

Department of Defense

Report on 2005 Defense Base Closure and Realignment Implementation

October 201&

**Office of the Deputy Under Secretary of
Defense (Installations and Environment)**

Preparation of this report/study cost the
Department of Defense a total of approximately
\$226,000 for the 2012 Fiscal Year.

Appendix 2: Additional (Non-DERP) Environmental Remediation Issues

Appendix 3: Section 2907, BRAC Act of 1990

Introduction

The National Defense Authorization Act for Fiscal Year 2002 amended the Defense Base Closure and Realignment Act of 1990 (Public Law 101-510; 10 U.S.C. 2687 note) to authorize a round of closures and realignments in 2005. The Commission forwarded its report and recommendations to the President on September 8, 2005. On September 15, 2005, the President approved the Commission's recommendations and forwarded its report to Congress. Since Congress did not enact a joint resolution of disapproval within the review period provided by the BRAC Act, on November 9, 2005, the Department became legally obligated to close and realign all installations recommended for closure and realignment in the Commission's report. In accordance with the BRAC Act, the Department completed actions to implement the recommendations.

This report addresses reporting requirements specified in section 2907 of the BRAC Act, as amended by section 2831 of the National Defense Authorization Act for Fiscal Year 2006 (P.L. 109-163) and section 2711 of the National Defense Authorization Act for Fiscal Year 2009 (P.L. 110-417).

As was the case in prior BRAC rounds and in prior reports for this round the annual budget justification material submitted separately by the Under Secretary of Defense Comptroller was developed to satisfy the requirements of paragraphs (1) and (2) of section 2907, specifically the FY 2013 material submitted by the DoD Components that provided detailed information by realignment and closure package, broken out by one-time implementation costs, anticipated revenues from land sales, and expected savings.

Section 2831 of the National Defense Authorization Act for Fiscal Year 2006 amended section 2907 by adding new reporting requirements. The amended section 2907 is provided in Appendix 3. This report provides the information required by paragraphs three through seven. Specifically, this report provides:

- a description of the closure actions carried out at each BRAC 2005 installation and the current status of the closure of the installation, including whether—
 - a redevelopment authority has been recognized by the Secretary of Defense for the installation;
 - the screening of property at the installation for other Federal use has been completed; and
 - a redevelopment plan has been agreed to by the redevelopment authority for the installation;
- a description of redevelopment plans for each BRAC 2005 installation;
- the quantity of property remaining to be disposed of at each BRAC 2005 installation as part of its closure;

- the quantity of property already disposed of at each BRAC 2005 installation;
- a list of the Federal agencies that have requested property during the screening process for each BRAC 2005 installation, including the date of transfer or anticipated transfer of the property to such agencies, the acreage involved in such transfers, and an explanation for any delays in such transfers;
- a list of known environmental remediation issues at each BRAC 2005 installation, including the acreage affected by these issues, an estimate of the cost-to-complete such environmental remediation, and the plans (and timelines) to address such environmental remediation; and
- the date of completion of all closure actions at each BRAC 2005 installation.

As stated in the Deputy Under Secretary of Defense (Installation and Environment)'s recent congressional testimony, BRAC 2005 was by far the largest round undertaken by the Department. The BRAC Commission made 222 recommendations, resulting in 24 major closures, 24 major realignments and 765 lesser actions. These actions affected some 125,000 military personnel at more than 800 locations across the United States. The cost of implementation totaled \$35.1 billion, including \$24.7 billion for military construction and another \$10.4 billion to move personnel and equipment, outfit facilities and carry out environmental clean-up. Although the implementation cost far exceeded that of any prior round, so too do the savings. Of all the efficiency measures that the Department has undertaken over the years, BRAC is perhaps the most successful and significant. BRAC 2005 is producing a total of about \$4 billion in annual recurring savings. This amount represents the additional costs that the Department would incur every year for base operating support, personnel and leasing costs had we not had BRAC.

Although elimination of excess capacity and dollar savings was an objective, the focus of the 2005 BRAC round was on aligning our infrastructure with our military strategy so as to maximize war fighting capacity and efficiency. BRAC 2005 enabled the Department to reset its infrastructure to accommodate the return of forces from Europe and Korea; restructure its medical platforms; markedly increase joint basing and other cross-Service efforts; accommodate the Army's modularization; and revitalize the Army's reserve and guard infrastructure. These efforts were needed, and they have contributed significantly to the Department's effectiveness. However, they necessarily required substantial investments.

