- “The shipyard should be thoroughly cleaned. I don't want people getting sick in the future. In the World War II era, people didn't know the consequences of dumping stuff, but now we know. Families will be living out there, so it needs to be clean. San Francisco needs this to be redeveloped; it's no good to have that empty hole out there. It will be a brand new destination for tourists and will boost the economy.” —Civic Organizations/Group or Club
- “The community has a significant level of distrust of all agencies with the cleanup. It will take time to manage trust. There is general paranoia of government agencies and also bad experience with the HPS project.”
—Resident, Civic Organizations/Group or Club
- “What is the status of the cleanup now? What is the current schedule?”
—Numerous Interviewees

Suggested Communication Methods from Interviewees

Interviewees were presented with a list of several communication methods that the Navy has used in the past to reach out to the community. The feedback on those methods is presented in [Chapter 2](#). Interviewees were also encouraged to suggest communication methods that they thought would be successful in informing and involving the community in the environmental cleanup program at HPS. The following table lists all of the methods that were suggested and notes with more details about the method.

Appendix C: Community Interview Process and Summary (continued)

Interviewee Feedback on Suggested Communication Methods

Method	Interviewees' Critiques of Method
Prepare Calendar of Events	Cross check against other local events to make sure no conflict
	Publish far in advance
	Include on flyers, fact sheets, and Web site
Prepare Progress Reports	Have professional company, such as Baycat, create them
	Make simple and "cool"
Use Local Churches	Good to reach Samoan and African American Communities
	Use church bulletin boards to post print materials related to HPS cleanup
	Organize meetings with church groups
	Share information with pastors
	Good venues for "town hall" meetings
Collaborate with Established Community Members to Convey HPS Environmental Cleanup Information	Have local community members personally distribute flyers or door hangers
	Use young community developers to hire community members
	Outreach to churches for interested members
	Hire Chinese American contact to help reach Chinese community
Distribute Flyers	Flyer content could be meeting announcement or brief messaging about general HPS information and Web site; could also be formatted as a postcard
	Door to door; educate and train community members to be comfortable to discuss flyer content
	Target churches, YMCA, childcare providers, local businesses (i.e., barber shops, beauty salons)
	Insert in weekly Wednesday packets at Starr King Elementary School and other schools willing to participate
	Mail to every street address in 94124 (Note: also suggested personal distribution more effective than mail)

Appendix C: Community Interview Process and Summary (continued)

Interviewee Feedback on Suggested Communication Methods

Method	Interviewees' Critiques of Method
<p>Conduct Bus Tours</p>	Explain/advertise specific purpose in advance
	Hold technical information oriented tours and basic information tours
	Include lunch
	Invite K–5 grade students with parents
	Invite high school students
	Invite Health and Environmental Resource Center
	Invite Chinese community (include translator)
	<p>Detriments to Bus Tours:</p> <ul style="list-style-type: none"> • Cannot cross through neighborhoods because of safety concerns; not safe for members from certain neighborhoods to go into another neighborhood • Too dangerous for people to be on the Navy base • There is nothing to look at
<p>Attend Community Events</p>	Unity Parade (Note: July and August annually)
	Host booth at Earth Day Event (Note: annually April)
<p>Give Navy Presentation at Meeting Hosted by Organization or Community Group</p>	Project Area Committee (especially health and environment subcommittee)
	Bayview Childcare Association (meets quarterly)
	Parent Teacher Association
	Block or neighborhood groups
	West Point Residents Council
	Bayview Merchants Association
	Misc. groups within the China Town area of San Francisco to reach Chinese community; meeting size small to promote dialogue

Appendix C: Community Interview Process and Summary (continued)**Interviewee Feedback on Suggested Communication Methods**

Method	Interviewees' Critiques of Method
Hold a Public Meeting	Open house style includes poster board stations
	Different meetings for different stakeholder groups
	Bring facilitator to help keep meeting on track
	Limit public comment time period
	Community Mapping Meeting—document community thoughts/issues by writing them on a map
	Town hall meetings
	Community forums
Create Advisory Board	"Bring back the RAB!"
	Have advisory board with technical experts from local colleges, such as University of California, Berkeley; University of San Francisco; San Francisco State
	Have small board made of community leaders with 1 year membership rotations
Use Internet	Facebook and/or Twitter; Good outreach for Samoan community
	Several U.S. EPA cleanup sites have Facebook and Twitter
	Hire public relations firm to assist with messaging and monitoring posts
	Advertise meetings via Web site and e mail
	Post work notices and traffic impacts that community should be aware of
	Live question and answer sessions
	Create online information repository with all current documents
	Current Web site too difficult to use with layers of links to access information; create more user friendly platform
Use Radio	Commercials on popular stations to announce upcoming meetings
	Air on popular Chinese American station (1450 AM)
	Air on 30 minute radio show on KALX Radio (University of California, Berkeley) and KZSU (Stanford)

Appendix C: Community Interview Process and Summary (continued)**Interviewee Feedback on Suggested Communication Methods**

Method	Interviewees' Critiques of Method
Use Media Publications	Ensure that correct information getting to media
	Newspapers do not have a lot of readership
	Use San Francisco Examiner, San Francisco Bayview, The Potrero View, and Visitacion Valley Grapevine
Use Telephone	Make local hotline number available and advertise (Note: local number currently available)
	Use phone bank to invite community to meetings
	Text message announcements or meeting invites (Note: majority of community members have text capabilities)
Provide Audio Recordings	Record executive summaries of technical documents and put on CDs for information repositories
Create a DVD	Create DVDs with information about HPS environmental cleanup program
	Incentivize barber shops and beauty salons to show DVDs by purchasing televisions and DVD players and paying store for each showing
Use Incentives to Increase Involvement	Give away backpacks with school supplies and HPS environmental cleanup information inside
	Provide food at any public event (Note: Navy rules do not allow taxpayer funds to be used to provide food or beverage service at public meetings or events)
Host Job Fair	Host a fair to help identify jobs
Involve High profile Scientists	To help refute those who are "making a big deal about toxics that are not a big deal"
Hire Public Relations Firm	Use to manage Facebook
	Use to make "cool" factsheets and flyers
	Use to train Navy on how to get their message out

*Appendix C: Community Interview Process and Summary (continued)***Postcard Mailed to Community Requesting Participation in the CIP Interview Process****Be a Voice of Your Community – Please Take Part!**

We hope you will take part in a Community Involvement Plan interview with the Navy. The purpose of the interviews is to talk to various community members and groups to find out what people are interested in or concerned about when it comes to the environmental cleanup at Hunters Point. The Navy will use the feedback from the interviews to determine how to best involve you in the cleanup decision-making process. To be part of an interview, you DO NOT need to know a lot about Hunters Point Shipyard. **The Navy wants to talk to local residents, business owners, activists, and other interested parties. We are scheduling interviews this summer in-person or via telephone.**

If you would like to be interviewed, please provide your contact information and availability to:

Ms. Carolyn Hunter,
Tetra Tech Community Involvement Manager
carolyn.hunter@tetrattech.com, (510) 302-6297

About the Community Involvement Plan: Based on the feedback in the interviews, the Navy will outline how they will inform and involve the community in environmental cleanup decisions at Hunters Point. The document will provide background information about Hunters Point; a list of all environmental sites and their status; demographic information about the local community; a list of past community involvement activities; applicable regulatory requirements; and contact information for the cleanup team. This document will be made available to the public.

Appendix D: Community Background

The Department of the Navy defines the Hunters Point Shipyard (HPS) community as ZIP codes 94107, 94124, and 94134. In 1939, the Navy purchased the HPS property. From 1945 to 1974, the Navy was one of the largest employers of the HPS community. At its peak employment level during the last months of World War II, the shipyard employed over 17,000 civilians. When the shipyard closed in the late 1970s, thousands of people lost their jobs.

Following is information on the population, race, ages, education, average income, employment, and housing for the HPS community. All of the demographic information presented was provided by the Nielsen Company, 2010, unless otherwise noted.

This information helped the Navy know more about the community when planning the involvement program. Age breakdown (see [Page D 3](#)) indicated that the Navy could reach the community through schools as well as senior centers. Furthermore, the Navy may choose to use youth friendly involvement methods such as texting, along with retirement age friendly daytime meetings.

The census information also indicates there is a high unemployment level, which reinforces concerns that jobs and economic impacts of the environmental cleanup are a top interest for the community. The Navy is addressing this concern by using local vendors, holding job fairs, and creating a fact sheet to direct people to potential hiring opportunities related to the cleanup.

Population by ZIP Code	94107	94124	94134
Population	24,014	34,557	41,732

Appendix D: Community Background (continued)

Note:

* The U.S. Census Bureau considers the Hispanic/Latino designation an ethnicity, not a race. The population self identified as “Hispanic/Latino” is also represented within the categories in the “Race” demographic. In the HPS community, 17.1% defined themselves as Hispanic/Latino.

HPS Community is defined as three ZIP codes: 94107, 94124 and 94134.

Race By ZIP Code	94107	94124	94134
Asian	19.1%	29.2%	55.5%
White	60.1%	11.0%	16.4%
Black/African American	11.5%	38.0%	9.7%
Native Hawaiian/Pacific Islander	0.6%	3.2%	1.5%
Native American/Alaska Native	0.5%	0.45%	0.3%
Some Other Race	3.5%	13.6%	12.0%
Two or More Races	4.7%	4.6%	4.6%
Ethnicity*			
Hispanic/Latino	8.5%	22.2%	20.7%

Appendix D: Community Background (continued)

Age Groups by ZIP Code	94107	94124	94134
0 to 4 years	4.3%	9.6%	8.2%
5 to 17 years	8.5%	18.6%	15.0%
18 to 24 years	4.7%	11.6%	9.8%
25 to 34 years	16.3%	11.0%	10.7%
35 to 44 years	24.2%	15.6%	17.3%
45 to 54 years	15.7%	13.0%	13.6%
55 to 64 years	11.1%	9.8%	11.1%
65 + years	15.2%	10.8%	14.3%
Average age	42.8 years	34.9 years	38.4 years

Appendix D: Community Background (continued)

Note: Education level for population age 25 and older. Associates Degrees and Bachelor’s Degrees: Typically 2 to 4 year degrees. Masters, Doctoral, and Professional Degrees: Graduate academic or professional degree programs composed of advanced studies. Includes but is not limited to MS, MA, PhD, EdD, DPH, MD, DDS, DSW, DO, JD, and ThD.

HPS Community is defined as three ZIP codes: 94107, 94124 and 94134.

Education by ZIP Code	94107	94124	94134
No High School Degree	10.8%	31.6%	31.4%
High School Graduate/GED	11.2%	26.3%	23.7%
Some College (No Degree)	11.6%	20.4%	16.2%
Associates/Bachelors Degree (2 to 4 year degrees)	38.9%	16.0%	22.2%
Masters/Doctorate/Professional Degree	27.5%	5.7%	6.5%

Appendix D: Community Background (continued)

Income by ZIP Code	94107	94124	94134
Average Household Income	\$112,344	\$69,953	\$88,979
Average per Person Income	\$58,737	\$19,761	\$23,524

Appendix D: Community Background (continued)

Household Income by ZIP Code	94107	94124	94134
\$0 to \$24,999	23.2%	27.4%	15.7%
\$25,000 to \$49,999	16.4%	21.0%	17.3%
\$50,000 to \$99,999	22.9%	28.7%	34.7%
\$100,000 to \$149,999	13.0%	13.7%	18.6%
\$150,000 +	24.5%	9.2%	13.7%
Average Household Size	1.87 persons	3.58 persons	3.80 persons

Appendix D: Community Background (continued)

Note:
 Employment percentage for population age 16 and older.
 HPS community is defined as three ZIP codes: 94107, 94124, and 94134.

Employment by ZIP Code	94107	94124	94134
Employed	59.3%	35.2%	43.7%
Unemployed	40.7%	64.8%	56.3%

Appendix E: Former Restoration Advisory Board

This appendix includes information on the Department of the Navy's former Restoration Advisory Board (**RAB**) at Hunters Point Shipyard (**HPS**). The HPS RAB was formed in 1994 and dissolved in 2009. The purpose of the RAB was to review and comment on environmental documents and to provide the Navy and regulatory agencies with input from the community on the environmental cleanup program. The Navy would like to take this opportunity again to acknowledge that service on the RAB was a voluntary effort on the part of community members and to thank those who participated and donated their time. Over the 15 years the RAB existed, there was helpful community input and productive dialogue between the Navy and regulatory agencies and the community. However, in 2009, it was determined that the RAB was no longer fulfilling its objective. This Community Involvement Plan (**CIP**) is a key step in the Navy's goal to explore other means to promote two way communication with the HPS community.

A letter of intent to dissolve the RAB was issued on May 22, 2009, encouraging public comments on the letter (see [Page E 9](#)). The Navy HPS team began discussions with Navy management and the regulatory agencies to dissolve the RAB based on several factors, including the following:

- During RAB meetings, discussions turned into verbal arguments and focus was directed to items not within the scope of or related to the RAB. This resulted in many presentations and discussions about environmental cleanup not being completed.
- Some RAB members and community members who attended meetings confidentially stated they felt the meetings had a volatile tone that made them feel unwelcome and in some cases unsafe.
- The RAB did not provide comments on any Navy environmental documents.
- The RAB was not serving as a liaison between the Navy/regulatory agencies and the community, as it was designed to do.

On December 23, 2009, the Navy officially dissolved the RAB. The letter dissolving the RAB is presented on [Page E 15](#). Per the Department of Defense RAB Rule Handbook, Chapter 7, the Navy will continue to evaluate community interest in a RAB at least every 24 months after the board was dissolved.

Following is additional information, including graphs, presenting the attendance trends at RAB meetings until the last RAB meeting held in January 2009. In addition, information is presented on attendance at technical meetings the Navy has held subsequent to the last RAB meeting in order to continue communication with the HPS community.

Data for [Graphs 1 and 2](#) were compiled from the sign in sheets for RAB meetings from 2006 (when the last CIP update was finalized) through the last meeting in 2009. In addition, the post RAB meeting sign in sheets from 2009 through 2010 were also compiled. Once the data was compiled all "paid" attendees including Navy, regulatory agency, City of San Francisco, and contractor employees were identified and removed from the data set. The resulting graphs represent community member attendees at the meetings. The graphs included RAB members (not eliminated by the previously listed categories) as community members.

Data for [Graphs 3 through 6](#) was compiled from sign in sheets for RAB meetings from 2005 through 2008. The data set evaluated only included community RAB members.

Appendix E: Former Restoration Advisory Board (continued)

Graph 1: Meeting Attendance over Time, 2006 through 2011

[Graph 1](#) shows community members in attendance at meetings from 2006 through 2011. Meeting attendance in 2006 was relatively low until December 2006, when a large increase occurred. The trend for number of community members in attendance during 2007 was greater than 2006 and trended downward except in August 2007 when the meeting attendance was greatest. 2008 saw some increases and decreases in attendance throughout the year, with the final RAB meeting in January 2009 having a larger attendance than any meeting in 2008. Since the RAB was dissolved, meeting attendance in 2009 and 2010 has continued to be variable with an upward trend since the low during the July 2010 meeting. A few reasons that might have contributed to the variance in attendance during 2009 included the lack of regularly scheduled meetings and the variability in meeting locations.

One item that was not tracked during the meetings was the number of participants present at the end of the meetings. General observations from Navy contractors in attendance at the latter RAB meetings indicate that some participants left during the meetings. Furthermore, during three RAB meetings in September 2007, December 2008, and January 2009, the planned presentations were not given or finished due to disruptions during the meetings. Some individuals provided feedback to the Navy that they did not feel comfortable coming to future meetings because of the aggressive environment during these meetings.

Graph 2: Percentage of New and Existing Community Members at Meetings in 2009 through 2011

[Graph 2](#) shows the percentage of community members who attended post RAB meetings who had not been involved prior to the last RAB in January 2009. The graph indicates 64% of the meeting participants in 2009 through 2011 had not attended a prior RAB meeting. The post RAB meetings appear to be reaching out to new members of the HPS community.

Graph 3: Percentage of RAB Members in Attendance from 2005 through 2008

The number of community RAB members varied by month; therefore, the percentage of RAB members in attendance during RAB meetings is shown on [Graph 3](#).

Graph 4: Percentage of RAB Members in Attendance by Month from 2005 through 2008

[Graph 4](#) shows the percentage of community RAB members by month during 2005 through 2008. No specific trends were observed in the graphs, but some decreases in July and September were observed.

Graph 5: RAB Members in Attendance from 2005 through 2008

[Graph 5](#) indicates the actual number of community RAB members who attended RAB meetings from 2005 through 2008. In general, more RAB members were present in 2007 and 2008 than 2005 and 2006.

Graph 6: Number of New and Resigning RAB Members from 2005 through 2009

[Graph 6](#) represents the number of new and resigning community RAB members during 2005 through 2009. The most people resigned in 2008 with four RAB members leaving. The most new community RAB members joined in during 2007 and 2009, when nine and seven new members joined, respectively.

Appendix E: Former Restoration Advisory Board (continued)

Appendix E: Former Restoration Advisory Board (continued)

Graph 2: Percentage of New and Existing Community Members at Meetings in 2009 - 2011

Appendix E: Former Restoration Advisory Board (continued)

Ser BPMOW.DG/0317
MAY 22 2009

Dear Hunters Point Naval Shipyard RAB Community Co-Chair and RAB Members:

This letter serves as the Navy's notice of intent to dissolve the Hunters Point Naval Shipyard (HPS) Restoration Advisory Board (RAB) as provided by 32 Code of Federal Regulations (CFR) Part 202. My office has consulted with the Environmental Protection Agency, as well as State, and local government representatives about this proposal. The purpose of a RAB is to ensure community involvement in the environmental cleanup process whereby an open discussion and exchange of information occurs. The Navy fully supports the need for open, meaningful dialogue with the diverse Bayview Hunters Point Community regarding our environmental cleanup actions and decisions. However, the RAB is not fulfilling this objective. Therefore, we will be exploring other means to accomplish this important goal. As the Navy follows the RAB dissolution process (enclosed), my staff will be working with you, the greater Bayview Hunters Point Community, and our regulatory partners to find alternative means to meet these community involvement goals and requirements. I specifically request your ideas for an effective community involvement program which will reach a broad community audience and encourage effective two-way communication between the community and Navy regarding environmental cleanup issues at HPS.

My review of input from the RAB over the last 24 months regarding Navy environmental cleanup matters leads me to conclude that the HPS RAB should be dissolved. To continue holding meetings will not fulfill the RAB's purpose or mission. This conclusion is based on the following:

1. RAB meetings do not provide the diverse Bayview Hunters Point Community's input to the Navy's environmental cleanup program.
 - The Navy has issued over 80 documents for review over the last 24 months and only 3 have received formal written comments from RAB members.
 - The Navy has issued four different Proposed Plan/Record of Decision documents over the past year without receiving any formal written comment from RAB members.
 - RAB meetings are used to discuss non-Navy issues such as redevelopment actions. In fact, RAB members recently voted to stop all work on HPS due to concerns about work on an adjacent City-owned parcel.
 - RAB meetings are used to discuss contracting issues rather than the cleanup program. RAB members recently passed a resolution to pursue a civil grand jury investigation into economic issues at HPS.

While the Navy agrees that redevelopment and contracting issues are important to the community, they are outside the scope of the RAB and there are other appropriate forums for these topics. The Navy has repeated this point to the RAB without a change in RAB performance.

2. The RAB atmosphere is not productive to effective public discourse.
 - Rules of order are often not followed during meetings; interruptions are common; and meeting facilitators are not respected.
 - A number of RAB Community members have complained about the hostile tone of RAB meetings and decline to attend because of the unwillingness of other RAB members to listen to contrasting points of view and/or inability of the RAB to focus on environmental cleanup issues.
 - At the January 22, 2009 RAB meeting, RAB members voted to request replacement of the City's representative, which is not an appropriate RAB function.
 - At a February 18, 2009 "emergency meeting" RAB members voted to request replacement of the Navy RAB Co-Chair, which is not an appropriate RAB function.

As a consequence, valuable information from Navy and other state and Federal agency representatives has not been effectively presented. Instead of fostering discussion on the effectiveness of proposed Navy cleanup actions, RAB discussions focus on matters unrelated to the Navy's clean-up efforts.

3. Navy attempts to work with the Community to improve the RAB process have failed.
 - Over the past 24 months, the Navy RAB Co-Chair and others have attempted to refocus RAB meetings with the help of a professional facilitator.
 - The Navy RAB Co-Chair has had discussions outside of RAB meetings with RAB members to try to refocus the RAB on the environmental program.

These attempts have been unsuccessful in changing the atmosphere or inducing input on the environmental restoration program.

Though I believe the RAB should be dissolved, I remain fully committed to seeking community involvement and input for ongoing and future HPS cleanup actions. While we work through this RAB dissolution process, I will post information such as fact sheets and presentations on the Hunter's Point website (www.bracpmo.navy.mil), as well as provide informational mailings to elicit community member comments and questions.

Ser BPMOW.DG/0317
MAY 22 2009

As stated earlier, the Navy fully supports the need for open, meaningful dialogue with the diverse Bayview Hunters Point Community regarding our environmental cleanup actions and decisions. Should the RAB be dissolved, the revised community involvement program may include community environmental forums, including using internet-based technology to more easily reach a diverse audience; expanded Monthly Progress Reports and facts sheets; and hosting technical discussions and tours of cleanup sites on HPS for interested community members. I solicit your comments on this letter of intent, as well as your ideas regarding more productive community involvement alternatives between the Bayview Hunters Point Community and the Navy. I request you provide your ideas and comments to HPS Base Closure Manager, Mr. Douglas Gilkey, at the address on the letterhead no later than 30 June 2009. Please feel free to contact Mr. Gilkey at (619)-532-0949 if you have any questions about this notice or the dissolution process.

During the interim period between my publishing of this intent letter and a final decision as to the RAB's dissolution, further meetings of the RAB are suspended.

I thank each of you for the effort you have made as a member of the HPS RAB. The Navy places a high priority on obtaining meaningful and timely input from the community in the course of its environmental cleanup activities and hope you will continue to participate in the HPS environmental restoration program in the future. Thank you for your contributions.

Sincerely,

LAURA DUCHNAK
Director, BRAC PMO West

Encl: (1) 32 C.F.R Part 202.10

32 C.F.R Part 202.10

(b) *RAB dissolution*—(1) *Requirements for RAB dissolution*. An Installation Commander may recommend dissolution of a RAB when a RAB is no longer fulfilling the intended purpose of advising and providing community input to an Installation Commander and decision makers on environmental restoration projects as described in §202.1(b).

(2) *Dissolution procedures*. If the Installation Commander is considering dissolving the RAB, the Installation Commander shall:

(i) Consult with EPA, state, tribal and local government representatives, as appropriate, regarding dissolving the RAB.

(ii) Notify the RAB community co-chair and members in writing of the intent to dissolve the RAB and the reasons for doing so and provide the RAB members 30 days to respond in writing. The Installation Commander shall consider RAB member responses, and in consultation with EPA, state, tribal and local government representatives, as appropriate, determine the appropriate actions.

(iii) Notify the public of the proposal to dissolve the RAB and provide a 30-day public comment period on the proposal, if the Installation Commander decides to proceed with dissolution. At the conclusion of the public comment period, the Installation Commander will review the public comments, consult with EPA, state, tribal and local government representatives, as appropriate, and, if the Installation Commander still believes dissolution is appropriate, render a recommendation to that effect.

(iv) Send the recommendation, responsiveness summary, and all supporting documentation via the chain-of-command to the Military Component's Environmental Deputy Assistant Secretary (or equivalent) for approval or disapproval. The Military Component's Environmental Deputy Assistant Secretary (or equivalent) shall notify the Office of the Deputy Under Secretary of Defense (Installations & Environment) (or equivalent) of the decision to approve or disapprove the request to dissolve the RAB and the rationale for that decision.

(v) Document the recommendation, responsiveness summary, and the rationale for dissolution in a memorandum for inclusion in the Administrative Record, notify the public of the decision through written notice to the RAB members and through publication of a notice in a local newspaper of general circulation and describe other ongoing public involvement opportunities that are available, once the Military Component's Environmental Deputy Assistant Secretary (or equivalent) makes a final decision.

(c) *Reestablishing an adjourned or dissolved RAB.* An Installation Commander may reestablish an adjourned or dissolved RAB if there is sufficient and sustained community interest in doing so, and there are environmental restoration activities still ongoing at the installation or that may start up again. Where a RAB is adjourned or dissolved and environmental restoration activities continue, the Installation Commander should reassess community interest at least every 24 months. When all environmental restoration decisions have been made and required remedies are in place and are properly operating at an installation, reassessment of the community interest for reestablishing the RAB is not necessary. When additional environmental restoration decisions have to be made resulting from subsequent actions, such as long-term management and five-year reviews, the installation will reassess community interest for reestablishing the RAB. Where the reassessment finds sufficient and sustained community interest at previously adjourned or dissolved RABs, the Installation Commander should reestablish a RAB. Where the reassessment does not find sufficient and sustained community interest in reestablishing the RAB, the Installation Commander shall document in a memorandum for the record the procedures followed in the reassessment and the findings of the reassessment. This document shall be included in the Administrative Record for the installation. If there is interest in reestablishment at a previously dissolved RAB, but the Installation Commander determines that the same conditions exist that required the original dissolution, he or she will request, through the chain-of-command to the Military Component's Deputy Assistant Secretary, an exception to reestablishing the RAB. If those conditions no longer exist at a previously dissolved RAB, and there is sufficient and sustained interest in reestablishment, the Installation Commander should recommend to the Deputy Assistant Secretary that the RAB be reestablished. The Deputy Assistant Secretary will take the Installation Commander's recommendation under advisement and may approve that RAB for reestablishment.

(d) *Public comment.* If the Installation Commander intends to recommend dissolution of a RAB or reestablish a dissolved RAB, the Installation Commander shall notify the public of the proposal to dissolve or reestablish the RAB and provide a 30-day public comment period on the proposal. At the conclusion of the public comment period, the Installation Commander shall review public comments; consult with EPA and state, tribal, or local government representatives, as appropriate; prepare a responsiveness summary; and render a recommendation. The recommendation, responsiveness summary, and all supporting documentation should be sent via the chain-of-command to the Military Component's Environmental Deputy Assistant Secretary (or equivalent) for approval or disapproval. The Installation Commander shall notify the public of the decision.

DEPARTMENT OF THE NAVY
OFFICE OF THE ASSISTANT SECRETARY
(INSTALLATIONS AND ENVIRONMENT)
1000 NAVY PENTAGON
WASHINGTON DC 20350-1000

DEC 23 2009

MEMORANDUM TO MS. LAURA DUCHNAK, DIRECTOR,
BASE REALIGNMENT AND CLOSURE (BRAC) PROGRAM

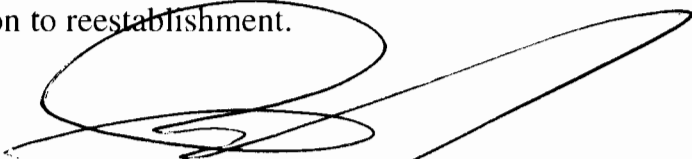

SUBJECT: Hunters Point Restoration Advisory Board (RAB)

I received your December 22, 2009 memorandum (Attachment 1) submitted pursuant to the Code of Federal Regulations (CFR) at Title 32, Section 202.10(b) along with the supporting materials, wherein you recommend the dissolution of the Hunters Point Shipyard (HPS) Restoration Advisory Board (RAB). In accordance with Title 32, I considered your recommendation and the content of the administrative record in reaching my decision. I also reviewed the process you undertook to make the public aware of your intentions, as well as attempts made by your staff to resolve issues affecting the RAB's effectiveness. Based on review of that information, I have determined the HPS RAB is unable to fulfill its intended purpose of advising Navy's Environmental Restoration program managers and decision makers, and I therefore approve your request to dissolve the HPS RAB.

The Department of the Navy (DON) establishes RABs to provide stakeholder involvement in the environmental restoration process at Department of Defense (DoD) installations. The RAB is an opportunity for parties who may be affected by environmental restoration activities to review program progress, and participate in a dialogue where they provide comment and advice to environmental restoration program managers and decision makers. I have reviewed documents within the administrative record. I paid particular attention to the minutes of various RAB meetings (Attch. 2, 13, 14 and 20). The meeting minutes revealed a RAB that at times was productive but more often was unproductive. While members of the RAB listened and provided insightful comments at one point, the next moment conversations devolved into acrimony and accusation on issues which had little or nothing to do with HPS environmental restoration. The meeting of January 2009 is a prime example of this inconsistency (Attch. 20). The RAB Community Co-Chair notes in Attachment 22 that the RAB is an advisory board for environmental clean-up decisions; however, in that same note, he demands initiation of a grand jury investigation on economic matters and immediate removal from the RAB of a San Francisco City regulator. Email by current and former members of the RAB was also telling of the wide dichotomy of views within the RAB regarding its continued value (Attach. 30, 34, 35, 37, 39, 40, 41 and 61). Reasonable steps were taken to resolve issues affecting the RAB's effectiveness, as seen by regular use of a meeting facilitator and numerous attempts by Navy personnel to work with RAB members on issues that are outside the RAB's purview (Attch. 62). Nevertheless, it appears clear to me that irresolvable internal issues prevent the HPS RAB from fulfilling its

intended purpose of advising the environmental restoration program managers and decision makers.

Since February 2009, you have taken numerous steps to seek out and implement enhanced community involvement in other forums and through internet technologies. While several actions have shown promise, others may not have been completely successful (Attch.6). I encourage you to continue to provide information to the public, seek their input on the environmental restoration program implementation, and continue to explore other opportunities for meaningful dialogue with the local community. I am directing you to monitor and reassess community interest in the RAB process at least every 24 months. If your reassessment finds sufficient and sustained community interest for reestablishing the HPS RAB, you should reestablish a RAB. However, if the same conditions occurring at the time of this RAB's dissolution still exist, you should notify this office through your chain of command and request an exception to reestablishment.

Richard G. Mach, Jr., P.E.
Acting Deputy Assistant Secretary of the Navy
(Environment)

Appendix G: Regulations and Guidance for Community Involvement

The Department of the Navy's Installation Restoration Program is conducted in accordance with federal and state requirements, and its purpose is twofold—(1) to identify, investigate, and clean up or control releases of hazardous substances, and (2) to reduce the risk to human health and the environment. The Navy is the lead federal agency for the Installation Restoration Program at Hunters Point Shipyard (HPS). The figure on [Page G 2](#) presents the major phases of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) process.

