

Table 20.1 Illicit Drug Use in Past Month and Illicit Drug Use Other Than Marijuana in Past Month in Maine among Persons Aged 12 or Older, by Substate Region: Percentages, Annual Averages Based on 2004, 2005, and 2006 NSDUHs

State/Substate Region	Illicit Drug Use in Past Month		Illicit Drug Use Other Than Marijuana in Past Month	
	Estimate	95% Prediction Interval	Estimate	95% Prediction Interval
Maine	9.75	(8.61 - 11.03)	3.18	(2.63 - 3.84)
Aroostook/Downeast	8.53	(6.41 - 11.26)	3.14	(2.16 - 4.54)
Central	10.43	(8.19 - 13.19)	3.16	(2.25 - 4.43)
Cumberland	10.45	(8.38 - 12.97)	3.19	(2.29 - 4.44)
Midcoast	8.25	(6.30 - 10.72)	3.00	(2.10 - 4.27)
Penquis	10.22	(8.13 - 12.77)	3.14	(2.23 - 4.41)
Western	10.39	(8.23 - 13.03)	3.07	(2.20 - 4.29)
York	9.33	(7.42 - 11.68)	3.48	(2.47 - 4.88)

NOTE: For Substate Region definitions, see Section D of the report on *Substate Estimates from the 2004-2006 National Surveys on Drug Use and Health*.

NOTE: Estimates are based on a survey-weighted hierarchical Bayes estimation approach, and the 95 percent prediction (credible) intervals are generated by Markov Chain Monte Carlo techniques.

NOTE: Illicit Drugs include marijuana/hashish, cocaine (including crack), heroin, hallucinogens, inhalants, or prescription-type psychotherapeutics used nonmedically. Illicit Drugs Other Than Marijuana include cocaine (including crack), heroin, hallucinogens, inhalants, or prescription-type psychotherapeutics used nonmedically.

Western	9.29	(7.28 - 11.78)	2.21	(1.68 - 2.91)	33.30	(28.41 - 38.58)
York	7.99	(6.19 - 10.24)	1.59	(1.21 - 2.10)	33.04	(28.29 - 38.18)

NOTE: For Substate Region definitions, see Section D of the report on *Substate Estimates from the 2004-2006 National Surveys on Drug Use and Health*.

NOTE: Estimates are based on a survey-weighted hierarchical Bayes estimation approach, and the 95 percent prediction (credible) intervals are generated by Markov Chain Monte Carlo techniques.

¹ *Average annual rate* = $100 * \{ [X_1 \div (0.5 * X_1 + X_2)] \div 2 \}$, where X_1 is the number of marijuana initiates in the past 24 months and X_2 is the number of persons who never used marijuana. Both of the computation components, X_1 and X_2 , are based on a survey-weighted hierarchical Bayes estimation approach. Note that the age group is based on a respondent's age at the time of the interview, not his or her age at first use. The prediction intervals for Average Annual Rate of First Use of Marijuana use a simultaneous solution for First Use of Marijuana and Never Used Marijuana outcomes, which had age group-specific random effects that were allowed to be correlated across the two outcomes. The associated Markov Chain Monte Carlo chains were used to calculate the posterior variance.

Table 20.10 *Serious Psychological Distress in Past Year and Having at Least One Major Depressive Episode in Past Year in Maine among Persons Aged 18 or Older, by Substate Region: Percentages, Annual Averages Based on 2004, 2005, and 2006 NSDUHs*

State/Substate Region	Serious Psychological Distress in Past Year ¹		Having at Least One Major Depressive Episode in Past Year ²	
	Estimate	95% Prediction Interval	Estimate	95% Prediction Interval
Maine	12.20	(10.79 - 13.77)	9.08	(7.58 - 10.84)
Aroostook/Downeast	12.03	(9.51 - 15.10)	8.18	(6.02 - 11.03)
Central	12.78	(10.39 - 15.63)	9.11	(6.74 - 12.21)
Cumberland	12.36	(10.17 - 14.94)	9.29	(6.99 - 12.25)
Midcoast	11.16	(8.95 - 13.83)	9.57	(7.00 - 12.94)
Penquis	12.43	(10.08 - 15.22)	9.30	(6.99 - 12.27)
Western	12.75	(10.37 - 15.57)	9.49	(7.09 - 12.60)
York	11.70	(9.48 - 14.35)	8.52	(6.42 - 11.22)

NOTE: For Substate Region definitions, see Section D of the report on *Substate Estimates from the 2004-2006 National Surveys on Drug Use and Health*.

