CHAPTER 2

PRICE ANALYSIS AND NEGOTIATION

2.1 OVERVIEW

The previous chapter outlined the steps required to initiate a task order and receive a proposal from an A/E consultant. This chapter addresses the steps necessary to award the task order to the A/E consultant. These steps include: reviewing the A/E proposal; establishing a negotiation position; developing pre-negotiation and negotiation memoranda to describe the negotiations; and documenting the final negotiated price.

The purpose of performing a price analysis is to develop a negotiation position that allows the negotiator and the offeror to reach agreement on a fair and reasonable price while providing the offeror the greatest incentive for efficient and economical performance. The objective of the negotiation process is to reach a complete and mutual understanding of the detailed scope and cost of services to be provided. Without this understanding, it is impossible for the A/E consultant to provide a quality product. Any misunderstandings may cause errors and omissions during the design phase resulting in problems during construction when corrections can be very costly.

2.2 PRICE PROPOSAL

A Price Proposal is required from the A/E consultant for a task order and for task order modifications involving cost adjustments, either upward or downward. The A/E consultant's Price Proposal is prepared on a spreadsheet. The spreadsheet for the consultant is created by the COTR deleting the hours and other expenses from the IGE document and providing the modified document to Acquisitions. The only information remaining on the spreadsheet is the tasks, the disciplines, the hourly rates and the non-price information on other costs. (See Exhibit 1.4-A with the hours deleted.) Both a hard copy and computer link to the SOW, IGE and any revisions should be provided to Acquisitions.

The A/E consultant may add, delete or modify with justification provided at the time of the price proposal the tasks and the personnel positions listed on the spreadsheet. The A/E consultant then places its estimate of hours and costs onto the spreadsheet, which becomes the A/E consultant's Price Proposal, and submits this to the Government prior to the negotiation meeting. Any changes to the tasks, disciplines or other direct cost areas of the spreadsheet become discussion topics for the negotiation meeting. The A/E consultant may also submit suggestions for changes to the SOW to include effort, schedule and deliverables. The Government should consider the suggestions and may accept, reject or modify them as part of the negotiations. Exhibit 2.2-A provides an example of a COTR's request for a Price Proposal review by technical disciplines.

The A/E consultant may provide a Job Classification/Responsibility List for disciplines for which the Government may require a more detailed description of the job duties of each A/E consultant personnel position listed on the Price Proposal spreadsheet.

The following are items to review or points to consider when evaluating a Price Proposal submitted by an A/E consultant:

- Review work items (and/or task item breakdowns) and determine validity.
- Are the labor hours and type of personnel assigned appropriate for the task?
- Are the labor hours appropriate for the personnel category?
- Do all the subtotals (task labor hours, personnel category and others) add up correctly?
- Does each personnel category have the correct current year salary rate as established in the IDIQ contract? (Obtain the IDIQ information from Acquisitions.)
- Are the direct costs appropriate and reasonable? Have unit costs been established in the IDIQ?
- Are any direct costs typically overhead costs? (Obtain overhead cost data from Acquisitions.)
- Is the overhead factor correct as established in the IDIQ?

- Are all calculations correct?
- Are the escalation rates for multi-year contracts those established in the IDIQ?

Exhibit 2.2-B provides a typical example of a Price Proposal evaluation by a COTR. For an additional example, see the BLRI Price Proposal Evaluation on the EFLHD server at M:\Projects\AE Manual (where M: = fhfl15ntc\data).

Solicitation No. DTFH71-01-R-XXXX Project No. XX
Re: Evaluation of bid proposal from A/E
By: <insert name=""> COTR</insert>
In A/E's cover letter under item 3 they have noted that "property surveys are not required". This is not completely true. Some of the private property boundaries (or Park boundary) will require field location/verification at the entrance to the Park. This work is required in order to determine work limit proximity to the private property. No additional ROW will be required, or any work requiring recordation of property by a certified Land Surveyor.
In the same cover letter item 7 enumerates A/E' s responsibility in securing environmental permits from MDE. To ensure understanding of the statement of work we should restate that EFLHD will make the initial submittal (with A/E prepared documents) to MDE for review for environmental permits, A/E will then coordinate with MDE in the resolution of all MDE comments until the permit(s) are received.
The following evaluates hours and costs associated with the Phases of Work:
<u>Phase IA</u> - Task 9. I estimate this work should be 52 hours. Location of field evidence of boundary lines is easily done during survey of the road itself. Time for research for boundary information should not exceed one day for a technician. Another day may be required for computation and location in plan view, in electronic format.
Mileage for travel seems high. They are located in Maryland. Assuming 100 miles (I'm not exact on this) of two-way travel, they would have to do 25 trips. I do not believe 25 trips are required for this phase.
Phase IB. Again, I question the mileage.
<u>Phase II</u> - Item 1. This needs to be evaluated by our Geotechnical personnel. The number seems excessive. Under direct costs there is already \$22,685 for work. EFLHD's estimate for this work was \$5,500.
Item 2. Our estimate was 53 hours, which included the work done under Item 1.
Item 3. Our estimate is 38 hours. For the preliminary phase (field review), we did not think effort beyond the 38 would be required as field review for the entrance road and parking areas at the Inn would be performed during the conceptual design.
Again. Travel mileage seems excessive.