The large number of transformational recommendations, particularly recommendations to establish joint operations, present significant implementation challenges. To meet these challenges, the Department developed Business Plans that laid out the requisite actions, timing of those actions, and the costs and savings associated with implementing each recommendation.

The Department has also completed screening for property transfer to other federal agencies, recognized Local Redevelopment Authorities (LRAs), and worked with communities impacted by both closure and growth. Most data reported for each installation data contained in this report is as of December 1, 2011 with updates made since then as appropriate. Environmental remediation cost-to-complete data is consistent with the FY 2013 budget submission to Congress.

Report Organization

Installations impacted by BRAC 2005 recommendations (including leased installations) are provided by Military Department by state, and Defense Agency. For each closing installation the report provides individual installation summaries consisting of:

- The BRAC Commission number and title for all recommendations affecting the installation.
- The date when the DoD completed the BRAC recommendation.
- Whether a LRA has been recognized by the Secretary of Defense. A LRA may be recognized to prepare a redevelopment plan when there is surplus property to be disposed (32 CFR Part 174).
- Whether the screening of property at the installation for other federal agency use has been completed.
- Whether a redevelopment plan has been agreed to by the redevelopment authority. The deadline for submittal of a redevelopment plan by a LRA may be extended through the Director of the Office of Economic Adjustment (32 CFR Part 176).
- If a redevelopment plan does exist, its description. For this section there are three types of descriptions:
 - A description of the redevelopment plan.
 - No Surplus Property. This indicates that because there is no surplus property available for disposal, no redevelopment plan is necessary. This response also includes installations that have property excess to DoD, but the property is slated for transfer to another federal agency, and is therefore, unavailable to the community. In addition, this description applies to leased locations and other types of property arrangements where the property is not owned by DoD and as such cannot be transferred by DoD.
 - Pending. The plan has not been finalized and, therefore, a description cannot be provided.
- The total quantity of property remaining to be disposed. This section reflects the government-owned acreage reported by the Military Departments that has been screened through a formal "Notice of Availability" under the General Services Administration-delegated disposal authorities across the components of the Department of Defense and determined as "excess" to the Department's needs. This data reflects what was reported by the Military Departments as of September 30, 2011. Where the "excess" determination

- has not been finalized, the acreage published in the component's "Notice of Availability" as of the date of the publication of the report is represented.
- The quantity of property already disposed. This is shown as "none" for most installations.
 - A list of the federal agency(s) that have requested property during the screening process, including the date of anticipated transfer, the acreage involved, and an explanation of any delays to transfer. Federal agency(s) have expressed a request for property by either a Notice of Intent or a GSA Form 1334/DD 1354 application. A Notice of Intent request is not a binding agreement and subsequent reports will reflect only GSA Form 1334/DD 1354 application requests.
 - The overall completion date for all closure actions at the installation. This is the last date of the last action necessary to complete the closure. This equates to the date on which all functions have transferred from the installation and activities cease except for caretaker actions. It does not include time necessary for environmental restoration or property disposal. Note: the Department's business plans tracked implementation at the recommendation level which often affects more than one installation. The plans contain an overall completion date. This date is the point in time in which all actions (e.g. personnel performing a function are moved, construction at receiving installations) in the business plan are completed.
 - If an installation has environmental remediation issues, those are detailed at Appendices 1 and 2.

Environmental Remediation Issues and Cost-to-Complete

Appendix 1 provides the list of known environmental remediation issues at each installation closed by BRAC 2005 that are part of the Defense Environmental Restoration Program (DERP) as defined by DoD's *2012 DoD Manual 4715.20, DERP Management*. The data presented for each installation includes the known environmental remediation issues to be addressed under the DERP, an estimate of the cost-to-complete for DERP eligible environmental restoration activities, the number of acres affected by remediation issues, the plans and timelines for addressing these remediation issues, the affected media, remedy types, and contaminant types identified for prioritization ranking purposes.

Below is a Department-level summary of the estimated cost-to-complete for all known environmental remediation actions for the DERP sites at installations impacted by the 2005 BRAC round.

