SECTION 1 – REGISTRATION INSTRUCTIONS AND GENERAL INFORMATION

Welcome to the USACE Learning Center (ULC) FY13 annual course catalog, the Purple Book, for the PROSPECT Program. The ULC will continue to use the traditional method to determine FY13 seat allocations.

This is the third year the virtual Purple Book is located on the ULC website at <http://ulc.usace.army.mil>. Using the virtual Purple Book, instead of the hardcopy version, ensures you have current course information.

HOW TO USE THIS HANDBOOK

Sections of the Handbook

This handbook is divided into 5 sections. Those sections are displayed in the Table of Contents. Use the Table of Contents to quickly reference the information you’re seeking.

Scheduling Requirements

Annually, we solicit class seats and your Training Coordinator distributes procedures for requesting quotas. Division, District, and other agency Training Coordinators consolidate requirements and submit them electronically to the USACE Learning Center (ULC).

Note to students: Contact your Training Coordinator before enrolling in a course. Contact your supervisor if you do not know your Training Coordinator.

Priority System

Regarding our annual scheduling system, we use the following priority system established by Headquarters, HQUSACE for space allocation requests:

Priority	Description	Explanation
0	Mandatory Training	Mandated by regulation or higher headquarters.
1	Training, Knowledge, Skills and Abilities Needed Now	Need to use training within the next 6 to 12 months; therefore, the employee needs the training in the current FY.
2	Education – KSAs Needed	Need to use training within the next 12 to 24 months; therefore, the employee needs the training in the current or next training cycle
3	Development – KSAs needed in the future	Need to use training in the future, more than 24 months away. Employee may take training in the current cycle but can defer training to a future cycle.

Onsite Training Sessions

Submit inquiries for onsite training sessions to the ULC by email or memorandum. Onsite sessions should have normal class sizes, e.g., a course with a class size of 35 students should have an onsite requirement of at least 25 students to effectively use required resources. Students enrolled in individual PROSPECT courses should not be included in onsite requests. Note: It is very important that you identify onsite requirements during the annual training needs survey. Additional cost saving opportunities may be implemented when we receive early notification.

Tuition Billing System

The PROSPECT program operates on a “pay-as-you-go” tuition system. Course Managers calculate tuition by adding instructional and overhead costs (including ULC staff salaries), and dividing the total by the projected number of students.

For requested quotas, organizations pay for their students’ tuition, travel and per diem cost to attend courses. Provided dates and locations do not change, enrolling students is an organization’s commitment to pay for allocated class seats with obligated funds.

How to Pay for Scheduled Training

Corps Government Employees:

Use of the Government Purchase Card (GPC), formerly known as IMPAC Card, is mandatory using Pay.gov. Do NOT use a personal Government travel credit card. We also accept Standard Form (SF) 182s for Department of Army (DA) interns/Army Civilian Training, Education and Development System (ACTEDS) students. The SF-182 is the individual organizational requirement to document all training and MUST be provided to the ULC Registrar Office. Bills for tuitions paid by SF-182 will be processed monthly, following completion of training, through the USACE Finance Center.

Note: VERY IMPORTANT! When making a payment in Pay.gov, please be sure to use the USACE Learning Center public form to make tuition payments UNLESS you’ve received an invoice from the USACE Finance Center. In that case, be sure to use the USACE Finance Center public form.

Note for Corps Training Coordinators: We strongly recommend that USACE approving Training Coordinators become GPC holders with authority to purchase up to \$2,500 minimum, and that they identify an individual in their organization with authority to pay tuitions exceeding \$2,500 (this often occurs with onsite courses).

Non-Corps Government Employees:

Please make payments using Pay.gov. We will also accept fully-funded SF-182 forms. Bills for tuitions paid by SF-182 will be processed monthly, following completion of training, through the USACE Finance Center.

State, County and City Employees:

Please make payments using Pay.gov. Please contact the Registrar if paying by check. Non-Federal Government agencies (state or local) must prepay tuition no later than 30 days before course start date.

How to Pay for Onsite Training

Acceptable payment methods for onsite sessions are Military Interdepartmental Purchase Request (MIPR) and Standard Form (SF) 182s for DA interns/ACTEDS students. Credit card payment by other agencies is also recommended.

Annual Training Needs Survey

We determine the size and budget requirements of the annual program using results from our annual survey. Therefore, it is important that Training Coordinators input as many training requirements as possible during the survey period, 1 May – 15 June.

Prerequisites

Always check the prerequisites in the course descriptions. Supervisors are responsible for ensuring primary or substitute enrollees meet all listed requirements. Students, who don't meet course prerequisites, must request a prerequisite waiver to CEHR-ULC-PMO before taking the class.

Cancellations

Training Coordinators may cancel enrollments anytime up to 60 days prior to the start date of a class. (1) Cancellations received less than 60 days prior to the class start date for which no qualified standby student is available, and (2) no-shows will be billed for the applicable tuition. The Registrar's Office maintains a standby list for courses and most cancelled quotas can be filled if the cancellation is provided promptly. Your support in this policy assists us in maintaining the lowest possible tuition rates and in providing training to as many students as possible. Your credit card will not be charged unless the cancellation is within the 60-day no-cancellation window. In this case, the tuition charge will be processed and the Registrar's Office will notify you. **We will continue to honor late requests for cancellations without penalty based upon deployment, illness, and other emergencies.**

Questions

Refer all questions **through local Training Coordinators** to one of the following:

Purpose	Telephone/FAX	E-Mail

FAQs

You may view and download this current Purple Book, credit card procedures, and Frequently Asked Questions (FAQs) from the ULC website at <http://ulc.usace.army.mil>.

TRAINING INFORMATION FOR SUPERVISORS

Laws and Regulations

- * The Government Employees Training Act (PL 85-507), GETA.
- * AR 350-1, Army Training and Leader Development.
- * The Army Regulation, as AR 690, Chapter 410.
- * Individual Division/District/Activity Procedures or Regulations.
- * ER 690-1-414, PROSPECT

Training Defined

Training - process of making available to an employee a planned and coordinated educational program of instruction in various fields which are or will be directly related to the performance of the employee's official duties for the government. This educational program should effectively increase the knowledge, proficiency, ability, skill and qualifications of the employee in the performance of official duties.

Official duties - authorized duties that an employee is currently performing or those which he/she could reasonably be expected to perform in the future. This includes potential duties in a different job or occupation at the same or higher level than one currently held by the employee.

Principal Purpose of Training

The main purpose of training is to provide knowledge and skills needed in situations such as:

- * Agency mission or program changes.
- * New technology.
- * New work assignments.
- * Improvement in present performance.
- * Future staffing needs.
- * Development of unavailable skills.
- * Requirements for journeyman status in an apprenticeship role.
- * Orientation for new employees.
- * Adult basic education.

Training Facilities

The Government Employees Training Act (GETA) provides for training employees through either government or nongovernmental facilities, however, training employees through nongovernmental facilities is authorized only after the department head determines that adequate training through a government facility is not reasonably available. Each department shall also provide for training, insofar as practicable, through those government facilities which are under department jurisdiction or control.

Length and Types of Training

The Office of Personnel Management considers any training under 120 days to be short-term training, while training over 120 days is long-term training.

Payment of Training Expenses

GETA authorizes the head of each department to do the following:

- * Pay all or any part of the salary, pay or compensation (excluding overtime, holiday, and night differential pay) of each employee selected and assigned for training through government or nongovernmental facilities for each period of training.
- * Pay or reimburse the employee for all or any part of the necessary expenses of each training assignment including the necessary costs of travel and per diem in lieu of subsistence; transportation of immediate family, household goods, and personal effects whenever the estimated cost of such transportation and related services is less than the estimated aggregate per diem payments for the period of training; tuition and matriculation fees; library and laboratory services; purchase or rental of books, materials, and supplies; and other services or facilities directly related to the training of the employee.

Responsibility for Training

Supervisors/managers are responsible for training their subordinates. If an employee fails a job assignment because of the lack of training, the supervisor is held responsible, not the employee. Supervisors are responsible for asking superiors, Activity Career Program Managers (ACPMs) or personnel technicians for assistance needed. Each activity should encourage self-development of employees and recognize performance improvements that result from training.

Employees also have a basic responsibility for self-development. Employees are encouraged to show initiative regarding training opportunities and to demonstrate improvements resulting from training. When employees are selected for training, they are obliged to give their best thought and effort to it.

Selection for Training

Agencies must establish procedures necessary to ensure:

- * In the selection of employees for training, there is no discrimination because of race, color, religion, sex, national origin, age or other factors unrelated to the need for training.
- * Eligible employees will have a reasonable opportunity for consideration in selection for training which is to result in promotion. Merit promotion procedures must be followed in selecting career or career-conditional employees for training that is given primarily to prepare trainees for advancement and that is required for promotion. These requirements have been established in the interests of fair and equitable treatment of employees as required by the law and principles underlying the Federal Merit Promotion Program.

Consider factors such as the following when selecting employees for training:

- * Employees' need for training.
- * Potential of employees for advancement.

- * Extent to which employees' knowledge, skill, attitudes, or performance is likely to improve by training.
- * Ability of employees to share learning with others upon returning to the job.
- * Length of time and degree to which the agency expects to benefit from the employees' improved knowledge, skills, attitudes, and performance.
- * Training opportunities previously afforded employees by the agency.
- * Employees' own interest in and efforts to improve their work.

Training Policy

General training policy is found on the PERMISS section of <http://cpol.army.mil> or on the CPAC website.

DISTRIBUTED LEARNING (DL) -YOUR TRAINING SOLUTION

Introduction

Training and education are investments in readiness. In an effort to maintain readiness, stay within reducing budgets and continue to meet future operational and compliance requirements, the Corps must take advantage of all available learning strategies and technologies. Resident instruction and distributed learning in its many forms are all components in our efforts to leverage technologies. Under the guidance of the USACE Human Resources (HR) Directorate, the US Army Corps of Engineers Learning Center (ULC) has developed a planning strategy that uses these technologies as appropriate to accomplish this goal.

As of March 2012, the ULC is working with representatives of the Army Training Support Center (ATSC) to host PROSPECT DL training on the Army Learning Management System (ALMS), an existing LMS available to all Army organizations. The plan is to modify the Training Management Information System (TMIS), currently used by ULC to manage training programming (surveys/allocations) and execution, to interface with the ALMS. The USACE Learning Network (ULN) (<https://www.MyULN.net>) as currently configured will remain available for users taking DL until the TMIS/ALMS interface is developed/implemented.

To contact the ULN Help Desk: ulc.uln.support@usace.army.mil or call 256-895-7730.

Procedures for Purchasing DL Courses

USACE and other agencies purchasing a distance learning course or product must pay in advance. The method of reimbursement for DL courses and products is via a Government Purchase Card (GPC). Do not use Government travel credit cards for payment. Payment is made through Pay.gov.

CONTINUING EDUCATION CREDITS

General Information

Many state and other certifying and licensing bodies require their members to earn continuing education credits to maintain certifications and licenses.

The ULC maintains a rigorous certification/registration program. Many PROSPECT courses provide continuing education credits through six national professional organizations:

Organization	Credit
American Institute of Architects (AIA)	LU (Learning Unit)
American Planning Association (APA)/American Institute of Certified Planners (AICP)	CM (Certified Maintenance) (hour)
International Association for Continuing Education and Training (IACET)	CEU (Continuing Education Unit)
National Society for Professional Engineers (NSPE)	PDH (Professional Development Hour)
Project Management Institute (PMI)	PDU (Professional Development Unit)
Green Building Certification Institute (GBCI)	CE (Continuing Education) Credits

In FY12, the ULC became an authorized provider with the Leadership in Energy and Environmental Design (LEED) professional credentialing program, a third-party credentialing organization under the Green Building Certification Institute (previously U.S. Green Building Council). To learn more about GBCI and LEED certification, go to <http://www.gbci.org>.

The following summarizes PROSPECT courses authorized continuing education credits for FY13. Course descriptions in Section 2b also identify their respective credits. Additionally, PROSPECT course certificates indicate the type and number of credits earned. Managers and employees should consider these crediting courses when developing Individual Development Plans (IDPs).

COURSES SUPPORTING USACE COMMUNITIES OF PRACTICE (COPS)

The Corp’s Communities and sub-Communities of Practice (CoPs/sub-CoPs) ensure that employees develop and maintain technical competencies. CoP/sub-CoP leaders designate proponents who determine course curriculum based on results from ULC supported surveys and results of the National Technical Competency Study (NTCS). This link to proponents allows PROSPECT to serve as a conduit for individual and organizational learning.

The following is a list of CoPs, Sub-CoPs and respective PROSPECT courses:

Civil Works (CW) Planning & Policy		
	11	Coastal Project Planning
	60	Consequence Estimation with HEC-FIA
	75	Master Planning Principles
	77	PCC2 Planning Principles and Procedures
	86	PCC1 Civil Works Orientation
	214	Real Property Utilization
	241	Master Planning Practices
	270	PCC4 Economic Analysis
	315	Development of Project Partnership Agreements
	345	Nonstructural Measures for Flood Risk
	349	Risk Analysis-WRP&M
	406	PCC6 Plan Formulation (WK)
	407	PCC7 Public Involvement & Team Building
	408	PCC3 Environmental Considerations in Planning
	409	PCC5 H&H Considerations for Planning
Program and Project Management		
	10	CW Program Development
	88	Project Management - MIL PROG
	91	Public Involvement - Communication
	120	CE Commanders Course
	128	Advanced Scheduling For Project Managers
	143	Scheduling Basics for Projects
	224	Customer Relationship Management
	227	Medical MILCON/SRM Program Execution
	334	District Officer Introductory Course
	355	Project Management in USACE
	358	Civil Works Programming Process
	383	Project Teambuilding
	402	Project Management Professional (PMP PREP)
Engineering & Construction		
Architecture	3	Architectural Hardware-QV
	244	Sustainable Military Building Design and Construct
Civil Engineering	185	Specs for Construction Contracts
	218	Civil Design for Planning
Construction Management	1	Cost Reimbursement
	4	A-E Contracting
	21	Concrete Fundamentals
	29	Const Quality Mgt
	40	Earthwork Construction--QV

	50	Maintenance and Repair of Pavements
	54	General Construction-QV
	68	HVAC Systems TA&B-QV
	74	Mechanical--QV
	80	Construction Schedule Performance Management
	115	Pavement Evaluation and Design
	180	Estimating for Construction Modifications
	208	E&D Quality Management
	246	HVAC Control Systems: O&M
	257	Concrete Maintenance and Repair
	327	HVAC Systems Commissioning
	340	HVAC Control Systems: Design & QV
	344	Early Contractor Involvement (ECI)
	366	Construction Contract Administration
	368	Negotiating Construction Contract Modifications
	391	HVAC Design: Basic
Construction Management	425	Design Build Construction
Cost Engineering	24	Civil Works Cost Engineering
	118	Dredge Cost Estimating
	181	Cost Estimating Basics
	220	Cost Risk Analysis Basic
	305	MII Basic
	312	MII Advanced
Dam Safety	28	Dam Safety
Electrical & Eletronic Engrg	42	Electrical Quality Verification
	78	National Electrical Code
	90	Electrical Exterior Design
	106	Diesel Generators: Basics/Testing

SECTION 2 - PROPONENT-SPONSORED ENGINEER CORPS TRAINING (PROSPECT)

Corps Regional Concept

The regional concept for scheduling locations of the classroom courses includes four regions: Western, Central, Northeastern and Southeastern. These regional centers are shown on the following map:

Most course sessions surveyed occur at regional centers. Exceptions include: 1) Site dependent courses, approximately 1/3 of the program (i.e., Vicksburg, Mississippi (ERDC); Davis, California (HEC); and 2) Courses with a large number of applicants from a city other than a designated regional center, (e.g., Omaha, Nebraska in the Central Region).

The ULC gives priority consideration to placement of classes at the Beville Center in Huntsville, Alabama, the Corps' training facility.

We encourage you to select a session closest to your assigned work location. Cooperation of all parties - proponents, instructors, Training Coordinators, managers, and students - will secure the benefits of lower travel costs through regional scheduling.

General

The courses in this section meet Corps of Engineers and other government agency training needs. Corps and other government employees from HQUSACE, IMCOM/ACSIM, Corps divisions, districts, laboratories and contractors teach these courses. PROSPECT courses provide formal learning opportunities in support of the USACE Communities of Practices (CoPs).

Contact Information

Director
USACE Learning Center (ULC)
ATTN: CEHR-ULC-PMO (Registrar)
PO Box 1600
Huntsville, Alabama 35807-4301
Telephone: (256) 895-7425/7421
FAX: (256) 895-7469

Cost

Your activity will pay for tuition, travel and per diem.

Student Notification

The Registrar transmits the Student Reporting Instructions (SRIs) electronically to Training Coordinators approximately 60 days before the month when the class session will occur. These instructions provide hotel accommodations, classroom locations, and all other pertinent course information.

Summary Lists to Help Find Courses in Course Descriptions:

Distributed learning (DL) courses

Resident PROSPECT courses listed by course number: Use if you are looking for the course title.

Resident PROSPECT courses listed by course title: Use if you are looking for the course number.

PROSPECT courses added to and deleted from the FY13 inventory.

Course Descriptions

Active resident courses listed by course title: Course descriptions provide course purpose, description, prerequisites, continuing education credits, tuition, and course length. Reminder: Supervisors are required to check the prerequisites in course descriptions (Section 1, Prerequisites).

National Technical Competencies (NTC): Click the link "Competencies" to bring up a list of competencies taught in the given course.

For specific questions, clicking the "Contact" link will allow you to email the course manager.

DISTRIBUTED LEARNING (DL) COURSES

ULC Courses:

- (700) Fiscal Law Refresher
- (701) CQM for Contractors Recertification (fee)
- (706) Streambank Erosion and Protection Vol I-CN
- (707) Streambank Erosion and Protection Vol II-CN
- (762) Project Management Business Process (PMBP) – An Overview
- (763) PMBP Working
- (844) QRP/Ordnance and Explosives Recognition & Safety

1391 PREPARATION

253 Length: 36 Hours 5413901A

Tuition: \$1490

Purpose.

This course provides a logical framework for preparing the DD Form 1391, "Military Construction Project Data," and provides working knowledge on how to verify requirements, prepare the documentation package, review, certify, and program a project to request congressional authorization and appropriation of military construction (MILCON) funds.

Description.

Topics covered include: (a) project requirement identification and definition; (b) required verification and justification; (c) alternative considerations; (d) criteria and standards; and (e) practical exercises (case study). Preparation of DD Form 1391 and related documentation: (1) detailed justification; (2) supplemental data preparation; and (3) project summary. Programming policies and procedures: (a) HQDA/HQUSACE military construction policies; (b) program development cycle for military construction; (c) appropriations and programs that provide for military construction; (d) program formulation and approval; (e) congressional interest; (f) Region/ACOM/ASCC/DRU/HQUSACE/MS/USAISEC/HQIMCOM/HQDA review, certification and approval process; and (g) how to market a project. This course includes an overview of the automated applications that support the military construction process.

Prerequisites.

(a) Personnel at all levels, (installation, Region, ACOM/ASCC/DRU, USACE district, USACE division, HQUSACE, HQIMCOM, HQDA, OSD), who are assigned to prepare, review, certify, approve, or use (e.g., design project managers) DD Forms 1391 (including personnel from other services, defense agencies and the private sector who are involved in DD Form 1391 Preparation); (b) Occupational series: 0800, 0020, and other personnel involved in DD Form 1391 process; (c) Grade: GS-05 and above. Nominees should have 6 months "on-the-job" training prior to attending this course.

1391 PROCESSOR

252 Length: 36 Hours 5413P01A

Tuition: \$1440

Purpose.

The DD Form 1391 Processor System, which is available in a web-enabled environment, is the means for documenting and submitting military construction project requirements and justification data for funding requests to Congress. Through lectures and practical exercise sessions, this course introduces the student to the capabilities, formats, functions, and usage procedures of the DD Form 1391 Processor System. The DD Form 1391 Processor System allows the user to prepare, edit, query, submit, review, and distribute DD Forms and supporting DD Form 1391 documents electronically using a personal computer.

Description.

Topics covered include creating, submitting, reviewing, and editing individual DD Forms 1391 as well as creating directories and custom reports. The custom reporting and directory features can assist an organization in managing its military construction program. All features of the system are covered.

Prerequisites.

Nominees must be assigned current positions at Army installation, Region, MACOM, USACE district, USACE division, HQUSACE, HQ, IMA, or HQDA who are involved in preparing and/or reviewing the DD Form 1391 and related documentation associated with the military construction planning, programming, and budgeting process. (Note: Although this course is focused on Army policy, employees of other Services are welcome to attend for information purposes.)

A-E CONTRACTING

4 Length: 36 Hours 41AEP01A
CEUs: 3.1 PDHs: 31 LUs: 34

Tuition: \$1260

Purpose.

This course is for engineers, architects, technicians, project managers, contract specialists, and other personnel responsible for A-E contract procurement, and/or the supervision and administration of A-E contracts. The course provides a concentrated look at all aspects of A-E contracting, including acquisition planning, public announcement, selection, preproposal activities, negotiations, contract award, administration and closeout.

Description.

Through lectures, individual study, and work group activities, this course provides detailed explanations of the laws and regulations affecting the A-E acquisition process, including selection, cost principles, preparation of Government cost estimates, cost or pricing data (truth-in-negotiations), negotiation strategies and techniques, contract award, and contract administration. Also covered are types of A-E contracts, contract clauses, proposal analysis, contractor liability, performance evaluations, and the A-E Contract Administration Support System (ACASS). The students are provided a course manual with essential background information, regulations, examples and exercises.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0340, 0800, 0900, and 1100. (b) Grade: GS-11 or above. Lower grade employees are eligible only if their current duties are directly related to A-E contracting. (c) Employees with current or pending assignments which entail selection, negotiation of and/or administration of A-E contracts are eligible. (d) Nominees must not have attended similar courses within the past 3 years. (4) Attendees must bring a pocket calculator, and if possible, a laptop computer with EXCEL software.

students should bring computer is able to.

Notes.

ADVANCED APPLICATIONS OF HEC-HMS

369 Length: 36 Hours 35AHC01A

Tuition: \$2190

Purpose.

This course provides instruction in the use of the Corps' Hydrologic Modeling System (HEC-HMS) for ecosystem restoration, flood damage reduction, forecasting, and navigation studies where advanced simulation strategies are required. Workshops are used to provide hands-on reinforcement of scientific and engineering principles presented in lecture. Students will be prepared to work on more complicated studies after completing the course.

Description.

The course covers advanced hydrologic analysis methods. Students are introduced to continuous simulation techniques including soil moisture modeling and parameter estimation from soil databases. Approaches are provided for simulating interior ponds and their interaction with main channel flow. Snow accumulation and melt modeling is conducted using a temperature index approach. Distributed modeling with the ModClark approach is included with attention to using GIS to develop the complex data that is required in gridded hydrology. The week ends with approaches to representing difficult urban hydraulic scenarios. Teaching of scientific and engineering principles of advanced hydrologic studies is integrated with increasing capability to use HEC-HMS as a tool.

Prerequisites.

Nominees must have a working knowledge of hydrologic processes and how they are represented in HEC-HMS. Students should have taken Course 178, Hydrologic Modeling with HEC-HMS, or have equivalent work experience. Basic HEC-HMS navigation skills will not be taught in this class. Nominees must be assigned (a) Occupational Series: Selected 0800 and 1300; (b) Grade: GS-09 or above.

ADVANCED SCHEDULING FOR PROJECT MANAGERS

128 Length: 36 Hours

46ASP01A

Tuition: \$1895

Purpose.

USACE manages thousands of projects across a variety of Programs, including Civil Works, Military Programs, Environmental, International/Interagency Support, and may include multiple phases: Project Management Plan, studies/investigations, agreements, design, construction, operations and maintenance, closeout, etc. These projects are required to be managed in the USACE Program and Project Management System P2. This system is used to create and maintain project schedules and budgets. The purpose of this course is to teach advanced scheduling techniques to improve Program and Project execution and workforce utilization.

Description.

The course provides advanced scheduling tools and techniques such as workload analysis, resource leveling, managing and fine tuning project schedules, risk assessment, risk management, performance management, controlling project execution, use of what-if analysis for slip recovery, portfolio management, schedule forensics, data quality, and tools for schedule/budget development.

After completing this course, the student should be able to (1) better manage project schedules and budgets through the use of the USACE managed Program and Project Management System, (2) anticipate and avoid cost/schedule overruns, (3) improve project data quality, (4) use workload analysis in order to anticipate rather than react to problems, (5) recover from projected schedule slips (6) better manage using critical path, (7) use historic data to develop better schedules/budgets, and (8) assess execution using Earned Value.

Students will be taught in a computer lab environment where hands on software training is provided. Students will be encouraged to use their existing projects in the training to learn advanced scheduling techniques.

Prerequisites.

Nominees should have a current project(s) assignment requiring knowledge of P2 and network analysis as a schedule performance management technique and must be familiar with Primavera and scheduling concepts. Acceptable course prerequisites are listed below. Nominees should be at Grade GS-9 through GS-13 and have access/accounts for Primavera Project Manager, Primavera Web, Oracle Financial Analyzer, and Business Objects.

This course is highly desirable for USACE District Office, Program and Project Managers, and Schedulers. Resource Providers may benefit through improved

understanding of the Project Manager's role and the link between project schedules and workload analysis and planning.

Prerequisite Training: Nominee should have completed the PROSPECT Scheduling Basics for Projects (#143) course as well as the P2 sponsored course, P2 How To (P200 100) in order to assure the nominee understands the basic scheduling principles and techniques and knows the basics of how to use P2 to plan and execute their projects. No basic scheduling will be included in this course.

ADVANCED STEADY FLOW WITH HEC-RAS

67 Length: 36 Hours

35AH201A

CEUs: 3.1 PDHs: 31

Tuition: \$2840

Purpose.

This is an advanced course in applying computer program HEC-RAS. The course provides participants with the knowledge to effectively use computer program HEC-RAS to analyze difficult hydraulic conditions in natural and constructed channels.

Description.

Topics include applications and limitations of one-dimensional models, effective use of HEC-RAS bridge and culvert analysis techniques, supercritical and mixed flow, use of the channel modification option to analyze proposed channel modifications, divided flow analysis, analysis of gated structures, modeling drop structures, and incorporating spatially referenced data into HEC-RAS and mapping of RAS results using HEC-GeoRAS and RAS Mapper.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 and 1300; (b) Grade: GS-7 or above. Students must be experienced engineers who have attended Steady Flow with HEC-RAS (Crs. No. 114). Participants must be in positions where they are currently engaged in using HEC-RAS in hydraulic investigations.

ADVANCED STREAMBANK PROTECTION

394 Length: 36 Hours 35ASP01A
CEUs: 3.2 PDHs: 32

Purpose.

Building on information presented in the Streambank Erosion and Protection course (#285), this course provides project managers, planners, technicians, engineers, biologists, designers, regulators, and personnel involved in permit review and Section 14, 1135, and 206 projects, with advanced training in the geomorphological aspects of river planform, the hydraulic and geotechnical processes related to specific streambank and bed erosion problems and their effect on the stream system, advanced training and design criteria for recently developed innovative protection techniques, and a short introduction to the benefits and importance of streamside riparian zone restoration.

Description.

The majority of this class will be taught in the field. Classroom lectures will cover recently developed protection techniques, such as: Lunkers, Ajax, Newbury rocked riffles, and dormant willow post method. Utilizing a group of nationally recognized instructors, students will participate in a series of half- and full-day field trips to investigate a wide array of stream types (differing sizes, slopes, bed materials) within a 50 mile radius of Grenada, MS. Over 25 streamside, interactive mini-lectures will be presented in the field, with subjects to include: identifying dominant hydraulic, geotechnical, and morphological processes, analyzing trees and roots, transitions, bed gradation sampling techniques, vegetative roughness analysis, the role of Large Woody Debris in bank protection (hydraulic, geotechnical, and environmental considerations), where is vegetation appropriate, and vegetative secession. The long-term performance (hydraulic, geotechnical, and environmental) and effectiveness of several grade control and streambank protection projects will be analyzed. Some projects are over 20 years old. Some failed sites will be reviewed. Repair or redesign and replacement of these projects will be discussed. Using advanced geomorphic analyses techniques, several severe bank erosion and bed degradation sites will be reviewed from both a local, and system-wide perspective. For these sites, project goals will be formulated and conceptual designs developed. In-class discussion will focus on further review of completed projects, failures, and erosion problems studied during the field trips. Students are encouraged to give a brief presentation of a current project for group discussion and review.

Prerequisites.

Within the last five years the student must have completed the Streambank Erosion and Protection course (#285). Federal nominees must be assigned (a)

Occupational Series: Selected 0000-0100, 0400, 0800, 1300, and (b) Grade GS-07 or above.

APPLICATION OF ENGINEERING GEOLOGY

251 Length: 36 Hours 35AEG01A

Tuition: \$2860

Purpose.

This course presents a combined application of engineering geology, geophysics, and rock mechanics. The course is recommended for engineering geologists, design engineers, and construction engineers.

Description.

Lectures, demonstrations, and reading assignments will cover: the history and evolution of Engineering Geology; Site Investigations; Seismology; Basic Rock Mechanics; Rock Excavation; Foundation Treatment; Rock Reinforcement; Rock Slope Stability; Underground Construction; Ground Water; and Hazardous/Toxic/Radioactive Waste.

Prerequisites.

Nominees should be assigned: Occupational Series: Selected 0800, 0810, 1310, and 1350; Grade: GS-07 or above and project management personnel.

ARCHITECTURAL HARDWARE-QV

3 Length: 36 Hours 35AHQ01A
CEUs: 2.8 PDHs: 28 LUs: 28

Tuition: \$2535

Purpose.

This course develops new skills oriented to the quality verification of hardware used in building construction and updates the student's knowledge of current industry practices and changes in specifications. It also provides training that results in a more effective quality assurance.

Description.

This course presents the fundamentals of the industry including hardware materials and finishes-their purpose, use, and application; basic information covering all architectural hardware products, terminology, and types of doors and frames; and the fundamentals of hardware schedules, preparation, and use. Emphasis is placed on how to interpret a hardware schedule for installation purposes and field use, as well as an analysis of a hardware schedule submitted to the designer for approval.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800; (b) Grade: GS-05 or above; (c) current or projected assignment with responsibility for providing quality verification of hardware, specifying hardware, or reviewing hardware submittals from contractors for approval. Student must not have attended this or a similar course within the past 5 years.

BOAT OPERATOR LICENSE EXAMINER

172 Length: 40 Hours 33BOL01A

Tuition: \$3155

Purpose.

This course trains, tests, and licenses individuals as motor boat license examiners for the Corps of Engineers.

Description.

Lectures, demonstrations, group assignments, and practical exercises cover the areas listed below and enable students to perform duties as outlined in Engineer Regulation 385-1-91 and be in compliance with EM 385-1-1 Safety and Health Requirements Manual. Specific areas to be covered include (a) USACE Boat Licensing Policy: (b) equipment requirements and equipment maintenance: (c) boat orientation and boat maintenance: (1) getting underway (2) checking equipment (3) starting procedures and (4) refueling procedures: (d) trailers and trailer maintenance (e) marlinspike seamanship (f) aids to navigation (g) rules of the road (h) fire suppression (i) course familiarization (j) emergency procedures: (1) rescue sequence (2) self rescue techniques (3) man overboard rescues: (k) boat operation: (l) practical course maneuvering exercises: (1) serpentine course (2) transition serpentine (3) avoidance course (4) docking (5) trailering (6) launching and retrieving (7) alongside maneuvering (8) towing and (9) anchoring procedures.

Prerequisites.

Individuals attending this course must show proof of completion of a U.S. Coast Guard or National Association of State Boating Law Administrators (NASBLA) training course for the state in which they are operating and be: (a) currently licensed as Corps of Engineers Class A and Class I boat operators (b) able to swim in a Personal Flotation Device (PFD) for 100 yards (c) an experienced motor boat operator and (d) designated to train local motor boat operators in boating skills.

BUDGET TRAINING

254 Length: 32 Hours 42BTC01A
CEUs: 3.3

Tuition: \$1225

Purpose.

This course is targeted for those civilian and military employees of the Corps of Engineers who work directly within the financial management arena. It provides a framework and knowledge of the federal budget process with specialized emphasis on policies and procedures of the Corps of Engineers. The objective is to provide a uniform understanding of Corps budgeting so that operations are improved/streamlined at all Corps organizational levels.

Description.

The course describes program and budget activities at the HQUSACE, MSC, District, FOA, and Laboratory levels, and how these activities interrelate with those at Army, DOD, OMB, and the Congress. The curriculum is structured around the formulation and execution of an activity's operating budget. The material is presented through lectures and practical exercises covering various budgeting processes and budget-related issues. Major topics/areas include command operating budgets; Corps of Engineers funding sources to include military, civil and reimbursable programs; military and civil works budgeting; budget execution; statutory and administrative limitations; mobilization; and Corps of Engineers revolving fund.

Prerequisites.

Restricted to full time Corps members in the Grade of GS-11 (0-3) and higher in all professional fields who have significant financial management responsibilities in their commands. The target Corps members are individuals in the CP-11 career field. Priority enrollment to this course will be afforded to the CP-11 careerist. Waivers will only be considered for CP-11 personnel below the GS-11 level and those must be approved by the student's local Chief of Resource Management prior to requesting a space allocation. Other professional series below the GS-11 will not be considered.

BUILDING AIR BARRIERS AND PRESSURE TESTING

126 Length: 36 Hours 35BAP01A
CEUs: 3.0

Tuition: \$1420

Purpose.

Engineering and Construction Bulletin 2009-29 implement new Army requirements to install continuous air barriers and to perform pressure testing to determine overall air leakage in all new and major retrofit Army construction projects. This class will provide architects, engineers, and QA personnel knowledge and skills to design and construct effective continuous air barriers correctly in Army facilities and to witness building pressure tests on completed facilities which will determine overall building air leakage rates.

Description.

Through lecture, hands-on laboratory sessions, and testing, this course presents the following building air barrier and pressure testing related subjects: design and construction of building air barriers including materials, components, and systems; design and construction of HVAC air distribution systems; the USACE Air Leakage Test Protocol; building pressure testing equipment, including manufacturer's fan capacities, calibration requirements, and accuracies; collection of pressure test data (i.e. CFM pressure); and data analysis and calculations, including linear regression, correlation, confident intervals, and error evaluation.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0800; (b) Grade: GS-05 through GS-14, or equivalent; (c) current or projected position as an architect, engineer, engineering technician, construction representative, or project manager.

BUILDING INFORMATION MODELING

51 Length: 24 Hours 41BIM01A

Tuition: \$ 880

Purpose.

This course facilitates the inclusion of Building Information Modeling (BIM) in the development of construction documents requiring the interoperability of design drawings, contract details, environmental conditions, submittal processes, and other specifications that impact building quality. The implementation of BIM can bridge the information loss currently associated with handing a project from the design team to the construction team and, finally, to the building owner/operator. Each team is able to reference back to digital information they developed during their period of contribution to the BIM model. This course illustrates through practical examples how architects, construction engineers, and facility managers can use this information to quickly and accurately create sustainable building designs, support construction, and improve operation and maintenance of buildings.

Description.

This course is an overview of the geometry, spatial relationships, geographic information, quantities and properties of building components. It provides a demonstration of the entire building life cycle including the processes of construction and facility operation. This course illustrates how quantities and shared properties of materials can easily be isolated and defined as systems, assemblies, and sequences shown in a relative scale with the entire facility or group of facilities. The focus of the course is on the relationships of the design team, project manager, construction manager, and facility manager and how building information modeling is used to effectively control all aspects of construction, operation, and maintenance.

Prerequisites.

Project, Construction, Facility Managers (GS9-13), Series 0020, 0800, 0150, and 1640.

CE COMMANDERS COURSE120 Length: 36 Hours 15CCC01A
CEUs: 2.5 PDHs: 25

Tuition: \$4430

Purpose.

The USACE Command Preparation Program orients newly assigned district commanders and deputy division/district commanders to some of the unique aspects of command in USACE organizations. The program also provides an understanding and awareness of a broad range of topics related to executing the USACE mission and serving its customers. Consisting of two subcourses, PCC and the Commanders' Course, the USACE Command Preparation Program is intended to establish both the doctrinal framework for district operations, as well as specific tactics, techniques, and procedures for success.

Description.

District Engineer Pre-Command Course (PCC), "District Command - Essential Facts and Knowledge," is five (5) days long. It provides the district commander designees with the tools, knowledge, and fundamentals to assume command of their district. They will learn key concepts of the Project Management Business Process, and becoming familiar with the associated PMBP portal, Resource Management, Human Resources, Emergency Management, media engagements, engagements with our stakeholders/ customers/partners in the Military and Civil Works missions. In addition to hearing the Chief's command philosophy, they will meet with the Directors of Civil Works and Military Programs. The HQ staff will be introduced, as well. The class will tour the Hill with Congressional Office visits, hearing from key staffers their experiences with Corps visits.

The course starts the first Monday after the last Senior Service College graduation and is mandatory for all District Engineer designees assuming command later in the year.

USACE Commanders' Course, "District Command - Tactics, Techniques, and Procedures" is 5 days long. It is mandatory for all recently assigned District Engineers and recommended for all division and district deputy commanders. It builds upon the introductions in PCC, allowing the students to fully explore the details of command of USACE organizations. Led by serving District Engineers and subject matter experts, the students use lecture and case studies to gain deeper understanding of USACE processes and doctrine. This Phase takes place in October, immediately before the Fall District Commanders' Conference.

Prerequisites.

Designated and recently assigned district commanders and deputy district/division commanders. Commanders are nominated by the Military Personnel Division of

HQUSACE (CEHR-M). Deputy commanders are nominated by their district/division. Nominations for deputy commanders for Phase II should be sent to the Director, USACE Learning Center, ATTN: CEHR-ULC-EC, P.O. Box 1600, Huntsville, Alabama 35807-4301.

CE CONTRACT LAW

342 Length: 36 Hours 37ECL01A
CEUs: 2.8 PDHs: 28

Purpose.

This course is primarily intended to instruct USACE attorneys in the basic legal principles and procedures related to Corps of Engineers construction contracting. Attendees will be able to provide competent legal advice on contractual matters and to process contract actions such as bid protests, mistakes-in-bid, and claims and appeals.

Description.

Through the use of lectures, workshops, and case study sessions, this course primarily addresses those aspects of construction contract law essential to successfully accomplishing the Corps' contract mission. This course is designed for training Corps of Engineers attorneys, acquisition personnel, and project managers.

Prerequisites.

Nominees must be assigned (a) Occupational series: 905, 1102, or 340; (b) Grade: GS-09 or above; (c) Other: This course is recommended for attendees that have had basic government procurement law training.

CERCLA/RCRA PROCESS

356 Length: 24 Hours 33HEL01A
CEUs: 2.1 PDHs: 21

Tuition: \$1280

Purpose.

This course trains personnel on the Comprehensive, Environmental Response, Compensation and Liability Act (CERCLA) hazardous substance response process and the Resource Conservation and Recovery Act (RCRA) corrective action process as it relates to the Department of Defense. It addresses the Defense Environmental Restoration Program which includes the Installation Restoration Program (IRP), the Base Realignment and Closure (BRAC) Program, and the Formerly Used Defense Sites (FUDS) Program. It also has applicability to cleanups conducted under the Formerly Used Sites Remedial Action Program (FUSRAP), the EPA Superfund program, and cleanups at Army Corps of Engineers Civil Works facilities. This is an ISEERB approved course.

Description.