Federal and state environmental statutes and amendments require community involvement for hazardous waste sites, and guidance documents have been created to address these requirements. The United States Environmental Protection Agency (U.S. EPA) community involvement documents can be found at www.epa.gov/superfund/community/involvement.htm. The Department of Defense documents can be found at https://portal.navfac.navy.mil/portal/page/portal/NAVFAC/NAVFAC_WW_PP/NAVFAC_NFESC_PP/ENVIRONMENTAL/ERB/COMINV. The Navy's Community Involvement Plan (CIP) at HPS meets these requirements. The following state and federal environmental statutes and amendments require community involvement program activities for hazardous waste sites:

- Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (Title 42, *United States Code*, Section 9601, and following sections), also known as Superfund
- Superfund Amendments and Reauthorization Act of 1986, which amended CERCLA
- Community Environmental Response Facilitation Act of 1992, which also amended CERCLA
- California Health and Safety Code, Division 20
- Title 22, California Code of Regulations, Division 4.5
- *California Public Resources Code*, Section 21000 and the sections that follow Section 21000 in the *Public Resource Code*

The guidelines for conducting community involvement, including preparing a CIP, are set forth in the following:

- "Superfund Community Involvement Handbook" (U.S. EPA, 2005)
- "Superfund Community Involvement Toolkit" (U.S. EPA, 2005)
- "Navy/Marine Corps Installation Restoration Manual" (Naval Facilities Engineering Command, 1997)
- "Department of Defense/EPA Restoration Advisory Board (RAB) Implementation Guidelines" (Department of Defense, 1994)
- "State of California Environmental Protection Agency Department of Toxic Substances Control (DTSC) Public Participation Manual" (DTSC, 2001)

In addition, the National Oil and Hazardous Substances Pollution Contingency Plan, also called the National Contingency Plan (NCP), contains the federal government's requirements for responding to

Appendix G: Regulations and Guidance for Community Involvement (continued)

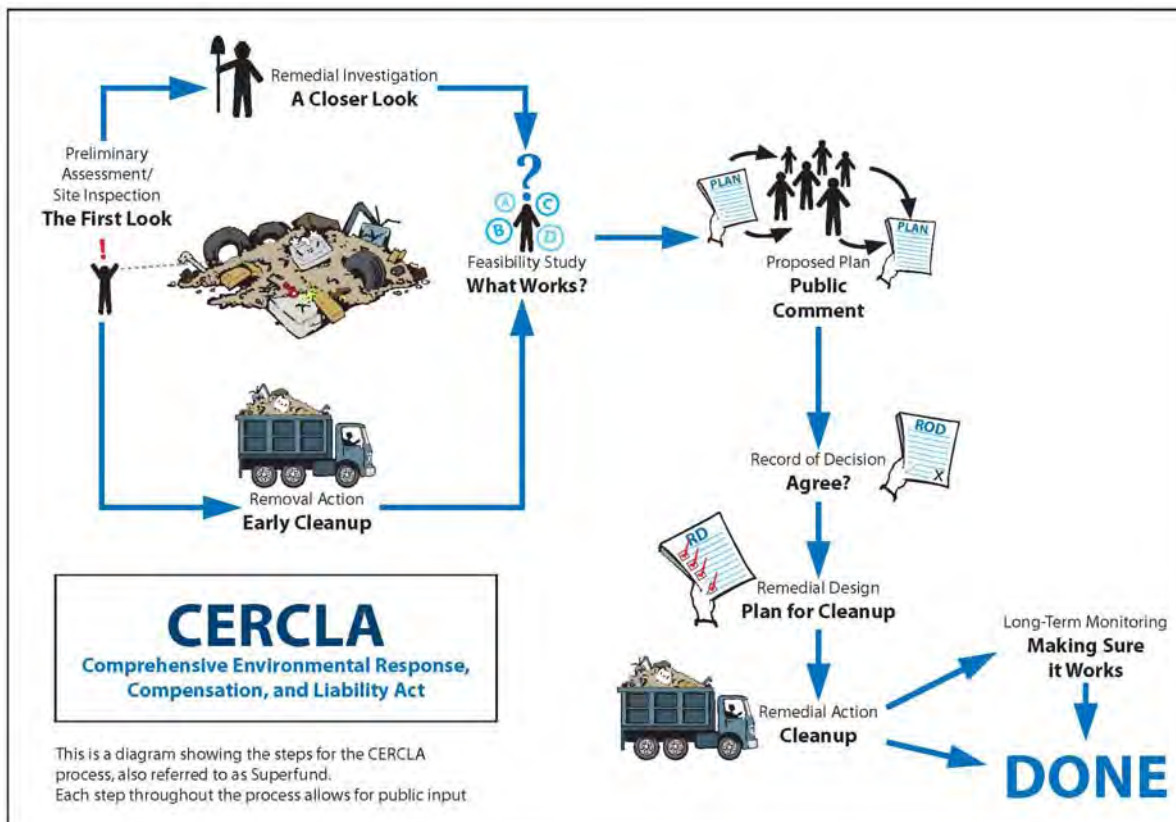

hazardous substance releases. The Navy meets all NCP requirements for public involvement. In addition, the Navy's Installation Restoration Program, described below, exceeds the NCP requirements for public involvement. The relevant text from the NCP (40 CFR 300.430) has been provided below beginning on page G 7.

Installation Restoration Program

The Department of Defense developed the Installation Restoration Program in 1981 to comply with CERCLA and other federal and state requirements at military facilities.

CERCLA requires that a remedial action or removal action process be selected specifically for each Installation Restoration Program site. A removal action is an environmental response that reduces threats to human health and the environment, such as fencing a site or excavating and removing contaminated soil. A removal action may be an interim action or may be the final cleanup for the site. A remedial action is the long term final cleanup of a site, such as a groundwater treatment system or a landfill cap.

A remedial action or removal action is selected by evaluating the advantages and disadvantages of each alternative to clean up a site and selecting the one that best protects human health and the environment in a cost effective manner. Illustrated in the following graphic and discussed on the following pages are the stages of each phase of CERCLA, including associated community involvement program activities.

Appendix G: Regulations and Guidance for Community Involvement (continued)

Remedial Action Process

The CERCLA remedial action process, as defined in Title 42 USC Section 9601 and the following sections, specifies the phases to thoroughly evaluate the nature and extent of contamination and to identify and evaluate cleanup alternatives. The various phases of the cleanup process are described below.

Discovery and Notification – Discovery occurs when a hazardous waste site is discovered or a release of hazardous materials into the environment is noticed. The installation Commanding Officer is responsible for notifying the U.S. EPA and state regulatory agencies of the hazardous waste site.

Preliminary Assessment – A preliminary assessment is conducted to evaluate whether current or past waste management practices have resulted in a release of hazardous substances. The preliminary assessment is completed through record searches and visual inspections of the area. This stage results in a list of potential areas of concern that warrant further investigation.

Site Inspection – The site inspection usually requires sampling and analysis of soil, surface water, groundwater, or any combination of the three. Based on the data that result, the site will be (1) slated for no action, (2) recommended for a removal action, or (3) investigated further in the remedial investigation phase. If the area will be investigated further, an Information Repository is established.

Remedial Investigation – The remedial investigation involves a comprehensive study of site soils, surface water, and groundwater to evaluate the lateral and vertical extent of contamination. Risks to human health and the environment are also assessed. Based on the estimated risk posed, the site could be (1) recommended for a removal action, (2) recommended for no action, or (3) entered into the next phase, the feasibility study.

Feasibility Study – The feasibility study uses the data collected during the remedial investigation to develop and evaluate cleanup alternatives. Cleanup alternatives are evaluated based on a variety of criteria, including technical feasibility, cost effectiveness, and community acceptance.

Proposed Plan – The Proposed Plan is a fact sheet that is developed to describe cleanup alternatives and explain why the preferred alternative was chosen. ***This is the key point at which community members are highly encouraged to provide comments.*** The Navy considers all comments received on the Proposed Plan before a final decision is made. The Navy provides a reply to all significant comments in a responsiveness summary in the Record of Decision.

Record of Decision – The selected cleanup alternative is documented in the Record of Decision. The notice of availability of the Record of Decision is ***publicized in a local newspaper of general circulation.***

Remedial Design – The design for the cleanup alternatives is prepared and a fact sheet is distributed before the Navy begins a remedial action (or cleanup). ***The need for updating the CIP will also be assessed at this time.***

Remedial Action – The cleanup alternative is carried out and the ***public is kept informed.*** At a minimum, the community will have a point of contact who can be contacted to ask questions or raise concerns.

Appendix G: Regulations and Guidance for Community Involvement (continued)

Post Project Activities – Post project activities may include long term monitoring. Long term monitoring occurs at sites where hazardous substances, pollutants, or contaminants remain after the remedial action has been completed. Long term monitoring is also used to confirm that previous site remediation continues to be effective. Every five years the Navy will conduct a review of cleanup where waste is left in place to ensure the remedy remains protective of human health and the environment.

Site Closeout – Site closeout occurs when all necessary remedial action activities are complete and the Navy and regulatory agencies agree no further action is appropriate at the site. Site closeout can also occur during the remedial action process.

Removal Action Process

In some cases, the Navy may conduct a removal action of hazardous substances from a site. The removal action can be implemented at any time during the remedial action process. These removal actions are carried out in accordance with federal and state requirements. The Navy can conduct a removal action if there is an immediate or perceived threat to public health or the environment. Any one or more of the following criteria must be met to implement a removal action:

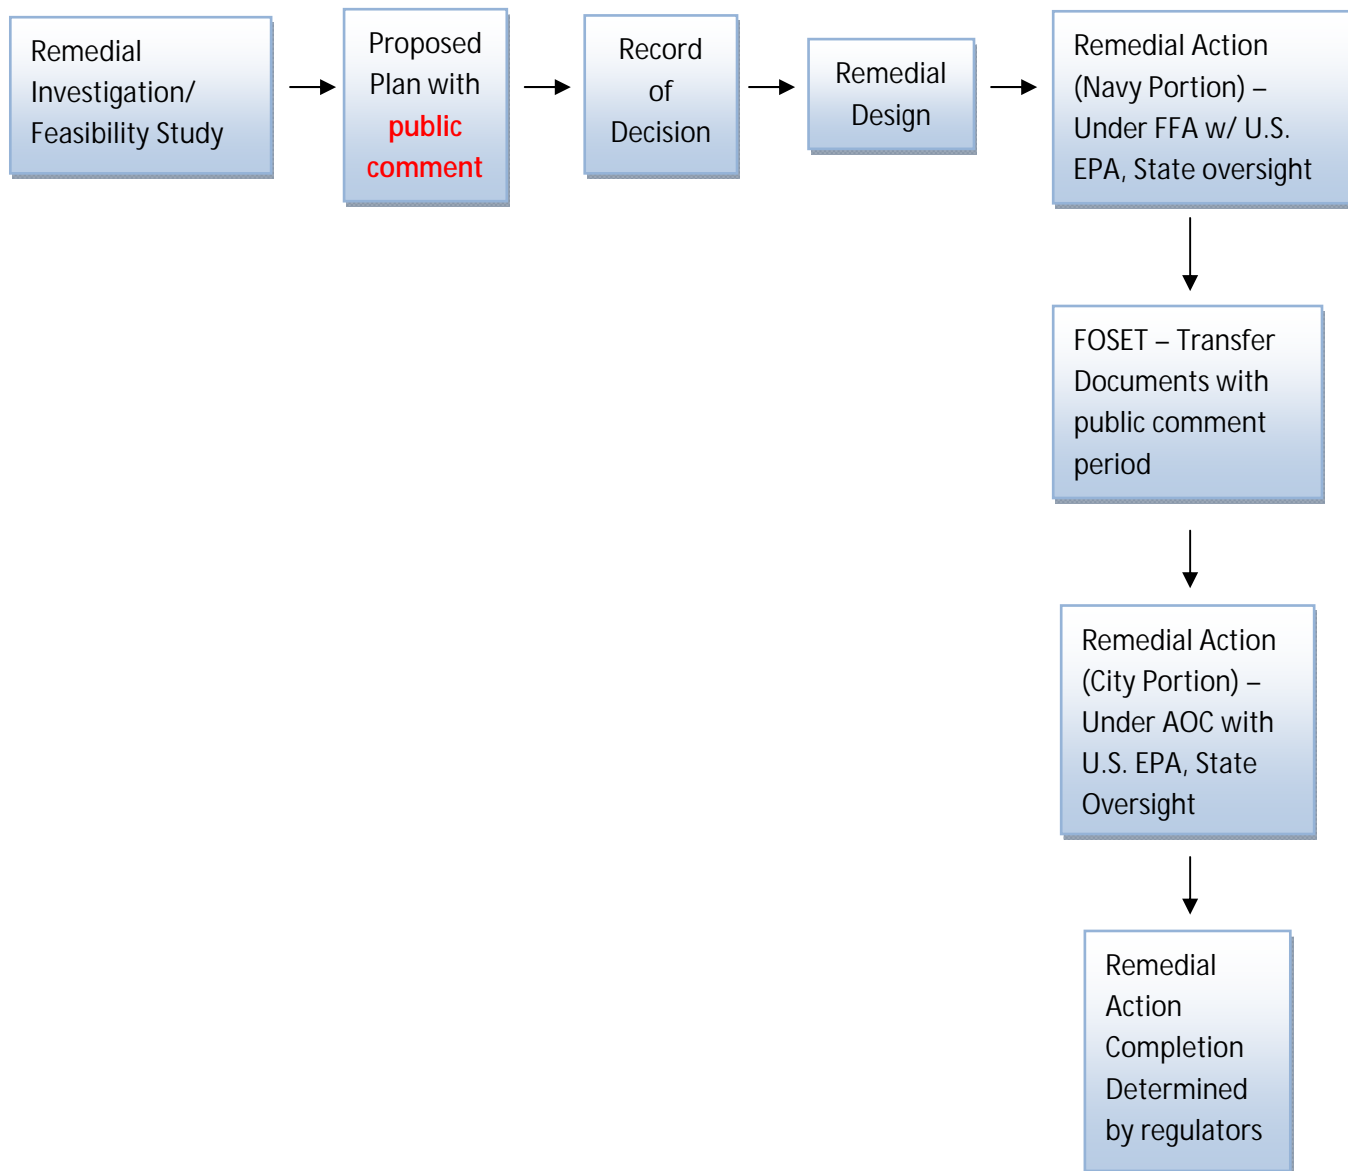

- An imminent threat to human health or the environment exists
- The source of the contamination can be removed quickly and effectively
- Access to contamination can be limited
- A removal action is the fastest way of remediating the site

The U.S. EPA has defined three types of removal actions—emergency, time critical, and non time critical removals. These removal actions types and corresponding documentation are detailed as follows:

- **Emergency Removal Actions:** Emergency removal actions occur when cleanup must begin within 2 weeks after the lead agency concludes that a removal action is necessary.
- **Time Critical Removal Actions:** Time critical removal actions occur when cleanup can be initiated within 6 months after the lead agency concludes that a removal action is necessary.
- **Non Time Critical Removal Actions:** Non time critical removal actions occur when cleanup need not begin within 6 months after the lead agency concludes that a removal action is necessary. Non time critical removal actions require preparation of an Engineering Evaluation/Cost Analysis and an Action Memorandum.
- **Engineering Evaluation/Cost Analysis:** An Engineering Evaluation/Cost Analysis is the first step in the non time critical removal action process. The Engineering Evaluation/Cost Analysis document evaluates alternatives for cleanup and states the Navy's preferred cleanup alternative.
- **Action Memorandum:** The final decision about the removal action selected is documented in the Action Memorandum. The draft Action Memorandum is normally announced with the Engineering Evaluation/Cost Analysis in a public notice.

Appendix G: Regulations and Guidance for Community Involvement (continued)

CERCLA Process with Early Transfer

Appendix G: Regulations and Guidance for Community Involvement (continued)

Pertinent Passages from the National Contingency Plan (40 CFR 300.430)

The relevant NCP text from the Code of Federal Regulations pertaining to the requirements for community involvement has been provided on the following pages.

requirements of 29 CFR 1910.120 concerning use of an incident command system.

(b) In a response action taken by a responsible party, the responsible party must assure that an occupational safety and health program consistent with 29 CFR 1910.120 is made available for the protection of workers at the response site.

(c) In a response taken under the NCP by a lead agency, an occupational safety and health program should be made available for the protection of workers at the response site, consistent with, and to the extent required by, 29 CFR 1910.120. Contracts relating to a response action under the NCP should contain assurances that the contractor at the response site will comply with this program and with any applicable provisions of the Occupational Safety and Health Act of 1970 (29 U.S.C. 651 et seq.) (OSH Act) and state laws with plans approved under section 18 of the OSH Act.

(d) When a state, or political subdivision of a state, without an OSHA-approved state plan is the lead agency for response, the state or political subdivision must comply with standards in 40 CFR part 311, promulgated by EPA pursuant to section 126(f) of SARA.

(e) Requirements, standards, and regulations of the OSH Act and of state OSH laws not directly referenced in paragraphs (a) through (d) of this section, must be complied with where applicable. Federal OSH Act requirements include, among other things, Construction Standards (29 CFR part 1926), General Industry Standards (29 CFR part 1910), and the general duty requirement of section 5(a)(1) of the OSH Act (29 U.S.C. 654(a)(1)). No action by the lead agency with respect to response activities under the NCP constitutes an exercise of statutory authority within the meaning of section 4(b)(1) of the OSH Act. All governmental agencies and private employers are directly responsible for the health and safety of their own employees.

§ 300.155 Public information and community relations.

(a) When an incident occurs, it is imperative to give the public prompt, accurate information on the nature of

the incident and the actions underway to mitigate the damage. OSCs/RPMs and community relations personnel should ensure that all appropriate public and private interests are kept informed and that their concerns are considered throughout a response. They should coordinate with available public affairs/community relations resources to carry out this responsibility by establishing, as appropriate, a Joint Information Center bringing together resources from federal and state agencies and the responsible party.

(b) An on-scene news office may be established to coordinate media relations and to issue official federal information on an incident. Whenever possible, it will be headed by a representative of the lead agency. The OSC/RPM determines the location of the on-scene news office, but every effort should be made to locate it near the scene of the incident. If a participating agency believes public interest warrants the issuance of statements and an on-scene news office has not been established, the affected agency should recommend its establishment. All federal news releases or statements by participating agencies should be cleared through the OSC/RPM. Information dissemination relating to natural resource damage assessment activities shall be coordinated through the lead administrative trustee. The designated lead administrative trustee may assist the OSC/RPM by disseminating information on issues relating to damage assessment activities. Following termination of removal activity, information dissemination on damage assessment activities shall be through the lead administrative trustee.

(c) The community relations requirements specified in §§ 300.415, 300.430, and 300.435 apply to removal, remedial, and enforcement actions and are intended to promote active communication between communities affected by discharges or releases and the lead agency responsible for response actions. Community Relations Plans (CRPs) are required by EPA for certain response actions. The OSC/RPM should ensure coordination with such plans which may be in effect at the scene of a discharge or release or which may need to be developed during follow-up activities.

§ 300.415

40 CFR Ch. I (7-1-03 Edition)

federal environmental or state environmental or facility siting laws. Waivers described in § 300.430(f)(1)(ii)(C) may be used for removal actions. Other federal and state advisories, criteria, or guidance may, as appropriate, be considered in formulating the removal action (see § 300.400(g)(3)). In determining whether compliance with ARARs is practicable, the lead agency may consider appropriate factors, including:

- (1) The urgency of the situation; and
- (2) The scope of the removal action to be conducted.

(k) Removal actions pursuant to section 106 or 122 of CERCLA are not subject to the following requirements of this section:

(1) Section 300.415(a)(2) requirement to locate responsible parties and have them undertake the response;

(2) Section 300.415(b)(2)(vii) requirement to consider the availability of other appropriate federal or state response and enforcement mechanisms to respond to the release;

(3) Section 300.415(b)(5) requirement to terminate response after \$2 million has been obligated or 12 months have elapsed from the date of the initial response; and

(4) Section 300.415(g) requirement to assure an orderly transition from removal to remedial action.

(l) To the extent practicable, provision for post-removal site control following a CERCLA Fund-financed removal action at both NPL and non-NPL sites is encouraged to be made prior to the initiation of the removal action. Such post-removal site control includes actions necessary to ensure the effectiveness and integrity of the removal action after the completion of the on-site removal action or after the \$2 million or 12-month statutory limits are reached for sites that do not meet the exemption criteria in paragraph (b)(5) of this section. Post-removal site control may be conducted by:

(1) The affected state or political subdivision thereof or local units of government for any removal;

(2) Potentially responsible parties; or

(3) EPA's remedial program for some federal-lead Fund-financed responses at NPL sites.

(m) OSCs/RPMs conducting removal actions shall submit OSC reports to the RRT as required by § 300.165.

(n) *Community relations in removal actions.* (1) In the case of all CERCLA removal actions taken pursuant to § 300.415 or CERCLA enforcement actions to compel removal response, a spokesperson shall be designated by the lead agency. The spokesperson shall inform the community of actions taken, respond to inquiries, and provide information concerning the release. All news releases or statements made by participating agencies shall be coordinated with the OSC/RPM. The spokesperson shall notify, at a minimum, immediately affected citizens, state and local officials, and, when appropriate, civil defense or emergency management agencies.

(2) For CERCLA actions where, based on the site evaluation, the lead agency determines that a removal is appropriate, and that less than six months exists before on-site removal activity must begin, the lead agency shall:

(i) Publish a notice of availability of the administrative record file established pursuant to § 300.820 in a major local newspaper of general circulation within 60 days of initiation of on-site removal activity;

(ii) Provide a public comment period, as appropriate, of not less than 30 days from the time the administrative record file is made available for public inspection, pursuant to § 300.820(b)(2); and

(iii) Prepare a written response to significant comments pursuant to § 300.820(b)(3).

(3) For CERCLA removal actions where on-site action is expected to extend beyond 120 days from the initiation of on-site removal activities, the lead agency shall by the end of the 120-day period:

(i) Conduct interviews with local officials, community residents, public interest groups, or other interested or affected parties, as appropriate, to solicit their concerns, information needs, and how or when citizens would like to be involved in the Superfund process;

(ii) Prepare a formal community relations plan (CRP) based on the community interviews and other relevant information, specifying the community

relations activities that the lead agency expects to undertake during the response; and

(iii) Establish at least one local information repository at or near the location of the response action. The information repository should contain items made available for public information. Further, an administrative record file established pursuant to subpart I for all removal actions shall be available for public inspection in at least one of the repositories. The lead agency shall inform the public of the establishment of the information repository and provide notice of availability of the administrative record file for public review. All items in the repository shall be available for public inspection and copying.

(4) Where, based on the site evaluation, the lead agency determines that a CERCLA removal action is appropriate and that a planning period of at least six months exists prior to initiation of the on-site removal activities, the lead agency shall at a minimum:

(i) Comply with the requirements set forth in paragraphs (n)(3)(i), (ii), and (iii) of this section, prior to the completion of the EE/CA, or its equivalent, except that the information repository and the administrative record file will be established no later than when the EE/CA approval memorandum is signed;

(ii) Publish a notice of availability and brief description of the EE/CA in a major local newspaper of general circulation pursuant to § 300.820;

(iii) Provide a reasonable opportunity, not less than 30 calendar days, for submission of written and oral comments after completion of the EE/CA pursuant to § 300.820(a). Upon timely request, the lead agency will extend the public comment period by a minimum of 15 days; and

(iv) Prepare a written response to significant comments pursuant to § 300.820(a).

[59 FR 47448, Sept. 15, 1994]

§ 300.420 Remedial site evaluation.

(a) *General.* The purpose of this section is to describe the methods, procedures, and criteria the lead agency shall use to collect data, as required, and evaluate releases of hazardous sub-

stances, pollutants, or contaminants. The evaluation may consist of two steps: a remedial preliminary assessment (PA) and a remedial site inspection (SI).

(b) *Remedial preliminary assessment.* (1) The lead agency shall perform a remedial PA on all sites in CERCLIS as defined in § 300.5 to:

(i) Eliminate from further consideration those sites that pose no threat to public health or the environment;

(ii) Determine if there is any potential need for removal action;

(iii) Set priorities for site inspections; and

(iv) Gather existing data to facilitate later evaluation of the release pursuant to the Hazard Ranking System (HRS) if warranted.

(2) A remedial PA shall consist of a review of existing information about a release such as information on the pathways of exposure, exposure targets, and source and nature of release. A remedial PA shall also include an off-site reconnaissance as appropriate. A remedial PA may include an on-site reconnaissance where appropriate.

(3) If the remedial PA indicates that a removal action may be warranted, the lead agency shall initiate removal evaluation pursuant to § 300.410.

(4) In performing a remedial PA, the lead agency may complete the EPA Preliminary Assessment form, available from EPA regional offices, or its equivalent, and shall prepare a PA report, which shall include:

(i) A description of the release;

(ii) A description of the probable nature of the release; and

(iii) A recommendation on whether further action is warranted, which lead agency should conduct further action, and whether an SI or removal action or both should be undertaken.

(5) Any person may petition the lead federal agency (EPA or the appropriate federal agency in the case of a release or suspected release from a federal facility), to perform a PA of a release when such person is, or may be, affected by a release of a hazardous substance, pollutant, or contaminant. Such petitions shall be addressed to the EPA Regional Administrator for

that conforms with 29 CFR 1910.120 (l)(1) and (l)(2).

(7) If natural resources are or may be injured by the release, ensure that state and federal trustees of the affected natural resources have been notified in order that the trustees may initiate appropriate actions, including those identified in subpart G of this part. The lead agency shall seek to coordinate necessary assessments, evaluations, investigations, and planning with such state and federal trustees.

(8) Develop sampling and analysis plans that shall provide a process for obtaining data of sufficient quality and quantity to satisfy data needs. Sampling and analysis plans shall be reviewed and approved by EPA. The sampling and analysis plans shall consist of two parts:

(i) The field sampling plan, which describes the number, type, and location of samples and the type of analyses; and

(ii) The quality assurance project plan, which describes policy, organization, and functional activities and the data quality objectives and measures necessary to achieve adequate data for use in selecting the appropriate remedy.

(9) Initiate the identification of potential federal and state ARARs and, as appropriate, other criteria, advisories, or guidance to be considered.

(c) *Community relations.* (1) The community relations requirements described in this section apply to all remedial activities undertaken pursuant to CERCLA section 104 and to section 106 or section 122 consent orders or decrees, or section 106 administrative orders.

(2) The lead agency shall provide for the conduct of the following community relations activities, to the extent practicable, prior to commencing field work for the remedial investigation:

(i) Conducting interviews with local officials, community residents, public interest groups, or other interested or affected parties, as appropriate, to solicit their concerns and information needs, and to learn how and when citizens would like to be involved in the Superfund process.

(ii) Preparing a formal community relations plan (CRP), based on the community interviews and other relevant information, specifying the community relations activities that the lead agency expects to undertake during the remedial response. The purpose of the CRP is to:

(A) Ensure the public appropriate opportunities for involvement in a wide variety of site-related decisions, including site analysis and characterization, alternatives analysis, and selection of remedy;

(B) Determine, based on community interviews, appropriate activities to ensure such public involvement, and

(C) Provide appropriate opportunities for the community to learn about the site.

(iii) Establishing at least one local information repository at or near the location of the response action. Each information repository should contain a copy of items made available to the public, including information that describes the technical assistance grants application process. The lead agency shall inform interested parties of the establishment of the information repository.

(iv) Informing the community of the availability of technical assistance grants.

(3) For PRP actions, the lead agency shall plan and implement the community relations program at a site. PRPs may participate in aspects of the community relations program at the discretion of and with oversight by the lead agency.

(4) The lead agency may conduct technical discussions involving PRPs and the public. These technical discussions may be held separately from, but contemporaneously with, the negotiations/settlement discussions.

(5) In addition, the following provisions specifically apply to enforcement actions:

(i) Lead agencies entering into an enforcement agreement with de minimis parties under CERCLA section 122(g) or cost recovery settlements under section 122(h) shall publish a notice of the proposed agreement in the FEDERAL REGISTER at least 30 days before the agreement becomes final, as required

by section 122(i). The notice must identify the name of the facility and the parties to the proposed agreement and must allow an opportunity for comment and consideration of comments; and

(ii) Where the enforcement agreement is embodied in a consent decree, public notice and opportunity for public comment shall be provided in accordance with 28 CFR 50.7.

(d) *Remedial investigation.* (1) The purpose of the remedial investigation (RI) is to collect data necessary to adequately characterize the site for the purpose of developing and evaluating effective remedial alternatives. To characterize the site, the lead agency shall, as appropriate, conduct field investigations, including treatability studies, and conduct a baseline risk assessment. The RI provides information to assess the risks to human health and the environment and to support the development, evaluation, and selection of appropriate response alternatives. Site characterization may be conducted in one or more phases to focus sampling efforts and increase the efficiency of the investigation. Because estimates of actual or potential exposures and associated impacts on human and environmental receptors may be refined throughout the phases of the RI as new information is obtained, site characterization activities should be fully integrated with the development and evaluation of alternatives in the feasibility study. Bench- or pilot-scale treatability studies shall be conducted, when appropriate and practicable, to provide additional data for the detailed analysis and to support engineering design of remedial alternatives.

(2) The lead agency shall characterize the nature of and threat posed by the hazardous substances and hazardous materials and gather data necessary to assess the extent to which the release poses a threat to human health or the environment or to support the analysis and design of potential response actions by conducting, as appropriate, field investigations to assess the following factors:

(i) Physical characteristics of the site, including important surface features, soils, geology, hydrogeology, meteorology, and ecology;

(ii) Characteristics or classifications of air, surface water, and ground water;

(iii) The general characteristics of the waste, including quantities, state, concentration, toxicity, propensity to bioaccumulate, persistence, and mobility;

(iv) The extent to which the source can be adequately identified and characterized;

(v) Actual and potential exposure pathways through environmental media;

(vi) Actual and potential exposure routes, for example, inhalation and ingestion; and

(vii) Other factors, such as sensitive populations, that pertain to the characterization of the site or support the analysis of potential remedial action alternatives.