BRAC Category	Cost-to-Complete (\$ Millions)
BRAC Round 2005	\$292.1M

The DERP cost-to-complete for closing installations is funded through the BRAC account. Cost-to-complete estimates are based on the best-available information at the time of their development and represent bottom-up, site level aggregations. Additionally, the cost-to-complete estimates address all site-level DERP requirements at the entire installation.

Appendix 2 includes each type of remediation issue at each installation affected by the BRAC 2005 actions that are not included in the DERP, as defined by the *2012 DoD Manual 4715.20, DERP Management*. For each issue Appendix 2 includes the type of remediation issue; its description; acreage affected; an estimate of the cost-to-complete; a description of the plans to address each issue; and timelines for addressing each remediation issue in terms of estimated start and completion dates. The types of “non-DERP” environmental remediation issues are categorized as follows:

- Operational Ranges
- Asbestos
- Landfill Closure
- Tank Closure
- Building Decontamination (DECON)
- Radiological Decontamination
- Permits to Site Closeouts
- Notice of Violation
- Other

Definitions for each of these categories are located in Appendix 2.

Army

Alabama

Abbott USARC, Tuskegee, AL

Commission recommendation(s) affected by this installation:

Number	Title
11	RC Transformation in Alabama

Closure or realignment actions taken as of December 1, 2011:

The Army completed the closure on 9/1/2011.

Has a local redevelopment authority been recognized by the Secretary of Defense? Yes

Has the screening of property for other Federal Agency use been completed?
Yes

Has a redevelopment plan been agreed to by the redevelopment authority? Yes

Description of redevelopment plan:
Complete Recreation

Quantity of property remaining to be disposed: 5.69

Quantity of property already disposed: 0.0

Federal Agencies requesting property during screening process; and if applicable, the anticipated transfer date and the amount of property to be transferred:

Federal Agency	Anticipated Transfer Date	Acres to be Transferred
None	None	None

Explanation for any delays in transfer of property:

None

Known environmental remediation issues: None

Acreage affected by remediation issues: None

Estimated cost to complete environmental remediation: None

Plans and timelines to address environmental remediation: None

Estimated completion date for all closure or realignment actions: Sep 1 2011

California

Navy Broadway Complex, CA

Commission recommendation(s) affected by this installation:

Number	Title
192	Navy Broadway Complex, San Diego, CA

Closure or realignment actions taken as of December 1, 2011:

On November 22, 2006, the Navy entered into a long term lease that provides for the redevelopment of the Navy Broadway Complex under the authority granted by section 2732 of Public Law 99-661, the National Defense Authorization Act for fiscal year 1987. Accordingly, the Commission recommendation to close the Broadway Complex if the Navy did not enter into such a lease on or before January 1, 2007, has no further effect. All action on this recommendation is complete.

Defense Finance and Accounting Service (DFAS)

DFAS - Oakland, CA

Commission recommendation(s) affected by this installation:

Number	Title
145	Defense Finance and Accounting Service

Closure or realignment actions taken as of December 1, 2011:

An initial site survey visit was conducted in November 2005. The purpose of the survey was to develop a site profile for DFAS locations. The visit consisted of data collection for business processes, workforce size, and systems applications. This information will be used for workload and workforce transition to the enduring sites. DFAS planned for site closure and mission realignment. DFAS conducted an All Hands briefing in December 2005 to inform employees about the BRAC closure schedule, impacts to employees, and upcoming events. Union officials for sites closing in FY06 were notified in December 2005. Voluntary Early Retirement Act (VERA) / Voluntary Separation Incentive Program (VSIP) windows and employee registration in the Priority Placement Program (PPP) were scheduled for February 2006. Human Resources scheduled Reduction in Force (RIF) notices to be issued in March 2006. DFAS, Oakland closed in June 2006.