This course has been developed by in-house USACE staff and focuses on the regulatory requirements for cleaning up hazardous substances, pollutants, and contaminants under CERCLA and solid and/or hazardous wastes at RCRA sites. This course covers the CERCLA process as outlined by Subpart E of the National Contingency Plan and the RCRA corrective action process as implemented via EPA guidance, RCRA permit requirements, and consent orders. CERCLA topics addressed include preliminary assessments, site inspections, removal site evaluations, engineering evaluations/cost analyses, removal actions, remedial investigations, feasibility studies, proposed plans, records of decision (ROD), pre and post-ROD changes, remedial design and construction, and public participation requirements. RCRA topics include the initiation of the RCRA corrective action process via permit conditions and consent orders, the RCRA Facility Assessment, RCRA Facility Investigations, Interim Stabilization Measures, Corrective Measures Studies, and Corrective Measures Implementation. In addition to the RCRA course, individual two-day workshops on the CERCLA or RCRA process can be tailored to meet your site specific training needs. Whether you are interested in an onsite CERCLA/RCRA process course or a separate course featuring either the CERCLA or the RCRA process, contact the USACE Learning Center, Huntsville, AL.

Prerequisites.

Nominees must have at least one year of environmental experience. Priority will be given to personnel directly involved in environmental restoration. The target audience for this course includes the following occupational series: 800 series Engineers (0801, 0819, 0830, 0893, 0896, etc); Environmental Protection

Specialist (0028); Program Mangers, Engineering and Science (0340); Industrial Hygienists (0690); Geologists/Hydrologist (1350, 1315); and Chemists (1320).

CIVIL DESIGN FOR PLANNING

218 Length: 36 Hours
CEUs: 3.0 PDHs: 30 LUs: 30

35CDP01A

Tuition: \$1630

Purpose.

This course focuses on the Corps of Engineers (USACE) Civil Works project development process. It provides a general understanding of the broad-range of engineering studies and sensitive engineering issues that impact and influence project formulation, the reconnaissance and feasibility planning phase, as well as the preconstruction engineering and design (PED) phase. The course also covers the processes involved in accomplishing studies (e.g. independent technical review, technical and policy review, quality control, value engineering), and tools (mapping, risk based analysis, Project Management Plans, etc.). It discusses the role of the designer, planner, and project manager in the context of the Project Delivery Team. It is intended to reach newly assigned professional scientists/engineers within the engineering, planning, and project management functions of the Corps or those who are new to the Civil Works process. The class can also provide an excellent refresher and update for staff currently working in the program. Individuals not working with, or planning to work with, the USACE Civil Works process may receive less benefit from this class.

Description.

The objective of this course is to develop knowledge, skills, and aptitudes regarding the policies, procedures, tools, and techniques for the execution (planning and design) of a USACE Civil Works project. After completing this course, the student should be able to more effectively execute and coordinate a multi-disciplinary USACE Civil Works project. Topics include organization and development of resources required to execute the process, policy guidance, and various sensitive design concerns within the project planning process (including engineering overview, geotechnical, electrical/mechanical, hydrology and hydraulics, risk-based analysis, value engineering, structural engineering studies, geographic information systems, and the implications of the "12 Actions for Change"). Emphasis is placed on the Independent Technical Review process, and successful navigation through the review process. This course tracks the Corps of Engineers Project Management Business Process from the authorization of the first study to the completion of construction. The course was developed for USACE Civil Works personnel and may be of reduced value to personnel from other agencies. Students completing the class may receive 3.0 CEU (Continuing Education Units), or 30 LU (Learning Units), or 30 PDH (Professional Development Hours).

Prerequisites.

Nominees should be on, or have a potential assignment to a Civil Works study team in the Planning or Engineering phases and have functional responsibilities within the Planning, Engineering, or Project Management organizations. (a) Occupational Series: All series; and (b) Grade: GS-07 through GS-13. Individuals not working with, or planning to work with, the USACE Civil Works process may receive less benefit from this class. Steel-toed boots may be necessary for the class field trip.

CIVIL WORKS COST ENGINEERING

24 Length: 36 Hours 35CCW01A
CEUs: 3.2 PDHs: 32 LUs: 32

Purpose.

This course is needed due to the demand for training Cost Estimators in the Civil Works (CW) field. Currently there are a large number of cost estimators in the Corps that do not have the intermediate and advanced civil works cost estimating skills and knowledge to adequately perform their job duties. Estimating civil works projects is a specialized field, whereby correct and accurate estimating is needed in order to support and to successfully complete projects. Also a recent audit of the CoE concluded that the Corps needs to provide more training in the Civil Works field.

Description.

The topics covered include the Civil Works Cost Estimating regulations and CW Cost Engineering technical letter. The requirements for performing risk analysis for CW projects will be discussed. Cost Engineering and the interrelation to project management will be reviewed. Advanced methodology of quantity takeoff and review of plans and specifications will be taught. The course will include discussions and examples on real life civil works cost estimating and conditions effecting production rates, bidding strategies, acquiring transportation and placement of materials. Cost estimating software used for estimating CW will be introduced, however the detailed software applications are covered in other PROSPECT classes.

Prerequisites.

The employees that should attend this class include Cost Engineers and estimators at the District and Division level. Occupational Series: 0800 engineering series and engineering technicians; grades: GS-09 and above. The people attending this class should be currently assigned in Cost Engineering or working in the Civil Works field. This course is designed for the intermediate to advanced cost engineer that works on Civil Works projects during their work duty/responsibility. Potential candidates with less than five years experience in preparing cost estimates or grades GS-7 and below are eligible if recommended by their supervisor. It is strongly suggested that potential students have taken the Cost Estimating Basics and MII PROSPECT classes.

CIVIL WORKS PROGRAMMING PROCESS

358 Length: 36 Hours 46CWB01A
 CEUs: 3.1 PDHs: 31

Tuition: \$1600

Purpose.

This course is designed primarily for programmers, project managers, study managers and functional mission personnel. It provides a comprehensive understanding of civil works activities, programming and project/study management concepts and their interrelationship with mission accomplishment.

Description.

The course includes practical exercises and discussions of: (1) the Corps of Engineers, the Administration, the Congress, and actions relative to civil works studies and projects, authorizations, and appropriations; (2) program development and formulation at the district and the division level, including new starts, continuing programs and capabilities; (3) detailed preparation of study/project cost estimates, schedules, justification documents, and related project management documents; (4) program defense including the question and answer process, district briefings, division testimony, and OMB and congressional hearings; (5) study/project and program execution, including work allowances, reprogramming actions, and related documents.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Any job series within career program 18 (engineers and scientists) and career program 11 (comptroller); (b) Grade: GS-07 and above - below GS-07 individuals are eligible if recommended by their supervisors.

COASTAL ECOLOGY

263 Length: 36 Hours 33COE01A
 CEUs: 2.6

Tuition: \$2255

Purpose.

This course provides Corps of Engineer personnel with state-of-the-art knowledge and technology in marine and coastal ecology. Students are given an overview of the latest scientific and analytical techniques in the field of coast ecology and related sciences.

Description.

Through a series of lectures, practical exercises, and field trips, students are introduced to the basic concepts of marine/estuarine ecology (including benthic ecosystems, fisheries, coastal marsh and seagrass ecology), sensitive resources, experimental design, and current marine ecological techniques such as the Benthic Resources Assessment Techniques (BRAT) and the Sediment Profiling (SP) camera. The role and importance of coastal ecosystems will be discussed. Temperate, subtropical, and tropical ecosystems will be covered for the Gulf, Atlantic, and Pacific coasts.

Prerequisites.

Nominees must be assigned: (a) Occupational series: 0020, 0400s, 0800s, and 1300s; (b) Grade: GS-09 and above; and (c) This course is meant primarily for engineers, scientists, and technicians with planning, operations, or regulatory duty assignments involving marine and coastal systems.

COASTAL ENGINEERING

13	Length: 36 Hours	35CE201A
CEUs: 2.7	PDHs: 27	

Purpose.

This course provides formal and hands-on training in the fundamental processes, and functional and structural design elements required to work on coastal engineering projects. The emphasis is on learning and applying the basics of shore protection and navigation structure planning, design, rehabilitation, and maintenance. Attendees are introduced to coastal project and element alternatives, functions, and design procedures for structural and non-structural solutions. This course is intended primarily for planning, engineering, and construction or operations personnel needing state-of-the-art procedures and techniques for working with coastal projects. Course content will emphasize up-to-date technology and analysis tools specific to the needs of both newly assigned and experienced practicing coastal engineers.

Description.

Basic scientific principles and computational procedures presented in the "Shore Protection Manual" (SPM) and in completed portions of the "Coastal Engineering Manual" (CEM) will serve as the formal instructional foundation. Attendees will become familiar with the use of these same references plus the Automated Coastal Engineering Systems (ACES) and other numerical computational tools and models, physical models, and field data collection through lecture, case studies, and classroom exercises. Access to and use of USACE and other coastal processes and map data bases will be explored. These materials will be illustrated by the instructors' examples and through the hands-on use of calculator and PC scale computational technology. Attendees will be assigned to work on a team coastal engineering problem for presentation to the rest of the class. Attendees will become familiar with (1) coastal project development and structure design including navigation breakwaters and jetties, shore-connected and detached breakwaters, groins, seawalls, and revetments, and (2) the planning and design of beachfills, offshore berms, physical aspects of coastal wetland restoration, and dredging and material disposal management, and channel design. Attendees will learn the functional and structural design characteristics of different types of coastal structures and how to evaluate non-structural alternatives. Topics discussed are (a) wave structure interaction (i.e., wave run-up, overtopping, reflection and transmission); (b) selection of design parameters; (c) design and use of coastal armoring; (d) design and use of erosion control techniques; (e) design and use of navigation and harbor structures; (f) beach fill design and other sediment management projects; and (g) microcomputer

computational tools.

Prerequisites.

Engineers or scientists who have been assigned to coastal projects and who need in-depth knowledge on coastal planning, project design, and operational practices. Attendees should have some experience or background in coastal processes having taken either the PROSPECT Coastal Planning course (#11) or an equivalent university level coastal course. Grade: GS-09 or above.

COASTAL PROJECT PLANNING

11 Length: 36 Hours 35CEN01A
CEUs: 2.8 PDHs: 28

Tuition: \$2325

Purpose.

This course provides a formal introduction to the technical and management issues important to coastal studies and projects. The course addresses the foundation areas necessary for effectively understanding and working on projects in the coastal zone and is divided into five areas addressing physical setting/location (geology and geomorphology), forcing factors (weather, tides, waves, storm surge), coastal processes (hydrodynamics and sediment transport), coastal problems and solutions, and special planning considerations (sea-level change, regional sediment management, dredging, etc.) The problems, the approach to addressing the problems, and the solutions presented in the class are particularly applicable to the Corps of Engineers' planning and environmental management missions but would be useful to project managers, planners, engineers, regulatory specialists, attorneys, and members of public stakeholder groups involved with studies and projects in the coastal zone.

Description.

Major topics to be covered include: coastal geology and geomorphology, hydrodynamics, littoral sediment transport processes, sediment budgets, coastal problem identification and analysis of alternative solutions, impact prediction and monitoring, coastal data collection, and the basic issues of coastal project planning and design. Unique coastal settings (including lake shores), regional management, stewardship and mitigative practices will be emphasized. The mission and authorities of the Corps of Engineers, particularly as they relate to other Federal agencies and state coastal zone management, will be explored.

Attendees will be introduced to the "Shore Protection Manual" (SPM) and the "Coastal Engineering Manual" (CEM) as basic reference materials, as well as journal publications and other publications useful for a better understanding of coastal zone issues. Common computer tools used in coastal engineering will be described but will not be taught as part of this course. Issues and principles will be illustrated through the instructors' examples, case studies, and a field trip to select sites on the North Carolina Outer Banks. The training site is the USACE Coastal Field Research Facilities and select elements of the course are designed to take advantage of this venue.

Prerequisites.

Nominees should be assigned as engineers, geologists, physical scientists, environmentalists, biologists, planners, project managers, regulatory specialists, or attorneys who have review, planning, or design

responsibilities for coastal shore protection, navigation, and environmental projects. Grade: GS-07 or above.

CONCRETE ENGINEERING TECHNOLOGY

22 Length: 36 Hours 35CET01A
CEUs: 2.5 PDHs: 25 LUs: 24

Purpose.

This course provides the participant with advanced knowledge in design, construction, and evaluation of concrete and related products.

Description.

This course covers emerging technologies in concrete, concrete construction, and other related materials. Topics such as roller-compacted concrete (RCC), self-consolidating concrete, underwater concrete, low-density concrete, reactive powder concrete, fiber-reinforced concrete, ultra-high-performance concrete, high-volume fly-ash concrete, silica fume concrete, and chemical admixtures, cementitious materials, and non-destructive testing are included in the discussion. Time is also allotted for consultation with instructors. Students who have encountered an actual concrete, construction, or materials problem are encouraged to briefly present their problem to the instructors and class attendees as information or for a possible solution.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0802, 0809, and 0810; (b) Grade: GS-09 or above; (c) Other: Students should have a current or projected assignment as a design or construction engineer or a senior technician related to concrete materials.

CONCRETE FUNDAMENTALS

21 Length: 36 Hours 35QVC01A
CEUs: 2.4 LUs: 24

Tuition: \$1690

Purpose.

This course provides the participant with the specific fundamental knowledge of materials, techniques, and procedures for quality concrete construction.

Description.

Through lectures and demonstrations, this course covers concrete fundamentals such as materials, sampling, testing, handling, mixing, placing, consolidating, finishing, curing, and other miscellaneous items.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0802, 0809, and 0810; (b) Grade: GS-05 or above. (c) Other: Students should have a current or projected assignment in concrete construction at the field level. This course is also well suited for junior engineers and for Corps division, district, and field office personnel directly concerned with concrete operations.

CONCRETE MAINTENANCE AND REPAIR

257 Length: 36 Hours 35CMR01A

Tuition: \$2060

Purpose.

This course provides the participant with specific knowledge of materials, techniques, and procedures for evaluation, repair, and maintenance of concrete.

Description.

Through lecture and demonstration sessions, the student will be able to identify the causes of distress, determine extent of failure, list advantages and disadvantages of making repairs, and recommend methods of repair with concrete, mortars, resins, surface coatings, and joint sealants. This course does not cover repair or maintenance of concrete pavements.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 series; (b) Grade: GS-05 or above; (c) Other: Students should have a current or projected assignment which involves repair or maintenance of concrete.

CONSEQUENCE ESTIMATION WITH HEC-FIA

60 Length: 36 Hours 35CEH01A

Tuition: \$2340

Purpose.

This course is intended to teach users how to use the HEC-FIA tool to do many different types of analysis including; agriculture damages due to flooding, calculation population at risk and life loss associated with flooding, and economic consequences associated with flooding.

Description.

The course presents a software program (HEC-FIA) for conducting economic and life loss consequences for Flood Risk Mitigation projects such as levees, channels, and reservoirs. Included are lectures and case studies describing procedures for creating H&H, Population, Economic and Agriculture inputs for various project site characteristics and how they are used in HEC-FIA. Procedures for conducting simulations for evaluating single flooding events are described using current software developed for the personal computer. Concepts and procedures are demonstrated and practiced in classroom workshops. Current Corps policy related to economic and life loss is also discussed. Project function focuses on typical features associated with riverine flood reduction project, as well as catastrophic failure of those projects. Examples and case studies illustrate potential problems and solutions.

Prerequisites.

Nominees for the course should have experience in the hydrologic, hydraulic, economic, or plan formulation aspects of flood risk analysis. Nominees must be assigned (a) Occupational Series: Selected 0000-0010, 0800, and 1300; (b) Grade: GS-09 or above. Nominees should have a basic understanding of concepts, terms, and analysis as presented in Hydrologic Engineering in Planning (J57) and Risk Analysis for Flood Risk Management (209).

CONST QUALITY MGT

29 Length: 20 Hours 35CQM01A
 CEUs: 1.5 PDHs: 15 LUs: 15

Tuition: \$ 810

Purpose.

This course is designed to be the primary introduction to the Construction Quality Management System as practiced in the Corps of Engineers. The targeted audience is all persons involved in the surveillance of construction contracts.

Description.

After completing this course, the student will understand the objective of construction quality management related to establishing quality requirements, controlling quality during construction, and taking necessary measures to assure quality.

Prerequisites.

Nominees must be assigned (a) Occupational series: 0800 or equivalent NSPS; (b) Grade: GS-05 or above or equivalent NSPS; (c) Other: Students should have a current or projected assignment as a member of the resident or area engineer's staff whose day-to-day function entails construction contract surveillance and contract administration. Specification writers and designers who establish the quality to be incorporated in the contract documents are eligible for attendance.

CONSTRUCTION CONTRACT ADMINISTRATION

366 Length: 36 Hours 41CCA01A
 CEUs: 2.5 PDHs: 25 LUs: 25

Tuition: \$1300

Purpose.

This course provides a basic review of the DOD acquisition process as it relates to administration of fixed-price construction contracts. The primary focus is post-award contract administration, but the course includes pre-award coordination and review for field-level personnel. As an introductory course, it also serves as a developmental link between the construction and engineering career ladders. It provides suggested direction and training for students interested in more advanced and/or specialized contract types and focus areas.

Description.

This course covers the typical procedures to administer a fixed-price construction contract. The student is provided with the basic tenets of the FAR acquisition process and a detailed review of the construction management functions in a typical field office. The course provides a basic understanding of fixed-price construction contracts, important operative FAR, DFARS, AFARS, and EFARS clauses, legal considerations, and administrative requirements of government contracting. A series of lectures, problem-solving cases, and exercises are presented to illustrate the important contractual and procedural issues encountered during the construction contract administration process.

Prerequisites.

Nominees should be assigned (a) Occupational Series: Selected 0340, 0800, 0905, 1100; GS-05 or above; (b) Grade: GS-05 to GS-13 GS-05 or above; (c) Experience: 0-3 years in the construction function; (d) Responsibilities: personnel should be actively or imminently engaged in the field administration of fixed-price construction contracts; this course is also for those other series actively and directly involved in the construction contracting process; (e) Knowledge/Skills: nominee should possess a general knowledge of the post-award construction contract process.

CONSTRUCTION SCHEDULE PERFORMANCE MANAGEMENT

80 Length: 24 Hours 46NWA01A
CEUs: 2.1 PDHs: 21 LUs: 21

Tuition: \$1060

Purpose.

USACE manages thousands of construction projects which require its contractors to manage schedule performance using sophisticated network scheduling techniques. The triple constraints of technical performance, budget performance and schedule performance must be effectively managed to insure project success. During the construction execution phase of a project, effective schedule performance management is crucial to overall project success. It is not uncommon for the construction phase to initiate later than desired due to late completion of the programming, planning, design and procurement of the requirement. As a result, construction performance periods may be compressed. During the construction phase, time sensitive costs and the risk associated with late project delivery can be severe. When projects fall behind schedule, it is not uncommon for technical performance (quality, safety) to suffer as the contractor attempts to make up lost time. As well, contractors may be entitled to excusable compensable delay costs if the Government is responsible for any delay. It is of paramount importance that USACE in its role as construction agent, perform effective professional schedule performance management consistent with its contract requirements and industry best practices. This course serves that purpose by training the construction management team in schedule performance management.

Description.

After completing this course, the student should be able to (1) state, interpret and enforce the contract clauses and technical provisions respecting schedule performance management, (2) effectively and efficiently review preliminary, initial and updated schedules for reasonableness, (3) make informed judgments respecting the effectiveness of contractors' schedules to plan the work, predict completion dates and provide an accurate as-built record of how the project progressed from NTP to final acceptance, (4) schedule, filter, organize, sort and produce schedule reports using Oracle's Primavera P6 Professional Project Management software, (5) understand the QCS/RMS/P6 interface, perform basic schedule impact analyses (6) efficiently and effectively perform and review schedule updates, and (7) assess the reasonableness of schedule cost loading, activity coding and work break down structure. ER 1-1-11 and EP 415-1-4, and the UFGS Scheduling Specification are used for reference. Students are taught in a computer lab environment where hands on software training is provided. This is not a course to teach all of the features of Oracle's

Primavera P6 Professional Project Management, but rather how to effectively and efficiently use its basic features to eliminate the need to resort to paper plots and reports which are ineffective for schedule analysis.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800; (b) Grade: GS-11 or higher. Students should have a current or projected assignment requiring knowledge of construction network analysis as a schedule performance management technique. Students must be proficient in the use of a personal computer. Prior knowledge of a Network Scheduling and the Windows Operating System is required. This course is highly desirable for USACE District Office, Project and Resident engineers, for District, Division, Branch, and Section heads of construction.

Prerequisite Training: Nominee should have completed the Scheduling Basics for Projects (#143) course. No basic scheduling will be included in course 080.

Continuing Authorities Program (CAP)

49 Length: 32 Hours 46CAP01A

Tuition: \$1790

Purpose.

This course develops the skill sets of Project Managers, PDT members, Program Analysts, Planners, and Section level chiefs in basic CAP knowledge, managing CAP projects, timely decision-making, scaling business processes to match complexity of the project, and developing and maintaining relationship.

Description.

Training topics and tasks focus on CAP guidance from ER 1105-2-100, Appendix F, Latest Amendment for water resource related projects of relatively smaller scope, cost and complexity.

The course covers:

CAP Program Overview

General Principles, Restrictions on Program Eligibility, Coordination Account, Program Cost Sharing, Statutory Federal Participation Limits, Converting GI Funded Studies to CAP, and Converting CAP Feasibility Studies to GI.

Project Implementation

Feasibility and Design and Implementation Phases, Approval Authorities for Decision Documents and Agreements, Post Implementation Federal and Non-Federal Responsibilities, After Action Reviews, Non-Federal Feasibility Work & Non-Federal Design and Implementation Work, Real Estate, Beneficial Uses of Dredged Material Multi-Purpose CAP Projects, Recreation, Ecosystem Restoration and Estuary Policies Applicable to Sections 204, 206, and 1135, Monitoring and Adaptive Management, Design Deficiency Corrections

Guidance for Project Authorities

Prerequisites.

Students should be CAP coordinators, PMs, PDT members (Civil, Geotechnical, H&H, Environmental/Cultural, Cost/Specs), Planners, first line supervisors and senior staff responsible for the preparation, review and approval of CAP project submittals. Attendees should have basic knowledge of PMBP for Civil Works projects. Training is also valuable for other Program authorities that follow CAP-like processes.

Contract Post-Award Oversight

89 Length: 36 Hours 41CPO01A

Tuition: \$1100

Purpose.

This course reinforces the required knowledge and skills for proper contract oversight, surveillance, compliance and post-award documentation by all members of the acquisition team with an emphasis on service contracts. The primary purpose of this course is to mitigate risk by clarifying roles, responsibilities and accountability during post-award management. While the contracting officer is ultimately responsible for contract oversight, this course stresses the requirement to have properly trained and certified Contract Specialists, ACOs, and CORs in accordance with applicable policies and regulations. Through instruction and group exercises, students will gain the technical expertise needed to ensure these requirements are met.

Description.

This course covers at a minimum: (1) planning for post-award/contract administration oversight, roles and responsibilities; (2) contracting authority and accountability for contracts/processes; (3) compliance, consistency, oversight documentation; (4) technical proficiency (skill gaps, training) by acquisition team members; (5) quality management, accuracy, timelines for oversight, checks and balances; (6) process/action verification, validation, approvals; (7) pricing, price reasonableness determinations; (8) modifications: documentation, negotiations, contract changes, authority; (9) current audits, inspections, corrective action plans; (10) inspection clauses, claims, remedies and resources; (11) checklists, reports, file management; (12) contractor reporting, participation, partnering; (13) contracting integrity, fraud, waste and abuse; (14) contract close out/post completion activities

Prerequisites.

All participants that perform contract oversight and surveillance: Contracting 1100 series; Engineer 800 series; Quality Assurance Representatives 1900 series; Project Management/Functional communities; Legal Advisors; all USACE employees who perform or will perform COR functions; Performance Assessment Personnel; subject matter experts serving as Technical or Performance Monitors.

NOTE: This course is not open to contractors.

CORROSION CONTROL

9 Length: 36 Hours 35CCL01A

Tuition: \$2110

Purpose.

This course familiarizes design engineers, maintenance staff and engineers involved with project operations such as structural, mechanical, electrical, etc., with the mechanism of corrosion, the results if unchecked, and the methods of its mitigation. Designers, if familiar with corrosion phenomena, can temper their designs so as to avoid potential problems or make it easier to provide protection.

Description.

Topics included in this course are: fundamentals of corrosion and engineering alloys; principles of cathodic protection and electrode potentials; design of cathodic protection systems; design considerations; atmospheric corrosion; design for underground cathodic protection systems; types of corrosion; painting practices; sea water corrosion; system test and evaluation; and materials selection.

Prerequisites.

Nominees must be assigned (a) Occupational series: selected 0800; (b) Grade: GS-09 or above; (c) Other: students should be designers or supervisory engineers.

COST ESTIMATING BASICS181 Length: 36 Hours 35CEB01A
CEUs: 2.9 PDHs: 29

Tuition: \$1310

Purpose.

This course provides training on basic cost estimating principles and fundamentals. The training is intended for individuals who are entering the Cost Engineering profession with little or no cost estimating experience or who will be responsible for the review or preparation of detail cost estimates for Military Programs, Civil Works, Environmental and other projects as required.

Description.

This is a basic, non-computer based course designed to teach individuals the basic principles of cost estimate preparation, and how to identify and classify costs associated with the construction. Through the use of lectures, visual aids, individual and group practical exercises, the course provides instructions on: (a) an overview of procurement and cost engineering regulations; (b) work breakdown structures; (c) reading construction drawings; (d) quantity calculation and development; (e) performing manual quantity takeoffs; (f) determining labor costs and crew composition; (g) estimating costs of equipment, material, and supplies; (h) developing indirect costs; (i) determining cost escalation and contingencies; and (j) preparing government estimates summaries.

Prerequisites.

Nominees must be assigned (a) Occupational series: selected 0800; (b) Grade: GS-05 or above (c) Other: nominees must obtain CECW-EIC approval before attending this course. A pocket calculator is required for this class.

COST REIMBURSEMENT

1 Length: 36 Hours 41CRC01A
CEUs: 2.5 PDHs: 25

Tuition: \$1835

Purpose.

This course provides practical guidance on how to structure, solicit, and manage cost-reimbursement contracts. The course is suitable for all functional elements, but is primarily geared to the Corps construction execution workforce. The course directly supports the Corps vision by addressing many contemporary issues regarding the management of innovative contracts and supports the "Best Value" selection process.

Description.

This course covers the acquisition strategy, source selection, and management of cost-reimbursement contracts. The instruction and text material addresses solicitation preparation to final closeout of cost-reimbursement contracts. Specific subjects addressed include the history of cost-reimbursement contracts, acquisition policies, selection of contract type, preparation of the request for proposal, source selection procedures, cost accounting, procurement and property management, Work Authorization Document (WAD) and Earned Value Systems for cost control, fee and profit policies, Corps organization and management, contractors organization, and final closeout.

Prerequisites.

Nominees should be assigned (a) Occupational Series: 0028, 0340, 0560, 0800, 0905, and 1100; (b) Grade: GS-11 or above, or equivalent; Military--Captain or above; (c) Responsibilities: personnel should be assigned or actively engaged in the administration of a current or future cost-reimbursement contract or to a start-up team for a cost-reimbursement contract; (d) Knowledge/skills: nominee should possess a general knowledge of contracting procedures and construction contract administration; (e) Prerequisite training: nominee should have completed the Construction Contract Administration course (No. 366).

COST RISK ANALYSIS BASIC

220 Length: 32 Hours 35CRA01A

Tuition: \$2310

Purpose.

This course provides training on basic cost risk analysis principles and fundamentals. The training is intended for the Cost Engineering professional with little or no cost experience in cost risk analysis techniques who will be responsible for the review or preparation of construction contingencies for Civil Works and MILCON cost estimates.

Description.

This is a computer based course, and is designed to provide a solid introduction to the theory and application of risk analysis problems involving multiple numeric uncertainties (e.g. budget to detailed cost estimating, contingency analysis, and competitive bidding) and demonstrate why risk analysis is necessary, and how to mitigate the probability of having a cost overrun.

Through the use of lectures, visual aids, individual and group practical exercises, the course will provide instructions on: (a) procedures and cost engineering regulations regarding the use of cost risk analysis, (b) basic statistics (c) data gathering, (d) uncertainties identification and quantification, and (e) interpretation and use of the results.

This course will discuss, and provide familiarization and hands on training of the computational tool, Crystal Ball. Crystal Ball is the Corps required software for preparing risk analysis for contingency development.

Prerequisites.

Nominees must be assigned (a) Occupational series: selected 0800; (b) Grade: GS-11 and above, and have completed the Cost Engineering Basic course; (c) Other nominees must obtain CECW-CE approval before attending this course. A pocket calculator is required for this class. Proficiency with Microsoft Excel is required.

CRANE SAFETY

32	Length: 36 Hours	58CNS01A
----	------------------	----------

Tuition: \$1785

Purpose.

This course provides students with an introductory, fundamental understanding and knowledge of cranes and hoisting equipment as well as USACE and OSHA safety requirements for a crane program, to include rigging, signal personal and rigger requirements. Inspection, maintenance, training and operational requirements (not certifications) for cranes and hoisting devices are also covered in this 36 hour class.

Description.

Areas to be covered in this course include a general but thorough introduction to types of cranes and hoisting equipment, to include common terminology, nomenclature and components. In addition, discussion and overview of the following will be covered:

- (a) Basic design and construction of cranes/hoists to include the basic scientific principles associated with crane/hoisting operations;
- (b) Fundamentals of rigging - includes a variety of rigging gear, components and configurations and potential applications to include the requirements for a navel architectural analysis on floating plant, as well as the components of wire rope and inspection requirements and procedures for wire rope, load blocks, and sheaves;
- (c) Crane/hoisting signals;
- (d) Operator selection, training and certification requirements to include physical requirements;
- (e) Inspection requirements of cranes/hoisting equipment;
- (f) Operator aids, safety devices and general safety requirements for cranes/hoists;
- (g) Operational and load testing requirements to include frequency as well as conditions that trigger the requirements;
- (h) Lift planning procedures, to include assembly/disassembly and critical lifts;
- (i) Communication and emergency procedures to include accident prevention and investigation and the hazards of power line clearance, and
- (j) Similarities and differences between USACE crane/hoist requirements (EM 385-1-1), OSHA requirements, ANSI and consensus standards.

Prerequisites.

Nominees should have an occupational need for basic crane and hoist information and related requirements. This course does not provide an in-depth knowledge of cranes and hoists. All grade levels are accepted. Course is specifically recommended for Corps of Engineers construction QA's, project engineers, safety and health professionals, Environmental Compliance Coordinators and anyone else with a need to know

USACE and contractor crane program requirements to include: basic construction and maintenance safety by stressing vital aspects of following safe work practices and procedures and how and what to monitor for on contractor crane/hoisting operations.

NOTES: THIS COURSE DOES NOT CERTIFY/QUALIFY ATTENDEES AS CRANE/DERRICK OR EQUIPMENT OPERATORS.

CULTURAL RESOURCES

299 Length: 36 Hours 33CUR01A

Tuition: \$ 810

Purpose.

This course provides students with a broad-based understanding of the character and quality of cultural resources, a working knowledge of the identification and assessment procedures applied to those resources, and a review of tribal policy principles that impact agency cultural resources management. The course is designed for planners, environmental resources managers, student managers, project managers, and others who will participate in the management of cultural resources and interact with Indian tribes.

Description.

The attributes, quality, and values of cultural resources are examined with the processes of identification, evaluation, and impact assessment described in detail. Students receive an overview of Corps planning principles and guidelines focusing on the integration of cultural resource considerations with other resource planning and management activities. Attention is given to provisions of the National Historic Preservation Act (NHPA) of 1966, the Archeological Resources Protection Act of 1979, the Native American Graves Protection and Repatriation Act and other legislative and regulatory requirements. This course gives special consideration to the procedural requirements of Section 106 of the NHPA and the interrelationships of the agency, the Advisory Council on Historic Preservation, the State Historic Preservation Office, and officials of Indian tribes. The program also offers an overview of the nature of Corps relations with Indian tribes including an understanding of the Trust relationship, government-to-government relations, treatment of Native American human remains and associated objects and Indian access to sacred sites. State-of-the-art field techniques, methodologies regional overviews, and data management are illustrated.

Prerequisites.

Nominees must be assigned (a) Occupational series: selected 0020, 0100, 0400, 0800 and 1300; (b) Grade: GS-07 or above (water resource planners, rangers, park managers, planners, study managers, designers - anyone potentially involved with cultural resources during the planning, design, or operation of a project). Nominees should have attended the Environmental Impact Assessment course and the PCC1 Civil Works Orientation course, or equivalents.

CUSTOMER RELATIONSHIP MANAGEMENT

224 Length: 16 Hours 15CRM01A

Tuition: \$ 815

Purpose.

What is CRM and why it is important to USACE as a reimbursible government agency, Objectives and benefits of CRM, Components of CRM, Hard and soft skills of CRM, The relevance of recruitment, hiring and retention and sustainment of technical competency to CRM, Where you fit into CRM, The CRM process, Developing a strategic customer engagement plan, Developing a customer account plan, CRM Implementation and Evaluation.

Description.

This course focuses on the what, where, when, why, and how of developing and managing relationships with USACE customers. Managing relationships is key to assuring we meet customers' needs and that we effectively partner with customers in developing innovative solutions to now and into the future. From this course, students discover the importance of Customer Relationship Development and Sustainment as a USACE Core Competency, gain an understanding of the concept of CRM, learn the value of building long-term customer relationships, understand the corporate language for CRM, learn how to develop customer-focused strategies, utilize CRM tools and evaluate CRM effectiveness.

Prerequisites.

Generally those who are in direct contact with customers. Specifically that includes: USACE Outreach coordinators, Customer Account Managers, Project Managers and Program Managers. Sometimes this also includes key project delivery team members who have frequent contact with customers, stakeholders and project partners – in addition to those specifically mentioned. Students should be journeyman level or above and have had experience working with customers.

CW PROGRAM DEVELOPMENT

10 Length: 28 Hours 46CWP01A
CEUs: 2.3 PDUs: 23

Tuition: \$1090

Purpose.

This training is primarily designed for civil works project delivery team members and program managers with an emphasis on the budget development and defense process. It provides a comprehensive understanding of civil works mission accomplishment, HQ-level programs management activities, the importance of the Project Management Business Process (PMBP) in program execution, and includes HQUSACE interface with Office of Management and Budget (OMB) and Congress.

Description.

The training includes discussions of topics in view of the Project Management Business Process, including: (1) the Corps of Engineers civil works organization, the Administration, and the Congressional committees that provide legislative oversight of the civil works program through authorizations and appropriations; (2) program development, including new start and continuing programs, and funding capabilities; (3) program defense, including OMB and Congressional hearings; and (4) program execution, including work allowances, reprogramming actions, performance measurement.

Prerequisites.

Nominees must be project delivery team members, GS-340 program managers, chiefs of organizations that support the Project Management Business Process (e.g., Real Estate, Counsel, Resource Management). Division and district commanders, deputy commanders with civil works missions, and members of the Senior Executive Service are invited to attend this seminar.

CWMS MODELING FOR WATER MANAGEMENT

155 Length: 36 Hours 35RTW01A

Tuition: \$2240

Purpose.

The Corps Water Management System (CWMS) is the automated information system (AIS) supporting the Corps' water control operations mission. CWMS provides data collection, processing, decision support modeling, data dissemination, and graphics tools to allow each local office to effectively execute their water management mission in real-time. This course will provide water managers the training necessary to effectively use hydrologic and hydraulic modeling software in CWMS for real-time operations. The students will learn advanced features of CWMS, including calibration and execution of model programs in support of the decisions made in the course of Corps project operations.

Description.

Topics will include: 1) The use of CWMS hydrologic and hydraulic models (HMS, ResSim, RAS and FIA) through the Control and Visualization Interface (CAVI). 2) Calibration and optimization of model parameters in real-time. 3) How to model and evaluate possible hydro-meteorological and operational scenarios in real-time to improve reservoir operations. 4) Advanced CWMS concepts and tools, such as scripting and trials. This class does not address the installation of CWMS or the development of models.

Prerequisites.

Nominees must be assigned:

- (a) Occupational Series: Selected 0400, 0800, and 1300
- (b) Grade: GS-09 or above.
- (c) Nominees should be water control managers, hydrologists, or hydraulic engineers.
- (d) Nominees should have some experience and responsibility for real-time reservoir or flood control operations and with the H&H models mentioned above.

DAM SAFETY

28 Length: 32 Hours 54DAS01A
CEUs: 2.6 PDHs: 26

Tuition: \$2695

Purpose.

This course trains managers, engineers, geologists, technicians, and project operating personnel in FOA engineering, construction, and operations divisions on all aspects of the Corps of Engineers Dam Safety Program. The background and history of dam safety in the Corps is covered along with the multidiscipline design, construction, and operational considerations. Details of planning, conducting, and reporting the results of a periodic inspection are included. Guidance on project surveillance by operation personnel along with the Dam Safety Program are covered in detail. Public awareness and preparedness are included.

Description.

Through lectures, case histories, field visits, and structured student discussions, the course covers all aspects of a dam safety program. The course outlines technical considerations (hydrologic, seismic, geotechnical, electrical/mechanical and structural) as well as the operational requirements (operation, maintenance, surveillance, preparedness, training, and notification). The scope and implementation details of the Dam Safety Program are covered in detail. Presentations, video modules, case histories, and a walk-through inspection are used to effectively present a multidiscipline approach to the successful monitoring and evaluation of Corps of Engineers dams.

Prerequisites.

Nominee must be assigned:

- (a) Occupational Series: Selected 0800 and 1350.
- (b) Grade: GS and WG, as appropriate, GS-05 or above.

This course is intended for all personnel involved in the design, construction, operation, inspection, and maintenance of Corps dams. Attendees should bring proper attire for field visits, e.g., rain gear, comfortable shoes (no sandals or flip-flops.)

DESIGN BUILD CONSTRUCTION

425 Length: 36 Hours 35DBM01A
CEUs: 3.1 PDHs: 31

Tuition: \$1300

Purpose.

This course provides current information to Corps of Engineers personnel and customers doing business with the Corps of Engineers on the latest developments, lessons learned and use of Design-Build as a construction method.

Description.

Topics include: (a) Design-Build Overview; (b) Planning the Acquisition; (c) Special Contract Requirements and Important Clauses; (d) Developing Technical RFP Requirements; (e) Proposal Submission Requirements; (f) Proposal Evaluation Requirements; (g) Source Selection Plans; (h) RFP Completion; (i) Source Selection (j) Contract Award and Beyond; and (k) Contract Management.

Prerequisites.

Nominees should be individuals involved in Design-Build contracting, including: Engineering, Construction, Contracting, Counsel, Project Management, and Customers.

**DEVELOPMENT OF PROJECT PARTNERSHIP
AGREEMENTS**

315

Length: 36 Hours

46LCA01A

Tuition: \$ 760

Purpose.

This course provides the basic knowledge, skills, and abilities needed to develop, negotiate and process for approval agreements (Project Partnership Agreements (PPA), Design Agreements (DA), and Feasibility Cost Shared Agreements (FCSA)) used for implementation of cost shared Civil Works water resources development projects and the supporting documents necessary for the agreement packages. Lecturers and instructors include HQUSACE staff, Division staff, and a guest speaker.

Description.

Topics include: (a) Development, negotiation, and processing of Agreements (such as PPA, DA, and FCSA) for cost shared Civil Works water resources development projects; (b) Implementation of cost shared Civil Works projects including cost sharing policies; (c) Planning, Policy, Programs, Real Estate, and Legal aspects and considerations in development of Agreements; (d) In-Kind Contributions authorities; (e) Policies and procedures to account for project funds including preparation of Federal/Non-Federal Funds Allocation Table and determining non-Federal proportionate share; (f) Requirements for accelerated, contributed, and advanced funding; (g) Non-Federal Sponsor Self-Certification of Financial Capability Form; and (h) Project examples and experiences.

Prerequisites.

Nominees must be assigned (a) Grade: GS-09 to GS-15; and (b) current responsibilities in Project Management; Study Management; Engineering Management; Planning; Programs; Real Estate; Counsel; and Cost Share Control Record Managers or others assigned to the Office of Resource Management and Internal Review.

DIESEL GENERATORS: BASICS/TESTING

106

Length: 36 Hours

54DGN01A

Tuition: \$2310

Purpose.

