

Voyager

THE INTERSTELLAR MISSION

The twin Voyager spacecraft are exploring regions of space never before encountered as they leave the solar system. Voyager 1 has traveled farther from Earth than any other human-made object.

Both Voyagers carry a message from Earth on a phonograph record protected by an inscribed golden disc.

Before 2020, Voyager will likely cross into the heliopause — where the region of space dominated by particles streaming from the Sun ends and interstellar space begins.
