NOTE

These procedures were formally issued by the Office of State and Tribal Programs (STP). Any changes to the procedure will be the responsibility of the FSME Procedure Contact as of October 1, 2006. Copies of FSME procedures will be available through the NRC website.

Procedure Title: *Reviewing the Non-Common Performance Indicator, Compatibility Requirements*
Procedure Number: SA-107

Page: 1 of 10

**Issue Date:
3/27/2008**

I. INTRODUCTION

This document describes the procedure for conducting reviews of Agreement State radioactive materials programs using Non-Common Performance Indicator, Compatibility Requirements, specified in NRC Management Directive (MD) 5.6, *Integrated Materials Performance Evaluation Program (IMPEP)*.

II. OBJECTIVE

To ensure that an Agreement State program does not create conflicts, duplications, gaps, or other conditions that jeopardize an orderly pattern in the regulation of radioactive materials under the Atomic Energy Act, as amended.

III. BACKGROUND

For Agreement State program reviews, an assessment of both adequacy and compatibility is necessary to ensure that State programs are adequate to protect public health and safety, and compatible with NRC's regulatory program. This indicator is a non-common performance indicator because it is not applicable to NRC Regional radioactive materials programs.

IV. ROLES AND RESPONSIBILITIES

A. Team Leader:

Determines which team member is assigned lead review responsibility for this performance indicator.

B. Principal Reviewer:

1. Reviews State legislation and regulations, program elements and other generic legally binding requirements (including orders and license conditions); conducts staff discussions; and documents information pertinent to the compatibility of the State and the adequacy of the authority to conduct Agreement State functions.

2. Meets the appropriate requirements specified in MD 5.10, *Formal Qualifications for Integrated Materials Performance Evaluation Program (IMPEP) Team Members*.

V. GUIDANCE

A. Scope

1. Statutes and regulations comprise one of the basic components of an Agreement State radioactive materials program, since they provide the program's regulatory framework.
2. Statutes
 - a. Under Section 274 of the Atomic Energy Act of 1954, as amended, Agreement States administer regulatory programs under their own State statutes. State laws should provide specific elements of authority to the Agreement materials program.
 - b. State laws should not create duplications, gaps or conflicts in regulation, between the State and NRC, State agencies, other Federal agencies, or State and local agencies.
 - c. The State laws should not seek to regulate materials or activities reserved to NRC.
3. Regulations
 - a. Each Agreement State has the responsibility to promulgate generic legally binding requirements that satisfy the compatibility requirement of Section 274 of the Atomic Energy Act of 1954, as amended. States generally fulfill that responsibility through promulgation of regulations. Regulations will be reviewed by NRC in accordance with Office of Federal and State Materials and Environmental Management Programs (FSME) Procedure SA-201, *Review of State Regulatory Requirements*.
 - b. Regulations designated as necessary for health and safety will be reviewed by NRC in accordance with FSME Procedure SA-201, *Review of State Regulatory Requirements*.
 - c. To assist States in promulgating compatible regulations or other

generic legally binding requirements within 3 years of the effective date of changes in NRC regulations, NRC staff prepares and publishes a Chronology of NRC Amendments. Included in the chronology is identification of each regulation change, the specific sections modified or established by the regulation change, the effective date of the change, and the compatibility or health and safety designation.

- d. The State Regulation Status Data Sheet (SRS) for each Agreement State is also available on the FSME home page to assist States in identifying the necessary regulations or other generic legally binding requirement necessary for adequacy and compatibility.

B. Evaluation Procedures

1. The principal reviewer should refer to Part III, Evaluation Criteria, of MD 5.6, *Integrated Materials Performance Evaluation Program*, for specific evaluation criteria.
2. Any changes to State legislation since the last IMPEP review affecting the radiation control program should be reviewed.
3. The status of all regulations adopted in the radiation control program or other generic legally binding requirements since the last IMPEP review, as well as the status of any regulations currently in the rulemaking process, should be determined.
4. The principle reviewer should complete as much of the work to determine the status of the Agreement State's rules prior to the on-site portion of the review. This work should be coordinated with the State Regulation Review Coordinator (SRRC), State Agreements and Industrial Safety Branch (SAISB), Division of Materials Safety and State Agreements (DMSSA).
5. The status of the State's regulations and other generic legally binding requirements should be discussed with the appropriate Regional State Agreements Officer (RSAO) and the SRRC.