This course provides a general familiarization with the components and systems that make up a diesel generator and teaches the proper testing and checkout procedures to be followed prior to accepting generating units from the construction contractor.

Description.

Through lectures, visual aids, and demonstration sessions, this course covers such subjects as engine and generator basics, fuel systems, heat transfer systems, generator exciters and regulators, governors, instrumentation, design criteria, various factory and field test procedures, automatic transfer switches, and typical installation problems. A portion of this course will utilize a diesel generator unit for performing typical field tests.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0802, 0809, 0810, 0830, and 0850; (b) Grade: GS-07 or WG-07 or above. Nominees should have current or projected responsibilities that include power generation specification, procurement, installation, testing or operation. The broad content of the course is beneficial for technically-oriented construction, design, and maintenance personnel. Although this is not intended to be a maintenance course, maintenance personnel should benefit from this course. Recommend that nominees complete the Electrical, Mechanical, or General Quality Verification Courses prior to taking this course. Engineers are exempt from this prerequisite requirement.

District Datum Coordinator

346 Length: 24 Hours 35DDN01A

Tuition: \$1640

Purpose.

This training is designed to provide USACE districts Datum Coordinators the necessary skills and abilities to carry out the requirements in ER 1110-2-8160 for their respected District. ER 1110-2-8160 requires that the designed, constructed, and maintained elevation grades of USACE projects shall be reliably and accurately referenced to a consistent nationwide framework, or vertical datum—i.e., the National Spatial Reference System or the National Water Level Observation Network maintained by the National Oceanic and Atmospheric Administration. This course will provide technical and procedural guidance for establishing the relationships for designed, constructed, or maintained project grades relative to these nationwide frameworks. This training is needed so trainees from USACE districts can have the necessary skills and abilities to carry out the requirements in ER 1110-2-8160 for their respected District.

Description.

Topics: Geodesy, State Plane Coordinate Systems, Geodetic Datums, Tidal Datums, Hydraulic Datums, Survey Accuracy Standards and Procedures, Procedures for Referencing Datums and Dredging Grades

on Coastal Navigation Projects, Coastal Hurricane and Shore Protection Projects, Inland Flood Control and Navigation Projects, Regulatory and Mitigation Projects, and Projects in high subsidence areas.

Prerequisites.**DISTRICT OFFICER INTRODUCTORY COURSE**334 Length: 36 Hours 41DOI01A
CEUs: 3.4

Tuition: \$2780

Purpose.

This course is designed to orient the newly assigned engineering officer who is an engineer by training but has done little or no business in the USACE environment. The course provides a broad overview of the organization and covers a wide range of topics relating to all facets of the Corps of Engineers mission.

Description.

Course is structured to take students through all phases of military and civil works projects. Specific topic areas include programming, budget design, project management, acquisition, planning, contracting, construction contract management, legal considerations, and environmental issues. Case studies and practical exercises are utilized to enhance the student's understanding of specific subject matter in selected areas of the course. The course is designed to familiarize the student with the field operating environment.

Prerequisites.

Students will be nominated by HQDA (Engineer Branch), the Military Personnel Division (CEHR-M) of HQUSACE, division and district commanders, and laboratory directors. Nominees should be (a) Occupational branch series: 21; (b) Paygrades: 02, 03, or 04; (c) newly assigned officers who will be assigned duties within the USACE environment in the Area of Concentration (AOC) 21D; (d) newly assigned civilian personnel GS-12 and above.

DIVE SAFETY ADMIN

175 Length: 72 Hours 54DVC01A

Tuition: \$3685

Purpose.

This course provides Corps of Engineers employees who are assigned as diving coordinators, alternate diving coordinators, Dive Inspectors and Safety Office Diving Safety Representatives with the necessary skills, knowledges, and abilities to perform their assigned duties. This training will provide students with state-of-art technology and methodology to evaluate underwater diving operations and effectively manage diving contingencies. NOTE: This course or the course "Working Diver" is required for all diving coordinators and alternate diving coordinators, and is recommended for all Safety and Occupational Health Office Diving Safety Representatives.

Description.

Students will become familiar with state-of-art diving systems and methodology, including support activities and dive equipment. This course consists of classroom presentations and practical exercises in dive planning and execution involving actual dive operations. The focus of the course is on Safety Requirements, Dive Planning, Hazard Analysis, Risk Management Emergency Management and Contract Administration, particularly as a function of the Project Management Business Process (PMBP). Sessions pertinent to underwater diving operations will include, but are not limited to, the following topics and activities: (a) diving physics; (b) diving physiology; (c) diving medicine; (d) modern diving systems and support equipment; (e) SCUBA equipment and operations; (f) surface supplied air equipment and operations; (g) decompression principles & associated tables; (h) modern diving accident management techniques; (i) working dive planning; (j) diver supervision principles and practices (k) preparation and use of Activity Hazard Analyses; (l) USACE, OSHA, and US Navy diving regulations (ER 385-1-86, EM 385-1-1, 29 CFR 1910, and US Navy Diving Manual); and (m) management of the diving function.

Prerequisites.

Students for this course should have a current or projected assignment as a District Diving Coordinator, Alternate District Diving Coordinator, Dive Inspector, or Safety and Occupational Health Office Diving Safety Representative. Students must participate in all lectures, written and practical exercises, and score at least 70 percent on the comprehensive post-course examination to pass the course. Exceptions or deviations to any of these prerequisites shall be approved by the HQUSACE Safety and Occupational Health Office.

NOTE: This course will be conducted at the same time

as the Diving Refresher course. However, a participant cannot be certified in both courses during this training period. A participant will only be certified in the course that he/she is registered in.

Formerly titled "Diving Coordinator".

DIVE SAFETY ADMINISTRATION REFRESHER

397 Length: 40 Hours 33DIS01A

Tuition: \$3315

Purpose.

This course provides refresher training for Corps of Engineers employees who have contract inspector, safety, and/or oversight responsibilities for diving activities and/or operations. This training provides attendees with the necessary skills, knowledge, and abilities to safely and successfully perform inspections, oversight, and administration of diving operations.

Description.

This course consists of both classroom discussions and water-side exercises. In-depth training sessions cover the following topics: (a) diving physics; (b) diving physiology; (c) dive tables; (d) SCUBA equipment and operations; (e) surface supplied air equipment and operations; (f) diving support equipment; (g) diving in contaminated water; (h) underwater tools; (i) diving accident management; (j) dive planning and contractor submittals; (k) Corps of Engineers regulations; and (l) inspection of diving operations.

Prerequisites.

Nominee must have completed the Dive Safety, Dive Supervisor, Dive Inspector or Dive Safety Administrator Course within the past 5 years and have a current or projected assignment to a position that requires knowledge of contractor diving operations, and is not a currently certified Corps of Engineers diver or diving supervisor. Nominee must submit copy of current certification (listed above) to ULC registrar in order to be registered for the course. Attendees must participate in all exercises and score at least 70 percent on the comprehensive post-course examination.

NOTE: Formerly titled "Diving Inspector".

DIVING REFRESHER

259 Length: 64 Hours 54DVR01A

Tuition: \$5390

Purpose.

This course provides Corps divers and diving supervisors with the latest technical and managerial data as it relates to underwater diving. This course is required at 4-year intervals after completing the Diving Safety and/or Diving Supervisor course as stated in ER 385-1-86 for those persons working with underwater diving programs. Students will satisfactorily complete all aspects of the training to receive certification.

Description.

Through lectures and demonstration sessions, this course covers (a) state-of-the-art diving equipment and procedures; (b) latest developments in accident management techniques; (c) refresher training in decompression tables; (d) refresher training in repetitive diving; (e) refresher training in diving medicine; and (f) recompression chamber experience.

Prerequisites.

(a) Attendees must have successfully completed the Working Diver and/or Diving Coordinator course.* Divers should have a current or projected assignment in diving activities and have passed a diving medical examination within the previous 12 months. Verification of medical exam will be required at the course. (b) Attendees must make at least 70 percent on comprehensive post-course examination for recertification. (c) Attendees must participate in and complete all phases of instruction. Failure to participate in all class activities will be cause for course failure.

* The Corps of Engineers Diver/Supervisor Certification Card (wallet) must be presented at the course.

DPW JOB ORDER CONTRACTING ADVANCED

991 Length: 16 Hours 441DJA01

Purpose.

This course teaches students strategies and procedures for technical discussion and negotiation with contractors in the JOC task order process. Students shall learn how to apply the IDIQ Delivery Order Limits, which is locked in by the FAR and codified in public law. JOC is most applicable to the Directorate of Public Works (DPW) organization on an Army installation or community and USACE MSCs/District Offices.

Description.

After completing the course, the student should be able to serve as a knowledgeable ordering officer for the JOC Branch within the DPW as well as scope SRM projects using the JOC unit price book, manage construction contracts and schedules, and manage projects in accordance with RPMA program requirements, i.e., determine appropriate funding programs, work classification, etc. as well as understand the IQC delivery process, competitive bid process, and firm-fixed price requirements. The students will understand the overall process of contract changes, modifications, and claims processes in accordance with the FAR and AFARS.

The course covers the elements of JOC; task order scoping; task order proposal requesting, receiving, reviewing, evaluation, negotiation, and documentation; task order placement by ordering officers; key JOC management issues; and contract administration procedures under JOC. The underlying themes through all the modules of the course emphasize a cooperative working agreement between contractor and government; efficient and timely processing and completion of projects; and adherence to proper contract administration procedures.

Prerequisites.

It is recommended that nominees be Army installation DPW or supporting contracting office personnel, which includes USACE District support offices, that are, or expect to be, performing as JOC project managers, ordering officers, or contract administration personnel. Contractor personnel are not eligible to attend. It is advisable to have completed the Job Order Contracting Basic Course and have at least one year working experience with JOC prior to taking the Job Order Contracting Advanced Course.

NOTES: (1) The classroom version of this course is for onsite purposes ONLY. Beginning in FY13, individual students can register for the distance learning (DL) version at <https://www.myuln.net>. (2) Attendees need a calculator to benefit from the Practical Exercises that are an integral part of the course.

DPW JOB ORDER CONTRACTING BASIC

990 Length: 16 Hours 41DJB01A

Tuition: \$ 810

Purpose.

This course teaches students the basic policies, and procedures for properly executing sustainment, restoration, and modernization (SRM) projects using a Job Order Contracting (JOC) contract applicable to the Directorate of Public Works or a USACE District Office.

Description.

After completing the course, the student should be able to serve as a knowledgeable ordering officer for the JOC Branch within the DPW as well as scope SRM projects using the JOC unit price book, manage construction contracts and schedules, and manage projects in accordance with RPMA program requirements, i.e., determine appropriate funding programs, work classification, etc. as well as understand the IQC delivery process, competitive bid process, and firm-fixed price requirements. Additionally, the students shall be able to apply the IDIQ

Delivery Order Limits, which is locked in by the FAR and codified in public law.

The course covers the elements of JOC; task order scoping; task order proposal requesting, receiving, reviewing, evaluation, negotiation, and documentation; task order placement by ordering officers; key JOC management issues; and contract administration procedures under JOC. The underlying themes through all the modules of the course emphasize a cooperative working agreement between contractor and government; efficient and timely processing and completion of projects; and adherence to proper contract administration procedures.

Prerequisites.

The nominees for this course may include any DPW and contracting office personnel. However, the course is specifically oriented for personnel assigned or about to be assigned duties in the JOC activity within the DPW, and personnel of the supporting contracting office that will be involved in JOC contract administration. This includes USACE District support offices.

NOTE: Beginning in FY13, this course has a distance learning (DL) portion that must be completed prior to registering for the classroom portion. Students can register for the DL portion at <https://www.myuln.net>.

DPW QUALITY ASSURANCE

972 Length: 24 Hours 41DQA01A

Tuition: \$ 905

Purpose.

This course is for Quality Assurance Evaluators, Contracting Officer Representatives, and other personnel with contract surveillance responsibilities. It incorporates recent DoD guidance addressing techniques for service contracts using commercial item acquisition procedures.

Description.

After completing the course, the students should be able to understand the DOD guidance, techniques, tools, and commercial item acquisition procedures as they relate to performance and service based contracts. The student should be able to prepare an SOW for QA contract as well as prepare a Quality Assurance and Surveillance Plan (QASP); for example, MEO PWS metrics/contracts.

This will be achieved through lectures, individual study, and work group activities. This course provides a detailed description of service contract surveillance techniques. Quality terms and definitions are presented and illustrated through the use of examples and practical exercises. Pertinent quality related contract clauses are identified and explained. New DoD procedures which shift the quality assurance focus from oversight to insight are addressed. The concept of partnering with the contractor to validate the contractor's quality control system, establish meaningful metrics, and monitoring of those metrics is explained. Emphasis is on understanding what is needed in terms of contractor management, worker skills, training, processes, procedures, materials, tools, equipment, facilities, and all other elements of quality control. In addition to DPW quality management techniques and responsibilities, various users' partnerships with and participation in the Corps of Engineers' quality management program and involvement in USACE management of DOD projects will be explored.

The elements of the QASP are discussed and the need for objective quality assurance data is identified. Sample Surveillance Checklists are provided and the students prepare tailored checklists in class. Surveillance methods are explained and practical exercises are used to illustrate the essential features of random sampling, planned sampling and 100 percent inspection. The use of validated customer complaints and unscheduled inspections are discussed. Applicable portions of ANSI/ASQC Z1.4, "Sampling Procedures and Tables for Inspection by Attributes" are covered in detail. Students prepare a government contract quality assurance program using a sample contract as the basis for the work which includes various Assurance QA Plan

attachments such as surveillance activity checklists, inventory of services worksheets, etc. A mock surveillance action is performed and critiqued in class.

NOTE: Attendees need a calculator to benefit fully from the Practical Exercises that are an integral part of the course.

Prerequisites.

None. This course is recommended for personnel assigned or to be assigned as Contracting Officer Representatives, Quality Assurance Evaluators, or others with contractor performance monitoring duties. However, the following GS Series - 1107, 0800, 1170, 0340, & 0020 should attend.

DREDGE COST ESTIMATING

118 Length: 36 Hours 54DGE01A
CEUs: 2.8 PDHs: 28

Tuition: \$2850

Purpose.

This course provides an understanding of cost estimating for dredging projects. Methodology for cost estimating of pipeline, hopper, and mechanical dredging is presented. Training is provided on the use of CEDEP, the official dredge estimating software program.

Description.

Through lectures, discussion, demonstrations and class problems, the course covers the current requirements for the preparation of dredge cost estimates. Specific emphasis is placed on definitions, equipment selection, productivity and cost detail development in the preparation of cost estimates for projects utilizing pipeline, hopper, and mechanical dredges. These principles are further discussed in relationship to the current version of the CEDEP software.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0800; (b) Grade: GS-07 or above; Nominees are those who have a need to learn more about cost estimates for dredging projects. These employees are envisioned to work in the engineering, operation, planning, or construction divisions of Corps Districts or Divisions. Their educational background should not be less than that of an engineering technician or equivalent. (c) Nominees should be knowledgeable of computer software and computer spreadsheet programs. Dredging Fundamentals is a suggested (not required) class to be taken prior to this course.

DREDGING FUNDAMENTALS

333 Length: 36 Hours 54DFM01A
CEUs: 2.5 PDHs: 25

Tuition: \$2480

Purpose.

This course provides the student with fundamental dredging theories and practices involved with the dredging process.

Description.

Through lectures, group discussions, examinations, and a field trip, this course teaches the student fundamental dredging theory and accepted dredging practices in addition to basic information on how Corps dredging projects are engineered, managed, and maintained. A brief overview of dredge estimating, dredging safety, hydrographic surveys, and dredging contract administration is also provided. A field trip to see operating dredge equipment is included to help the student understand the material taught in the classroom. This course is a prerequisite for the Dredge Cost Estimating course.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Dredging related; (b) Grade: GS-04 through GM-13 or NSPS equivalent. Students should bring clothing appropriate for a field trip aboard an operating dredge including rain gear, normally located on open water. Safety and/or athletic shoes are acceptable for secure footing on open deck areas. The Corps will provide PFD's, hard hats, and hearing protection. The use of cellular telephones, pagers, laptop computers, or other devices which may cause disruption with the instructors' presentations during the classroom sessions will not be allowed. Use of these items for other than subject matter instruction will be grounds for immediate dismissal.

E&D QUALITY MANAGEMENT

208 Length: 20 Hours 35EQM01A
 CEUs: 1.7 PDHs: 17 LUs: 17

Tuition: \$1965

Purpose.

Improve the quality of projects, products and services, and enhance customer satisfaction by training team members in the policies, principles, processes, and tools of Engineering and Design Quality Management (E&D QM). Emphasize the role of Engineering in the USACE Business Process.

Description.

The student will be able to effectively apply E&D QM policies, principles, processes, and tools in the planning and design of projects. Emphasis is given to project planning, criteria development, designer selection, project design and review, construction, and operations and maintenance phases. The Civil Works, Military Programs, Support For Others, and Environmental project delivery processes are presented from the perspective of improving technical quality, timeliness and cost effectiveness. The course covers the design of projects by private sector architect-engineer firms and in-house technical personnel. Classroom presentations are supplemented by active classroom discussions and group exercises.

Prerequisites.

Grade: GS-07 and above; Series: 0800 and 0340; Corps team members involved with the project delivery process. Customers and employees of other agencies having an interest in Corps E&D QM processes are encouraged to participate.

EARLY CONTRACTOR INVOLVEMENT (ECI)

344 Length: 36 Hours 41ECI01A
 CEUs: 3.0

Tuition: \$1920

Purpose.

This course provides trainees an understanding of the use and application of the Early Contractor Involvement (ECI) Project Delivery System. ECI is an integrated project delivery system that uses an incentive type contract, operating under the FAR Successive Targets Clause. The delivery system is unique to USACE and differs from the design-build and design-bid-build delivery systems. It is premised on the concept of bringing the designer and constructor together early in the project design phase under two separate contracts.

Description.

The training defines and provides lessons-learned regarding the process of initiating, planning and executing a project using the ECI delivery system. Topics include: ECI definition and introduction; acquisition planning, ECI contract formation and legal sufficiency; ECI project planning, solicitation development, evaluation and award; administering the pre-construction phase; awarding construction options; awarding and administering 'fast track' packets; cost and pricing principles; negotiating at the production point; and involvement of DCMA and DCAA.

Prerequisites.

Nominees should be Project Delivery Team (PDT) members and/or their supervisors, who will be involved in projects utilizing the ECI delivery system (Contracting, Counsel, Project Management, Engineering, Construction and Customers). Varying experience levels are acceptable, but a basic understanding of Acquisition Planning, Best Value Tradeoff Source Selection Process and Construction Contract Administration is required.

EARTHWORK CONSTRUCTION--QV

40 Length: 36 Hours 35EWI01A
CEUs: 2.4

Tuition: \$1540

Purpose.

This course provides the participant with proper earthwork inspection techniques and improves quality assurance management on construction projects. Insight is also provided as to the technical reasons behind construction requirements and how these requirements contribute to successful construction.

Description.

Through lecture, conference sessions, laboratory demonstrations and practical exercises this course covers the field of soils identification, soil sampling and testing, and techniques for earthwork inspection and testing. This course primarily teaches earthwork embankment construction, although some material pertaining to building foundation preparation is included.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0801, 0802, 0809, 0810, 0830, and 0850; (b) Grade: GS-05 to 09. Students should have a current or projected assignment as a general or earthwork construction inspector or related duties at the field level. This course is also well suited for junior engineers as part of the training provided in Engineer-In-Training programs, and for Corps division, district, and field office personnel directly concerned with construction operations. Nominees must not have attended this or a similar course within the past 5 years.

ECOLOGICAL RESOURCES: INVENTORY & EVAL

168 Length: 36 Hours 33ERI01A

Tuition: \$2040

Purpose.

This course provides students with a working knowledge of current techniques and methods that can be used to identify, analyze, and evaluate ecological resources. Emphasis is placed on state-of-the-art procedures for inventory and data collection and evaluation of natural resources required for compliance with Federal laws, Executive Orders, and Corps of Engineers policy and planning guidance. Ecological resources include broadly defined fish and wildlife populations, habitats, and their relationships to each other and the environmental/ecosystem. While the course is not an introductory level course, it is assumed that the student has limited or outdated knowledge of fish and wildlife population dynamics, vegetation sampling, and assessment techniques for these resources.

Description.

Corps planning guidance and the "Principles and Guidelines" for planning water resources projects are used as the basis to describe the information required for ecological resources evaluation. Emphasis is placed on describing and demonstrating cost-effective, state-of-the-art techniques and procedures for identifying, inventorying, assessing, evaluating, and displaying ecological resources information. Habitat assessment procedures and inventory techniques are described and demonstrated for birds, mammals, reptiles, amphibians, and fishes. Emphasis is placed on those techniques that can be used to inventory sensitive species and evaluate their habitat or potential habitat. Students receive hands-on training through field trips taken to both terrestrial and aquatic sites where they conduct selected animal inventories and habitat assessments. Students will be provided with key sources of ecological resources information and technical assistance within the Corps, other agencies, and outside sources. Instructors emphasize that ecological resources cross geographic and political boundaries and encourage interdisciplinary and cross-stovepipe collaboration.

Prerequisites.

- a. This course is primarily for technical personnel whose duties involve the identification, evaluation, analysis or management of ecological resources. Project and Program Managers responsible for project and program management activities, particularly those involving ecosystem restoration, would also benefit.
- b. Occupational Series: Primarily 0028, 0400, and 1300.
- c. Grade: GS-09 or above. Disciplines (other than the above) may be accepted provided nominee's present or anticipated duties involve the management, analysis, identification, or evaluation of ecological resources.

SPECIAL INSTRUCTIONS: Much of this course involves field exercises. Therefore, students should prepare to work in both upland and aquatic environments and to bring appropriate shoes and clothing. Special tours may be available after class hours.

ECONOMIC ANALYSIS MILCON

101 Length: 28 Hours 35EAM01A

Tuition: \$1685

Purpose.

This course explains the fundamental principles and procedures for developing economic analyses (E/A) in support of military construction and capital investment projects. The practical application of economic principles is provided through "hands-on" computer training sessions in which participants develop economic analyses using the Army's economic analysis package, ECONPACK. Economic Analysis is an integral and required justification for military construction projects and capital investment proposals. This course is specifically designed to enable participants to prepare adequate, analytically accurate economic analyses in support of project funding requests to OSD and Congress. Lectures, work group exercises, practical exercises, and computer sessions are used to familiarize participants with the theoretical principles and automated capability to formulate, develop, document, and evaluate E/A.

Description.

Specific topics include (a) an overview of economic analysis as it relates to the planning, programming, and review process; (b) the economic analysis process: the logical sequential process used to develop E/A; (c) life-cycle cost analysis: terms and definitions; (d) the concept of equivalence, the time value of money, and the discounting and treatment of inflation; (e) life-cycle cost calculations: net present value, savings-to-investment ratio, discounted payback period; and (f) sensitivity analysis: testing data uncertainties. Students, using the automated system, ECONPACK, will perform calculations, document, and report analysis results. The course covers the automatic transfer of completed economic analyses to a DD Form 1391.

Prerequisites.

Nominees must be assigned to current positions involved with planning, preparing, programming, or reviewing requests for government military construction or military capital investment projects.

ELECTRICAL DESIGN I

373 Length: 36 Hours
CEUs: 3.3 PDHs: 33

35ED101A

Tuition: \$1560

Purpose.

This course clarifies criteria and practices for electrical engineer designers to assure an adequate design and review of electrical features of government projects and to improve design quality and incorporate AT/FT requirements. The course will develop the complete electrical design of a 40,000 square foot office building, including sizing of service, distribution equipment, feeder and branch conductors, transformers, panelboards, grounding components, fire alarm and fire pump, exterior and interior lighting, lightning protection, energy savings, protective devices, coordination and power requirements.

Description.

(a) **INTRODUCTION AND DESIGN PROCESS:** This session discusses project development and provides an overview of DD Form 1391, design construction and post completion steps, and cost codes. An overview of the site plan, floor plan, and one-line diagram is presented.

(b) **DESIGN-BUILD:** This session will discuss the Design-Build process in general and the development of the electrical requirements for the Request for Proposals (RFP) package.

(c) **ONE-LINE DIAGRAM:** This session develops a one-line diagram from the electrical distribution system connection to the building service entrance equipment. Emphasis is on equipment selection and sizing in accordance with DoD criteria, codes, and good engineering practice. Protection and coordination requirements will be discussed.

(d) **LIGHTING DESIGN:** This session includes selection and application of interior and exterior lighting fixtures and emergency and exit lighting systems. Interior lighting calculations (using the zonal cavity method) and exterior lighting calculations (using the point-to-point method) are discussed and demonstrated.

(e) **ELECTRICAL CALCULATIONS:** This session includes calculations for branch circuits and feeders, fire-pump motor circuits, and panel schedules; short-circuit currents (using the per-unit system and the point-to-point method), voltage drop calculations, and demand and diversity factors.

(f) **FIRE ALARM SYSTEMS:** This session discusses the specific application of NFPA 72 and 101 to the design of the office building. Placement of notification appliances and signaling devices are determined along with developing the riser diagram.

(g) **ELECTRICAL POWER SYSTEMS:** This session discusses the electrical design requirements for UPS, harmonics, transformers, surge protection, grounding, and emergency power. Energy savings and design considerations will be presented.

(h) **CLASSROOM EXERCISE:** Students design a building's electrical system.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0850, and 0855. Those in 0801 series or equivalent electrical professions who have an electrical background may also attend. Nominees should be electrical or electronic engineers or have electrical engineering responsibilities with a basic background in the practical applications of electrical and electronic projects.

ELECTRICAL DESIGN II

374 Length: 36 Hours
CEUs: 3.3 PDHs: 33

35ED201A

Tuition: \$1975

Purpose.

This course clarifies criteria and practices to assure an adequate design or review of electrical features (including AT/FP requirements) of military and civil projects. The course should increase proficiency in the design/review of electrical systems, improve design quality, reduce project cost, and eliminate/reduce field change orders due to design deficiencies during the construction phase to minimize the cost growth.

Description.

(a) **COURSE OVERVIEW:** This session discusses the required steps in the development of electrical system designs for military and civil work projects.

(b) **POWER SYSTEM CONFIGURATION:** This session discusses the methods to configure a power system for reliability. Main emphasis is on double-ended configuration.

(c) **ALTERNATE POWER SYSTEMS:** This session discusses design requirements for uninterruptible power supply (UPS), standby, and emergency power systems for various types of facilities.

(d) **ENGINE GENERATOR SET APPLICATIONS:** This session acquaints the designer with the components of engine generators and discusses the design parameters and features for engine generator set applications.

(e) **ARC FLASH HAZARD ANALYSIS:** This session covers the requirements and procedures to perform this analysis and provides the end user with the required information for marking hazards on electrical equipment and for providing proper personal protective equipment (PPE).

(f) **FIRE ALARM SYSTEMS:** This session includes discussion of the design requirements of signaling and detection circuits. Also included is the design of the fire protective signaling systems based upon NFPA and DOD requirements.

(g) **HARMONICS:** This session discusses the design of electrical distribution systems where non-linear loads exist. The effect of harmonics on linear loads is discussed. Design considerations and options to minimize the effects of harmonics are presented.

(h) **CATHODIC PROTECTION:** This session discusses galvanic corrosion and the design of sacrificial cathodic protection systems.

(i) **WIRING SYSTEMS AND APPLICATION ISSUES:** This session discusses wiring and cabling, telephone, public address and intercom systems, and fire protection systems including fiber-optic cable applications.

(j) **AIRFIELD LIGHTING:** This session discusses the electrical wiring system requirements for airfield lighting and control.

(k) **LIGHTNING PROTECTION:** This covers the fundamental requirements and procedures to design lightning protection systems for structures that comply with NFPA 780 and other DoD criteria. Transient voltage surge suppression (TVSS) will also be covered.

(l) **DESIGN ISSUES:** Using knowledge gained in the design course, the students will, with the help of the instructors, improve design quality and cost effectiveness of their projects.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0850 and 0855. Those in 0801 series or equivalent electrical professions who have an electrical background may also attend. Nominees should be electrical or electronic engineers or have electrical engineering responsibilities with a basic background in the practical applications of electrical and electronic projects.

ELECTRICAL EXTERIOR DESIGN

90 Length: 36 Hours
CEUs: 3.3 PDHs: 33

35ESC01A

Tuition: \$2070

Purpose.

This course presents an overview of the basic rules for the design, construction and maintenance of electrical substations, grounding, switchyards, overhead and underground power and communication lines, and coordination. It provides a sound basis for understanding the intent of the National Electrical Safety Code (NESC), applies the code in practical situations, and presents the Corps' policy and guidance, as documented in technical manuals and guide specifications. AT/FP requirements are also discussed. In order to receive the most benefits from this topic it is strongly recommended that the student have a working knowledge in the interpretation of time vs. current characteristic curve plots or have attended course Electrical Design I.

Description.

(a) **INTRODUCTION:** This segment presents the Technical Manuals and United Facilities Guide Specifications (UFGS) applicable to exterior design. The development, structure and application of the NESC are also presented in this introductory session. The responsibilities of utility system operators are stressed in the discussion of rules covering the purpose, scope, application and intent of the code. A general discussion of electrical loss versus equipment costs will illustrate why different voltage levels should be used for different applications.

(b) **GROUNDING:** This portion addresses the fundamentals of grounding: to include earth grounding, protective equipment operation, the flow of current to the electrode and its transfer to the earth, and electrode effectiveness. The grounding rules portion covers: the grounding conductor's point of connection, grounding conductor properties, the means of connection, grounding electrodes, methods of connection, and ground resistance. The allowed connections between grounding conductors and electrodes serving low-voltage, secondary circuits and those serving high-voltage, distribution lines and equipment are discussed.

(c) **ELECTRIC SUPPLY STATIONS:** This segment presents equipment arrangements in substations including enclosing equipment and selecting equipment. The requirements for protective grounding, the guarding of live parts, and providing working space around live equipment are also emphasized.

(d) **DESIGN, CONSTRUCTION, AND MAINTENANCE OF OVERHEAD ELECTRIC SUPPLY LINES:** This

portion addresses the design and construction of equipment, grounding, clearances, strength and loading. NESC fundamental concepts and requirements are explained and discussed in detail. Students discuss design/construction information.

(e) **DESIGN, CONSTRUCTION, AND MAINTENANCE OF UNDERGROUND DISTRIBUTION SUPPLY LINES:** Emphasis is placed on conduit design/construction, supply cable requirements, direct buried cables, risers and terminations, equipment concerns, and tunnels.

(f) **POWER SYSTEM PROTECTION AND COORDINATION:** This segment identifies the nature of short circuits and short-circuit protection philosophy. Protective device coordination will be discussed using sample problems.

(g) **FACILITY DESIGN:** This session develops a detailed design of a facility including connections to the power station, overhead/underground wiring system, transformers, service equipment, meters, grounding, and protection systems.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0850, and 0855. Those in 0801 series or equivalent electrical professions who have an electrical background may also attend. Nominees should be electrical or electronic engineers or have electrical engineering responsibilities with a basic knowledge of the design and/or construction and maintenance of substations, switchyards, and overhead and underground power.

ELECTRICAL QUALITY VERIFICATION

42 Length: 36 Hours 35ELC01A
CEUs: 3.0 PDHs: 30 LUs: 30

Tuition: \$1310

Purpose.

This course provides the participant with (a) requirements and techniques of electrical quality assurance to comply with contract requirements; (b) increased knowledge of materials, equipment, installation, and quality assurance techniques; and (c) training in interpreting plans and specifications and the National Electrical Code (NEC).

Description.

Through lectures and directed conference sessions, this course presents methods of quality assurance for interior and exterior distribution, motors, controls, lighting, special alarm systems, grounding and hazardous locations, and other electrical installations. It also places emphasis on enforcement of contract requirements, compliance with electrical safety, the electrical code, and the contractor's obligation for quality control under the Corps' quality management program.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0801, 0802, 0809, 0810, 0830, or 0850; (b) Grade: GS-05 or above, and equivalent. Students should have a current or projected assignment as an electrical or general quality assurance representative. Engineers are exempt from these eligibility requirements.

ELECTRONIC SECURITY SYS (ESS) DESIGN

360 Length: 36 Hours 55ESS01A
 CEUs: 3.2 PDHs: 32

Tuition: \$1400

Purpose.

This course is directed toward a variety of professional disciplines that typically make up a security design team, including: physical security specialists, anti-terrorism and force protection officers, engineers, technicians, planners, and project managers. Each student is given the basic knowledge and skills necessary to contribute to an ESS design effort.

Description.

Students are provided a solid foundation in all aspects of ESS technology and design. Instructors with extensive ESS qualifications and experience explain the basic theory, operation, and application of all ESS components--including intrusion detection systems (IDS), electronic entry control devices, video cameras (CCTV), and illumination sources. Requirements and techniques for effective system integration using a robust communications, command, and control (C3) infrastructure are emphasized. After completing the course, students should be proficient at conducting an ESS site survey, developing an ESS concept design, and performing quality assurance (QA) inspections and performance verification testing during the ESS installation phase. Throughout the course students are encouraged to actively participate by asking questions, analyzing case studies, and solving practical design problems.

Prerequisites.

Grade: GS-07 (or Military E-5) or higher involved with using, planning, designing, or managing electronic security systems.

ENVIRONMENTAL IMPACT ASSESSMENT

169 Length: 36 Hours 33EIA01A
 LUs: 31

Tuition: \$1055

Purpose.

This course provides students with a working knowledge of the environmental impact assessment process and the information, including environmental studies, needed to prepare an environmental impact assessment document or an environmental impact statement.

Description.

Detailed examination of some of the factors to be considered in evaluating the effect of proposed actions upon various aspects of the environment. The data and information required for the environmental evaluation of a major federal action are examined and their sources are discussed. Particular emphasis is placed on the physical and chemical factors which can control impacts on biological or cultural resources. The impact evaluation procedures to be followed in complying with the National Environmental Policy Act and with the current regulations and standards, are outlined. Procedures are described and analyzed to assist the preparation and critique of an assessment. Points to be considered in legal challenges are discussed. Coordination and public involvement are addressed. In addition to providing assessment procedures, this course serves as preparation in the physical resource environment for separate courses on ecological and cultural resources.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0020, 0100, 0400, 0800, and 1300 or by demonstration of special needs related to job responsibilities; (b) Grade: GS-07 or above.

ENVIRONMENTAL LAWS & REGULATIONS

170 Length: 36 Hours 33ELR01A
LUs: 31

Tuition: \$1225

Purpose.

After completing the course, students will be able to (a) list major federal statutes designed to protect the environment*; (b) summarize the major provisions of each federal environmental law and relationship to activities of the Corps of Engineers; (c) find the federal and state environmental statutes and regulations pertinent to a specific Corps activity, given access to a reference library; (d) identify and state legal requirements for environmental protection related to specified Corps activity, given access to suitable reference materials.

Description.

This is a general survey course designed for non-attorneys or for attorneys with limited background in environmental law. Topics include federal laws and regulations for environmental protection; pollution standards and variances; congressional and judicial developments; economic and technical difficulties in meeting standards; relation of the Corps of Engineers to state and federal agencies in meeting standards and enforcing laws; methods of monitoring pollution; legal penalties; litigation techniques; the Rivers and Harbors Act of 1899 regulatory provisions; the National Environmental Policy Act (NEPA); Executive Order 11514; the NEPA regulations of the Council on Environmental Quality; the Federal Clean Water Act; the Federal Clean Air Act; the Resource Conservation and Recovery Act; the Toxic Substances Control Act; the Endangered Species Act; the Fish and Wildlife Coordination Act; the Historic Preservation Act; the Noise Control Act; the Federal Environmental Pesticide Control Act; the Coastal Zone Management Act; regulations of the Environmental Protection Agency; and state laws and regulations.

*This course is not intended for personnel primarily involved with hazardous and toxic waste projects and does not include detailed coverage of the Resource Conservation and Recovery Act (RCRA), the Comprehensive, Environmental Response, Compensation and Liability Act of 1980 (CERCLA), or the Superfund Amendments and Reauthorization Act (SARA) of 1986.

This course is ISEERB (Interservice Environmental Education Review Board) approved. It has been reviewed by subject matter experts from DOD Components and found to be suitable to more than one agency.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0020, 0100, 0400, 0800, and 0900; (b) Grade: GS-07 or above. Nominees should have the abilities stated in the Environmental Impact Assessment course.

ENVIRONMENTAL REGULATIONS PRACTICAL APPLICATION

398 Length: 36 Hours 33MEC01A
CEUs: 2.2 PDHs: 22

Tuition: \$1880

Purpose.

This course is designed to further the student's understanding and ability to apply the technical requirements of various major federal environmental regulations. This course consists of a review of the technical application of selected environmental requirements pertinent to compliance issues. It will not consist of an exhaustive, detailed study of environmental statutes and regulations.

Description.

This course is comprised of discussions and practical exercises pertaining to the technical application of various environmental regulations such as RCRA waste classification and generator standards, used oil management, NPDES wastewater and stormwater requirements, SPCC plans, PCB management, Clean Air Act regulations, USTs, SWDA requirements, Spill reporting, Pesticide management, Hazardous materials transportation, and EPCRA requirements. The course also includes a brief introductory session on environmental management systems addressed in EO 13148. This course focuses on the practical application of these regulations during day-to-day compliance activities at DoD installations, Corps construction projects and Civil Works Projects and Facilities.

Prerequisites.

Nominees must have worked at least one year on environmental compliance projects, environmental projects, military construction projects, or civil works environmental compliance projects or have attended an environmental laws and regulations course within the past three years. Target audience includes engineers, scientists (chemists, industrial hygienists, geologists, etc.), Construction personnel, environmental compliance officers, ECAS and ERGO coordinators, environmental protection specialists, and operations personnel responsible for the technical application of various environmental compliance requirements.

ENVIRONMENTAL REMEDIATION TECHNOLOGIES

395 Length: 36 Hours 35GHS01A
CEUs: 2.8 PDHs: 28

Tuition: \$2695

Purpose.

This course provides the student with a practical understanding of various containment, ex-situ, and in-situ technologies. The information is intended for use by geologists, engineers, chemists, and other professionals involved in project planning, technology selection, design, operation, and optimization of remediation technologies for in-house projects or oversight of contractor efforts on environmental restoration sites.

Description.

After completion of this course, the student should have an understanding of the current site characterization strategies and remediation technologies being used on USACE projects. The class trip to a hazardous waste site provides an opportunity to see technologies that have been implemented. The student will also be introduced to available guidance from the USACE, EPA, Air Force, ITRC, ASTM, and other sources.

Prerequisites.

Nominees should be in occupational series 1300 or 0800 or working as an Environmental Protection Specialist or Project/Technical Manager on remediation projects. Nominees must be in grades GS-7 or higher. Courses in soils, hydrogeology, and/or chemistry would be helpful, but are not necessary. Students should bring clothing suitable for a field trip on one of the days.

ENVIRONMENTAL WRITING

198 Length: 36 Hours 53EVW01A

Tuition: \$1730

Purpose.

This course provides instruction for those who prepare NEPA documents (NOI, EIS, EA, FONSI, ROD, Supplements, etc.) as part of legislative proposals and feasibility studies to help them save time and develop good strategies for planning, organizing, writing, and revising.

Description.

Following this course, attendees will know the appropriate content and formatting requirements for NEPA documents that will be separate, combined with, or integrated as part of other project reports. As a result of the classroom instruction and several workshops, students will be better prepared to (a) interpret regulations and procedures relating to NEPA documents; (b) use the multi-objective, interdisciplinary planning framework for producing EAs and EISs; (c) organize material such as alternatives and impacts in a logical manner; (d) design graphic and tabular displays; (e) review and evaluate Corps documents for correct content and readability; and (f) prepare legally sufficient and defensible NEPA documents.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0020, 0100, 0400, 0800, and 1300 or demonstrate special needs related to job responsibilities; (b) Grade: GS-07 or above, and; (c) Experience: At least one year directly or indirectly involved with preparing NEPA documents.