(3) The lead and support agency shall identify their respective potential ARARs related to the location of and contaminants at the site in a timely manner. The lead and support agencies may also, as appropriate, identify other pertinent advisories, criteria, or guidance in a timely manner (see § 300.400(g)(3)).

(4) Using the data developed under paragraphs (d)(1) and (2) of this section, the lead agency shall conduct a site-specific baseline risk assessment to characterize the current and potential threats to human health and the environment that may be posed by contaminants migrating to ground water or surface water, releasing to air, leaching through soil, remaining in the soil, and bioaccumulating in the food chain. The results of the baseline risk assessment will help establish acceptable exposure levels for use in developing remedial alternatives in the FS, as described in paragraph (e) of this section.

(e) *Feasibility study.* (1) The primary objective of the feasibility study (FS) is to ensure that appropriate remedial alternatives are developed and evaluated such that relevant information concerning the remedial action options can be presented to a decision-maker and an appropriate remedy selected. The lead agency may develop a feasibility study to address a specific site problem or the entire site. The development and evaluation of alternatives

(8) The lead agency shall notify the support agency of the alternatives that will be evaluated in detail to facilitate the identification of ARARs and, as appropriate, pertinent advisories, criteria, or guidance to be considered.

(9) *Detailed analysis of alternatives.* (i) A detailed analysis shall be conducted on the limited number of alternatives that represent viable approaches to remedial action after evaluation in the screening stage. The lead and support agencies must identify their ARARs related to specific actions in a timely manner and no later than the early stages of the comparative analysis. The lead and support agencies may also, as appropriate, identify other pertinent advisories, criteria, or guidance in a timely manner.

(ii) The detailed analysis consists of an assessment of individual alternatives against each of nine evaluation criteria and a comparative analysis that focuses upon the relative performance of each alternative against those criteria.

(iii) *Nine criteria for evaluation.* The analysis of alternatives under review shall reflect the scope and complexity of site problems and alternatives being evaluated and consider the relative significance of the factors within each criteria. The nine evaluation criteria are as follows:

(A) *Overall protection of human health and the environment.* Alternatives shall be assessed to determine whether they can adequately protect human health and the environment, in both the short- and long-term, from unacceptable risks posed by hazardous substances, pollutants, or contaminants present at the site by eliminating, reducing, or controlling exposures to levels established during development of remediation goals consistent with §300.430(e)(2)(i). Overall protection of human health and the environment draws on the assessments of other evaluation criteria, especially long-term effectiveness and permanence, short-term effectiveness, and compliance with ARARs.

(B) *Compliance with ARARs.* The alternatives shall be assessed to determine whether they attain applicable or relevant and appropriate requirements under federal environmental laws and

state environmental or facility siting laws or provide grounds for invoking one of the waivers under paragraph (f)(1)(ii)(C) of this section.

(C) *Long-term effectiveness and permanence.* Alternatives shall be assessed for the long-term effectiveness and permanence they afford, along with the degree of certainty that the alternative will prove successful. Factors that shall be considered, as appropriate, include the following:

(1) Magnitude of residual risk remaining from untreated waste or treatment residuals remaining at the conclusion of the remedial activities. The characteristics of the residuals should be considered to the degree that they remain hazardous, taking into account their volume, toxicity, mobility, and propensity to bioaccumulate.

(2) Adequacy and reliability of controls such as containment systems and institutional controls that are necessary to manage treatment residuals and untreated waste. This factor addresses in particular the uncertainties associated with land disposal for providing long-term protection from residuals; the assessment of the potential need to replace technical components of the alternative, such as a cap, a slurry wall, or a treatment system; and the potential exposure pathways and risks posed should the remedial action need replacement.

(D) *Reduction of toxicity, mobility, or volume through treatment.* The degree to which alternatives employ recycling or treatment that reduces toxicity, mobility, or volume shall be assessed, including how treatment is used to address the principal threats posed by the site. Factors that shall be considered, as appropriate, include the following:

(1) The treatment or recycling processes the alternatives employ and materials they will treat;

(2) The amount of hazardous substances, pollutants, or contaminants that will be destroyed, treated, or recycled;

(3) The degree of expected reduction in toxicity, mobility, or volume of the waste due to treatment or recycling and the specification of which reduction(s) are occurring;

(4) The degree to which the treatment is irreversible;

(5) The type and quantity of residuals that will remain following treatment, considering the persistence, toxicity, mobility, and propensity to bioaccumulate of such hazardous substances and their constituents; and

(6) The degree to which treatment reduces the inherent hazards posed by principal threats at the site.

(E) *Short-term effectiveness.* The short-term impacts of alternatives shall be assessed considering the following:

(1) Short-term risks that might be posed to the community during implementation of an alternative;

(2) Potential impacts on workers during remedial action and the effectiveness and reliability of protective measures;

(3) Potential environmental impacts of the remedial action and the effectiveness and reliability of mitigative measures during implementation; and

(4) Time until protection is achieved.

(F) *Implementability.* The ease or difficulty of implementing the alternatives shall be assessed by considering the following types of factors as appropriate:

(1) Technical feasibility, including technical difficulties and unknowns associated with the construction and operation of a technology, the reliability of the technology, ease of undertaking additional remedial actions, and the ability to monitor the effectiveness of the remedy.

(2) Administrative feasibility, including activities needed to coordinate with other offices and agencies and the ability and time required to obtain any necessary approvals and permits from other agencies (for off-site actions);

(3) Availability of services and materials, including the availability of adequate off-site treatment, storage capacity, and disposal capacity and services; the availability of necessary equipment and specialists, and provisions to ensure any necessary additional resources; the availability of services and materials; and availability of prospective technologies.

(G) *Cost.* The types of costs that shall be assessed include the following:

(1) Capital costs, including both direct and indirect costs;

(2) Annual operation and maintenance costs; and

(3) Net present value of capital and O&M costs.

(H) *State acceptance.* Assessment of state concerns may not be completed until comments on the RI/FS are received but may be discussed, to the extent possible, in the proposed plan issued for public comment. The state concerns that shall be assessed include the following:

(1) The state's position and key concerns related to the preferred alternative and other alternatives; and

(2) State comments on ARARs or the proposed use of waivers.

(I) *Community acceptance.* This assessment includes determining which components of the alternatives interested persons in the community support, have reservations about, or oppose. This assessment may not be completed until comments on the proposed plan are received.

(f) *Selection of remedy*—(1) Remedies selected shall reflect the scope and purpose of the actions being undertaken and how the action relates to long-term, comprehensive response at the site.

(i) The criteria noted in paragraph (e)(9)(iii) of this section are used to select a remedy. These criteria are categorized into three groups.

(A) *Threshold criteria.* Overall protection of human health and the environment and compliance with ARARs (unless a specific ARAR is waived) are threshold requirements that each alternative must meet in order to be eligible for selection.

(B) *Primary balancing criteria.* The five primary balancing criteria are long-term effectiveness and permanence; reduction of toxicity, mobility, or volume through treatment; short-term effectiveness; implementability; and cost.

(C) *Modifying criteria.* State and community acceptance are modifying criteria that shall be considered in remedy selection.

(ii) The selection of a remedial action is a two-step process and shall proceed in accordance with §300.515(e). First, the lead agency, in conjunction with the support agency, identifies a preferred alternative and presents it to the public in a proposed plan, for review and comment. Second, the lead

§ 300.430

40 CFR Ch. I (7-1-03 Edition)

agency shall review the public comments and consult with the state (or support agency) in order to determine if the alternative remains the most appropriate remedial action for the site or site problem. The lead agency, as specified in §300.515(e), makes the final remedy selection decision, which shall be documented in the ROD. Each remedial alternative selected as a Superfund remedy will employ the criteria as indicated in paragraph (f)(1)(i) of this section to make the following determination:

(A) Each remedial action selected shall be protective of human health and the environment.

(B) On-site remedial actions selected in a ROD must attain those ARARs that are identified at the time of ROD signature or provide grounds for invoking a waiver under §300.430(f)(1)(ii)(C).

(1) Requirements that are promulgated or modified after ROD signature must be attained (or waived) only when determined to be applicable or relevant and appropriate and necessary to ensure that the remedy is protective of human health and the environment.

(2) Components of the remedy not described in the ROD must attain (or waive) requirements that are identified as applicable or relevant and appropriate at the time the amendment to the ROD or the explanation of significant difference describing the component is signed.

(C) An alternative that does not meet an ARAR under federal environmental or state environmental or facility siting laws may be selected under the following circumstances:

(1) The alternative is an interim measure and will become part of a total remedial action that will attain the applicable or relevant and appropriate federal or state requirement;

(2) Compliance with the requirement will result in greater risk to human health and the environment than other alternatives;

(3) Compliance with the requirement is technically impracticable from an engineering perspective;

(4) The alternative will attain a standard of performance that is equivalent to that required under the otherwise applicable standard, requirement,

or limitation through use of another method or approach;

(5) With respect to a state requirement, the state has not consistently applied, or demonstrated the intention to consistently apply, the promulgated requirement in similar circumstances at other remedial actions within the state; or

(6) For Fund-financed response actions only, an alternative that attains the ARAR will not provide a balance between the need for protection of human health and the environment at the site and the availability of Fund monies to respond to other sites that may present a threat to human health and the environment.

(D) Each remedial action selected shall be cost-effective, provided that it first satisfies the threshold criteria set forth in §300.430(f)(1)(ii)(A) and (B). Cost-effectiveness is determined by evaluating the following three of the five balancing criteria noted in §300.430(f)(1)(i)(B) to determine overall effectiveness: long-term effectiveness and permanence, reduction of toxicity, mobility, or volume through treatment, and short-term effectiveness. Overall effectiveness is then compared to cost to ensure that the remedy is cost-effective. A remedy shall be cost-effective if its costs are proportional to its overall effectiveness.

(E) Each remedial action shall utilize permanent solutions and alternative treatment technologies or resource recovery technologies to the maximum extent practicable. This requirement shall be fulfilled by selecting the alternative that satisfies paragraph (f)(1)(ii)(A) and (B) of this section and provides the best balance of trade-offs among alternatives in terms of the five primary balancing criteria noted in paragraph (f)(1)(i)(B) of this section. The balancing shall emphasize long-term effectiveness and reduction of toxicity, mobility, or volume through treatment. The balancing shall also consider the preference for treatment as a principal element and the bias against off-site land disposal of untreated waste. In making the determination under this paragraph, the modifying criteria of state acceptance and community acceptance described

in paragraph (f)(1)(i)(C) of this section shall also be considered.

(2) *The proposed plan.* In the first step in the remedy selection process, the lead agency shall identify the alternative that best meets the requirements in § 300.430(f)(1), above, and shall present that alternative to the public in a proposed plan. The lead agency, in conjunction with the support agency and consistent with § 300.515(e), shall prepare a proposed plan that briefly describes the remedial alternatives analyzed by the lead agency, proposes a preferred remedial action alternative, and summarizes the information relied upon to select the preferred alternative. The selection of remedy process for an operable unit may be initiated at any time during the remedial action process. The purpose of the proposed plan is to supplement the RI/FS and provide the public with a reasonable opportunity to comment on the preferred alternative for remedial action, as well as alternative plans under consideration, and to participate in the selection of remedial action at a site. At a minimum, the proposed plan shall:

(i) Provide a brief summary description of the remedial alternatives evaluated in the detailed analysis established under paragraph (e)(9) of this section;

(ii) Identify and provide a discussion of the rationale that supports the preferred alternative;

(iii) Provide a summary of any formal comments received from the support agency; and

(iv) Provide a summary explanation of any proposed waiver identified under paragraph (f)(1)(ii)(C) of this section from an ARAR.

(3) *Community relations to support the selection of remedy.* (i) The lead agency, after preparation of the proposed plan and review by the support agency, shall conduct the following activities:

(A) Publish a notice of availability and brief analysis of the proposed plan in a major local newspaper of general circulation;

(B) Make the proposed plan and supporting analysis and information available in the administrative record required under subpart I of this part;

(C) Provide a reasonable opportunity, not less than 30 calendar days, for sub-

mission of written and oral comments on the proposed plan and the supporting analysis and information located in the information repository, including the RI/FS. Upon timely request, the lead agency will extend the public comment period by a minimum of 30 additional days;

(D) Provide the opportunity for a public meeting to be held during the public comment period at or near the site at issue regarding the proposed plan and the supporting analysis and information;

(E) Keep a transcript of the public meeting held during the public comment period pursuant to CERCLA section 117(a) and make such transcript available to the public; and

(F) Prepare a written summary of significant comments, criticisms, and new relevant information submitted during the public comment period and the lead agency response to each issue. This responsiveness summary shall be made available with the record of decision.

(ii) After publication of the proposed plan and prior to adoption of the selected remedy in the record of decision, if new information is made available that significantly changes the basic features of the remedy with respect to scope, performance, or cost, such that the remedy significantly differs from the original proposal in the proposed plan and the supporting analysis and information, the lead agency shall:

(A) Include a discussion in the record of decision of the significant changes and reasons for such changes, if the lead agency determines such changes could be reasonably anticipated by the public based on the alternatives and other information available in the proposed plan or the supporting analysis and information in the administrative record; or

(B) Seek additional public comment on a revised proposed plan, when the lead agency determines the change could not have been reasonably anticipated by the public based on the information available in the proposed plan or the supporting analysis and information in the administrative record. The lead agency shall, prior to adoption of the selected remedy in the ROD, issue a revised proposed plan, which

shall include a discussion of the significant changes and the reasons for such changes, in accordance with the public participation requirements described in paragraph (f)(3)(i) of this section.

(4) *Final remedy selection.* (i) In the second and final step in the remedy selection process, the lead agency shall reassess its initial determination that the preferred alternative provides the best balance of trade-offs, now factoring in any new information or points of view expressed by the state (or support agency) and community during the public comment period. The lead agency shall consider state (or support agency) and community comments regarding the lead agency's evaluation of alternatives with respect to the other criteria. These comments may prompt the lead agency to modify aspects of the preferred alternative or decide that another alternative provides a more appropriate balance. The lead agency, as specified in §300.515(e), shall make the final remedy selection decision and document that decision in the ROD.

(ii) If a remedial action is selected that results in hazardous substances, pollutants, or contaminants remaining at the site above levels that allow for unlimited use and unrestricted exposure, the lead agency shall review such action no less often than every five years after initiation of the selected remedial action.

(iii) The process for selection of a remedial action at a federal facility on the NPL, pursuant to CERCLA section 120, shall entail:

(A) Joint selection of remedial action by the head of the relevant department, agency, or instrumentality and EPA; or

(B) If mutual agreement on the remedy is not reached, selection of the remedy is made by EPA.

(5) *Documenting the decision.* (i) To support the selection of a remedial action, all facts, analyses of facts, and site-specific policy determinations considered in the course of carrying out activities in this section shall be documented, as appropriate, in a record of decision, in a level of detail appropriate to the site situation, for inclusion in the administrative record required under subpart I of this part.

Documentation shall explain how the evaluation criteria in paragraph (e)(9)(iii) of this section were used to select the remedy.

(ii) The ROD shall describe the following statutory requirements as they relate to the scope and objectives of the action:

(A) How the selected remedy is protective of human health and the environment, explaining how the remedy eliminates, reduces, or controls exposures to human and environmental receptors;

(B) The federal and state requirements that are applicable or relevant and appropriate to the site that the remedy will attain;

(C) The applicable or relevant and appropriate requirements of other federal and state laws that the remedy will not meet, the waiver invoked, and the justification for invoking the waiver;

(D) How the remedy is cost-effective, i.e., explaining how the remedy provides overall effectiveness proportional to its costs;

(E) How the remedy utilizes permanent solutions and alternative treatment technologies or resource recovery technologies to the maximum extent practicable; and

(F) Whether the preference for remedies employing treatment which permanently and significantly reduces the toxicity, mobility, or volume of the hazardous substances, pollutants, or contaminants as a principal element is or is not satisfied by the selected remedy. If this preference is not satisfied, the record of decision must explain why a remedial action involving such reductions in toxicity, mobility, or volume was not selected.

(iii) The ROD also shall:

(A) Indicate, as appropriate, the remediation goals, discussed in paragraph (e)(2)(i) of this section, that the remedy is expected to achieve. Performance shall be measured at appropriate locations in the ground water, surface water, soils, air, and other affected environmental media. Measurement relating to the performance of the treatment processes and the engineering controls may also be identified, as appropriate;

(B) Discuss significant changes and the response to comments described in paragraph (f)(3)(i)(F) of this section;

(C) Describe whether hazardous substances, pollutants, or contaminants will remain at the site such that a review of the remedial action under paragraph (f)(4)(ii) of this section no less often than every five years shall be required; and

(D) When appropriate, provide a commitment for further analysis and selection of long-term response measures within an appropriate time-frame.

(6) *Community relations when the record of decision is signed.* After the ROD is signed, the lead agency shall:

(i) Publish a notice of the availability of the ROD in a major local newspaper of general circulation; and

(ii) Make the record of decision available for public inspection and copying at or near the facility at issue prior to the commencement of any remedial action.

§ 300.435 Remedial design/remedial action, operation and maintenance.

(a) *General.* The remedial design/remedial action (RD/RA) stage includes the development of the actual design of the selected remedy and implementation of the remedy through construction. A period of operation and maintenance may follow the RA activities.

(b) *RD/RA activities.* (1) All RD/RA activities shall be in conformance with the remedy selected and set forth in the ROD or other decision document for that site. Those portions of RD/RA sampling and analysis plans describing the QA/QC requirements for chemical and analytical testing and sampling procedures of samples taken for the purpose of determining whether clean-up action levels specified in the ROD are achieved, generally will be consistent with the requirements of § 300.430(b)(8).

(2) During the course of the RD/RA, the lead agency shall be responsible for ensuring that all federal and state requirements that are identified in the ROD as applicable or relevant and appropriate requirements for the action are met. If waivers from any ARARs are involved, the lead agency shall be responsible for ensuring that the conditions of the waivers are met.

(c) *Community relations.* (1) Prior to the initiation of RD, the lead agency shall review the CRP to determine whether it should be revised to describe further public involvement activities during RD/RA that are not already addressed or provided for in the CRP.

(2) After the adoption of the ROD, if the remedial action or enforcement action taken, or the settlement or consent decree entered into, differs significantly from the remedy selected in the ROD with respect to scope, performance, or cost, the lead agency shall consult with the support agency, as appropriate, and shall either:

(i) Publish an explanation of significant differences when the differences in the remedial or enforcement action, settlement, or consent decree significantly change but do not fundamentally alter the remedy selected in the ROD with respect to scope, performance, or cost. To issue an explanation of significant differences, the lead agency shall:

(A) Make the explanation of significant differences and supporting information available to the public in the administrative record established under § 300.815 and the information repository; and

(B) Publish a notice that briefly summarizes the explanation of significant differences, including the reasons for such differences, in a major local newspaper of general circulation; or

(ii) Propose an amendment to the ROD if the differences in the remedial or enforcement action, settlement, or consent decree fundamentally alter the basic features of the selected remedy with respect to scope, performance, or cost. To amend the ROD, the lead agency, in conjunction with the support agency, as provided in § 300.515(e), shall:

(A) Issue a notice of availability and brief description of the proposed amendment to the ROD in a major local newspaper of general circulation;

(B) Make the proposed amendment to the ROD and information supporting the decision available for public comment;

(C) Provide a reasonable opportunity, not less than 30 calendar days, for submission of written or oral comments on the amendment to the ROD. Upon

timely request, the lead agency will extend the public comment period by a minimum of 30 additional days;

(D) Provide the opportunity for a public meeting to be held during the public comment period at or near the facility at issue;

(E) Keep a transcript of comments received at the public meeting held during the public comment period;

(F) Include in the amended ROD a brief explanation of the amendment and the response to each of the significant comments, criticisms, and new relevant information submitted during the public comment period;

(G) Publish a notice of the availability of the amended ROD in a major local newspaper of general circulation; and

(H) Make the amended ROD and supporting information available to the public in the administrative record and information repository prior to the commencement of the remedial action affected by the amendment.

(3) After the completion of the final engineering design, the lead agency shall issue a fact sheet and provide, as appropriate, a public briefing prior to the initiation of the remedial action.

(d) *Contractor conflict of interest.* (1) For Fund-financed RD/RA and O&M activities, the lead agency shall:

(i) Include appropriate language in the solicitation requiring potential prime contractors to submit information on their status, as well as the status of their subcontractors, parent companies, and affiliates, as potentially responsible parties at the site.

(ii) Require potential prime contractors to certify that, to the best of their knowledge, they and their potential subcontractors, parent companies, and affiliates have disclosed all information described in § 300.435(d)(1)(i) or that no such information exists, and that any such information discovered after submission of their bid or proposal or contract award will be disclosed immediately.

(2) Prior to contract award, the lead agency shall evaluate the information provided by the potential prime contractors and:

(i) Determine whether they have conflicts of interest that could significantly impact the performance of the

contract or the liability of potential prime contractors or subcontractors.

(ii) If a potential prime contractor or subcontractor has a conflict of interest that cannot be avoided or otherwise resolved, and using that potential prime contractor or subcontractor to conduct RD/RA or O&M work under a Fund-financed action would not be in the best interests of the state or federal government, an offeror or bidder contemplating use of that prime contractor or subcontractor may be declared non-responsible or ineligible for award in accordance with appropriate acquisition regulations, and the contract may be awarded to the next eligible offeror or bidder.

(e) *Recontracting.* (1) If a Fund-financed contract must be terminated because additional work outside the scope of the contract is needed, EPA is authorized to take appropriate steps to continue interim RAs as necessary to reduce risks to public health and the environment. Appropriate steps may include extending an existing contract for a federal-lead RA or amending a cooperative agreement for a state-lead RA. Until the lead agency can reopen the bidding process and recontract to complete the RA, EPA may take such appropriate steps as described above to cover interim work to reduce such risks, where:

(i) Additional work is found to be needed as a result of such unforeseen situations as newly discovered sources, types, or quantities of hazardous substances at a facility; and

(ii) Performance of the complete RA requires the lead agency to rebid the contract because the existing contract does not encompass this newly discovered work.

(2) The cost of such interim actions shall not exceed \$2 million.

(f) *Operation and maintenance.* (1) Operation and maintenance (O&M) measures are initiated after the remedy has achieved the remedial action objectives and remediation goals in the ROD, and is determined to be operational and functional, except for ground- or surface-water restoration actions covered under § 300.435(f)(4). A state must provide its assurance to assume responsibility for O&M, including, where appropriate, requirements for maintaining

Appendix H: News Media, Potential Event Locations, and Other Contacts

This table provides a list of potential media contacts that may be useful in reaching the Hunters Point Shipyard community. The contacts were compiled based on community interviews, input from other community members during community meetings, local research, and grassroots efforts.

Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)

The table below provides contact information for organizations and venues located in or providing services to the Hunters Point Shipyard community. The Navy contacted these organizations and venues to determine whether they could help support the Navy's community involvement actions. If an "X" is present in the column, the organization responded positively to that action. For example, some organizations indicated the Navy could come to one of their regularly scheduled meetings and provide a brief update or presentation. Other venues are included because they have space to hold a Navy meeting or places where Navy flyers could be posted. Other organizations indicated that the Navy could inform them about the Navy's opportunities for community involvement and the organization would pass the Navy's information along to its members.

Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)**Community Mailing List**

The Hunters Point Shipyard (HPS) community mailing list is used to distribute information and updates via e mail and hardcopies to the HPS community and other interested parties in the City of San Francisco. The e mail list contains more than 500 members and the hardcopy mailing list has more than 3,000 addresses, including local residents; community organizations; local, state, and federal regulatory agencies; news media; elected officials; business associations; and other interested parties. Individuals on the list will receive fact sheets, meeting notifications, and other important information.

To create and maintain the mailing list, the Department of the Navy adds the following:

- Anyone who makes a telephone or e mail request for HPS information
- Community Involvement Plan (CIP) interviewees
- Meeting attendees
- Local elected officials (updated annually)
- Anyone who asks to be added

The Navy also updates the list with mailing or e mail returns, as required to update addresses or remove people from the lists. The mailing list will continue to be updated to ensure that the Navy is reaching all interested and concerned parties. If you want to be added to the Navy's e mail or hardcopy mailing list, please contact Keith Forman at (415) 308 1458, (619) 532 0913, or keith.s.forman@navy.mil.

Key Mailing List Contacts

The key contacts list is a subset of the community mailing list and includes Navy representatives, regulatory agency representatives, elected officials, and other government agencies for the area and state. Those individuals and organizations on the list will receive fact sheets, news releases, meeting notices, and other important information.

Information Repository Locations

The Information Repository contains the Administrative Record index plus site related documents such as technical reports, sampling data, fact sheets, newsletters, and public meeting transcripts. The Information Repository is available at the following locations:

San Francisco Main Public Library

Science, Technical, and Government Documents Room

100 Larkin Street

San Francisco, CA 94102

(415) 557 4400

<http://sfpl.org/index.php?pg=0100000101>

Hours:

Mondays: 10:00 a.m. to 6:00 p.m.

Tuesdays, Wednesdays, and Thursdays: 9:00 a.m. to 8:00 p.m.

Fridays: 12:00 p.m. to 6:00 p.m.

Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)

Saturdays: 10:00 a.m. to 6:00 p.m.

Sundays: 12:00 p.m. to 5:00 p.m.

Bayview/Anna E. Waden Branch Library

5075 Third Street

San Francisco, CA 94124

(415) 355 5757

<http://sfpl.org/index.php?pg=0100000401>

Hours:

Mondays and Tuesdays: 10:00 a.m. to 6:00 p.m.

Wednesdays: 1:00 p.m. to 8:00 p.m.

Thursdays: 10:00 a.m. to 8:00 p.m.

Fridays: 1:00 p.m. to 6:00 p.m.

Saturdays: 10:00 a.m. to 6:00 p.m.

Sundays: 1:00 p.m. to 5:00 p.m.

* The Bayview/Anna E. Waden Branch Library is scheduled for renovations in April 2011. While the library is closed, the Navy will have relocated the Information Repository to a temporary location at:

Hunters Point Shipyard Site Trailer (Located across the street from the security entrance to the Shipyard)

690 Hudson Avenue

San Francisco, CA 94124

Appendix H: News Media, Potential Event Locations, and Other Contacts (continued)

U.S. EPA	United States Environmental Protection Agency
USC	U.S. Code
VOC	Volatile Organic Compound
Water Board	San Francisco Bay Regional Water Quality Control Board

Appendix J: Responses to Comments on the Draft CIP

Comments from:

[Jackie Lane, U.S. Environmental Protection Agency \(U.S. EPA\) Region 9, April 11, 2011](#)

Comment Number	Section/ Page	Comment	Response
1.	Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS	The Navy may want to use "Available upon request" for informal review and "Formal Public Comment Needed" for required public comment documents.	The text has been revised to "Available upon request for public review and comment" and "Formal public review and comment required."
2.	Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS	Delete reference to draft CIP and final CIP at the beginning of this section. The public will not get an opportunity to review the final CIP again and they have already reviewed the draft final.	The two Community Involvement Plan (CIP) documents have been removed from the table and the schedule for other documents has been updated.
3.	Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS	Delete the second "Removal" word in the title "Draft Action Memorandum – Shipshielding Time Critical Removal Action."	The text has been revised as requested.
4.	Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS	Delete double entries of the draft and final document titles in the same section under "Removal Action Reports for Parcel E-2."	The table was reviewed; however, no double entries were found. Several draft and final versions of the same document are listed, as is the case throughout this table.
5.	Chapter 4, pg 40-41, Opportunities for Public Involvement at HPS	You may want to add a glossary to this section so people will understand what the report means as it concerns the cleanup. For example, what is "Shipshielding?" The average citizen does not know most of the terms used or those expressed in the titles of these documents.	The table has been revised to include footnotes to define terms not commonly used and to refer readers to Appendix G for a glossary of the types of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) documents.
6.	Chapter 5, pg 51 Cleanup Roles and Responsibilities	Paragraph 2, sentence 2: spell out CAC and PAC and what these groups do or support. I could not find the contact reference for the groups in Appendix B as reference here.	The acronyms Community Advisory Council (CAC) and Project Area Committee (PAC) are now spelled out and defined in Chapter 5. CAC and PAC are now listed in Appendix B, under Websites for Additional Information. In the table in Appendix B, a description of what these groups do has been added.
7.	Appendix A	Page A-1, move paragraph 4 to end of page A-2.	The text has been revised as requested.
8.	Appendix A	"Dust Control at the Site" section: add a sentence that says why this action is important in protecting health	A sentence has been added explaining why controlling dust is important for health. Text was also added to explain some of the actions the Navy implements to control dust.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[Amy Brownell, P.E., on behalf of the City and County of San Francisco, and Lennar, April 11, 2011](#)

Comment Number	Section/ Page	Comment	Response
1.	General	When discussing the redevelopment, please change the references from City of San Francisco to “the San Francisco Redevelopment Agency” or “the San Francisco Redevelopment Agency or its successor agency”.	The text has been modified to “the San Francisco Redevelopment Agency” or SFRA where appropriate.
2.	Executive Summary, page 2, third paragraph, first sentence	Please replace with “In addition, the San Francisco Redevelopment Agency, or its successor agency, is responsible for redeveloping HPS.”	Redevelopment is not discussed in this section; therefore, the sentence was not replaced. The CIP has been reviewed and revised in all sections where redevelopment is discussed, to clarify that the SFRA is responsible for redeveloping HPS.
3.	Executive Summary, page 2, fourth paragraph, last sentence:	Please replace “the City” with “the San Francisco Redevelopment Agency”	The text has been revised as requested.
4.	Chapter 3: Community Involvement-Actions and Activities, page 16, ninth bullet:	Please reword first line to state “The Navy will designate a Navy contractor to be the Community Involvement Manager...”.	The text has been revised as requested.
5.	Chapter 3, Theme 1, bullet 7:	“At meetings, an updated calendar of events and...”	The text has been revised as requested.
6.	Chapter 3, Community Involvement-Actions and Activities, page 18, Theme 4:	Please change title reference from “City of San Francisco Redevelopment” to “San Francisco Redevelopment Agency Redevelopment” and please change any references in text to correspond.	The text has been revised as requested.
7.	Chapter 4, Navy’s Cleanup Program, page 23, sixth paragraph:	Please change references about Parcel A transfer and redevelopment from the City of San Francisco to the San Francisco Redevelopment Agency.	The text has been revised as requested.
8.	Chapter 4, Navy’s Cleanup Program, page 28, Shipyard Map:	Please change legend for red-dashed line to “Former Parcel A, currently SFRA property”	The map has been revised as requested.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[Amy Brownell, P.E., on behalf of the City and County of San Francisco, and Lennar, April 11, 2011](#)

Comment Number	Section/ Page	Comment	Response
9.	Chapter 4, Navy's Cleanup Program, page 29, Parcel A table, next steps, 1st sentence:	Please change to: "The San Francisco Redevelopment Agency is working with developers, selected by the SFRA, to build..."	The text has been revised as requested.
10.	Chapter 4, Parcel G, Status of Cleanup, second sentence, page 37:	It currently reads "areas specified areas" – it should be "specified areas".	The text has been revised as requested.
11.	Chapter 4, Opportunities for Public Involvement at HPS:	Shouldn't the Parcel B and Parcel G Findings of Suitability for Early Transfer and the FOSTs for other parcels be listed here?	Finding of Suitability to Transfer (FOST) and Finding of Suitability for Early Transfer (FOSET) are transfer documents rather than cleanup documents; therefore, they have not been added to the list.
12.	Chapter 5: Cleanup Roles and Responsibilities, page 47:	When referring to the transfer of land, please change all references when referring to transfer from the City of San Francisco to the San Francisco Redevelopment Agency or SFRA.	The text has been revised as requested.
13.	Chapter 5: Cleanup Roles and Responsibilities, Roles and Responsibilities of the City and County of San Francisco, starts on page 49:	You need to delete the second and third bullets in the blue box and all paragraphs except the last one which begins: "SFDPH is one..." You need to insert a new heading in front of this City and County of SF heading and titled it "Roles and Responsibilities of the San Francisco Redevelopment Agency or its successors" and then insert the second and third bullets from the blue box (i.e. becomes landowner... and is responsible for redevelopment). You also need to change the first two sentences to "The San Francisco Redevelopment Agency, or its successors, is primary responsible for redeveloping HPS. In 1997, after an extensive multi-year community planning effort, the SFRA adopted the Hunters Point Shipyard Redevelopment Plan." In the third paragraph, please change the references from the City to the SFRA. Delete the third paragraph from this section – it will be retained in CCSF roles – see Comment #13.	The text has been revised as requested. The only exception is that the "or its successors" language was not include in the "Roles and Responsibilities of the San Francisco Redevelopment Agency" heading.