C. Review Guidelines

1. A copy of the SRS for the State from the FSME home page will be included in the IMPEP questionnaire for the State to review, verify as correct, and update the information since the last IMPEP review.
2. Information from the IMPEP questionnaire on legislation, regulations, legally binding requirements and other program elements required for compatibility should be used by the principal reviewer as a starting point for discussions with the State.
3. Findings
 - a. A “satisfactory” finding may be appropriate in the following circumstances:
 - I. If the State program has no significant changes to the statutes affecting the program’s regulatory authority, no overdue regulations, legally binding requirements or other program elements, and meets all the other evaluation criteria for this performance indicator in MD 5.6, the review team should recommend to the Management Review Board (MRB) that the State’s performance with respect to this indicator, be found satisfactory.
 - ii. If the State program has adopted all but a few essential regulations or other program elements, and meets all the other evaluation criteria for this performance indicator in MD 5.6, the review team should consider recommending to the MRB that the State’s performance with respect to this indicator, be found “satisfactory.” Essential regulations are usually considered Compatibility Category A or B as defined in FSME Procedure SA-200, *Compatibility Categories and Health & Safety Identification for NRC Regulations and Other Program Elements*. One or a combination of the following circumstances may pertain to regulations or program elements that have not been adopted and should be considered in reaching a proposed finding recommendation:
 1. Compatibility significance of the rules.

For example, the adoption of the "Transportation Requirements," Part 71, is more significant than "Minor Corrections, Clarifying Changes, and a Minor Policy Change," 10 CFR Parts 20, 32, 35, 36, and 39 amendments. The State postponed adoption of the less significant rule in order to speed adoption of the more significant regulation.

2. Rules not needed at the time of the review. For example, a State may not have issued any licenses for well logging licensees so that "Energy Compensation Sources for Well Logging and Other Regulatory Clarifications," 10 CFR Part 39 amendment is not necessary at this time. The State has postponed adoption.
 - iii. If the State program has no overdue regulations or other program elements, at the time of the onsite review, but experienced difficulties during the review period adopting regulations within the three-year period, the review team should consider whether the State's performance with respect to this indicator, be found "satisfactory" or "satisfactory but needs improvement." The review team will need to consider in their evaluation of this performance indicator the root cause of the delay in promulgation of regulations, the State managements' actions which addressed and corrected the problem and the compatibility significance of the regulations or elements. For example, a State could experience significant staff loss, which the State managed and recovered from through hiring, training and prioritizing workload such that at the time of the on-site review, all regulations had been promulgated and the root cause for the delay has been addressed to ensure that the State would not experience the same difficulty in the future.
- b. A "satisfactory but needs improvement" finding may be appropriate in the following circumstances:

I. If the State program has not adopted several essential regulations, or other program elements, the review team should consider whether to recommend to the MRB that the State's performance with respect to this indicator, be found "satisfactory but needs improvement" or be found "unsatisfactory." For a finding of "satisfactory but needs improvement," one or a combination of the following circumstances may pertain to regulations or program elements that have not been adopted:

1. Compatibility significance of the rules.

For example, the adoption of the "Medical Use of Byproduct Material," 10 CFR 20, 32 and 35 amendments and implementation of "Increased Controls for Risk-Significant Radioactive Sources" (NRC Order EA-05-090) are more significant than "Minor Corrections, Clarifying Changes, and a Minor Policy Change," 10 CFR Parts 20, 32, 35, 36, and 39 amendments. The State has postponed adoption of the less significant rule in order to speed adoption of the more significant regulation and legally binding requirements.

2. Rules not needed at the time of the review.

For example, a State may not have issued any licenses for well logging licensees so that "Energy Compensation Sources for Well Logging and Other Regulatory Clarifications," 10 CFR Part 39 amendment is not necessary at this time. The State has postponed adoption.