ESTIMATING FOR CONSTRUCTION MODIFICATIONS

180 Length: 36 Hours 41ECM01A
 CEUs: 3.4 PDHs: 34 LUs: 34

Tuition: \$1280

Purpose.

This course provides intermediate level instructions and computer-based tools to assist in improving the participant's ability to prepare estimates for construction contract modifications within USACE policies and procedures.

Description.

Through computer-based tools, lectures, hands-on exercises and case study sessions, this course covers the various elements of a cost estimate (e.g., labor, material, equipment, job office overhead, home office overhead, bond and profit costs) and how to effectively and efficiently develop an estimate for construction modifications.

Also covered in the course are the estimating procedures for time extensions, delays, suspensions, impacts to both the changed and unchanged work, acceleration, extended home office overhead costs (Eichleay) and the benefit of the well prepared estimate in negotiations of a final modification settlement.

Prerequisites.

Nominees may be from (a) any civilian occupational series or military specialty; (b) Grade: GS-07 or above and comparable military with a current or projected involvement in the preparation, review, or use of construction cost estimates for contract modifications. Students must be proficient in the use of a personal computer. Prior knowledge of Microsoft Excel is required. This course is highly desirable for USACE construction managers and cost engineers.

Recommended Prerequisite Training: Student should have completed the Cost Estimating Basics (#181), or possess a firm understanding of basic estimating skills and principles.

FINANCE AND ACCOUNTING

12 Length: 36 Hours 42FAE01A
 CEUs: 3.3

Tuition: \$1115

Purpose.

To enhance the attendee's knowledge and understanding of USACE finance and accounting policy and managerial accounting principles in USACE.

Description.

The concepts of finance and accounting policies and procedures in the Corps of Engineers are presented. Emphasis is placed on professional accounting standards and requirements, managerial accounting functions, and compliance with the Chief Financial Officers' Act.

Prerequisites.

Nominees must be assigned in CP-11 in one of the following Occupational Series: 0510 Accountant; 0501 Financial Analyst; 0503 Management Analyst; 0505 Financial Manager; 0511 Auditor; 0560 Budget Analyst; 0343 Program Analyst. Participants must be at GS-07 grade level or above. Students must be Corps of Engineers employees, DA interns assigned to USACE Resource Management, or foreign nationals working in USACE Resource Management Offices.

FIRE PROTECTION ENGINEERING (BASIC)

6 Length: 36 Hours 55FPE01A
CEUs: 3.4 LUs: 34

Tuition: \$1090

Purpose.

This course teaches architects and engineers the necessary skills and knowledge required to implement the fundamental considerations of fire protection in building design and construction. After completing the course, the student should be able to review basic fire protection analyses and drawings more efficiently.

Description.

The course covers basic fire protection for facilities. The course includes instruction on fire-rated construction, building and life safety codes, exit requirements, special hazard protection, and general requirements of fire suppression systems, fire alarm and detection systems, and water supplies.

Prerequisites.

Nominees must meet the following criteria: (a) Occupational Series: Selected 0800, (b) Grade: GS-07 or above, (c) students should have a current or projected assignment in a safety office, in an engineer design section, in a construction office, or as a project manager with duties which require a technical knowledge of fire protection engineering principles.

FIRE SUPPRESSION SYSTEMS DESIGN

33 Length: 36 Hours 55FES01A

Tuition: \$4265

Purpose.

This course teaches the basic knowledge and skills necessary for the design, calculation, and review of automatic fire suppression systems. The Corps of Engineers requires personnel involved in fire suppression system design to be familiar with all required fire suppression systems.

Description.

The course covers fixed fire protection systems and design of fire suppression systems. After completing this course, the student should be able to design/review most types of automatic fire suppression systems. The course will emphasize fire sprinkler design.

Prerequisites.

Nominees must meet the following criteria: (a) Occupational Series: Selected 0800, (b) Grade: GS-07 or above; (c) students must be involved in design/construction of fire extinguishing systems as part of their duties or require this knowledge in their work.

FLOATING PLANT SAFETY

81 Length: 28 Hours 58FPD01A

Tuition: \$1390

Purpose.

This course provides personnel with current safety and health information with which they will be able to perform required safety and health inspections of the Corps of Engineers and contractor owned floating plant and dredging equipment and/ or operations. The intent of this training is to familiarize students with pertinent safety and health requirements, including the Corps of Engineers Safety and Health Requirements Manual (EM 385-1-1), US Coast Guard requirements, applicable Codes of Federal Regulations, and other industry standards pertaining to floating plant and dredging equipment and operations.

Description.

This course is designed for Government personnel that have responsibility for purchasing, maintaining, inspecting, or operating floating plant, dredging equipment and/or operations subject to the requirements of EM385-1-1. Some of the specific areas to be covered in this course, through open discussion, lecture, video tapes, on-site visit, and practical exercises, include the following topics: (a) overview of applicable safety standards; (b) types of floating plant/dredges; (c) in-depth review of Section 19 of EM-385-1-1; (d) reviewing contractor safety submittals; (e) contractual safety requirements and/or specifications; (f) electrical safety on floating plant; (g) fire prevention and required on-board equipment; (h) rigging and hoisting equipment; (i) confined space and environmental requirements; (j) how to perform safety inspections and record findings; (k) on-board inspections of floating plant (practical exercise); (l) safety program management; and (m) contingency/emergency operations.

Prerequisites.

Nominees should include dredging inspectors, quality assurance representatives, project and resident engineers, safety specialists, managers and/or engineers, vessel operators and crew, maintenance personnel, and personnel in other career fields that have an interest in floating plant and dredging safety. Students should have a basic understanding of floating plant and dredging equipment and/or operations. Students should bring clothing appropriate for a field trip aboard an operating vessel, normally located on open deck areas. Safety and/or athletic shoes are acceptable for secure footing on open deck areas. The Corps will provide PFD's, hard hats, and hearing protection. A picture ID is required. Laptop computers or other devices to aid in learning may be used.

FLOOD CONTROL & COASTAL EMER

158 Length: 36 Hours 35FCC01A

Purpose.

This course provides a comprehensive overview of the U.S. Army Corps of Engineers (USACE) Civil Emergency Management Program. The course includes studies of the policy and guidance associated with the USACE Flood Control and Coastal Emergency authority (PL 84-99).

Description.

Through lectures, case studies, discussions and exercises, the student receives training in the following areas: USACE emergency responsibilities involving all-hazard natural disaster preparedness, advance measures; emergency operations (flood and post flood response); rehabilitation of flood control works threatened or destroyed by flood; protection or repair of federally authorized shore protection works threatened or damaged by coastal storm; and provision of emergency water supplies needed as a result of drought or contaminated sources.

Prerequisites.

District and MSC emergency managers must approve nominations. In general, nominees should be: (a) emergency management personnel; (b) functional or technical staff who are currently assigned to/or working in positions with responsibilities related to emergency management, flood control works inspections and maintenance, and emergency response operations. Attendance by other personnel will be determined based on space available in the course. All emergency management personnel should have this course within the first two years of their assignment to the emergency management organization and every three years thereafter as a refresher. Chief, HQUSACE Civil Emergency Management Branch will have final approval authority over all nominations, based on the recommendation(s) of local and MSC emergency managers. As many skills and competencies are involved in planning and conducting emergency operations, there is no specific job series requirement to attend this course.

FLOOD FREQUENCY ANALYSIS

123 Length: 36 Hours 35FFA01A

Purpose.

This course provides a basic understanding for the correct application of the Interagency Committee on Water Data guidelines on computation of flood flow frequencies. The computer software HEC-SSP is used throughout the course.

Description.

This course enables the participant to make technically sound and efficient discharge-frequency estimates. The course focuses on the theoretical basis for frequency analysis, application of techniques contained in the "Guidelines for Determining Flood Flow Frequency," Bulletin 17B, and application of the computer program HEC-SSP. The course is intended for engineers, hydrologists, and others involved in developing discharge-frequency estimates at gaged and ungaged locations.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800, 1300, and 1500; (b) Grade: GS-07 or above. Course nominees should be engineers who perform professional work in the fields of hydrology and hydraulics. Nominees should have one or more years of experience in these areas. It is required that course participants be in positions where, in the next year or two, they will be involved in developing frequency curves, performing regional analysis, or determining generalized skew coefficients. Course nominees must have completed a college-level statistics course in order to succeed in this class.

FORMAL SOURCE SELECTION

183 Length: 28 Hours 41FSS01A
CEUs: 2.3 PDU: 23

Tuition: \$ 730

Purpose.

This course provides basic skills to ensure acquisition teams are thoroughly trained in the regulatory and prescribed procedures mandated for proper execution of the formal source selection process. This process covers the evaluation, documentation and selection of contract awards by individuals other than the Contracting Officer. Through instruction and group exercises, students will gain the technical expertise needed to implement the required evaluation and selection procedures.

Description.

This course covers (1) Pre-solicitation: Development of Evaluation Criteria using market research information, Source Selection Plans; and Selection and Appointment of the Source Selection Organization; (2) Solicitation: Issuance of Request for Proposal, Proposal Evaluations, Preparation of Source Selection Documents, Briefings, and Decisions Rationale; (3) Documentation of Best Value Trade Offs – The Cross Walk; (4) Procurement Integrity – Protecting the Process, Proposals and Government's Best Interest, (5) Contract Award and (6) Other Points to Consider.

Prerequisites.

The following types of employees will benefit from this training: (1) Contracting 1102 series (GS 9-15 equivalents), Engineer 800 series (GS 9-15 equivalents), and Contingency Contracting Officers who are participating or expect to participate as an acquisition team member/participant in the source selection process, (2) Subject Matter Experts requested to participate as members or advisors, i.e., Counsel, Resource Management, Cost Price Personnel, (3) Technical/functional/ external customer evaluator representatives of requirements received for formal source selection evaluation, and (4) All procurement and functional second year interns who have obtained DAWIA Level II Certification.

NOTE: This course is not open to Contractors.

FUNDAMENTALS OF WETLANDS ECOLOGY

272 Length: 36 Hours 33WET01A
CEUs: 2.3 PDHs: 23

Tuition: \$2450

Purpose.

The restoration of fish and wildlife habitat and other wetland functions is a high priority project purpose in the civil works program. Wetlands typically comprise a major portion of the fish and wildlife habitat restoration projects currently being planned by Corps districts. However, additional wetland functions such as improvement of water quality are becoming increasingly recognized for their importance in many Corps' programs. Corps personnel who have no, or only limited, experience or education with wetland ecosystems need to know the fundamental concepts of wetlands science and management. This course provides an introduction and overview of basic wetland ecological concepts and principles in the context of planning and operating civil works environmental and mitigation projects.

Description.

Students are provided with state-of-the-art basic knowledge of wetland flora and fauna, hydrology, soils, and ecology. The course emphasizes wetlands functions and values in an ecosystem perspective. Both saltwater and freshwater wetlands will be addressed in the course. The relationship of wetlands to adjacent terrestrial and deep water habitats, along with wetlands succession and dynamics, are discussed. This course provides the base working level fundamentals in the wetlands ecology area and may also serve to update students in current developments in wetlands science. While the focus of this course is not on wetlands delineation or regulatory (Section 404) issues, regulatory personnel would benefit from the broader overview of wetlands ecology.

This course provides instruction in the following topics: (a) wetland hydrology; (b) wetland vegetation; (c) major faunal populations associated with wetlands; (d) wetland plant and animal communities, ecosystem relationships, and dynamic processes; (e) hydric soils; (f) wetland classification systems, including the relationship of such wetland classifications to ecosystems classifications and parameters; (g) principles of wetlands ecology and dynamics; (h) current research in wetlands; (i) evaluation of wetland functions; (j) overview of wetland development, restoration, and constructed wetlands; and (k) open discussion and problem solving.

Prerequisites.

Nominees must be: Occupational Series: 0025, 0028, 0110, 0400, 0800, 1300; and Grade: GS-07 and above.

GENERAL CONSTRUCTION-QV

54 Length: 37 Hours 35GCQ01A
 CEUs: 3.3 PDHs: 33 LUs: 33

Tuition: \$1070

Purpose.

This course provides the participant with the basic technical knowledge required to verify all elements of building construction, based on guide specifications, and to identify the quality assurance representative's role as it relates to construction quality management.

Description.

Through lectures, conferences, and case study sessions, the course covers the subjects of concrete and masonry, safety, exterior and interior electrical systems and components, heating, air-conditioning, plumbing, ventilation, interior and exterior finishes, structural steel and welding, mechanical insulation, sheet metal work, site utilities, soils and compaction, and roofing. An account of the purpose, meaning, and acceptance of contract quality control is included in the session on procedures for monitoring the construction quality management program. The course is directed toward proper and effective quality assurance verification of building construction. This course would be very helpful for field installation personnel who perform operation and maintenance repair on building systems and personnel who have real property inspection duties.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0801, 0802, 0808, 0809, 0810, 0830, and 0850; (b) Grade: GS-05 or above or equivalent. Students should have a current or projected assignment as a general quality assurance representative, construction representative, technician, or engineer, with quality assurance responsibilities. The fact that this course is oriented to building construction should be weighed when nominating a civil works candidate. Candidates must not have attended this or similar course within the past 5 years.

GIS INTERMEDIATE

167 Length: 24 Hours 54GII01A

Tuition: \$1350

Purpose.

This course provides students who already have basic GIS knowledge with more advanced GIS concepts and issues. The class uses a single data set to reinforce class instruction during a series of hands-on laboratory exercises.

Description.

This instruction provides knowledge of advanced GIS concepts. Specific issues addressed:

- (a) Database Design. Best ways to create databases for solving specific problems and avoiding the need to later redesign so as to rectify deficiencies;
- (b) Advanced Analytical Methods. Processing methods beyond basic boolean overlay and map algebra will be considered for environmental, water control, and land management applications;
- (c) Error. Error types, calculation, and issues related to propagation of error during analysis.
- (d) Presentation of Results. Preparation and presentation using key elements of effective GIS maps.

Prerequisites.

Students shall have previous instruction or job-related experience in the use of GIS.

Nominees should be assigned (a) Occupational Series: 0020-0029, 0100-0199, 0400-0499, 0800-0899, 1170, and 1300-1399; (b) Grade: GS-07 or above.

GIS INTRODUCTION

205 Length: 36 Hours 54GIS01A
CEUs: 2.2 PDHs: 22

Tuition: \$1475

Purpose.

This course provides introductory instruction on the use of GIS software/hardware and various data sources to analyze Corps project operations and support decision making.

Description.

Instruction should introduce students to the concept of GIS as an integrator of geospatial data and as an analysis tool emphasizing emergency management, natural resources and environmental applications. Topics include:

- (a) concept and operation of GIS, data entry, storage, display, and output;
- (b) geospatial data structures and their advantages;
- (c) compatibility issues;
- (d) analysis, modeling, QA/QC;
- (e) selection of a GIS;
- (f) importation of imagery CAD files; and
- (g) related USACE and Federal policies and standards.

Prerequisites.

Nominees should be assigned (a) as engineers, planners, biologists, foresters, or surveyors who use digital data to map or analyze projects; (b) Occupational Series: 0020-0029, 0100-0199, 0400-0499, 0800-0899, 1170, and 1300-1399; (c) Grade: GS-07 or above; (d) those whose job responsibilities include the analysis of spatial data and the use of digital data to map or manage Corps projects will find this course useful or (e) supervisors or others from any occupational series who are considering or are interested in the possible use of GIS in their business process.

GPS FOR GIS APPLICATIONS

187 Length: 36 Hours 35GOV01A
CEUs: 2.8 PDHs: 28

Tuition: \$2500

Purpose.

This course provides participants with a knowledge of the basic techniques for integrating field GPS spatial data into GIS databases. Functional elements supported by this course include: surveying, engineering, construction, navigation, master planning, and facility management.

Description.

This course covers basic GPS/GIS concepts using the Spatial Data Standards principles and applications; related cost factors; GIS database development; absolute and differential modes; survey applications and procedures; and GPS data collection, reduction, accuracy, and analysis using commercial data bases and GIS software.

Prerequisites.

The course is intended for military and civil functional elements involved with facility management, surveying, construction, navigation, mapping, real estate, FM, GIS, etc. Hands-on computer experience required for this course. The course is intended for both professional and technical level classifications. It is open to all grades/series with GPS/GIS responsibilities.

Hazardous Waste Manifesting, Adv 8-Hour Ref

431 Length: 8 Hours

56HMA01A

Tuition: \$ 750

Purpose.

This course provides training relative to the Hazardous Materials Transportation Act (HMTA) and the Resource Conservation and Recovery Act (RCRA) as it applies to the generation, transportation, and disposal of hazmat, focusing upon hazardous waste. This 8-hour training course is an alternative to the 16 hour training course offered under PROSPECT course number 429 for those individuals in need of recurrent training under 49 CFR 172.704(c)(2) that already possess a working knowledge of existing hazardous materials and hazardous waste regulations. This 8-hour course focuses primarily on recent regulatory changes. A pretest is used to promote self-review of existing regulations and to assess current level of understanding. Students unable to pass the pretest and/or in need of refresher training on long-standing requirements, are referred to the 16 hour PROSPECT course #429. Both courses are intended to enable employers to certify that their employees have been trained and tested as required by 49 CFR 172, Subpart H. (Note: Certain RCRA and safety related training elements required by 49 CFR 172 Subpart H and 40 CFR 265.16 are typically site-specific and must be performed on the job.)

Description.

Training topics reviewed via self-study with respect to the open-book pretest include identification and classification of hazardous waste for purposes of preparing a hazardous waste manifest and DOT requirements for shipping hazardous wastes. The self review includes the following topics: waste classification; land disposal restriction notifications; identification of reportable quantities; use of the Hazardous Materials Table; hazardous materials shipping descriptions; and packaging, labeling, marking, and placarding requirements. Course instruction focuses on recent changes to EPA hazardous waste and DOT hazardous material transportation regulations. It also provides security awareness training. As time permits, the course will offer a brief review of relevant, long-standing hazardous material and hazardous waste regulatory requirements pertaining to manifesting of hazardous waste.

Prerequisites.

To be eligible for this course, the student must have successfully completed the initial training in PROSPECT Course #223-HW Manifest/DOT Certification and at least three iterations of refresher training in PROSPECT Course #429-HW Manifest/DOT Recertification. Additionally the student must score at least 70% on an on-line open book exam designed to measure the competencies focused on RCRA and HMTA

requirements. POC for further information on the pretest, contact (402) 697-2559 or (402) 697-2560.

HTRW CONSTRUCTION INSPECTION

141 Length: 24 Hours

56HCI01A

Tuition: \$2725

Purpose.

This course is for working level and management personnel having responsibilities in the USACE Superfund, DERP, and other Hazardous, Toxic, and Radioactive Waste (HTRW) programs. It provides a comprehensive overview of responsibilities and acceptable work practices for Quality Assurance Representatives (QAR) and supervisors on HTRW construction sites. The course provides information to allow the QAR to effectively perform his job in determining if contract work performed, testing, etc., complies with relevant federal, state, and local standards and with the contract documents. This course focuses on QAR activities beginning with Biddability, Constructibility, Operability (BCOE) reviews; through mobilization and preconstruction; construction activities; final cleanup/demobilization; and operation and maintenance (O&M). Areas of chemistry, health and safety, and environmental regulations are covered in summary level-the course emphasis is on the Quality Management Process.

Description.

Through lectures, lessons learned, and case studies, this course provides instruction in the following areas: (a) environmental laws and regulations; (b) field monitoring activities including Chemical Data Quality Management, removal, containment, and treatment systems; (c) overview of removal, containment, and treatment systems technologies, including surface water control, extraction and treatment of groundwater, excavation/on-site treatment of soil, collection and disposal of wastes, underground storage tank management, and geosynthetics applications; (d) sampling and testing procedures, interpretation of test results; and (e) health and safety in field activities including work practices to minimize risks for both on-site and off-site personnel and site-specific safety and health plans. A site visit is tentatively planned, subject to availability and proximity of sites to the classroom site.

Prerequisites.

This course is for working level and management personnel with a current or projected assignment in the USACE HTRW program.

HVAC CONTROL SYSTEMS: DESIGN & QV

340 Length: 36 Hours 35HVC01A
CEUs: 3.1 PDHs: 31

Tuition: \$1710

Purpose.

This course is intended for HVAC control system designers and Quality Verification (QV) construction staff responsible for the design, specification, and construction of direct digital control (DDC) systems for HVAC and other building-level controls systems. The focus is on LONWORKS technology, as specified in UFGS-15951 and UFGS-13801, based on an open-standard multi-vendor communications protocol that supports base-wide monitoring and control functions.

Description.

This course provides the HVAC control system designer with the knowledge necessary to develop a project design and specification for building-level direct digital controls capable of being interfaced with a base-wide utility monitoring and control system (UMCS). Subjects include:

- (1) Applied control theory,
- (2) Control hardware, loops, systems, and drawings
- (3) Calculations, sizing, selections, and setpoints
- (4) DDC software packages and requirements
- (5) LonWorks; technology, terminology, devices, functions, architecture, system networking, interfaces, and LonWorks Network Services (LNS)
- (6) LonWorks points schedule drawing requirements
- (7) UMCS supervisory functions and operator interface requirements (graphical display, alarms, scheduling, trending)
- (8) Project implementation
- (9) Project quality verification and inspection
- (10) HVAC controls commissioning
- (11) LonWorks multi-vendor product support and availability
- (12) LonWorks hardware/software demonstration
- (13) Base-wide UMCS/DDC master planning

Prerequisites.

Basic understanding of HVAC system types and functions.

HVAC CONTROL SYSTEMS: O&M

246 Length: 36 Hours 72HOM01A
CEUs: 3.1

Tuition: \$2010

Purpose.

This course provides instruction on the operation and maintenance of conventional direct digital control (DDC) for building-level HVAC systems.

Description.

This course provides instruction on the operation and maintenance of conventional DDC systems. The training is not specific to any single vendor's DDC system. The instruction is generic and intended to be applicable to any vendor's hardware and software, but several different vendors DDC systems, hardware, and software will be described. The instruction includes:

- (1) Applied HVAC control theory,
- (2) Control systems, loops, and hardware,
- (3) Systems details (including but not limited to VAV systems and VAV boxes),
- (4) Reading schematics and diagrams,
- (5) Controller settings and adjustments,
- (6) Control loop diagnosis and trouble shooting,
- (7) DDC system architectures, hardware, and software,
- (8) LONWORKS introduction and basics,
- (9) Coordination with Designers and Construction Quality Verification staff,
- (10) Performance Verification Testing (PVT) and system acceptance,
- (11) Demonstrations and hands-on lab sessions.

Prerequisites.

This course is intended for individuals performing HVAC control system operation and maintenance. Construction Quality Verification staff will also benefit from this course.

HVAC DESIGN: BASIC

391 Length: 36 Hours 35BHV01A
CEUs: 3.3 PDHs: 33

Tuition: \$1680

Purpose.

This course provides instruction on the fundamentals of HVAC design including appropriate Corps of Engineers criteria.

Description.

This course presents topics on (a) heating and cooling load calculations; (b) psychometrics; (c) duct design; (d) hydronic system design; (e) equipment selection; (f) HVAC system sizing and layout; (g) HVAC system design and construction criteria sources; (h) building insulation and U-value determination; (i) energy conservation criteria including ASHRAE 90.1 conformance; (j) noise and vibration considerations, and (k) indoor air quality.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0800 through 0855; (b) Grade: no limitations; (c) current or projected assignment as an HVAC design engineer or technician with limited or no design experience. The course provides an overview of HVAC design topics for individuals responsible for design, construction, or operation of HVAC systems.

HVAC SYSTEMS COMMISSIONING

327 Length: 36 Hours 35MSC01A
CEUs: 3.0 PDHs: 30

Tuition: \$2230

Purpose.

This course provides practical technical information to fulfill construction quality verification duties for commissioning of mechanical systems. The course identifies procedures for startup, sequence of operation, and testing that pertain to mechanical equipment and repetitive deficiencies in system performance.

Description.

Through lecture, visual aids, conferences, and testing, this course presents the following mechanical HVAC subjects: commissioning of mechanical systems, cooling systems, heating systems, air side systems, and control systems. A 2-day lab experience is included where students observe proper performance testing of HVAC Systems.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0801, 0802, 0809, 0810, 0830, and 0850; (b) Grade: GS-05 through GS-12, or equivalent; (c) a current or projected position as an engineer, engineering technician, construction representative, or resident engineer with mechanical quality assurance (directly or supervised) responsibilities. Nominees should have completed the Mechanical QV PROSPECT Course, #074, or have experience in mechanical quality assurance equivalent to the basics presented therein. Engineers are exempt from these requirements.

HVAC SYSTEMS TA&B-QV

68 Length: 36 Hours 35TAB01A
CEUs: 3.0 PDHs: 30

Tuition: \$2050

Purpose.

This course provides quality assurance personnel in the field with an understanding of HVAC systems functions and the testing, adjusting, and balancing relationships of the complete system.

Description.

The course teaches the necessary skills and knowledge to evaluate system installation and system testing, adjusting, and balancing. The course includes a 2-day lab exercise that demonstrates technical material necessary for field technicians and field engineers to perform quality verification.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0801, 0802, 0809, 0810, 0830, and 0850; (b) Grade: GS-07, WG-09, or above, or equivalent. Five years of quality assurance experience as a mechanical technician or general quality assurance representative is recommended. Students should bring pocket calculator.

HW MANIFEST/DOT CERTIFICATION

223 Length: 36 Hours 56HWM01A
CEUs: 3.4

Tuition: \$1910

Purpose.

This 36-hour course provides initial training regarding regulatory requirements of the Hazardous Materials Transportation Act (HMTA) and the Resource Conservation and Recovery Act (RCRA) as it applies to the generation, transportation, and disposal of hazmat, focusing upon hazardous waste. It enables employers to certify that as required by 49 CFR 172 Subpart H, that their employees have been trained and tested on general awareness and function specific elements described below. In addition, this is an ISEERB approved and DoD approved course as per DoD 4500.9-ER. It has been reviewed by subject matter experts from DOD components and found to be suitable for more than one agency. (Note: Certain RCRA and safety related training elements required by 49 CFR 172 Subpart H and 40 CFR 265.16 are typically site-specific and must be performed on the job.)

Description.

Training topics cover the identification and classification of hazardous wastes for purposes of preparing a hazardous waste manifest and fulfilling the DOT requirements for shipping hazardous wastes. Specifically, training topics include RCRA waste classification, land disposal restrictions and notifications, generator requirements, manifesting requirements, identification of a DOT Reportable Quantity, use of the Hazardous Materials Table, DOT requirements for determining a shipping name, properly packaging, labeling, marking and placarding, and DOT emergency response requirements, and general security awareness training. In addition, the course addresses special EPA and DOT requirements for shipping asbestos and PCBs.

Prerequisites.

This course is primarily targeted at persons in the following series: 0800, 0820, 0809, 0810, 0819, 0028, 0029, 0025, 0026, 0401, 1350, 1301, 0893, 0830, 1306, and 1320 (All series involved with environmental programs, including all engineers, chemist, industrial hygienists, health physicists, biologists, geologists, hydrogeologists, program managers, planners, etc.) as well as all Installation environmental staff, Civil Works Environmental Compliance Coordinators and Civil works personnel required to sign hazmat shipping documents and/or hazardous waste manifests. The training is designed for persons with any of the following job responsibilities: identification of proper shipping names for hazardous wastes in accordance with DOT regulations; selection of appropriate packaging, marking, labels and placards in accordance with DOT regulations; RCRA waste identification and classification; completion or review of hazardous waste manifests

and/or land disposal restriction notifications; preparation of shipping documents for used oil, asbestos and PCBs; shipping of analytical samples; loading or unloading of hazardous wastes; and transportation of hazardous materials in general.

HW MANIFEST/DOT RECERTIFICATION		
---------------------------------	--	--

429

Length: 16 Hours

56HWR01A

Tuition: \$ 790

Purpose.

This 16-hour course provides recurrent training regarding regulatory requirements of the Hazardous Materials Transportation Act (HMTA) and the Resource Conservation and Recovery Act (RCRA) as it applies to the generation, transportation, and disposal of hazmat, focusing upon hazardous waste. It enables employers to certify as required by 49 CFR 172 Subpart H, that their employees have been trained and tested in general awareness and function-specific elements described below. In addition, this is an ISEERB approved and DoD approved course as per DoD 4500.9-R. It has been reviewed by subject matter experts from DOD components and found to be suitable for more than one agency. (Note: Certain RCRA and safety related training elements required by 49 CFR 172 Subpart H and 40 CFR 265.16 are typically site-specific and must be performed on the job.)

Description.

Training topics cover the identification and classification of hazardous wastes for purposes of preparing a hazardous waste manifest and fulfilling the DOT requirements for shipping hazardous wastes. Specifically, training topics include RCRA waste classification, land disposal restrictions and notification, manifesting requirements, identification of a DOT Reportable Quantity, use of the Hazardous Materials Table, DOT requirements for determining a shipping name, properly packaging, labeling, marking and placarding, and DOT emergency response requirements, and general security awareness. In addition, the course addresses special EPA and DOT requirements for shipping asbestos and PCBs.

Prerequisites.

This course is primarily targeted at persons in the following series: 0800 0820, 0809, 0810, 0819, 0028, 0029, 0025, 0026, 0401, 1350, 1301, 0893, 0830, and 1320. (All series involved with environmental programs, including all engineers, chemists, industrial hygienists, health physicists, biologists, geologists, hydrogeologists, program managers, planners, etc.) as well as all Installation environmental staff, Civil Works Environmental Compliance Coordinators, and Civil Works personnel required to sign hazmat shipping documents and/or hazardous waste manifests. The training is designed for persons with any of the following job responsibilities: identification of proper shipping names for hazardous wastes in accordance with DOT regulations; selection of appropriate packaging, markings, labels and placards in accordance with DOT regulations; RCRA waste identification and classification; completion or review of hazardous waste manifests

and/or land disposal restriction notifications; preparation of shipping documents for used oil, asbestos and PCBs; shipping of analytical samples; loading or unloading of hazardous wastes; and transportation of hazardous materials in general.

HYDRAULIC STEEL STRUCTURES - OVERVIEW

343 Length: 36 Hours 33HSS01A
CEUs: 3.2 PDHs: 32

Tuition: \$2530

Purpose.

This course is designed to provide training on the inspection, evaluation, and repair of hydraulic steel structures, that includes the identification of critical members and connections. Nondestructive testing techniques that may be used during periodic inspections or detailed structural inspections are discussed. Guidance is provided on material testing to determine the chemistry, strength, ductility, hardness, and toughness of the base and weld metal. Analyses methods that can be used to determine structure safety, safe inspection intervals, and expected remaining life of the structure with given operational demands are presented.

Description.

This course is an overview of the USACE requirements for design, inspection, and evaluation of hydraulic steel structures(HSS). It is designed to provide guidance in the best practices for maintenance, repair, or replacement of HSS. Nondestructive testing techniques that may be used during periodic inspections or detailed structural inspections are discussed. Guidance is provided on material testing to determine the chemistry, strength, ductility, hardness, and toughness of the base and weld metal. Analyses methods that can be used to determine structure safety, safe inspection intervals, and expected remaining life of the structure with given operational demands are presented.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800; (b) Grade: GS-07 or above and WG as appropriate; and (c) This course is designed for all personnel involved in the design, fabrication, inspection, and repair of USACE hydraulic steel structures.

HYDRAULICS AND HYDROLOGY FOR DAM SAFETY STUDIES

320

Length: 36 Hours

33HHD01A

Tuition: \$2220

Purpose.

Computation of inflows to a reservoir, through the dam, and downstream are critical to assessing the safety of the dam and potential flood problems downstream. Current training available to hydrologic and hydraulic engineers deals with development of historical and design storms for flood and conservation storage and day-to-day operational events. This course provides needed guidance in the evaluation of extreme events related to dam safety. With the aging infrastructure of Corps dams, the need for analysis tools and engineers trained to properly use these tools is expanding.

Description.

Through a series of lectures and hands-on workshops, the students will learn about development of extreme storm events and hydrologic and hydraulic analysis methods using HEC-HMS and HEC-RAS software to simulate inflow design floods to assess spillway adequacy, and to evaluate dam-break consequences. Other topics will include severe storm magnitude and sequence analysis, hydrologic simulation of inflow to dam and downstream tributaries, spillway sizing and operation, hydraulic calculations of flow through dam outlets; estimating dam breach parameters; dam breaching analysis; hydraulic routing of dam break flood waves; how to solve model stability problems when performing a dam break analysis; and inundation mapping.

Prerequisites.

Nominees must be assigned (a) Occupational series: Selected 0800 and 1300 (b) Grade: GS-07 or above (c) Prior courses: Basic HEC-HMS (#178) and HEC-RAS (#114) or equivalent knowledge; and (d) Familiarity working in a Windows-based computer system environment. Basic HEC-HMS and HEC-RAS input will not be covered. Prior experience with unsteady flow routing is recommended.

HYDROGRAPHIC SURVEY TECHNIQUES

56 Length: 40 Hours 35HST01A
CEUs: 3.0 PDHs: 30

Tuition: \$2530

Purpose.

This course provides participants with the knowledge and technology required in performing hydrographic surveys in support of USACE navigation, dredging, surveying, coastal engineering, inland waterways and related marine construction activities. The course is designed to provide engineers, engineer technicians, field survey technicians, survey vessel operators, and A-E contract administration personnel with a technical familiarization of the criteria, standards, and specifications in EM 1110-2-1003, "Hydrographic Surveying", and applying this manual in performing in-house and contracted hydrographic surveys.

Description.

This course provides instruction on the process and technology used to conduct hydrographic surveys. The instructional program emphasizes the processes required to most effectively perform hydrographic surveys. The major subject areas covered include: hydrography, survey datums, depth and position determination, horizontal and vertical error estimation and analysis, tidal theory, computer hardware and software used for automated hydrographic surveys, fluff measurement, volume computations, multi-beam swath and multitransducer sweep systems, GPS positioning, LIDAR, and project planning. Some horizontal and vertical measurement concepts and techniques will be demonstrated in the field.

Prerequisites.

Nominees should be assigned (a) Occupational Series: 0800 (engineers, engineer technicians), 0817 and 1300 (field survey technicians), and 0095 and 1100 (A-E contract administration personnel); (b) Grade: GS-05 or above. Waivers will be considered.

HYDROLOGIC ANALYSIS FOR ECOSYSTEM RESTORATION

161 Length: 36 Hours 33RAW01A

Tuition: \$2210

Purpose.

The primary objectives of the course are to provide participants with an understanding of the role of hydrologic engineering in ecosystem restoration studies and to provide experience in the application of several software tools that can be used to perform the hydrologic analyses common in restoration planning.

Description.

Hydrologic and hydraulic processes generally control the creation, restoration, maintenance, size, and function of rivers and aquatic and terrestrial floodplain ecosystems. They not only affect the quantity and quality of water available but also influence soil conditions, nutrient availability, salinity, and the flora and fauna that develop along rivers and in wetlands. In riverine ecosystems the quantity of water available, its seasonal timing and duration, river alignment and exposure are some of the principal considerations influencing habitat and wildlife. This course will focus on hydrologic and hydraulic processes and in analyses that apply to ecosystem restoration. The course agenda includes a series of increasingly difficult topics and workshops, beginning with principles of hydrology, ecology, and statistics and advancing to time series analysis, hydrologic alteration, ecosystem flow definition, ecosystem functions modeling, river hydraulics, and sedimentation. Over a third of the week will be dedicated to software demonstrations and workshops where course participants gain experience using a number of different software tools.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 800 and 400 series, 028, 819, 184, 101, 401, and 1301; (b) Grade GS-09 and above. Nominees should be water control managers, hydrologists engineers, environmentalists, biologists, economists, sociologists, ecologists, or study managers.

HYDROLOGIC DATA MANAGEMENT WITH HEC-DSSVUE

152 Length: 36 Hours 54MDH01A

Tuition: \$2180

Purpose.

This course provides Corps of Engineers' water resource professionals with detailed instruction on available computer software to develop, manage, analyze, and display engineering data in the HEC Data Storage System (HEC-DSS) and the new HEC-DSSVUE program. The procedures and programs provide a convenient system to support a variety of applications including hydrologic, water quality, and flood damage analysis. The system is designed for handling both historical and real-time data

Description.

Data management tools, provide a systematic means for organizing, storing, retrieving, manipulating, and sorting data for simulation and plan evaluation models. The HEC data storage systems allow for a convenient, orderly exchange of data among many application and analysis programs. This course focuses on the Data Storage System and the DSSVue graphical user interface. Applications with HEC programs to create data files, to manage and manipulate those data, to provide statistical analysis, and to develop graphical and tabular displays are included. Applications will be demonstrated with workshops and case studies. Major topics covered are (a) use of the HEC Data Storage System; (b) HEC-DSSVue graphical displays; (c) presenting data in a report form; (d) data entry; (e) statistical analysis and mathematical operations of data; (f) hydrologic applications; and g) user-developed scripts for data presentation.

Prerequisites.

Nominees should be assigned (a) Occupational Series: 0400, 0800, and 1300; (b) Grade: GS-07 or above. Nominees should be familiar with Windows.

HYDROLOGIC ENGINEERING APPLICATIONS FOR GIS

219 Length: 36 Hours 35GIS01A

Tuition: \$2160

Purpose.

This course provides the basic skills to utilize a Geographic Information System (GIS) to develop data and display results for hydrologic and hydraulic engineering analysis.

Description.

This course provides information in lectures and workshops on: (a) GIS concepts and their application in H&H analysis; (b) acquisition of GIS data sets; (c) the National Geospatial Data Clearinghouse, and Corps of Engineers policies on geospatial data and systems; (d) use of GIS data sets and ArcGIS with the HEC-HMS for hydrologic analysis and HEC-RAS for river hydraulics; (e) combining H&H results with GIS data sets for flood analysis and planning; and (f) case studies of GIS application in H&H analysis, feasibility studies, and water control.

Prerequisites.

Nominees must be assigned (a) Occupational Series: selected 0028, 0029, 0800, and 1300; (b) Grade: GS-07 or above. Some prior experience or GIS training (such as PROSPECT GIS Introduction) is recommended. ArcGIS application experience would be desirable. Student should be in a position to apply GIS methods in the near future.

HYDROLOGIC MODELING WITH HEC-HMS

178 Length: 36 Hours 35HAF01A

Purpose.

This course provides instruction in the use of the Corps' Hydrologic Modeling System (HEC-HMS) for flood damage reduction. Workshops are used to provide hands-on reinforcement of scientific and engineering principals presented in lectures. Students will be prepared to work on typical flood damage reduction studies after completing the course. These same skills are also used as a starting point for studies in ecosystem restoration, forecasting, and navigation.

Description.

The course covers basic hydrologic engineering techniques for rainfall-runoff analysis in support of flood damage reduction studies. Topics include: basin average rainfall estimation, infiltration determination, unit hydrographs, streamflow routing, and methods for modeling runoff throughout a watershed composed of multiple subbasins and river reaches. Parameter estimation using optimization and reservoir outflow modeling are also included. Workshops provide hands-on reinforcement for these areas while following from start to finish a sample reservoir study typical of many flood damage reduction projects. Teaching of scientific and engineering principles of hydrologic studies is integrated with learning to use HEC-HMS as a tool.

Prerequisites.

Prerequisites: Nominees should have completed a college-level hydrology course. Nominees must be assigned (a) Occupational Series: 0400, 0800, and 1300; (b) Grade: GS-07 or above.

INTERPRETIVE SERVICES

72 Length: 28 Hours 53INT01A
CEUs: 1.9

Tuition: \$1470

Purpose.

This course is intended for those employees in natural resources management career fields and others who have interpretation or related job responsibilities. The course is designed to develop the skills of Interpretive Services and Outreach Program managers in the Corps to show how to develop, evaluate, and contract interpretive media, and to demonstrate the use of regulations that can enhance the Interpretive Services and Outreach Program.

Description.

