

D.J. Luscher - D.J. received his B.S. and M.S. degrees in civil engineering at Montana State University focusing on structural mechanics. He then joined the Los Alamos National Lab as a staff member developing, validating, and using finite-element models to conduct assessments on weapon systems. Recently he returned to graduate school at Georgia Tech in pursuit of a Ph.D. in mechanical engineering in the area of constitutive modeling. Now back at LANL finishing his thesis, his research interests are in the area of computational continuum dynamics, especially the multiscaled modeling of materials and damage. D.J. is a registered professional engineer in New Mexico.
