**Table 34.2 Marijuana Use in Past Month, Average Annual Rate of First Use of Marijuana, and Perceptions of Great Risk of Smoking Marijuana Once a Month in North Carolina among Persons Aged 12 or Older, by Substate Region: Percentages, Annual Averages Based on 2002, 2003, and 2004 NSDUHs**

State/Substate Region	Marijuana Use in Past Month		Average Annual Rate of First Use of Marijuana <sup>1</sup>		Perceptions of Great Risk of Smoking Marijuana Once a Month	
	Estimate	95% Prediction Interval	Estimate	95% Prediction Interval	Estimate	95% Prediction Interval
<b>North Carolina</b>	5.44	(4.59 - 6.44)	1.73	(1.52 - 1.97)	43.07	(40.31 - 45.88)
Eastern	4.52	(3.41 - 5.97)	1.67	(1.32 - 2.10)	48.65	(44.00 - 53.32)
North Central	4.81	(3.59 - 6.41)	1.89	(1.50 - 2.38)	40.88	(36.30 - 45.63)
South Central	5.06	(3.82 - 6.66)	1.60	(1.24 - 2.06)	41.10	(36.20 - 46.19)
Western	6.69	(5.31 - 8.39)	1.75	(1.43 - 2.15)	42.74	(38.65 - 46.92)

NOTE: For Substate Region definitions, see Section D of the report on *Substate Estimates from the 2002-2004 National Surveys on Drug Use and Health*.

NOTE: Estimates are based on a survey-weighted hierarchical Bayes estimation approach, and the 95 percent prediction (credible) intervals are generated by Markov Chain Monte Carlo techniques.

<sup>1</sup> Average Annual Rate =  $[100 * \{(\text{Number of Marijuana Initiates in past 24 months}) / [(\text{Number of Marijuana Initiates in past 24 months} * 0.5) + \text{Number of persons who never used marijuana}]\} / 2]$ . Both the computation components, Number of Marijuana Initiates in past 24 months and Number of persons who never used marijuana, are based on a survey-weighted hierarchical Bayes estimation approach. Note that the age group is based on a respondent's age at the time of the interview, not his or her age at first use. The prediction intervals for Average Annual Rate of First Use of Marijuana use a simultaneous solution for First Use of Marijuana and Never Used Marijuana outcomes, which had random effects that were allowed to be correlated across the two outcomes. The associated Markov Chain Monte Carlo chains were used to calculate the posterior variance.