Has a local redevelopment authority been recognized by the Secretary of Defense? No
Has the screening of property for other Federal Agency use been completed?
 No property to transfer

Has a redevelopment plan been agreed to by the redevelopment authority? No
Description of redevelopment plan: None

Closure or realignment actions taken as of December 1, 2011:

Component	Description	Complete Date
WHS	The WHS completed the closure on 30 November, 2011. The space was returned to Lessor on 30 November, 2011. OSD organizations were relocated to the Mark Center. This building is closed.	Nov 30 2011

Has a local redevelopment authority been recognized by the Secretary of Defense? No

Has the screening of property for other Federal Agency use been completed?
No property to transfer

Has a redevelopment plan been agreed to by the redevelopment authority? No

Description of redevelopment plan:

Quantity of property remaining to be disposed: 0.0

Quantity of property already disposed: 0.0

Federal Agencies requesting property during screening process; and if applicable, the anticipated transfer date and the amount of property to be transferred:

Federal Agency	Anticipated Transfer Date	Acres to be Transferred
None	None	None

Explanation for any delays in transfer of property:
None

Known environmental remediation issues: None

Acres affected by remediation issues: None

Estimated cost to complete environmental remediation: None

Plans and timelines to address environmental remediation: None

Estimated completion date for all closure or realignment actions: Nov 30 2011

Crown Ridge Building, 4035 Ridgetop, Arlington, VA

Commission recommendation(s) affected by this installation:

Number	Title
133	Co-locate Miscellaneous DoD, Defense Agency, and Field Activity Leased locations

Closure or realignment actions taken as of December 1, 2011:

Component	Description	Complete Date
WHS	The WHS completed the realignment on 6 September, 2011. Space is anticipated to be restored and returned to Lessor on 31 August, 2012.	Sep 6 2011

Has a local redevelopment authority been recognized by the Secretary of Defense? No

Has the screening of property for other Federal Agency use been completed?
No property to transfer

Has a redevelopment plan been agreed to by the redevelopment authority? No

Description of redevelopment plan:

Quantity of property remaining to be disposed: 0.0

Quantity of property already disposed: 0.0

Federal Agencies requesting property during screening process; and if applicable, the anticipated transfer date and the amount of property to be transferred:

Federal Agency	Anticipated Transfer Date	Acres to be Transferred
None	None	None

Explanation for any delays in transfer of property:
None

Known environmental remediation issues: None

Acreage affected by remediation issues: None

Estimated cost to complete environmental remediation: None

Plans and timelines to address environmental remediation: None

Estimated completion date for all closure or realignment actions: Sep 6 2011

North Tower 2800 Crystal Drive Arlington, VA

Commission recommendation(s) affected by this installation:

Number	Title
133	Co-locate Miscellaneous DoD, Defense Agency, and Field Activity Leased locations

Closure or realignment actions taken as of December 1, 2011:

Component	Description	Complete Date
WHS	The WHS completed the realignment on November, 2011. Space is anticipated to be restored and returned to Lessor on 13 April, 2012.	Nov 30 2011

Has a local redevelopment authority been recognized by the Secretary of Defense? No

Has the screening of property for other Federal Agency use been completed?

No property to transfer

Department of Defense

**Report on 2005 Defense Base
Closure and Realignment
Implementation**

Volume II

October 2012

**Office of the Deputy Under Secretary of
Defense (Installations and Environment)**

Appendix I

Defense Environmental Restoration Program (DERP) Issues

Defense Environmental Restoration Program (DERP) Issues

The Department of Defense (DoD) manages approximately 29 million acres of land, as well as thousands of military facilities and former defense properties throughout the United States and abroad to support its national security mission. This built and natural infrastructure provides DoD with the capability to organize, train, and equip the nation's military to perform its mission. DoD's environmental programs, such as the Defense Environmental Restoration Program (DERP), sustain, restore, and modernize its infrastructure to maintain readiness and protect human health and the environment.

Through the DERP, DoD addresses environmental contamination resulting from military activities. The DERP applies the environmental restoration process to all contaminated sites as set forth by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and its implementing regulation, the National Oil and Hazardous Substances Pollution Contingency Plan. CERCLA is the primary legal authority governing cleanup activities at all DoD installations and properties, including base realignment and closure (BRAC) installations. Under DERP, DoD has established three program categories to address different types of contamination at active installations, BRAC installations, and Formerly Used Defense Sites (FUDS) properties:

- **The Installation Restoration Program (IRP)** governs cleanup (i.e., identification, investigation, removal actions, remedial actions, or a combination of removal and remedial actions) to address the release of hazardous substances and pollutants or contaminants; petroleum, oil, or lubricants; DoD unique materials; hazardous wastes or hazardous waste constituents; explosive compounds released as a result of ammunition or explosives production, or manufacturing at ammunition plants; and unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC) that are incidental to an IRP site.
- **The Military Munitions Response Program (MMRP)** directs cleanup at locations where UXO, DMM, or MC are known or suspected to be present. DoD refers to these locations as munitions response sites (MRSs). The MMRP applies to all locations with the exception of operational ranges, locations outside of the United States, operating storage and manufacturing facilities, and where munitions result from combat.
- **The Building Demolition/Debris Removal (BD/DR) Program** demolishes and removes unsafe buildings and structures at facilities or sites that meet specific criteria. This program does not apply to BRAC installations.