Exhibit 2.2-B PRICE PROPOSAL EVALUATION BY COTR

Exhibit 2.2-B PRICE PROPOSAL EVALUATION BY COTR (Continued)

<u>Phase III</u> - Item 2. Our estimate for this effort is 197 hours compared to their 769. Work requiring Tabulation of the quantity sheets, plan and profile sheets, pavement elevation sheets, erosion control narrative and plans, drainage and utility plans and profiles, EFLHD std details and drwgs, and the roadway cross sections all seem too high.
Item 4. Our estimate is 11 hours. Much of the estimate should have been setup/done during conceptual.
Item 11. Our estimate is 9 hours. Generally, our level of effort is much less than this during this phase.
Item 13. Our estimate is 18 hours. The draft report is done in phase II. The effort here should only reflect addressing our phase II comments.
Item 14. Our estimate is 36 hours. Most of the effort here is communicating over the phone with the utilities and one field meeting for a couple hours.
Item 15. Our estimate is 32 hours. The control and mapping will have been done in phase 1. Staking of the centerline should not take more than a day.
Item 16. There should only be 2 coordination meetings, reducing time to 18 hours.
Again. Travel mileage seems excessive.
<u>Phase IV and V.</u> Travel mileage seems excessive. If the mileage is for travel to EFLHD, progress meetings are generally held at the A/E's office.
<u>Phase VI</u> - Total hours we came up with was 27 compared to A/E's 236. We may have been a little low. However, the centerline will already have been staked from phase III. They will only need to recover the staking (i.e. remarking faded stations or resetting stakes, etc.) Our time was mostly for providing staking data, for which the 27 hour estimate is more than adequate.
Again. Travel mileage seems excessive, there shouldn't be but one trip to the site for relocating the centerline.
<u>Phase VII</u> - Item 1. Our estimate of hours is 36. At this phase there should be little to correct. Item 7. Our estimate is 4 hours. The revision of the narrative should be minor, if any. Item 9. It shouldn't take 8 hours to review for minor corrections made. Most corrections from earlier reviews should all have taken place by 99% (Phase V) submittal.
Again. Travel mileage seems excessive. There shouldn't be any travel for this phase.

2.3 PRE-NEGOTIATION OBJECTIVE MEMORANDUM

Pre-negotiation objectives establish the Government's initial negotiation position and are documented in the Pre-negotiation Objective Memorandum (POM). The objective is based on the results of the analysis of the A/E's proposal, taking into consideration all pertinent information including field pricing assistance, fact-finding results, the IGE and the price histories. The analysis includes a verification of the A/E consultant's formula/calculations for accuracy. The COTR provides Acquisitions the information needed to establish pre-negotiation objectives before the negotiation of any pricing action. The scope and depth of the analysis supporting the objectives is directly related to the dollar value, importance and complexity of the pricing action. The Government's pre-negotiation objective has substance, rationale and detail sufficient to explain to a third party how the overall reasonableness of the proposed prices were determined and how the objective represents a fair and reasonable amount. If the negotiation objective exceeds the IGE and funding document, then the COTR requests additional funds prior to commencing negotiations. (See Section 1.5.)

The POM is written by the Acquisitions staff, marked "For Official Use Only" and included with the package that is forwarded for CO signature. See Exhibit 2.3-A for an example of a POM.

