

2007 Minerals Yearbook

IRAN [ADVANCE RELEASE]

THE MINERAL INDUSTRY OF IRAN

By Philip M. Mobbs

Iran's hydrocarbon sector, which included the production of natural gas and oil, the refining of crude oil, and the distribution of hydrocarbons, was a significant facet of the country's economy. The Central Bank reported that crude oil production averaged 4.02 million barrels per day in 2007. According to the U.S. Energy Information Administration (undated), Iran was the world's fourth ranked producer of crude oil and condensate, accounting for about 5.4% of the world's output. The country also was estimated to account for more than 1% of the world's output of cement and fluorspar (Central Bank of the Islamic Republic of Iran, 2008b, p. 7; Miller, 2008; van Oss, 2009).

Minerals in the National Economy

Iran had an extensive mineral production and processing industry. Production, processing, transportation, and sales of crude oil and natural gas accounted for about 10% of the country's gross domestic product at constant prices. Cement and steel were significant sectors of the domestic mineral industry. Aluminum, refined copper, and steel ingots were minor, but notable, mineral sector exports. Most mineral sector producers were required by law to satisfy domestic demand before exporting any output (Central Bank of the Islamic Republic of Iran, 2008b, p. 3).

Government Policies and Programs

The Mining Code of 1998, which was based on Articles 44 and 45 of Chapter 4 of the 1978 Constitution of the Islamic Republic of Iran, and various amendments to the Mining Code, regulated the mining sector. In 2004, a reinterpretation of the Constitution allowed private domestic and international investor participation in the mining sector. The Petroleum Act of 1987 clarified the Government's authority in the oil sector. With regard to the provisions of Article 81 of Chapter 6 of the Constitution (which prohibited foreigners from acquiring equity interest in Iran's agriculture, commercial, industrial, mineral extraction, and services sectors), such adjustments as Note 29 of the First Five-Year Plan and Note 22 of the Second Five-Year Plan allowed international companies to participate in Iranian petroleum sector operations under 'buyback' contracts, which were short-term service contracts that authorized international companies to work on oil and natural gas production projects for a defined time period in return for revenue from produced oil and gas.

In December, the Government cited the depreciation of the United States (U.S.) dollar and U.S. economic sanctions as reasons to end its sales of crude oil in U.S. dollars. Future oil sales were expected to be primarily in European Union euros and Japanese yen (Tehran Times, 2007).

Production

Based on estimates of mineral commodity production, significant increases in output in 2007 compared with that of 2006 were projected for ammonia, copper ore, gold ore, and molybdenum ore. Notable increases were estimated for cement, ferrochromium, iron ore, kaolin, and lead ore. Because of problems at the Angouran Mine, which was the largest zinc mine in Iran, production decreases were projected for zinc ore and refined zinc metal. Data on estimated mineral production are provided in table 1.

Structure of the Mineral Industry

The Ministry of Industries and Mines administered all mining, smelting, and refining industries, except the oil and gas sectors, which were administered by the Ministry of Petroleum. Basic geologic exploration and most initial evaluations of the nation's mineral resources (except hydrocarbons) were performed by the Geological Survey of Iran.

Most of the country's more-than-3,000 active mines were privately owned. The Government retained control of many of the larger mineral commodity companies, especially those that produced aluminum, ammonia, coal, copper, iron and steel, natural gas, petroleum, salt, and sulfur. In 2007, the Government privatized 20% of its equity interest in National Iranian Copper Industries Co., 6% of its interest in Mobarekeh Steel Co., 5% of its interest in Iran Aluminium Co., and 5% of its interest in Khouzestan Steel Co. The Government evaluated the proposed privatization of 92 subsidiaries in the oil and gas sector (table 2).

Mineral Trade

The Central Bank of the Islamic Republic of Iran (2006, p. 13; 2008a, p. 13; b, p. 13) reported that hydrocarbons accounted for about 82% of total exports in 2007. Hydrocarbon exports were valued at about \$72.7 billion¹ in 2007 compared with a revised \$59.6 billion in 2006. Crude oil exports accounted for most of the hydrocarbon exports; natural gas and refined petroleum products made up the remainder. About 50% of crude oil exports (based on value) were shipped to China, India, and Japan.

Commodity Review

Metals

Bauxite and Alumina, Aluminum, and Nepheline

Syenite.—In October, the Iranian Mines and Mining Industries Development and Renovation Organization (IMIDRO) awarded the contract for the construction of a 200,000-metric-ton-per-

¹Where necessary, values have been converted from Iranian rials (RI) to U.S. dollars (US\$) at the average exchange rate of RI9,532=US\$1.00.

year (t/yr)-capacity alumina plant at Sarab to the consortium of China Nonferrous Metal Industry's Foreign Engineering and Construction Co., Ltd. and Iranian partners Jahad Tahgihighat Group and Jahad Tahghighat Sahand. The facility would process nepheline syenite to produce alumina (Iran Daily, 2007b).