Comment Number	Section/ Page	Comment	Response
14.	Chapter 5: Cleanup Roles and Responsibilities, page 50:	Please consider adding the following “The City has several mechanisms in place that will require anyone who disturbs soil or other ground cover at HPS to comply with requirements in the San Francisco Municipal Codes, specifically Health, Building and Public Works Codes. The City also will regulate the construction of new development through its Subdivision Code, which will require construction of public improvements in conjunction with subdivision of land for private development. The City and the San Francisco Redevelopment Agency have a formal process to confirm that the improvements were constructed as required by the permits. The City also has a process in its Building Code to confirm that structures are constructed to code. Permitted activities involving the disturbance of soil require the permit applicant to go through a special process set out under Article 31 of the Health Code. The Applicant is required to obtain approval of various plans under Article 31 from SFDPH to assure that environmental restrictions and conditions are appropriately taken into account during the permitted activities. Once the Applicant receives approval of the required plans and meets all other permit requirements the Applicant will receive approval for the building, grading or other permit and can begin grading or construction.”	The text has been revised as requested.
15.	Chapter 5: Cleanup Roles and Responsibilities, page 51, last paragraph:	In last sentence, change “The City” to “The San Francisco Redevelopment Agency”.	The text has been revised as requested, using the acronym SFRA throughout the document.

Comment Number	Section/ Page	Comment	Response
1.	Executive Summary	The Executive Summary starts right in with acronyms so please make them easier to find than in a distant Appendix. Perhaps right inside the front cover of the report?	Although most technical documents include an acronym list in the front, this document is designed to be more reader-friendly. The acronym list has been kept in the appendices with its own tab because it is easy to flip to in the hard copy and it is linked in the electronic file. Acronyms are defined as they are used, so the reader will not have to refer to the acronym list for the definitions in the Executive Summary.

Comment Number	Section/ Page	Comment	Response
2.	General	<ul style="list-style-type: none"> This is a Community Involvement Plan, not a how-to on preparing a Community Development Plan. I recommend rearranging the sections so the plan's emphasis is on now and going forward, not so much demonstrating that the voice of the community has been heard in preparing the plan. The users of the plan are primarily going to want to know how to use it, secondarily how it came to be. Specifically: put Section 5.0 Cleanup Roles and Responsibilities right after the Introduction. Then put Section 4 on the cleanup program history and status, followed by Section 3 Community Involvement. After that can be the section documenting how the plan was arrived at and the References section and appendices. This arrangement is more logical because it introduces the plan and its purposes, it describes the process and regulatory responsibilities of the agencies, it describes the existing conditions that require a cleanup and community involvement, and then it presents the plan for give and take between the community and the Navy. Community members who wish to participate can then do so and can read the next section about how the plan was produced, if they want to, and can use the resources presented in the appendices. A statement about how thoroughly the community was involved in the preparation of the CIP is important to include, but it should not be the main focus of the CIP. The Executive Summary and Introduction should be edited to have a consistent arrangement of topics with the new arrangement of sections. 	The table of contents and outline for this document were developed in coordination with the U.S. Environmental Protection Agency (U.S. EPA) and are based on existing CIP examples provided by U.S. EPA. To avoid confusing the public by moving significant text in the final round, this request was not incorporated.
3.	Pie Charts	Quantitative information should be displayed in bar charts or other ways but not pie charts in the view of experts on presenting data. Please use graphics other than pie charts wherever possible.	Most qualitative information has been revised to be presented in bar charts.
4.	General	Why does translating into Chinese equal translating into Cantonese and not Mandarin? Please provide a little explanation for this.	Based on information provided by the Chinese-American community, Cantonese is the primary Chinese dialect spoken in San Francisco. The Navy may provide other translations in the future if a specific need is identified.

Comments from:

[Michael F. McGowan, Ph.D, Arc Ecology, March 14, 2011](#)

Comment Number	Section/ Page	Comment	Response
5.	Chapter 4 page 40	Two “time” per year should be “times” per year.	The text has been revised as requested.
6.	Chapter 5 page 49	Change “DTSC that is” to “DTSC is”.	The text has been revised as requested.
7.	Chapter 5 page 49	Change “The City and County of San Francisco are” to “The city of San Francisco is”	The text has been alternately revised to address City and County of San Francisco comments on the CIP.
8.	Chapter 5 pages 49 and 50	Rearrange the paragraphs at the bottom of page 49 and the top of page 50 so they are in the logical order: 1. SFDPH is one... 2. Once a parcel meets... 3. The city of San Francisco... 4. According to the SFRA website (also change the W to w in “website”)	The text has been revised to address City and County of San Francisco comments on the CIP.
9.	Appendix A page A-1	Change “See the following table...” and label the three separate kinds of content as Table A-1, Table A-2, and Table A-3. Change the one table to three with individual titles.	The table has not been revised into three tables. It is relatively short, and to break it up would mean one table would have only one row.
10.	Appendix A page A-1	Change “if air quality is recorded at above approved” to “if dust is detected above approved” or some other factually and grammatically correct statement.	The text has been revised as requested.
11.	Appendix A page A-3	Explain here or previously why Cantonese translations and not Mandarin or other Chinese dialects. What is the basis for providing Spanish and Cantonese? Will the Navy provide other translations if requested?	See response to comment number 4.
12.	Appendix A page A-4	Under Broader Health Concern for Bay Area Air Quality Management District insert, “Outdoor Air Quality”. The mandate of BAAQMD is outdoor air.	The text has been revised as requested.
13.	Appendix A page A-4	In the box for Federal Agencies Details include the 2008(?) review by ATSDR of the asbestos monitoring at the shipyard and Parcel A. There was a report, a workshop at the CAC, and a variety of correspondence.	The text has been revised as requested.

Comment Number	Section/ Page	Comment	Response
14.	Appendix A, pages A-4 and A-5	Federal and local agencies are included, but what about state agencies?	In general, the local agencies will provide more specific information than the state agencies. However, the document has been revised to include the California Department of Public Health, with a link to their San Francisco-specific programs.
15.	Appendix B, page B-2	Change the street address of Arc Ecology to 1331 Evans Avenue. ZIP code remains 94124	The text has been revised as requested.
16.	Appendix B, page B-2	The email address for James Haas is not clear. Is there an underline between his first and last names, or?	An underscore is present between his first and last names. The text was revised to include a bolded underscore in his email address for clarity.
17.	Appendix B, page B-3	The website for U.S. EPA is formatted differently from all the rest	The text has been revised to include a hyperlink, which also formats the website consistently.
18.	Appendix C, page C-14	In the Use Radio box the entry should be edited to show that the University of California radio station is kalx, not Calx, Stanford's radio station is kzsru, and I don't think Lawrence Livermore Lab has a broadcast radio station. Please correct this information.	The text has been revised as requested, with radio station call letters capitalized.
19.	Appendix C, page C-15	Do Navy rules prohibit food or beverages or just paying to have them at the meeting? Please clarify.	The text has been revised to clarify the prohibition on using taxpayer funds to provide food and beverages during meetings.
20.	Appendix C, page C-15	Please change the spelling "faire" to "fair" throughout the document.	The text has been revised as requested.
21.	Appendix D, page D-2	Please change the format of the data in the table to 1 decimal place for all entries to facilitate comparisons.	The text has been revised as requested.
22.	Appendix D, page D-3, D-4, and D-6	One decimal place in all data, please.	The text has been revised as requested.
23.	Appendix E, page E-1	Data "were", not "was".	The text was revised as appropriate.
24.	Appendix E, page E-8	The 3-D bars do not help view the data and obscure the numbers above the bars. Please use 2-D bars for clarity.	Graph 6 has been revised as requested.

25.	Appendix H, page H-3	Please include information for Arc Ecology in this table. Contact Saul Bloom about Arc's ability to host a meeting and other entries in the table.	The text has been revised as requested.
26.	Appendix H, pages H-3	Clarify "Attend Its Meeting" in column heading. Does this mean "Navy willing to Attend Organization's Meeting"?	The text has been revised as requested.

Comments from:

[Marlene Tran, spokesperson for Visitacion Valley Asian Alliance, during HPS Community Meeting, March 23, 2011](#)

Comment Number	Section/ Page	Comment	Response
1.	Proposed Outreach: Dedicated Call-in line	For those who speak Cantonese, Spanish, or other languages, please have a dedicated phone number someone can call, get cleanup updates in their language and leave a message. This option is especially important for those people who lack internet access.	A dedicated call-in line has been added to the list of planned activities.
2.	Pie Charts	In the Draft CIP, the legends on the pie charts are too small. Please enlarge them so they can be read more easily.	The charts have been modified as requested.
3.	Proposed Outreach: Translated materials	Make sure there is transparency in the Navy's program by sending translated information to the ethnic media.	The CIP includes sending translated materials to ethnic media. Chapter 3 was revised to include radio show presentations and call-in shows and other information that will be provided to the media in other languages.
4.	Section 5.0 Cleanup Roles and Responsibilities	The community needs clearer definitions of the roles of each party (Navy, regulatory agencies, city, Redevelopment agency). It's very unclear who is involved in the cleanup and what their role is.	Please refer to Chapter 5 of the CIP, which has been updated to clarify the roles of all the responsible parties.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

Jaron Browne, community member, during HPS Community Meeting, March 23, 2011

Comment Number	Section/ Page	Comment	Response
1.	Proposed Outreach: Two-way communication	<p>The Navy should have an elected body that provides input & two-way communication. All the CIP activities are one-way communication.</p> <p>RAB was a body that was recorded & could make recommendations, that is missing from the plan for new activities.</p> <p>The fundamental concern that POWER has with the CIP is that all of the action and activities are geared toward one-way communication from the Navy to community. The CIP lacks formal mechanisms for the community opinions and concerns to be recorded. The CIP absolutely must include a democratically elected community body that can vote and make formal decisions. Even if this body does not have power over the Navy's decisions – it would make a record of the community's democratic decision.</p>	<p>The need for a Restoration Advisory Board (RAB) or another such elected body will be reevaluated at least every 2 years.</p> <p>The current plan includes activities for two-way communication, such as:</p> <ul style="list-style-type: none"> • Community meetings with question and answer (Q&A) and break-out sessions • Radio call-in shows • Bus tours • Dedicated call-in line • Presentations at established group meetings • Use of a Community Involvement Manager <p>In addition, community opinions and concerns are recorded by:</p> <ul style="list-style-type: none"> • Writing community comments at meetings and reading them aloud to the group • Providing meeting summaries on the website • Saving radio shows as podcasts • Issuing formal responses to comments on documents

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

Mishwa Lee, community member, during HPS Community Meeting, March 23, 2011

Comment Number	Section/ Page	Comment	Response
1.	Proposed Outreach: Meeting with local groups/organizations	Instead of community coming to you, go to them. Meet with their church groups, etc. Find out what they know already, and then give them more information.	The CIP includes plans for meeting with several community groups during the group’s regular meetings (see Chapter 3). In addition, see the updated list of recent outreach activities in Appendix F.
2.	Dissolution of the RAB	Does the Navy have the legal right to dissolve the RAB Board? Why is the Navy trying to appear to involve the community, when the Navy didn’t abide by the community input?	Yes, the Navy has the legal right to dissolve the RAB. Please see Chapter 1 and Appendix E for more explanation on that process. The Navy strictly followed standing requirements in the <i>Restoration Advisory Board Rule Handbook</i> . Just because the Navy does not fully incorporate community input that does not mean the requirement for community acceptance is being ignored. Please see Chapter 1 and Appendix E.

Comments from:

India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011

Comment Number	Section/ Page	Comment	Response
1.	Generalized Theme	<ul style="list-style-type: none"> a) The dissolution of the RAB is driving the update of the CIP. b) There is an underlying unstated but nevertheless clear theme that the Navy is disinclined to undertake a new Restoration Advisory Board (RAB) process; c) The CIP is an attempt to reorganize public participation in the cleanup process to accommodate its disinclination to undertake a new RAB 	<ul style="list-style-type: none"> a) The CIP was last updated in 2004; therefore, it was due for an update regardless of the dissolution of the RAB. It is accurate to state a new plan for the community involvement program was required; therefore, the CIP was updated. b) Based on feedback received in the 73 interviews, a RAB was not identified as the type of outreach that meets the needs of the community. The RAB was no longer serving its purpose, as detailed in Appendix E. This CIP outlines new and different activities designed to better reach the greater community and meet the needs identified in the CIP interviews. c) The CIP is designed to create an involvement program that uses more diverse involvement activities, per the needs of the community identified during the community interviews.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
2.	Generalized Theme	<p>By seeking to avoid creating another RAB the Navy has made decisions that could negatively impact meaningful public participation in the Navy Hunters Point Shipyard remedial program.</p> <ol style="list-style-type: none"> 1. The CIP has redefined community involvement as information, outreach, and education; 2. The CIP fails to grasp important community involvement issues. Substituting outreach and education for engagement is the wrong strategy; 3. The CIP has deemphasized dialogue and the creation of a process for developing an ongoing informed community analysis of the process of cleanup. 	<p>The CIP uses information gathered from the Hunters Point Shipyard (HPS) community to design a program that, in addition to meeting regulatory requirements for public involvement, meets the needs of the various sectors of the community through varied means of communication.</p> <ol style="list-style-type: none"> 1. Community involvement has not been redefined as only information, outreach, and education. Throughout the CIP, the desire to engage and involve the community in the cleanup process is described. 2. For the community to provide input on the proposed cleanup actions during the formal public comment periods, it is necessary to provide opportunities to solicit input and to educate the HPS community. Activities in the CIP are designed to engage the HPS community in the cleanup process in ways community members have expressed are most suitable. 3. The Navy has increased the variety of activities in the CIP allowing for dialogue/two-way communication, including: <ul style="list-style-type: none"> • participating in multi-lingual radio call-in shows • holding community meetings that include formal question and answer sessions in addition to smaller break-out sessions where community members can talk one on one with the Navy and regulatory agencies' representatives • scheduling bus tours • giving presentations at established group meetings • using a local Community Involvement Manager • maintaining a multi-lingual hotline where people can leave messages and have the call returned.

3.	Generalized Theme	<p>The text of the CIP demonstrates an ongoing resistance to seat this program in the context of its regulatory requirements and guidance directions.</p> <ol style="list-style-type: none"> 1. In a number of the comments to follow we will raise ongoing concern with regard to the clear avoidance by the authors of the CIP to acknowledge or quote from regulatory requirement and guidance directions governing public participation; 2. Furthermore the CIP has failed to list or otherwise acknowledge several guidances, orders, and an expression of community preference that would replace the general sense of the Navy's conferring of opportunity with meeting legal requirements. 	<ol style="list-style-type: none"> 1. The CIP has been modified to clearly identify the community involvement activities and opportunities for public comment that are specifically required per the National Contingency Plan (NCP). The CIP is intended to provide opportunities for public involvement above and beyond the required activities conducted at the project-level as part of the CERCLA process. 2. Appendix G provides a list of the guidance documents pertaining to community involvement. An excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.
4.	Chapter 1	<p>The first paragraph of Chapter 1 makes it appear as though the Navy and U.S. EPA were acknowledging conceptual rights and therefore conferring an opportunity to the public to participate. Public engagement is a regulatory responsibility not a conferred opportunity. The CIP should acknowledge the Navy's regulatory requirement to seek public engagement up front in the introduction.</p>	<p>The introductory paragraph is a positive statement describing the right of the community to be involved and the value of involvement. In addition, this is standard language found in other U.S. EPA-led Community Involvement documents, such as the Iron King Mine CIP. It has now been noted in Chapter 1 that there are regulatory requirements for public participation. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.</p>
5.	Chapter 1	<p>Chapter 1 reference to Appendix G Regulations and Guidance appears as six words in its final paragraph which presents a guide to the entire document. The contents of Appendix G are mentioned without listing its letter designation or explaining the importance to understanding how public participation is governed. Appendix G is located in a part of the document members of the public might not read if its importance is not underscored in the introduction.</p>	<p>The final paragraph of Chapter 1 has been expanded to include a more detailed description of all appendices, including Appendix G. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.</p>

6.	Chapter 1	Given that the focus of the CIP is public participation, it would be appropriate for some of the space in Chapter 1 to be devoted to a discussion of the regulatory requirements and departmental guidances for public participation.	See response to comment 3. The last paragraph of Chapter 1 has been updated to include a more thorough description of what is included in each appendix, including Appendix G. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G.
7.	Chapter 2	<p>Chapter 2 “Community Interviews and Feedback” provides useful information and is well organized however:</p> <ul style="list-style-type: none"> a) the resistance to specifying regulatory and guidance requirements within the text of the CIP analysis calls into question whether the information being fed back within the CIP was subjected to an institutional bias; b) the failure to provide a statistical analysis of interviewee feedback on each of the survey questions reinforces the concern about institutional bias when reviewing the summary of respondent themes; c) the underlying resistance to creating another RAB further undermines confidence in the interpretation of respondent data. 	<ul style="list-style-type: none"> a) The purpose of Chapter 2 is to summarize the community interview purpose, process, and feedback. In addition, an excerpt from the NCP explaining the regulatory requirements for community participation has been added to Appendix G. b) Interviews were planned and conducted using the U.S. EPA’s <i>Superfund Community Involvement Handbook</i> as guidance, referenced in Chapter 6. Interviews were not conducted with the intent of producing a statistical survey evaluation. Questions were open-ended and interviews were conversational to promote open communication, resulting in qualitative responses. A strictly statistical analysis of the feedback is not possible. Responses were quantified where possible, and themes in the feedback were identified after all of the responses were gathered. c) Please see response to comment number 1.

Comment Number	Section/ Page	Comment	Response
8.	Chapter 2	<p>The CIP fails to acknowledge the National Contingency Plan and the invocation of its Community Acceptance Criteria. The Navy summarizes its understanding of the cleanup objectives of the community in paragraph 5 of Page 7 in Chapter 2 as follows:</p> <p><i>“The community wants the cleanup to be completed in a way that protects the current community and all future users and neighbors of HPS. The Navy and regulators share this goal with the community and are committed to involving the community in the cleanup process.”</i></p> <p>While we appreciate this expression of the Navy’s understanding, the community adopted a clear Community Acceptance Criteria for cleanup with the passage of Proposition P in 2000. Proposition P sought to establish the National Contingency Plan’s (NCP) 9th Criterion on Community Acceptance. The NCP establishes nine criterions for a cleanup program. 87% of the electorate in San Francisco and 93% in the greater Bayview Hunters Point community voted for this criterion. While the 9th criterion is modifying and not mandatory, the criterion has nevertheless been established and the Navy must acknowledge its existence. There is no exemption within the NCP enabling an agency to simply ignore an NCP criterion or the existing establishment of a Community Acceptance criterion. This comment is related to the concern expressed in Comment III. The Navy should make specific reference to Proposition P here.</p>	<p>The NCP requirements have been added to Appendix G. The ninth NCP criterion is community acceptance of a specific remedy during the Proposed Plan.</p> <p>Chapter 2 of the CIP states a general understanding that all community members want a cleanup that protects the current community and future users of the site, regardless of providing specific comments on a remedy.</p> <p>Proposition P is better categorized as a recommendation on what level voters want HPS cleaned to. The Navy’s cleanup is directly tied to the San Francisco Redevelopment Agency’s redevelopment plan. The cleanup recommendation in Proposition P does not match the SFRA redevelopment plan.</p> <p>Though the Navy does not always follow all recommendations from the community that does not mean the requirement for community acceptance is being ignored. The Navy will continue to adhere to the NCP requirements to solicit public comment on each proposed plan for HPS.</p>

9.	Chapter 2	<p>The Navy's resistance to the establishment of a new RAB has implications for the response reported in the portion of the respondent theme table presented on Page 12 as Public Meetings:</p> <p>Pro "<i>Many people are informed at once.</i>" & Cons.... "<i>Many members of the community feel intimidated at a large, centralized meeting. It was stated that it is difficult to have individual questions addressed; there is no single venue where everyone in the community feels comfortable.</i>"</p> <p>Under existing regulation and guidance RABs and or other committees and meetings are one of many methods to be used when reaching out to a community. The above argument was incorporated into the Navy letters and memos discussing its rationale for disbanding the RAB and its appearance here seems to reinforce the impression that the Navy continues to be unwilling to consider creating a new RAB. The bias in this response is further emphasized by the fact that these conclusions are not fully representative of the range of results available through a meeting oriented process and specifically a RAB. The fact that such processes and bodies can result in the development of a group of community representatives conversant in the issues associated with the Shipyard's cleanup and capable of providing the Navy with useful guidance based upon knowledge and experience is completely ignored.</p>	<p>The column header for the last column of the table has been adjusted to read "Pros and Cons Noted by Interviewees." The pros and cons listed for each of the nine historical outreach methods were identified by the community during the interviews, not by the Navy. The Navy does not feel the response is biased.</p> <p>The Navy letters and memoranda included in Appendix E were written prior to and separately from this draft CIP. The Navy does not feel it was biased. The Navy is required to reevaluate the need for a RAB every 2 years, and will continue to do so.</p>

Comment Number	Section/ Page	Comment	Response
10.	Chapter 2, page 11	<p>The table on Page 11 presents themes raised and by how many interviewees however there are problems with the presentation.</p> <p>a. It does not correspond to the questions asked in the survey which leads to questions with regard to how the responses were interpreted and presented by the Navy;</p> <p>b. The lack of correspondence of the findings presented in the Table to the actual questions presented in the survey creates questions about how the survey data is being interpreted;</p> <p>c. For example there was no question on the Navy's survey form regarding whether an interviewee had an opinion on the status of the RAB, nevertheless the table on Page 11 indicates that less than 5 individuals raised the lack of a RAB as a concern. Table gives the appearance that the RAB issue was surveyed. The problem the table creates is that we can't tell whether the size of the response is a function of a lack of interest or lack of a question in the survey;</p> <p>It would have been more useful for the Navy to have been presented with a matrix providing a summary and numerical scoring of the community responses to the specific survey questions. This way it would have been easier to know how many respondents felt a particular way about the issue raised and there would be less question about the potential for Navy bias in interpreting the data.</p>	<p>As noted in the response to comment number 7, the interview format included many open ended questions. Responses in the table on page 11 were in response to the open-ended question: <i>Do you have any interests or concerns regarding the base and the cleanup program? If yes, what are they?</i></p> <p>This question offered the interviewees an opportunity to raise any concern or interest they have, not to review a list that the Navy would have had to develop.</p> <p>The introductory sentence to the table on page 11 has been revised to read: <i>Interviewees were asked an open-ended question about whether they have concerns or interests related to the base and the cleanup program, and what all of their concerns and interests might be.</i></p> <p>After feedback was received, it was reviewed for themes developed after feedback was received.</p>

11.	Chapter 3 Community Involvement Actions and Activities	Chapter 3 Community Involvement Actions and Activities is the portion of the CIP wherein the Navy changes the emphasis of past CIPs from public participation and engagement to information, outreach and education. While we have no objection to the activities discussed, it is the overall effect that we are concerned about. It is our view that the proposed plan substitutes superficial involvement to the type of detailed engagement consistent with CIPs including RAB and other committees wherein the focus is developing a group of advisors capable of contextualizing their reviews based on prior experience and providing the Navy with informed opinions with regard to the management of the IR program.	<p>Engage is a synonym for involve. The activities outlined in the draft CIP are designed to get information to the broader community and involve them in the cleanup. Feedback received during interviews is that many people are lacking basic information about the cleanup. The Navy seeks to inform and educate the community about the cleanup in order to involve and engage the community in discussions about cleanup decisions during formal public comments periods as well as during informal community involvement activities.</p> <p>No single activity fits the needs of all HPS community members. The plan has included activities for those who want minor updates all the way to those who wish to read and comment on technical documents and contact the Navy or regulatory agencies directly.</p> <p>In the past, the reach of the RAB was relatively narrow, and it was the primary means of involvement. By relying heavily on the RAB as the primary means of involvement, the Navy was unable to engage members of the community who were unable to attend regular meetings, or who had a negative experience at the RAB and were unwilling to attend another meeting. The new plan offers numerous and diverse ways of involving the public, including the use of radio and newspapers as well as other media. Holding regular meetings continues to be an activity in the CIP.</p>

12.	Chapter 3 Opening Statement	<p>The reference to Fort Ord and McClellan Air Force Base emphasizes that the overriding theme of the new CIP is life without a RAB. Both Fort Ord and McClellan Air Force Base had RABs that were shuttered after the local Base commander determined that the committees were no longer meeting their objectives. Both Fort Ord and McClellan's RAB dissolutions were subject to extended litigation. In the case of Fort Ord, the litigation there led directly to the promulgation of the RAB rule of 2007. In the case of McClellan Air Force base the concerns that drove the disagreement – that the site was more radiologically contaminated than the Air Force was willing to admit – was later verified by subsequent remedial research. In both instances the RABs became fractious however records show that the dysfunctionality of both RABs were as much the responsibility of the local base and environmental commands and regulators as they were RAB members. Many members of the respective communities were unhappy with the disbanding of the RABs and the replacement CIPs. As such reference herein is discomfoting. Community engagement at both sites has been dramatically curtailed and the benefit to the ongoing cleanup is debatable. Iron Mountain on the other hand is a private site on the NPL in Arizona. There is no military involvement. Nor are there any BRAC conditions on the Site. The analogy to the Hunters Point Shipyard therefore may be more tenuous than not and more likely close to a brownfield. As to public participation specifically, there is a community coalition playing a prominent role in providing feedback to the U.S. EPA, this model is not likely to be applicable to the greater Bayview Community owing to the wide diversity of opinion here.</p>	<p>The CIPs for Fort Ord and McClellan Air Force Base were reviewed as resources because they are both sites in California that are on the National Priorities List, and because these sites do not have a RAB. It is noted that the Navy's plan in this CIP is not a copy of any other outreach program, but was designed to meet the needs of the HPS community.</p> <p>The Iron King Mine CIP was provided by U.S. EPA as an example of a CIP with a format that is user-friendly and a model for other plans. There was no intention to draw a parallel between the cleanup programs at Iron King Mine and HPS.</p> <p>The text in the second sentence has been modified to remove any implication that the Iron King Mine site is in California.</p>

Comment Number	Section/ Page	Comment	Response
13.	Chapter 3	Theme Two – Hold Regularly Scheduled Meetings. We question whether having the bi-monthly meetings without a commitment to the close coordination involved in a RAB or RAB like entity will result in a different outcome than was the case with the previous RAB. It seems more likely that without addressing the causes of the dysfunctionality experienced with the prior RAB the Navy process will be unsuccessful. We also wonder whether bi-monthly meetings are insufficient to keep up with the schedule presented in the CIP.	Although the CIP identifies bi-monthly meetings, the Navy is currently holding monthly or even twice monthly meetings to reach different segments of the community. The CIP has been revised to acknowledge that the Navy may hold meetings more frequently when appropriate. Various meeting formats are being used to foster more participation and engagement, including sending agendas ahead of time, having small break-out sessions for people to speak directly with the Navy and regulatory agencies, and holding meetings in various locations and on different days and times.
14.	Chapter 4	Chapter 4, The Navy's Cleanup Program at the Hunters Point Shipyard provides a useful and excellent summary of the Shipyard program, however: it is not relevant within the context of a description of a community involvement plan. The material presented in Chapter 4 should have been placed in an Appendix, and the space devoted to a greater explanation of the regulatory requirements of the Navy CIP.	The CIP was prepared using guidance from U.S. EPA's Superfund Community Involvement Handbook, and with collaboration from U.S. EPA. Based on feedback gathered in the interviews, the community requested more general information about the Navy's cleanup program. Placing the site cleanup summary in the main text of the CIP provides the reader with the context for the community involvement activities described in the CIP. Additional feedback gathered in the interviews indicated a need for more information about the roles and responsibilities of the regulatory agencies, along with the Navy and other entities involved in the cleanup. Information to address this concern has also been included in the main text of the document, in Chapter 5.
15.	Chapter 4	Ordinarily we would be very appreciative of such a well thought out and clear summary of the Navy's cleanup activities. We were particularly pleased to see the schedule of documents, however this is not a document focused on the cleanup itself but rather how the Navy will engage the public in cleanup decision making.	The CIP was prepared using guidance from U.S. EPA's Superfund Community Involvement Handbook and with collaboration from U.S. EPA. It is a standard format for a CIP to present an overview of the installation and information about the status of the cleanup. Chapter 4 may educate readers who are not inclined to read more technical documents, and it also provides context for the types of cleanup projects about which they may review and submit comments.