Subject: Pre Negatiation Objectives Memorandum Date: mm/dd/yy	
Subject: Pre Negotiation Objectives Memorandum Date: him/du/yy Task Order 02-002	
Contract No. DTFH71-02-D-0XXX,	
A/E Refer To: HFAC-15	
This memorandum establishes the pre negotiation objectives for the referenced contract action in accordance with Federal Acquisition Regulation (FAR) 15.406-1 and Transportation Acquisition Manual (TAM) 1215.406-170.	
DESCRIPTION OF THE PROJECT/ACTION	
This Task Order is for all engineering services for the preparation of Plans, Specifications, and Estimates	
(PS&E) and other supporting documentation for the execution of Project XX.	
Project XX consists of rehabilitating 10.5 miles of Newfound Gap Road, from just north of the Collins Creek intersection area (Project XX limits) to the Tennessee/North Carolina border at the Newfound Gap Parkway Area. The existing surface was last paved in 1979 and is experiencing moderate wear along edges and traveling surface, with areas of moderate to severe ruting and the presence of potholes. The majority of the roadway has a fair to poor FHWA condition rating. The rehabilitation work will include milling and/or overlaying Newfound Gap Road and resurfacing existing roadside pullouts and parking areas, including the Newfound Gap Parking area; full-depth pavement reconstruction in deteriorated and/or settled areas; repair or replacement of existing drainage structures; repair of rock fall areas at four locations identified in the Final Geotechnical Report; stabilizing and reestablishing roadside ditches; replacement of existing guardrail with steel-backed timber guardrail; repair of stone masonry guardrail; shoulder stabilizing and reseeding; pavement markings and replacing NPS signs; and turf establishment.	
PROPOSAL ANALYSIS	
A request for Proposal was submitted to the A/E by letter dated October 17, 2002. The A/E's proposal was dated November 11, 2002. The contractor proposed a firm-Fixed-price in the amount of \$XXX,000.00. The COTR <insert name=""> performed a technical and price analysis of the proposal which was provided 12 December 2002 at which time the undersigned requested that the COTR <insert name=""> provide the full detail of his price estimate which was received 16 December 2002. A comparison of the A/E's proposal, the Independent Government Estimate (IGE) and the Government's Objective follows:</insert></insert>

Direct Costs Item 4. 3 For total number of plan sheets, the IGE itemized 170 total sheets, whereas, A/E itemized 191 total plan sheets. The IGE total plan sheets count will be increased by 17 sheets (4 plan and profile sheets for the added pullouts, 12 drainage & utility plan sheets and 1 survey reference sheet), for the added work. Even though there are differences in the number of sheets for the various plan sections, the number of sheets proposed by A/E, 191, is reasonable considering the type and complexity of work included in the Statement of Work and how the plans will be organized. To make sure there is no misunderstanding as to the work involved, the following plan sheet sections will be discussed during negotiations: Drainage summary Guardrail schedule Erosion Control Narrative and Plans Permanent Signing & Striping Plans Drainage & Utility Plans Drainage Cross Sections Roadway Cross Sections Item 5. The IGE did not include any cost for "Plots" and none are required for Project XX. The IGE did not include any cost for Copies (external printer). This is an oversight in the IGE since there will be copying cost to produce the Hydraulics Report, Special Contract Requirements, Engineer's Estimate, Unit Price Analysis, Design Quantity Computations, Construction Staking Data, etc. as part of the Deliverables Furthermore, the IGE did not include any cost for Color Copies. Inasmuch as the COTR does not require plots under this effort these costs will be disallowed. Furthermore, A/E shall be asked to clarify what necessitates color copies. During negotiations the Government will discuss and reach a consensus on the copying requirements and the number of plan sheets needed of each of the phases under this effort. Contractors Proposal Plan Color Sheets Copies Copies Plots Phase I 0 0 0 0 1100 \$385.00 140 \$210.00 \$675.00 Phase II 500 \$50 00 450 Phase III 6876 \$2,406.60 60 \$90.00 4000 \$400.00 2100 \$3,150.00 Phase IV 7500 \$2,625.00 60 \$90.00 6500 \$650.00 2100 \$3,150.00 Phase V 2500 \$875.00 30 \$45.00 4000 \$400.00 2100 \$3,150.00 Phase VI 2675 \$936.25 30 \$45.00 4500 \$450.00 2100 \$3,150.00 Phase VII 0 0 400 0 \$480.00 \$7,227.85 \$1,950.00 \$13,275.00 Item 6. Sub-Contracting In the direct labor schedule for Phases, II, III and VII A/E included an un-priced item for Survey sub consultant fee and the cost was identified under Direct Cost schedule as Survey and Mapping however, Phase II did not provide price. In addition Phase I included a price under direct cost but did not