After completing the course, the student should be able to develop and maintain an effective interpretive services program. Topics covered include (a) definitions of interpretation and outreach; (b) objectives of Corps interpretive efforts; (c) role of the manager in interpretation; (d) target groups and media selection; (e) use of volunteers; (f) use of cooperating associations; (g) visitor center exhibit and wayside contracts; and (h) interpretive planning and evaluation.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 023, 025, 026, 028 and 1001 as well as all the 400 series; (b) Grade: GS-05 or above; (c) employees in job series other than those listed above who have interpretation as part of their job responsibilities. It is recommended, but not required, that nominees have completed Certified Interpretive Guide training by the National Association for Interpretation or equivalent training.

**INTERPRETIVE SERVICES FOR MGRS SUPV & TEAM
LDERS**

70 Length: 36 Hours 53ISM01A

Tuition: \$2340

Purpose.

This course is primarily intended for employees in natural resource management career fields and others who have interpretation, public outreach, or related job responsibilities at a management, supervision or team leadership level. The overarching objective of this class is to use interpretation as a tool to support project management and other missions of the Corps and make the other tasks performed by Corps employees more efficient. Partnerships, environmental compliance, natural resource management, recreation, visitor and employee safety programs may all become more effective through interpretation.

Description.

After completing the course, the student should be able to develop, manage, supervise, and lead an effective interpretive services program.

Topics to be covered in the course include:

- a. Interpretive planning, incorporating interpretation in the project management process (Operational Management Plans, Project Management Plans, etc.
- b. Partnering, Cooperative Associations, volunteers, etc.
- c. Developing and evaluating interpretive programs, products, and facilities
- d. Training interpretive personnel
- e. Contracting interpretive products and services, business management
- f. Developing exhibits and other interpretive media, interpretive writing
- g. Use of technology
- h. Planning special events
- i. Dealing with barriers to access and communication

Prerequisites.

- a. Occupational series 023, 025, 028, any 0400 series, (YB, YC, YD) levels 1-3), 023, 2210 at the team leader, supervisor, or manager level.
- b. Completion of the Corps of Engineers Interpretive Services PROSPECT Course (#072), or the National Association for Interpretation Certified Interpretive Guide Course, or the National Park Service Interpretive Development Program or equivalent to any of above.
- c. Or Bachelor's degree or higher in interpretation or two years of experience as a field interpreter.

LUBRICATION OF MECHANICAL EQUIPMENT

412 Length: 30 Hours 35LME01A

Tuition: \$2260

Purpose.

This course is designed primarily for Corps personnel who have hydropower, navlock, and spillway maintenance responsibilities; such as supervisors, mechanic crew foremen, engineers, powerhouse mechanics, and technicians. It provides a comprehensive understanding of lubrication issues in hydropower facilities, navigation locks, and spillways. It may also be of benefit to design engineers who need a broader knowledge of lubricant characteristics and performance.

Description.

Through lectures, visual aids, and case study sessions, this course covers the following subjects: (a) friction, wear and lubrication fundamentals; (b) lubricant formulation; (c) turbine oil additives and their function; (d) essential characteristics of turbine oils; (e) turbine oil sampling, testing, and interpretation of test data; (f) an introduction to proactive maintenance practices based on tracking and trending of test data; (g) compatibility of turbine oils; (h) oil purification; (i) oil filtration and contamination control; (j) lubricating greases - classification, formulation and application; (k) compatibility of greases; (l) hydraulic fluids; (m) compressor oils; (n) gear oils; and (o) environmentally acceptable lubricants. The course includes a tour of a Corps powerhouse.

Prerequisites.

Nominees must be assigned in GS or WG Occupational Series as engineers, supervisors, mechanic crew foremen, mechanics, and technicians at Corps' facilities with responsibility for operations and maintenance. Exceptions may be considered for COE design engineers, and personnel involved with management and planning in hydropower related organizations, but not directly involved in hydropower O&M.

MAINTENANCE AND REPAIR OF PAVEMENTS

50 Length: 36 Hours 35FPC01A
 CEUs: 2.9 PDHs: 29

Tuition: \$1540

Purpose.

This course teaches methods and techniques for maintenance and rehabilitation of flexible, rigid, and unsurfaced pavements.

Description.

This course focuses on practical and effective maintenance and repair methods and techniques. The course is composed of lectures, videos, handout materials, and field demonstrations. Maintenance and rehabilitation topics of both flexible and rigid pavements covered include repair techniques, material properties and mix design, surface maintenance options, joint and crack sealants, recycling, production, placement, compaction, and case studies. Additionally, a background in lab tests and field identification of soils and bases materials, maintenance and repair of drainage structures, dust control, and gravel roads will be provided.

Prerequisites.

Nominees must be assigned to an activity with responsibility for maintenance, repair, and improvements of installation facilities (e.g., Army facilities engineer, Air Force base civil engineer) or Corps of Engineers field operations and maintenance activities. This course is designed for maintenance personnel and interested technical staff.

Management of Hydropower - O & M

376 Length: 36 Hours 35MHO01A
 CEUs: 3.1 PDHs: 31

Tuition: \$2195

Purpose.

Through the use of subject matter experts in a lecture format, this course covers the management of Corps of Engineers hydroelectric generating stations. It includes the descriptions of powerhouse equipment design and construction for structural, mechanical, and electrical systems. It considers environmental requirements, power system accounting, maintenance management, power system operation, safety consideration, material flow, benchmarking, and control systems. Prospective students should be managers or prospective managers of Corps of Engineers hydroelectric assets

Description.

This course is designed primarily for civil works managers, supervisors, engineers, and technicians who have hydropower operations and maintenance responsibilities. It provides a comprehensive understanding of the management of the hydropower facilities. It may also be of benefit to planners, design engineers, hydrologists, and Reservoir Control Center staff who need an understanding of hydropower O&M from the field level perspective.

Prerequisites.

MASONRY STRUCTURES DESIGN

317 Length: 36 Hours 35MSD01A

Tuition: \$1960

Purpose.

This course familiarizes the engineer with design and construction practices including criteria, procedures, and specifications for masonry structures. The course instructs DoD engineering personnel in the techniques of masonry design and construction utilizing UFC 3-310-06 "Masonry, Design for Buildings" and the IBC. Seismic issues related to masonry will be addressed, based on UFC 3-310-04, and other pertinent literature. A large portion of Army buildings include masonry as a building unit. Proper design is necessary to eliminate construction and maintenance problems and be cost effective.

Description.

Topics include (a) masonry materials, properties, and testing; (b) design loads; (c) strength design of reinforced masonry; (d) lateral load considerations and shear wall design; (e) column/plaster design; (f) masonry lintels; (g) bond beams; (h) masonry specifications; (i) masonry details; (j) workshop design problems; and (k) quality assurance. After taking this course the structural engineer should be able to design a cost effective building that incorporates the latest masonry technologies to produce a building with the required structural integrity. The manuals to be used are UFC 3-310-06, "Masonry Design for Buildings", IBC 2003, and other Corps manual and referenced national guidance and standards.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800; Grade: GS-07 or above or equivalent. Nominees should be engineers with masonry design or construction responsibilities. Course is open to Air Force and Navy personnel.

MASTER PLANNING ADVANCED TECHNIQUES952 Length: 36 Hours 49ARP01A
CEUs: 3.0 PDHs: 30 LUs: 30 CMs: 30

Tuition: \$2640

Purpose.

This course provides planners the collaborative planning skills needed to conduct/lead complex master planning efforts such as sustainable planning, area development planning and form-base coding. With the update to AR 210-20, and the DOD Master Planning UFC this class provides the details on how to implement the various principles set forth in DoD base planning. It also provides an overview of comprehensive planning techniques needed to integrate various planning considerations that must be comprehensively considered in the development of Army as well as other DoD and Federal installations/communities. The class instruction appropriate for planners in cities and towns and is meets AICP certification for continuing education.

Description.

Through an intensive hands-on workshop, students will use a planning charette technique to develop an Area Development Plan for a real world planning problem at an installation. Students will learn how to define a form-based code for installation development and implement the code requirements. Through the exercise, students will be faced with various planning considerations and will be required to holistically integrate these issues into a comprehensive solution that meets mission requirements and provides for a quality urban design solution that is sustainable and compatible to the installation's vision for real property development. Students will reference several planning text books and use these applications to learn how to apply these planning principles.

Prerequisites.

Attendees should be engaged in dod installation/federal master planning and management activities. Participants will be required to have a fundamental knowledge of master planning. Students will be required to use a PC and should be able to insert pictures and graphics and prepare a report. Further, the students will be required to participate in a field exercise where they will apply real world applications to planning principles presented. Students will be required to walk during the exercise as well as bring appropriate clothing. This course is open to the general public.

MASTER PLANNING APPLIED SKILLS

326 Length: 36 Hours 46RMS01A
 CEUs: 3.0 LUs: 30 CMs: 30

Tuition: \$2490

Purpose.

Master Planning Applied Skills provides a unique opportunity to learn how to use Army planning tools to conduct planning studies, requirements analyses, stationing impacts, etc. Through application and instruction, students will gain further understanding in the use of these tools.

Description.

Students will gain a thorough understanding of how the Army stations units and how to develop Real Property requirements and how to assess the impacts of this stationing. Students will use planning tools such as ASIP and RPLANS to determine real property requirements and the impact to the installation's Real Property Master Plan.

Prerequisites.

This class is not a class to learn how to use RPLANS and ASIP, but rather how to use these tools to form a succinct definition of real property requirements, stationing scenarios and gap analysis. Further, students should know, this class does not teach one about how to prepare a DD form 1391. This course is open to the general public.

MASTER PLANNING CODING PRACTICES

319 Length: 36 Hours 46MPC01A

Tuition: \$2550

Purpose.

To provide master planners a broad understanding of the concept of coding and its use in the planning and development of installation communities. The course provides an overview of what is a code and a thorough review of a form-based code. Students will learn how to develop a code, use the code and enforce the code in managing community development.

Description.

Students will be able to develop a form-based code, create a suite of planning standards and develop a regulatory plan. Students will learn how to process site approvals using the form-based code, create regulatory protocols and understand the integration to the overall master planning process.

Prerequisites.

Students who are involved in planning should attend this class. Also, designers and programmers who must meet planning code restrictions should attend. Students will be required to participate in group exercises. Further, a field trip will be scheduled for a 1-2 mile walk may be required. Also, students are required to turn off cell phones during class training. Minimum requirements for passing is full class attendance so students are strongly encouraged not to leave class early.

MASTER PLANNING ENERGY AND SUSTAINABILITY FACTORS

258 Length: 28 Hours 46MES01A

Tuition: \$2470

Purpose.

This course provides planners understanding of the planning principles of sustainability and energy efficiency, provides instruction on how to apply them in the planning and development of installations and provides instruction on how to create a suite of metrics to assure principle compliance. Recent Executive Orders on energy efficiency and sustainability, the Army commitment to ASHRAE 189-2 compliance, the New DoD Master Planning UFC and updated Master Planning policies require that energy efficiency and sustainability be integrated into all planning and development of DoD properties. This course provides unique insight in providing the method to achieve these directives.

Description.

This course provides a unique learning environment involving lecture, studio-based applied instruction/design and field trips. These events enable the students to understand and identify what the various sustainability and energy efficiency planning practices are in order to meet recent Executive Orders on energy efficiency and sustainability. Students will gain knowledge in how to implement the master planning processes and identify metrics to assure the principles are followed through programming, design and construction. Through an intensive hands-on workshop, students will use design studio techniques to apply these practices for a real world planning problem at an installation. Students will learn how to define a series of codes and metrics for sustainable, energy efficiency installation development and observe the practices in action through field trip activities. Students will reference several planning text books and use these applications to learn how to apply the planning principles.

Prerequisites.

Attendees should be engaged in master planning and management activities. Participants will be required to have a fundamental knowledge of master planning. Students will be required to use a PC, participate in group design exercise requiring basic drawing and illustrating and be able to present their findings to the class. Further, the students will be required to participate in a field exercise where they will apply real world applications to the planning principles presented. For successful class completion, students are required to attend the entire class which will end at noon on the last day. Class participants should NOT depart the classroom any earlier. Second, successful completion of the class requires students to fully participate in the class dialog and collaboration. Therefore, it is strongly recommended that students leave their cell phones/blackberries muted and that there be no email

activities during class. This course is open to the general public.

This class will be taught at the offices of the USACE Division South Pacific. San Francisco. The class will not be finished to 12 noon. Class participants should plan on NOT scheduling any departures earlier than 12 noon.

MASTER PLANNING HISTORIC STRUCTURES I

392 Length: 36 Hours 35HIS01A
 CEUs: 3.0 PDHs: 30 LUs: 30 CMs: 30

Tuition: \$2430

Purpose.

This course provides an awareness of the unique characteristics, legal requirements, procedures, technical knowledge, and skills necessary to administer, maintain and repair historic properties of the Federal Government.

Description.

Guidance: Laws, Regulations, Secretary of the Interior's Standards, and Criteria and Guidance. Identification and Documentation of Historic Fabric. Maintenance Issues: Inspection and Diagnostics, Maintenance Types and Cost, and Execution of Minor Maintenance and Repair. Design Issues: Exterior Finishes, Interiors, Life Safety and Accessibility, Seismic Design, Historic Landscape Preservation, Material Life Cycle Value, and Energy Conservation and Engineering Support Systems. Procedures: Design, Procurement, Execution-Treatment Issues. Field Trip: Treatment Techniques. Making Choices: Case Studies in Interpreting Preservation Guidelines.

Prerequisites.

Nominees should be assigned (a) Occupational Series: 0020, 0023, 0025, 0028, 0170, 0193, 0301, 0341, 0342, 0343, 0401, 0408, 0800, 1005, 1008, 1170, 1171, 1173, 1176, 1300, 1301, 1640, 1910, 1960, or other series with cultural resource responsibilities; (b) Grade: GS-07, WG-11, E-6, O-1, or above. Attendees should have a minimum of one year experience in their organization prior to attending this course. Each session will attempt to approximate a mix between installation and USACE personnel. Typical USACE functions appropriate to this course include master planning engineering, project management, construction, contracting, and real estate. Typical installation functions include engineering plans and services, family housing, operations and maintenance, engineering resource management, and environment.

MASTER PLANNING HISTORIC STRUCTURES II

163 Length: 24 Hours 35HS201A
CEUs: 2.5 PDHs: 25 LUs: 23

Tuition: \$1830

Purpose.

The course objective is to understand the legal and compliance requirements under Section 110 of the National Historic Preservation Act of 1966 and the Secretary of the Interior's Standards for the Treatment of Historic Properties (Standard) and its integration with the installation/community master planning process. The course illustrates various methods available to ensure compliance while meeting the installation/community's master planning vision, goals and objectives. The class also provides an overview on maintenance and repair issues of historic buildings, structures and landscapes. The instruction is interactive and includes participation in a three-day collaborative planning exercise which shows how to use the master planning process to formulate project planning and programming of a typical historic preservation project. This course emphasizes installation master planning practices, Preservation & Federal regulations, Secretary of the Interior's Standards, DoD regulations, LEED and sustainability goals and consultation with State Historic Preservation Officers.

Description.

This course emphasizes the roles of project development team members. Team Roles include master planning, program/project management, cost engineering, architectural and engineering design, functional user, maintenance & repair, fire protection, force protection, sustainable design, energy efficiency and management, and cultural resources. This course focuses on how to plan and program for Historic Structures rehabilitation and maintenance projects at the installation, and/or community. The course content is applicable for experts throughout the Federal Government, the consulting community and the general public.

Prerequisites.

Nominees include Occupational series 0020, 0023, 0025, 0028, 0170, 0193, 0301, 0341, 0342, 0800 series, 1008, 1170, 1171, 1173, 1176, 1301, 1601 1640, 1910, 1960. Persons involved in any of the above-specified roles are eligible as well as other related professionals working in other Federal agencies, consultants and the general public. Persons are expected to have one-year experience in the above-specified roles or series or possess the general awareness of urban planning, architecture and historic preservation. A basic knowledge of historic preservation laws such as the Introduction to Section 106 or Historic Structures I Maintenance and Repair is recommended.

MASTER PLANNING PRACTICES

241 Length: 36 Hours 46MOO01A
CEUs: 3.0 LUs: 30 CMs: 30

Tuition: \$2160

Purpose.

To provide students a review of master planning practices used to implement installation master planning. This course provides follow up training to illustrate how planning principles are translated into day-to-day practices.

Description.

Students will learn the steps of the RPMP process, identify the RPMP components and understand the difference between the short and long term planning horizon and the concept of capacity planning. The student will be able to formulate customer requirements to include understanding who the customer is, analyzing existing needs/usage, identify the future projected users/population and accompanying programmatic needs, identify all applicable criteria to formulate facility allowance and learn the process of interviewing the customer and documenting their needs. The student will understand what is Force Structure and will learn what components of the RPMP should be included in the Vision Plan. This will encompass how to create a guiding vision and how to list goals and objectives that are user identified through collaborative, consensus building exercises. The student will learn the difference between a mission statement and an RPMP vision and be able to describe a framework. Students will be able to define an IDG, to describe what the CIS is and understand how the CIS links long-term planning to plan implementation.

The student will be able to define the LRC and list the key parts of the process for developing the LRC Area Development Plans. Students will understand the concept of planning at an ADP level and will learn the components of an area development plan.

Field Survey Planning Law: Students will understand the legal aspects of planning and how the history of legal precedence affects current planning practices.

Standard Design and Army Standards: Students will understand the purpose of and differences between Army Standards and the Standard Design concept. Students will understand the appropriate applicability of the waiver process.

Professional Development: Students will recognize that planning is a profession that requires continuing education and training. Students will learn the potential career path and training options as a planner. They will understand the AICP certification process.

Space Planning: Students will understand how spatial requirements are developed for customers and how the ASPCM can be used to help accommodate these requirements. Students will learn the regulatory basis for these requirements including category codes and the TAB and how to apply these considerations. In addition, students will learn the difference between unit level and installation level planning.

Planning Tools: The student will obtain understanding of the workings of the Real Property Planning Board to include understanding who makes up the board, what the board does, when they do it and what is the master planner's role in this process.

Installation Development Plan: Students will learn what an installation development plan is, when it should be prepared and who should approve it.

Installation Real Property Master Plan Digest: Students will learn the role of the Digest in the planning process, who prepares the contents and who approves it.

Charrettes: Students will learn who should participate, when they should be conducted and what the outcome should be.

RPMP Digest Examples: Students will be able to evaluate the components of a RPMP Digest.

Planning, Programming, Budget and Execution System (PPBES): Students will understand that PPBES is the process that programs, funds and constructs MCA projects beginning with the installation's 1-n MCA submission and ending with the authorization to construct.

Prerequisites.

This class is closely synchronized with course #75 (Master Planning Principles). This class focuses on day-to-day practices needed to implement the principles discussed in course #75. Students that work in the planning community from the Army (active and reserve) as well as other DoD services and agencies, consultants and the general public would benefit from this class. A field trip will be included in the class so students should be prepared to walk 1-2 miles. Further, students should be warned that cell phones are required to be turned off during the class lectures and exercises. To receive a certificate of completion, students are required to attend the full class so leaving early is strongly discouraged.

MASTER PLANNING PRINCIPLES

75 Length: 36 Hours 46PMP01A
CEUs: 3.0 PDHs: 30 LUs: 30 CMs: 30

Tuition: \$2750

Purpose.

This course is an introduction to MASTER PLANNING Principles for planners and Real Property Specialists at Army and DOD installations, Corps of Engineers district levels as well as planners from other DoD and Federal agencies. The goal of the course is to make planners more effective by providing them an overview of the fundamentals of the master planning process that is used by not only the Army but also other DoD Federal agencies and local cities and towns. For non-planners, this course provides an overview of the fundamental planning principles of master planning. General planning principles covered in this course may be applicable to the U.S. Army Reserves and other military services and Government agencies as well as to the civilian planning community.

Description.

Through lectures, case studies, group interaction, field trips and practical exercises, this course will explain an overview of fundamental Master Planning principles cited in Army and DoD Master Planning policies; (b) present the planning process/methodology in general and explain how it is applied to installation Master Planning; (c) emphasize that master planning is a professional capability requiring close collaboration and facilitation with stakeholders; and (d) present an overview of sustainable development concepts.

Prerequisites.

Nominees must be assigned to GS-05 or above and associated with installation master planning and management support functions at DoD installation/communities, MACOMs, MSCs, USAR, RSCs, USACE divisions/districts, and/or a supporting contractor or equivalent experience from other DoD, and Federal Agencies. This course is open to the general public. Participants should be aware that the class will require walking involving field trips. Students should bring appropriate walking shoes and/or clothing.

MASTER PLANNING VISUALIZATION TECHNIQUES

948 Length: 32 Hours 46RPV01A
LUs: 31 CMs: 31

Tuition: \$2240

Purpose.

To provide master planners training in planning visualization techniques. The course objectives will be implemented through the use of Google Sketch-up and Adobe Photoshop as tools to assist in military installation planning. The training applies to the planning and development of local cities and towns as well. With the update to DoD and Army planning policies, visualization skills are essential in building great area development plans.

Description.

The challenge of installation planning requires planners to understand the broad context of community planning, the concept of scale, massing of facilities, landscaping, Architectural compatibility and Force Protection/Critical Infrastructure Assurance aspects. Further, with the emphasis of neighborhood planning in LEED ND sustainability principles, it is essential to visualize the entire urban space that is being created. This 32-hour course provides Planners a fundamental overview of the use of planning visualization tools Google Sketch-up and Google Earth as "easy to use" tools to help plan our military installations. Students will have hands-on instruction on the use of the software and even produce several basic Area Development proposals using both Google Sketch-up and Photoshop. Further, students will leave with a knowledge in the fundamentals of Google Sketch-up, and Adobe Photoshop, as tools in the planning and development of communities.

Prerequisites.

There are no prerequisite requirements to participate in this course. This course is open to the general public.

MECHANICAL--QV

74 Length: 36 Hours 35MCQ01A
CEUs: 3.2 PDHs: 32

Tuition: \$1470

Purpose.

This course is designed to develop the student's quality verification, analytical, and problem solving skills to identify, prevent, correct, and resolve prevalent problems in the application of paints and coatings. Students will learn the basic concepts of paint composition, coating selection, safety, environmental considerations, and construction quality management necessary to administer the painting requirements of project plans and specifications.

Description.

Through lectures, hands-on demonstrations, analysis of case studies, and laboratory sessions, this course covers such subjects as: paint fundamentals; characteristics and selection of coatings; surface preparation and painting of metals, concrete and masonry surfaces, wood, wallboard, and other miscellaneous surfaces and material types; paint defects; paint approval; testing instruments; painting specifications; and safety, environmental, and sustainability considerations. Construction Quality Management, Maintenance Painting, and changes in guidance and regulations affecting painting are emphasized. Recent changes to the UFGS 09 90 00 and 09 97 02 are emphasized to include the use of the Master Painter's Institute (MPI) specifications and its application to the design-build process and other available online resources.

Prerequisites.

(a) Grade: All (b) Occupational Series: 0800, 1300, 4000, 5318, 5426. Other disciplines will be accepted provided nominee's present or anticipated duties require knowledge of coating systems involved in design, construction or facility maintenance. This includes architects and engineers with design, specification and review responsibilities. This course is open to those individuals from DPWs, BCEs, NAVFAC and other government agencies who are responsible for quality assurance and verification, specifying paint requirements for maintenance or new construction and those serving on constructability review teams.

Medical MILCON/SRM Program Execution

227 Length: 36 Hours 46MMP01A
CEUs: 3.1 PDUs: 31

Tuition: \$1930

Purpose.

This course is taught in conjunction with American Society of Healthcare Engineers (ASHE) and is designed to teach the standard practices for design, construction, operations and maintenance of healthcare facilities. It provides project managers, resident engineers, design managers, construction managers, and QA personnel with procedures, tools, techniques and healthcare knowledge to effectively manage Medical Military Construction (MILCON) and Sustainment, Restoration and Modernization (SRM) projects. This course also provides members of the project delivery team, including budget support and contracting personnel, an overview of the medical program project execution process and procedures.

Description.

This course aims to provide an overview of the rules and practices that govern the construction of medical healthcare facilities from programming through construction and occupancy. Construction of medical facility types is governed by a strict set of codes and requirements as established by The Joint Commission (TJC). This course will increase participants' understanding of code and compliance issues relevant to working in a health care environment. Topics covered in this course include the following areas: healthcare industry fundamentals, planning, design and construction process, patient safety, project management principles, and the medical funding stream. Presentations, case studies, or group exercises may be used to encourage meaningful discussions and provide hands-on experience. After completion of this course, each student should be able to support Medical and SRM project execution as a member of Medical or SRM Project Delivery Teams. Upon successful completion of this course, each student will be issued the ASHE Healthcare Construction Certificate and be registered at the ASHE website.

Prerequisites.

Nominees must be GS 7-9-11 employees who provide Quality Assurance/Construction Quality Management (QA/CQM) construction surveillance of medical or laboratory facilities; GS 11-14 project managers, program managers, construction managers, resident and area engineers; design engineers who design or review medical construction plans and specifications. Students who register for this course will be required to take ASHE web-based preparatory training prior to arrival at course site.

MII ADVANCED

312 Length: 36 Hours 54MGA01A
CEUs: 2.8 PDHs: 28 LUs: 28

Tuition: \$1585

Purpose.

This course provides cost engineering professionals with advanced instructions on accessing and utilizing the components of the MII software program not provided in the MII Basic course. The course presents detailed information on: (a) Military Programs, Civil Works, Environmental and modeling; (b) Crew Productivity Analysis for Civil Works; (c) Military Program, Civil Works and Environmental Work Breakdown Structures; (d) Management of MII Libraries, assemblies and tables, and (e) Other Advanced Cost Engineering Tools.

Description.

The course provides instruction on the use of modeling and quantity linking for the development of budget estimates, as well as detail cost estimates. This modeling approach and other estimating techniques are used to develop ENG Form 3086 estimates in the proper electronic format. Parameter worksheets, quantity linking, and assemblies are also applied to crew productivity analysis for the development of Civil Works (CW) estimates. The course explores estimate structures development and reporting to accommodate the CW Code of Accounts and the Military Programs, and the Environmental Work Breakdown Structures (WBS). Students will work with database functions to create site-specific unit prices, modify equipment costs for project specific circumstance, and adjust crew for overtime and shift differential.

Prerequisites.

(1) Students must be assigned (a) Occupational Series: Selected 0800, 0802, 0810, 0830, and 0850; (b) Grade: GS-09 and above; (2) This course is open only to DoD personnel. Other participants must obtain CECW-CE approval and may be permitted to attend only on a last priority basis; (3) Students should have a decent working knowledge of (a) MII and should have taken the MII Basic and Cost Estimating Basics PROSPECT courses prior to this training, (b) Excel, particularly the use of ranges and if/then statements, (c) cost engineering, its rules and regulations, and (d) computer operations using the current Microsoft Windows operating environment.

MII BASIC

305 Length: 36 Hours 54MCA01A
LUs: 36

Tuition: \$1610

Purpose.

This course provides cost engineering professionals with instruction in the preparation and execution of computerized cost estimates using the latest MII cost estimating software program. The course also supplements computerized estimating with ready-reference material intended to improve the participant's knowledge of Corps of Engineers policies and procedures for preparing government estimates for Military, Civil Works and Environmental construction projects.

Description.

Through lectures, demonstrations, and hands-on computer usage, this course covers the basic computerized aspects of estimating using the latest version of MCACES (MII), the latest CostBook (UPB) and other supporting libraries (i.e., equipment, assemblies, labor, etc.) The student is required to complete quantity takeoffs and prepare detailed cost estimates, which may require work to be done after regular class hours. A pretest and posttest will be given.

Prerequisites.

(1) Students must be assigned (a) Occupational Series: Selected 0800, 0802, 0810, 0830, and 0850; (b) Grade: GS-07 and above; (2) The course is open only to DoD personnel. Other participants must obtain CECW-CE approval and may be permitted to attend only on a last priority basis; (3) Students should have at least a basic working knowledge of (a) cost estimating (it is highly encouraged for students to have taken Cost Estimating Basics PROSPECT course prior to this training) and (b) computer operations using the current Microsoft Windows operating environment; (4) Previous exposure to MCACES (MII) software programs is helpful; (5) Students should bring a calculator with them.

NATIONAL ELECTRICAL CODE

78 Length: 36 Hours 35NEC01A
CEUs: 3.0 PDHs: 30

Tuition: \$1125

Purpose.

PROSPECT course 078 was originally developed more than 30 years ago to meet the need within USACE to provide training for electrical professionals (includes engineers and technicians) to properly apply the requirements of the National Electrical Code in the design, construction, and maintenance of all USACE projects involving the use of electricity. The fields of electrical design, construction, and maintenance are very broad. Course 078 was developed to specifically address the electrical design and construction issues encountered on the wide variety of USACE projects, which include Military facilities, Civil Work structures and HTRW projects.

Description.

This course covers the application and interpretation of code requirements for the design, construction, and maintenance of interior electrical systems through directed informal discussion sessions, case studies and homework. Topics include, but are not limited to, interior distribution, grounding and bonding, motor and transformer circuits, calculations, ground - fault circuit interrupters, classified (hazardous) areas, special conditions, communication circuits, and use of tables.

Prerequisites.

Nominees should be assigned (a) Occupational Series: 0801, 0802, 0809, 0810, 0830, 0850, or 0855; (b) Grade: GS-09 or equivalent wage grade and above. Nominees should be electrical engineers of any grade level or engineering technicians or construction representatives GS-09 or above. Nominees should be familiar with the principles of interior electrical installations or currently be assigned responsibilities for design, construction, or maintenance of interior electrical installations at Corps or other government facilities. Nominees are required to bring a calculator to the course in order to perform example calculations.

did minor change to Purpose. Added a sentence to ~~Notes~~ prerequisites at the end indicating calculators are required.

**NATIVE AMERICAN PERSPECTIVES AND CORPS
MISSIONS**

950 Length: 32 Hours 33NAE01A

Tuition: \$1990

Purpose.

This course identifies sustainable environmental principles through immersion in a culture different than one's own and exposes students to practices that have enabled Native Americans to thrive for thousands of years. Concepts and principles examined provide project and program managers with an expanded range of alternatives to consider when planning and implementing Corps activities.

Description.

The course is founded on the USACE Environmental Operating Principles: achieve sustainability, recognize interdependence, seek balance, accept responsibility, mitigate impacts, build and share knowledge, and positively seek ideas to find solutions.

Elements and concepts that students are exposed to in this training will influence planning, decision-making and implementation of USACE projects and programs. Leadership and team-building skills are an added benefit. Students build skills through interactions with Tribal members, hands-on activities, and cooperative efforts in a remote setting. The remote setting enables students to "think outside the box," away from the office and routine daily tasks. Students gain a fresh perspective on interdependencies among natural resources and human activities, and on the enormous importance of maintaining the web of sustainability.

Lessons learned aid in all aspects and phases of environmentally beneficial water resource programs and projects, installations, and overseas operations. Students are challenged to apply lessons learned to Corps mission areas.

Prerequisites.

This course is vital for individuals engaged in environmental decision-making at all levels and in all areas - leaders, planners, project managers, operations staff, real estate and regulatory specialists, public affairs, office of counsel, environmental engineers, scientists, park rangers, civil engineers, and others engaged in water resource programs/projects. Employees from the GS-7 to SES level and military classifications O3 to O6, as well as other federal and state agencies, have benefited from the course already.

**NEGOTIATING CONSTRUCTION CONTRACT
MODIFICATIONS**
368 Length: 36 Hours 41NCC01A
CEUs: 2.5 PDHs: 25 LUs: 25

Tuition: \$1090

Purpose.

This course provides instruction that will improve the participant's effectiveness in negotiating construction contract modifications. The course provides a thorough review of the processes in effectively analyzing contractor proposals and government estimates. This course assists the participant in applying sound judgment to arrive at an equitable adjustment. The course is recommended for individuals who are involved in processing and negotiating construction contract modifications.

Description.

The course provides lectures, discussions, case studies, and workshop sessions, which present a detailed explanation of regulations affecting negotiations, pricing objectives, the independent government estimate, cost or pricing data (truth-in-negotiations), job and home office overhead, contingencies, profit, special modification problems, and negotiation strategy and techniques. This course also covers the manner in which costs are expressed, analyzed, and used in negotiating construction modifications, task orders, and contracts.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0340, 0800, 1102, and 0905 GS-05 or above or equivalent NSPS; (b) Grades: Military: 0-3 and above; Civilian: GS-07 or above; (c) Experience: recommended for personnel with 1-3 years of experience in the construction and contract administration functions; (d) Responsibilities: attendees should have or anticipate having responsibility for processing, negotiating, or reviewing construction contract modifications; (e) Knowledges/skills: attendees should possess a general knowledge of the post-award construction contracting process. Previous completion of the Construction Contract Administration course (No. 366) is suggested.

Nonstructural Measures for Flood Risk

345 Length: 36 Hours 35FWP01A

Tuition: \$3550

Purpose.

This course will provide participants with the overall ability to realize opportunities with nonstructural measures, to formulate nonstructural measures, and to implement nonstructural measures.

Description.

This course will touch on the Corps flood risk management mission and the relationship of these missions to the Actions for Change, the Civil Works Strategic Plan, the Environmental Operating Principles, watershed/systems planning, in order for the participant to fully understand the significant role of nonstructural measures. This course will make the student very familiar with the basic nonstructural measures such as elevation, dry flood proofing, wet flood proofing, small berms, levees and walls, relocation, acquisition, and flood warning. The importance and relevance of the National Flood Insurance Program to flood risk management will be explained. Laws, policies, statutes, executive orders, etc., will be covered that relate directly to nonstructural measure formulation and implementation. The host of opportunities that exist with implementing nonstructural measures will be explored in terms of accomplishing long term flood risk management. The student will be shown how to conduct nonstructural benefit analysis and how to formulate nonstructural alternatives. A field trip will be included to actually see nonstructural measures that have been implemented. The course offers opportunities to professional staff in such areas as flood plain management, hydraulics and hydrology, and civil works planning to become knowledgeable in this area. Its focus is on realizing the need for and the opportunities with nonstructural measures as well as the methodologies and procedures for performing reconnaissance and feasibility phase investigations for plan formulation, evaluation and implementation of nonstructural measures.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0000-0100, 0800, and 1300; (b) Grade: GS-7 or above.

O&M CONTRACTS

119 Length: 28 Hours 41OMC01A
CEUs: 2.6 PDHs: 26

Tuition: \$ 900

Purpose.

This course provides basic instruction on preparing and administering a broad range of service, supply, and small construction contracts and purchase orders used at civil works projects. Coursework applicable to: Operations project managers, natural resource managers, park rangers, maintenance supervisors and staff, operational support personnel, also Army and civilian CORs for service contracts. Individuals needing instruction in formal Construction Contracts should take the Construction Contract Administration course (#366).

Description.

Contracting procedures being used on army and civil works projects for operation and maintenance are addressed through lecture, discussion, and exercises. Special emphasis is given to those steps which are key to developing and administering successful contracting programs. As a basic first exposure to O&M contracting, the student will develop a sound understanding of techniques and responsibilities. Specific subjects addressed in the course are: contracting procedures, safety considerations, contract clauses/payments, COR duties and responsibilities, technical contract requirements, formulation of a solicitation, and quality assurance.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0023, 0025, 0300, 0400, 0800, 1100 and 4749; (b) Grade: GS-05, WG-05, and above. Students should have current or projected assignments involving project contracting procedures.

O&M CONTRACTS ADVANCED

318 Length: 32 Hours 41OMA01A
CEUs: 1.8 PDHs: 18

Tuition: \$1580

Purpose.

This course provides operations/project personnel with additional skills for developing and administering service, maintenance, and construction contracts.

Description.

Through lectures, field exercises, and directed discussion sessions, this course covers contract types, administrative considerations, legal implications, and handling adverse circumstances of O&M contracts. This course provides project contract administration personnel with advanced understanding in project operations where significant reliance on O&M contracting is required.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0023, 0025, 0300, 0400, 0800 and 1100; (b) Grade: GS-07 or above or equivalent WG grade and series. Students should be assigned project office contracting responsibilities, or district office personnel involved in contract administration supervision. Students must have completed the Administration of Operation and Maintenance Contracts basic course (No. 119). Students should attend sessions outside their home Division in order to receive full benefit of class field trip. It is recommended that students "DO NOT" request a class location in their home district. Those that do are subject to re-assignment.

OMBIL - Applications and Reports

160 Length: 28 Hours 46OMB01A
CEUs: 2.3 PDHs: 23

Tuition: \$1725

Purpose.

The Operations and Management Business Information Link (OMBIL) is a web-based, business information gateway (on the Corps Intranet at <https://ombil.usace.army.mil>) which links six major Corps business functional systems (navigation, hydropower, recreation, water supply environmental stewardship, including natural resources and environmental compliance, and flood damage reduction) with CEFMS for the purpose of data collecting, data management, reporting, and performance measurement. Operations, Program and Project Managers in these major business functional areas need to learn what is available and how to quickly access this web-based interface for tracking, monitoring, and viewing information and for use in making management decisions. Students will perform hands-on-searching and report-building activities in a computer laboratory

Description.

- Course will discuss OMBIL purpose and background. - Overview of information and reports available in five major business areas. Type of data available, what reports can be created, and how the process works. How to acquire real-time operation data and extract data and create reports. Business area relationships will be explored. - Develop performance analysis, project performance, output trends and comparisons. - Students will perform practical exercises in which they use the web interface to extract and generate general information and reports for their business area. This course DOES NOT include data entry procedures.

Prerequisites.

(a) Nominees should be from all USACE levels (HQ, divisions, districts) who are budget analysts, or operations, program, or project managers involved with navigation, hydropower, recreation, water supply, environmental stewardship, and flood damage reduction. Nominees may also be park managers, park rangers, and lock or plant operators responsible for managing operations data.

(b) Grades: GS-7 through GS-15 or equivalent.

OPERATIONS MANAGEMENT

245 Length: 36 Hours 46OMW01A

Tuition: \$1010

Purpose.

This course is targeted toward US Army Corps of Engineers employees who aspire to become Operations Project Managers (OPMs). It is taught by existing or former OPMs and national business program managers from a practical management perspective. It is intended to foster a uniform understanding of current programmatic changes, issues, and initiatives in both individual business line areas and general management practices.

Description.

This course is designed to provide students with insight into functioning as an OPM in the areas of the project management business process, budget preparation and execution, communities of practice, human resource management procedures, specific leadership skills, and union/management relations. It also covers individual business lines such as hydropower, flood damage reduction, recreation, navigation, environmental stewardship, and others from both an OPM's and a national perspective. An entire day of this course takes place in the USACE HQ office, exposing students to national senior leaders and program experts.

Prerequisites.

Nominees must be: (a) US Army Corps of Engineers employees; (b) Grade GS-11 or above; and (c) be directly involved in or experienced in the operation and maintenance of USACE operational projects. First consideration will be given to high potential aspiring OPMs who have been so identified by their command.

Paint Coatings and Quality Verification (QV)84 Length: 36 Hours 35PNT01A
CEUs: 3.1 PDHs: 31 LUs: 31

Tuition: \$1520

Purpose.

This course is designed to develop the student's quality verification, analytical, and problem solving skills to identify, prevent, correct, and resolve prevalent problems in the application of paints and coatings. Students will learn the basic concepts of paint composition, coating selection, safety, environmental considerations, and construction quality management necessary to administer the painting requirements of project plans and specifications.

Description.

Through lectures, hands-on demonstrations, analysis of case studies, and laboratory sessions, this course covers such subjects as: paint fundamentals; characteristics and selection of coatings; surface preparation and painting of metals, concrete and masonry surfaces, wood, wallboard, and other miscellaneous surfaces and material types; paint defects; paint approval; testing instruments; painting specifications; and safety, environmental, and sustainability considerations. Construction Quality Management, Maintenance Painting, and changes in guidance and regulations affecting painting are emphasized. Recent changes to the UFGS 09 90 00 and 09 97 02 are emphasized to include the use of the Master Painter's Institute (MPI) specifications and its application to the design-build process and other available online resources.

Prerequisites.

