

Tennessee

Opportunities from Russia's Accession to the WTO

- Russia's WTO accession will create new opportunities for Tennessee's companies and workers to export goods, such as textiles and related products, chemicals, and information and communications technologies (ICT), as well as services, to Russia.
- By joining the WTO, Russia agrees to abide by WTO rules, including specific commitments on issues such as non-discrimination, standards, and protection of intellectual property rights. Russia's accession will give the United States the opportunity to use WTO tools, including dispute settlement, to ensure Russia's compliance with its commitments on market access and WTO rules. Russia will be obligated to treat U.S. goods and services on an equal or better basis with those of other WTO Members, as well as on an equal or better basis with its own goods and most services.
- If Tennessee's companies, farmers, ranchers, and workers are to compete successfully for the export opportunities of the 21st century, they need fair trade and more open access to foreign markets, which Russia's accession to the WTO will help provide.
- If Congress ends application to Russia of Title IV of the Trade Act of 1974 (also known as the Jackson-Vanik Amendment), Tennessee's companies and workers will be able to benefit from the new market access opportunities that stem from Russia acceding to the WTO, and the U.S. government will have the ability to enforce those benefits through WTO dispute settlement. Ending application of Jackson-Vanik to Russia will ensure that exports of U.S. goods and services enjoy the same access to the Russian market as those of their global competitors.

Key Benefits for Tennessee's Industries

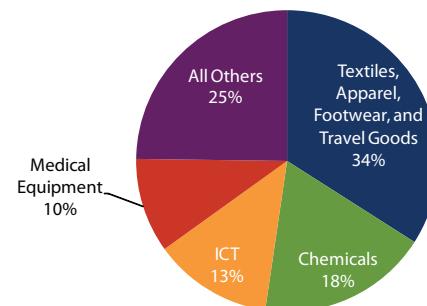

Textiles, Apparel, Footwear, and Travel Goods:

U.S. textiles, apparel, footwear, and travel goods exports to Russia accounted for nearly \$137 million from 2008 to 2010 (annual average). As part of its WTO accession, Russia committed to reduce many of its tariffs on textiles, apparel, footwear, and travel goods, which currently are applied at rates up to 20 percent. After full implementation of its WTO accession commitments, Russia's tariffs on textiles, apparel, footwear, and travel goods will be bound at an average rate of 9.6 percent. Russia will bind its tariffs on textiles at an average rate of 7.9 percent; tariffs on apparel products at an average rate of 14.5 percent; tariffs on footwear at an average rate of 16 percent; and tariffs on travel goods at an average rate of 14.1 percent.

Chemicals:

U.S. chemical exports to Russia averaged almost \$1.6 billion annually from 2008 to 2010 and accounted for 13 percent of total U.S. industrial goods exports to Russia. Russia has agreed to final bound rates on chemical products along the processing chain that are generally consistent with the rates agreed to under the Chemical Tariff Harmonization Agreement. After full implementation of its WTO accession commitments, Russia's average tariff on chemical products will be reduced to, and bound at, 5.3 percent, down from the current average tariff of 6.7 percent. The average Russian tariff U.S. exporters face on key chemical subsectors will be reduced as well. After full implementation of its WTO accession commitments, Russia's average tariff on cosmetics will be bound at 6.3 percent, down from the current average tariff of 13.5 percent; on plastics at 6.2

**Tennessee's Top Goods Exports to Russia
(Average 2008-2010)**

Source: International Trade Administration

percent on average, down from the current average tariff of 10 percent; and the average tariff on pharmaceuticals will be bound at an average rate of 4.4 percent.

Information and Communications Technologies (ICT):

U.S. exports of ICT products to Russia were \$733 million on annual average from 2008 to 2010. Russia has committed to join the Information Technology Agreement (ITA), providing duty-free treatment on all ITA products within three years. As a result, information technology products from computers to telecommunications equipment will enter the Russian market duty-free. After full implementation of its WTO accession commitments, Russia's tariff on all ICT products will be bound at an average rate of 4.0 percent, down from the current average tariff of 6.7 percent.

Medical Equipment:

The medical equipment sector represented almost \$748 million in U.S. exports to Russia over 2008-2010 (annual average). After full implementation of its WTO accession commitments, Russia's tariff on medical equipment will be bound at an average rate of 4.3 percent, with the maximum end of the spectrum bound at 7 percent. Russia committed to binding 97 percent of its tariffs on medical equipment at 5 percent or less.