Fata SpA of Italy continued work on the Hormozal 147,000-t/yr-capacity-expansion project of Almahdi Aluminium Corp.'s 100,000-t/yr-capacity smelter at Bandar Abbas. The expansion program would add 228 pots that would use Dubai Aluminium Co. Ltd.'s D20 reduction cell technology and pot control system. Initial production from the expansion was projected to begin in late 2008 (Fata SpA, 2006).

The initial phase of Iran Aluminium Co.'s new smelter at Arak was completed in 2007. The company's total production capacity was increased to 155,000 t/yr from 120,000 t/yr. An additional 75,000 t/yr of production capacity was scheduled to be completed at the new smelter in 2008. Also in 2007, China Aluminium International Engineering Co. and the CITIC Group of China started construction on a new 270,000-t/yr-capacity aluminum smelter in Fars Province for South Aluminum Group of Iran (Iran Daily, 2007c; Iranian Mines and Mining Industries Development and Renovation Organization, 2007b).

Gold.—IMIDRO awarded the construction contract for the Zarshuran gold mine and 3-t/yr-capacity pressure oxidation plant at Takab. Persian Gold plc of Ireland continued exploration of the Chah-e-Zard and the Dalli prospects (Iran Daily, 2007a).

Iron Ore and Iron and Steel.—IMIDRO published information on Iranian iron ore reserves and resources in 2007, which reported measured reserves of 1.2 billion metric tons (iron content). Most of the reserves are located in iron ore deposits at Chadormalu, the Gol-e-Gohar area, and the Sangan area (Iranian Mines and Mining Industries Development and Renovation Organization, 2007a).

By 2012, the proposed addition of 29 million metric tons per year (Mt/yr) of new crude steel capacity would bring Iran's total steel production capacity to about 40 Mt/yr. Most of the capacity expansion projects would use electric-arc furnaces, which would increase Iranian industrial demand for electrical power. Projects included Mobarekeh Steel Co.'s crude steel capacity expansion to about 6 Mt/yr from 4.2 Mt/yr, and National Iranian Steel Co.'s proposal to fund the construction of 800,000-t/yr-capacity steel plants at Bafgh, Miyaheh, Neiriz, Qaenat, Sefid Dasht, Shadegan, and Sirjan (Metal Bulletin, 2008; Middle East Economic Digest, 2007b, d).

Zinc.—The late 2006 collapse of a wall of the Angouran zinc mine, which was operated by Iran Zinc Mine Development Co., resulted in the significant decline in the production of zinc ore in 2007. Several plants refined ore from the Angouran Mine, and the reduction of zinc ore output adversely affected the output of refined zinc metal.

Beroner Tehran Co. transitioned from open pit mining to underground mining at the Emarat Mine. Zinc ore (5.47% average grade) and lead ore (1.79% average grade) output was increased to 100,000 metric tons (t) in 2007 from 35,000 t in 2006 (Nesko Maden Tic. ve San. A.Ş., undated).

Tete Mining and Engineering Co. of Turkey evaluated the development of an underground ore deposit below BAMA Co.'s Gooshfil open pit mine. Tete also evaluated the Firuzabad, the

Kerman Gojer, the Khomeyn, the Raveng, and the Zehabad lead-zinc occurrences. Mehdiabad Zinc Co., which was a joint venture of IMIDRO (50% interest), Union Resources Ltd. of Australia (47.7%), and Iran Itok (an affiliate of Itok GmbH of Austria) (2.3%), had worked on the development of the Mehdiabad zinc deposit. In late 2006, IMIDRO notified Union Resources that it had terminated several agreements concerning the Mehdiabad joint venture because of alleged breaches of contract. Union Resources disputed the notice of termination and continued to attempt to settle the issue during 2007 (Union Resources Ltd., 2008).

Industrial Minerals

Cement.—Construction of new cement plants and capacity expansions at existing plants continued. In 2007, Iranian cement production capacity was about 42 Mt/yr; about 38 Mt/yr of additional production capacity was anticipated to be online by 2013 (Vaseghi and Parsaei, 2007; Irancement.com, undated).