Comment Number	Section/ Page	Comment	Response
16.	Chapter 4, Page 23	The historical presentation presented on Page 23 is also interesting although highly abbreviated and of questionable utility. It would have been more useful, if the Navy was of a mind to present a relevant history, it could have provided an overview of the evolution of public participation in cleanup decision making and the crafting of the Navy CIP process. These points would include a review of the public participation components of regulations including NEPA, the NCP, 1986 SARA, as well as a summary of the key point from the Federal Facilities Environmental Dialogue Committee report, a review of the Clinton/ Perry Executive Order on RABs and the Clinton Executive Order on Environmental Justice, the Bush Administration RAB rule and other related issues.	The CIP is not intended to be a primer about regulations and guidance pertaining to public involvement. This document is specific to HPS, and as such provides basic information about the shipyard, including a general timeline. Please see the response to comment number 3.
17.	Chapter 4	As indicated above, we appreciate the presentation of the document schedule, <u>however the table includes references to informal and formal comment periods without defining the difference between the two.</u> This distinction is of the utmost importance and represents a significant failing in the goal of the CIP to inform the public. <u><i>The formal comment periods associated with the Proposed Plans are the only time during the CERCLA review process when the Administrative Record is open to public comment because an action is being contemplated. As such not providing a description of the difference and its import anywhere in this document represents a significant omission.</i></u>	An introduction has been added to the table to explain the difference between the informal and formal comment periods. In addition, Appendix G has been revised to highlight in red the opportunities for required public comment on page G3 and G4 and in the CERCLA graphic on page G-5. Please note that one distinction between the NCP requirements and the Department of Defense (DoD) Installation Restoration program is that the DoD provides significant additional opportunities for formal comment, which are added to the administrative record.

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
18.	Chapter 5	<p>Chapter 5 Cleanup Roles and Responsibilities/ Responsibilities of the City and County of San Francisco fails to cite existing critical agreements between the City and the Navy;</p> <p>The City's capacity to accept Navy property for transfer is conditioned upon the meeting of the criteria agreed upon within the Conveyance Agreement of 2004. A clear City role in this process is determining whether Conveyance Agreement criteria have been met. This agreement is not cited.</p> <p>Proposition P is City policy and cited within the Conveyance Agreement, yet it is also not cited in the CIP. It is also the 9th criteria for cleanup established by the citizens of San Francisco in accordance with the National Contingency Plan which governs the Shipyard cleanup. While the 9th criterion of the NCP is a modifying criterion the Navy nevertheless must address conformance with Prop P when finalizing a cleanup plan.</p>	<p>The nine evaluation criteria listed in the NCP, 40 Code of Federal Regulations (CFR) 300.430(e)(9)(iii) are used to evaluate cleanup alternatives for a given site or project. Community acceptance is the ninth criterion and is gauged based on community comments provided on the Proposed Plan document. The Navy is required to provide the Proposed Plan and a minimum 30-day public comment period and address public comments in the Record of Decision. The Navy will continue to meet these requirements.</p> <p>The text in Chapter 5 has been modified to cite the 2004 conveyance agreement between the Navy and SFRA. The Navy will meet those conveyance agreements.</p> <p>However, Proposition P is not the guiding authority for the Navy's cleanup. Proposition P is a recommendation to the Navy to clean up to certain standards, but is not enforceable policy.</p> <p>In 2011, the SFRA issued new redevelopment plan. This document helps guides the Navy on the cleanup levels based on future reuse.</p>
19.	Appendix C	<p>This Appendix is somewhat confusing. On Page C2 the graphic pie chart caption states that the Navy team conducted 73 interviews and that these many of those interviewed had multiple affiliations which is why the list beginning on Page C3 had 151 affiliations listed. It is unclear however whether individuals with multiple affiliations are representative of the views of each of the organizations they belong to. As such the value of presenting the list is unclear. Is the list intended to show organizational interest or the potential for information resonance in the community? The use of the list is therefore troubling because the CIP does nothing to document either interest or resonance. This being the case it raises we believe a justifiable concern that the list merely serves to inflate the reach of the survey.</p>	<p>Individuals self-identified the organizations they belong to and were asked if the document could note that they were interviewed as a member of that organization before the organization's name was included in the document. Interviewees were not asked to state that they represent the views and opinions of any group in any formal manner. In addition, responses are kept separate from interviewees' names.</p> <p>The goal was to talk with a wide variety of individuals who have varied experiences, interests, and needs. The listing of organizations is an indication of the wide variety of people interviewed.</p>

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
20.	Appendix C	<p>If affiliation was a driver in the selection of individuals surveyed we are curious about the selection of entities interviewed. Of the 151 affiliations listed, perhaps as many as 58% would appear to be organizationally disinterested in the details or issues associated with the Shipyard's cleanup. With no disrespect intended the interest of The National Rifle Association, the Good Samaritan Family Resource Center, and Friends of McClaren Park in the subject is unclear as is the interest of 84 other organizations of the 151 entities listed. Of the remaining 42% of organizations and entities it seems likely that no more than perhaps half have had any experience with the HPS cleanup. Including duplicated affiliations by different names (Arc Ecology and Community Window for example), 26% or just 40 entities might possess more than a cursory opinion about the cleanup sufficient to provide an informed view of the engagement process.</p> <p>While we recognize that such external views are very useful, we frankly question the balance because of its potential for view shopping. In the past, instances of view shopping lead the Navy to the mistaken notion that residents of Bayview Hunters Point would accept the lowest standard of cleanup if it would hasten the creation of jobs. This view was shown to be in error when 93% of the voting residents of the district voted for Proposition P.</p>	<p>As noted above, people self –identified the groups they belong to. Often, individuals were asked for an interview because of one or two of their affiliations, and then during the interview they identified additional affiliations they wished to have included on the list.</p> <p>The purpose of interviews was not just to talk to people who have already had experience with the HPS cleanup, but also to reach local community members and groups who may want information and were underserved in the past.</p> <p>The list of potential interviewees was reviewed by the regulatory agencies. According to the U.S. EPA Superfund Community Involvement Handbook, listed as a reference in Chapter 6, most CIPs rely on 15 to 25 interviews. The 2004 HPS CIP included 40 interviews, and this CIP includes 73 interviews. The interviews for this document represent a diverse sampling and an enormous effort. The Navy believes it far exceeded previous efforts on this base and other bases in which to form a richer more complete picture of the HPS community.</p>
21.	Appendix D	<p>Appendix D reinforces the concerns expressed in VII by clearly demonstrating why Bayview Hunters Point is an environmental justice community but never referring to it as such,</p> <p>1. Neither the phrase nor reference to the Executive Order on Environmental Justice appears in the text of the CIP; 2. The failure to include reference to EJ guidances calls into question whether the Navy intends to incorporate this concern into its deliberations over cleanup and public participation.</p>	<p>A description of environmental justice (EJ) has been added to the introduction.</p>

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
22.	Appendix E	This Appendix recounts the reasons why the RAB was discontinued. While it was the opinion of the author of this memo that the RAB Guidance gave the Navy sufficient authority to dissolve the HPS RAB, it was nevertheless difficult to observe so little self examination on the part of the Navy for its role in creating the situation.	The Navy is focused on the current cleanup and creating an inclusive ongoing community involvement program moving forward. The Navy continues to believe the arguments for dissolving the RAB are appropriately captured in the letter of December 23, 2011, in Appendix E.
23.	Appendix E	The issues of employment, mistrust, insulting and raucous behavior, and the inability of contractors and Navy personnel to complete entire presentations have been part and parcel of the culture of this body since it was created. Misbehavior was endemic to this RAB from the very beginning and frequently encouraged by Navy personnel and contractors. If the minutes of the HPS RAB beginning in 1994 were scrutinized against the criteria utilized for its dissolution in 2009, the RAB would have been disestablished in 1995. In truth, the RAB has only had brief periods of geniality breaking up its overall fractious history.	The Navy seeks to have a community involvement program moving forward that allows for the two-way exchange of information in a manner that is safe, welcoming, and inclusive of the diverse HPS community. The Navy disagrees that misbehavior at RAB meetings was ever encouraged by Navy personnel or contractors. The Navy also believes that the level of discord and ineffectiveness of the RAB did vary from year to year; however, what is important is that the end-state of the RAB in the 2008/2009 time period was, despite Navy efforts, an ineffective community involvement vehicle.
24.	Appendix E	The reason for this situation was insufficient up front training of RAB members starting in 1994. It was unrealistic on the part of the Navy to presume that individuals residing in a community with long term socio economic, environmental and equality disadvantages to immediately give over their trust to an entity whose actions in 1974 helped drive the community into poverty.	The Navy disagrees with the assumptions listed in this comment regarding reasons that the RAB was ineffective. The Navy has never stated that a goal of the RAB is for community members to "give over their trust" to the Navy.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
25.	Appendix E	Another contributing factor was that the Navy failed to take advantage of City-based efforts to assist the RAB's management. In 1995, the Hunters Point Shipyard Citizens Advisory Committee created its Environment and Reuse Subcommittee to address matters the Navy considered outside of the scope of the HPS RAB. These issues include questions regarding cleanup employment and contracting and non CERCLA environmental concerns. The Navy BEC at the time, Michael McClellan, and the Western Division Commander were informed that the Subcommittee was being created to in part take the pressure off the RAB by providing an alternative forum for these views. The Navy was invited to participate. Had the Navy partnered with the Subcommittee as was proposed, the RAB might not have been burdened by these questions over the past sixteen years.	The Navy disagrees with the idea that if it had invested more time in the CAC subcommittee that the RAB would have been more effective.
26.	Appendix E	It was also unrealistic for the Navy to assume that a community with long-term socio-economic, environmental and equality disadvantages would not see environmental remedial activity as a source of employment and be frustrated by the Navy's segmentation of its hiring, contracting and remedial activities. However valid the Navy's process from its own point of view, the Navy mission centered viewpoint was as destructive to the goals of that mission as counter insurgency methods were to our national campaigns prior to the Petraeus doctrine of engagement.	The Navy disagrees with the assumption stated in this comment. Page 11 of the CIP indicates that during interviews jobs were identified as a primary concern for the community. The Navy will continue to provide information for obtaining jobs through the City's CityBuild Information Line. A handout has been prepared in multiple languages that describes the use of local vendors in the Navy's cleanup. Additionally, a vendor sign-up sheet is provided at each meeting in English, Chinese, and Spanish for any community member who wants to provide contact information.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
27.	Appendix E	By viewing external sources of expertise as competitors or agent provocateurs rather than individuals lending their expertise to help the Navy through its cleanup effort, the Navy failed to build the necessary external technical support mechanism in the RAB that would have brought the non environmental professional members of the Board along when there was agreement on remedial strategies. The use of local academic technical expertise would have over the long term built a strong community/ Navy team working on mutual goals around the remedial program each gaining understanding and concessions from the other.	The Navy disagrees with the assumptions contained within this comment. The Navy has historically reached out to a number of individuals, not only to try to increase RAB membership, but also to provide more opportunities for involvement.
28.	Appendix E	The lack of internal introspective analysis regarding the Navy's role in the failure of the RAB significantly undermines the credibility of the analysis presented in Appendix E.	The Navy disagrees with this statement. The Navy believes reasons articulated in the letter dated December 23, 2009, accurately reflect the Navy's decision to dissolve the RAB. No further "internal introspective analysis" would have added value to this document.
29.	Appendix G	Appendix G should have been Chapter 1 or 2 of the CIP.	The format for this CIP is not uncommon and was developed in cooperation with U.S. EPA. Chapter 1 provides a reader-friendly introduction to the document, and Chapter 2 delves into the feedback received during interviews, which is the cornerstone for the plan outlined in Chapter 3. Regulations can be confusing and the information can be overwhelming to the non-technical reader. General information has been provided, with references for those who wish to review the detailed guidance. See response to comment number 3.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
30.	Appendix G, Page G1	<p>The statement appearing in the second paragraph of Appendix G:</p> <p>“Federal and state environmental statutes and amendments require community involvement for hazardous waste sites... “</p> <p>should have been the first paragraph of a chapter devoted to explaining these requirements. Such a chapter should appear as either the 1st or 2nd chapter of the CIP to provide the reader with a context for the requirements and expectations of Congress and successive federal and state administrations for the conduct of public engagement activities.</p>	Please see response to comment number 29.
31.	Appendix G	<p>The first paragraph of Appendix G should have been the second paragraph of the chapter described above in VII.1</p> <p><i>“The Department of the Navy’s Installation Restoration Program is conducted in accordance with federal and state requirements, and its purpose is twofold---(1) to identify, investigate, and clean up or control the releases of hazardous substances and (2) to reduce the risk to human health and the environment. The Navy is the lead federal agency for the Installation Restoration Program at Hunters Point Shipyard (HPS). The figure on Page G---2 presents the major phases of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) process.”</i> Appendix G, Page G1</p> <p>To this the Navy should add: CERCLA includes guidance with regard to the provision of public involvement activities found in 42 USC, Section 9601 and following; The Navy could then present a summary of the relevant CERCLA and SARA provisions or cite that the relevant sections of those laws are presented in a new Appendix G.</p>	The format for this CIP is not uncommon and was developed in cooperation with U.S. EPA. A thorough explanation of regulations is provided in Appendix G, and an additional chapter specific to regulations is not deemed necessary for this document.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
32.	Appendix G	<p>Although the CIP provides Appendix G which contains a good overview of the regulations governing public participation, this section is not cited elsewhere in the document and the relevant sections of the regs are not quoted.</p> <p>The Navy goes into significant detail about matters regarding the cleanup that are not specific to the issue of public participation (these issues such as those presented in Chapter 4) however it fails to provide equal description to matters of specific relevance to the CIP and public participation such as providing the public participation requirements in each regulation, guidance and other directives in whole or summarized anywhere in the document;</p>	A more thorough description of Appendix G has been added to Chapter 1. Please see response to comment number 3.
33.	Appendix G	This comment corresponds with and expands upon Comment [32]. The Navy has couched the CIP in such a ways as to de-emphasize its regulatory requirement to conduct a community involvement process. This clear trend within the document is worrisome.	The Navy disagrees that the CIP in any way deemphasizes regulatory requirements to conduct community involvement. In fact, the Navy is proposing a program that far exceeds any minimum requirements for community involvement.
34.	General observation/ recommendation	While there are genuinely many useful concepts in the CIP, the document is undermined by its unstated but obvious antipathy to the full acknowledgement of the requirements of regulation and guidance. The document would be far richer, more informative, and useful if the rules and guidances were fully presented and discussed.	Please see response to comment number 16.
35.	General observation/ recommendation	The Navy should acknowledge its own role in the dysfunctionality of the RAB. We refer the Navy to the comments provided on Appendix E [above].	The Navy disagrees with the accuracy and relevance of this comment. Furthermore, the CIP is not meant to focus on the past but to provide a path forward for the future.

Appendix J: Responses to Comments on the Draft CIP (continued)

Comments from:

[India Basin Neighborhood Association, Technical Assistant Grant Technical Advisor, May 8, 2011](#)

Comment Number	Section/ Page	Comment	Response
36.	General observation/ recommendation	The Navy should reconsider creating a new RAB. RABs can play important and useful roles if utilized well and organized appropriately. Particular care must be given to balancing community representation with technical expertise from non military academic and environmental sources because doing so will ultimately serve to educate the full membership of the Board and help it make better recommendations in a more professional collegial environment.	Navy acknowledges that RABs on most Base Realignment and Closure (BRAC) bases do play important and useful roles. However the circumstances described in this comment capture an ideal situation that did not exist at HPS. Although a RAB or other advisory board is not currently part of the planned community involvement activities, as noted in Appendix E, the need for a RAB will be assessed at least every 2 years, as required.

HUNTERS POINT NAVAL SHIPYARD

Summary of the Navy's Proposed Cleanup of Parcel E-2

Shoreline of Parcel E-2

September 2011

This fact sheet provides a summary of the Proposed Plan (included in this mailing) for Parcel E-2 on the Hunters Point Naval Shipyard. In addition, the Proposed Plan and other Parcel E-2 information can be viewed on the BRAC PMO website at: www.bracpmo.navy.mil. The Navy is requesting public comment on the Proposed Plan in writing before October 24th, 2011 – or in person at a 6:00pm public meeting on September 20, 2011 in the Alex L. Pitcher, Jr. Conference Room at the Southeast Community Facility Commission, located at 1800 Oakdale Avenue in San Francisco.

Figure 1 - Location of Parcel E-2

A Brief History of Hunters Point Naval Shipyard

Hunters Point Naval Shipyard (the Shipyard) is located in the southeastern portion of the City of San Francisco and is adjacent to San Francisco Bay (Figure 1). The Shipyard is now closed, but formerly had many uses, including a commercial dry dock from 1869 until it was purchased by the United States Navy (Navy) in 1939. From 1945 until 1974, the Shipyard was used for shipbuilding, repair, and maintenance. The Shipyard was also the site of the Naval Radiological Defense Laboratory, which operated from 1948 through 1969. The Shipyard was closed in 1974 and remained vacant until 1976, when Triple A Machine Shop, Inc. leased the property until 1986. Several buildings have been leased by artists and others between 1986 and the present. Since 1991, the Navy has conducted hundreds of studies, excavations and groundwater treatment actions in an effort to clean up the Shipyard. This fact sheet focuses on the proposed cleanup of a part of the Shipyard called Parcel E-2.

History of Parcel E-2

Parcel E-2 is a 48-acre area located in the southwestern portion of the Shipyard. It is part of an area that was created by filling in the edge of San Francisco Bay with soil, crushed bedrock, dredged sediments and debris. Parcel E-2 also includes a 22-acre landfill where the Navy disposed of construction debris, municipal-type trash, and industrial waste from the mid-1950s until the 1960s. After the landfill closed in the early 1970s, the Navy covered it with 2 to 5 feet of soil. In 2000, the Navy constructed a multi-layer cap across 14 acres affected by a fire. This multi-layer cap remains in place today. The Navy has previously conducted cleanup actions to address known areas of contamination on Parcel E-2, including extracting contaminated groundwater, removing landfill gas, and excavating contaminated soil. These previous actions are all consistent and build upon the Navy's proposal for a permanent remedy at Parcel E-2.

Site Risks

The landfill does NOT currently pose a risk to the Bayview/Hunters Point community because direct exposure to contaminants in the landfill is controlled by the successful completion of the previous Navy actions. The Navy's Proposed Remedy expands on these actions and creates a permanent remedy that will be protective of human health and the environment in the long term. The Navy's proposal allows the property to be developed by the City of San Francisco as open space/parklands.

Parcel E-2 Proposed Cleanup Actions

The Proposed Plan for Parcel E-2 outlines several cleanup alternatives and recommends the following actions to address contaminated soil, sediment, landfill gas, groundwater, and soil which may have low levels of radioactive elements that remain on Parcel E-2. The Navy has carefully studied Parcel E-2 and believes that the following is the best way to protect public health and the environment:

Soil

- Excavate contaminated soil from several areas and dispose of it off site at an approved landfill.
- Install a protective cap and soil cover over all of Parcel E-2 (in addition to the 14 acres already capped) to prevent exposure to the public and minimize rainwater from coming into contact with remaining onsite contamination (Figure 2).
- Build a protective shoreline barrier of large boulders to prevent shoreline erosion along the edge of the Landfill (Figure 2).
- Create new wetlands along parts of the shoreline to restore the environment in the "panhandle" area (Figure 2).
- Conduct a radiation scan of the entire surface of Parcel E-2, remove shallow soil contaminated with radiation, if found, and dispose of it off site at an approved landfill.
- Investigate and clean storm drain lines with any residual low levels of radiation found in them.

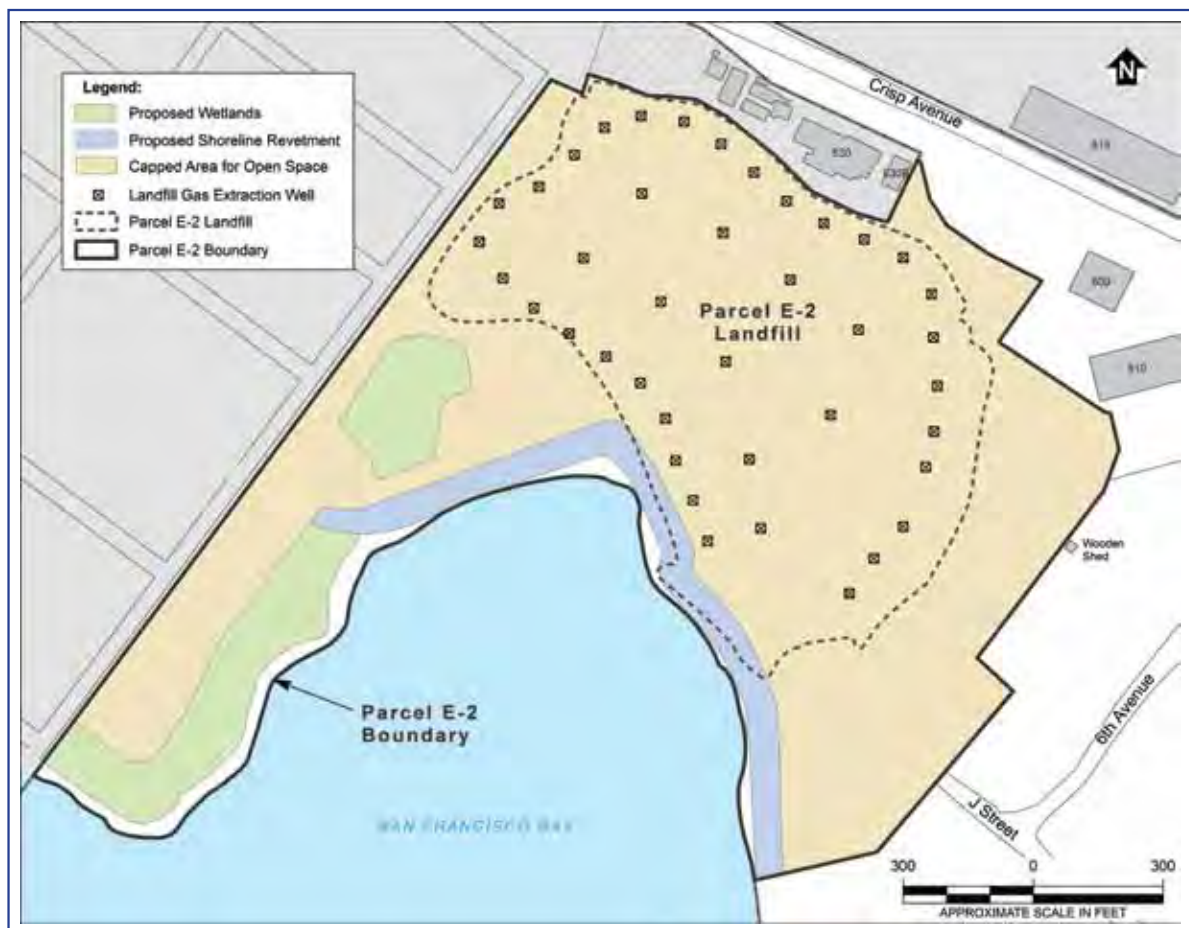

Figure 2 - Parcel E-2 Proposed Cover Plan

Parcel E-2 Proposed Cleanup Actions (continued)

Groundwater

- Install below-ground barriers to control groundwater from entering San Francisco Bay.
- Monitor groundwater underneath Parcel E-2 and continue verifying that contaminated groundwater is NOT impacting the San Francisco Bay.

Landfill Gas

- Install wells and equipment to remove, treat, and contain landfill gas and prevent it from moving beyond the boundary of Parcel E-2 (Figure 2).
- Monitor the landfill gas to verify that it is being managed effectively on the property.

Maintaining Parcel E-2 after these cleanup actions

After conducting the actions described above, regular inspections and maintenance of the soil cap, below-ground barriers, well and landfill gas equipment, shoreline revetment, and restored wetlands will be conducted to ensure they are functioning as intended. Use of the land will be limited to open space/parkland, and future digging through the cap will be restricted to ensure the contamination is contained, stays in place, and that the public and the environment are protected.

Estimated Cost

The estimated cost of the proposed actions for soil, sediment, groundwater, landfill gas, and "rad"-impacted soil is approximately \$87 million.

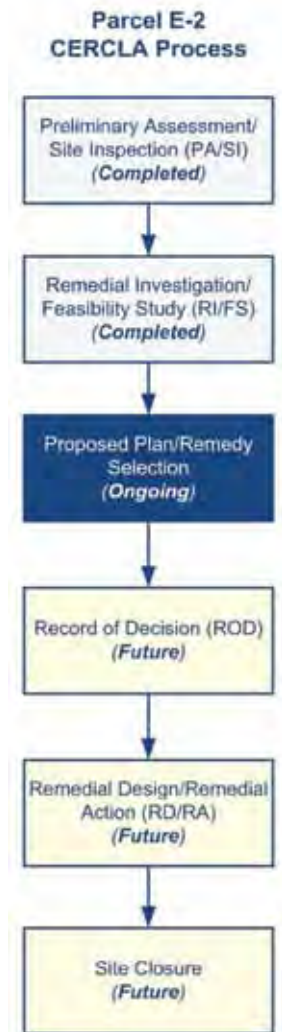

The Proposed Remedy discussed above will protect human health and the environment by removing contaminants near the surface and shoreline and installing a cap that will prevent exposure to any remaining waste. The Bay will be protected by keeping contaminants from seeping or moving out of the landfill. When the Navy actually designs these parts of the remedy, the design will take into account future sea level rise, extreme weather conditions and future earthquakes.

Public Comment Period

The Proposed Plan for Parcel E-2 was released to the public in September 2011. You are invited to comment on the preferred remedy for Parcel E-2 at a public meeting on September 20, 2011 at the Southeast Community Facility Commission Building in the Alex L. Pitcher, Jr. Room located at 1800 Oakdale Avenue in San Francisco.

Comments from the community will also be accepted in writing from September 7 through October 24, 2011.

The Navy considers all comments before making a final remedy selection. The selected remedy must then be approved by federal and state regulatory agencies. The Navy's selected remedy will then be described in a document called a Record of Decision. This will include a summary of all comments received and the Navy's response to each comment, including how the comment may have influenced aspects of the final remedy selected.

Where do I get more information about the Parcel E-2 cleanup at Hunters Point Naval Shipyard?

Navy documents and reference materials about Hunters Point Naval Shipyard are available to the public at the City of San Francisco Main Library and the Hunters Point Naval Shipyard Site Trailer. The downtown San Francisco library contains a nearly complete record of all documents related to the investigation and cleanup actions under way at Hunters Point Naval Shipyard. Information is also available on the Navy's Hunters Point Naval Shipyard website: www.bracpmo.navy.mil.

Click 'Prior BRAC' at bottom of page, and then select 'Former NSY Hunters Point' from the 'Prior BRAC Installations', then scroll down and select 'View/Hide all Documents', then select 'Parcel E-2 Landfill' from the menu.

Information is also available at:**City of San Francisco Main Library**

Government Information Center, 5th Floor
 100 Larkin Street
 San Francisco, CA 94102
 (415) 557-4500

Hours of Operation:

Monday: 10:00 a.m. to 6:00 p.m.
 Tuesday through Thursday: 9:00 a.m. to 8:00 p.m.
 Friday: 12:00 p.m. to 6:00 p.m.
 Saturday: 10:00 a.m. to 6:00 p.m.
 Sunday: 12:00 p.m. to 5:00 p.m.

Hunters Point Naval Shipyard Site Trailer

(Adjacent to the security entrance
 to the Shipyard.)
 690 Hudson Avenue
 San Francisco, CA 94102

Hours of Operation:

Monday - Friday: 8:00 a.m. to 5:00 p.m.

The complete Administrative Record for Hunters Point Naval Shipyard is maintained at the Naval Facilities Engineering Command (NAVFAC) offices in San Diego, California.

Because of the volume of documents required for the Administrative Record, all documents may not be in the local Information Repository. However, a copy of the complete Administrative Record index and documents are available for public review at the Information Repository located at the San Francisco Main Public Library.

Copies of documents located at the Administrative Record are available for review by appointment only by contacting:

Diane Silva

Code EVR-FISC Bldg. 1, 3rd Floor
 NAVFAC Southwest
 Phone: (619) 532-3676
 Fax: (619) 532-3546
 diane.silva@navy.mil

Administrative hours are 8:00 a.m. to 5:00 p.m. Monday through Friday. Documents may not be removed from the facility; however, they may be photocopied.

HUNTERS POINT NAVAL SHIPYARD

Frequently Asked Questions About the Shipyard Landfill

September 2011

The community has many questions about the landfill at Parcel E-2 at Hunters Point Naval Shipyard. Below is a list of frequently asked questions, and answers to those questions based on what the Navy has learned from numerous investigations and cleanups conducted over the years.

What do we know about what's in the landfill?

The Navy has thoroughly studied the landfill, including reviewing historical records and collecting hundreds of samples. The Navy has done a large number of investigations at the site, including digging test pits, drilling boreholes to take samples from below the ground, using radiation detectors over the entire surface and sampling the water from under the landfill. Based on this work, the Navy knows that municipal trash, construction debris, soil, and shipyard industrial waste were buried in the landfill.

The Navy took over 300 samples of soil within the landfill (from soil borings, excavation holes where PCB removal was being conducted, groundwater monitoring wells, and test pits). The results of these samples show low levels of contamination, with lead, PCBs and chemicals related to asphalt, being the most common.

Most of the samples show levels of contamination within EPA's acceptable risk range. The worst areas were in the PCB Hotspot Area, which the Navy is currently excavating (Figure 1).

Figure 1 – Parcel E-2 Cleanup Areas

Who is making decisions about the landfill?

The Navy doesn't make cleanup decisions alone. The landfill project at Hunters Point Naval Shipyard involves the Navy, the U.S. EPA, California EPA (also called the Department of Toxic Substances Control), the San Francisco Regional Water Quality Control Board, and other regulatory agencies. In the Proposed Plan, the Navy is announcing what it believes is the best way forward for the landfill. However, the Navy must work with the environmental regulators and the City of San Francisco every step of the way. The cleanup process only moves forward once the Navy and the regulators are in agreement.