Construction Equipment:

U.S. construction equipment exports to Russia were almost \$573 million on annual average from 2008 to 2010. As part of its WTO accession, Russia committed to reduce or eliminate many of its tariffs on construction equipment, which currently are applied at rates as high as 25 percent. After full implementation of its WTO accession commitments, Russia's average tariff on construction equipment will be bound at 5.3 percent.

Express Delivery Services:

Russia will allow foreign express delivery companies to operate as 100 percent foreign-owned enterprises upon accession. Russia's accession in the WTO will ensure full market access for express delivery of documents, parcels, packages, and other items through all relevant modes of supply, and guarantee that foreign express delivery operators will receive treatment no less favorable than that accorded to domestic express delivery operators.

Audio-Visual Services:

Russia's commitments for audio-visual services are broader than those of other countries that have recently joined the WTO. Upon accession to the WTO, Russia will open its market to U.S. audio-visual service suppliers in several important sectors, such as motion picture distribution and projection services, as well as the sale of television and radio programs to television and radio stations. Russia will also allow foreign audio-visual companies to operate as 100 percent foreign-owned enterprises.

Agriculture:

Accounting for 17 percent of total farm cash receipts, soybeans are Tennessee's second largest agricultural commodity with sales of \$518 million in 2010. Soybeans and soy products were also the state's leading agricultural export in 2010 totaling \$290 million. As part of its WTO commitments, upon accession, Russia's tariff on soybeans will be bound at zero. In addition, Russia will no longer require a veterinary certificate for soybeans and other plant products.

Other Key Benefits for Tennessee's Companies

National Treatment:

National treatment requires that imported goods be treated no less favorably than domestically produced products. As a result, Russia cannot impose on imports measures that are more burdensome or stringent, such as additional inspections, higher taxes, or stricter technical requirements, than those applied to domestically produced products.

Transparency:

Upon accession, Russia will ensure that laws and regulations pertaining to trade in goods, trade in services, or intellectual property rights will be published before

they become effective and will be subject to "notice and comment" procedures. Compliance with these rules will not only give interested persons (e.g., U.S. producers and exporters) an opportunity to provide input into the rules governing trade with Russia, but it will also ensure advance notice for any changes. In addition, where Customs Union (CU) authorities have responsibility for WTO issues, such as sanitary and phytosanitary measures, technical barriers to trade, customs issues, and enforcement of intellectual property rights at the CU border, these transparency obligations will apply.

Customs Valuation and Fees:

The WTO Customs Valuation Agreement and Russia's commitments in its Protocol of Accession, inter alia, establish rules on methods used to determine the value of imports to calculate tariffs. These commitments increase certainty and predictability on this core trade issue. Upon accession, Russia will cut its maximum customs fee, paid to clear imported goods through customs, by about two-thirds. In addition, Russia will establish lower fixed fees for the customs clearance of goods using electronic format or other simplified filing methods, and overall will ensure that its fees related to importation and exportation will not exceed the cost of services rendered.

Technical Barriers to Trade/ Standards:

As a WTO Member, Russia and its Customs Union partners will be responsible for implementing the terms of the Agreement on Technical Barriers to Trade (TBT) and standards-related commitments in Russia's Protocol of Accession. The TBT Agreement includes obligations relating to the preparation, adoption, and application of mandatory technical regulations and voluntary standards to avoid the creation of unnecessary barriers to trade. Russia and its Customs Union partners will also assume an obligation to provide a notice and comment process on proposed technical regulations affecting trade in goods, to comply with TBT Agreement rules for conformity assessment procedures, and to use relevant international standards as a basis for their technical regulations, except where ineffective or inappropriate for achieving the legitimate objective. Implementation of these obligations can facilitate trade in almost all products.

Sanitary and Phytosanitary Measures:

As a WTO Member, Russia will be obliged to ensure that its sanitary and phytosanitary measures are consistent with the Agreement on the Application of Sanitary and Phytosanitary (SPS) Measures. This Agreement requires that measures imposed to protect human or animal (sanitary) or plant (phytosanitary) life and health be based on science, risk assessments based on the appropriate assessment of the actual risk involved, and do not arbitrarily or unjustifiably discriminate against imports. The Agreement also provides other disciplines on how SPS measures are adopted and applied. For example, governments are required to notify other countries of any proposed changes to SPS requirements which affect trade. Russia and the Customs Union have adopted the legal framework to allow Russia to fully implement its WTO SPS obligations on day one of WTO membership. The United States believes Russia's implementation of this Agreement will help address significant barriers to U.S. exports of agricultural goods, in particular meat and poultry. In addition, the United States will have additional tools to address SPS issues affecting exports to Russia.