Mineral Fuels

Natural Gas.—In March, Total S.A. of France delayed an expected investment decision for the \$10 billion 9-Mt/yr-to-10-Mt/yr-capacity Pars liquefied natural gas (LNG) plant. Total, which held 30% interest in the project [partners included National Iranian Oil Co. (50%) and PETRONAS Carigali Overseas Sdn. Bhd. of Malaysia (20%)] noted that the estimated cost of the project had more than doubled in the past 3 years. During the same period, Iran's nuclear program had increased the potential for economic sanctions by the United Nations. Work on the development of three other Iranian LNG plants, which were subject to similar economic and geopolitical pressure, continued in 2007. A gas pipeline to Armenia was under construction, and gas pipelines to Europe, Kuwait, and the United Arab Emirates were also under consideration (Middle East Economic Digest, 2007a).

Petroleum.—In 2007, the Government increased the subsidized cost of gasoline to about \$0.11 per liter (\$0.42 per gallon) from \$0.09 per liter (\$0.34 per gallon). The strong domestic demand for petroleum products and Iran's limited refining capacity resulted in the rationing of motor gasoline, which began in June. Motorists were allowed to buy 120 liters (about 32 gallons) of gasoline per month (Middle East Economic Digest, 2007c).

National Iranian Oil Refining and Distribution Co. (NIORDC) worked on numerous refinery optimization and production-capacity expansion projects in 2007. NIORDC was increasing the production capacity of the Bandar Abbas Refinery to 320,000 barrels per day (bbl/d) from 232,000 bbl/d and expanding the production capacity of the Shazand refinery in Arak to 250,000 bbl/d from 169,100 bbl/d. NIORDC planned to significantly increase its motor gasoline production by 2012. Projects underway included an 85,000-bbl/d expansion of gasoline production capacity at the Esfahan refinery, a 36,300-bbl/d expansion of gasoline production capacity at the Bandar Abbas refinery, an 11,000-bbl/d expansion of production capacity at the Tehran refinery, an 11,000-bbl/d expansion of

production capacity at the Lavan refinery, and a 4,500-bbl/d expansion of production capacity at the Tabriz refinery. NIORDC also planned to reduce the sulfur content of the diesel fuel produced at the Tehran refinery and to recover the sulfur (National Iranian Oil Refining and Distribution Co., undated).

Outlook

Numerous development or expansion projects are planned or underway in the aluminum, cement, copper, ferroalloys, gold, iron and steel, magnesium compounds, oil and gas, potash, stone, and zinc sectors. International funding for capital-intensive development of mineral-related projects by Government-controlled and private companies operating in Iran was impaired, in part, by the Government's continued development of a nuclear program, which included the nuclear-fueled electricity-generating reactor at Bushehr. The dependence of large-scale mineral resource development programs on Government funding adversely affected the timeliness of mineral development and production capacity expansion projects. Such project delays historically have resulted in increased construction costs and lost revenue from the projects.

More than 60% of Iranian oil production was exported in 2007. Domestic demand for crude oil and natural gas is expected to continue to increase in the future, which may require that Iran forgo income-generating hydrocarbon exports in order to meet demand. Development of identified natural gas and oil resources is expected to continue, subject to funding constraints and limitations imposed by existing (2007) economic sanctions. New construction and renovation of existing oil refineries are expected to begin during the current 5-year plan (2005 to 2009) (Central Bank of the Islamic Republic of Iran, 2008b, p. 7; U.S. Department of the Treasury, Office of Foreign Assets Control, undated).

Total	do.	543,000	509.000 r	515.000 °	583.000 r	600,000

eEstimated; estimated data are rounded to no more than three significant digits; may not add to totals shown. Revised. do. Ditto. -- Zero.

¹Table includes data available through February 27, 2009.

²Data are for Iranian years ending March 20 of that stated, except data for alumina, natural gas, natural-gas-plant liquids, and petroleum, which are for Gregorian calendar years.

³In addition to commodities listed, the following may have been produced, but information is inadequte to estimate output: antimony, bromine, crude construction materials (such as sand and shell), ferromolybdenum, hafnium oxide, ilmenite, selenium, silicomanganese, uranium, zeolite, and zirconium metal.

⁴Reported figure

⁵Includes gold recovered from the Mouteh gold mine and from the Sarcheshmeh copper complex.

⁶Includes marble and travertine.

⁷Includes marmarite.

^eEstimated. Do., do. Ditto. NA Not available.

¹About 3,000 mines that are located in Iran are active. About 65% of the active mines and quarries produce building and construction materials, such as aggregate, sand, and stone.

²Data was augmented by input from the Iranian National Committee of the World Mining Congress.

³Government owned.

⁴A subsidiary of state-owned Iranian Mines and Mining Industries Development and Renovation Organization.

⁵Recovered from Sar Chemesh copper plant slimes.

⁶May include basic sediment and condensate.

⁷Includes lead and zinc ores.
