Operational Capabilities for Expeditionary Tactical
Information Operations Support (ETIOS)

1. Purpose. To issue the required operational capabilities (ROC) and the projected operational environment (POE) for Navy Expeditionary Intelligence Command (NEIC) forces.

2. Background. Per OPNAVNOTE 5400 Ser DNS-33/7U107958, the Chief of Naval Operations (CNO) established the NEIC to build and manage an expeditionary intelligence force capable of conducting intelligence operations in support of expeditionary forces worldwide. NEIC collects, analyses, and disseminates human derived information and human enabled information (HDI/HEI) through military source operations (MSO) in support of maritime domain awareness (MDA), force protection and indications and warnings (FP/I&W) in the maritime and

expeditionary environments. NEIC complements and expands current Navy and Department of Defense (DoD) intelligence capabilities. A detailed description of the mission and capabilities of the NEIC Force is contained in reference (a).

3. Discussion. This instruction provides descriptions of NEIC forces, mission requirements, capabilities, and the mission environments described in reference (a). Enclosures (1) through (5) are prepared per reference (b); these enclosures provide details of the mission areas and operational capabilities. This instruction provides resource sponsors with the information to ensure proper resourcing of the force.

4. Action. Fleet commanders shall periodically review enclosures (1) through (5) and recommend changes to the CNO (Attention: Navy Expeditionary Combat Branch (N857)/Counter Intelligence/Human Intelligence Branch (N2/N6C22) when mission or capabilities of NEIC forces are altered. Change recommendations should include comments on the expected activity manpower document impact.

5. Records Management. Records created as a result of this instruction, regardless of media and format, shall be managed per Secretary of the Navy Manual 5210.1 of November 2007.

**OPERATIONAL MISSION AREAS
FOR
NAVY EXPEDITIONARY INTELLIGENCE COMMAND (NEIC) FORCES**

1. The NEIC provides centralized planning, coordination, and integration of expeditionary intelligence capabilities to assess, plan, and execute intelligence operations in the expeditionary and maritime domain. NEIC is responsible for administrative support, movement planning, organizational oversight and training, and required DoD intelligence capability certification for all assigned teams and elements. NEIC exercises administrative control of the Navy Human Intelligence (HUMINT) Teams (NHTs), Maritime Interception Operations - Intelligence Exploitation Teams (MIO-IETs), Expeditionary Intelligence Support Elements (EISE) and NEIC Expeditionary Tactical Information Operations Support (ETIOS).

2. Primary missions are those missions that a unit was established to perform during wartime. Secondary missions are those missions that a unit could be expected to perform but are not essential to carrying out its wartime role.

3. NEIC staff is responsible for training and certifying each team and element that is ready for deployment. The headquarters staff has oversight of operations, intelligence, administration, medical, legal, logistical support and maintenance of NEIC forces. Normally, the NEIC staff will not deploy but assist in coordinating logistics and support to deployed forces. NEIC serves as an advocate for manning, training, and equipment requirements for the force.

4. NEIC is located at the Dam Neck Annex of Naval Air Station Oceana, Virginia Beach, Virginia. When deployed, an NEIC unit, team or element is operationally supported by and reports to the regional joint force maritime component commander (JFMCC), joint force commander, or Navy component commander (NCC) as assigned.

**PROJECTED OPERATIONAL ENVIRONMENT
FOR
NAVY HUMAN INTELLIGENCE TEAM (NHT)**

1. NEIC NHTs are deployable, five-man teams capable of task organizing (in part or in whole) to conduct MSO in direct support of JFMCC or NCC requirements. NHTs coordinate closely with the NEIC commander to establish manning, training, and equipment requirements for the NHTs. This includes assisting the NEIC staff in establishing required operational policy and tactics, techniques and procedures (TTP).
2. NHTs will report to, and integrate with the appropriate joint human intelligence (J2X) officer upon arrival in assigned theater. At the direction of the J2X, NHTs employ HDI/HEI methods to obtain FP/I&W intelligence in support of assigned operational or unit commanders requirements. NHTs conduct MSO and use interviews, elicitation, open source exploitation, interrogation, liaison, and document and media exploitation (DOMEX) as means of collection.
3. Personnel assigned to NHTs will be DoD certified in and credentialed for interrogation, counter-intelligence (CI) and MSO, and they will be culturally astute and serve as a primary means for interaction with local populations in support of the commander's requirements and their collection mission. NHTs do not have organic language capability, to meet mission requirements; interpreters may be added from the reserve component, other services, or civilian agencies.
4. In addition, NHT missions place team members in close proximity to potential high-value-individuals/high-value-targets (HVI/HVT) requiring special skills, equipment and training. Examples include, but are not limited to, biometric collection and processing, technical electronic exploitation, and technical document verification/translation.
5. The Naval Criminal Investigative Service (NAVCRIMINSERV) conducts all CI functions for the Navy. NHTs may support CI activities as requested by NAVCRIMINSERV or NAVCRIMINSERV may augment NHT capabilities with CI and law enforcement personnel if dictated by operational requirements and directed by higher authority.
6. ROC statements are used to specify the desired level of achievement of readiness or other work for or during a particular readiness condition. Readiness normally applies to

01 Mar 2010

operations and/or evolutions, while other work refers to non-watch activity such as performing maintenance or training.

CAPABILITIES

"F" = "Full." The capability is to be fully achieved. For operational functions this means that installed equipment or systems will be fully manned to design capability.

