	APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers
ECTION I: BACKGROUND INFORMA	ATION
A. REPORT COMPLETION DATE FOR APPI	ROVED JURISDICTIONAL DETERMINATION (JD): 12-Feb-2011
3. DISTRICT OFFICE, FILE NAME, AND NU	MBER: Honolulu District. POH-2011-00051-JD1
C. PROJECT LOCATION AND BACKGROUI State :	ND INFORMATION: HI - Hawaii
County/parish/borough: City:	Maui
Lat:	20.90686
Long:	-156.48857
Universal Transverse Mercator	Folder UTM List UTM list determined by folder location
	NAD83 / UTM zone 4N
	Waters UTM List UTM list determined by waters location
Name of nearest waterbody:	On instruction by waters location
Name of nearest Traditional Navigable Wat	
Name of watershed or Hydrologic Unit Coo	de (HUC):
Check if map/diagram of review area and	d/or potential jurisdictional areas is/are available upon request.
Check if other sites (e.g., offsite mitigation	on sites, disposal sites, $\operatorname{etc}_{\dot{c}}$) are associated with the action and are recorded on a different JD form.
D. REVIEW PERFORMED FOR SITE EVALU	IATION:
✓ Office Determination Date: 12-Feb-20	
Field Determination Date(s):	
SECTION II: SUMMARY OF FINDINGS	
A. RHA SECTION 10 DETERMINATION OF	JURISDICTION
There "navigable waters of the U.S." within R	ivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area.
There "navigable waters of the U.S." within R	
Waters subject to the ebb and f	low of the tide.

(i) General Area Conditions: Watershed size: Drainage area: Average annual rainfall: inches Average annual snowfall: inches

(ii) Physical Characteristics (a) Relationship with TNW:

Tributary flows directly into TNW.

Tributary flows through [] tributaries before entering TNW. :Number of tributaries

Project waters are river miles from TNW.

Project waters are river miles from RPW. Project Waters are aerial (straight) miles from TNW.

Project waters are aerial(straight) miles from RPW.

Project waters cross or serve as state boundaries.

Explain:

Identify flow route to TNW:5

Tributary Stream Order, if known:

OrderTributary Name3Iao Stream

(b) General Tributary Characteristics:

Tributary is:					
Tributary Name	Natural	Artificial	Explain	Manipulated	Explain
lao Stream	-	-	-	х	A large portion of the stream has been channelized and armored as part of the USACE Honolulu District Iao Stream Flood Control Project

Tributary properties	with respect	to top of ban	k (estimate):
Tributary Name	Width (ft)	Depth (ft)	Side Slopes

 Tributary Name
 Width (ft)
 Depth (ft)
 Side Slopes

 Iao Stream
 100
 1
 Vertical (1:1 or less)

Primary tributary substrate composition:

Tributary Name	Silt	Sands	Concrete	Cobble	Gravel	Muck	Bedrock	Vegetation	Other
lao Stream	-	-	-	-	-	-	-	-	Х

Other Explained:

Tributary Name	Other Explained
lao Stream	It is concrete lined channel at the project location

Tributary (conditions, stability, presence, geometry, gradient):

Tributary Name	Condition\Stability	Run\Riffle\Pool Complexes	Geometry	Gradient (%)
lao Stream	None, it is a concrete lined channel at the project location.	None, it is a concrete lined channel at the project location.	Meandering	5

(c) Flow:

Tributary Name	Provides for	Events Per Year	Flow Regime	Duration & Volume
lao Stream	Seasonal flow	-	Prior to agricultural diversions, the stream likely was perennial; however, currently such diversions only allow for seasonal flow	-

Surface Flow is:

Tributary Name	Surface Flow	Characteristics
lao Stream	Confined	-

Subsurface Flow:

Tributary Name	Subsurface Flow	Explain Findings	Dye (or other) Test
lao Stream	Unknown	-	-

Tributary has:

Tributary Name	Bed & Banks	онwм	Discontinuous OHWM ⁷	Explain
lao Stream	Х	Х	-	-

Tributaries with OHWM⁶ - (as indicated above)

Tributary Name	онwм	Clear	Litter	Changes in Soil	Destruction Vegetation	Shelving	Wrack Line	Matted\Absent Vegetation	Sediment Sorting	Leaf Litter	Scour	Sediment Deposition	Flow Events	Wa Staiı
lao Stream	Х	-	-	-	-	-	-	-	-	-	-	-	-	-

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction:

High Tide Line indicated by: Not Applicable.

