Preface

Distances Between United States Ports is published by the Office of Coast Survey, National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), pursuant to the Act of 6 August 1947 (33 U.S.C. 883a and b), and the Act of 22 October 1968 (44 U.S.C. 1310).

Distances Between United States Ports contains distances from a port of the United States to other ports in the United States, and from a port in the Great Lakes in the United States to Canadian ports in the Great Lakes and St. Lawrence River.

Distances Between Ports, Publication 151, is published by National Geospatial-Intelligence Agency (NGA) and distributed by NOS. NGA Pub. 151 is international in scope and lists distances from foreign port to foreign port and from foreign port to major U.S. ports. The two publications, **Distances Between United States Ports** and **Distances Between Ports**, complement each other.

General Information

Distances Between United States Ports contains distances from a port of the United States to other ports in the United States, and from a port in the Great Lakes in the United States to Canadian Ports in the Great Lakes and St Lawrence River. These distances are measured along navigable tracklines.

General

Departure and arrival geographic coordinates, where listed, are for a centrally located pier inside the port. Distances along the coast are given in nautical miles. Distances in tables of the Mississippi River System, the Great Lakes, and other inland waters are in statute miles.

International nautical mile

The nautical mile is a special unit employed for marine and aerial navigation to express distance. The International nautical mile is exactly 1,852 meters in length (1,852 meters = 6,076.11549 feet). Each distance between the two ports concerned is along the shortest route that safe navigation permits. The navigator must make his own adjustments for weather or prevailing currents.

Junction Points

These are positions where two or more routes converge; they are shown in CAPITAL LETTERS in the tables. Distances between ports listed in different tables can be obtained by adding the respective distances to the junction points. Where a port is listed in more than one table, additional combinations of distances can also be obtained by using the port as a common reference point. (See examples that follow.)

Foreign Ports

Distances Between Ports, Pub. 151, is published by the National Geospatial-Intelligence Agency (NGA) and distributed by the National Oceanic Service. NGA Pub 151 is International in scope and lists distances from foreign port to foreign port, and from foreign port to major United States ports. The two publications, Distances Between United States Ports and Distances Between Ports, complement each other.

Examples

The following examples will illustrate the use of the tables. The index will show in which table the ports are listed.

All tabular distances are by outside routes which can be used by the deepest-draft vessel that the listed ports can accommodate. Lighter-draft vessels can save considerable mileage by transiting Canso Lock (Canada), the Cape Cod Canal (Massachusetts), and the Chesapeake and Delaware Canal (Delaware-Maryland); see the detailed tables. Gulf of Mexico distances are through the Shipping Safety Fairways.

Each distance is by the shortest route that safe navigation permits between the two ports concerned. Vessels standing along the coast must make their own adjustments for non-direct routes. For example the table shows a distance of 214 miles by direct route from Machiasport to Provincetown; the distance via Matinicus Rock and Cape Ann is 235 miles. Distances from Eastport to Machiasport and other ports southward are via the deep Head Harbour Passage, which is 8 miles farther than via the shallower Lubec Channel.

Mississippi River Systems

Distances on the Mississippi River Systems

Distances in this section are the mileages (in statute miles) from the mouth of a river (or other designated point) taken from charts, maps, and publications of the U.S. Army Corps of Engineers. Distances between any two points on the same waterway may be obtained by taking the difference of the indicated mileages. Distances between places on different waterways can be determined by taking distances to and from a common reference point. (See the appendix for information relating to procurement of charts and publications.)

Mississippi River

At Head of Passes, three of the Mississippi River's important passes come together: South Pass, Southwest Pass and Pass a Loutre. This point of confluence is at Head of Passes Junction Light ($29^{\circ}08'53"N$, $89^{\circ}15'05"W$). From this point distances on the Mississippi River are measured in statute miles "above Head of Passes", abbreviated AHP, to its confluence with the Ohio River.

The reach of the Mississippi River from Head of Passes to Baton Rouge is charted by NOAA's National Ocean Service (NOS). The reach from the Head of Passes to the confluence with the Ohio River is charted by the U.S. Army Corps of Engineers in Flood Control and Navigation Maps of the Mississippi River Mileages indicated in Flood Control and Navigation Maps of the Mississippi River are in statute miles AHP and are so listed following.

The following table lists mileages on the Mississippi River from Head of Passes to its junction with the mouth of the Ohio River.

Measurements are by the shortest marked or safe direct courses, starting (unless otherwise noted) from the main entrance between pierheads of breakwaters or piers, or from the principal landings of open roadsteads. Where landings are appreciably remote from protected entrances, the distance from the main entrance to the landing may be ascertained from the harbor description or from nautical charts. Points in this table are arranged in the order of their location on the Great Lakes in the following sequence (top to bottom): Lake Superior, Lake Michigan, Lake Huron, Lake Erie, and Lake Ontario-St. Lawrence River.

Table for Estimating Time of Transit

Determination of Wind Speed by Sea Condition

| Determination of Wind Speed by Sea Condition | | | | | |
|--|-------|-----------------|--|-----------------------|-----------------------------|
| Miles per hour | Knots | Descriptive | Sea Conditions | Wind Force (Beaufort) | Probable Wave Height (feet) |
| 0-1 | 0-1 | Calm | Sea smooth and mirror like | 0 | - |
| 1-3 | 1-3 | Light Air | Scale-like ripples without foam crests | 1 | ¼ |
| 4-7 | 4-6 | Light Breeze | Small, short wavelets; crests have a glassy appearance and do not break. | 2 | ½ |
| 8-12 | 7-10 | Gentle Breeze | Large wavelets; some crests begin to break; foam has glassy appearance. Occasional white foam crests. | 3 | 2 |
| 13-18 | 11-16 | Moderate Breeze | Small waves, become longer; fairly frequent white foam crests. | 4 | 4 |
| 19-24 | 17-21 | Fresh Breeze | Moderate waves, taking a more pronounced long form; many white foam crests; there may be some spray. | 5 | 6 |
| 25-31 | 22-27 | Strong Breeze | Large waves begin to form; white foam crests are more extensive everywhere; there may be some spray. | 6 | 10 |
| 32-38 | 28-33 | Near Gale | Sea heaps up and white foam from breaking waves begin to be blown in streaks along the direction of the wind; spindrift begins. | 7 | 14 |
| 39-46 | 34-40 | Gale | Moderately high waves of greater length; edges of crests break into spindrift; foam is blown in well-marked streaks along the direction of the wind. | 8 | 18 |
| 47-54 | 41-47 | Strong Gale | High waves; dense streaks of foam along the direction of the wind; crests of waves begin to topple, tumble and roll over; spray may reduce visibility. | 9 | 23 |
| 55-63 | 48-55 | Storm | Very high waves with long overhanging crests. The resulting foam in great patches is blown in dense white streaks along the direction of the wind. On the whole, the surface of the sea is white in appearance. The tumbling of the sea becomes heavy and shock-like. Visibility is reduced. | 10 | 29 |
| 64-72 | 56-63 | Violent Storm | Exceptionally high waves that may obscure small and medium-sized ships. The sea is completely covered with long white patches of foam lying along the direction of the wind. Everywhere the edges of the wave crests are blown into froth. Visibility is reduced. | 11 | 37 |
| 73+ | 64+ | Hurricane | The air is filled with foam and spray. Sea completely white with driving spray; visibility is very much reduced. | 12 | 45 |