Indude a reference in the labor schedule. AE will be asked if this is an oversight or if the price is included in the total of another phase. The proposed costs are as follows: Phase II \$1,760.00 2,000.00 Phase III \$37,316.00 31,000.00 Phase III \$37,316.00 10,000.00 Phase IIII \$37,316.00 10,000.00 AC's proposal did not identify their proposed abb-contractor or provide a subcontracting plan. AE will be asked to do so and provide further detail as to their qualifications, the level of effort they are expected to perform and any management issued that might arise. Respective of the issues noted above, AE proposed a total cost of \$41,416 as opposed to the Government's estimate of \$51,000.00. Item 7 Tavel The COTR did not take issue with the Contractors proposed travel requirements and associated cost. The Government usilinated a cost of \$16,000.00 compared to AE's proposed total of \$10,112.00. The Government will accept AE's price and adjust the ICE accordingly. The following is the COTR evaluation and items for discussion/resolution for each of the individual Phases: Phase I S a result of the changes discussed in the Technical Review discussed above the COTR revised the Governments. Governments Estimate to incorporate an additional \$6,000.00. For Phase II, the IGE had a total of 1770 hours vs. 2090 hours for AE. Of the total hours, two items review Government provided data" 98 hours and "Revise/document revisions" app	the total of another phase. The proposed costs are as follows: Phase I \$1,760.00 2,000.00 Phase III \$37,316.00 31,000.00 Phase III \$1,000.00 Phase III \$2,2340.00 10,000.00 Total \$41,416.00 51,000.00 ACE's proposed did not identify their proposed sub-contractor or provide a subcontracting plan. AE will be asked to do so and provide further detail as to their qualifications, the level of effort they are expected to perform and any management issued that might arise. Irrespective of the issues noted above, AE proposed a total cost of \$41,416 as opposed to the Government's estimate of \$51,000.00. Item 7. Travel The COTR did not take issue with the Contractors proposed travel requirements and associated cost. The Government estimated a cost of \$16,000.00 compared to AE's proposed total of \$10,112.00. The Government estimated a cost of \$16,000.00 compared to AE's proposed total of \$10,112.00. The Government estimated a cost of \$16,000.00 compared to AE's proposed total of \$10,112.00. The Government will accept AE's price and adjust the IGE accordingly. The following is the COTR evaluation and items for discussion/resolution for each of the individual Phases: Phase I Even though there are a number of minor differences, there appears to be no misunderstanding in the scope of work. Total cost is comparable. Phase I As a result of the changes discussed in the Technical Review discussed above the COTR revised the Governments Estimate to incorporate an additional \$6,000.00. For Phase II, the IGE had a total of 1770 hours vs. 2090 hours for AE. Of the total hours, two items represent the majority of the difference. 1. "Conduct Field Reviews", the IGE had 168 hours vs. 306 hours for AE. As part of this item, A/E included Review Government provided data" of 98 hours and "Revise/document revisions" of 88 hours. For Review Government provided data" the bus more a large amount of government provided data was pick hours the fiele E had 168 hours w. For Review Government provided data". The IGE did no				4
Phase I \$1,760.00 2,000.00 Phase II \$2,2340.00 10,000.00 Phase VII \$2,2340.00 10,000.00 Total \$41,416.00 51,000.00 AE's proposal did not identify their proposed sub-contractor or provide a subcontracting plan. AE will be asked to do so and provide further detail as to their qualifications, the level of effort they are expected to perform and any management issued that might arise. Irrespective of the issues noted above, AE proposed a total cost of \$41,416 as opposed to the Government's estimate of \$51,000.00. Item T. Travel The COTR did not take issue with the Contractors proposed travel requirements and associated cost. The Government will accept AE's price and adjust the IGE accordingly. The following is the COTR evaluation and items for discussion/resolution for each of the individual Phases: Phase I Even though there are a number of minor differences, there appears to be no misunderstanding in the scope of work. Total cost is comparable. Phase I As a result of the changes discussed in the Technical Review discussed above the COTR revised the Government set of 1770 hours vs. 2090 hours for AE. Of the total hours, two items represent the majority of the difference. 1. "Conduct Field Reviews", the IGE had 168 hours vs. 306 hours for AE. Of the total hours, two items represent the majority of the difference. 1. "Conduct Field Reviews", the IGE had 168 hours vs. 306 hours for AE. Memorandum is specific and detailed as to what is required. In revisiting the SOW for this item, it is nestimated that the work effort for this item will be approximately a week and a half of effort or 120 hou IGE for this item should be increased by 100 hours for a total of 120 hours.	
<u>"Coordinate with the NPS",</u> was not included in the IGE. A/E had 35 hours for this item and the work i required as the first item of work under Phase II. It is clearly an allowable cost and should be added to The 35 hours is considered reasonable and should be added to the IGE.	
As a result in increasing the IGE total hours from 1770 to 2003 (98 + 100 + 35 hours) and incre "Survey and Mapping" cost by \$6000, Phase II IGE cost will increase from \$201,548.79 to \$233,718.5	
Phase III	
For Phase III, A/E had a sub-consultant direct cost of \$0 for "Location Survey", vs. \$8,000 cost for the In revisiting the SOW, Item #12 of Phase III, it requires "Flag, or otherwise mark, the proposed centerline(s) of the project for the Plan-in-hand field review. No backup was provided for this subcont work including the name of the sub-consultant. This information needs to be provided. Additionally, Ite may need to be clarified based upon the backup from the sub-consultant.	tracted
The IGE had a total of 1612 hours for Phase III vs. 2214 hours for A/E. A comparison of the ite resulted in the following differences requiring discussions:	ems
In reviewing the SOW and A/E's proposal, 2 of the items were underestimated by the govern "Progress meetings/preparing minutes" the IGE only included one meeting (52 hours) vs. thr meetings (216 hours) for A/E. It is estimated that 3 meeting will be held during Phase III (two Meetings and one Pre-submittal Meeting). The IGE needs to be increased by 2 meetings res 156 hours an increase in the IGE by 104 hours. The difference between 216 hours vs. 156 h needs to be resolved for this item.	ee Progress ulting in
Other items requiring clarification and discussion are: "Prepare Design Quality Calculations" - 32 hours IGE vs. 94 hours A/E, "Prepare Draft Design Narrative" - 10 hours IGE vs. 54 hours A/E, "Prepare Final Hydraulics Report' - 48 hours IGE vs. 122 hours A/E; and "Attending Plans-in-Hand field review" - 84 hours IGE vs. 136 hours A/E.	
As a result of increasing the IGE total hours from 1612 to 1732 (104 + 16 hours), Phase III IGE increase from \$166,025.96 to \$179,791.87.	cost will
.Phase IV	
For Phase IV, the IGE has a total cost of \$91,774.26 vs. \$79,475.73. In reviewing A/E's proposal the r difference is the hours for direct labor cost. The major item is for "Revise plans". The IGE has 715 hou hours for A/E. Due to the large difference in hours, this item needs to be discussed to make sure there misunderstanding on work effort.	irs vs. 236
Phase V	
Even though there are a number of minor differences, there appears to be no misunderstanding scope of work.	in the
Phase VI	
Even though there are differences for hours by A/E (231) vs. the IGE (173), there appears to be misunderstanding in the scope of work.	no

