

US Army Corps of Engineers

Institute for Water Resources

BUILDING STRONG®

International (2012)

Status: **Project Manager:**

In Progress [Robert Brumbaugh](#)

Purpose: The Corps of Engineers has widely recognized expertise and experience in water resources, infrastructure planning and development, and environmental protection and restoration. Other Federal agencies, particularly the State Department, the Agency for International Development, and international organizations, can benefit from use of the Corps talents in addressing problems of importance to the United States. The International Program utilizes Corps abilities to perform its civil works and international missions, promote opportunities in the U.S. private sector, and promote national security interests. Program funds are used to support the State Department on global water issues, the World Water Council, USACE involvement on various interagency and international task forces, assisting U.S. Embassies with strategic interactions, and other initiatives of national importance. Flood management information is also shared through collaboration with the Netherlands Rijkswaterstaat.

Objective: The objective of this program is to support international activities which provide a benefit to important national and international missions.

Benefits: The benefit of this project is the achievement of U.S. priorities in international water resources via capacity development, education, training and technical assistance, thereby providing a positive representation of USACE and IWR.