3. Status of draft regulations within the State's administrative procedures

A State has experienced difficulties adopting regulations within the three-year period, but the State has drafted regulations and begun

the process of promulgating the necessary regulations.

- ii. For the review team to consider that the State is in the process of promulgating the necessary regulations, the State should have completed draft regulations and the draft regulation package should be either out for public comment, or within the State's administrative procedures for final promulgation to be given consideration for a "satisfactory but needs improvement" finding.

- c. A "unsatisfactory" finding may be appropriate in the following circumstances:

- I. If the State program has not adopted over ten regulations or other program elements required for compatibility, has experienced difficulties or has often been unable to adopt regulations during the review period, the review team should consider whether the State's performance with respect to this indicator, be found unsatisfactory or satisfactory but needs improvement.

- ii. If a State has not begun drafting regulations or has only an internal draft package that has not been transmitted for external review by stakeholders in the promulgation process, the review team should give consideration for an unsatisfactory finding.

D. Review Details.

For compatibility requirements, the principal reviewer should evaluate and document the review of the following:

- 1. Legislation that affects the radiation control program, including any legislation that has been passed since the last review, that affects the State's authority to:
 - a. Promulgate regulatory requirements necessary to provide reasonable assurance of protection of public health and safety.
 - b. License, inspect, and enforce legally binding requirements such as regulations and licenses.

2. State statutes are consistent with Federal statutes, as appropriate.
3. The State has adopted legally binding requirements, regulations, and other program elements in accordance with MD 5.9, *Adequacy and Compatibility of Agreement State Programs*, and the current revisions of FSME Procedures SA-200, *Compatibility Categories and Health & Safety Identification for NRC Regulations and Other Program Elements*, and SA-201, *Review of State Regulatory Requirements*.
4. The State has existing legally enforceable measures in place such as generally applicable rules, license provisions, or other appropriate measures, necessary to allow the State to ensure adequate protection of public health and safety in the regulation of agreement material.
5. The State's administrative rulemaking process allows for the adoption of regulations in an appropriate amount of time and includes sufficient period(s) for public comment.
6. All regulations required for purposes of compatibility or health and safety are adopted in a time frame so that the effective date of the State requirement is not later than 3 years after the effective date of NRC's final rule. The FSME's Chronology of Amendments is a list of NRC regulation amendments including the NRC effective date. The most recent chronology can be found on the FSME home page (<http://nrc-stp.ornl.gov/>) under Agreement State Letters. Use the examples in Appendix A as a sample format for listing regulation amendments in IMPEP reports.
7. The status of any regulations currently in the rulemaking process.
8. There is sufficient full-time equivalent (FTE) in the program dedicated to regulation adoption and oversight.
9. The State submits proposed regulations or other generic legally binding requirements following the guidance in FSME Procedure SA-201, *Review of State Regulatory Requirements*. Specifically, draft rules and generic legally binding requirements are sent to DMSSA for review and comment.
10. Other program elements that have been designated as necessary for maintenance of an adequate and compatible program are adopted and implemented within 6 months following NRC designation.

11. The State has implemented legally binding requirements, regulations, and other program elements in accordance with MD 5.9, *Adequacy and Compatibility of Agreement State Programs* and the current revisions of FSME Procedure SA-200, *Compatibility Categories and Health & Safety Identification for NRC Regulations and Other Program Elements*.

E. Discussion of Findings with State.

The reviewer should follow the guidance given in FSME Procedure SA-100, *Implementation of the Integrated Materials Performance Evaluation Program (IMPEP)*, for discussion of technical findings with reviewers, supervisors, and managers.

