

Genetic Analysis of Wheat Adaptation (Post-Doc or Associate Scientist)

The **International Maize and Wheat Improvement Center (CIMMYT)** is looking for an innovative and academically well qualified candidate to work within a global wheat research team. The position will be based at CIMMYT's Main Campus located 45 km northeast of Mexico City, Mexico. The appointment is initially for 2 years, with the opportunity for extension into a career position. The selected candidate will play a key role as a member of the Global Wheat Program (GWP) team focusing on molecular mapping of agronomically important traits, with special focus on adaptation of phenology. As a Mexico-based member of the CIMMYT-GWP, the selected candidate will also work closely with partners in advanced laboratories and national research programs worldwide.

Main Responsibilities:

- Apply QTL/Association mapping analysis to wheat data sets including multi-partner meta-analysis.
- Manage field experiments involving phenotyping of wheat for agronomic and phenology traits.
- Interact with physiologists, breeders, statisticians and crop modelers
- Analyze, interpret and publish data.

Skills and experience sought:

- A recent Ph.D. in biological science/biometrics and thorough understanding of plant genetics
- Expertise in genetic analysis and relevant statistical approaches
- Knowledge of crop physiology
- Fluency in spoken and written English; Spanish language skills an advantage.
- Ability to work well as part of multidisciplinary and multicultural teams.
- Must be prepared to travel

The International Maize and Wheat Improvement Center, known by its Spanish acronym, CIMMYT® (www.cimmyt.org), is a not-for-profit research and training organization with partners in over 100 countries. The center works to sustainably increase the productivity of maize and wheat systems and thus ensure global food security and reduce poverty. The center's outputs and services include improved maize and wheat varieties and cropping systems, the conservation of maize and wheat genetic resources, and capacity building. CIMMYT belongs to and is funded by the Consultative Group on International Agricultural Research (CGIAR) (www.cgiar.org) and also receives support from national governments, foundations, development banks, and other public and private agencies.

CIMMYT has had enormous impact in the developing world. It is the center of excellence for work on two of the three most important food crops in the developing world. Its most famous employee, Dr. Norman Borlaug, is credited by many with saving more lives than any other individual in the history of the world. Borlaug's work dramatically increased yields of wheat in the Indo-Gangetic plains in the 1960s and 1970s, staving off starvation for hundreds of millions. For this work, Borlaug received the Nobel Prize in 1970. Scores of other CIMMYT efforts have saved or enriched millions of lives, from releasing disease-resistant varieties and varieties resistant to drought and heat and soil deficiencies, to dispersing techniques to reduce farmer costs and post-harvest losses. In developing countries, wheat varieties developed by CIMMYT and its partners cover 75% of the area planted to modern wheat varieties.

CIMMYT offers an attractive remuneration package paid in US dollars, with a range of benefits including housing allowance, life and health insurance, education allowance (for pre-school, elementary, secondary, and other pre-university grade levels), home leave, retirement fund, and relocation shipping assistance.

CIMMYT is an equal-opportunity employer and strives for staff diversity in gender and nationality.

[Apply online](#) no later than August 21st, 2012.