Further, the voice of the community plays a significant role. Telling the Navy and regulators your views and opinions can help shape the final decision. The Navy wants to hear from you!

Is there radioactive waste in the landfill?

The Navy has found glow-in-the-dark dials and markers during several excavations. These devices were painted with radium, which is a radioactive material that is no longer used. The Navy has excavated the two areas most likely to have such devices, though there may be more scattered throughout the landfill. The radiation levels are low in these devices and do not pose any risk if they remain underground.

From the late 1940s through the late 1960s, the Navy conducted experiments on the health effects of radiation on animals, and some of those animals may have been buried in the landfill. However, any animals buried in the landfill were not radioactive since the radiation levels they were exposed to were low (similar to those of an x-ray). Any animals that were radioactively contaminated were disposed of at licensed off-site disposal facilities or drummed and disposed of at sea.

Sandblast waste from cleaning ships used during weapons testing in the South Pacific may also have been disposed of at the landfill. However, historic records suggest that waste with the highest levels of radioactivity was controlled and not disposed of at the landfill.

What about toxic chemicals?

The results of the sampling described on Page 1 show that while there are industrial wastes in the landfill, the amounts and concentrations are not that high, except for a few specific hotspots. The Navy has sampled over 200 groundwater locations and did not find any plumes of chemicals in the groundwater. In addition, the soil borings and test pits found mostly wood, glass, cement, metal and paper. The most highly contaminated areas were the Metal Slag area and the PCB Hotspot. The Navy found over 100 buried metal drums filled with oil and tarry waste in the PCB Hotspot Area. The Navy excavated both areas and removed the drums. The Navy is currently extending the excavations in the PCB Hotspot to remove more contamination, including lead contaminated soil in an area where batteries were disposed (see photo to the right).

Excavation of soil with lead contamination

What Navy cleanup actions have been completed at the landfill and in Parcel E-2 to date?

- Installed a sheet pile wall and groundwater extraction system in the southeast portion of Parcel E-2 in 1998 to keep PCBs from moving towards the Bay. The system operated until 2005 when the Navy excavated and removed the source of contamination.
- Installed a multi-layer cap over 14.5 acres of the landfill in 2000.
- Installed a landfill gas control and extraction system in 2002.
- Removed debris from the shoreline in 2003, including 81 tons of metal sent to a recycler, 52 dump trucks of non-metal debris, 344 tires and 10 cubic yards of material containing asbestos.

Old cables excavated from PCB Hot Spot shoreline area

Debris excavated from PCB Hot Spot

- Excavated 8,200 cubic yards (600 dump trucks) of soil, metal slag and debris from the Metal Slag area on the Panhandle in 2005-2006. The Navy found 32 radiological devices (glow-in-the-dark dials or markers) in this waste.
- Excavated 44,500 cubic yards (3,100 dump trucks) of soil and sediment containing PCBs, along with 110 buried drums, from the PCB Hotspot Area in 2005-2007.
- Currently excavating another 40,000 cubic yards (about 2,500 dump trucks) of soil from the PCB Hotspot and East Adjacent Area, where the Navy is removing soil with lead contamination from an area where batteries were disposed.

What about gases from the landfill?

The primary gases from landfills, including the one at Hunters Point, are methane and carbon dioxide that come from rotting material. Neither of these is toxic, though methane must be controlled because it is flammable. In addition, there are small amounts of other gases, called non-methane organic compounds. The Navy installed a cap over the landfill in 2000 to trap the gases, which are then captured for monthly testing. The gases are sent through a carbon filter that removes the non-methane organic compounds before venting them to the atmosphere. Navy tests have shown the gases do not pose a risk to the community.

What about dust and risk?

During soil moving, there is a risk of releasing dust that has chemicals and asbestos in it. The Navy follows an approved dust control plan that prevents public exposure to dust during earth-moving activities. Measures include containing soil to prevent contaminated dust from getting into the air. All trucks carrying soil on or off the Shipyard must have covers and truck wheels are washed or brushed off before leaving the Shipyard. The Navy continuously waters down any areas where soil is being moved to keep dust down. In addition, the Navy monitors the air around all of its active cleanup areas. Test results to date show no risk to the community or the workers. Results from dust monitoring can be found on the Navy's website: www.bracpmo.navy.mil.

What about earthquakes and liquefaction?

The Navy has done geotechnical testing of the landfill area and found a low likelihood for major soil movement, called liquefaction. Liquefaction and earthquake related effects are well understood in California. CERCLA, the "Superfund" law regulating cleanup at the Shipyard, requires an evaluation of nine criteria, including short and long-term protectiveness for any remedy proposed. Any remedy will be designed to be protective during and after an earthquake. If a landfill cap and revetment wall are chosen as the remedy, they will be designed and constructed with this in mind.

Can contaminants move into the Bay?

The Navy has completed a large amount of sampling in the Bay and did find PCBs at low levels in sediment near the landfill and the mouth of Yosemite Slough. The sources are private companies near Yosemite Slough and the PCB Hotspot along the shoreline of the landfill. The Navy is removing the PCB Hotspot and evaluating methods to dredge or clean contaminated sediments near Yosemite Slough and the landfill. The Navy has thoroughly sampled groundwater flowing underneath the landfill and has not found any groundwater plumes with contamination migrating towards the Bay.

What if there is a rise in sea level?

All Navy remedies at Hunters Point, including those proposed for the landfill, are designed to withstand potential sea level rise. Any capping remedy will have revetments and elevations that will account for significant sea level rise.

Will the landfill be safe for reuse?

The proposed remedy at the landfill includes an engineered cap, soil cover, and rock revetment along the shoreline. This proposed remedy is summarized in the Navy's Proposed Plan (included in this mailer) and will break the pathway to any contamination left beneath the ground. This action will protect humans and the environment for future reuse of the landfill site. The current projected reuse of the landfill and immediately surrounding area is open space, including a park and Bay Trail.

Where can I get more information about the landfill and Parcel E-2 cleanup at Hunters Point Naval Shipyard?

Information is available on the Navy's Hunters Point Naval Shipyard website: www.bracpmo.navy.mil.

Click 'Prior BRAC' at bottom of page, and then select 'Former NSY Hunters Point' from the 'Prior BRAC Installations', then scroll down and select 'View/Hide all Documents', then select 'Parcel E-2 Landfill' from the menu.

2 6:32 P.M.

3 ---oOo---

4 MR. ROBINSON: All right. Well, thank you very  
5 much, ladies and gentlemen. Thank you for coming  
6 tonight. I'm Matt Robinson. I'm the community  
7 involvement manager for the Hunters Point Naval  
8 Shipyard.

9 We're here tonight to have a meeting on the  
10 Proposed Plan for the Parcel E-2 section at the naval  
11 shipyard.

12 Here tonight to speak to you about the project  
13 is Keith Forman, the Navy's environmental coordinator;  
14 Melanie Kito, the Navy's lead project manager; Laura  
15 Urizar, another Navy project manager. Also here with us  
16 tonight are regulators who oversee what the Navy is  
17 doing at the shipyard.

18 I'm going to ask them all to stand up and wave,  
19 the people who are talking tonight as well. From the  
20 EPA, U.S. EPA, John Chesnutt, Craig Cooper and Jackie  
21 Lane; from California EPA, Ryan Miya; from the Water  
22 Board, Alec Naugle and Ross Steenson.

23 Now, for tonight the purpose of tonight's  
24 meeting, we're here to provide overview of the Proposed  
25 Plan for Parcel E-2 at the shipyard. We're also

1 accepting public comment tonight on the Proposed Plan,  
2 but you'll also have more time to put in written  
3 comments on the plan after this meeting.

4           Tonight we will also be, as I've said,  
5 presenting the Proposed Plan on Parcel E-2. Now, in the  
6 back, if you signed in, you can also get a copy of the  
7 Proposed Plan to read at your leisure after the  
8 meeting.

9           We'll also be giving you a chance after the  
10 presentation to ask clarifying questions on what you've  
11 seen and heard from the folks up here about the  
12 Parcel E-2 plan. You'll get a chance to ask them for  
13 clarifying questions. And then afterwards we'll have  
14 you come up. There will be a microphone up here for you  
15 to give comments about the Proposed Plan as well.

16           Now, tonight we want to make sure that  
17 everybody has a chance to speak if you would like to  
18 speak. And to make sure that everyone is heard, we also  
19 have some ground rules that we'd all like you to adhere  
20 to tonight.

21           First of all, we'd like to have you respect  
22 other people here participating in the event so not only  
23 they can hear what's going on and get a chance to talk  
24 with the folks up here about the E-2 parcel and their  
25 questions about it. We'd also like you to hold your

1 questions and comments until after the presentation is  
2 done and you've heard from the folks up here about  
3 what's going on at Parcel E-2.

4           We ask that when we have public comment and on  
5 clarifying questions that we speak one at a time. We'll  
6 have a microphone set up here for you to come up, give  
7 us your name, and spell it for the court reporter and be  
8 able to talk to the folks up here and do it one at a  
9 time.

10           And there will also be time for everybody to  
11 make comment. We want to hear from everyone here  
12 tonight who came out to talk about what's going on. We  
13 want to give you the opportunity to have some comments  
14 to speak to the Navy about the E -- Parcel E-2.

15           We're going to give three minutes per speaker.  
16 And after three minutes, we'd like you to move aside and  
17 let someone else have a chance to speak.

18           But we also want to hear from you if your  
19 comments are longer than three minutes. You can wait --  
20 Please wait until the last person is done, and then come  
21 back up to continue your comments for another three  
22 minutes.

23           We also want to make sure that everyone is  
24 heard. When you come up for your three minutes, please  
25 don't give your three minutes to somebody else. If you

1 have a comment, please make it. Otherwise, let others  
2 have a chance to speak.

3           Also, we also have handouts in the back. If  
4 you -- As you sign in, we have a comment card. We have  
5 a Fact Sheet as well as Frequently Asked Questions sheet  
6 about the parcel that you can also take home and review  
7 it.

8           So now we will turn this over to Keith Forman  
9 about Parcel E-2.

10           MR. FORMAN: Okay. We good to go? All right.

11           All right. Thank you, everybody, for coming  
12 tonight. This is an important meeting for us and for  
13 you as we reach a point in the shipyard where we talk  
14 about Parcel E-2, which is known to many as the parcel  
15 on the shipyard where the base landfill is located.  
16 We're going to talk a little bit about the cleanup  
17 process.

18           Just so you know where this meeting tonight  
19 fits in, we're going to document the Proposed Plan  
20 handout that you have, where that fits into the  
21 process. We're going to talk about what we know about  
22 Parcel E-2 and why the Navy's in a position to make a  
23 recommendation now, a proposal to you and to regulators  
24 about what to do with Parcel E-2.

25           We're also going to talk a little bit about

1 site risks and how they factored into the  
2 decision-making process. And we are going to let you  
3 know what data the Navy has and what the Navy's done as  
4 far as early cleanup actions, many of which have already  
5 been done and some of which are ongoing.

6           And then we're going to look at the different  
7 choices for cleanup. They are called remedial  
8 alternatives. We are going to look at those choices and  
9 then -- and then tell you what we think the best choice  
10 is. We call that a preferred alternative. We're going  
11 to do that tonight, and we're going to tell you what the  
12 next step of the process is during -- of our  
13 presentation.

14           Then after that there's going to be two  
15 sections, one to clarify what we have said. You'll have  
16 an opportunity to question us. And then we'll take a  
17 break.

18           And then there will be comments for the  
19 record. Those of you who have been at these formal  
20 meetings before know that's your opportunity to comment  
21 for the record and become part of the process, and  
22 that's one of the reasons we have Christine here to  
23 record everything tonight.

24           Okay. Parcel E-2, if you see the map -- do we  
25 need to turn down the lights at all, or can everyone

1 see? Turn out some of the lights?

2 Thank you. Thank you.

3 Pardon?

4 Yeah. Can you see?

5 Okay. Is that a little better? Okay. I just  
6 want to make sure you can see, and I understand it's not  
7 the largest screen in the world, but I'm hoping that you  
8 can see this. Let us know if there's a problem with  
9 that, or you can move up closer here.

10 Okay. So we're talking about Parcel E-2.  
11 Parcel E-2 is located on the southwest part of Hunters  
12 Point. Many of you know where it is. If you're  
13 standing on the parcel, you'll look across that bay into  
14 Candlestick Park. And Candlestick Park, which is  
15 located over here [indicating]. This is Parcel E-2.  
16 It's about 48 acres; and out of the 48 acres, about 22  
17 of those acres comprise the base landfill.

18 Okay. Little bit of history of this parcel.  
19 Parcel E-2 shares a lot in common with the other parcels  
20 that you might know about on the shipyard.

21 When the Navy first purchased the property in  
22 1939, it was a rocky peninsula. There wasn't much to  
23 it. And over the course of the decades of 1940s, '50s  
24 and '60s, the Navy filled in the bay. It was a process  
25 that occurred year after year as the Navy built out the

1 parcels to form the base as we now know it.

2           And when the Navy was filling in this portion  
3 of the base, we have -- we have a lot of evidence to  
4 suggest what created this new land that jutted out into  
5 the bay; and it's soil, crushed bedrock, dredged  
6 sediments. Dredged sediments means things that came  
7 from the bay already. Construction debris, trash, and  
8 some industrial waste also fill out the volume of this  
9 portion of the base. We'll talk a little bit more about  
10 that and go over that for -- particularly for the base  
11 landfill.

12           So I want to show you some of the photographic  
13 record we have; and if you want to study this more  
14 intently, we have poster boards, poster boards over here  
15 that show you really sort of a chronological record of  
16 how Parcel E-2 was built.

17           So let's start with 1946. The 1935  
18 shoreline -- I hope you can all see this in blue. Some  
19 of you -- some of you who are -- actually know about  
20 this is that's a natural shoreline.

21           Now, Parcel E-2 [indicating], the outline of  
22 Parcel E-2 is here. This is all bay [indicating]. This  
23 is a portion of the bay. It hasn't been filled in  
24 much. You can see, though, this east adjacent area is  
25 already built out.

1           So let's go to 1955. You can see there that  
2 there's been a lot of work to create new land. The east  
3 adjacent area again; but still this large section, it's  
4 water. But this panhandle area has been built out a  
5 little bit. You can see there's actual solid land  
6 here. This is not on the Navy base, but this part of  
7 the Navy base has been built out and so is this. And  
8 you can see that there's -- from the photograph there's  
9 been activity here too.

10           Let's go a few more years, 1965. You can see a  
11 big difference now. The Navy's been building out this  
12 parcel. The panhandle area has been completed. This  
13 area looks all filled in. Here is the bay out here.  
14 This area -- this area had to do with the radiological  
15 research program, and the Navy's going to do a separate  
16 investigation on that. This is in Parcel E-2. You can  
17 see how this has been built out, and this area as well  
18 has been all nicely filled in. But this area still  
19 remains water.

20           Okay. So 1969, four years later, you can see  
21 the Navy was busy filling in in this four-year period,  
22 and we are down to a drainage channel here. Everything  
23 else pretty much seems to be filled in.

24           And then finally, 1974. Unfortunately for  
25 many -- we talked a lot about this in the past -- 1974

1 is the year that the Navy officially closed the  
2 shipyard. Many of the shipyard operations went away in  
3 1974. But this is what it looked like at the time.  
4 Parcels have been filled in, and the landfill is green  
5 here. This is the 22 acres that comprise the  
6 landfill -- the base landfill.

7           Okay. Now, a little bit about the process of  
8 where this meeting tonight and the document in your  
9 hand, the Proposed Plan, where that fits in.

10           The Navy's done a bunch of investigations.  
11 They have fancy names through the years: site  
12 inspections, assessments, remedial investigation, and  
13 the document where we looked at all the different  
14 options, and so we put them on the table. That's called  
15 a Feasibility Study.

16           But the important thing to really remember is  
17 the Navy's been at this for many years taking samples  
18 from the site, looking at the site, using instruments to  
19 monitor the site to learn more and more about the site;  
20 and that's because the regulatory agencies -- there's a  
21 number of them -- actually demand that we know more  
22 about the parcel.

23           So that's led us up to this moment. We're now  
24 in a position where we have enough -- enough data,  
25 enough information, enough history where the Navy can

1 look at all of the options of what to do and then pick  
2 one as a recommendation.

3           So we're here tonight to tell you what our  
4 recommendation is and give you an opportunity tonight  
5 and throughout the comment period here to give us input  
6 and the regulatory agencies input on what you think we  
7 ought to do. You also have an opportunity tonight to  
8 ask us questions about the presentation to learn more.

9           Now, after that we'll have -- after that the  
10 next step in the process will be the Record of  
11 Decision. That's the next document. That's basically  
12 where we go from a proposal to a draft document that  
13 suggests this is what we think we want to do; this is  
14 how we want to move forward. That's going to be  
15 incorporated, your comments.

16           So if you speak here tonight, Christine again  
17 will take that -- your comments down on the record that  
18 will become a permanent part of the record, a permanent  
19 part of the process.

20           The Navy's required to respond to each and  
21 every one of the comments, and you will get to see that  
22 in writing and become a permanent part of this Record of  
23 Decision. We anticipate this coming out in early 2012,  
24 and you'll get to see your comment and make or submit  
25 one later and see our response again.

1           After that in the process, when you have a  
2 final decision here, then you have to do a design. The  
3 design is for the actual details of how you're going to  
4 build the remedy and what it's going to be composed of,  
5 all the nitty-gritty details of what it really needs to  
6 do -- what we decide to do on the landfill.

7           And then the remedial action is when we go out  
8 and actually build a remedy for a period of years, and  
9 this is all to seek in the future site closure.

10           Okay. So what we know about Parcel E-2.  
11 That's just another picture of one of our workers out on  
12 the site on a field work project that's actually ongoing  
13 now, and that's one of the hot-spot areas where we have  
14 been digging up contamination, in this case, the  
15 contamination called PCBs. We're going to learn a  
16 little bit about what the Navy knows.

17           Okay. But first, this is -- these are the  
18 different areas that we refer to. When you read your  
19 handouts, your Proposed Plan -- if you don't feel like  
20 doing that and you just want to read the Fact Sheet that  
21 summarizes the Proposed Plan, feel free to do that. You  
22 should receive a copy of that. It's a summary of what  
23 the 28-page Proposed Plan says.

24           And it divides the parcels in different areas.  
25 This was for ease of investigation, also just to make it

1 easier to talk about the parcel, about the 48 acres.

2           So we've got the panhandle area I talked  
3 about. We have a specific recommendation we're going to  
4 make about that.

5           You have the landfill proper, I call it,  
6 because all of this is really landfill. But the actual  
7 base dump or base landfill is in this area  
8 [indicating].

9           And then you have the east adjacent area I  
10 talked about. There's contamination there the Navy  
11 knows a lot about that's taking some actions on that is  
12 separate from this landfill.

13           And then we have the shoreline area. We have  
14 worked some -- diligently on some projects for the  
15 shoreline area in order to remove contamination to be  
16 protective in this case of San Francisco Bay.

17           Okay. So previous investigations at this  
18 parcel. Now, it was considered when we make this  
19 presentation, how detailed do I really want to get? How  
20 much do I want to throw out document names? And I don't  
21 think that that's really so important as giving you a  
22 decent take-away that represents how much effort the  
23 Navy's put in and what the results have been.

24           We have been investigating this parcel for  
25 20 years. 1980 to 2008 we've gathered a lot of data.

1 And when the Navy gathers data, we go out and check the  
2 soil not only on the surface, but at depth, by digging  
3 borings into it and taking samples and sending them off  
4 to a lab and then sharing that data in public documents  
5 that you can read. You can go to the San Francisco Main  
6 Library or -- and the regulators always check out. And  
7 we have been doing this for a long time.

8           We've also done trenches. Some of those  
9 trenches are in the landfill itself, and some of them  
10 are just outside the perimeter of the boundary of the  
11 landfill.

12           We have also done a lot of groundwater  
13 monitoring. And if you talk to folks who are in this  
14 environmental cleanup business or environmental  
15 investigation business, one thing that stands out to me  
16 is this is a 48-acre section of the base we're talking  
17 about. And look at what we've got here. Over this time  
18 period, we have put in 103 groundwater monitoring  
19 wells. That's an awful lot for 48 acres.

20           Now, the comeback to that if the Navy were to  
21 complain about this -- we are not -- is: This part of  
22 the base, this Parcel E-2, deserved that amount of  
23 attention. And it's been given over the years.

24           We also have 32 soil gas monitoring probes.  
25 That's fancy -- That's a fancy name for a place to

1 monitor the landfill gas that's generated by the  
2 landfill. Landfills generate landfill gases. It's one  
3 of the facts in the business that we deal with. And we  
4 have 32 monitoring probes currently, and you'll get --  
5 when we get to our recommendations, we're going to put  
6 in even more.

7           Now, the subtotal of this is pretty important.  
8 And I don't want to bore you with too many numbers  
9 because most people don't really want to get into that  
10 too much. You can get further detail if you wish by  
11 reading the Proposed Plan.

12           But the take-away here is we have many, many  
13 soil samples, many groundwater samples, many  
14 radiological soil groundwater samples that the Navy has  
15 taken over the years in an attempt to be able to show  
16 the public and show the regulatory agencies that  
17 scrutinize this how much, if any, radioisotopes still  
18 exist in the soil of the groundwater out there. And we  
19 have taken a lot of outdoor air samples and landfill gas  
20 samples over the years.

21           So my take-away of this to you is the Navy has  
22 done a lot of investigation. We have a ton of data to  
23 support what's going on out there, and we think that  
24 makes us very confident tonight in telling you what our  
25 recommendation for moving forward is.

1           Okay. I want to show you this because it sort  
2 of graphically demonstrates some things about  
3 Parcel E-2. These are some of the data points that we  
4 posted just outside the parcel in the case of landfill  
5 gas probes in the compound near the landfill and then on  
6 the parcel itself.

7           Now, the density of the data points varies  
8 depending upon whether an area that has similar fill  
9 material and similar stuff that you've logged, results,  
10 versus an investigation where digging is occurring and  
11 then the sampling points are much closer together  
12 because when the Navy goes out and does some of these  
13 cleanup actions, we dig and sample and dig and sample  
14 and dig, sample. That's the way we do it.

15           But I wanted to show you that this 48 acres has  
16 been very thoroughly characterized. We have a lot of  
17 data to support putting together the picture, pieces of  
18 the puzzle, to tell us what goes on with this parcel and  
19 this landfill.

20           So some of the things we know about the  
21 landfill is what went into it. Well, we know that a lot  
22 of construction debris went into it: wood, steel,  
23 concrete, and soil.

24           And I actually was fortunate enough to be on  
25 the team and on the base at the time when we put in a

1 landfill gas barrier system. When we did that, we dug  
2 deep trenches for many feet along the western and  
3 northern boundary of the landfill, and it's a little bit  
4 like peeling it back and looking at the different layers  
5 of a sandwich. We were able to see what was in the  
6 landfill on the northern and western edges of it.

7           And that's not all you need to know and it's  
8 not the complete picture, but it gives you a pretty  
9 darned good idea, looking and peering in there, of what  
10 it looks like.

11           And what we found there is huge concrete slats  
12 that take up a lot of volume, a lot of metal ropes and a  
13 lot of -- a lot of metal rebar that's used in  
14 construction to reinforce concrete, a lot of things like  
15 that. In addition to that, a lot of wood, wood being  
16 decomposed and wouldn't even -- most of the time it's  
17 going to create landfill gas, and a lot of soil as well,  
18 not necessarily clean soil, but a lot of soil to fill in  
19 the gaps.

20           And again, this was part of the Navy filling in  
21 the volume part of the parcel, not just -- not just  
22 taking its trash out of the landfill. This site really  
23 is a mixture of that.

24           We also had a lot of municipal-type trash.  
25 You're familiar with that. It's the kind of trash that

1 any base would generate. They have housing areas on the  
2 base during -- during the heyday of the shipyard, and  
3 they also had a lot of offices there and a lot of  
4 industrial activity.

5           Now, the offices, as you -- as you know, know  
6 anyone in your family or friends who's been in the Navy,  
7 the Navy runs on a lot of paper. There's a lot of  
8 admin. There's a lot of that kind of stuff that's  
9 generated on the base. And this is one of the waste  
10 streams that went into the landfill.

11           We also have industrial waste, and this is  
12 important not to overlook. The Navy's not minimizing  
13 this at all. In fact, much of the sampling we had to do  
14 over the years is because there's this other category of  
15 waste coming off of the industrial activities on the  
16 base. And some of it, not all of it, but some of it  
17 ended up in this landfill.

18           That includes sandblast grit, sandblast waste  
19 from the ships that were pulled into the dry docks, and  
20 then paint was sandblasted off them while they were  
21 undergoing repairs and maintenance. Much of that ended  
22 up in the landfill.

23           Also some low-level radioactive material.  
24 We're pretty familiar with this because we have a huge  
25 radiological investigation program on the base.

1           And those of you who have followed this some  
2 years know the Navy has this very extensive and very  
3 thorough program that we executed since 2004 where we're  
4 going after any residual low-level radioisotopes, like  
5 radium, that could be left -- could have left -- been  
6 left on the base. And we know there is some of that  
7 there. That's not uncommon for a military landfill.

8           Much of it consists of dials and  
9 radioluminescent devices. Radioluminescent device is a  
10 fancy name for a glow-in-the-dark deck marker or a  
11 glow-in-the-dark dashboard dial where radium paint was  
12 used back in the day so that it glowed in the dark and  
13 would let the submarine sailor or a surface -- a ship  
14 sailor know what was going on in the night.

15           And to this day, Navy ships, they don't use  
16 radium paint for these devices anymore, but they have a  
17 lot of night -- night lights, a lot of glow-in-the-dark  
18 markers. We just simply don't use radium paint anymore  
19 to do that.

20           But that's -- that will be found in the waste  
21 stream of the landfill, also a lot of paint sludge  
22 because paint is involved. Paint and things like red  
23 lead and primers were used a lot on shipyards. Cleaning  
24 solvents, a lot of chlorinated compounds, a lot of  
25 things that were used to pickle metal and to degrease

1 things were also found on the base as well as waste  
2 soils and a family of chemicals called PCBs. Might have  
3 heard that.

4 PCBs were used in a lot of electrical  
5 equipment, like transformers, and basically they are  
6 coolants. They're just a liquid that was used in  
7 machinery to transfer heat from one location to another  
8 to cool it.

9 Do we use PCBs anymore? No. The EPA has  
10 determined that it's -- and a lot of these facts, the  
11 fact that it's a carcinogen, it's no longer used in our  
12 modern industry. But back in the day, 1940s and '50s  
13 and '60s, it was used, and there is PCB contamination in  
14 this part of the base.

15 Before I leave this too, I want to say that  
16 this photo -- I don't know how -- if you can see the  
17 details very much. But again, this is from one of the  
18 trenches, and it shows you a lot about metal rebar  
19 hanging out, a lot of paper and ash and par -- on parts  
20 of wood, things like that. That's very typical of what  
21 we have seen when we've gone into the landfill area.

22 Okay. For the next section, talk about site  
23 risk, I'll turn it over to Melanie Kito. She's the  
24 lead -- engineer lead project manager for the base.

25 MS. KITO: Good evening. My name is Melanie

1 Kito. I'm a lead engineer or project manager for  
2 Hunters Point Shipyard. I'm in charge of all the  
3 technical projects here. It's nice to see everyone  
4 here.

5 My slide here is "What are the site risks?"  
6 And I think this is an important slide, just to kind of  
7 take my time on a little bit. I think it's one reason  
8 why a lot of people are here is the Navy might say --  
9 willing to say after the selected remedy is chosen.

10 So No. 1 is risk. What is risk? Now,  
11 remember, in life, everyone's always going to be at  
12 risk. It doesn't matter what it is. There's always  
13 going to be some type of risk.

14 I'm going to use the example of a Clorox bleach  
15 bottle, okay. Everyone knows what Clorox -- Clorox  
16 bleach is because we normally do laundry. Well, guess  
17 what, is also risk with it. If you inhale it, it's  
18 going to be -- it's going to be harm to you. If you put  
19 it on your hands, it's going to be harmful. If you  
20 drink it, it's going to be harmful.

21 Well, does that mean that you can't have it in  
22 your household? Absolutely not. Most people here  
23 actually own Clorox bleach. But everyone knows that it  
24 can be dangerous. Why? Be a little bottle. The bottle  
25 actually says: Don't inhale; don't drink this; don't

1 put this on your hands. And with that, it's okay. It's  
2 in a nice sealed sturdy bottle with a -- with a cap on  
3 it, and that's your remedy.

4 Your remedy is going to keep you safe. Can you  
5 still use it? Yes. Is there a risk? Yes. But it's  
6 still okay. So I'm going to kind of use analogies as I  
7 talk about risk a little bit.

8 Now, the figure that you see here is not  
9 considered our land. It's a typical landfill that we're  
10 looking at. And what the Navy does is very similar to a  
11 Clorox bleach, which is can people -- you know, is this  
12 safe for people?

13 Well, first of all, you have to look at your  
14 risk and then see what you're exposed to. So the risk  
15 with Clorox, if you're exposed to it, there's a risk if  
16 you inhale it. But let's look and stop the inhalation  
17 problem.

18 So we look at -- at a landfill; can people  
19 actually breathe in the vapors? If you have a landfill,  
20 ask what is in there. And as Keith Forman mentioned, we  
21 did a lot of sampling, since 1988 did a lot of  
22 sampling.

23 Well, this material will actually leach out or  
24 actua- -- dissolve into the groundwater and then  
25 eventually go into the well or the bay. Will it --?

1 Can it actually harm critters in the bay? We looked at  
2 that too. When you look at actually rains, will it go  
3 into the landfill, get contaminants into the bay or the  
4 wetlands, again, causing harm to the wildlife. We look  
5 at that. Can people drink the water?

6 So we look at all these things.

7 Now, the main thing we looked at when we choose  
8 a remedy is, number one, we want everyone to be safe,  
9 humans and the wildlife.

10 So enable to do that, you have to cut off the  
11 exposure. You have to make sure people -- take that  
12 Clorox bleach: Make sure you can't inhale, drink, put  
13 the Clorox on your hands. You have to cut off the  
14 exposure somehow. That's going to be your bottle.  
15 Institution controls basically is the -- is going to be  
16 the warning label on that bottle. Tells people what you  
17 can and cannot do.