Appendix A

List of NRC Amendments to 10 CFR

The following is a list of the NRC amendments issued since 1991 that need to be addressed during IMPEP reviews in rulemakings or by adopting alternate legally binding requirements. Use the following format for listing regulation amendments in IMPEP reports:

- “Standards for Protection Against Radiation,” 10 CFR Part 20 amendment (56 FR 23360) that became effective June 20, 1991.
- “Safety Requirements for Radiographic Equipment,” 10 CFR Part 34 amendment (55 FR 843) that became effective January 10, 1991.
- “Notification of Incidents,” 10 CFR Parts 20, 30, 31, 34, 39, 40, and 70 amendments (56 FR 64980) that became effective on October 15, 1991.
- “Quality Management Program and Misadministrations,” 10 CFR Part 35 amendment (56 FR 34104) that became effective January 27, 1992 .
- “Licensing and Radiation Safety Requirements for Irradiators,” 10 CFR Part 36 amendment (58 FR 7715) that became effective July 1, 1993.
- “Definition of Land Disposal and Waste Site QA Program,” 10 CFR Part 61 amendment (58 FR 33886) that became effective July 22, 1993.
- "Decommissioning Recordkeeping, and License Termination: Documentation Additions," 10 CFR Parts 30, 40, 70, and 72 amendments (58 FR 39628) that became effective on October 25, 1993.
- “Uranium Mill Tailings: Conforming to EPA Standards,” 10 CFR Part 40 amendment (59 FR 28220) that became effective July 1, 1994.
- “Timeliness in Decommissioning of Materials Facilities,” 10 CFR Parts 30, 40, and 70 amendments (59 FR 36026) that became effective August 15, 1994.
- “Preparation, Transfer for Commercial Distribution, and Use of Byproduct Material for Medical Use,” 10 CFR Parts 30, 32, and 35 amendments (59 FR 61767, 59 FR 65243 and 60 FR 322) that became effective January 1, 1995.
- “Frequency of Medical Examinations for Use of Respiratory Protection Equipment,” 10 CFR Part 20 amendment (60 FR 7900) that became effective March 13, 1995.
- “Low-Level Waste Shipment Manifest Information and Reporting,” 10 CFR Parts 20 and 61 amendments (60 FR 15649 and 25983) that became effective March 1, 1998.

Appendix A (Continued)

- “Performance Requirements for Radiography Equipment,” 10 CFR Part 34 amendment (60 FR 28323) that became effective June 30, 1995.
- "Radiation Protection Requirements: Amended Definitions and Criteria," 10 CFR Parts 19 and 20 amendments (60 FR 36038) that became effective August 14, 1995.
- “Medical Administration of Radiation and Radioactive Materials,” 10 CFR Parts 20 and 35 amendments (60 FR 48623) that became effective October 20, 1995.
- "Clarification of Decommissioning Funding Requirements," 10 CFR Parts 30, 40, and 70 amendments (60 FR 38235) that became effective November 24, 1995.
- "Compatibility with the International Atomic Energy Agency," 10 CFR Part 71 amendment (60 FR 50248 and 61 FR 28724) that became effective April 1, 1996.
- “Termination or Transfer of Licensed Activities: Record Keeping Requirements,” 10 CFR Parts 20, 30, 40, 61, and 70 amendments (61 FR 24669) that became effective June 17, 1996.
- “Resolution of Dual Regulation of Airborne Effluents of Radioactive Materials; Clean Air Act,” 10 CFR Part 20 amendment (61 FR 65120) that became effective January 9, 1997.
- “Recognition of Agreement State Licenses in Areas Under Exclusive Federal Jurisdiction Within an Agreement State,” 10 CFR Part 150 amendment (62 FR 1662) that became effective February 27, 1997.
- “Criteria for the Release of Individuals Administered Radioactive Material,” 10 CFR Parts 20 and 35 amendments (62 FR 4120) that became effective May 29, 1997.
- “Licenses for Industrial Radiography and Radiation Safety Requirements for Industrial Radiography Operations,” 10 CFR Parts 30, 34, 71, and 150 amendments (62 FR 28947) that became effective June 27, 1997.
- “Radiological Criteria for License Termination,” 10 CFR Parts 20, 30, 40, and 70 amendments (62 FR 39057) that became effective August 20, 1997.

