

NTSB National Transportation Safety Board

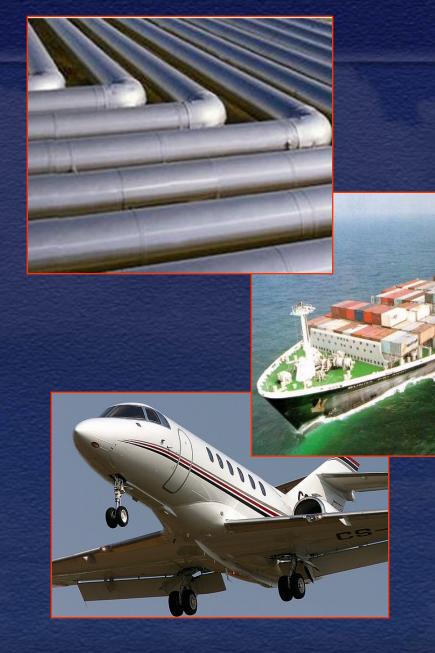

Professionalism in Aviation

Robert L. Sumwalt NTSB Board Member

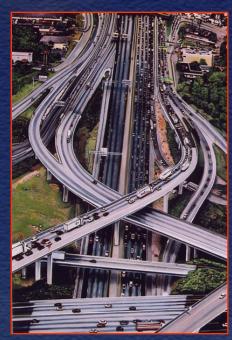

NTSB is an independent federal agency, charged by Congress to investigate transportation accidents, determine probable cause, and issue safety recommendations.

Facilities

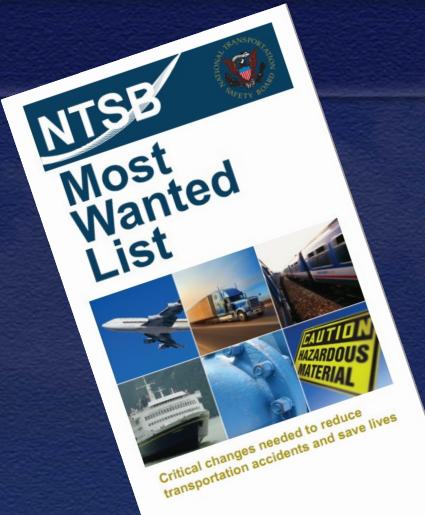

- Headquartered in Washington, DC
- 9 Regional Offices
- NTSB Training Center

National Transportation Safety Board

Professionalism: Maintaining the right attitude

June 4, 2007

What the investigation found

Captain/chief pilot/check airman

- had prior certificate revocation
- routinely failed to comply with procedures and regulations
- falsified training records

NTSB Finding

 "The pilots' lack of discipline, indepth systems knowledge, and adherence to procedures contributed to their inability to cope with anomalies experienced during the accident flight."

Owatonna, MN July 31, 2008 8 fatalities

Accident sequence

- F/O called FBO 3 minutes before touchdown
- Wet runway, 8 knot tailwind
- After touchdown, Captain delayed 7 seconds before deploying Lift Dump
- 17 seconds after touchdown, captain initiated go-around/ takeoff attempt
 - Appx. 1200 feet from runway end
 - Appx. 75 80 knots
- Collided with localizer antenna

NTSB finding

 "The captain allowed an atmosphere in the cockpit ... including [lack of] sterile cockpit adherence, and this atmosphere permitted inadequate briefing of the approach and monitoring of the current weather conditions;

... inappropriate conversation; nonstandard terminology; and a lack of checklist discipline throughout the descent and approach phases of the flight."

Colgan Air flight 3407

- February 12, 2009
- 10:17 pm Eastern Standard Time
- Colgan Air, Inc.
 - Operated as Continental Connection
- Bombardier DHC-8-400
- On approach to Buffalo, New York
- 50 fatalities
 - 2 pilots
 - 2 flight attendants
 - 45 passengers
 - 1 home resident killed

History of flight

- Crew engaged in almost continuous conversation throughout flight
 - Conversation mostly extraneous to flight operations
- Conversation preempted timely performance of flightrelated duties
 - Approach briefing, descent checklist, approach checklist

History of flight

- Approximately 3 miles from outer marker:
 - power was reduced to slow for approach
 - gear extended
 - props to max RPM
- Airspeed decreased 50 kts in 21 seconds

Stall, Upset, Loss of Control

- Stick shaker (stall warning) activated at 131 knots
- Autopilot disconnected
- Captain reacted with "startle and confusion"
- Captain pulled nose to 19 degrees nose up pitch
- Stall, extreme roll
- Stick pusher activated 3 times
 - countered by captain's actions of pulling
- Loss of control

Board Meeting

Major Areas of Focus

Airspeed Selection Cockpit Discipline

Crew Reaction to Stall Warning and Stall

NTSB Finding

- The captain's failure to effectively manage the flight
 - enabled conversation that delayed checklist completion and conflicted with sterile cockpit procedures, and
 - created an environment that impeded timely error detection.

Pinnacle Airlines Flight 3701 Jefferson City, Missouri

- October 14, 2004
- Bombardier CL-600-2B19
- Repositioning flight
- Both flight crewmembers killed

What the investigation discovered

- Intentional activation of stall warning
- Swapping crew seats
- Rudder mishandling
- Climb to FL 410
 - "have a little fun"
- Automation mismanagement
- Airspeed loss, stall, loss of control, double engine failure
- Did not fully disclose real problem with ATC

NTSB's Probable Cause

 "the pilots' unprofessional behavior, deviation from standard operating procedures, and poor airmanship, which resulted in an in-flight emergency from which they were unable to recover..."