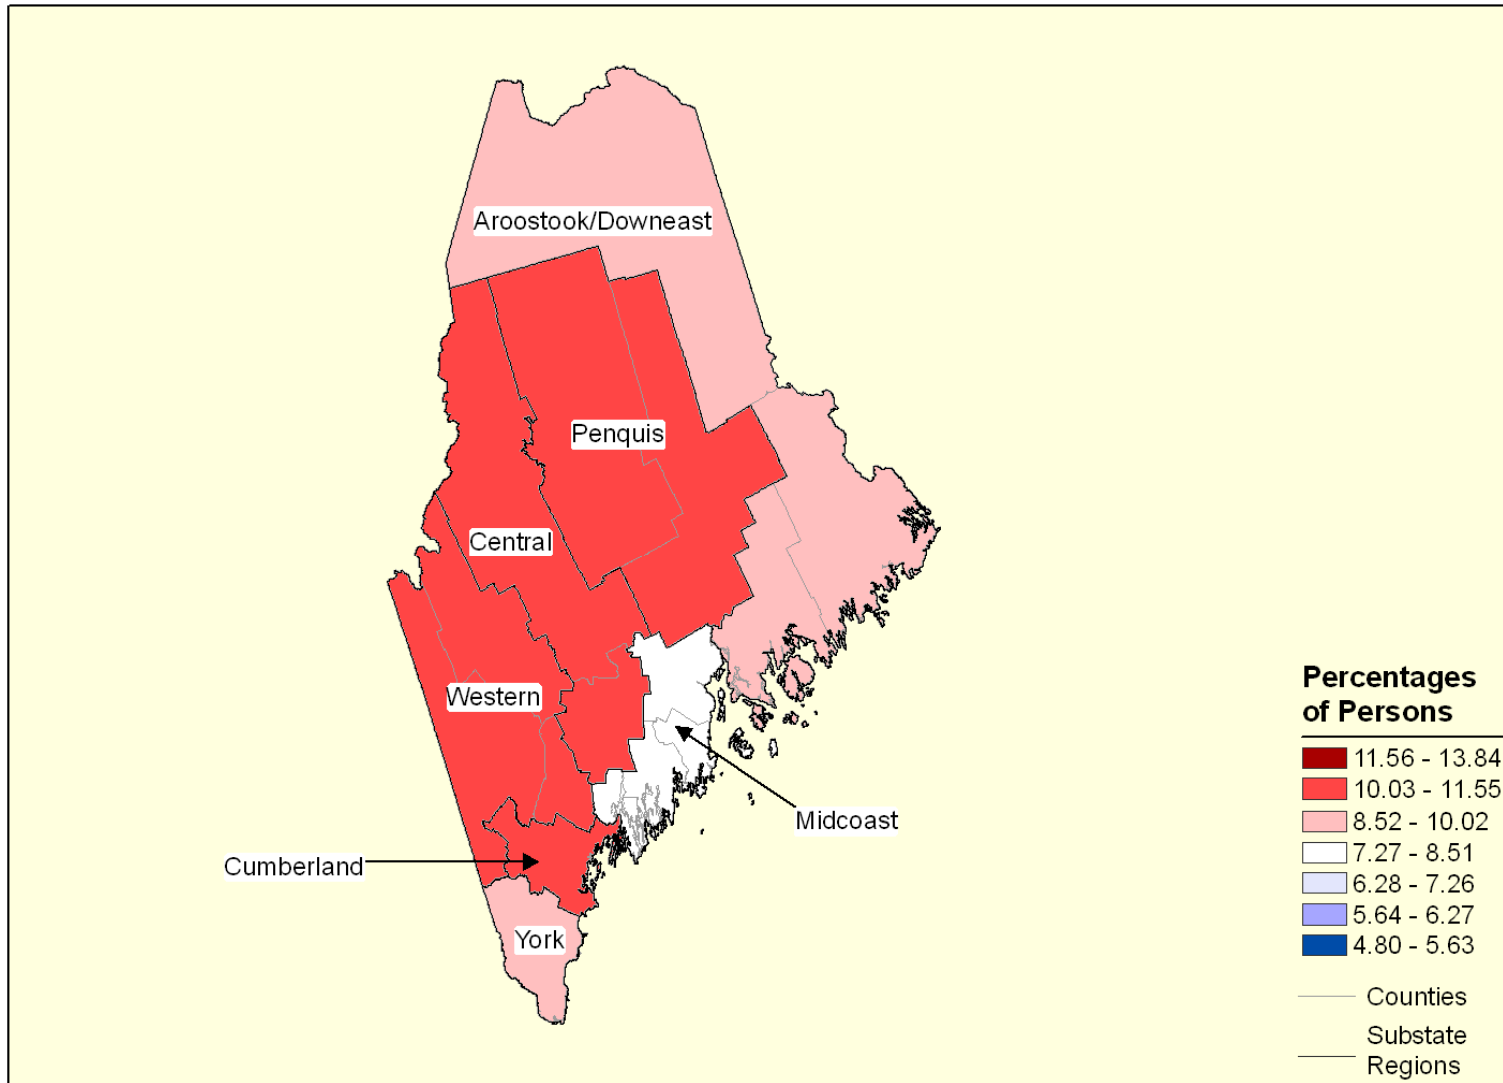

NOTE: Estimates are based on a survey-weighted hierarchical Bayes estimation approach, and the 95 percent prediction (credible) intervals are generated by Markov Chain Monte Carlo techniques.

¹ Serious Psychological Distress (SPD) is defined as having a score of 13 or higher on the K6 scale. Because of questionnaire changes, these estimates are not comparable with estimates from the 2002-2004 substate report. For details, see Section B.7 of the report on *Substate Estimates from the 2004-2006 National Surveys on Drug Use and Health*. Data for SPD are not defined for 12 to 17 year olds; therefore, the estimates reflect only those aged 18 or older.

² Major Depressive Episode (MDE) is defined as in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV), which specifies a period of at least 2 weeks when a person experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. There are minor wording differences in the questions in the adult and adolescent MDE modules. Therefore, data from youths aged 12 to 17 were not combined with data from persons aged 18 or older to get an overall estimate (12 or older).
