

Environmental Consequences

Air Quality

- Construction activities on the Cantonment would increase fugitive dust emissions
- Newly constructed buildings with associated fuel usage would increase air pollutant emissions

Water Resources

- Up to approximately 33,000 additional Soldiers stationed would increase water demand from El Paso Water Utilities
- Increase wastewater demand associated with range construction and range camp expansion

Energy Demand and Infrastructure

- Potential increased energy demand associated with construction and operation of new facilities and increased population of Fort Bliss

Solid Waste/Hazardous Waste Materials

- Cantonment and range construction projects would increase amounts of hazardous materials to manage