"L" = "Limited." The capability is to be only partially realized. Even though only limited capability is realized, it is to be sustained. A limiting statement specifying the limitation must support every "L."

**PROJECTED OPERATIONAL ENVIRONMENT
FOR
MARITIME INTERCEPTION OPERATIONS - INTELLIGENCE EXPLOITATION TEAM
(MIO-IET)**

1. NEIC MIO-IETs are comprised of deployable eight-man teams capable of task organizing (in part or in whole) to conduct intelligence exploitation operations directly supporting the JFMCC or NCC requirements. The MIO-IET OIC coordinates with NEIC commanding officer to establish manning, training, and equipment requirements for the teams. This work includes assisting the NEIC staff in drafting and establishing operational policy and TTPs to support operations.
2. MIO-IET provides fleet MIO boarding teams with requisite expertise to recognize and exploit intelligence opportunities. These teams, using a variety of techniques, and in collaboration with theater and national intelligence centers, support the JFMCC, combined force maritime component commander and NCC in developing and maintaining MDA and in directly support operational requirements.
3. The Office of Naval Intelligence, as part of the global maritime and air intelligence integration core element, will serve as the primary intelligence center for collection and analytical reach-back for MIO-IET operations.
4. MIO-IET specific collection and exploitation skills include civil maritime expertise, DOMEEX, interrogation, monitoring techniques, theater familiarity, and targeting. Team members are certified to conduct visit board search and seizure (VBSS) level I/II boardings. When directed by higher competent authority, MIO-IET personnel with required HDI/HEI training and accreditation can conduct maritime security operations in the maritime environment. IO tools and skills training facilitate IET operations. Examples include tagging, wireless transfer of data, computer network operations, and data transfer via reach-back tools. Specific subject matter experts may augment the team to meet specialized collection requirements when directed by higher competent authority. Select IET personnel receive advanced training required to conduct security operations in the maritime environment.
5. MIO-IET operations place team members in close proximity to potential HVI/HVT requiring special skills, equipment and training. Examples include biometric collection and processing,

technical electronic exploitation, and technical document verification/translation.

6. The NAVCRIMINSERV may augment MIO-IET capabilities with CI and law enforcement personnel if dictated by operational requirements and approved by higher authority.

7. ROC statements are used to specify the desired level of achievement of readiness or other work for or during a particular readiness condition. Readiness normally applies to operations and/or evolutions, while other work refers to non-watch activity such as performing maintenance or training.

CAPABILITIES

"F" = "Full." The capability is to be fully achieved. For operational functions this means that installed equipment or systems will be fully manned to design capability.

"L" = "Limited." The capability is to be only partially realized. Even though only limited capability is realized, it is to be sustained. A limiting statement specifying the limitation must support every "L."

**PROJECTED OPERATIONAL ENVIRONMENT
FOR
EXPEDITIONARY INTELLIGENCE SUPPORT ELEMENT (EISE)**

1. EISE are deployable, three-man teams of tactical intelligence specialists (IS 3912) and intelligence officers capable of task organizing (in part or in whole) to support the full range expeditionary intelligence missions. EISE personnel complete baseline expeditionary intelligence training and function as an additional capacity in support of the component's organic intelligence capability. EISE teams are included in AFPs and deployed in support of expeditionary component requirements.

2. In response to component operational requirements, NEIC determines the optimal force package and provides recommendations to the NECC intelligence officer (N2) for concurrence and staffing to NECC for approval. When approved, NEIC coordinates assignment and deployment of EISE personnel to deploying elements. Regional capability requirements (e.g., translators) are augmented through coordination with combatant commanders.

3. EISE OIC will coordinate with the commander to establish manning, training, and equipment requirements. This work includes assisting the NEIC staff in establishing required operational policy and TTPs.

4. ROC statements are used to specify the desired level of achievement of readiness or other work for or during a particular readiness condition. Readiness normally applies to operations and/or evolutions, while other work refers to non-watch activity such as performing maintenance or training.

CAPABILITIES

"F" = "Full." The capability is to be fully achieved. For operational functions this means that installed equipment or systems will be fully manned to design capability.

"L" = "Limited." The capability is to be only partially realized. Even though only limited capability is realized, it is to be sustained. A limiting statement specifying the limitation must support every "L."

**PROJECTED OPERATIONAL ENVIRONMENT
FOR
EXPEDITIONARY TACTICAL INFORMATION OPERATIONS SUPPORT (ETIOS)**

1. NEIC ETIOS teams are deployable, three-man enlisted teams capable of task organizing to conduct tactical SIGINT electronic warfare (EW)/electronic warfare support (ES) collection, processing, and analysis in direct support of JFMCC or NCC requirements.
2. ETIOS provides EW/SIGINT-derived FP/I&W intelligence to the supported commanders and staffs. Specifically, ETIOS personnel conduct real-time or near-real-time collection operations that include, but are not limited to, search, intercept, identify, exploit, and direction-find communications and non-communications transmissions support to deployed expeditionary forces.
3. ROC statements are used to specify the desired level of achievement of readiness or other work for or during a particular readiness condition. Readiness normally applies to operations and/or evolutions, while other work refers to non-watch activity such as performing maintenance or training.

CAPABILITIES

"F" = "Full." The capability is to be fully achieved. For operational functions this means that installed equipment or systems will be fully manned to design capability.

"L" = "Limited." The capability is to be only partially realized. Even though only limited capability is realized, it is to be sustained. A limiting statement specifying the limitation must support every "L."