Mean High Water Mark indicated by: Not Applicable. (iii) Chemical Characteristics: Characterize tributary (e.g., water color is clear, discolored, oily film; water quality;general watershed characteristics, etc.).

Tributary Name	Explain	Identify specific pollutants, if known
lao Stream	-	-

(iv) Biological Characteristics. Channel supports:

Tributary Name	Riparian Corridor	Characteristics	Wetland Fringe	Characteristics	Habitat
lao Stream	-	-	-	-	-

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics: (a) General Wetland Characteristics: Properties: Not Applicable.

(b) General Flow Relationship with Non-TNW:

Flow is: Not Applicable.

Surface flow is: Not Applicable.

Subsurface flow: Not Applicable.

(c) Wetland Adjacency Determination with Non-TNW: Not Applicable.

(d) Proximity (Relationship) to TNW: Not Applicable.

(ii) Chemical Characteristics: Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Not Applicable.

(iii) Biological Characteristics. Wetland supports: Not Applicable.

3. Characteristics of all wetlands adjacent to the tributary (if any):

All wetlands being considered in the cumulative analysis: Not Applicable.

Summarize overall biological, chemical and physical functions being performed: Not Applicable.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Significant Nexus: Not Applicable

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE:

1. TNWs and Adjacent Wetlands:

Not Applicable.

2. RPWs that flow directly or indirectly into TNWs:

 Wetland Name
 Flow
 Explain

 lao Stream
 SEASONAL
 Although the Atlas of Hawaiian Watersheds & Their Aquatic Resources for the Island of Maui produced by the State of Hawaii Division of Aquatic Resources indicates it is a perennial stream, agricultural diversions remove most of the water except during the wet season.

Provide estimates for jurisdictional waters in the review area:

Total:		304.8	0	
lao Stream	Relatively Permanent Waters (RPWs) that flow directly or indirectly into TNWs	304.8	-	
Wetland Name	Туре	Size (Linear) (m)	Size (Area) (m ²)	

3. Non-RPWs that flow directly or indirectly into TNWs:⁸ Not Applicable.

Provide estimates for jurisdictional waters in the review area:

Not Applicable.

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Not Applicable.

Provide acreage estimates for jurisdictional wetlands in the review area: Not Applicable

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs: Not Applicable

Provide acreage estimates for jurisdictional wetlands in the review area: Not Applicable

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs: Not Applicable

Provide estimates for jurisdictional wetlands in the review area: Not Applicable.

7. Impoundments of jurisdictional waters:⁹ Not Applicable.

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS:¹⁰ Not Applicable.

Identify water body and summarize rationale supporting determination: Not Applicable

Provide estimates for jurisdictional waters in the review area: Not Applicable.

F. NON-JURISDICTIONAL WATERS. INCLUDING WETLANDS

If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements:

- Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce:
- Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based soley on the "Migratory Bird Rule" (MBR):

Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (Explain):

Other (Explain):

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (ie., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment: Not Applicable

Provide acreage estimates for non-jurisdictional waters in the review area, that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Not Applicable

B. ADDITIONAL COMMENTS TO SUPPORT JD: Not Applicable.

¹-Boxes checked below shall be supported by completing the appropriate sections in Section III below.

2-For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

³-Supporting documentation is presented in Section III.F.

4-Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

5-Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

⁶ A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break. break in 7-Ibid.

⁹ -To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

10-Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

⁸⁻See Footnote #3.