(a) Grade: All (b) Occupational Series: 0800, 1300, 4000, 5318, 5426. Other disciplines will be accepted provided nominee's present or anticipated duties require knowledge of coating systems involved in design, construction or facility maintenance. This includes architects and engineers with design, specification and review responsibilities. This course is open to those individuals from DPWs, BCEs, NAVFAC and other government agencies who are responsible for quality assurance and verification, specifying paint requirements for maintenance or new construction and those serving on constructability review teams.

Partnerships in Natural Resource Management (NRM)

328 Length: 36 Hours 35PNR01A

Tuition: \$1700

Purpose.

This course is designed to develop an understanding of the capabilities of the Corps of Engineers NRM Partnership Authorities and to promote consistency in Partnership policy application, explore alternative management techniques, funding sources and practical applications. Lecturers and instructors include HQUSACE staff, HQ Partnership Advisory Committee Members, and guest speakers.

Description.

Topics to be covered in class will be: a) USACE's NRM Partnership Authorities as described in ER-1130-2-500, b) Partnerships and their applications, c) Benefits of the Handshake Partnership Program and development of applications for Handshake Funds, d) Partnership ethics, e) Cooperating Associations and Cooperative Management Agreements, f) Contributions, g) Volunteers, h) Lessons Learned and documentation of partnerships in OMBIL. (THIS COURSE FOCUSES ON THE RECREATION AND ENVIRONMENTAL STEWARDSHIP BUSINESS LINE PARTNERSHIPS)

Prerequisites.

(a) Attendance is open to all 0025, 0023, and 0400 series Natural Resource Management personnel, Managers, and Specialists who deal with partners and volunteers on a daily basis. Attendance is also encouraged for Office of Counsel, Real Estate, and Resource Management staff. No prior knowledge of this topic is required to attend this class.

(b) Grade: GS-05 and above.

(THIS COURSE FOCUSES ON THE RECREATION AND ENVIRONMENTAL STEWARDSHIP BUSINESS LINE PARTNERSHIPS)

PAVEMENT EVALUATION AND DESIGN115 Length: 36 Hours 75PER01A
CEUs: 3.0 PDHs: 30

Tuition: \$1540

Purpose.

This course teaches method and techniques for the evaluation and design of flexible, rigid, and unsurfaced pavements.

Description.

Through lectures, laboratory tours, field exercises, and discussions, this course covers the general concepts in pavement evaluation and design, selection of pavement system, design procedures, and computer applications. Specific topics include identification of surface deficiencies, PAVER, pavement management systems, field tests of soil, bases, and asphalt layers, rigid, flexible, and unsurfaced pavement design, overlay design, surface and subsurface drainage, and an overview of PCASE. Students are encouraged, but not required, to bring a laptop so that the PAVER/PCASE software can be installed and used during the course.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 series; (b) Grade: GS-09 or above. Student should have a current or projected assignment as a design or construction engineer or be a senior technician responsible for pavement evaluation, maintenance, rehabilitation, or construction.

PCC1 CIVIL WORKS ORIENTATION

86 Length: 32 Hours 35PWR01A

Tuition: \$1195

Purpose.

This course provides the student with a basic understanding of the Corps of Engineers civil works program and the project development process. It is designed for Corps employees who are relatively new to civil works or individuals who require an overall understanding of and the procedural stages involved in the development of civil works projects.

Description.

Topics will be presented and discussed relating to the Civil Works process, including: overviews of the Corps missions, programs and organizational structure; legislative and review processes; study and project cost-sharing; program budgeting and funding; environmental compliance and HTRW considerations; public involvement; partnering and cooperation with non-Federal sponsors; and new trends and developments. The student will learn the entire Civil Works process from the problem identification to project implementation. Various individual, group, and class exercises; role-plays of Corps-sponsor meetings; and discussions are used throughout the course to help students understand the process.

Prerequisites.

Nominees must be involved in or closely support all phases of civil works project development, project planning, project management, or programs management and must be assigned (a) Occupational Series: Selected 0020, 0100, 0300, 0400, 0800, 0900, 1100, and 1300 series or others such as public affairs officers, real estate, or counsel that support the development process; (b) Grade: GS-05 or above. This course is highly recommended as the first training class for new or entry level employees in the CW Planning function.

PCC2 PLANNING PRINCIPLES AND PROCEDURES

77 Length: 36 Hours 35PPP01A

Tuition: \$1420

Purpose.

This course provides district and division planners with an overview of how Corps of Engineers water resource projects are planned in accordance with current policies and procedures.

Description.

Upon completion of the course, the student will have a basic understanding of the principles and policies guiding the planning of Corps Civil Works water resources development projects. Policies and procedures are discussed in a series of short presentations by HQUSACE staff and through class participation in small group exercises. Presentations and class exercises focus on case studies designed to illustrate the planning process and application of guidance and policy. The course presents the basic procedures that enable the student to conduct the planning process under today's requirements. The course covers interaction among the district, division, HQUSACE, Army, and the Administration, and includes a session on new directions in planning. The course is conducted in an informal atmosphere to encourage class interaction.

Prerequisites.

Participants should be currently involved in the planning of civil works water resources development projects. Prior completion of the PROSPECT Course, "PCC1 Civil Works Orientation" is highly recommended. Priority will be given to GS5-GS12 students with less than 3 years of current planning experience.

PCC3 Environmental Considerations in Planning

408 Length: 36 Hours 35ECP01A

Tuition: \$1900

Purpose.

This class surveys environmental topics needed for new planners to pursue civil works planning studies. Participants learn to recognize the basis for and key components of NEPA documents consistent with applicable environmental laws, regulations and procedures necessary to conduct civil works planning studies. Students will also receive basic information regarding the Corps ecosystem restoration authorities and guidance on partnership development. Course includes field trip and experiential exercises to demonstrate and apply course learnings.

Description.

The class consists of a series of modules summarizing the many laws, regulations, and planning processes governing environmental aspects of the Corps of Engineers civil works planning process. Modules include an overview of the process and its relationship to compliance under the National Environmental Policy Act, and the contents and procedural requirements for the preparation of Environmental Impact Statements. Regulatory discussions address the: Endangered Species Act, Fish and Wildlife Coordination Act, National Historic Preservation Act, Clean Water Act, Clean Air Act, Coastal Zone Management Act, Magnuson-Stevens Fishery Management Act, and the Wild and Scenic Rivers Act. Other topics include mitigation, cost effectiveness analysis, environmental sustainability, and guidance on ecosystem restoration under the continuing authorities and general investigation programs. Ecosystem and other impact assessment methods are reviewed, with exercises focused on the selection of assessment procedures for wetland evaluations.

Prerequisites.

Nominees should be newly assigned to the Planning and Project or Program Management Components of the civil works planning programs with planning experience of less than 3 years or in fields having a nexus with a need for an understanding of environmental considerations in the planning process. Grade level: GS-5 through GS-11. Preference will be given to students who have completed the PCC1 Civil Works Orientation course and the PCC2 Planning Process and Principles Course or equivalent.

PCC5 H&H Considerations for Planning

409 Length: 32 Hours 35HHC01A

Tuition: \$2020

Purpose.

This course provides less experienced district and division planners with a basic overview of the Corps of Engineers basic hydraulic and hydrologic concepts in accordance with current policies and procedures. It is developed for those who are relatively new to civil works planning; or, individuals who require an overall understanding of the policies and procedures involved in hydraulic and hydrologic process.

Description.

Formerly the Planner Core Curriculum Class entitled "Hydrologic and Hydraulic Considerations in Planning." This course provides basic information in layman's terms on hydraulics, hydrology, geomorphology, sediment transport, and associated models. Many hands-on demonstrations are utilized to reinforce these concepts. The concepts are then specifically applied to the Corps water resources mission areas of flood damage reduction, coastal damage reduction, navigation, ecosystem restoration, etc. In addition, the course provides a discussion of the development of Project Management Plans and scope versus consequences and includes a field trip and a major class exercise. The target audience for this class is new planners with no formal education in hydraulics and hydrology. While engineers may take this class, it should be recognized that basic principles will be discussed.

Prerequisites.

Nominees should be beginning/newly assigned to the Civil Works Planning and/or Project or Program Management areas of the civil works planning programs. Typically, with less than 3-years of related hydraulic and hydrologic experience; or, in fields having a nexus with and relevant need for an understanding of the hydraulic and hydrologic processes and their relationships to civil works project development. Nominees should be currently involved in the planning of civil works water resources development projects. Prior completion of the "Planner Orientation" and "Planning Process" courses from the Planning Core Curriculum; or, the "PCC1 Civil Works Orientation" and "PCC2 Planning Principles and Procedures" PROSPECT courses is highly recommended. Grades: GS 5-11.

PCC6 PLAN FORMULATION (WK)

406 Length: 32 Hours 35PFM01A

Tuition: \$1870

Purpose.

This course provides less experienced district and division planners with a basic overview of the Corps of Engineers plan formulation process in accordance with current policies and procedures. It is developed for those who are relatively new to civil works planning; or, individuals who This course contains one or more field trips and several experiential classroom and field exercises to reinforce application of course learnings. require an overall understanding of the policies and procedures involved in the plan formulation process.

Description.

Basic student learning objectives for this course include general understanding of the plan formulation process; the steps of plan formulation and how plan formulation fits within the six-step planning process. Multipurpose plan formulation strategies and approaches for ecosystem restoration, flood damage reduction, navigation and true multipurpose application is covered and discussed through a series of presentations; and, various class, group and individual exercises. Presentations and class exercises also include a field trip based case study(s) designed to provide experiential learning through application of the plan formulation process, plan formulation strategies, guidance and policy. The course is conducted in an informal atmosphere to encourage class interaction.

Prerequisites.

Nominees should be beginning or newly assigned to the Civil Works Planning and/or Project or Program Management areas of the civil works planning programs. Typically, with less than 3-years of related plan formulation experience; or, in fields having a nexus with and relevant need for an understanding of the plan formulation process and its relationships to civil works project development. Nominees should be currently involved in the planning of civil works water resources development projects. Prior completion of the "PCC1 Civil Works Orientation" and "PCC2 Planning Principles and Procedures" PROSPECT courses is highly recommended. Priority will be given to students in Grades: GS-5 through GS-11.

PCC7 Public Involvement & Team Building

407 Length: 36 Hours 35CPL01A

Tuition: \$1950

Purpose.

Corps of Engineers planners typically work in multi-disciplinary teams, often involving project sponsors, other federal and state agencies, and occasionally stakeholder groups or private individuals. These teams, in turn often consult with a broader public, identifying and addressing public concerns as the agencies proceed through the planning process. This environment requires skills for successfully designing and conducting processes that effectively draw together the different partners and stakeholders throughout the planning process, resulting in decisions that enjoy broad public support.

Description.

This course will concentrate on the methods, techniques, and skills that assist Corps Civil Works Planning teams with developing a high-functioning team and maintaining effective communication with sponsors, stakeholders and interested parties throughout the life of the study. Participants will learn ways to raise awareness of ongoing studies and efforts, integrate stakeholder values and concerns into the formulation and evaluation of projects, manage conflicts and disputes, and develop strategies to align participation activities with the Corps Six-Step Planning Process. By the end of this course the student will be able to develop an effective public involvement strategy, effectively lead and participate in teams, design and facilitate an interactive public meeting or workshop.

Prerequisites.

Nominees should be Civil Works Planners or Project Managers or be assigned to a planning study team. Students should have basic working knowledge of the Corps Six-Step Planning Process and Civil Works Process. Prior completion of PROSPECT "PCC1 Civil Works Orientation" and "PCC6 Plan Formulation" is highly recommended.

PLANNING FOR ECOSYSTEM RESTORATION

348 Length: 36 Hours 33EBE01A
CEUs: 3.1

Tuition: \$2575

Purpose.

Ecosystem restoration is a priority mission in the Corps' Civil Works program. Together with traditional environmental mitigation, restoration spans the range of resources from fish and wildlife to watersheds and ecosystems. The formulation and evaluation that leads to restoration projects require a collaborative approach that also involves local sponsors and other stakeholders. This course explores key issues related to the current practice of ecosystem restoration planning: current and evolving policy, definition and measurement of ecosystem outputs, resource significance, plan formulation, and cost effectiveness/incremental cost analyses. Case studies and a field trip will be utilized to illustrate current practices.

Description.

Within the context of the Corps' six-step planning process [(1) identify problems and opportunities, (2) inventory and forecasting, (3) formulating plans, (4) evaluating effects of alternative plans, (5) comparing alternative plans and finally, (6) selecting a recommended plan] and with a particular emphasis on ecosystem restoration needs, the following topics will be discussed.

- Authorities for Corps involvement in ecosystem restoration projects
- Environmental outputs and tools available for measuring them
- The meaning of resource significance and the importance of the evaluation criteria of efficiency, effectiveness, acceptability and completeness in ecosystem restoration
- Fundamentals of ecological principles and processes
- Management measures
- How risk and uncertainty factor into ecosystem restoration evaluation
- The purpose of Cost Effectiveness and Incremental Cost Analysis
- How to formulate jointly for ecosystem restoration (NER) and National Economic Development (NED) benefits

(NOTE: Although this course addresses evaluation tools and procedures for ecosystem restoration planning, this is not a course in the theory/mechanics of ecological or habitat models such as HEP or HGM.)

Objectives. Upon completion of this training, attendees will be able to: (a) list important authorities related to planning and ecosystem restoration; (b) list and describe the six steps of the planning process; (c) write statements of significance for ecosystem restoration

studies; (d) effectively describe their recommended plan in terms of evaluative criteria of efficiency, effectiveness, acceptability and completeness in ecosystem restoration; and (e) conduct a simple cost effectiveness and incremental cost analysis for an ecosystem restoration project.

The course will include a half-day field trip to a local Corps restoration project, and student teams will be responsible for developing and presenting a case study based on the field visit.

Prerequisites.

This course is designed for Corps personnel involved in planning and designing, and evaluating environmental restoration projects, including planners, biologists, economists, engineers, outdoor recreation planners, landscape architects, project managers and other planning team members. Recommended grade of GS-09 or above.

PROJECT MANAGEMENT - MIL PROG

88 Length: 36 Hours 46PMM01A
 CEUs: 3.1 PDHs: 31 LUs: 31 PDU: 31

Tuition: \$1305

Purpose.

This intermediate level course provides the project manager in a programs/project management division with management procedures, tools, and techniques necessary to effectively manage military construction (MILCON) projects from design authorization through construction completion. Additionally, this course provides the other technical members of the project delivery team, including supporting budget, scheduling, contracting, and legal specialists an overview of the military construction process and procedures.

Description.

Through lectures, directed discussions, and case studies, this course covers the entire spectrum of project management of MCA military programs. It includes the MILCON budget cycle, regulations and philosophy, planning and programming, the design process, A-E and in-house design management, A-E selection and negotiations, project advertising and award, and project management responsibilities during the construction phase. Course focus is on Military Construction (MILCON) process, application of Project Management Business Process (PMBP), and Project Management (PM) principles. The Army MILCON (MCA) process is used as a model. Other programs are covered in general and by analogy. It also addresses project management business process (PMBP) requirements contained in ER 5-1-11, U.S. Army Corps of Engineers Business Process.

Prerequisites.

Nominees must be Grade: GS-09 or above. First priority will be given to personnel currently assigned as a military programs project manager. Second priority will be given to those personnel currently assigned to a military project delivery team.

Project Management IN USACE

355 Length: 32 Hours 46PJM01A
 CEUs: 2.3 PDHs: 23 LUs: 23 PDU: 23

Tuition: \$1270

Purpose.

This course is designed primarily for those individuals who are, or will be, a project manager in any program area. Project delivery team (PDT) members from functions other than project management may benefit through improved understanding of the project manager's and their own roles and an overview of the project management process.

Description.

The course provides the basic concepts and philosophy of project management and the USACE project management business process (PMBP); it introduces the phases of a project, discusses roles and responsibilities of the PDT, and provides tools for project management. The course seeks, through presentations, discussions, illustrations, team exercises and case studies to provide current guidance in using project management techniques and the PMBP. General project management skills, tools, and techniques are reinforced by the use of civil works and military programs case studies. Instruction covers the development of a project management plan (PMP), project scope, work breakdown structures, and project schedules; techniques for cost estimating, risk assessment/contingency management and performance measurement; assessing earned value; resourcing projects, and the civil works and military programs budget cycles.

Team dynamics and individual and team strengths are also discussed and illustrated throughout the course. Completing an individual on-line assessment is a course prerequisite.

This course is designed to teach you key elements of doing project management at USACE. It is intended to be a basic course that may be supplemented by other courses that specifically address in detail such elements as network analysis and scheduling, earned value; or in-depth mission specifics, such as Civil Works or Military Programs. This course does not teach you how to use P2.

This course includes instruction teaching and reinforcing the following competencies found in the National Technical Competency Study: a) Project Manager USACE Level 1 Certification, and b) Project Management, USACE.

Prerequisites.

This is an overview of project management in USACE; it addresses both hard and soft skills required to manage a project and a team. The course is appropriate for

newly assigned project managers or those who anticipate being assigned as a project manager, with a minimum of 2 years experience working with project teams. Additionally, this course provides the other technical members of the project delivery team (PDT), including supporting budget, scheduling, contracting, and legal specialists an overview of the project management process and procedures. This course is not appropriate for administrative staff or individuals without at least 2 years experience working in or with project teams. Nominees should be at Grade GS-11 or above. Pocket calculators are needed for earned value and case study work.

Completing the individual assessment is a mandatory course prerequisite. The online access code and website are provided to students prior to their scheduled PM355 class. Students must email their top five strengths to the designated course POC at least two weeks prior to class.

PROJECT MANAGEMENT PROFESSIONAL(PMP PREP)

402 Length: 37.5 Hours
CEUs: 3.2

46PMP01A

Tuition: \$1475

Purpose.

This course will provide experienced USACE program and project managers a needed common language and baseline understanding of global standard project management practices, procedures, tools, and techniques in managing the execution of complex projects with a variety of customers and contractors.

Description.

At a minimum, learn, identify, understand (in detail) the nine project management knowledge areas (integration, scope, time, cost, quality, human resource, communications, risk, and procurement), the five project management process groups (initiation, planning, executing, monitoring & controlling, and closing), global project management terminology, project management tools and techniques, test-taking strategies, and professional ethics. Also, the course will outline the steps and requirements to apply for the PMP certification exam and support provided by the USACE Program and Project Management Community of Practice.

Prerequisites.

Attendees (a) must have a minimum of 3 years of full-time project management experience (with a bachelor's degree or higher) OR 5 years of full-time project management experience (b) should bring a list of projects that they manage(d) as the project manager (c) should register for a free PMI account at PMI Registration (d) should review PMI video, Maintaining Your PMI Credential: Introduction only (2:17 minutes), and should add their intent to take the PMP exam to their Individual Development Plan.

PROJECT TEAMBUILDING

383 Length: 36 Hours 15PTL01A

Tuition: \$1785

Purpose.

This course is designed to prepare project managers to deal more effectively with the difficult and demanding tasks of managing organizational and people problems. These challenges are natural in project management and have far greater influence on project success than do the tools and techniques such as PERT, work breakdown schedules, earned value controls, etc.

Description.

This course profiles the successful project manager and discusses project leadership in a matrix environment within a government organization, stressing proactive personal leadership and networking as well as using personal and organizational currency in order to influence without authority.

The course covers:

- (1) Leadership styles,
- (2) Building and leading high-performing project teams; recognizing and understanding team dynamics; inspiring team success,
- (3) Understanding communication styles and developing and practicing communication skills,
- (4) Understanding and developing critical personal and interpersonal skills. A few topics covered under this objective are; receiving feedback in their leadership decision making style, enhancing skills in conflict management and practicing conflict resolution methods, managing relationships with customers, peers and bosses;
- (5) Developing self-knowledge and emotional intelligence; understanding individual differences and personality types,
- (6) Learning to develop networks to gain influence over important decisions.

Objectives are taught by lectures combined with case studies, small group exercises and other interactive methods to provide maximum exchange of ideas and information.

Prerequisites.

Students should be project managers with 2 or more years experience in project management in grades of GS-12 and GS-13.

PUBLIC INVOLVEMENT - COMMUNICATION

91 Length: 36 Hours 53PIC01A

Tuition: \$1250

Purpose.

This course is for staff whose responsibilities require communicating with the public about agency activities. The purpose of the course is to present the rationale for public involvement in Corps of Engineers activities and to present basic communications and group process techniques to enable Corps employees to more effectively interact with the public.

Description.

The course utilizes team workshops, lectures, and case studies to present and demonstrate the utility of a wide-range of formats, techniques, and methods for public involvement. Topics covered in this course are: the public's role in decision-making; applying public involvement in Corps of Engineers activities; defining agency value systems; distinguishing policy (political) from technical decisions; designing a public involvement program; facilitation and small group leadership skills; listening and sending skills; designing public meetings and workshops; the role of values in public involvement; and dealing with conflict.

Prerequisites.

Nominees should be assigned (a) Occupational Series: selected 0100, 0020, 0021, 0023, 0025, 0026, 0300, 0400, 0800, 1000 and 1300; (b) Grade: Suggest Target Audience be GS 9-12. (water resources planners, study managers, project managers, rangers, park managers etc) - anyone potentially involved with public involvement during the planning, design, construction or operation of a project.

RADIOACTIVE WASTE TRANSPORT

441 Length: 24 Hours

56RWT01A

Tuition: \$2865

Purpose.

This workshop provides initial training regarding the regulatory requirements of the Hazardous Materials Transportation Act (HMTA) as it applies to the offsite transportation of Class 7 and Class 9 Radioactive Wastes for recycling, treatment and/or disposal. It enables employers to certify as required in 49 CFR 172 Subpart H, that their employees have been trained and tested in general awareness and function-specific elements as described below. (Note: Certain safety related training elements required by 49 CFR 172 Subpart H are site-specific and must be performed on the job.)

Description.

This workshop is designed to instruct the student on the Department of Transportation (DOT) requirements pertaining specifically to radioactive wastes, in particular, remediation wastes from radioactive sites such as FUSRAP sites, EPA Superfund sites, and military installations. This workshop is focused on the DOT regulations associated with Class 7 and Class 9 radionuclides which includes ongoing DOT/NRC rulemaking for harmonization with international transportation regulations. Course contents include, but are not limited to, determining if the material meets a Class 7 or Class 9 hazard class, DOT subtyping (Excepted, Type A, Type B, HRCQ, LSA, SCO etc), determining the proper shipping names, markings, labeling, and packaging, determining the correct shipping paper requirements, and security awareness training. There is minor discussion on the Nuclear Regulatory Commission (NRC) regulations as they relate to transportation. (Note: A scientific calculator must be brought to class. A worksheet on scientific notation and International System of Units (SI) conversions for radiological units of measure will be sent before the class to be completed prior to arriving for workshop.)

Prerequisites.

This course is primarily targeted at persons in the following series: 0820, 0809, 0810, 0819, 0028, 0029, 0025, 0026, 0401, 1350, 1301, 0893, 0830, 1306, and 1320. (All series involved with environmental programs, including all engineers, chemists, industrial hygienists, health physicists, biologists, geologists, hydrogeologists, program managers, planners, etc.) The training is designated for persons who may be overseeing, arranging, or managing the offsite transportation of Class 7 or Class 9 radioactive wastes, or shipments of analytical samples from radioactively contaminated sites to laboratories. In addition, students are advised that an extremely helpful course would be the Hazardous Waste Manifesting/DOT Certification PROSPECT Course #223.

This is not a required prerequisite. Students should be advised that Course #223 must be taken if certification is required for hazardous materials or wastes other than Class 7 (e.g. mixed wastes, friable asbestos).

**RADIOACTIVE WASTE TRANSPORT/DOT
RECERTIFICATION**

430

Length: 20 Hours

56RTD01A

Tuition: \$ 840

Purpose.

This 20-hour course provides recurrent training regarding the regulatory requirements of the Hazardous Materials Transportation Act (HMTA) and the Resource Conservation and Recovery Act (RCRA) as it applies to the generation, transportation and disposal of hazardous waste and Class 7 and 9 radionuclides. It enables employers to certify as required in 49 CFR 172 Subpart H, that their employees have been trained and tested in general awareness and function-specific elements as described below. In addition, this is a DoD approved course as per DoD 4500.9-R, Oct 99. (Note: Certain RCRA and safety related training elements required by 49 CFR 172 Subpart H and 40 CFR 265.16 are typically site-specific and must be performed on the job.)

Description.

Training topics cover the identification and classification of hazardous wastes for purposes of preparing a hazardous waste manifest and fulfilling the DOT requirements for shipping hazardous wastes and radioactively contaminated wastes. Specifically, training topics include RCRA waste classification, land disposal restrictions and notification, manifesting requirements, identification of a DOT Reportable Quantity, use of the Hazardous Materials Table, DOT requirements for determining a shipping name, properly packaging, labeling, marking and placarding, and DOT emergency response requirements. In addition, the course addresses special EPA and DOT requirements for shipping asbestos and PCBs, and the specific DOT requirements associated with shipping Class 7 materials. (A scientific calculator must be brought to class.)

Prerequisites.

This course is primarily targeted at persons in the following series: 0820, 0809, 0810, 0819, 0028, 0029, 0025, 0026, 0401, 1350, 1301, 0893, 0830, 1306, and 1320. (All series involved with environmental programs, including all engineers, chemists, industrial hygienists, health physicists, biologists, geologists, hydrogeologists, program managers, planners, etc.) The training is designated for persons with any of the following job responsibilities: identification of proper shipping names for hazardous and/or radioactive wastes in accordance with DOT regulations; selection of appropriate packagings, markings, labels and placards in accordance with DOT regulations; RCRA waste identification and classification; completion or review of hazardous waste manifests and/or land disposal restriction notifications; preparation of shipping documents for radioactive waste, used oil, asbestos and PCBs; shipping of analytical samples; loading or

unloading of radioactive or hazardous wastes; and transportation of hazardous materials in general.

REAL ESTATE DISPOSALS 202

76

Length: 24 Hours

49RM201A

Tuition: \$ 925

Purpose.

The real estate disposal mission of the Department of the Army has no counterpart private sector. The laws, regulations, and policies pertaining thereto are primarily peculiar to the Federal Government. This course provides an advanced overview of the Disposal portion of the management and disposal mission, policies, procedures and regulations for Army and Corps of Engineers projects, with emphasis on complex actions.

Description.

The course includes lectures, class discussions, problem solving, and testing. Topics for presentation address (a) authorities, documents, and procedures for various types of disposals, (b) environmental land use controls and documentation, (c) negotiation skills. After completion of this course, the student should have advanced to real estate disposal actions, although additional study and experience will be required

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0905, 1170, and 1171; (b) Grade: GS-11 and above; (c) personnel primarily assigned to real estate disposal functions within the Corps of Engineers. Individuals must have completed RE Management and Disposal 101, Course No. 007, 49RED01A, or have equivalent experience. Individuals outside prerequisite occupational series and grade will be considered on a space available basis. Nominees should have an advanced understanding of The Army and the Corps of Engineers organizational structure and have read the appropriate Engineer regulations.

REAL ESTATE MGT AND DISPOSAL 101

7 Length: 32 Hours 49RED01A

Tuition: \$1200

Purpose.

The real estate management and disposal mission of the Department of the Army has no counterpart in the private sector. The laws, regulations, and policies pertaining thereto are primarily peculiar to the Federal Government. This course provides a basic overview of the Outgrant and Disposal policies, procedures and regulations for Army and Corps of Engineers projects, with emphasis on routine actions that use standard formats, such as licenses and building disposal.

Description.

The course includes lectures, class discussions, problem solving, and testing. Topics for presentation address (a) authorities, documents, and procedures for placing property in excess status or to approve disposal; for GSA disposal, agency disposal, or special authority disposal, (b) disposal document preparation, (c) authorities, documents, and procedures for making property available for use by others, (d) routine outgrant document preparation, (i) outgrant management and administration, (j) environmental considerations, and (k) negotiation skills. After completion of this course, the student should have a foundation upon which to begin work on routine actions and, with additional study and experience, advance to more advanced real estate management and disposal actions.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0905, 1101, 1170, and 1171; (b) Grade: GS-05 through GS-11; (c) personnel primarily assigned to real estate functions within the Corps of Engineers. Individuals outside prerequisite occupational series and grade and those actively engaged in real estate activities (such as natural resource specialist, outdoor recreation planners, park managers, project managers, master planners, and installation DPW staff) will be considered on a space available basis. Nominees should have a general understanding of the Corps of Engineers organizational structure and have read the Real Estate Handbook, ER405-1-12, Chapters 8 and 11.

REAL ESTATE MGT AND OUTGRANTS 201

73 Length: 24 Hours 49RMD01A

Tuition: \$ 965

Purpose.

The real estate management of the Department of the Army real property has no counterpart in the private sector. The laws, regulations, and policies pertaining thereto are primarily peculiar to the Federal Government. This course provides an advanced overview of the Management portion of the management and disposal mission, policies, procedures and regulations for Army and Corps of Engineers, with emphasis on complex actions and outgrants.

Description.

The course includes lectures, class discussions, problem solving, and testing. Topics for presentation address (a) authorities, documents, and procedures for complex outgrants, (b) management of title, encroachments and boundary disputes, (c) environmental land use controls, compliance and documentation, (d) authorities, documents, and procedures for making property available for use by others, (e) complex outgrant document preparation, (f) outgrant management and administration, and (g) negotiation skills. After completion of this course, the student should have advanced to more advanced real estate management, although additional study and experience will be required.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0905, 1170, and 1171; (b) Grade: GS-11 and above; (c) personnel primarily assigned to real estate management and outgrant functions within the Corps of Engineers. Individuals must have completed RE Management and Disposal 101, Course No. 007, 49RED01A, or have equivalent experience. Individuals outside prerequisite occupational series and grade will be considered on a space available basis. Nominees should have an advanced understanding of The Army and the Corps of Engineers organizational structure and have read the appropriate Engineer regulations.

REAL ESTATE ACQUISITION 101

79 Length: 32 Hours 49REA01A
CEUs: 3.0

Tuition: \$1205

Purpose.

The real estate acquisition mission of the Department of The Army has no counterpart in the private sector. The laws, regulations, and policies pertaining thereto are peculiar to acquisition of real estate by the Federal Government or in conjunction with Federal projects. This course provides a basic overview of the land acquisition policies, procedures and regulations for Army and Corps of Engineers projects.

Description.

The course includes lectures, class discussions, problem solving, and testing. Topics for presentation address (a) project planning, documents, and authorities, (b) elementary mapping and legal descriptions, (c) title evidence, (d) just compensation, (e) condemnation, (f) general fundamentals of appraisals for land acquisition, (g) interest and estates in land, (h) local cooperation and cost-sharing, (i) environmental considerations, (j) negotiation skills, and (k) crediting for land provided by project sponsors. After completion of this course, the student should have a foundation upon which, with additional study and experience, a knowledge base in real estate acquisition can be built.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0318, 0905, 1101, 1170, and 1171; (b) Grade: GS-07 through GS-11; (c) personnel primarily assigned to real estate functions within the Corps of Engineers. Individuals outside prerequisite occupational series and grade and those actively engaged in real estate activities (such as planners and project managers) will be considered on a space available basis. Nominees should have a general understanding of the Corps of Engineers organizational structure and have read the Real Estate Handbook and other Army policy related to acquisitions.

REAL ESTATE ACQUISITION 201

121 Length: 24 Hours 49RA201A

Tuition: \$ 905

Purpose.

The real estate acquisition mission of the Department of the Army has no counterpart in the private sector. The laws, regulations, and policies pertaining thereto are peculiar to acquisition of real estate by the Federal Government or in conjunction with Federal projects. This course provides an advanced overview of the land acquisition policies, procedures and regulations for Corps of Engineers Civil Works water resources projects.

Description.

The course includes lectures, class discussions, problem solving, and testing. Topics for presentation address (a) preparation of real estate plans, (b) just compensation, (c) estates in land, including non-standard estates, (d) environmental considerations, (e) Continuing Authority Program (CAP) issues, (f) crediting for land provided by project sponsors, (g) utility and public facility relocations and, (h) Project Partnership Agreements (PPA) principles.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0318, 0905, 1170, and 1171; (b) Grade: GS-11 and above; (c) personnel primarily assigned to real estate planning or acquisition functions for Corps of Engineers Civil Works projects. Individuals must have completed RE Acquisition 101, Course No. 079, 49REA01A, or have equivalent experience. Individuals outside prerequisite occupational series and grade and those actively engaged in real estate activities (such as planners and project managers) will be considered on a space available basis. Nominees should have an advanced understanding of the Corps of Engineers organizational structure and have read the Real Estate Handbook, ER 405-1-12, Chapters 12 and applicable Engineer Circulars.

REAL ESTATE PROJECT MGT & CONTROL(RE PM&C)

144 Length: 28 Hours 49RPC01A

Tuition: \$1290

Purpose.

The real estate planning and control (P&C) function of the Corps of Engineers, Real Estate elements comprises a myriad of duties and responsibilities. This course provides a basic overview of the planning and control policies, procedures and regulations for Corps of Engineers mission support. The course outlines how P&C interfaces with other elements of the Corps and addresses broad aspects of the fiscal, manpower, planning, and real estate management information systems within real estate, Corps of Engineers, and the Army.

Description.

The course includes lectures, class discussions, problem solving, and testing. Topics for presentation address (a) real estate planning, budgeting, and manpower, (b) real estate surveying, land descriptions, (c) real estate data validation and records management, (d) real estate accountability and Chief Financial Officer Act issues, (e) authorities, documents, and procedures, (f) real estate aspects of Life Cycle Project Management, and (g) use of automated Real Estate information systems and their interaction with other Army and Corps systems. After completion of this course, the student should have a foundation upon which to begin work on routine actions and, with additional study and experience, advance to more advanced real estate P&C actions.

Prerequisites.

Nominees must be assigned (a) Grade: GS-05 and above and (b) personnel primarily assigned to real estate functions within the Corps of Engineers. Individuals outside prerequisite grade and will be considered on a space available basis. Nominees should have a general understanding of the Corps of Engineers organizational structure and have read the Real Estate Handbook, ER 405-1-12 and appropriate Engineer Circulars.

REAL PROPERTY ASSET MANAGEMENT286 Length: 36 Hours 49RPM01A
CEUs: 2.7

Tuition: \$ 985

Purpose.

This course is designed as an introduction and overview to Army Real Property Asset Management as well as a means of providing Army Real Property personnel up-to-date information on changes and issues relating to the responsibilities, regulations, policies, and procedures of Army Real Property Asset Management from a HQDA perspective. The objective of the course is to provide an overall understanding for the new Army real property person and also to enhance the knowledge of the experienced person who performs functions related to Army Real Property Management.

Description.

This course provides the most up-to-date information on the life cycle of real property and its management through lectures, case studies, a field trip, group interaction and practical exercises. This course will provide the most current information on Army real property accountability to include requirements of the Chief Financial Officers Act for Real Property Accountability and Reporting, space utilization, acquisition, disposals, outgrants, natural and cultural resource requirements, environmental documentation, the McKinney Homeless Assistance Program, annexation, jurisdiction, encroachments, privatization, and automated management systems associated with Army real property management and accountability.

Prerequisites.

Nominees should include personnel both directly and indirectly associated with the management of Army real property, military and civil for all Army components.

REAL PROPERTY COMPUTER SKILLS

150 Length: 36 Hours 46RPS01A

Tuition: \$1360

Purpose.

This course provides basic skills for Army Military Real Property clerks, specialists, and officers on the use of the Army Military real property automated systems and the basic knowledge of Army Military Real Property.

Description.

This course covers the life cycle of real property and how to use the real property source system to record it including the use of the DD Form 1354 and DA Form 337. Through lectures and hands-on computer exercises, the course covers the process and procedures for the accounting of Army Military Real Property, the management of Real Property/Real Estate and data input, and the use of the source system used to maintain the of Army Military Real Property. The course will provide the most recent updates in the procedures and input of the Army Military Real Property Inventory and accountability.

Prerequisites.

Attendees should be engaged in the accountability and management of Army Military Real Property/Real Estate. Participation requires fundamental knowledge of Army Military Real Property/Real Estate.

REAL PROPERTY UTILIZATION214 Length: 36 Hours 49SUM01A
LUs: 25

Tuition: \$1085

Purpose.

This course is designed for space utilization, master planning, real property management, and facilities management personnel. The course was developed to provide these personnel with the basic tenets of real property and space utilization management within the U.S. Army. Information can be adapted and applied for use by other DOD Activities and Federal Agencies. This course has three focuses: (1) to train managers at all levels on how to determine organizational space authorizations and requirements, (2) to plan and conduct utilization surveys; and (3) to identify ways to increase efficiency.

Description.

This course includes lectures, discussions, a field trip, and exercises which teach students to plan and manage facility space and to make necessary adjustments. Utilization will be adjusted through authorizations and requirements analysis of organizations and facilities on the installation. The course also includes determining and improving space utilization rates. Major topics include (a) life cycle of planning and use, (b) organizational authorizations and requirements, (c) planning and conducting a utilization survey, (d) utilization principles, and (e) qualitative elements of space planning. The principal underlying directive for this course is Army Regulation 405-70, Utilization of Real Property.

Prerequisites.

This course is open to all civilian and military personnel employed by the US Government. Contractor personnel may be accommodated with special permission. Nominees are normally assigned in Civilian Occupational Series: 0301; 0303, 0322, 1343, 0344, 0801, 0802, 1101, 1170, 1173; Grade: GS-05 or above. Military personnel equivalents should be used to determine eligibility.

REGULATORY I

100 Length: 32 Hours 35RG101A

Tuition: \$ 905

Purpose.

This course provides a comprehensive background in the regulatory program and an understanding of current regulatory policies and procedures.

Description.

This course covers a broad range of topics that personnel in the regulatory program must be familiar with in order to do an effective job. Topics to be covered include (a) Background and Program Overview; (b) Permit Process; (c) Jurisdiction; (d) Reviewing and Assessing Applications; (e) 404(b)(1) Guidelines; (f) Compliance and Enforcement; (g) Site Inspection; (h) NEPA Compliance; (i) Special Policies and Procedures; (j) Construction Method; (k) Decision-Making Process/Public Policy Process; (l) Permit Documentation; (m) General Permits; and (n) Conflict Management/Public Involvement.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0200 and selected 0100, 0300, 0400, 0800, 1300, and selected others; (b) other: Nominees should work in the regulatory functions program. However other Corps employees required to support regulators could benefit from this course. Only regulators can be assigned priority 1.

REGULATORY IIA

322 Length: 32 Hours 35IIA01A

Tuition: \$ 995

Purpose.

This course provides an in-depth discussion of the procedural issues related to the more complicated laws, regulations, and policies which Corps regulators are called upon to enforce.

Description.

The course covers scope of analysis, cumulative impacts, historic properties, tribal issues, and endangered species.

Prerequisites.

Nominees must have attended the Regulatory I training course. Only regulators can be assigned priority 1. Other Corps employees required to support regulators, as well as people in other agencies having regulatory responsibilities, could benefit from this course.

TARGET AUDIENCE. Supervisors, project managers, enforcement officers, journeyman level regulators with a minimum of 2 years experience in grade level GS-07 and above.

REGULATORY IIB

REGULATORY IIC

323 Length: 32 Hours 35IIB01A

370 Length: 32 Hours 35IIC01A

Tuition: \$ 995

Purpose.

This course provides in-depth discussion of the more complex decisions that must be made throughout a permit evaluation, leading to a reasonable and timely final permit decision.

Description.

The course covers excavation rule, jurisdictional determination, exemptions, solid waste, general permits, wetlands management, purpose, need, alternatives analysis, 404(b)(1) guidelines, public interest review, documentation appeals and mitigation

Prerequisites.

Nominees must have attended the Regulatory I training course. Only regulators can be assigned priority 1. Other Corps employees required to support regulators, as well as people in other agencies having regulatory responsibilities, could benefit from this course.

TARGET AUDIENCE. Supervisors, project managers, enforcement officers, journeyman level regulators with a minimum of 2 years experience in grade level GS-07 and above.

Tuition: \$ 995

Purpose.

