

Ψ

- Phasic Systems Inc
- Dr. Geoffrey Malafsky

Ψ

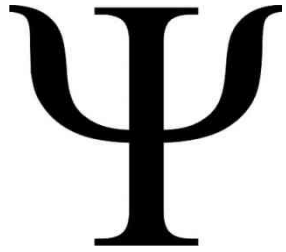

- PSI develops technology to semantically align disparate data models and systems using the KORS simplified, expressive semantic framework directly linking domain Knowledge, Ontologies, Rules, and Semantic metadata using predefined classes designed by research into KDD, organizations, business processes, semantics, and data engineering. This rapidly and accurately enables alignment, harmonization, integration, and cleansing.

Ψ

- Unite disparate enterprise data into common data model using KORS prebuilt ontology and data model templates rapidly using plain English. Eliminate manual intervention with automated data transformations. Deep 360 clean and integrate data using business-based evidence rules and logic with Multi-Variate Evidence Transformation (MVET). Produce Authoritative Data Store (ADS).

Ψ

- PSI wants to join a KDD team working on advanced methods and technologies for automating semantic alignment of data systems. We will provide our expertise in data models, data engineering, semantic analysis, as well as our KORS, MVET, and DataStar technology.