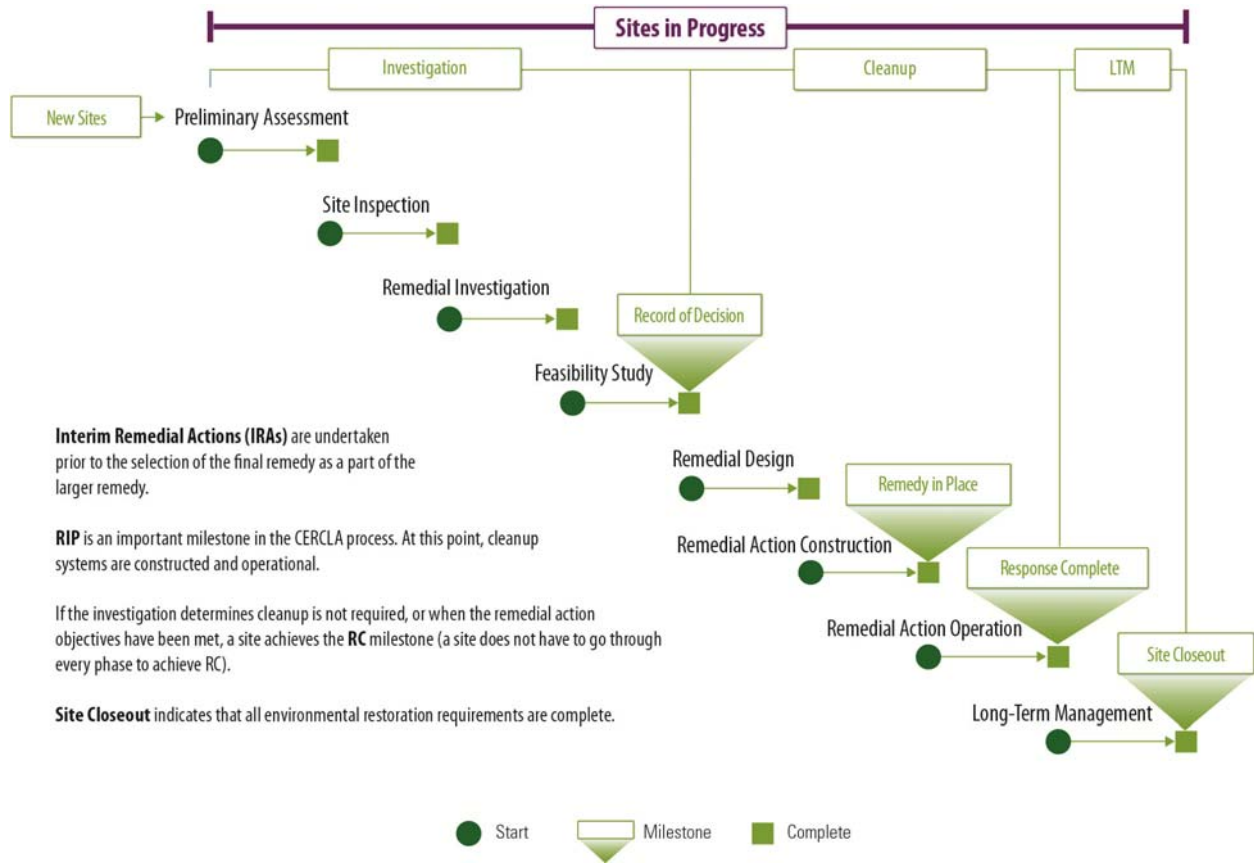

Enactment of Public Law No. 110-417, the "Duncan Hunter National Defense Authorization Act for Fiscal Year 2009," has led to changes in the 2907 reporting requirements. Beginning with fiscal year (FY) 2008, DoD must only report BRAC 2005 closures. Prior to FY2008, both closures and realignments were reported.