2.4 NEGOTIATIONS

The negotiation meeting or teleconference is conducted between the Government team (usually the COTR, the CO and others as needed) and the A/E consultant team. In addition to members from its team, the A/E consultant usually includes representatives from the subconsultants as well. The intent of the negotiations is to reach an agreement between the Government team and the A/E consultant team on the SOW requirements, level of effort, risks, costs and tasks/schedule(s) included in the task order or the task order modification.

Prior to the negotiation meeting(s) with the A/E consultant, it is imperative that the appropriate Government personnel (Acquisitions, the CO, the COTR, the CFT as applicable and others as needed) review the A/E consultant's proposal (including modifications to the SOW and schedule), compare the A/E consultant's Price Proposal against the IGE, identify key issues/items for discussion and accomplish the pre-negotiation objectives. Prior to meeting with the A/E for negotiations, each team member's role must be understood and agreed to. If the COTR requires clarification of items on the A/E's proposal, the COTR must coordinate with Acquisitions, which will then determine the best process to obtain the information.

All members of the Government team must be willing to enter into negotiations without preconceptions of "written in stone" results. To be successful, all members have to be ready to discuss items with an open mind and to listen to and consider the A/E consultant's opinions and position. Both the Government team and the A/E consultant team must enter into the sessions with the opinion that the results will be win-win and that the Government will pay a fair and reasonable price, allowing the A/E to achieve a reasonable price for its work.

During the negotiation meeting(s), portions of the SOW may need to be revised due to changes in work requirements or funding availability or due to resolution of any disagreements between the A/E consultant and the Government about portions of the SOW or levels of effort. If the negotiations require revisions to the SOW, it should be revised immediately after the negotiation meeting to reflect the revisions agreed to in the meeting. Revisions may include specific tasks, general requirements, deliverable expectations, level of effort and schedule. Acquisitions will provide the final SOW and final costs to the A/E consultant for signature actions.