Appendix A (Continued)

- “Exempt Distribution of a Radioactive Drug Containing One Microcurie of Carbon-14 Urea,” 10 CFR Part 30 amendment (62 FR 63634) that became effective January 2, 1998.
- “Deliberate Misconduct by Unlicensed Persons,” 10 CFR Parts 30, 40, 61, 70, and 150 amendments (63 FR 1890 and 13773) that became effective February 12, 1998.
- “License for Industrial Radiography and Radiation Safety Requirements for Industrial Radiographic Operations; Clarifying Amendments and Corrections,” 10 CFR Part 34 amendment (63 FR 37059) that became effective July 9, 1998.
- “Minor Corrections, Clarifying Changes, and a Minor Policy Change,” 10 CFR Parts 20, 32, 35, 36, and 39 amendments (63 FR 39477 and 45393) that became effective October 26, 1998.
- “Transfer for Disposal and Manifest; Minor Technical Conforming Amendments,” 10 CFR Part 20 amendment (63 FR 50127) that became effective November 20, 1998.
- “Radiological Criteria for License Termination of Uranium Recovery Facilities,” 10 CFR Part 40, Appendix A (64 FR 17506) that became effective June 11, 1999.
- “Respiratory Protection and Controls to Restrict Internal Exposures,” 10 CFR Part 20 amendment (64 FR 54543 and 55524) that became effective February 2, 2000.
- “Energy Compensation Sources for Well Logging and Other Regulatory Clarifications,” 10 CFR Part 39 amendment (65 FR 20337) that became effective May 17, 2000.
- “New Dosimetry Technology,” 10 CFR Parts 34, 36, and 39 amendments (65 FR 63750) that became effective January 8, 2001.
- “Requirements for Certain Generally Licensed Industrial Devices Containing Byproduct Material,” 10 CFR Parts 30, 31, and 32 amendments (65 FR 79162) that became effective February 16, 2001.
- “Revision of the Skin Dose Limit,” 10 CFR Part 20 amendment (67 FR 16298) that became effective April 5, 2002.
- “Medical Use of Byproduct Material,” 10 CFR Parts 20, 32 and 35 amendments (67 CFR 20249) that became effective October 24, 2002.
- “Financial Assurance for Materials Licensees,” 10 CFR Parts 30, 40, and 70 amendments (68 FR 57327) that became effective on December 3, 2003.
- “Compatibility with IAEA Transportation Safety Standards (TS-R-1) and Other

Appendix A (Continued)

Transportation Safety Amendments,” 10 CFR Part 71 amendments (69 FR 3698) that became effective on October 1, 2004.

- “Security Requirements for Portable Gauges Containing Byproduct Material,” 10 CFR Part 30 amendments (70 FR 2001) that became effective July 11, 2005.
- “Medical Use of Byproduct Material - Recognition of Specialty Boards,” 10 CFR Part 35 amendments (70 FR 16336; 71 FR 1926) that became effective April 29, 2005.
- “Increased Controls for Risk-Significant Radioactive Sources” (NRC Order EA-05-090), (70 FR 72128). Agreement States issued legally binding requirements satisfying the requirements of NRC Order EA-05-090 by December 15, 2005.
- “Minor Amendments,” 10 CFR Parts 20, 30, 32, 35, 40, and 70 amendments (71 FR 15005) that became effective March 27, 2006.
- “National Source Tracking System,” Serialization Requirements -10 CFR Part 32 amendments with reference to Part 20 Appendix E (71 FR 65685) that became effective February 6, 2007.
- “National Source Tracking System,” 10 CFR Part 20 amendments (71 FR 65685) that became effective February 6, 2007. Agreement States are expected to adopt this regulation by January 31, 2009.
- “Medical Use of Byproduct Material - Minor Corrections and Clarifications,” 10 CFR Parts 32 and 35 amendments (72 FR 45147; 72 FR 54207) that became effective October 29, 2007.
- “Exemptions From Licensing, General Licenses, and Distribution of Byproduct Material: Licensing and Reporting Requirements,” 10 CFR Parts 30, 31, 32, and 150 amendments (72 FR 58473) that became effective December 17, 2007.
- “Requirements for Expanded Definition of Byproduct Material,” 10 CFR Parts 20, 30, 31, 32, 33, 35, 61, and 150 amendments (72 FR 55864) that became effective November 30, 2007.
- “Order Imposing Fingerprinting and Criminal History Records Check Requirements for Unescorted Access to Certain Radioactive Materials” (NRC Order EA-07-305), (72 FR 70901). Agreement States issued legally binding requirements satisfying the requirements of NRC Order EA-07-305 by June 5, 2008.
- “Occupational Dose Records, Labeling Containers, and the Total Effective Dose Equivalent Parts – 19 and 20,” 10 CFR Parts 19 and 20 amendments (72 FR 55864) that