Environmental Restoration Process

DoD addresses contamination at BRAC installations within the DERP in the same manner that it addresses contamination at active installations and FUDS properties. DoD monitors cleanup progress at sites by aligning cleanup status with three key stages in the CERCLA process: (1) investigation completed, underway, or planned; (2) cleanup completed, underway, or planned; and (3) long-term management (LTM) completed, underway, or planned. This process is shown in Figure 1.

Defense Environmental Restoration Program (DERP) Issues

Figure 1: Environmental Restoration Process

1. Investigation Completed, Underway, or Planned – When environmental contamination is suspected at a site, DoD begins the investigation process. DoD collects data to assess the nature and extent of contamination and the potential risks posed by the contamination through cleanup phases. These phases include the preliminary assessment (PA), site inspection (SI), and remedial investigation (RI). Using the investigation data, DoD then conducts a feasibility study (FS) to examine the merits of various cleanup options and to determine the best strategy for remediation. The completion milestone for the investigation phase is documented in a Record of Decision (ROD) or an equivalent decision document for the site. In this document, DoD records the results of its investigation, the need for site remediation (if required), the selected remediation strategy, and the remedial objectives for the site. Interim remedial actions (IRAs) are undertaken prior to the selection of the final remedy as a part of the larger remedy.
2. Cleanup Completed, Underway, or Planned – If investigation results indicate that remediation is required, a site progresses to the cleanup stage, and DoD begins to implement the selected remedy for the site. The cleanup phases comprise the remedial design (RD) and remedial action construction (RA-C), and may include remedial action operation (RA-O). DoD continues cleanup or arranges for the operation of the remedy until the remedial objectives for the site required under the ROD, or equivalent document, are met. Two key milestones included in this stage are:

Defense Environmental Restoration Program (DERP) Issues

- A. Remedy in Place (RIP) – RIP is a milestone which occurs when cleanup systems are constructed and operational.
 - B. Response Complete (RC) – A site achieves RC when the site has achieved the agreed upon cleanup standards (though it may still be monitored due to restricted property use). This stage marks the end of the cleanup process at the site.
3. Long-term Management Completed, Underway, or Planned – After a site achieves RC, it may still require LTM activities to ensure the implemented remedy remains protective of human health and the environment. LTM includes the operations and maintenance measures required to maintain the effectiveness of response actions. LTM should be used until no further environmental restoration response actions are appropriate or anticipated. Examples of LTM include landfill cap maintenance, leachate disposal, fence monitoring and repair, performance of 5-year reviews, and LUC maintenance.

Installation Data Template

This appendix provides information on closing BRAC 2005 installations under DoD’s DERP program. Data in this appendix are provided at the installation-level for reporting purposes. Figure 2 depicts the data template for each installation.

Installation Data Template Sections

A *Installation Identification Information*

Installation Name:	Riverbank Army Ammunition Plant	Military Service:	Army
Installation FFID:	CA921382075900	State:	California

Lists the installation name, a unique identifier referred to as the federal facility identification (FFID) number, the Military Service, and state.

This graphic depicts the introductory information for each installation. The template provides the installation's name, the state where it is located, the responsible Military Service, and its FFID. The FFID is unique to the installation and its accompanying data to enable thorough tracking of information from year to year.

B *Total Sites and Acreage*

	Sites	Sites RC
Total:	16	12
IRP:	15	11
MMRP:	1	1

Provides the total number of DERP sites at the installation and the total number of sites in each program category (e.g., IRP and MMRP). The total number of sites that have achieved RC is also listed for the installation and by category (e.g., IRP and MMRP). Once a site has achieved RC, the environmental restoration for that site is completed. Long term management may occur after RC is achieved.

Affected Acres:	37
-----------------	----

Lists the total number of acres at the installation impacted by environmental contamination.

DoD tracks site progress by environmental restoration phase (e.g., investigation, cleanup, LTM) and demonstrates progress at these sites as they move from investigation through the cleanup phases to complete the environmental restoration requirements. This installation-level summary provides the total number of DERP sites at the installation and breaks that number down by DERP category (e.g., IRP or MMRP). It also shows the number of sites in each category that have achieved RC. Lastly, this section lists the number of acres impacted by environmental contamination.