Teterboro, NJ

Feb 2, 2005

NTSB finding

 "The pilots' failure to ensure that the airplane's weight and center of gravity were within approved takeoff limits was symptomatic of poor airmanship and a broader pattern of deficiencies in their CRM skills (specifically in the areas of leadership, workload management, communications/briefings, and crew coordination) ..."

Midair collision over Hudson River

- August 8, 2009
- 9 fatalities

Corporate Airlines dba American Connection Flight 5966 Kirksville, Missouri

- October 19,2004
- BAE J-32 (Jetstream)
- Crashed into trees on nighttime non-precision instrument approach
- 13 fatalities
- 2 serious injuries

NTSB Finding

 "The pilots' nonessential conversation below 10,000 feet MSL ... reflected a demeanor and cockpit environment that fostered deviation from established standard procedures, crew resource management disciplines, division of duties, and professionalism, reducing the margin of safety well below acceptable limits ..."

Charleston, WV January 19, 2010 LATER

Probable cause:

 "...the flight crewmembers' unprofessional behavior, including their non-adherence to sterile cockpit procedures by engaging in non-pertinent conversation, which distracted them from their primary flight-re

them from their primary flight-related duties and led to their failure to correctly set and verify the flaps."

Comair Airlines Flight 5191 Lexington, Kentucky

- Bombardier CRJ
- 49 Fatalities
- First officer severely injured
- Wrong runway takeoff

Crew Actions

- Setting tone during preflight
 - Casual and relaxed
- Noncompliance with sterile cockpit rule
 - 40 of the 150 seconds during taxi were violations of sterile cockpit rule
- Distraction likely contributed to loss of positional awareness

NTSB Finding

 "The flight crew's noncompliance with standard operating procedures, including the captain's abbreviated taxi briefing and both pilots' nonpertinent conversation, most likely created an atmosphere in the cockpit that enabled the crew's errors."

A fine line

- "There is a fine line separating a relaxed and easy atmosphere in a cockpit from a lax one where distractions can result in critical failures."
- "Professionalism may be described as knowing the difference between the two."

Honorable John K. Lauber

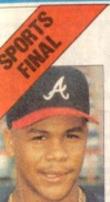

Negative Publicity Avoidance

"You never know on which flight your career will be judged."

Pilots' acts might have led to crash

■ Tail section of doomed jet found on ocean floor

By ERIC MALNIC, MATT SURMAN and MITCHELL LANDSBERG Los Angeles Times

PORT HUENEME, Cair. — Investigators are considering whether the pilots of Alaska Airlines Flight 261 unwittingly triggered their violent plunge into the Pacific Ocean by following prescribed procedures for an emergency landing, air safety officials said Thursday.

Late Thursday searchers found the tail of the jet after recovering the flight data recorder earlier in the day.

Underwater robots exploring the ocean floor found where the wreckage came to rest after the MD-83 ies, some of which are believed trapped under the debris.

National Transportation Safety Board officials raised the question about the pilots' actions after listening to a recording of the final 30 minutes that was contained in a cockpit voice recorder retrieved late Wednesday.

One NTSB official, speaking on condition of anonymity, said the investigation into the crash is increasingly focusing on the pilots' actions during their preparation for an emergency landing at Los Angeles International Airport.

In hindsight, investigators say, it appears possible that a by-the-book response to the mechanical problem reported by the pilots — a "horizontal stabilizer jam" — could have sent the plane into its wild, corkscrewing descent into the sea.

What accident data show

Accident Causal Factors Hull-loss Accidents over 10 Year Period

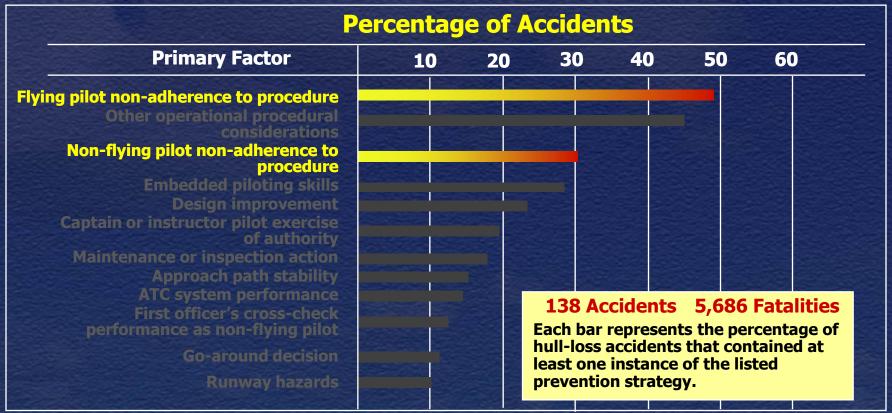

Source: Boeing study of accident prevention strategies

How SOPs relate to error

 LOSA data: crews that intentionally deviate from SOPs are approximately three times more likely to commit additional errors with consequential results.

"Normalization of Deviance"

Be Professional

What is a professional?

- A mindset
 - Precise checklist usage
 - Precise callouts
 - Precise compliance with SOPs and regulations
 - Staying abreast and current with knowledge and skills
 - The ability and willingness to say "I don't know" or "I am wrong"

Professionalism

Doing the right things, even when no one is watching.