This course provides in-depth discussion specific to permit evaluations associated with project proposals in coastal areas. It is designed to be complimentary to the Regulatory IIA and B curricula, not to replace them, providing regulators with the specific background necessary to effectively and efficiently evaluate projects proposing to impact coastal aquatic resources. Previously, this information was included in Regulatory IIA and IIB; however, as the Regulatory program increases in complexity, it is necessary to devote additional time to issues specifically related to the Coastal zone, including the Great Lakes.

Description.

The course will provide a comprehensive background related to coastal issues, focusing on coastal processes and activities, jurisdiction, essential fish habitat, coastal species/habitat protection and conservation, coordination with other Corps business lines, and cultural/tribal resources..

Prerequisites.

Nominees must have completed Reg I, and should have completed Reg IIA and Reg IIB. Target audience: Supervisors, Project Managers and seasoned regulators with a minimum of 3 years of experience.

REGULATORY III

325 Length: 32 Hours 35GR301A
CEUs: 2.9 PDHs: 29

Tuition: \$ 995

Purpose.

This course prepares Regulatory Project Managers and Counsel for their role in enforcing the regulatory authorities provided by the Clean Water Act, Rivers and Harbors Act and the Marine Protection Research and Sanctuaries Act. It is also designed to prepare Regulatory Program Managers for assigning and managing enforcement actions. This includes both unauthorized and compliance actions. This course can also serve as an introduction to other federal agencies to the Corps Regulatory Program.

Description.

This course covers statutory authorities, violations, enforcement and compliance, conducting investigations, collecting evidence, civil litigation, developing enforceable conditions and mitigation plans, criminal enforcement, civil and administrative penalties, as well as administrative resolution strategies and interagency cooperation. This course uses real world cases and exercises to translate regulatory laws, regulations and policies into practice. It prepares Counsel and Regulator alike for dealing with violators and U.S. Attorneys to ensure compliance with regulatory requirements and policies.

Prerequisites.

All Corps Regulatory Project Managers, Program Managers, and Counsel, in grade level GS-07 through GM/GS-15 whose duties require them to evaluate and manage regulatory program actions.

REGULATORY IV

140 Length: 36 Hours 35RG401A

Tuition: \$2260

Purpose.

Regulatory IV is an interagency course in wetland delineation based on the current Federal Wetland delineation manual. It provides the student with a basic understanding of the interaction of vegetation, soils, and hydrology in wetlands in sufficient detail to apply delineation methods on routine cases. Upon completion, successful graduates will possess the background necessary to identify wetlands and determine their boundaries for purposes of administering programs such as the Section 404 Regulatory Program. Successful completion is determined by attendance and participation in all lecture, field, and laboratory sessions.

Description.

Topics include (a) wetland characteristics (including soils, hydrology, and vegetation); (b) wetland delineation methods; and (c) field exercises in recognition of wetland boundaries.

Prerequisites.

Agency personnel of the Corps, EPA, NRCS and FWS who are involved in the delineation of wetlands will be assigned Priority 1. Other federal, state, local and tribal entities and their agency employees can benefit from the course on a priority 2 and 3 basis. Appropriate field clothes are required.

REGULATORY V

137 Length: 36 Hours 35RG501A

Tuition: \$2260

Purpose.

Regulatory V is an interagency course designed for employees of federal agencies involved in assessing wetland functions in the field. The objective of the course will is to ensure students are as proficient as possible in applying regional subclass models and in evaluating their results. The course will focus on the application of models under different scenarios such as project impact assessment, alternative analysis, and mitigation design/monitoring associated with implementation of regulatory programs such as the Clean Water Act and the Food Securities Act. Successful completion of the course is determined by attendance and participation in all lecture, field, and laboratory sessions.

Description.

Topics include overview of the Hydrogeomorphic Approach; developing Assessment Models and Regional Guidebooks; verifying, validating, and testing Assessment Models and Regional Guidebooks. After completing the course, students should be able to understand functional assessments, how to develop and use them, and their importance to the regulatory program.

Prerequisites.

Agency personnel of the Corps, EPA, NRCS, FWS, and FHWA who are involved in the evaluation of impacts associated with regulated or unauthorized activities in wetlands will be assigned Priority 1. Other Corps and outside agency employees can benefit from this course on a priority 2 or 3 basis. Appropriate field clothes are required.

REMOTE SENSING FUNDAMENTALS

196 Length: 36 Hours 35RSF01A

Purpose.

Instruction is designed to introduce the students to the concepts of applied remote sensing using satellite and airborne imagery. This course combines informative lectures with hands-on lab exercises that provide an understanding of remote sensing and image processing as they are used for USACE Civil Works applications. Topics include: remote sensing applications for navigation, flood damage detection, environmental missions, wetlands and waterways, regulation and permitting, real estate, recreation, survey and mapping, emergency response, and research and development.

Description.

This course provides a background of the principles of remote sensing; an overview of sensor types; processing of multispectral, hyperspectral, radar, LIDAR, and digital elevation data; obtaining image data via the USACE data acquisition protocol; spectral signatures and libraries, integrating imagery with GIS and GPS data; map projection and geo-rectification; and information extraction through image classification.

Prerequisites.

The course is intended for Civil Works personnel involved with survey and mapping, navigation, real estate, environmental, hydrology, regulation and permitting, and emergency response. Hands-on computer participation is required for this course. The course is intended for both professional and technical level classifications. It is open to selected occupational series: 0400, 0800, and 1300; and Grades: GS-07 through 12.

RESERVOIR SYSTEMS ANALYSIS WITH HEC-RESSIM

98 Length: 36 Hours 35RSA01A

Tuition: \$2330

Purpose.

This course provides participants with a capability to perform reservoir system studies using computer simulation to analyze reservoir system performance.

Description.

Reservoir simulation for flood control, water supply, hydropower and multipurpose operation is covered. The computer program, Reservoir System Simulation(HEC-ResSim) will be used for reservoir simulation problems. In addition to reservoir simulation by computer, the course covers topics related to developing flow data and systems demands, plus formulating and evaluating alternative reservoir system configurations and operation strategies.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 and 1300; (b) Grade: GS-07 or above. A basic level of understanding is required in hydrology, hydraulics, and reservoir regulation. In addition, it is strongly recommended that course participants be in positions where they will be involved in reservoir system studies within the next year or two.

RIPARIAN ZONE ECOLOGY/RESTORATION/MGT

281 Length: 36 Hours 33REM01A

Tuition: \$2290

Purpose.

This course addresses planning and management issues that pertain to riparian (streamside) ecosystems in a variety of ecological and geographical settings. Emphasis is placed on the ecology, restoration and stewardship of riparian habitats associated with Civil Works projects and activities. Students will receive instruction on the functions and ecological importance of riparian zones, conservation needs, potential impacts resulting from various land use practices, and restoration and management techniques that can be applied to maintain or improve riparian systems.

Description.

Through a series of lectures, practical exercises, and field activities, students will be introduced to the following topics: (a) riparian functions, values, and trends; (b) riparian ecology (vegetation, fauna; will include sessions on threatened and endangered species, and the importance of riparian zones to mammals (emphasis on bats), reptiles/amphibians, and neotropical migrant birds); (c) inventory and monitoring techniques; (d) impacts (hydrologic changes, vegetation modification, non-native invasive species, agricultural practices, bank erosion, non-point source pollution); (e) restoration methods (including monitoring and adaptive management); (f) fluvial geomorphology combined with a multitude of stream/riparian restoration case studies, and (g) management strategies (including development of appropriate designs for corridors and buffer strips). A day-long field trip will be taken to local rivers to examine riparian habitats and demonstrate inventory, restoration, and management techniques. Case studies will be presented on riparian issues at Civil Works projects and military installations. **SUBJECTS AND LEARNING OBJECTIVES.** Students will be able to characterize riparian habitats, understand the functions and values of these habitats, and make the most appropriate decisions regarding their restoration, use, conservation, and management from an ecosystem perspective. Students will be taught state-of-the-science techniques and procedures for collecting, analyzing, and displaying ecological data needed to understand and manage riparian systems. Applicable laws, regulations, and agency policies will be reviewed. Students will be able to identify specific techniques and procedures for inventorying, assessing, analyzing, and evaluating the status of riparian resources and associated impacts upon these resources.

Prerequisites.

Nominee assignments should be: (a) primarily technical personnel whose duties involve the identification, evaluation, analysis, protection or management of

ecological resources. Project and Program Managers responsible for project and program management activities, particularly those involving ecosystem restoration, would also benefit; (b) Occupational series: 0020's, 0150, 0185, 0190, 0198, 0400's, 0800's, 1023, 1350 to include physical scientists, environmental protection specialists, and hydrauligists; and (c) Grade: GS-09 or above. Disciplines (other than the above) may be accepted provided nominee's present or anticipated duties involve the management, analysis, identification, protection, or evaluation of ecological/natural resources.

RISK ANALYSIS FOR FLOOD RISK MANAGEMENT

209 Length: 36 Hours
CEUs: 2.6 PDHs: 26

33RBA01A

Tuition: \$2230

Purpose.

This course introduces Corps of Engineers field office staff to risk analysis for flood risk management planning. Participants will know the methodologies for determining uncertainty in discharge, stage, and damage and how to evaluate project size and performance accounting for the uncertainty in these parameters. Project function, safety, and workability are reviewed to increase awareness of how these issues affect the formulation of project features.

Description.

The course presents current policy and technical procedures for conducting risk analysis of typical flood risk management projects such as levees, channels, and reservoirs. Included are lectures and case studies describing procedures for determining uncertainty in discharge-frequency, stage-discharge, and stage-damage relationships for various project site characteristics. Procedures for conducting Monte Carlo simulations for evaluating project reliability and size are described using current software developed for the personal computer. Concepts and procedures are demonstrated and practiced in classroom workshops. Current Corps policy related to risk analysis is also discussed. Project function focuses on typical features associated with riverine flood reduction projects. Performance evaluation includes setting levee grade, closure and overtopping strategies, and local operation, maintenance, rehabilitation, replacement, and repair task evaluation. Requirements for levee certification are also presented. Examples and case studies illustrate potential problems and solutions.

Prerequisites.

Nominees for the course should have experience in the hydrologic, hydraulic, economic, or plan formulation aspects of flood damage reduction projects. Managerial and supervisory personnel are encouraged to attend. Nominees must be assigned (a) Occupational Series: Selected 0000-0100, 0800, and 1300; (b) Grade: GS-09 or above. Nominees should have a basic understanding of concepts, terms, and analysis as presented in Hydrologic Engineering in Planning (057).

RISK ANALYSIS-WRP&M

349 Length: 36 Hours 35RAW01A
CEUs: 3.1

Tuition: \$2025

Purpose.

This course introduces concepts and tools of risk analysis into Corps of Engineers planning studies and extends these concepts to studies for structural rehabilitation and for management and operations of existing projects. Risk analysis is a decision-making framework that explicitly evaluates the level of risk if no action is taken and recognizes the monetary and non-monetary costs and benefits of reducing risks when making decisions. Risk analysis also deals with uncertainties in models, parameters, and assumptions and acknowledges them in decision making. Risk analysis comprises three tasks: risk assessment, risk management, and risk communication. Many risk assessment techniques are already in use by Corps analysts, but are not applied in systematic and uniform manner. New methods and analytical models have been developed, along with a body of information on risk perception and communication that will also be transferred to practice.

Risk analysis is an integral component of Corps of Engineers decision making in all business lines. It affects all technical analysis throughout each step of planning process. For example, risk perception and communication is an important element of the scoping process. Environmental analysis, hydrologic analysis, and benefit-cost analysis all require aspects of risk analysis. In addition, risk concepts and risk informed decision making are being extended to aid decisions in all phases of project life. Major aspects of risk analysis included in this course are (a) definitions and concepts; (b) probability and statistics; (c) models for risk analysis; (d) non-quantitative methods; (e) event trees and decision trees; (f) Monte carol simulation; (g) using scenarios; (h) benefit-cost uncertainty; (i) risk informed planning; and (j) case studies from various applications to civil works. The course includes extensive use of computer exercises as aids to learning including hands-on risk modeling and assessment tools.

Description.

After completing this course the student should be able to: 1. Discuss the major causes of uncertainty in the Corps' Civil Works Program; 2. List the elements of integrated risk management; 3. Describe the differences between uncertainty and variability; 4. Use scenarios to deal with uncertainties; 5. Apply one or more qualitative risk assessment techniques; 6. List the Corps' software tools that support risk-informed planning; 7. Build a simple probabilistic scenario analysis in a spreadsheet environment; 8. Apply the addition, multiplication, and complimentary rules for probability in simple problems; 9. Use the binomial distribution for simple probability

calculations; 10. List the most useful distributions used in quantitative risk assessment; 11. Develop a distribution given some data; 12. Describe the two steps of the Monte Carlo process; 13. Run a simulation that uses the Monte Carlo process; 14. Conduct basic sensitivity and importance analysis; 15. Understand the issues of communicating technical and non-technical risk information to decision makers and stakeholders.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0020, 0340, 0110, 0801, 1300; (b) Grade: GS-07 through GS-13. This course is designed for planners and engineers. However, other personnel (project managers, operations, regulatory, recreation, etc.) will find it useful in terms of broadly applicable principles, concepts, and analytical tools.

RISK COMMUNICATION AND PUBLIC PARTICIPATION

104 Length: 24 Hours 53RCP01A

Tuition: \$1510

Purpose.

The course is designed to teach participants to better communicate risk, understand and engage various publics, and learn to use public participation skills.

Description.

This is an interactive workshop that teaches participants strategic communication, risk communication and public participation principles and strategies relevant to any issue. Participants learn how to identify missions, goals and objectives; identify and prioritize various publics; develop risk communication messages; determine the most effective methods and tools for conveying these messages; and evaluate the success of risk communication and/or public participation efforts. Participants of the course learn: how to handle hostile individuals and audiences and respond to challenging questions and statements; how to avoid traps; how to select the right public participation techniques; and how to improve and apply nonverbal communication skills.

Prerequisites.

Target Audience is USACE employees who interact with the public on a regular basis including members of Project Delivery Teams, Project Managers, Planners, Operations and Natural Resource Management, Dam and Levee Safety, Emergency Management, Environmental and Regulatory personnel, and Public Affairs personnel.

SAFETY MANAGEMENT FOR SUPV AND LDRS

236 Length: 24 Hours 55COS01A

Tuition: \$1035

Purpose.

This course is designed for Corps of Engineers team leaders, supervisors and/or managers who have responsibility for overseeing contract or in-house construction and operational activities. This 3-day course will provide managers and supervisors with current administrative safety requirements, safety management techniques, hazard assessment and accident reporting guidelines as well as a review of state-of-the-art safety technology and methodology as it relates to field work such as earth moving, roofing, mechanical installation, scaffolding and ladders, administrative safety requirements, etc. Through open discussions and group participation, this course will bring together OSHA, Corps of Engineers, and consensus safety standards that apply to typical Corps activities and heighten safety awareness of field managers and supervisors, guiding them in their responsibilities for leading and managing safety.

Description.

The basic references for this course are the Corps of Engineers' Safety and Health Requirements Manual, EM 385-1-1, and pertinent OSHA standards. This 3-day course will provide, through various formats, that information considered necessary and essential for project managers, area, resident, and project engineers, operations managers and/or supervisors and work team leaders in discharging their day-to-day safety and health responsibilities. This course also has direct application for other Corps of Engineers field personnel in related career fields, e.g., supervisory rangers, drill crew foremen, lockmasters, hired labor supervisors, survey crew leaders, etc. Some of the specific topics covered in this course will include: (a) overview of EM 385-1-1; (b) legal aspects of employee safety for supervisors; (c) administrative safety and health requirements; (d) review of contractor safety submittals; (e) OSHA and the Corps of Engineers; (f) preparation of Accident Prevention Plans; (g) medical surveillance plans; (h) workers compensation program/alternatives; (i) personnel protective equipment; (j) specific safety standards for field work; (k) accident investigation and reporting; (l) confined space requirements; (m) industrial hygiene programs; and (n) USACE accident reporting responsibilities.

Prerequisites.

Nominees must be assigned (a) at the operating level in Corps of Engineers construction and/or operational activities; (b) Grade GS-09 or above; and (c) current or projected assignment as manager, supervisor, foreman, team leader or equivalent.

NOTE: Formerly titled "Field Safety".

SCHEDULING BASICS FOR PROJECTS143 Length: 24 Hours 46SBP01A
CEUs: 1.8 PDHs: 18 PDU: 18

Tuition: \$ 850

Purpose.

The Corps of Engineers manages many projects in project management, engineering, and construction that require scheduling. The scheduling technique that this course covers is useful on any complicated project with varied aspects and resources required. The course was primarily developed to introduce the concept of network scheduling to project managers, and it is so oriented in its examples. While this class does not provide a hands-on application of specific scheduling software, the course provides an introduction and understanding of basic network scheduling and manual and computer analysis in both original schedules and progress updates using typical P2 screens and information.

Description.

After completing the course, the student should be able (1) to prepare, review, analyze, and update network analysis systems, and (2) to make practical use of the information derived from the system. Through lectures and workshop sessions, the course covers schedule development and basic diagramming techniques; analysis of diagram for starting and finishing times; utilization of a network diagram for project control, determination of progress; effects of project delays; and changes in scope.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0340, 0800, 0905, and 1100; (b) Grade: GS-09 or above. Students should have a current or projected assignment requiring knowledge of network analysis as a management technique. Prior knowledge of a network system or P2 is not required. This course is intended to meet the project scheduling requirement for Corps of Engineers PM certification at all levels (formerly covered by the Project Scheduling (NAS) course). This course is highly desirable for Project Managers and local configuration managers (LCM). Others that will benefit are Corps division and district engineers; division, branch, and section heads of project management, construction, operations, and engineering divisions; area engineers; resident engineers; office engineers; other quality assurance representatives; project and/or technical managers; and trial attorneys.

SEDIMENT TRANSPORT ANALYSIS WITH HEC-RAS

122 Length: 36 Hours 35SDT01A

Tuition: \$2840

Purpose.

This course introduces students to principles, software, and techniques used in numerical sediment transport modeling.

Description.

The course prepares engineers to perform moveable boundary sediment transport studies using the HEC-RAS. Topics include sediment characteristics, data requirements, transport equations, bed mixing algorithms, software features, calibration and model troubleshooting. Sediment transport modeling of reservoir filling, dam removal, channel aggradation, dredging, and restoration studies will be covered through instructor demonstrations and student workshops.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 and 1300; (b) Grade: GS-09 or above. The student should have a working knowledge of open channel hydraulics, particularly step-backwater calculations. Familiarity with HEC-RAS input structure and format is also required. In addition, course participants must be in positions or anticipate being in positions where they will be involved in sediment studies within the next year or two. Students should have at least one (1) college level class in open channel hydraulics. A college level class in Sediment Transport is desirable.

SEEPAGE AND PIPING ANALYSIS

250 Length: 36 Hours 35SEP01A

Tuition: \$1845

Purpose.

This course trains Corps of Engineers designers and field engineers for seepage analysis, control, field problems in dams, levees, retaining walls, and slopes. This course is for both novice and experienced engineers. The course uses criteria in EM 1110-2-1901 and TM 5-818-5, supplemented by field experience.

Description.

The course will cover the principles of seepage through soils, related problems with erosion and piping, and methods for preventing and mitigating these problems. Specific topics will include Darcy's law, permeability of soils, flow nets free surface problems, erosion and piping, filter criteria and remedial measures, and use of computer programs for design and analysis.

Prerequisites.

Nominees must be assigned: (a) Occupational Series: Selected 0800; (b) Grade: GS-07 or above; and (c) Others: Employed as soils engineer, geologist, construction engineers, or operation and maintenance engineers.

SEISMIC DESIGN BUILDINGS

27 Length: 36 Hours 35SDB01A

Tuition: \$3000

Purpose.

This course trains structural engineers who are not thoroughly familiar with seismic design. Seismic design technology and design procedures have advanced dramatically in recent years. The 2006 IBC and the 2005 ASCE 7 are expected to be the basis for the Corps seismic structural design by 2008. The Corps seismic manuals have been rewritten to reflect these criteria. Unless our designers are familiar with the new criteria, they could be designing buildings that do not meet the new codes and standards. The Corps designs Army buildings that must meet the latest codes. The most recent version of UFC 3-310-04, "Seismic Design for Buildings", is the current design guidance and is based on the 2005 ASCE 7.

Description.

Through lectures and testing, this course presents (a) introduction of seismic design; (b) seismic design criteria; (c) seismic design procedures; (d) structural elements of (including illustrative examples): (1) diaphragms, (2) walls, (3) frames, (4) masonry, (5) mechanical, electrical, and architectural elements, (6) utility systems. Students will be able to design/review seismic design analyses and drawings more efficiently upon completing this course. The manuals to be used are UFC 3-310-4, "Seismic Design for Buildings", and UFC 3-330-03A, "Seismic Review Procedures for Existing Military Buildings," and Corps Specifications addressing certain aspects of seismic issues and national codes and guidance referenced in the Corps documents.

Prerequisites.

Nominees must be assigned and/or have all of the following: (a) Occupational Series: 0810 and 0830. Waivers must be submitted for other occupational series; (b) Grade: GS-07 or above or equivalent. Course is open to Air Force and Navy personnel.

SEISMIC STABILITY OF EARTHEN DAMS

247 Length: 36 Hours 35SSE01A

Tuition: \$2690

Purpose.

This course provides Corps of Engineers personnel with the knowledge, skills, and abilities needed for assessing the seismic safety of the Corps dams and other earth structures with state-of-the-art analytical tools and procedures.

Description.

Through a series of lectures, case studies, and laboratory demonstrations, students will introduced to the following topics: (a) earthquake ground motions; (b) site characterization; (c) site response analysis; (d) liquefaction evaluation; (e) slope stability and deformation; and (f) remediation alternatives.

Prerequisites.

Nominees must be assigned: (a) Occupational series: 0810 and 1350; and (b) Grade GS-09 and above.

SOIL STRUC INTERACTION

113 Length: 36 Hours 35SSI01A

Tuition: \$3450

Purpose.

This course trains Corps of Engineers civil engineers to use soil structure interaction analyses for strip footings, mat foundations, single piles, sheet pile walls, and reinforced concrete structures.

Description.

The course covers the fundamentals of soil-structure interaction (SSI) analyses and their application to Corps-type problems. Finite difference and finite element computer programs available for the soil-structure interaction analysis are explained. Both 1-D and 2-D problems are covered. Examples of Corps-type problems are solved using SSI techniques. Workshop sessions provide the participants an opportunity to use computer programs that utilize SSI techniques. The new PC based SSI computer program will be demonstrated. After completing this course students will be able to complete difficult designs using computer solutions to soil structure displacement problems.

Prerequisites.

Nominee must be assigned (a) Occupational Series: Selected 0800; (b) Grade: GS-07 or above or equivalent. Nominees should be engineers involved in the design of structures and should have some experience in the use of personal computers.

SPECS FOR CONSTRUCTION CONTRACTS185 Length: 32 Hours 35SWC01A
LUs: 34

Tuition: \$1410

Purpose.

This course provides instruction for preparing effective specifications for construction projects. The course is designed for engineers, architects, and technicians involved in the preparation of project specifications. The course covers principles of specification writing, procedures and techniques for writing specifications, and relationships of specifications to other elements of the contract documents. This course is strongly recommended for all design and supervisory personnel involved in development of project specifications.

Description.

Major subject matter topics include (a) language of specifications/written communication; (b) organization and format of specifications; (c) sources of technical information; (d) procedures, techniques, and methods of specification development; (e) guide specifications and project developed specifications; (f) contract clauses and contract interpretation; (g) relationship of contract drawings to specifications; (h) automated specification methods; and (i) regulatory and ethical considerations.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0800; (b) Grade: GS-09 through GS-13. Students should have current or projected assignments related to project specifications.

STATISTICAL METHODS IN HYDROLOGY

58 Length: 36 Hours 35SMH01A

Tuition: \$2150

Purpose.

This course is designed for participants to become knowledgeable in the application of statistical methods useful in the analysis of flood damage reduction, environmental, and water supply systems. Methods include advanced theory of frequency analysis, distribution fitting and testing, univariate and multivariate regression analysis, and regional analysis.

Description.

Topics covered include (a) distribution fitting and testing; (b) mixed population frequency analysis; (c) regulated flood frequency analysis; (d) regional frequency analysis; (e) application of univariate and multivariate regression methods for regional analysis; and (f) time-series analysis.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800, 1300, and 1500; (b) Grade: GS-09 or above. Students must have had a college-level statistics course to fully succeed.

STEADY FLOW WITH HEC-RAS

114 Length: 36 Hours 35BH201A

Purpose.

The objective of the course is to enable the participants to perform water surface profile computations, for steady flow hydraulic analyses, using computer program HEC-RAS in a sound and effective manner.

Description.

This course teaches the concepts of open channel flow concepts, hydraulic model data requirements, HEC-RAS input requirements, laying out cross sections for 1D hydraulic modeling, application of bridge and culvert routines, calibration of a steady flow hydraulics model, floodway determination, an overview of Optional capabilities, and output analysis. The HEC-RAS software will be included in lectures and workshops. Participants have an opportunity to prepare input and analyze output during workshops.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 and 1300; (b) Grade: GS-05 or above. Nominees must be engineers who perform professional work in the fields of hydraulics and hydrology. Nominees should have one or more years of experience in these areas. Students should have had at least one (1) college level class in open channel Hydraulics. It is required that course participants be in positions or anticipate being in positions in the next year or two where they will be involved in water surface profile calculations.

STREAMBANK EROSION AND PROTECTION

285 Length: 36 Hours 35SBP01A
CEUs: 3.3 PDHs: 33

Tuition: \$1720

Purpose.

This course is designed to enable personnel with the responsibility for streambank erosion and protection to organize, prepare for, and conduct a field analysis of a streambank erosion problem. This course provides project managers, planners, technicians, engineers, biologists, designers, regulators, and personnel involved in Section 14, 1135, and 206 projects, with the latest practical knowledge and design criteria for streambank protection and associated erosion control methods.

Description.

The Streambank Erosion and Protection course provide participants with practical applications for remedying streambank erosion problems. Students are provided a series of lectures to review the fluvial geomorphological processes that causes Streambank erosion and failure, stream bed grade control design considerations and structures, geotechnical considerations and design, environmental considerations in stream protection works, and erosion control in high velocity channels. Students develop streambank protection conceptual designs that can include Bendway Weirs, Angle Slams, riprap blankets, Boil-Up pools, trench fill and windrow revetments, dikes, retards, proprietary methods, LUNKERS, Live Siltation, Longitudinal Peaked Stone Toe, encapsulated earth, Living Dikes, Rock Vanes, and biotechnical methods. Students conduct field exercises to develop techniques to analyze and select appropriate protection methods and to calculate construction, monitoring, maintenance, and repair of streambank protection projects costs. In conducting field exercises, students are taught how to plan for a stream reconnaissance, gather gage data and perform aerial photographic analyses, determine personal protection equipment and safety requirements, and how to gather and measure stream data.

In this course, student teams are required to analyze, prepare, and present a streambank erosion problem, develop several alternative bank protection treatments, choose the most effective (or combination) treatment while taking into consideration the expected engineering performance, environmental ramifications, and cost effectiveness of the project.

Student interactions with the instructor, each other, practical exercises, and site visits are the most critical elements of this course.

Prerequisites.

PREREQUISITES: Federal nominees must be assigned (a) Occupational Series: Selected 0000-0100, 0400, 0800, 1300, and (b) Grade GS-05 or above.

SPECIAL INSTRUCTIONS: An important part of the class is a half-day field trip to investigate a local stream. Students will be required to climb streambanks and wade approximately one mile of stream over a period of 3 to 4 hours. ERDC-WES will provide needed field equipment. Students should bring appropriate field clothes, a windbreaker, and rain gear.

Strength and Stability of Constructed Slopes

262 Length: 36 Hours 35SCS01A

Tuition: \$2090

Purpose.

This course is intended for engineers who want an introduction to the subject of Strength and Stability of Constructed Slopes, as well as for those who would like to review the subject for better understanding. It is not intended for individuals who have never had a basic course in soil mechanics. For many individuals the relevance of the material they studied in college often does not meet the practical applications to the problems encountered in designing and constructing stable slopes. This course summarizes the subject matter into the essential elements of shear strengths required in stability analysis of embankment dams, levees, and slopes in open cuts or natural ground. Students completing this course will be better able to select appropriate shear strength designs in various cases for which stability analyses need to be performed. This course complements and enhances the training in dam safety.

Description.

This course provides instruction in the stress-strain relationship of soils as they are affected by soil composition (basic soil material), state (initial), structure, and Loading condition. The following topics are addressed: (a) Shear strengths, concepts, failure envelopes, and failure criteria; (b) Shear strengths of cohesionless soils; (c) Shear strengths of cohesive soils; (d) slope stability theories and analysis procedures; (e) design conditions and design criteria; (f) computational methods, including slope stability charts, (g) special analysis procedures for sudden drawdown; and (h) methods and cases of Corps slope stability analysis.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800; and (b) Grade: GS-07 or above.

SURVEY I: BASIC PRINCIPLES

295 Length: 36 Hours 35SV101A
CEUs: 3.0 PDHs: 30

Tuition: \$1890

Purpose.

This course provides surveyors, planners, designers, and CADD/GIS developers with a fundamental knowledge of basic conventional field surveying procedures and with the computational techniques needed to support civil works, military construction, and environmental restoration projects. It also supports USACE hydrographic, topographic, and real estate surveying activities. This course covers all basic surveying procedures typically required to support Corps design, construction, operations, and maintenance activities and supplements surveying knowledge required for A-E quality assurance. (Survey II: Construction, Course No. 339, is intended to be a follow-on to this course.)

Description.

Specific topics covered in the course include surveying mathematical concepts; the rectangular coordinate system; angle and distance measurement; traverse surveys in support of engineering design and field construction stake out; traverse computations and balancing methods; field taping; trigonometric and differential leveling field procedures and note reduction; state plane coordinate systems; topographic surveying techniques; map accuracies; electronic total stations; land boundary surveys; and error analysis.

Prerequisites.

Nominees should be assigned (a) selected positions in occupational series 1300 (Surveyors), 0800 (Engineers), 1100 (A-E Contract Administrators), 0400 (park rangers), and planners, designers, construction inspectors, and CADD/GIS developers involved with civil works, construction, and environmental restoration projects who require a basic understanding of survey procedures and computational techniques. Waivers will be considered. (b) Grade: GS-03 or above; (c) A general working knowledge of high-school-level algebra and trigonometry. and (d) A general working knowledge of scientific calculators for computing trigonometric functions and for converting degree-minute-second angular measurements to decimal equivalents.

SURVEY III: MAPPING

296 Length: 36 Hours 35SV301A
CEUs: 2.9 PDHs: 29

Tuition: \$2740

Purpose.

This course provides engineers, cartographers, surveyors, planners, project managers and engineering technicians with an overview of the latest techniques used in acquiring and processing topographic elevation data. This data is used for planning, designing and construction of civil works and military and environmental projects. Emphasis is placed on collection techniques used to develop geospatial data bases such as topographic field surveying, LIDAR ground-based laser mapping, and photogrammetric mapping collection techniques (from field to finish). The course provides demonstrations of equipment and software used to collect and process topographic data sets collected from field surveys. Students apply PC-based software to format and transfer spatial data to CADD systems. Basic photogrammetric mapping principles are reviewed and discussed. Also discussed are A-E contracting for surveying, mapping, and photogrammetric services--this includes related cost estimating, contract administration, and quality control/quality assurance. The course provides several demonstrations as well as significant hands-on experience in the computer laboratory.

Description.

Specific topics include:

- o GEODESY AND MAP COORDINATE SYSTEMS AND PROJECTIONS:
 - Horizontal and vertical datums.
 - State plane and UTM coordinate systems.
 - Datum translation/transformation techniques.
- o TOPOGRAPHIC MAPPING (FIELD SURVEY DATA COLLECTION TECHNIQUES)
 - Electronic total stations, GPS, and other data collection tools.
 - Field survey procedures for developing topographic data.
 - Estimating costs and preparing specifications for field surveys.
- o PROCESSING FIELD SURVEY DATA
 - Transferring and processing field observations.
 - Data translation and interface to CADD systems.
- o PHOTOGRAMMETRIC MAPPING:
 - Basic principles and techniques.
 - Project planning for photogrammetric data collection.
 - Design of typical COE photogrammetric mapping projects.
 - Cost estimating.
 - Other spatial data collection systems including LIDAR.

- Discussion of basic LIDAR principles.
- Presentation of sample LIDAR data collection projects.

o A-E CONTRACTING FOR SURVEYING AND MAPPING

- Types of procurement contracts.
- COE procedures used to develop, administer and utilize A-E contracts.

Prerequisites.

Nominees must be assigned Occupational Series: 0800, 1100, 1300. This course involves hands-on application of PC-based software using standard software computational/translation packages. Therefore, nominees must have a general knowledge of PC operation.

SURVEY IV : GPS

203 Length: 36 Hours 35GPS01A
 CEUs: 2.9 PDHs: 29

Tuition: \$2680

Purpose.

This course provides training for surveyors, technicians, and engineers in the practical aspects of GPS surveying. The course is designed to provide a technical familiarization with EM 1110-1-1003, "NAVSTAR Global Positioning System Surveying."

Description.

This course addresses the planning, data acquisition, data processing, and data analysis components of GPS surveying.

- o GPS CONCEPTS
- o GPS PLANNING
- o GPS DATA ACQUISITION
- o GPS DATA PROCESSING AND ADJUSTMENTS
- o GPS CONTRACTING
- o VERTICAL POSITIONING USING GPS

Prerequisites.

Nominees should: (a) be selected occupational series 0800 (Engineers), 1300 (Surveyors and Technicians); (b) have hands-on computer experience.

Sustainable Military Building Design and Construct

244 Length: 36 Hours 41SAL01A
 CEUs: 3.2 PDHs: 32
 CEHs: 36.0

Tuition: \$1350

Purpose.

This course provides practical, hands-on training in this rapidly emerging and dynamic body of requirements that applies to all military construction. Trainees will gain understanding of these requirements and become familiar with the Leadership in Engineering and Environmental Design - New Construction (LEED-NC) project rating tool. This course will help develop a skill set of procedures trainees can employ to successfully implement sustainable design and LEED in projects from master planning and initial project planning through construction closeout and beyond.

Description.

This course covers the following topics:
 Federal mandates and Army, Air Force and USACE Sustainable Design and Development (SDD) criteria.
 Low Impact Development (LID).
 In-depth training on the LEED rating tool.
 Incorporating SDD in planning charettes, project programming documents, contract documents and construction activities.
 Life-cycle cost analysis (LCCA), energy analysis and strategies, sustainable technologies, waste diversion and master planning.
 ASHRAE Standard 189.1, OCONUS rating systems, the fundamentals of sustainability charettes.

Prerequisites.

Attendees should be assigned as USACE master planners, engineers, cost engineers, military project managers, or construction administration staff. It is also applicable to Army and Air Force Installation master planners, environmental managers, energy managers, transportation managers and engineering staff. Nominees should have basic familiarity with USACE military design and construction process.

Sustainable Military Renovations Operations and Maintenance

287 Length: 36 Hours 41SMR01A

Tuition: \$2665

Purpose.

This course provides practical, hands-on training to develop tailored solutions to maximize efficiencies in energy, water and waste, as applied to military renovations, building operations (by DPW and the garrison), and the continued maintenance of facilities. Trainees will learn about modeling technologies to assist in measurement and verification, behavioral adaptations, solutions for plug load reductions, innovative contracting types, as well as what criteria, policy, and regulations require the implementation of these tools in our existing facilities.

Description.

This course covers the following topics:

Dashboards, Renewable Energy, Energy Modeling for ROM, Behavioral Modification, Funding, Operations, Maintenance, Retrofitting, Cogeneration, LEED for Existing Buildings, Green Globes, Metering, Micro Grids.

Prerequisites.

Attendees should be Intern through GS-15, assigned as Architects, Project Engineers, Resident Engineers, Area Engineers, Energy Managers, Project Managers, Office Engineers, Master Planners, Researchers, Cost Engineers, Quality Assurance Representatives, Geotechnical Engineers. Attendees should be LEED Green Associates or have an understanding of the LEED system and the Sustainment, Renovations, and Maintenance process.

TRIAL ATTORNEY

179 Length: 36 Hours 37TLA01A

Tuition: \$1750

Purpose.

This course prepares and updates Corps trial attorneys on trial advocacy skills and practice before Boards of Contract Appeals.

Description.

The course is conducted utilizing representatives from the Chief Trial Attorney's office, the Armed Services Board of Contract Appeals, and experienced CE trial attorneys. Topics include preparing motions and pleadings, discovery, ethics, witness preparation, dispute resolution options, case management, conduct at trial, examining witnesses, briefing, and appeals. Also included are workshops on pre-hearing procedures, evidence, depositions, and trial.

After completing the course, a student will be competent to represent the government as respondent's counsel in a Type I or II contract appeal.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0905; (b) Grade: GS-11 or above.

UNSTEADY FLOW USING HEC-RAS

188 Length: 36 Hours 35UFA01A
CEUs: 3.2

Purpose.

This course focuses on the use of the computer program HEC-RAS for the analysis of one-dimensional gradually varied unsteady open channel flow. The role and application of this model in Corps' flood studies is presented in lectures, workshops and examples.

Description.

Primary coverage is on one-dimensional open channel hydraulics. This covers the theory, applicability, limitations, and data requirements of the HEC-RAS unsteady flow program. Additional topics include: modeling bridges and culverts, inline and lateral hydraulic structures, storage areas, model calibration, model stability and accuracy, trouble shooting, and advanced features for Unsteady Flow Modeling (flow (mixed flow regime, pump stations, dam and levee breaching). Case studies and computer workshops are used to illustrate model usage.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0810 and 1300; (b) Grade: GS-07 or above. Nominees must have a good background in open channel hydraulics and familiarity with HEC-RAS. Basic HEC-RAS input and output data requirements will not be covered in this class. It will be assumed that you already know how to use the software for performing a steady flow analysis. Familiarity with the partial differential equations of fluid motion and numerical solution techniques is desirable. Participants should be in positions requiring analysis of complex hydraulic problems. Students should have at least one (1) college level class in open channel hydraulics.

USACE 30 HR CONSTRUCTION SAFETY

215 Length: 36 Hours 58COS01A

Tuition: \$ 870

Purpose.

This course is designed to provide the USACE equivalent of the OSHA 30-hour Construction Safety Certification for field personnel that have construction safety and health responsibilities. Course provides information relative to the Corps Safety and Health Requirements Manual, EM 385-1-1 and pertinent Occupational Safety and Health Administration (OSHA) construction standards.

Description.

This course will cover through lectures, discussions, practical exercises, and case studies, the major aspects of the Corps of Engineers construction safety and health program. Using extensive construction safety backgrounds, instructor staff will discuss and examine prudent application of EM 385-1-1 to construction field settings and problem areas. Safety topics covered during these sessions will include the following: (a) construction safety mgmt; (b) trenching and excavation; (c) rigging and mechanized equip; (d) fall protection; (e) scaffolding and access; (f) occupational health reqmnts; (g) confined space entry; (h) hand and power tools; (i) temporary electrical service; (j) control of hazardous energy; (k) activity hazard analyses; (l) contractor safety submittals; (m) welding and cutting; (n) QA/QC - safety relationship; (o) contractual safety reqmnts; and (p) Corps/OSHA relationships. Participants will gain an overall understanding of the various elements that comprise a successful construction safety program and be provided current state-of-art safety technology and methodology as it relates to the Corps of Engineers. Upon successful completion, students will receive a USACE 30-hour construction safety certification.

Prerequisites.

Attendance is open to all Department of Defense and other Federal agency employees who have a need for construction safety and health information or responsibility for enforcing contractual safety requirements. It is recommended that field construction personnel repeat attendance to this course on a three-five year cycle.

NOTE: Formerly titled "Construction Safety".

**USACE 30-HR OPERATIONAL AND MAINTENANCE
SAFETY**

63 Length: 36 Hours 58INS01A

Tuition: \$1660

Purpose.