Negotiations are also intended to reach an agreement on the cost of the effort defined in the SOW and the IGE and presented by the A/E consultant in its Price Proposal. The IDIQ contracts usually contain pre-established hourly rates. Therefore, the negotiations must focus on the hours required for the tasks, the positions under which the hours are applied and other direct costs such as copies, mailing and travel expenses. During negotiations, the Government team should not disclose the information in the IGE to the A/E consultant.

Acquisitions must document the minutes and results of each negotiation meeting using a Negotiation Memorandum. Documentation should include agreed to changes in the SOW, as well as cost agreements and other relevant information.

See Exhibit 2.4-A and Exhibit 2.4-B for examples of an initial SOW and IGE for an environment task order; see Exhibit 2.4-C and Exhibit 2.4-D for examples of the revised SOW and IGE after negotiations. For an example of a revised highway design task order, go to the EFLHD server at M:\Projects\AE Manual\DEWA SOW and IGE Revision (where M: = fhfl15ntc\data).

2.5 PRICE NEGOTIATION MEMORANDUM

The Price Negotiation Memorandum (PNM) provides a narrative of the process by which the A/E consultant (offeror) and the Government (negotiator) arrived at a fair and reasonable price. The FAR and TAR require the preparation of a PNM on each negotiated procurement as indicated below.

Acquisitions documents in the task order file contain the principal elements of the negotiated agreement. The documentation shall include:

- The purpose of the negotiation.
- A description of the acquisition, including the base contract and the task order number.
- The name, position and organization of each person representing the A/E and the Government in the negotiation.
- A summary of the A/E's proposal and field pricing recommendations, the Government's negotiation objective, and the negotiated position.
- The most significant facts or considerations controlling the establishment of the prenegotiation objectives and the negotiated agreement including an explanation of any significant differences between the two positions.
- Documentation of fair and reasonable pricing.

The COTR, Acquisitions and Legal Counsel sign the PNM. If negotiations result in an agreement higher than the current Purchase Request, the Purchase Request must be adjusted before formal acceptance of the negotiations. The CO is the final approval authority for all task orders and task order modifications issued under the IDIQ contract. See Exhibit 2.5-A for an example of a PNM.

2.6 PRE/POST-NEGOTIATION MEMORANDUM

A combined Pre/Post-Negotiation Memorandum (POM/PNM) is acceptable and can be used in lieu of the separate POM and PNM forms if it provides for the pre-negotiation position and objective as well as the negotiation outcome. Acquisitions is responsible for providing documentation of this negotiated agreement in the task order file.

The following reviews and approvals are required for the POM and the PNM under TAM Subchapter 1204.70 – Review and Approval of Contracts and Contract Related Documents. (See http://fasteditapp.faa.gov/dot/do_action?do_action=ListTOC&contentUID=1.)

The CO responsible for the acquisition shall review the solicitation, the POM, the PNM and the task order or task order modification, as applicable, prior to the other reviews required by this subchapter of the TAM. The CO has the authority to approve all proposed solicitations, prenegotiation objectives, documentation of price negotiations, task order awards and task order modification awards valued at or below \$500,000. (See Exhibit 2.6-A and Exhibit 2.6-B.) Actions exceeding \$500,000 shall be approved by an individual at least one level above the CO responsible for the acquisition. (See Exhibit 2.6-C.)

All solicitations, POMs, PNMs, task order awards and task order modification awards expected to exceed \$500,000 shall be reviewed for legal sufficiency.

2.7 A/E PRICE AGREEMENT

After negotiations have been successfully completed, the A/E consultant may document its understanding of the negotiations, including the final fee amount, and submit this documentation to the CO. Having the A/E consultant document its understanding of the negotiations serves two purposes: it ensures agreement between the A/E and the Government, and it serves as an offer to the Government that the CO can accept and award without an extensive duplication of paperwork.

If good faith negotiations with the final selected A/E consultant do not produce an agreement on price in a predetermined reasonable period of time, then it is the CO's prerogative to terminate negotiations. If this is the case, the CO will obtain a written final proposal revision from the A/E within an acceptable time frame and notify the A/E that negotiations have been terminated. The CO can then begin negotiations with the second selected A/E by retracing the steps outlined in Chapters 1 and 2 of this manual.