Appendix A (Continued)

became effective February 15, 2008.

Appendix B

Frequently Asked Questions

- Q. Can the review team make a preliminary finding of compatibility for the overall program, if the finding for this performance indicator is satisfactory with recommendations for improvement?
- A. The review team should make a recommendation for an overall finding of compatibility if the State is found satisfactory or satisfactory but needs improvement for this performance indicator and no other compatibility issues have been identified in other performance indicators. If the team finds a State unsatisfactory for this performance indicator, the recommended finding to the Management Review Board should be not compatible.
- Q. If a State has adopted legally binding requirements instead of a regulation, do we still require the State to adopt the regulation in order to be considered satisfactory for this indicator?
- A. Implementation of a NRC regulation through a legally binding requirement is an acceptable approach and if the legally binding requirement is issued within 3 years, the State should be considered as meeting the requirement for this regulation.
- Q. If a State adopts legally binding requirements, is it necessary for NRC to review the requirement before NRC considers the requirement acceptable?
- A. Agreement States should submit legally binding requirements in accordance with FSME Procedure SA-201 for review. If a State has issued legally binding requirements, but has not sought NRC review, the review team should make a recommendation to the State to provide all legally binding requirements for NRC review, but the State should be given credit for addressing the requirement.
- Q. If the Agreement State staff has just begun work on drafting the necessary regulations, however State management has not received the completed package. Can the review team give the State credit for being in the process of promulgating the regulations?
- A. For the review team to consider the State in the process of promulgating the necessary regulations, the State should have completed draft regulations and the draft regulation package should be either out for public comment or within the State's administrative procedures for final promulgating.
- Q. The review team has found that the State had not promulgated "Minor Corrections, Clarifying Changes, and a Minor Policy Change," 10 CFR Parts 20, 32, 35, 36, and 39 amendments (63 FR 393477 and 63 FR 45393) and

Appendix B (Continued)

“Transfer for Disposal and Manifest; Minor Technical Conforming Amendments,” 10 CFR Part 20 amendment (63 FR 50127). Although both of these regulations revise regulations that have been identified as Category A and B, would these be considered essential regulations for determining the finding for this performance indicator?

- A. Minor revisions and clarifications to Category A or B regulations are normally not considered as critical as the initial revision to the regulations.
- Q. The review team has found that the State promulgated an amendment in accordance with NRC’s policies and procedures, however the State is not implementing the compatible requirement or is interpreting the requirements differently than NRC in the licensing program.
- A. The review team should identify the issue associated with the implementation to both the State and the Management Review Board as a compatibility issue.
- Q. What does it mean for both the Agreement State and the review team when a regulation is being held in abeyance?
- A. If a regulation is being held in abeyance, specific guidance will be provided to both the Agreement States and review teams as to the manner in which the Agreement States’ regulations are to be factored into the IMPEP review findings.

As of 2008, only three regulations have been held in abeyance, that is temporarily set aside. In these three specific cases, NRC staff continued to review Agreement State proposed and final rules but held any compatibility determination in abeyance on those rules if the Agreement State’s rules meet the essential elements of the NRC’s rule, even if the Agreement State’s rules were more restrictive than the NRC’s rule. For Agreement States without a rule or with a rule less restrictive than the NRC’s rules, the staff factored this determination into results of the NRC’s review of the State’s proposed and final rules and the compatibility findings during IMPEP reviews.