New Market Access in Russia

- Russia will bind tariffs across the board, and U.S. exporters will gain greater certainty of access with Russia's obligation not to raise tariffs above the negotiated rates for any product. See tables for key industrial and agricultural goods bound tariff rates.
- Russia's industrial goods bound tariff rate will be reduced to an average of 7 percent within seven years of joining the WTO. The majority of these tariff cuts will be fully implemented within two years, with many being implemented immediately. Additionally, Russia's commitments will provide deep tariff cuts for manufactured goods in many areas of commercial significance to the United States.
- Russia is undertaking legally enforceable market access commitments covering U.S. priority services sectors, including audio-visual, telecommunications, distribution, express delivery, energy, and financial services (including insurance, banking, and securities).
- Russia's WTO membership will bring more certainty for U.S. companies exporting to Russia, and provide the United States with mechanisms to address potential trade disputes with Russia – mechanisms unavailable to U.S. industries and workers as long as Russia remains outside the WTO.

Russia: A Large and Growing Market

- Russia's 2010 GDP of nearly \$1.5 trillion makes it the world's 11th largest economy, and it has been one of the world's fastest-growing economies over much of the past decade.
- Russia's estimated 2010 per capita GDP (based on purchasing power parity) of \$15,837 is significantly above that of any of the other "BRICS" markets: Brazil's per capita GDP is \$11,239, South Africa's is \$10,498, China's is \$7,519, and India's is \$3,339.
- Russia's economy is expected to see annual average real growth of 4 percent from 2011 to 2015.
- With its highly educated population and growing middle class, Russia continues to be a promising market for many U.S. companies.
- U.S. exports to Russia have grown significantly over the past decade. In particular, Russian purchases of U.S.-produced goods doubled between 2005 and 2010.
- On average, Russia purchased \$11 billion annually in U.S.-produced goods from 2008 to 2010.
- Russia is becoming an ever larger market for agricultural products. In 2005, Russia imported just under \$15.8 billion worth of agricultural products, but by 2010 imports doubled to more than \$31.7 billion. U.S. producers and exporters are well positioned to take advantage of the expected increased demand for consumer-ready imported foods as the Russian economy expands.
- In 2010, the United States was the third largest agricultural goods supplier to the Russian market, where

imports of U.S. food and agricultural products reached nearly \$1.3 billion. Russian retail food and beverage sales are forecast to increase in real terms from just over \$200 billion in 2010 to more than \$240 billion by 2014—a 20 percent increase. This is good news for U.S. food exporters as imports are expected to meet some of this growing consumer demand.

- Russia and the United States currently have a dynamic and important trade relationship that benefits farmers, manufacturers, and consumers in both countries.

Tennessee's Companies, Farms, and Workers Depend on World Markets, Including Russia

- Tennessee exported almost \$114 million in goods to Russia on average from 2008 to 2010. From 2005 to 2010, Tennessee's goods exports to Russia increased two-fold.
- Tennessee's top goods exports to Russia from 2008 to 2010 included: textiles, apparel, footwear, and travel goods; chemicals; information and communications technologies (ICT); medical equipment; construction equipment; poultry; food preparations; and essential oils.
- Tennessee's overall export shipments of merchandise to all markets in 2010 totaled \$25.9 billion.
- Tennessee's agricultural exports in 2010 supported about 8,200 jobs, on and off the farm.
- Tennessee's export sales make an important contribution to its farm economy, which had total cash receipts of \$3.1 billion in 2010.
- Just over 5,000 companies exported goods from Tennessee locations in 2008. Eighty-two percent (4,135) of those companies were small and medium-sized enterprises (SMEs), with fewer than 500 employees.
- SMEs generated 17 percent of Tennessee's total exports of merchandise in 2008.
- Four metropolitan areas in Tennessee exported over \$1.8 billion each in merchandise in 2009: Memphis (which includes some parts of Missouri and Arkansas), Nashville-Davidson-Murfreesboro, Kingsport-Bristol-Bristol (which includes some parts of Virginia), and Knoxville.

The calculated average tariff rates reported in this paper reflect only the *ad valorem* duty rates contained in Russia's WTO Schedule of Concessions and Commitments on Goods, as well as Russia's applied rates as contained in the Customs Union Common External Tariff.

All state export data in this report are based on the Origin of Movement (OM) series. This series allocates exports to states based on transportation origin, i.e., the state from which goods began their journey to the port (or other point) of exit from the United States. The transportation origin of exports is not always the same as the location where the goods were produced. Thus conclusions about "export production" in a state should not be made solely on the basis of the OM state export figures.