Defense Environmental Restoration Program (DERP) Issues

C Total Cost-to-Complete

Cost-to-Complete (\$K): **\$6,179**

Indicates the total cost-to-complete for the installation anticipated in FY2012 through completion. The total excludes program management and other support costs not attributable to specific sites.

This field provides the cost-to-complete (CTC) estimate for all remaining environmental actions at the installation. CTC estimates are the anticipated funds needed to complete cleanup at IRP sites and MRSs. DoD uses CTC estimates for several purposes, including planning, programming, budgeting and execution, as well as for reporting future program requirements. These amounts exclude program management and other support costs not directly attributable to specific sites.

Continued funding at sites that have achieved RC may be required to complete LTM actions specified in the site's decision document or requested by the lead regulatory agency. These costs are typically for activities such as conducting periodic monitoring and five-year reviews to ensure a site's cleanup actions remain protective of human health and the environment.

D Phase and Milestone Schedules

Phase	Phase FY		Phase, Cost and Milestone Schedules by FY																							
	Beg	End	<= 2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026=>								
PA	1980	2009	<-----																							
SI	1981	2012	<-----																							
RIFS	1984	1994	<-----																							
<i>Study Completion</i>		2012		•																						
IRA	1990	1991	<-----																							
RD	1987	1995	<-----																							
RA-C	1993	2014	<-----																							
<i>Remedy in Place</i>		2014				••																				
RA-O	1995	2017	<-----																							
<i>Response Complete</i>		2017							•••																	
LTM	2002	2024	<-----																							

Provides the beginning and end dates by FY for each phase, and the FY for each milestone at the installation.

Cleanup activities often span multiple FYs, making it necessary for DoD to track a cleanup action's status across multiple FYs. Phases within the investigation and cleanup stages may occur simultaneously or overlap across FYs.

In this section of the table, the phases and milestones of the cleanup process are identified along the y-axis, while the FY beginning and end dates for the phases and milestones are on the x-axis. These FYs may be estimated or actual FYs, depending on the phase and the installation's cleanup timeline. Anticipated milestones are highlighted according to the FY in which they are expected to occur; those phases and milestones occurring prior to the FYs listed are shown with an arrow indicating the phase was completed or the milestone has occurred in a previous FY. For both the phases and milestones, the beginning and end dates are recorded in the Phase FY column.

Defense Environmental Restoration Program (DERP) Issues

Expected timelines for addressing DERP environmental cleanup are provided for the three major restoration milestones:

- Study Completion (SC) – MMRP or IRP sites where investigation of the environmental contamination is beginning or still underway.
- RIP – The point at which the selected cleanup systems are constructed and operational.
- RC – The point at which the site has achieved the agreed upon cleanup standards (though it may still be monitored due to restricted property use).

For each milestone, the end date is graphically depicted with one dot for the SC milestone, two dots for the RIP milestone, and three dots for the RC milestone.

E Contaminant Type

Site Types: Contaminated Buildings, Contaminated Ground Water, Contaminated Sediments, Landfill, Pistol Range, Surface Impoundment/Lagoon, Spill Site Area, Waste Treatment Plant
Affected Media: Not Reported
Remedies: Removal, Waste Removal - Soils, Ground Water Treatment, Capping, Other
Contaminants: Not Reported

Describes each type of DERP site, the affected media, the remedies put in place to address the contamination, and the types of contaminants at the installation.

This section identifies the various types of known environmental remediation issues found at the installation and addressed under the DERP, as well as contaminants identified and the media affected. If remedies have been selected for the various cleanup actions, they are also included in this section. In some instances, an installation may use a combination of remedies to address a contaminant within a specific medium, or the same remedy may be applied to various site types.