18 Next, please.

19 All right. So on E-2 we have been doing  
20 studies since 1988; and with that when we actually  
21 sample something, you can see the density. I don't  
22 think you can remember how Keith had it. But the  
23 density of samples was in these areas [indicating].

24 The reason why there are more samples out in  
25 the areas is because you can see that there was a higher

1 risk. We actually found contaminants that were a higher  
2 risk, either PCBs or maybe it was a radiological  
3 concern, whatever it was. So what we did is we just  
4 removed them.

5           So -- and then this area -- it's green -- is  
6 called the metal slag area. This is an area that's full  
7 of metal, metal debris. It was a risk to the bay and  
8 actually has some radiological concerns there too. So  
9 we removed it.

10           Same thing with the PCB hot spot here, very  
11 high in PCB. It was too high to leave it there. It was  
12 too much of a risk. We removed that.

13           And then this area here in purple, a little  
14 purple here or there too, same thing: high  
15 contamination. And whenever I say this, as far as the  
16 Navy is, we're in collaboration with the regulators  
17 here, and together we decided it's too high of a risk  
18 not remove it, so we removed that as well.

19           And up here we have the landfill gas probes to  
20 make sure that methane isn't migrating in that area.

21           Now, one thing that's not on here but was on  
22 the figure that Keith had shown is all throughout here  
23 we've done radiological groundwater sampling too. So  
24 the one reason why we didn't do sam- -- do any type of a  
25 little work there is because it was very, very low.

1 There's no need to. Again, low risk, if none at all.

2 Next, please.

3 All right. These are just some pictures here,  
4 and this is what the PCB hot spot looked like at first.  
5 You can see there's a lot of junk here, junk. We didn't  
6 sample there. It was just too high. You can see how  
7 close it is to the bay here.

8 Next, please.

9 Afterwards we removed it, removed all of the  
10 contamination, which again lowers the risk; and that's  
11 what it looks like now. So it looks very good.

12 Next, please.

13 All right. So after doing all the sampling and  
14 you get your data, then you calculate it; then you have  
15 a whole team of engineers, scientists, risk assessors  
16 with the EPA Water Board, we actually determine that  
17 there should be five alternatives.

18 Now, five alternatives, you have to pick one.  
19 You see which ones -- let's see, is this one going to be  
20 better than the other? And you have to think of it  
21 as -- well, for us we picked five.

22 And you can see for No. 1, it's no action.  
23 Well, that's not one that we're going to pick. But you  
24 have to have a baseline that you go somewhere because  
25 you have to have your worst-case scenario. If you know

1 that there's a risk there and you do nothing, then  
2 what's going to be the baseline numbers to calculate  
3 from? That's why we always have that.

4           So the ones that we look at are going to be 2,  
5 3, and 4.

6           Number 2 is going to be remove and dispose of  
7 everything in that landfill. Number 3 is to contain the  
8 landfill and also the areas -- remove some of the --  
9 what, some hot spots, that need to remove the highest  
10 contaminated areas there, to remove high contaminated --  
11 contamination around that area. And then 4 and 5 we're  
12 actually removing more contamination than you do in 3,  
13 and you also have some landfill -- I mean some wetland  
14 design as well.

15           Next, please.

16           All right. This is a comparison criteria. I'm  
17 not going to go too much into detail. It's a little  
18 boring. If you guys are really interested, you can look  
19 on page 15 of the Proposed Plan for detail.

20           But the main thing is -- I want you guys to  
21 know is that there's nine criteria here that we must  
22 actually go through. Now, all the alternatives, you see  
23 1 and 2 here? Number 1 is probably the most important.  
24 Are we safe to humans and are we safe to wildlife? If  
25 the answer is no, it's out the door. So no action, we

1 do nothing, it's out the door. It's not even protective  
2 of humans and the environment.

3           Number 2 is another one. These are called the  
4 threshold criteria from the EPA, the EPA criteria that  
5 we use. And what that one just means is, are we  
6 actually going into all the rules and regulations? And  
7 again, that is no; it's out the door.

8           So 3, 4, 5, 6, 7 -- and 7 is a -- called  
9 short-term implementability. Those type of things are  
10 balancing criteria. So once we actually get some very  
11 good alternatives and now that balance, okay, which one  
12 is the right one we choose?

13           So then we have state acceptance. And then  
14 No. 9, which is community acceptance, why we're here  
15 today, we want to actually tell you all the things that  
16 we've done, all the calculations that we've done. We're  
17 going to actually tell you what we think is the best  
18 remedy, and then we want your input.

19           Next, please.

20           Okay. This is a comparison of alternatives,  
21 kind of like a consumer report. You guys have -- ever  
22 seen CONSUMER REPORT magazines? They have these pie  
23 charts here and, you know, on the pie charts the bubbles  
24 that are full, and there's bubbles that are empty here.

25           And it's a little deceiving here. You guys may

1 look at this and go, Wow, this remedy is really good and  
2 there's two really full. Well, you have to remember,  
3 though, this is going to be no action here.

4           So the short-term effectiveness is really good  
5 because you're not going to cause any harm to any  
6 construction worker because there is no construction  
7 work. You're not doing it.

8           Same thing with implementability. It's easy  
9 'cause you're not doing it. So that's why it's full.  
10 And here it's nothing here because it's -- there's no  
11 long-term effect if you're not doing it.

12           So after getting all of those alternatives that  
13 I talked about, 2, 3, 4, and 5, the very bottom one,  
14 which is blue, is in the opinion of the Navy and all of  
15 our professionals and also the regulatory agencies here  
16 is the best one that should be chosen only because it  
17 protects human health and wildlife and lowers the risk  
18 significantly.

19           And you can see that the pie chart here, these  
20 are three quarters; this was half. And Lara will talk  
21 more about this in future slides.

22           Next, please.

23           Okay. So I'm going to hand off the microphone  
24 to Lara, who's a project manager for this project, and  
25 she's going to tell you about our preferred remedy.

1 MS. URIZAR: Okay. So as Melanie mentioned,  
2 Alternative 5, or Option 5, this is the option that  
3 we're looking at for cleaning up Parcel E-2, right?  
4 Five different ways we could do it, and this is the one  
5 that's the best way for cleaning up Parcel E-2, the Navy  
6 landfill.

7 Okay. And so this included containing the  
8 landfill, excavating and disposing of hot spots, so  
9 dispose -- excavating those areas and digging up the  
10 most contaminated areas surrounding the landfill,  
11 excavating and disposing of radioactive material that's  
12 near the surface, installing protective liner and soil  
13 cover over the remaining contamination, and then  
14 installing something called slurry walls to --  
15 below-ground barriers, and this is to limit the  
16 groundwater flow.

17 And I'm just going to skim over this pretty  
18 quickly and show you some pictures and then to explain  
19 some of the components of this option so that you can  
20 better see what these mean.

21 Okay. Alternative 5, or Option 5. Option 5  
22 also includes additional actions to protect humans and  
23 wildlife. That's -- So that's really why we're doing  
24 all this, because we want to be protective. Whatever we  
25 do, in the end when we're done, we need to make sure

1 we've been protective of humans and wildlife.

2           Okay. So we're going to remove and treat  
3 landfill gas. That's the methane gas that builds up  
4 from, like, the decomposing wood that might be in the  
5 landfill.

6           We're going to build a shoreline revetment.  
7 That's just a fancy word for a rock wall. So we'll plan  
8 on building a rock wall on the shoreline.

9           Build new wetlands, tidal and freshwater. I'll  
10 show you a picture of that in a minute.

11           And then we'll monitor and maintain the  
12 different parts of these preferred alternatives. So  
13 we're not going to just walk away. When the Navy's  
14 done, we will monitor this and make sure that it's still  
15 protective of humans and the wildlife basically as long  
16 as we need to.

17           And then we're going to use institutional  
18 controls, which basically just restricts specific land  
19 uses. So while it's likely good for a park, you're not  
20 going to be able to dig a well and have water, take a  
21 shower in it, and you won't be able to build a house  
22 there. But that's basically what -- institutional  
23 controls.

24           All right. So this is -- okay, they are  
25 showing some of the components, and it's a little washed

1 out, but here you have the tidal wetlands. We're going  
2 to build wetlands. We have freshwater wetlands, kind of  
3 in an inland area; the shoreline revetment, or the rock  
4 wall, along here [indicating].

5           And here's our landfill. So you'll see all  
6 these little squares. These are landfill gas extraction  
7 wells. So we're going to have many wells in place to  
8 extract any methane or other landfill gases to prevent  
9 those from migrating off the site and from going off the  
10 site. And we're also going to have what's called slurry  
11 walls. There's going to be one here and one here.

12           Oh, wait. Actually, go back one.

13           One of the thing that isn't on this is a  
14 hot-spot removal. And so if you look at these poster  
15 boards we have over here -- and you can't really see  
16 them right now, but after the meeting -- you can see  
17 where all the hot spots are going to be where we're  
18 excavating. And some of them Keith and Melanie  
19 mentioned they are going to take early action and take  
20 some of those more contaminated areas out, and those are  
21 areas that are surrounding the areas outside of the  
22 landfill.

23           Okay. So "Preferred Alternative" still.  
24 Okay. This is a picture actually of our current  
25 landfill cap. And the reason why I'm showing you that

1 is because it's basically going to look like this when  
2 we're done.

3           Here you have some fancy names, "Schematic of  
4 Future Landfill Cap." It's basically you imagine like a  
5 layer cake with the bottom layer being the landfill  
6 waste, which is, you know, mostly trash and debris,  
7 which is about, you know, up to 25 feet thick.

8           On top of that in 1974 when the Navy ceased  
9 operations at the landfill, they placed at least 2 feet  
10 and up to 5 feet of soil on top of that three.

11           And then on top of that, you have 2 more feet  
12 of soil -- it was placed in 2000 -- and a liner. And  
13 actually, I brought you a sample you can come and look  
14 at when the meeting is over at what the liner looks  
15 like. It's basically like a plastic liner, and then on  
16 top of it it's a drainage so that water comes down  
17 through that top layer of soil and hits that and it can  
18 drain off the landfill rather than going into it. So  
19 that's the liner material.

20           And then on top of that the Navy will bring in  
21 2 feet, minimum 2 feet, of clean soil off the base  
22 that's been tested and it's clean, certified clean, to  
23 be put on top of that liner, and then the final ground  
24 surface, which you see there, and it will look pretty  
25 much like that.

1           Next.

2           All right. So here's the slurry wall. This is  
3 a picture of a slurry wall being constructed not on  
4 Hunters Point, but this is what it will look like. You  
5 have an excavator, and it's digging a trench along the  
6 line, and inside that trench is what's called  
7 soil-bentonite mixture, and that's just a fancy word for  
8 like a clay material mixed with sand; and that material  
9 is so thick that it helps prevent groundwater, which is  
10 the water that's underneath the ground, from flowing  
11 through it.

12           And here we have a typical cross section with  
13 the landfill, and you can see all the debris and the  
14 trash; and right here this dash line is where the  
15 groundwater is, right? So that's groundwater underneath  
16 the ground. And all of this debris is in groundwater.

17           And then here is soil-bentonite slurry wall,  
18 which is being built in this picture, and it goes down  
19 to the bottom of the base. And so this groundwater  
20 that's sitting here in waste has a harder time reaching  
21 the bay.

22           Okay. So these are some pictures. This is a  
23 picture of the tidal wetlands that's actually in the  
24 East Bay. But if you'll remember, we're going to be  
25 building also shoreline wetlands along the panhandle

1 area. So they'll -- they may look something like this.

2           And then here is the picture of the shoreline  
3 revetment. It's just a rock wall. And this is actually  
4 a picture of another site on the base that we just  
5 finished this year.

6           Next.

7           Okay. So why is this the preferred  
8 alternative? Well, it protects people and wildlife from  
9 being exposed to contamination that may cause  
10 unacceptable risk. It would remove and dispose of the  
11 hot-spot areas. So those more contaminated areas that  
12 were surrounding landfill will be excavated, dug up,  
13 hauled away, and taken off the base. And in fact, we've  
14 already done that.

15           We would remove and dispose of radioactive  
16 material near the ground surface, install soil cover,  
17 and this is actually a picture of a typical soil cover  
18 being installed.

19           We have landfill gas and groundwater  
20 controls -- those are the facts posed that I had showed  
21 you in the previous picture -- and the groundwater  
22 controls for the slurry wall. That would help prevent  
23 contact with remaining contamination.

24           And then we have long-term monitoring and  
25 maintenance. Once again, don't forget, the Navy's not

1 going to walk away. We are going to maintain this, keep  
2 it safe as long as it needs to be kept in place.

3 All right. So the landfill on the Navy base  
4 can be safely maintained because all of our  
5 investigations, all those samples that Keith showed you  
6 and talked about in numerous trenches, you know exactly  
7 what -- you know what the waste looks like, the soil  
8 samples that were collected, the groundwater samples.  
9 All of those show us that we know pretty well what's in  
10 the landfill.

11 We got construction debris, trash, industrial  
12 waste, and they're all very similar to landfills --  
13 other landfills around the bay that have also been  
14 closed in place. So this isn't a new thing. We didn't  
15 invent the wheel here.

16 We have low-level radioactive waste that  
17 consists mostly of glow-in-the-dark dials that could be  
18 safely and easily managed in place. If you'll remember,  
19 those are just the painted dials to keep the sailors  
20 from tripping over their toes. So it's -- this is not  
21 high-level radioactive waste we are talking about.

22 And then we know that groundwater does not pose  
23 a major risk to humans and wildlife. We did a  
24 groundwater study in 2008 where we looked at radioactive  
25 chemicals, and we found no levels that impact people and

1 wildlife, and we did numerous investigations and would  
2 have seen it. We did not see high-level radioactive  
3 levels.

4           Okay. So the preferred alternative will  
5 protect people and wildlife. It's consistent with EPA  
6 national policy for keeping large landfills in place.  
7 It's similar to other landfill closures around the bay.

8           So the other thing I have to point out with  
9 regards to the second one especially is that we didn't  
10 do this in a vacuum. All these investigations over all  
11 these years, every step of the way we've worked and  
12 coordinated with the agencies, with the Water Board,  
13 with the Cal EPA and U.S. EPA. And they wanted more  
14 samples; we took more samples. We didn't move to that  
15 next step in the process until everybody on the team was  
16 okay with where we are.

17           So you still might be wondering, Why are we  
18 still digging it up? Alternative 2 was the dig the  
19 whole landfill up. Why are we choosing Alternative 5?  
20 Well, because Alternative 5 presents fewer short-term  
21 risks.

22           It -- If you think about it, you have to dig  
23 up all -- use Alternative 2, and you're digging up the  
24 landfill. That's over a million cubic yards. That's, I  
25 think, over 60,000 trucks would have to be driven

1 through the neighborhood for a minimum of four years.  
2 That would be smelly. It would potentially cause more  
3 risk to the community because you're digging up all the  
4 material.

5           So in the short term, it's much safer to  
6 contain the material in place.

7           All right. So what happens if Alternative 5 is  
8 selected? Well, the Navy will design and build a final  
9 remedy to control potential liquefaction after an  
10 earthquake. So if there's a big earthquake, all the  
11 components of the remedy, the rock wall, the soil cover,  
12 all these will be designed to be very robust and stand  
13 up to earthquakes.

14           We'll treat landfill gas.

15           Maybe you're worried about potential sea-level  
16 rise. We'll protect against that. And all that is  
17 designed to accommodate potential sea-level rise.

18           And then, again, we'll provide pedestrian  
19 access. So this area will be a park that can be used.

20           Okay.

21           MR. FORMAN: Okay. Thank you.

22           Okay. So what are some of the next steps in  
23 the process? Tonight we're going to hear clarifying  
24 questions, which are questions that are related to the  
25 presentation that you want to get a better idea about,

1 an opportunity to do that, as Matt Robinson indicated.

2           Also, we're going to have a part of the meeting  
3 where we take official comments where you -- they are  
4 not necessarily questions. You can take comment -- We  
5 will take comments down. Christine may ask you to spell  
6 your name and to speak a little slower.

7           But we want to get it down on the record, each  
8 of your comments, because, as I indicated earlier, they  
9 will become part of the process and part of the  
10 permanent record so that when we go to the next step,  
11 which is the Record of Decision, your comments will be  
12 there and our responses will be there, the Navy's  
13 responses, that is.

14           Public comments are due on this Proposed Plan  
15 for Parcel E-2 -- they are due October 24th; and then  
16 the Navy will start writing a Record of Decision and  
17 will release this document in early 2012, February-March  
18 time frame.

19           And the difference between Proposed Plan and  
20 the Record of Decision is, what we have recommended here  
21 tonight in the next document will actually say: Well,  
22 we feel this is the final choice. This should be final  
23 choice. And that comes out again in the Record of  
24 Decision document.

25           Then where many of the nitty-gritty details are

1 ironed out about what exactly -- what exactly the  
2 program is going to be like will be formed in the  
3 design, the remedial design, for the -- this parcel.  
4 And then and only then after that's been finalized and  
5 approved by the regulatory agencies will we then go out  
6 and construct what is chosen as the final remedy for  
7 this parcel.

8           So those are the future steps in the process.

9           MR. ROBINSON: Okay. Thank you, Keith.

10           So how can you provide a comment tonight? We  
11 got a couple of ways. One, you can submit questions in  
12 writing. We have provided comment cards out there for  
13 you if you want to submit your writing -- comments in  
14 writing, or you can speak to this group of folks up  
15 here, being able to ask them your questions yourself if  
16 you'd like to do that as well.

17           Also, after tonight what you can do is send  
18 comments in mail, E-mail, fax to Keith Forman. Also,  
19 we'd like to have these comments no later than  
20 October 24th.

21           Also, some of the other contacts available,  
22 which is on page 20 of the Proposed Plan, of course, is  
23 Keith, Craig, Ryan, and Ross, some of the people who  
24 were working on this project for a long time and can  
25 help you with any questions you might have.

1           Any additional information, if you want to look  
2 at the Proposed Plan but don't have a copy, you may have  
3 lost a copy, you can get other copies and read them at  
4 the San Francisco Main Library on Larkin or also go to  
5 the Hunters Point Naval Shipyard trailer office. The  
6 trailer office is right before the security gate, and  
7 you can go in there and look at the Proposed Plan if  
8 you'd like.

9           You can also find the Proposed Plan at the  
10 Navy's Web site. The Web site is up here as well. It's  
11 also in the Proposed Plan if you have a printed copy.

12           So now we will take a break and let all of you  
13 take a chance to digest what you've just heard. We'll  
14 come back with our clarifying questions, comments, if  
15 you'd like to ask for clarifying questions about what  
16 you've just heard. Please come back at 7:30. Okay.  
17 Thank you very much.

18           Also, while you are walking around if you'd  
19 like to talk to . . . One more thing, folks. During  
20 the break, go ahead and look at all of the posters up  
21 here, also have a chance to talk to the Navy or any of  
22 the regulators walking around.

23                           (Whereupon, a recess is taken from  
24                           7:22 p.m. to 7:33 p.m.)

25           MR. ROBINSON: Ladies and gentlemen, let's get

1 started with the second portion of tonight's meeting.

2 Take your seat. Thank you very much.

3           So now we are getting started on Part Two of  
4 tonight's meeting, which is the chance for you to ask  
5 clarifying questions for the presentation you just heard  
6 a few moments ago. Here's a chance for you to ask the  
7 folks up here what they may have meant by certain  
8 information.

9           Also, if you'd like, you could also pose your  
10 question to one of the folks, Melanie, Keith, or  
11 Laura -- Lara, to ask them what they meant by something  
12 they said earlier.

13           This is not a chance for you to make a comment  
14 about the E-2. We just want to help you clarify any  
15 questions you had about what you have just seen.

16           Now, we ask that if you have any comment --  
17 clarifying questions, please step up to the mike, and  
18 please again go single file in line, and then go ahead  
19 and please ask your question.

20           Please state your name.

21           MS. JACKSON: Good evening. Thank you for  
22 coming. My name is Espanola Jackson, and I live here in  
23 the area.

24           One of the questions I did ask Matt but I will  
25 ask you the same question is why the police are here.

1 This is the first time that I came to a meeting and  
2 several police is out there; they say they came to  
3 contain Espanola, which is me. Okay?

4 Now, the question that I would like because it  
5 wasn't there, there was no talk of lead or asbestos in  
6 any of the talks that was made. You talked about the  
7 cleaning of the ship, the paint, this, that, and the  
8 other. Now, we all know from last time there was plenty  
9 of lead in all of the paint so -- that's in the ground.  
10 And I would just like to know why that was left out,  
11 paint and asbestos.

12 Thank you.

13 MR. ROBINSON: Thank you, Miss Jackson.

14 MR. FORMAN: Is this on?

15 MR. NEWTON: Yes.

16 MR. FORMAN: Okay. Espanola, thank you for  
17 coming and thank you for that question.

18 We didn't go through the long list of chemicals  
19 that are there. But you're absolutely right. Lead is  
20 there. There's an area, as -- As you stated, the  
21 shipyard used lead-based paint. They used lots of  
22 primers that were high in lead at the time, and that is  
23 waste that is included, really, within the whole paint  
24 waste streams in the landfill.

25 As far as asbestos, asbestos used to be used in

1 many ship activities on many ships and so on and so  
2 forth. And I'm sure there is asbestos in the land -- it  
3 is in the landfill, and it's another one of those  
4 industrial waste streams that is there.

5           There's also some specific areas outside of the  
6 landfill that have lead. We didn't go into the details  
7 of one of the areas, but let's see here, if I can go  
8 back. Okay. Well, this isn't working.

9           Pardon?

10           SPEAKER: (Brief statement off mike.)

11           MR. FORMAN: Well, no. I want to -- I just  
12 want to show a map so that I can show her a little bit  
13 of the detail of what we've done.

14           When it comes to elevated levels of lead, we  
15 have --

16           Well, further . . . No. Keep on going.

17 Good. Right there. Okay.

18           Sorry about that.

19           Okay. So this area -- I believe is this area  
20 of elevated lead?

21           MS. URIZAR: Yes.

22           MR. FORMAN: Okay. There was, I believe, a  
23 battery disposal area there. That is one of the hot  
24 spots. We didn't -- You're ri- -- absolutely right; we  
25 didn't go into the details of what drove that hot spot,

1 what drove us to dig there.

2           We had elevated levels of lead, a lot of --  
3 some other things too, that we dug out. And on a recent  
4 bus tour, we took folks to that area, to the pit that we  
5 dug there. This area has been dug up and hauled off.  
6 It had elevated levels of lead that we found, and that  
7 was one of the hot spots we've already removed.

8           Okay?

9           MR. ROBINSON: Any other questions, please step  
10 up to the mike.

11           MR. JENNISON: My name is Ell Jennison.

12           I heard the one la- -- Lara say that the remedy  
13 to extract everything would be -- would take four years  
14 to remove all the landfill, and you also said that it  
15 would also take 60,000 trucks to go through the  
16 neighborhood?

17           MS. URIZAR: Yes.

18           MR. JENNISON: Is that correct?

19           MS. URIZAR: Yes, a minimum of four years,  
20 yeah.

21           MR. JENNISON: Has it ever been proposed to  
22 take it out on barges out of the neighborhood and go  
23 ahead and extract? 'cause it seems to me that when you  
24 start extracting these hot spots and then you leave --  
25 you have to put a barrier, that's necessary to put a

1 barrier before you can put the final landfill to have a  
2 park or whatever on top of it. Why hasn't that been  
3 analyzed just to go ahead and remove all this stuff and  
4 then be done with it?

5 MS. URIZAR: You know, I don't think we did  
6 barging. Did we?

7 MS. JACKSON: What are you saying? I can't  
8 hear you.

9 MR. FORMAN: Yeah, put it on.

10 MR. BIELSKIS: So as part of our evaluation, we  
11 looked at several different options for waste.  
12 Actually, one of them by rail. That was another way to,  
13 you know, minimize truck traffic.

14 But, you know, the analogy that Lara used in  
15 the presentation of 60,000 truckloads was just to give  
16 people a visual representation of what the option we  
17 looked at. Barging in this particular area, you know,  
18 is not -- you can't do it at the shoreline 'cause of  
19 the -- there's not deep enough water to bring a boat  
20 in.

21 So you have to truck it from one spot to a  
22 different location on the base, and it's more cost  
23 effective to simply look at something else, for example,  
24 extending existing rails where they're already  
25 relatively close to the -- to the parcel.

1           MR. FORMAN:  So there's -- I mean, just to  
2 summarize here, there's a -- That is a good question.  
3 There's different ways you can do it.

4           The main point, though, in that alternative is  
5 that there's going to be exposure -- there's going to be  
6 exposure as you open up the landfill, and there's going  
7 to exposure during transportation phase of carting that  
8 waste from Point A to Point B.  Even if you were to come  
9 in, that base is far too shallow to have barge  
10 operations.

11           But let's say that you did some trucking to  
12 some other point on the base that's deep enough.  You  
13 barge it in across the bay.  A truck is going to have to  
14 pick it up on the other end there.  They are going to  
15 have to do something to still transport it to the legal  
16 authorized place for it to be deposited on another part  
17 of the planet.

18           In doing all of that, the take-away point is  
19 that there's a lot of opportunities for exposure to  
20 stuff that has been buried for a long period of time;  
21 and it's going to be many, many truckloads over an  
22 extended period of time.

23           So over that period of time, the community  
24 under that alternative would be exposed to things that  
25 they have never been exposed to before by the very

1 nature of having to dig things up, drag them out into  
2 piles, separate them, and eventually put them on  
3 something, whether it's a railroad truck or a barge  
4 temporarily or/and onto another truck to eventually get  
5 it to a land-based landfill some other place on the  
6 planet where it would then have to be put back into  
7 another landfill.

8           And now again, the whole take-away there is,  
9 you would have newly created exposure pathways over an  
10 extended period of time to cart the waste from Point A  
11 to Point B, and that was the Navy's thinking of why  
12 that's a disadvantage to that alternative.

13           MR. JENNISON: But hasn't the community been  
14 exposed when you've been trucking the stuff into the  
15 other hot spots through the community already?

16           MR. FORMAN: Well, what we do is we take -- we  
17 take a lot of time and -- to put together a plan to put  
18 the contaminated soil into a sealed bin, sealed truck,  
19 right, before it leaves the base.

20           That -- Now, what I'm talking about for  
21 exposure is not just the truck portion. The fact that  
22 if you had thousands and thousands of trucks and you  
23 apply statistics to that, there probably would be  
24 accidents that happen or other things that would happen  
25 if you're talking about 60,000 trucks.

1           But I'm talking really about the exposure that  
2 would occur when you dug up this incredible, you know,  
3 landfill, right, you would have to put out the waste on  
4 pads for an extended period of time. Much of the waste  
5 is below the groundwater level that you saw. So you'd  
6 have wet trash that would somehow have to be dried out  
7 and then would have to be handled and separated over an  
8 extended period of time.

9           The way we look at it is: This type of  
10 landfill doesn't lend itself to that type of operation.  
11 And the Navy's feeling is that we don't want to incur  
12 that additional risk or the potential for a lot of  
13 additional risk over that extended period of time.

14           You don't have that when you're digging in hot  
15 spots in relatively localized areas and then putting it  
16 into sealed trucks. You don't have quite the same  
17 exposure level.

18           You always have some risk attendant to any  
19 alternative. But in the Navy's view, the short-term  
20 risk and the additional exposure over time for the whole  
21 operation is a disadvantage to that alternative.

22           MR. JENNISON: Just one more question.

23           MR. FORMAN: Sure.

24           MR. JENNISON: Since it was a shipyard for  
25 gigantic ships and aircraft carriers --

1 MR. FORMAN: Sure.

2 MR. JENNISON: -- there has to be accessibility  
3 to the water for, you know, when you say it's low --

4 MS. JACKSON: I don't hear what he's saying.

5 MR. JENNISON: Where you say it's low -- low  
6 water for it to be -- it's not accessible for barges --

7 MR. FORMAN: In that --

8 MR. JENNISON: -- it seems like -- it seems  
9 like in that E-2 -- that F -- in the F -- F parcel --

10 MR. FORMAN: Yes, sir.

11 MR. PONTON: -- that area is probably  
12 contaminated too. So it won't hurt to go ahead and  
13 dredge that up and get rid of that material too, and  
14 then --

15 MR. FORMAN: That is --

16 MR. JENNISON: Then you would have  
17 accessibility to --

18 MR. FORMAN: It's a great point. That's  
19 another parcel; but you're right, there is contamination  
20 in the bay in that area that the Navy will have to take  
21 some action on in the future. We're not as far along in  
22 the process for that.

23 And as far as the barge operations, the  
24 potential barge operations you're talking about, I was  
25 pointing out that there's another part of the base

1 obviously where the deep ships came in where you could  
2 use barges conceivably, that's true.

3           But to get it from Point A to Point B on base,  
4 it would be a rather large trucking operation in  
5 itself. Even though it would be short hauls, you'd have  
6 to find a way to do that. And again, that's, again,  
7 another facet that we think is a disadvantage for this  
8 alternative. Okay.

9           MR. JENNISON: Just one more question. Just  
10 one more question I want to --

11           MR. FORMAN: Yes, sir.

12           MR. JENNISON: Just the fact is, would it be  
13 hard to seal off the whole --

14           MS. JACKSON: Could I ask, talk in the mike.

15           MR. JENNISON: -- to keep -- to keep the whole  
16 Navy yard sealed off until everything is completely  
17 cleaned up. Instead of trying to do it in piecemeals  
18 and have development here and there, why not just go  
19 ahead and have the whole thing sealed off until it is --  
20 everything is clean, you know, and it has a -- and the  
21 Navy's been cleared and say they can move on instead of  
22 doing these developments, trying to get developments in  
23 and this fast track instead of having it completed --  
24 the cleanup complete?

25           MR. FORMAN: That's a great question. Some --

1 some folks do believe that the proper approach to a base  
2 is to do the entire cleanup for every portion, every  
3 parcel, before you begin any kind of conveyance of the  
4 property.

5 MS. JACKSON: That's right.

6 MR. FORMAN: And I understand that, and I  
7 respect that viewpoint.

8 But currently the way the Navy's operating and  
9 not just on Hunters Point but on virtually every base  
10 that I'm familiar with is that when we finish the  
11 cleanup on other -- on a piece of land and we deem that  
12 that piece of land is ready, we then have to do a  
13 finding of suitability to transfer to see if it's safe  
14 to transfer.