This course is designed to provide hazard recognition for field personnel who perform USACE facility operation or maintenance or oversee contractors doing such work. The course provides information relative to the Corps Safety and Health Requirements Manual, EM 385-1-1 and pertinent Occupational Safety and Health Administration (OSHA) general industry standards.

Description.

The course will cover through lectures, discussions, practical exercises and case studies, the major aspects of the Corps of Engineers operations and maintenance safety and health program following the OSHA 30-hour general industry safety certification course template. Instruction and assignments will cover the areas listed below and enable the students to identify safety hazards and areas of noncompliance with Corps of Engineers and Occupational Safety and Health Administration (OSHA) requirements. Specific areas covered include (a) overview of OSHA (current OSHA requirements) and Corps of Engineers safety and health requirements; (b) scaffolding and access; (c) control of hazardous energy/arc flash prevention; (d) temporary electrical service; (e) heavy equipment; (f) personal protective equipment; (g) fire prevention; (h) confined spaces and entry; (i) motor vehicles; (j) safety submittals; (k) accident reporting and recording; and (l) accident prevention plans and hazard analyses.

Prerequisites.

Students should be from any occupation involved in performing, overseeing, or managing operation and/ or maintenance work at facilities, including maintenance units, shops, powerhouses, locks and dams, and other industrial activities.

NOTE: Formerly titled "OSHA Inspection".

**USACE GENERAL OFFICER/SENIOR EXECUTIVE
SERVICE**

415 Length: 20 Hours 15GOS01A

Purpose.

This course provides an orientation for newly assigned USACE Division Commanders and SES members and is taught by incumbent Division Commanders and USACE Senior Leaders.

Description.

Through interactive lectures and panel discussions, briefers will address the principles of Governance within USACE and at the DA level, critical organizational business processes, and key congressional and customer relationships.

Prerequisites.

Designated and recently assigned USACE General Officers (Division Commanders) and Senior Executive Service members. Participants are nominated by the USACE Director, Human Resources.

VALUE ENGINEERING

110 Length: 40 Hours 35VEW01A
 CEUs: 3.2 PDHs: 32 LUs: 32

Tuition: \$2180

Purpose.

This course provides the participant with the requirements, policies, and procedures necessary to enable the student to perform effectively as a value management/engineering study team member or leader; to recognize potential areas for VM/VE studies; to identify the value of utilizing Value Management/Value Engineering; and learn how to use VM/VE to Corps advantage, regardless of profession.

Description.

Through lectures, conferences, and workshop sessions, this course provides the history of value management/value engineering, its development in the Corps of Engineers, the need for value management/value engineering in Corps, the methodology employed, the VM/VE program, and program contractor participation. Nominees participate in class exercises and discussions. Approximately half of the course is devoted to workshops in which all participants are involved in actual value engineering studies of construction/other items selected by the offices involved. This course is designed primarily for training project managers, and construction/design engineers/technicians in the principles and application of value engineering; however, all levels of management benefit by participating in this course.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0340, 0800, 1300, and 1008 (b) Grade: GS-05 or above or equivalent NSPS; (c) managers with authority and responsibility for decision-making having a cost impact on Corps of Engineers projects. The course is also open to individuals who have a current or projected (within 1 year) assignment requiring knowledge of value engineering methodology. The nominee must not have attended this course in the past 5 years. Nominees must be approved by the local Value Engineering Officer of the nominating division or district.

VISITOR ASSISTANCE MANAGEMENT & POLICY

324 Length: 20 Hours 35VAU01A
 CEUs: 1.8

Tuition: \$ 950

Purpose.

This course provides an overview of the Corps of Engineers Visitor Assistance Program to promote consistency in Visitor Assistance policy application and explore alternative management techniques and practical applications.

Description.

Topics covered in this course include the policy status and direction of the Visitor Assistance Program, Title 18, Title 36, Security/Law Enforcement issues, communications, and legal liabilities.

Prerequisites.

Employees who have attended the Visitor Assistance Update or Management & Policy course within the past 5 years should not schedule this course. Attendees should be managers and supervisors at project, district, or division level who plan and manage the Visitor Assistance Program. Park Rangers/NRM Specialist, GS-9, may also attend, but they will be given a lower priority. Corps Security Specialists (GS-0080), Corps military personnel serving in a security capacity and Operational Project Managers may attend the course to gain a better understanding of the Corps Visitor Assistance Program.

VISITOR ASSISTANCE NRM

147 Length: 36 Hours 35VAN01A
CEUs: 3.6

Tuition: \$1630

Purpose.

This course, in combination with other required training, satisfies the minimum requirements for Authorization of Citation Authority and is designed to develop an understanding of the formulation, purpose, and limitations of the Corps of Engineers Visitor Assistance Program and to prepare trainees to handle the special responsibilities required in performing their official duties. This training is supplemented by detailed Division/District instruction of citation authority implementation procedures. In order to obtain citation authority, the graduate must complete the required Basic Visitor Assistance Training Curriculum (ER/EP 1130-2-550, Chapter 6). Course provides basic Pepper Spray training to eligible employees. Citation authority will only be granted to qualifying individuals as stipulated in the prerequisites paragraph.

Description.

Topics covered in this course include: organization policy and mission, Title 36 and program development, Title 18, authority and jurisdiction, magistrate court, torts claims, ranger responsibilities and image, legal constraints, enforcement procedures, security, situational analysis, tactical communication, Pepper Spray training, and personal protection techniques.

Prerequisites.

Nominees MUST be assigned (a) Occupational Series: GS-0023, 0025, or special GS-400 series such as biologist, forester, etc.; (b) Grade: GS-04 or above, seasonal and temporary employees included (employees of lower grade who are or will be performing similar duties may attend at the discretion of their manager/training coordinator). Nominees must be currently serving or have an anticipated assignment as a Corps Park Ranger or be in a directly related job such as a forester, a wildlife and fisheries manager, biologist, or natural resources specialist. Trainees should have less than 4 years experience in the Visitor Assistance Program, as per ER 1130-2-550. Nominees must be approved by the Natural Resources Functional Manager at the Division level and approval granted to attend by the PROSPECT Visitor Assistance Lead Instructor. Individuals receiving citation authority to enforce CFR Title 36 must be employed under the USACE Natural Resources Management Program and must have principle duties include visitor assistance, recreation and natural resource management. The individual must need citation authority to perform official duties in the most efficient manner and must be certified by the District Commander as per ER 1130-2-550, Chapter 6. Individual must have the proper aptitude, temperament, personality, experience, and ability to exercise citation

authority properly as determined by management. Employees who have previously received this training shall be nominated for the Visitor Assistance Management and Policy course (No. 324).

WATER AND THE WATERSHED

164 Length: 36 Hours 33WAW01A
CEUs: 2.7

Tuition: \$2425

Purpose.

This course provides participants with an understanding of the physical nature and role of water in the watershed, the history of Corps watershed policy and regulation, and the conceptual, technical, and institutional tools available for watershed planning and management.

Description.

This course aims to impart a broad understanding of the science, institutional policies, and available tools for watershed management and planning. The course covers the occurrence, movement, storage, and control of water (surface and ground water hydrology); the natural development of the landscape (geomorphology); the concept of the watershed as a bioregion and ecosystem; the development of the water resources for multiple purposes; the restoration of natural features in wetlands and Corps' restoration projects; and the social, cultural and institutional elements of watershed management. Historical and current regulations and policies affecting the Corps' approach to watershed planning and management are covered. Conceptual tools discussed include adaptive management and collaborative management with other stakeholders to resolve water conflicts. Technical tools include methods and models available to simulate hydrologic and ecological features and for study management. The course will discuss the many active local organizations and federal agencies with a stake in the water of the watershed and the role of the Corps in watershed initiatives and partnerships.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 800 and 400 series, 028, 819, 184, 101, 401, and 1301, (b) Grade GS-09 and above. Nominees should be water control managers, hydrologists, hydraulic or environmental engineers, biologists, economists, sociologists, ecologists, planners, or study managers.

WATER QUALITY MODELING WITH HEC-RAS

139 Length: 24 Hours 33WQH01A

Tuition: \$1640

Purpose.

Provide students with a comprehensive overview of techniques of approximating the movement of pollutants in rivers and streams using HEC-RAS.

Description.

This course is intended to prepare engineers to perform water temperature and water quality studies with HEC-RAS. Topics to be discussed include: surface runoff; hydrologic transport; conservative tracers with steady and unsteady flow hydraulic computations; water temperature modeling and the effects of riparian shading; dissolved oxygen and biochemical oxygen demand; and nutrient cycle modeling.

Prerequisites.

Nominees must be assigned (a) Occupational Series: Selected 0800 and 1300; (b) Grade: GS-09 or above. The student should have a working knowledge of open channel hydraulics and familiarity with HEC-RAS.

WATER RESOURCE ANALYSIS USING HEC-WAT

43 Length: 36 Hours 33WRH01A

Purpose.

This course introduces members of any project delivery team (PDT) to the Corps' new planning and collaboration software called the Watershed Analysis Tool or HEC-WAT. Students will not only learn the benefits and capabilities of the WAT, they will also learn how to use the WAT through a series of presentations and practical hands-on workshops.

The WAT helps engineers, economists, planners and environmental and consequence specialists work together to perform a study. It does so by streamlining and managing the implementation, editing, analysis and reporting of the software commonly used by the multi-disciplinary teams conducting these water resource studies. HEC-WAT has become an important tool for integrating the hydrologic, hydraulic, reservoir simulation and flow consequence evaluation in the Corps H&H communities. Also covered in this course will be the flood risk analysis (FRA) compute option of the HEC-WAT software. The compute option allows water resource studies to be performed in a watershed, systems-based context within a risk analysis and life-cycle context.

Description.

The primary objectives of this course are: to understand the advantages of a watershed and system-based approach to performing studies; identify the importance of establishing a common framework of physical data such as the stream alignment that all study teams can use; understand why and how to develop shared data used among the modeling specialties; illustrate the proper use of linking editors to interface the inputs and results of the models; establish practical guidelines for WAT execution; run the WAT; and interpret analysis results.

Prerequisites.

Nominees for the course should have experience in the hydrologic, hydraulic, economic, or plan formulation aspects of flood risk analysis. Managerial and supervisory personnel are encouraged to attend. Nominees must be assigned (a) Occupational Series: Selected 0000-0110, 0800, and 1300; (b) Grade: GS-09 or above. Nominees should have a basic understanding of concepts, terms, and analysis as presented in Hydrologic Engineering in Planning (057) and Risk Analysis for Flood Risk Management (209).

WELDING DESIGN

162 Length: 36 Hours 35WLD01A

Tuition: \$2600

Purpose.

The course teaches the participant, with a limited knowledge of welding or no background in welding, to create and draft replacement designs, to redesign or reinforce welding designs, and to communicate this information to field personnel.

Description.

The course covers design considerations and proper communication of welding processes, joint designs, weldability of metals, design methods, weld size determinations, weld costs estimating, design formulas, failure analysis of past design problems, and economics of welding.

Prerequisites.

Nominees must be assigned and/or meet all of the following: (a) Occupational Series: Selected 0800 and 1600; (b) Grade: GS-07 or above or equivalent; (c) have current or projected assignments requiring welding design and inspection responsibilities.

WELDING--QUALITY VERIFICATION116 Length: 36 Hours 35WLQ01A
CEUs: 2.9 PDHs: 29

Tuition: \$2600

Purpose.

This course teaches the participant to interpret the various methods and techniques employed in weldments and assuring the quality of welds.

Description.

Through lectures, conferences, and practical exercise sessions, students are able to identify aspects of welding safety and precautions, welding symbols, processes and quality assurance problems, roof decking welding, codes, procedures, and operator qualification, filler metals, workmanship, visual inspection, dye penetrant, magnetic particles, radiographic and ultrasonic testing techniques and interpretation, and destructive testing. Quality assurance in welding is emphasized.

Prerequisites.

Nominees must be assigned and/or have all of the following: (a) Occupational Series: 0801, 0802, 0809, 0810, and selected 0800; (b) Grade: GS-05 and above; or equivalent (c) other: Students should have current or projected assignments with welding quality assurance responsibilities. It is recommended that they have previously completed the General Construction - Quality Verification course and must not have attended this or a similar course within the past 5 years.

WETLAND PLANT IDENTIFICATION (SOUTHEAST)

423 Length: 32 Hours 33WPI01A

Tuition: \$2835

Purpose.

Practical development of plant identification techniques, focusing on wetland threatened and endangered species of the Southeastern United States.

Description.

Wetland Plant Identification Workshop Southeastern USA provides the basic identification skills to both, laboratory and field-identify 100-200 wetland plants of concern from a planning, environmental resources, project management, regulatory and natural resource perspective. Meet two (2) leading wetland plant taxonomists in the USA who will be conducting the instruction. Students will have knowledge of and be able to identify Southeastern USA wetland threatened and endangered species and their supportive habitats/ecosystems. Participants will be able to develop and review mitigation plans focused at the plant species level and develop skill in associating the species with habitat changes. Both laboratory and field practical examinations will be conducted to validate obtained skills.

Prerequisites.

Planning, Program Management, Regulatory, Natural Resource Management, Environmental Resources, Navigation and Engineering Personnel GS-07 through GS-15.

WETLAND RIVER FUNC/ECOL

426 Length: 32 Hours 33WRF01A

Tuition: \$2015

Purpose.

In the development of the CE Water Resources Development Act (WRDA) projects and other important CE activities, NEPA-driven mitigation measures have required increasingly rigid, complex and watershed-level functional assessments of adverse unavoidable project impacts. Historically, structural (acre for acre) mitigation has been a surrogate for functional (maintain wildlife, habitat, flood flow restoration, water quality, etc) mitigation. This approach is no longer adequate due to the rapid evolution of ecological science and the design of functional assessment methods based upon watershed geomorphology, hydrology, vegetation, landforms and associated habitats. The hydrogeomorphic functional assessment method (HGM) is a Federal Interagency tool developed to address this critical field need. This workshop focuses on small and large riverine systems in eastern and western USA and additionally provides project managers with an introduction to the "new river ecology" knowledge. An understanding of this ecological approach is essential in meeting restoration, enhancement and mitigation objectives. A special section of the workshop will cover restoration alternatives identification and assessment of deeply incised channels and floodplains of selected river systems. Participants will meet and work in facilitated problem solving classroom and field sessions with noted experts in this field.

Description.

Topics include: (1) Introduction to wetland river ecology of the late 1990's, (2) HGM classification system, (3) HGM national and regional guidebooks, (4) Geomorphology of Mississippi River System, (5) River Ecology and HGM Assessment of Rivers in KY, TN, and MT, (6) Case studies restoration, (7) Lessons learned, (8) Mitigation Alternatives Identification/Assessment and, (9) HGM and future WRDAs and other CE authorities and (10) Calculating Habitat Units.

Prerequisites.

Nominees may be assigned from engineering, planning, natural resource management, regulatory, etc. to include program/project management functions within the Corps of Engineers. Occupational Series: Open to all including legal, real estate, navigation, etc. This workshop is designed to provide background introductory information.

WETLAND RIVERINE FUNCTIONS ADVANCED

242 Length: 32 Hours 33WRE01A

Purpose.

Corps employees are involved in a wide range of water resource management activities to include: evaluating, regulating, planning, designing, monitoring, adaptively managing and operating projects and their associated systems. A solid understanding of riverine function and processes is critical to successfully understanding, evaluating and effectively managing these systems in a sustainable context. This course is designed to provide students with an advanced applied knowledge of riverine processes and function. Further, it will feature field applications of the Hydrogeomorphic (HGM) functional assessment method for evaluating system function of existing stream and river restoration efforts. Working with noted experts, training is designed for a 50/50 mix of facilitated problem solving between classroom and field-based instruction. It will build upon knowledge gained in the Introductory Level Course (#426). Field-based training will include: evaluation, critique and re-design of existing stream and river restoration projects. One project is located in a smaller, upland drainage, and the other is located in a larger, downstream system.

Key advanced concepts presented will include:

- what actions could be considered/undertaken to restore impacted processes and function;
- Improved understanding of effective application of river restoration techniques; and
- how to evaluate the ecological function of healthy and degraded systems and the anticipated ecological function of restoration proposals for riverine systems.

Description.

Topics include: (1) New wetland river ecology concepts and understanding (2) Advanced riverine processes and function (3) Cutting-edge applied research and evaluation methodologies (4) Field application of the HGM classification system, (5) Field evaluation of existing riverine restoration projects (6) Conceptual Redesign of existing riverine restoration projects and (7) Lessons learned

Prerequisites.

Nominees must have completed the introductory level course (#426) to enroll. Students may be assigned from engineering, planning, natural resource management, regulatory, etc. to include program/project management functions within the Corps of Engineers. Occupational Series: Open to all including legal, real estate, navigation, etc. This course is designed to provide advanced instruction in riverine processes, function and restoration.

WETLAND STREAM ECOLOGY BASIC

192 Length: 32 Hours 33FSE01A

Tuition: \$2090

Purpose.

A knowledge of the state-of-the-science wetland stream ecology is required to formulate science based Water Resources Development Act (WRDA) projects which are critical to the mission of the CE Civil Works Program. Additionally, NEPA (National Environmental Policy Act) and Clean Water Act (Section 404) driven wetland mitigation alternatives require an understanding of modern basic stream ecology which is holistic, landscape focused based on a systems approach to the biological, chemical, physical and geological components. Students will collect and identify wetland stream flora (botanical/plant) including the dominant vascular flowering plants and algae associated with streams. Laboratory and field work will be directed at identifying the benthic (bottom dwelling) stream macro and microinvertebrates important to stream water quality, nutrient cycling and food web linkages. A revolutionary new focus will be to develop a knowledge of stream geofluvial processes important to shaping and reshaping the active modern river channel and its associated floodplain in a geological time frame. Participants will meet on a one-on-one basis leading international and national experts in the field of stream ecology. Problem solving field exercises in real time and place will be conducted and facilitated by these experts and class facilitators to develop an understanding of altered stream ecology and its impacts on selected ESA species inhabiting western river systems.

Description.

Topics include: (1) A holistic and landscape driven approach to wetland stream ecology, (2) Introduction to the identification of flora and fauna of wetland stream systems with a strong focus on western regional stream systems, (3) Introduction to the processes and effects of geofluvial morphology on stream systems, (4) Focus on stream water quality factors including nutrients, sediments and catchment areas, (5) Application of the new stream ecology knowledge to understanding and developing ESA (Endangered Species Act) mitigation alternatives ie Bull Trout, etc.

Prerequisites.

Nominees may be assigned from engineering, construction, regulatory, planning, natural resources, program and project management business lines and practices within the Corps of Engineers and other Federal Agencies. Occupational Series: Open to all including navigation, flood control and the environment. Students should have already have taken Course Number 426 titled Wetland River Func/Ecol which is a basic overview course.

WETLANDS DEV & REST

276

Length: 32 Hours

33WDR01A

Tuition: \$1400

Purpose.

This course provides training in the concepts and practices of ecosystem restoration and development in both inland (fresh water) and coastal areas. The course is directed toward Corps of Engineers biologists, engineers, and natural resources managers concerned with ecosystem restoration including development and restoration of aquatic, wetland and riparian (stream/river) habitats. Practical, hands-on field experience and application of state-of-the-art techniques are emphasized and conducted by the leading national experts in the field of environmental restoration. The basic hydrologic principles in planning for and the development of environmental restoration projects is provided to meet the requirements of the Corps of Engineers and the public. Course focuses on lessons learned over the past twenty years with detailed analysis of hydrology, biology, and soils associated with both successful and failed restoration projects.

Description.

National training is conducted at three (3) regional wetland sites representing major wetland ecosystems: East Coast, West Coast, and at a Gulf of Mexico major estuary site. Technical sessions focus on marine, estuarine, and freshwater wetlands development and restoration of the particular coastal area involved (East Coast and West Coast). The Gulf of Mexico site focuses on wetland ecosystem restoration and development nationwide but emphasizes sites in Texas, Louisiana, Mississippi, Alabama, and Florida. All sessions include methods and case study training in site selection, determining water management (hydrology) and site design specifications, plant selection and revegetation techniques, operation and maintenance requirements, procedures for measuring and evaluating success of aquatic, riparian, wetlands, seagrass development and restoration and key factors to consider to determine the cost, manpower, expertise, equipment and materials required to successfully develop and restore these habitats. Selected case studies focused on lessons learned and extensive field exercises are included. Training is also provided for the following topics, as applicable, based on the location of the particular sessions: (1) hydrologic considerations for ecosystem restoration, (2) techniques for developing new and restored coastal and interior wetlands and seagrass beds, as applicable, using selected case studies, (3) techniques and examples for using wetland vegetation as an alternative to structural techniques for shoreline and levee erosion control, (4) identification of sources and methods for obtaining suitable plant stock including key factors that affect development and

restoration costs and success rates; and (5) mitigation techniques for evaluation, predicting and reducing impacts of engineering activities in wetlands and seagrass areas, (6) guidance on key factors that should be considered when preparing work orders and contracts for restoration activities.

Prerequisites.

Nominees must be assigned (a) Occupational Series: 0025, 0028, 0150, 0400, 0800, and 1300. Highly recommended for planning, regulatory, environmental resources, policy, engineering and natural resources management personnel and those involved with the planning and implementation of ecosystem restoration projects, regulating and evaluating restored wetlands and seagrass; (b) GS-07 and above is suggested.

WORKING DIVER

35

Length: 112 Hours

58DVS01A

Tuition: \$7800

Purpose.

This course provides Corps of Engineers employees who are assigned as divers, diver supervisors, and/or agency diving coordinators with the necessary skills, knowledges, and abilities to safely perform their assigned underwater tasks. This training will provide students with state-of-art technology and methodology to safely perform underwater diving operations and effectively manage diving contingencies.

Description.

Students will become familiar with and perform underwater exercises with state-of-art diving systems including self contained underwater breathing apparatus (SCUBA) and Surface Supplied Air equipment. This course consists of classroom presentations, training pool exercises, open water activities, and practical operations. Sessions pertinent to underwater diving operations will include, but are not limited to, the following topics and activities: (a) diving physics; (b) diving physiology; (c) diving medicine; (d) modern diving systems and support equipment; (e) SCUBA equipment and operations; (f) surface supplied air equipment and operations; (g) decompression principles & associated tables; (h) modern diving accident management techniques; (i) working dive planning; (j) diver supervision principles and practices (k) preparation and use of Activity Hazard Analyses; (l) USACE, OSHA, and US Navy diving regulations (ER 385-1-86, EM 385-1-1, 29 CFR 1910, and US Navy Diving Manual); and (m) management of the diving function.

Prerequisites.

(a) Students for this course must have a current or projected assignment to a position requiring underwater diving skills and prior to attending this training must hold a SCUBA training certificate or equivalent from a nationally recognized diver training organization, e.g., PADI, NAUI, etc. Failure to provide evidence of diver certification will be cause for rejection; (b) Nominees must successfully complete a diving medical examination as detailed in ER 385-1-86 within the past 11 months and provide a copy of the completed medical form to the training agent on the first day of class; and (c) Students must participate in all lectures, written and practical exercises, and score at least 70 percent on the comprehensive post-course examination to receive diver certification. Exceptions or deviations to any of these prerequisites shall be approved by the HQUSACE Safety and Occupational Health Office.

SECTION 3 - COMPETITIVE PROFESSIONAL DEVELOPMENT

Introduction

A variety of Competitive Professional Development opportunities are provided by DOD, HQDA, HQUSACE, and local activities. Many of these programs are announced annually in The Army Civilian Training Education and Development System (ACTEDS) Catalog. This catalog is available on the Army Civilian Personnel Online at <http://cpol.army.mil/library/train/catalog/>.

Typically the programs listed in the ACTEDS Catalog are competitive and many are at least partially funded.

The catalog includes information on the Civilian Education System, Senior Service College Programs, Functional Chief Representative Competitive Professional Development and Short Term Training Programs, Government and Non-Government Programs and Career Field Training.

Eligibility requirements, application procedures and forms and Army level suspense dates are included in the catalog. Please note however that many of these programs require that applications flow up the chain of command for prioritization and/or endorsement of the Army Command (ACOM). These programs will have interim suspense dates for submission of application.

USACE announces interim suspense dates and any USACE specific requirements by OPORD that are issued to subordinate commands. If you have questions regarding internal suspense dates please contact your CPAC or Major Subordinate Command (MSC) Human Resources Specialist.

**SECTION 4 - (FOR CORPS OF ENGINEERS PERSONNEL ONLY)
ARMY SERVICE SCHOOLS AND DEFENSE MANAGEMENT
EDUCATION AND TRAINING (DMET)**

General

The courses in this section are listed by school codes. Obtain course descriptions, prerequisites and length from your local Training Officer.

Source

The document for the Army Service Schools is the Army Formal Schools Catalog, DA Pamphlet 351-4 (31 Oct 95). The Defense Management Education and Training (DMET) Schools, information is contained in DOD 5010.16.c.

Nomination Procedures

*The USACE Learning Center (CEHR-ULC) receives the DOD quotas through the Structure Manning Decision Review (SMDR) process which is accomplished 3 years prior to the Fiscal Year the courses occur.

*The quotas received are published to all training POCs, and issued on a first-come, first-serve basis upon receipt of a SF-182 (Authorization, Agreement, Certification of Training).

*The employee's supervisor must submit a SF-182 for all primary and space-available nominations to the Training Officer. The Training Officer will process all requirements and email them encrypted to the USACE Quota Manager or fax them to (256) 895-7469, DSN 760-7469

Cost

There is no tuition charge for resident spaces for these classes, except Inspector General Auditor Training Institute. Organizations sponsoring on-site classes will be charged a fee.

Student Notification

See the following chart:

TRADOC Service: DA Pamphlet 351-4 provides telephone numbers and general reporting instructions for each school. Training Officers and/or students should contact the school for additional information not mentioned in the DA Pamphlet.

Auditor School: Each student receives a letter prior to course start date.

Inspector General Auditor Training Institute: Each student receives a letter prior to course start date.

Judge Advocate General School: Forwards reporting instructions to students prior to course start date.

DMET Schools

Resident Courses. Students receive reporting instructions from the school before course start date.

On-site Courses. Students receive reporting instructions from the hosting activity before course start date.

Schedules

You may obtain schedules that include dates and locations by accessing the school websites or accessing the ATRRS website at www.atrrs.army.mil.

SECTION 5 – (FOR CORPS OF ENGINEERS PERSONNEL ONLY)

ARMY CIVILIAN HUMAN RESOURCES TRAINING APPLICATION SYSTEM (CHRTAS) ON-LINE SYSTEM FOR CIVILIAN EDUCATION SYSTEM (CES) COURSES

The Civilian Education System (CES) is a new progressive and sequential leader development program that provides enhanced leader development and education opportunities for Army Civilians throughout their careers. Army Civilians will become multi-faceted Civilian leaders of the 21st Century who personify the warrior ethos in all aspects, from war-fighting support to statesmanship to business management.

General As a Corps of Engineers employee, your first stop for information about CES is the USACE Standard Operating Procedure and CES Matrix located at the HQUSACE-HR Intranet website:
<https://hqintra1.hq.ds.usace.army.mil/cehr/index.asp>.

You can find additional useful information on CES at the Army Management Staff College (AMSC) website:
<http://www.amsc.belvoir.army.mil/ces/>.

Finally, you can use the CHRTAS online system for additional information about the CES courses and to register for a course:
<https://www.atrs.army.mil/channels/chrtas>.

Source Headquarter Department of Army G-3/5/7 Policy, dated 22 November 2006.

Cost There is no tuition cost for the CES online or classroom-based courses. For Department of the Army Civilian employees attending CES classes, AMSC will process your TDY Request through the Defense Travel System (DTS). The TDY procedures are posted in Blackboard for those students attending the resident phase. AMSC does not fund rental cars, excess baggage fees, baggage handler tips, long-term airport parking, phone calls, Internet connect fees, and in/around transportation at the TDY site. If the student's organization agrees to fund a rental car or additional expenses that AMSC does not fund, please ensure that you add your organization's Line of Accounting to your TDY Request Form located in Blackboard. Your travel voucher will be processed through DTS via AMSC.

ARMY CIVILIAN LEADER DEVELOPMENT PROGRAMS

Distributed Learning (dL)	1-250-C59 (dL)	CES Foundation (57 Hrs dL)
	1-250-C60 (dL)	CES Basic (40 Hrs dL)
	1-250-C61 (dL)	CES Intermediate (44 Hrs dL)
	1-250-C62 (dL)	CES Advanced (63 Hrs dL)
	1-250-C63 (dL)	CES for Senior Leaders (40 Hrs dL)

Individuals applying for CES courses must apply for and complete the respective dL course (Phase 1) in CHRTAS before applying for the resident course (Phase 2).

Individuals have six months to complete Phase I from the day their Phase I application is approved in CHRTAS. The dL Phase I completion is valid for 365 days from the completion date posted in ATRRS. Individuals will be able to register for a resident class that is within 365 days from the dL completion date. When the dL completion date is greater than 365 days, individuals will be required to retake the dL before they are able to apply for the resident phase.

Individuals applying for a resident course will only be able to apply for classes with a start date of 60 days or greater from the application date. A new feature in CHRTAS, under student functions, allows those wishing to apply for a class within 60 days to submit a request for exception.

Residential Classes	AMSC, Fort Belvoir, VA (SC 704)	
	1-250-C61	CES Intermediate (3 weeks resident)
	1-250-C62	CES Advanced (4 weeks resident)
	1-250-C63	CES for Senior Leaders (4.5 days resident)

AMSC, Fort Leavenworth, KS (SC 701J)

1-250-C60	CES Basic	(2 weeks resident)
1-250-C61	CES Intermediate	(3 weeks resident)

AODC Action Officer Development Course (AODC) is a web-based course that focuses on “staff work” practices in the Army and covers organization and management, conducting completed staff work, managing time and priorities, conducting meetings and interviews, solving problems and making decisions, communications, writing to the Army standard, coordinating, conducting briefings, and ethics. AODC is required for all Interns.

For more information, visit <http://www.amsc.belvoir.army.mil/academic/aodc/>.

SDC Supervisor Development Course (SDC) is a web-based course with topics that focus on managing, leading, and human resources management. SDC is required for all Army Civilians in a supervisory or managerial position. The SDC must be completed within one year of placement in a supervisory or managerial position to meet the one-year supervisory probationary period requirement.

For more information, visit

<http://www.amsc.belvoir.army.mil/academic/sdc/>.

MDC Manager Development Course (MDC) is a web-based course with topics that focus on managing, leading, and human resources management. MDC includes topics in organizational culture; time management; objectives and plans; problem solving and decision making; planning, programming, and budgeting; manpower management; communications; information technology applications; the Army Environmental Program; equal employment opportunity; professional ethics; internal management control; and Army family team building.

DSLDP DOD Defense Senior Leader Development Program (DSLDP) is the premiere executive development program for senior defense Civilians and a key component of the DoD succession planning strategy. DSLDP provides joint leadership academic experience through: senior-level professional Military education, Defense-unique leadership seminars from an enterprise-wide perspective, and opportunities for individual development based on the participant's individual development plan. The goal of DSLDP is to empower participants to think strategically, and formulate proactive, competitive solutions that produce results for DoD and the nation. DSLDP program elements are designed to enhance an individual's readiness for top leadership positions. DSLDP participants are selected by an HQ Department of the Army (DA) Secretariat Board and expected to complete the program within two years.

For more information, visit

<http://cpol.army.mil/library/train/catalog/toc.html>.

SSC Senior Service College (SSC) is at the apex of the Army Civilian education system and prepares Army Civilians for positions of responsibility in the Department of Defense. SSC provides advanced level educational opportunities for leaders who require an understanding of complex policy and operational challenges and increased knowledge of the national security mission. Attendance is a competitive process and selections are made by an HQDA Secretariat Board. Army Civilians graduating from a SSC are centrally placed in a position of greater responsibility to an assignment or organization where they can apply the advanced education they have received.

<http://cpol.army.mil/library/train/catalog/toc.html>.

CES Foundation Course (FC)

The FC is a web-based course approximately 57 hours in length. It provides an orientation to the Army, and develops Civilians as effective members of the Army team. Students gain an understanding of the Army's role within the Department of Defense, as well as the Army's composition, customs, traditions, values, ethics, and the basics of Army leadership doctrine. Students will also learn team development, conflict management, administrative requirements, and oral and written communication skills. The course builds self awareness, as it relates to their profession; team building, group dynamics, and effective communication; assesses individual values and how they relate to professional ethics; completes administrative requirements expected of Army Civilians; and provides career progression information.

Foundation Course End-State: An Army Civilian Corps member who understands the Army and operates as an effective Army team member.

For more information, visit <http://www.amsc.belvoir.army.mil/academic/fc/>.

CES Basic Course (BC)

The BC is required for Army Civilians in team leader, supervisory, or managerial positions and is available to all other Army Civilians. BC develops Army Civilians skilled in leading; managing human and financial resources; implementing change; directing program management and system integration; and displaying flexibility, resilience, and focus on mission. It is to educate the team leader on the basic foundations of leadership and management skills to facilitate mission accomplishment. This course is designed using a blended learning approach, combining the use of dL through the Internet followed by two weeks of classroom education.

The three major underpinnings of *Student-Centered, Problem-Based, and Experiential* establish the basis of success in the BC on how to comprehend basic leadership skills, apply effective leader and communication skills, demonstrate leadership awareness, and comprehend the value of self and team member development. These goals are supported using Army doctrine; educational and leadership theories; small group instruction; and a combination of behaviorist, cognitivist (information processing), and constructivist knowledge theories.

- **Student-Centered** – All curriculum is designed to **focus** on the transference of knowledge through incorporating the **Army’s** Life Long Learning Philosophy with the emphasis on **leader development**. This focus encourages students, incorporating “self-responsibility” as a key element in both professional and personal leader development.
- **Problem-Based** – The curriculum is designed to provide students with “real world” issues and problems that they will encounter as a direct leader. Through collaborative learning opportunities with other leaders, the student will develop or enhance additional skill sets to be a more effective leader.
- **Experiential** – Using an experiential education methodology through activities and reflection, students are allowed to “practice” the new skills in an environment that minimizes risk, and encourages and offers immediate feedback.

Basic Course End-State: A DA Civilian who:

- **Comprehends basic leadership skills**
- **Applies effective leader and communication skills**
- **Demonstrates leadership awareness**
- **Comprehends the value of self and team member development**

For more information, visit <http://www.amsc.belvoir.army.mil/academic/bc/>.

CES Intermediate Course (IC)

The IC is required for Army Civilians in supervisory or managerial positions and is available to all other Army Civilians. This target population is, by necessity, more agile, innovative, self-aware, and prepared to effectively lead and care for personnel, and manage assigned resources. Training and development exercises focus on mission planning, team building, establishing command climate, and stewardship of resources. IC is conducted through blended learning, dL and three weeks of resident training.

The three major underpinnings of *Student-Centered, Problem-Based, and Experiential* establish the foundation of success in the IC on **how to develop a cohesive organization while applying leadership skills to achieve results**. These underpinnings are supported using Army doctrine; educational and leadership theories; small group instruction; and a combination of behaviorist, cognitivist (information processing), and constructivist learning theories.

- **Student-Centered** – All curriculum is designed to **focus** on the transference of knowledge through incorporating the **Army’s** Life Long Learning Philosophy with the emphasis on **leader development**. This focus encourages students to incorporate “self-responsibility” as a key element in both professional and personal leader development.

- **Problem-Based** – The curriculum is designed to provide students with “real world” issues and problems that they will encounter as a direct or indirect leader. Through collaborative learning opportunities with other leaders, the student will develop or enhance additional skill sets to be a more effective leader.
- **Experiential** – Using an experiential education methodology through activities and reflection, students are allowed to “practice” the new skills in an environment that minimizes risk, and encourages and offers immediate feedback.

Intermediate Course End-State: An Army Civilian Corps skilled in leading people; developing cohesive and efficient organizations; managing human and financial resources; implementing change; and demonstrating effective thinking and communication skills, with a focus on mission.

For more information, visit <http://www.amsc.belvoir.army.mil/academic/ic/>.

CES Advanced Course (AC)

The AC is for Civilian leaders who exercise predominately indirect supervision. It is required for Army Civilians in supervisory or managerial positions and is available to all other Army Civilians. AC focuses on Army Civilians skilled in leading a complex organization in support of national security and defense strategies, integrating Army and Joint Systems in support of the Joint Force, inspiring vision and creativity, and implementing change. AC is conducted through blended learning, a combination of 63 hours of distributed learning (dL) and four weeks of classroom education.

The three major underpinnings of *Student-Centered*, *Problem-Based*, and *Experiential* establish the foundation of success in the AC on how to lead a complex organization in support of national strategies, and integrating Army and Joint Systems in support of the Joint Force. These concepts are supported using Army doctrine; educational and leadership theories; small group instruction; and with a combination of case studies, written papers, and oral presentations.

- **Student-Centered** – All curriculum is designed to **focus** on the transference of knowledge through incorporating Life Long Learning with the emphasis on leading a complex organization. This focus encourages students to incorporate “personal experience” as a key element in both professional and personal leadership at the strategic level.
- **Problem-Based** – The curriculum is designed to provide students with “real world – strategic” issues and problems that they will encounter as an indirect leader. Through collaborative learning opportunities with other leaders, the student will develop or enhance additional skill sets to be a more effective leader and manager.
- **Experiential** – Using an experiential education methodology through activities and reflection, students are allowed to “integrate” their new skills with their existing skills and abilities developed over their Civilian or Military careers. This integration will occur in an environment of open discussion within a seminar room that enables feedback from peers and faculty.

Advanced Course End-State: Army Civilians skilled in leading a complex organization in support of national security and defense strategies, managing organizational resources, leading change; inspiring vision and creativity, directing program management, and integrating Army and Joint Systems in support of the Joint Force.

For more information, visit <http://www.amsc.belvoir.army.mil/academic/ac/>.

Continuing Education for Senior Leaders (CESL)

The CESL course is comprised of approximately 40 hours of pre-course material (reading and writing) and a 4.5 day of classroom education. The CESL course is for GS-14 and 15 or equivalent and active duty Military with the rank of LTC, COL, CW4, CW5, SGM, or CSM who have completed either the CES Advanced Course, Sustaining Base Leadership and Management Course, Command and General Staff College (CGSC)/Intermediate Level Education (ILE), Warrant Officer Senior Staff Course (WOSSC), or the Sergeant Majors Course (SMC) with a minimum of 3 years prior to the CESL class report date.

This program is designed to provide a continuing education and sustainment program for senior Civilian Army leaders and select senior Military leaders. CESL will provide senior level Army Civilians who have not completed a SSC an opportunity to refine their skills and potential for the Department of Defense's future contemporary operating environment. As a CESL student, you will discuss current and relevant issues facing the Army today. You will also engage in interactive exercises and presentations on topics that will challenge you to examine your leadership ideologies in a professional, educational atmosphere and share with your peers the challenges that you face as an Army Civilian leader.

For more information, visit <http://www.amsc.belvoir.army.mil/academic/cesl/>.

Equivalency Course Credits:

Applicants are required to use the secure on-line request process to request CES Equivalency Credit available through CHRTAS. The revised process complies with personally identifiable information (PII) requirements and will reduce the applicant processing time. Information and process for requesting CES Equivalency Credit is located at the CES course credit link on CHRTAS at:

<https://www.atrs.army.mil/channels/chrtas>.

POC's for CES Courses:

- * dL Help , registration, technical, and enrollments/graduation inquiries – dL Help Desk – dLTeam@conus.army.mil
- * Basic Course – Carrie Criqui – carrie.criqui@us.army.mil
- * Intermediate Course – Maria Rios – maria.maite.rios@us.army.mil and Barbara Coley – Barbara.coley@us.army.mil
- * Advanced Course – Deborah Withers – Deborah.h.withers@us.army.mil and Levi Williford – levi.williford@us.army.mil
- * CESL – Maria Rios - maria.maite.rios@us.army.mil
- * Marketing – Joyce Melton – joyce.melton@us.army.mil