Site Types:

Disposal Pit and Dry Well, Fire/Crash Training Area, Landfill, Spill Site Area

Affected Media:

Ground Water, Sediment, Soil, Surface Water

Remedies:

Bioremediation - In Situ Ground Water

Contaminants:

BTEX, Halogenated VOCs, Non-halogenated SVOCs, Nonhalogenated VOCs, Metals, Miscellaneous Inorganic Elements and Compounds (Misc. Organics), Phenols, Polynuclear Aromatic Hydrocarbons (PAHs)

Appendix II

Non-Defense Environmental Restoration Program (DERP) Issues

Appendix 2

Non-DEHP Environmental Remediation Issues

This appendix provides details of known environmental remediation issues at installations affected by BRAC 2005 actions that are not included in the Defense Environmental Remediation Program (DEHP). Currently, 9 Army and 6 Air Force installations have environmental remediation issues that are not included in DEHP. For each installation that has non-DEHP remediation issues a description of those issues is provided that includes the type of remediation issue; its description; acreage affected; an estimate of the cost-to-complete; a description of the plans to address each issue; and timelines for addressing each remediation issue in terms of estimated start and completion dates. (Note: For certain types of issues “acreage affected” is not relevant and therefore identified as “NA”).

The types of non-DEHP environmental remediation issues included are as follows:

Operational Ranges: For operational ranges at installations subject to the BRAC 05 decisions, the Departmental may need to undertake appropriate remediation actions consistent with the proposed use of the area. An operational range is defined as a range under the jurisdiction, custody, or control of the Secretary of a military department, that is a designated land or water area set aside, managed, and used to conduct research on, develop, test, and evaluate military munitions and explosives, other ordnance, or weapon systems, or to train military personnel in their use and handling.

Asbestos: Includes both friable and nonfriable asbestos-related cleanup.

Landfill Closure: Equipment expected to be installed and facilities expected to be constructed (based on the landfill closure plan) near or after the time that the landfill stops accepting additional waste, as well as the costs of the initial cover (capping) to be applied when the landfill stops accepting additional waste. Landfill closures are operated under the provisions of Resource Conservation and Recovery Act (RCRA).

Tank Closure: RCRA corrective actions associated with contamination produced by above or below ground storage tanks and/or activities associated with a “clean close” of a tank.

Building DECON: Actions associated with the decontamination of any building or other permanent or temporary structure.

Radiological DECON: Includes actions for the decommissioning and decontamination of any location for radiological materials subject to regulation by the NRC or the Atomic Energy Act of 1954.

Permits to Site Closeouts: Includes actions associated with the closure and post-closure care of waste treatment, storage, or disposal facilities (TSDFs).

Notice of Violation: Includes actions associated with all unresolved Notices of Violation (e.g., Publicly Owned Treatment Works (POTW) and water discharges pursuant to National Pollution Discharge Elimination Systems (NPDES) permits).

Other: Includes any other form of environmental cleanup not addressed in other categories.

Appendix III

Section 2907 Law

Appendix 3

Defense Base Closure and Realignment Act of 1990, Public Law 101-510, as Amended

SEC. 2907. REPORTS

As part of the budget request for fiscal year 2007 and for each fiscal year thereafter for the Department of Defense, the Secretary shall transmit to the congressional defense committees of Congress:

- (1) a schedule of the closure actions to be carried out under this part in the fiscal year for which the request is made and an estimate of the total expenditures required and cost savings to be achieved by each such closure and of the time period in which these savings are to be achieved in each case, together with the Secretary's assessment of the environmental effects of such actions;
- (2) a description of the military installations, including those under construction and those planned for construction, to which functions are to be transferred as a result of such closures, together with the Secretary's assessment of the environmental effects of such transfers;
- (3) a description of the closure actions already carried out at each military installation since the date of the installation's approval for closure under this part and the current status of the closure of the installation, including whether —
 - (A) a redevelopment authority has been recognized by the Secretary for the installation;
 - (B) the screening of property at the installation for other Federal use has been completed; and
 - (C) a redevelopment plan has been agreed to by the redevelopment authority for the installation;
- (4) a description of redevelopment plans for military installations approved for closure under this part, the quantity of property remaining to be disposed of at each installation as part of its closure, and the quantity of property already disposed of at each installation;
- (5) a list of the Federal agencies that have requested property during the screening process for each military installation approved for closure under this part, including the date of transfer or anticipated transfer of the property to such agencies, the acreage involved in such transfers, and an explanation for any delays in such transfers;
- (6) a list of known environmental remediation issues at each military installation approved for closure under this part, including the acreage affected by these issues, an estimate of the cost to complete such environmental remediation, and the plans (and timelines) to address such environmental remediation; and
- (7) an estimate of the date for the completion of all closure actions at each military installation approved for closure under this part.