15 If we get regulatory approval to do that and if  
16 we can demonstrate that it's safe to convey it, the  
17 Navy's position is that anything that's safe to convey  
18 will convey as soon as it is safe to do that.

19 The other approach would be for the base to sit  
20 there until the entire cleanup is done, which would be  
21 many, many years.

22 What Congress has told the Base Realignment and  
23 Closure Commission is: When possible and when done  
24 safely, we want parts of bases to be reintegrated into  
25 the community sooner rather than later, even if it's

1 portions of bases. So that's why the Base Realignment  
2 and Closure Commission across the country really  
3 operates the way we do.

4 But I do understand and respect that there are  
5 those who do not share that viewpoint and don't want  
6 anything done until the entire cleanup is complete  
7 everywhere. I understand that.

8 MR. JENNISON: Thank you.

9 MR. ROBINSON: Go ahead.

10 MR. TISDELL: Hi. My name is Keith Tisdell,  
11 d-e-l-l, and I'm a resident.

12 Keith, along the back wall where those air  
13 monitors -- the methane gas monitors was placed along  
14 the U.C. -- the back of U.C.S.F. and --

15 MR. FORMAN: Right. And, Keith, just -- excuse  
16 me. We'll just point this out so everyone can  
17 participate in this. You're talking about the gas  
18 probes here [indicating]?

19 MR. TISDELL: Yes, yes. Okay. Now, the Navy  
20 wasn't afraid to dig there and find out what was going  
21 on there.

22 MR. FORMAN: Right.

23 MR. TISDELL: Why should the Navy be scared to  
24 take out E-2? because you know -- you already know  
25 what's down there. It wasn't a risk factor to the

1 community when you was taking -- you know, building a  
2 trench and a slurry wall. But why would it be such of a  
3 big hassle to do E-2? That's just a question.

4 MR. FORMAN: Okay. Great question.

5 I think I probably need -- I probably should  
6 set the record straight and say the Navy isn't scared to  
7 do that.

8 But, Keith, one of the things that experience  
9 across the nation has told us is that landfills of this  
10 type, of this size, and of these contents can be  
11 professionally managed in place, in other words,  
12 contained in place, and that the pros outweigh the cons  
13 in doing that; that when it comes to the long term, that  
14 the best way is to professionally manage waste in place  
15 and to be responsible for where it was put.

16 Now, you always have to have a lot of data to  
17 support the fact that that's the right choice to make,  
18 and I think we do have the data to support that, both  
19 the groundwater and the soil.

20 So when you're talking about digging up the  
21 entire landfill, the question that I would have for you  
22 is, knowing everything up to this point that we know,  
23 what would be the driving reason to handle this landfill  
24 differently than many other landfills that fit this same  
25 profile across the country?

1 MR. TISDELL: One quick question.

2 MR. FORMAN: Sure.

3 MR. TISDELL: How many other landfills --?

4 MR. FORMAN: Keith, I'm sorry; but if you're  
5 going to ask a question, you have to go up to the  
6 microphone. I'm sorry.

7 MR. TISDELL: Say it different, how many other  
8 landfills are in, say, a sector like this in a black  
9 community? Is that a --?

10 MR. FORMAN: Well, okay. We're talking about a  
11 landfill -- let me -- if I could fill in some of the  
12 blanks. You let me know if I do a good job at this  
13 point.

14 It is a landfill that's perched on the bay like  
15 other landfills of San Francisco Bay and other bays.  
16 It's on a military base in a closed urban area.  
17 There's -- there's actually quite a few locations that  
18 fit that profile.

19 Now, the thing that we were looking for and  
20 that we have been doing investigation on since 1988 is,  
21 Do we know enough about this landfill? Do we have  
22 enough data to know that this landfill is the kind of  
23 landfill that could be professionally managed in place?

24 And I'm very confident in saying from the  
25 groundwater in the sense of work we've done around the

1 perimeter of the landfill from the 25 investigative  
2 trenches that we dug into the landfill, when you look at  
3 the different pieces of the puzzle that were provided to  
4 us over the years, we know enough to say that this  
5 landfill does not present the kinds of risks that can't  
6 be -- that cannot be designed for to be protective for  
7 the long term. And that won't be a proper way to  
8 address the situation.

9           MR. ROBINSON: Folks, we are -- want to make  
10 sure that you have any questions clarifying the  
11 presentation, so try to keep it to the presentation at  
12 this moment.

13           MR. FORMAN: All right. And I'm sorry, I'll  
14 try to make my answers more directed towards the  
15 presentation. Okay?

16           MR. McCARTHY: Yes. Given the graphics that  
17 we're seeing related to the different categories of  
18 remediation in this E-2 parcel site -- and I was active  
19 with the RAB before. My name is John McCarthy. I'm  
20 from the East Bay.

21           Anyway, there are two categories that I wanted  
22 to question. One is starting with the NRDL activity  
23 site in the panhandle area.

24           MR. FORMAN: Yes.

25           MR. McCARTHY: What information has been given

1 about monitoring what happens with that, with that area  
2 that the -- someone is responsible for concerning the  
3 NRDL activity in the panhandle? That's the first  
4 question regarding my first category.

5           The other question is that my understanding for  
6 over 15 years that there was a large drum area full  
7 of -- drums -- maybe 55-gallon drums --

8           MR. FORMAN: Yes.

9           MR. McCARTHY: -- that were full of  
10 contaminated material --

11          MR. FORMAN: Yes.

12          MR. McCARTHY: -- in the area that shows as the  
13 gas well monitoring area. I think that's where it was.

14          MR. FORMAN: Okay.

15          MR. McCARTHY: So what information has been  
16 provided relating to that drum storage area? So those  
17 are probably both questions related to the NRDL  
18 activities.

19          MR. FORMAN: Well, okay. Quite a few questions  
20 there, John. Let me -- let me go over a few things  
21 here.

22                 This is the ship shielding area. You see this  
23 very interesting shape? That's the ship shielding area  
24 that you're referring to, which is the Navy Radiological  
25 Defense Laboratory site. That's going be to subject

1 to -- and -- its own investigation and removal action.

2 MR. McCARTHY: From who? From --

3 MR. FORMAN: From the Navy.

4 MR. McCARTHY: Okay.

5 MR. FORMAN: Yes. We're going to do that in  
6 the not-too-distant future. We've already laid the  
7 groundwork to be able to do that. Melanie has already  
8 laid the groundwork to be able to include that in the  
9 future budget. Well, we're going to actually go out  
10 there and do some significant studies.

11 Now, again, that's a specific part of the base.

12 MR. McCARTHY: Right.

13 MR. FORMAN: And we have a very, very good idea  
14 what's there. We have done significant removals in this  
15 area [indicating] --

16 MR. McCARTHY: Right.

17 MR. FORMAN: -- for the metal slag area --

18 MR. McCARTHY: Yeah.

19 MR. FORMAN: -- which had -- which had some  
20 elevated readings from some devices that were imbedded  
21 in molten metal.

22 MR. McCARTHY: Right.

23 MR. FORMAN: And so -- and there was also a lot  
24 of trash on the shoreline that we cleaned up, oh, quite  
25 a few years ago now.

1 MR. McCARTHY: Right.

2 MR. FORMAN: So, now, when you're talking about  
3 the nest of drums, 55-gallon drums, we found -- in our  
4 first large removal action for the PCBs along the  
5 shoreline here --

6 MR. McCARTHY: Right.

7 MR. FORMAN: -- we found a nest of 9 -- I  
8 believe it was 95 drums, 55-gallon drums, in about 2005,  
9 2006 that we removed.

10 MR. McCARTHY: I think this was a larger  
11 accumulation of drums that -- than --

12 MR. FORMAN: Well, okay. If you can show me  
13 something that indicates that, because we were able to  
14 get our arms around that and actually remove every one  
15 of the drums in that area.

16 MR. McCARTHY: I've been looking for that  
17 documentation --

18 MR. FORMAN: Okay.

19 MR. McCARTHY: -- at the city library since  
20 they moved.

21 MR. FORMAN: Yes, sir. I can help you with  
22 that. That's -- It's a -- It's called a completion  
23 report. It's the completion report for the PCB hot-spot  
24 area in 2005, 2006.

25 MR. McCARTHY: And the other thing was related

1 to the graphics --

2 MR. FORMAN: Sure.

3 MR. MCCARTHY: -- the nearshore -- there's a  
4 hot-spot nearshore area --

5 MR. FORMAN: Right in there.

6 MR. MCCARTHY: -- and a hot-spot upland area.

7 And I'm wondering -- since I didn't see  
8 anything specific to the future monitoring for those two  
9 areas, I'm wondering what that is.

10 MR. FORMAN: Well, we have removed a lot off of  
11 that shoreline area: PCBs, gas and oil spills, elevated  
12 levels of lead, elevated levels of copper that we  
13 found. But that's also a continuing ongoing project.

14 What -- The largest field work project we had  
15 this year, in fact, is still ongoing. Lara's in charge  
16 of it. I think she's between 60 and 70 percent done  
17 with it where we are removing an additional 40,000 cubic  
18 yards to remove the contaminants from that area. So  
19 that's all going to be taken care of, you know, within  
20 the next six months.

21 And this again is the follow-on to what we  
22 started in 2005, 2006 where we removed 44,000 cubic  
23 yards of PCB contaminants, lead, copper, oil, and gas  
24 contamination that was in that shoreline area.

25 So we're -- the answer -- the short answer is:

1 We are removing all that before we put the rock wall in.

2 MR. McCARTHY: And then -- and then the upland  
3 area, the upland hot-spot area, which is adja- -- I  
4 think it's part of the east side --

5 MR. FORMAN: Yes.

6 MR. McCARTHY: -- adjacent area which is also a  
7 location of hot spot.

8 MR. FORMAN: We're right in there -- Right,  
9 and we've removed -- we have one of those areas that I  
10 showed you has PCBs that we removed, and another one is  
11 battery -- we think the battery disposal area where we  
12 found parts of batteries and elevated levels of lead in  
13 soil that we have removed very recently.

14 MR. McCARTHY: Okay. Thanks a lot.

15 MR. FORMAN: Thank you.

16 Okay. And again, Matt, I don't want to rush  
17 things here; but when it comes to questions, I think we  
18 need to somewhat keep to a three-minute rule on this so  
19 that we can get really the comments section where people  
20 can make official comments for the record.

21 MS. JACKSON: Well, don't you talk so long.

22 MR. FORMAN: Yes, ma'am. I'll take that  
23 advice.

24 MR. JAMES: Good evening, Keith.

25 MR. FORMAN: Good evening, Oscar. Good to see

1 you.

2

COMMENT

3 BY OSCAR JAMES:

4 My name is Oscar James. I'm a native of  
5 Bayview-Hunters Point. I was born on Navy Road.

6 MR. FORMAN: Yes, sir.

7 MR. JAMES: I seen all them Parcel E, E-2. I  
8 seen it fill. My father helped fill a lot of that. I  
9 had a uncle who drove the dump trucks down there who put  
10 a lot of those chemicals and those toxins there.

11 My father was one of the ones that put a lot of  
12 those barrels that were put in Parcel E-2, and they also  
13 put those same barrels out at the Farallon Islands where  
14 they -- the Navy did and then would perform experiments  
15 that were done in the old experimental lab in Hunters  
16 Point Shipyard where they had those dogs, and they would  
17 test them, put them in those barrels, and they would  
18 dump --

19 MR. ROBINSON: Sir, sir --

20 MR. JAMES: What I'm saying, I wasn't here -- I  
21 wasn't here for the presentation. I was at another  
22 meeting. I came here.

23 But I'm talking -- what I want to do, I want to  
24 make sure you do 100 percent clean, take out all those  
25 materials of Parcel E-2, make sure the community

1 truckers are allowed to do some of that work. I wish  
2 everyone is meeting from the community, from the city,  
3 write to you guys, stating that they want 100 percent  
4 clean and no cap at Hunters Point Shipyard.

5           When I was a little bitty boy, we used to look  
6 down, and that was a beach front before they started  
7 filling in. They used to have shrimps, trails, horses,  
8 and what have you like that --

9           MR. ROBINSON: I'm sorry.

10          MR. JAMES: -- down --

11          MR. ROBINSON: This is the question portion.

12          MR. JAMES: This is the question portion.

13          MR. ROBINSON: Did you have a question? Please  
14 ask your question.

15          MR. JAMES: My question is, All of the toxins  
16 have been down there, and you guys don't know what's  
17 been down there. I -- What my father told me and what  
18 my wife's uncle told me what was down there, Jack Jones,  
19 who was one of the truckers who did that, they took the  
20 materials out of 11 hospital [sic] into the shipyard  
21 that was toxic.

22                 We had crab, shrimps, and oysters out there.  
23 And when they start dumping in the '40s, in the '50s,  
24 there were no more crabs out there. We want to see our  
25 crabs and our shrimps come back.

1           This was an industrial area where we selling  
2 shrimps. That's why they had the -- The Chinese had  
3 the shrimp farms out here, and they were getting shrimps  
4 out there. Soon as they start dumping, all of that  
5 left.

6           We want our community 100 percent clean. I'll  
7 be not here another 20, 30 years from now, but my  
8 grandkids is going to be here. I want to make sure they  
9 have the same opportunity, the same thing I seen when I  
10 was a little bitty boy.

11           Thank you very much.

12           MR. FORMAN: All right. Thank you, Mr. James.

13           Matt, I guess that really is more of a  
14 official --

15           MR. ROBINSON: Yeah, it's official question  
16 [sic].

17           MR. FORMAN: I just want to make sure.

18           So, Mr. James, that will be part of the  
19 official record.

20           MR. JAMES: Yes, sir.

21           MR. FORMAN: It won't -- Thank you very much.

22           MR. ROBINSON: We are in the question portion  
23 of the proposal that you heard. Please keep it to the  
24 questions for now. After we have the last question,  
25 then we'll move on to being able to give comments.

1 Thank you.

2 DR. RAO: Hello. My name is Sudeep Motupalli  
3 Rao. I'm a resident, and I reside right here in Bayview  
4 Hunters Point. I've served on the RAB before it was  
5 dissolved. I have four quick questions.

6 MR. FORMAN: Okay.

7 DR. RAO: There are two slides I'd like to  
8 refer to. One is the slide which has the meatball  
9 chart, I guess you call it.

10 MR. FORMAN: Hold on. We'll see how fast I  
11 am. I guess I'm not as fast as some folks. Okay.

12 DR. RAO: So I'm wondering, so there's a  
13 short-term implementability and short-term effectiveness  
14 and others.

15 MR. FORMAN: Yes.

16 DR. RAO: I'm wondering -- I know you  
17 addressed -- there was a question earlier a gentleman  
18 asked about instead of trucking the 60,000 that Lara  
19 mentioned truckloads of waste -- I mean, basically it  
20 wasn't a request. The community was saying we don't  
21 want to have something, you know, in the community which  
22 is a landfill.

23 So in terms of implementability as far as  
24 barging the waste out, does it change -- if we consider  
25 barging, does it change the chart significantly, or does

1 it change there at all? That's one question I have.

2 MR. FORMAN: Okay.

3 DR. RAO: Should I --?

4 MR. FORMAN: First question -- No. First  
5 question I would say is, it wouldn't change it at all  
6 because the short-term effectiveness would still be zero  
7 in -- in -- because you'd be still exposing. The key  
8 here is not the method of transporting from Point A to  
9 Point B or what most likely will be in the case of a  
10 barge or railway from Point A to Point B to Point C to  
11 Point D because you ultimately have to put this stuff  
12 somewhere.

13 DR. RAO: Yeah.

14 MR. FORMAN: So the idea is in the short term,  
15 you're not -- you're not being effective at all in  
16 decreasing risk. You are in fact increasing risk by the  
17 very nature of creating whole new exposure pathways by  
18 digging this stuff up.

19 And one of the Navy's contentions is, using the  
20 data, working with the regulators, is -- what we found  
21 is, the data strongly supports that the risk that we're  
22 finding, right, does not warrant a removal of -- of the  
23 waste, and that in fact getting to the point of getting  
24 the waste exposed and creating exposure creates a  
25 greater risk than professionally managing and containing

1 the landfill in place. That -- that is the Navy's  
2 position.

3 DR. RAO: Thank you.

4 And there's another slide. I think it's --

5 MR. FORMAN: Sure.

6 DR. RAO: -- Slide 33.

7 MR. FORMAN: Sure.

8 DR. RAO: This looks like this is what is going  
9 to be in place, construction debris, trash; and there's  
10 also going to be some low-level radioactive waste, maybe  
11 some dials there, that were not found through our  
12 sampling.

13 MS. URIZAR: Right. This is --

14 MR. FORMAN: Right.

15 MS. URIZAR: -- material that would be left in  
16 places in the landfill.

17 DR. RAO: So -- But the question I have is,  
18 Can you call this a closure of the landfill? I mean,  
19 this is maybe semantic, but --

20 MR. FORMAN: Sure.

21 DR. RAO: -- but I'm just wondering, can we  
22 actually call this a closure of the landfill? because  
23 we're still having this in place. Or can we call it  
24 sealing of the landfill? because we're not technically  
25 closing the landfill. That is just a question that I

1 have. I mean --

2 MR. FORMAN: No, great question. Okay. Yeah,  
3 it might be similar semantics. I think you've hit on a  
4 good point here.

5 It would be professionally managing the waste  
6 in place. That will go on -- Unless there's something  
7 dramatic as landfills age through the centuries, that  
8 would go on for as far as I can see. We would have to  
9 professionally manage it and have controls in place, and  
10 then we would have to provide data to indicate that it's  
11 operating properly and successfully; and we would have  
12 to continue to do that with regulatory agencies.

13 DR. RAO: That leads my -- The next point  
14 is if you have --

15 MR. FORMAN: Sure.

16 DR. RAO: -- we leave the landfill in place  
17 after cleaning it up as much as we can --

18 MR. FORMAN: Yeah.

19 DR. RAO: -- if we leave it in place it will be  
20 good for the community. I'm just wondering if it's  
21 possible to have some kind of a real-time monitoring so  
22 when you're going back, well, let's say walking that,  
23 Oscar James hit on a point very well. He served on the  
24 RAB with me. He said when he was a kid he'd travel.

25 I have a dream that we can have our children or

1 our grandchildren be able to swim around and walk  
2 around, eventually to figure out ways in which we can  
3 clean up whatever parcels left and other things, go in  
4 the bay so -- and had a desire to jump into the water, I  
5 know the risks involved.

6           So if there's a way, is there a way to have  
7 real-time monitoring where people, as they're walking  
8 by, they can say, oh, that alarm's not going off or that  
9 dial is green or --?

10           I'm just thinking, you know, thinking outside  
11 the box a little bit rather than wait for the samples to  
12 go out, et cetera, some way in which we can leave behind  
13 a monitoring active laboratory, small dials or some ways  
14 in which we can reassure in real time that, hey, things  
15 are in place and that we can walk by the beach; we can  
16 walk by that walk, things like that? I'm just  
17 wondering -- you don't have to answer it right now, but  
18 just real-time monitoring would be a --

19           MR. FORMAN: It's a good question. We have --  
20 kind of have real-time monitoring.

21           MS. URIZAR: Well, and that's something that we  
22 can actually look at during the next step of the  
23 process, which is the design process, 'cause that seems  
24 like a really probably easy thing to look at, yeah.

25           DR. RAO: Dago Mary's where we had the meetings

1 was proposed at that time that it would be good to  
2 have -- use the Naval Shipyard as sort of a model museum  
3 of restoration, showing that, hey, we used best  
4 practices so that -- that means you have to use best  
5 practices.

6           And so the last and final point, somewhat  
7 technical, but if we are sort of using these dry -- wet  
8 slurry walls, I think it was -- wet or dry?

9           MS. URIZAR: They don't dry, particularly,  
10 yeah.

11          DR. RAO: Oh.

12          MS. URIZAR: They say --

13          DR. RAO: So --

14          MS. URIZAR: -- they're viscous.

15          DR. RAO: So if we use these walls, it's a  
16 desire to prevent any kind of transport between the  
17 landfill and the --

18          MS. URIZAR: Slow down, limit, not completely  
19 prevent, but to slow it down, yeah.

20          DR. RAO: Okay. So the question that I have  
21 is, Does it still allow to filter the toxic materials  
22 but not with water? But -- and you've answered the  
23 question that it does.

24          MS. URIZAR: Yes. Well, and we also have a  
25 revetment which also includes a very fine filter which

1 also keeps the contaminants that are attached to the  
2 soil and the sediment from flowing out into the bay.  
3 So, you know, there's -- there's two parts to the -- to  
4 the remedy.

5 DR. RAO: Thank you.

6 MR. ROBINSON: Any other questions?

7 MR. MacLEAN: Thanks for your presentation. My  
8 name is Neil MacLean. I've been a resident at Hunters  
9 Point. I'm currently from Mission and lifetime in San  
10 Francisco.

11 Despite that I -- in the presentation  
12 especially I was -- what I missed was an understanding  
13 of several things. One is sort of what is the -- what  
14 is the problems? Why -- It was almost like why is this  
15 designated a Superfund site? It was almost like it was  
16 a cleaned-over presentation in a sense. I didn't get  
17 what is the real risk that's ongoing.

18 And so one of the questions that I would come  
19 to is, like, what happened in 2000 when clearly it got  
20 out of control?

21 And following on that question, and why didn't  
22 we hear anything about that?

23 And why -- how do we know that it won't go out  
24 of control again? is sort of implicit in that.

25 And then following that also is that one of the

1 response to that, of course, was the citywide  
2 proposition around it, and the question I have there is,  
3 How do you feel your recommendation responds to that, as  
4 clearly people expressed at that time?

5 MR. ROBINSON: Do you want to answer those  
6 questions one at a time, Keith?

7 MR. MacLEAN: Okay.

8 MR. FORMAN: Well, sure.

9 Okay. When it -- when it comes to greater  
10 detail of the risk numbers, if you go to the handout in  
11 of the Proposed Plan itself --

12 Doug, you may have a copy that you can -- if  
13 the gentleman doesn't have it.

14 And you can go into great detail for the  
15 numbers. If you want to see the actual numbers of the  
16 risk as they can calculate it, yeah, many of them are in  
17 the Proposed Plan. Other than that, if you want any  
18 greater level of detail, you have to dig into other  
19 documents which you may or may not want to do.

20 But when you calculate risks, you use  
21 assumptions on what the risk would be if humans and  
22 wildlife are actually exposed. So when you calculate  
23 risk in risk as- -- and assess the risk in a risk  
24 assessment, which we did, you are looking for risk in  
25 worst-case scenarios that involve complete exposure

1 pathways.

2           When the Hunters Point Shipyard was put on the  
3 National Priorities List, which is referred to -- the  
4 nickname that is the Superfund, it was a compilation of  
5 the number of sites on the shipyard, I believe. It's  
6 a -- it's a function of addition. There are, I believe,  
7 78 installation restoration sites on the base. And when  
8 it made the National Priorities List, it had fewer than  
9 that at the time because it qualified for it at the  
10 time.

11           But to be -- in this case for the shipyard to  
12 have been on the National Priorities List, it was a  
13 function of the number of sites, not any one site that  
14 was particularly toxic, which is another way to get on  
15 the National Priorities List.

16           I'm -- Let me see. Did I --?

17           MR. MacLEAN: Thanks for that answer.

18           MR. FORMAN: Sure.

19           MR. MacLEAN: Another part of that --

20           MR. FORMAN: Oh, Proposition P?

21           MR. MacLEAN: Sorry.

22           MR. FORMAN: Did you want me to respond to  
23 Proposition P --

24           MR. MacLEAN: Yes.

25           MR. FORMAN: -- question? That's a good

1 question. Mr. Bloom always brings this up,  
2 Proposition P, and others do too.

3 My answer to that is, the Navy's program is --  
4 is very much targeted to working with the City and  
5 County of San Francisco. The City San -- and County of  
6 San Francisco set part of the agenda because what  
7 Congress has told -- in this case, the Navy, whatever  
8 branch for a particular base -- what Congress has told  
9 us to do is to work hand in hand with the local reuse  
10 authority, in this case the City and County of San  
11 Francisco.

12 When they put out a redevelopment plan or a  
13 reuse plan for the base, one of the things -- the target  
14 that we have to meet is our cleanup options are what we  
15 look at, and ultimately the cleanup decisions we make  
16 must be compatible with the reuse and redevelopment as  
17 proposed by the City and County of San Francisco. So  
18 the Navy has to meet that standard.

19 This additional standard that you're talking  
20 about, Proposition P, which I believe was a  
21 recommendation for the Navy to follow an even higher  
22 standard, is not something that we're required to meet.  
23 It was -- it was a recommendation.

24 And we understand that there's strong  
25 sentiment, particularly the way Proposition P was worded

1 or interpreted anyway, to clean up to an even higher  
2 level is one interpretation of it than is called for by  
3 the redevelopment or reuse plan. But we understand  
4 that. However, we are tied to and our cleanup program  
5 is very much tied to making sure that we meet the goals  
6 of the redevelopment and reuse plan.

7           So I guess in summary I can say it's sort of  
8 two ships passing in the night in terms of what a local  
9 vote would be and what the -- really the rules of the  
10 Navy follows, that Congress tells us to follow, to clean  
11 up a base and then transfer it to the City and County of  
12 San Francisco.

13           MR. ROBINSON: Okay.

14           MR. MacLEAN: Thanks. So that's clear, if I  
15 can summarize, it's that --

16           MR. FORMAN: Sure.

17           MR. MacLEAN: -- you're not responding to the  
18 proposition. You're saying that's --

19           MR. FORMAN: Right. The Navy -- the Navy in no  
20 way directly correspond -- directly tunes its program, I  
21 guess is one way of looking at it, with regard to that.  
22 We need official document in a community for reuse or  
23 the redevelopment plan, and then we work with the  
24 regulatory agencies and in this case the City and County  
25 of San Francisco to make sure that we meet the standards

1 of reuse and redevelopment. That's really our -- one of  
2 our missions.

3 Does that make sense?

4 MR. MacLEAN: Yes.

5 MR. FORMAN: And that may -- I understand fully  
6 that may not be a satisfactory response, but really  
7 that's one of the guidelines from Congress that the Navy  
8 has, the base realignment program.

9 MR. MacLEAN: There was a question in there too  
10 of what went wrong in 2000 that the fire started and all  
11 of that, that that -- it got so out of control? And  
12 so -- and how can we know that that -- and -- and how --  
13 how has that been taken care of? I guess is the  
14 question.

15 And I -- if I could just also sort of tune that  
16 a little bit to say that one of my concerns -- I think  
17 other people's -- is the bay itself at this point. How  
18 do we know that similar things are not occurring in  
19 terms of leaks into the water, and what is the long-term  
20 monitoring that you're proposing to do? How will we  
21 actually know? He just said he'd like to swim there,  
22 and we would like to be -- I mean, it's clearly a  
23 potentially wonderful place.

24 MS. KITO: I'll try to make this as short as I  
25 can with the first, first of all, in 2000.

1           Landfills in general, one thing you have to --  
2 every landfill is going to have to be monitored for  
3 methane. Methane's a gas that's produced once materials  
4 start decomposing. Normally it's going to be a wood or  
5 a paper material, and there are a lot of constructive  
6 wood, also paper from administrative things.

7           When it gets wet, groundwater goes up and down  
8 because of fluctuations of rainy season; that when it  
9 gets wet, that's what creates methane.

10           Now, in 2000 -- the landfill's closed in '76.  
11 A lot of time since '76 and 2000 had occurred; we had a  
12 lot of methane build up. If anyone has a compost, a  
13 compost can get really hot. That's what happens. It  
14 caught on fire.

15           What we did to remedy that is we put a cap on  
16 that. As with any fire, a fire cannot happen if it  
17 doesn't have oxygen. So you put a cap on top of it, a  
18 2- -- in our case, it was a 2-foot cap; and we put a  
19 plastic liner on it. You cut the exposure; you cut your  
20 oxygen; there goes your fire.

21           So we will -- we have never had any flare-ups  
22 at all and we won't because, again, a fire can't happen  
23 with -- without an oxygen source. So -- so that's that  
24 one.

25           I think you had one small --

1           MR. MacLEAN: Well, it was about the water, and  
2 it's really the monitoring of the water that's going to  
3 be ongoing and it's about its safety and it's about the  
4 use of the shoreline; and --

5           MS. KITO: Yeah, and we have a long --

6           MR. MacLEAN: -- and considering the history of  
7 sort of at least that major error --

8           MR. FORMAN: Sure.

9           MR. MacLEAN: -- how do we -- how do we know?

10          MS. KITO: Sure. We have a monitoring system  
11 that -- it's called long-term monitoring. And we have  
12 to make sure that -- you're absolutely correct -- that  
13 we know for a fact that no contaminants will be actually  
14 migrating from the contaminated area into the bay, and  
15 that will be going on -- ongoing to the person who  
16 wants -- like Sudeep said, I want to go out there and  
17 eventually, you know, dive in the water; it may be  
18 contaminated.

19          Eventually we are going to be cleaning up the  
20 bay too and Parcel F. That's what we call Parcel F and  
21 actually say that that's going to be clean eventually as  
22 well. But we just haven't gotten to that point yet.

23          MR. FORMAN: Okay.

24          MR. ROBINSON: Okay. Before we go to our next  
25 question, let's take a ten-minute break to allow our

1 court reporter a chance to rest her hands, and then we  
2 will -- we will just take a quick ten-minute break.

3 (Whereupon, a recess is taken from  
4 8:17 p.m. to 8:26 p.m.)

5 MR. ROBINSON: Ladies and gentlemen, we could  
6 get started again for folks to ask questions of the  
7 Navy. Please take your seats. All right.

8 MS. MOORE: Good evening. My name is Lavonne  
9 Moore.

10 MR. ROBINSON: Hold on. I'm sorry.

11 Let's get started for questions to be heard.

12 MS. MOORE: My name is Lavonne Moore, and I'm a  
13 citizen, a resident of the community, and self-employed  
14 here.

15 Prior to going into construction trucking, for  
16 20 years I was a paralegal downtown. And cases that we  
17 handled were from the shipyard. We had  
18 50,000 plaintiffs, most of which died.

19 But the ones that had the highest exposure  
20 levels to everything that's out there, "D" and "E"  
21 specifically, it was unreal. They lived a total of  
22 maybe two months.

23 I want to know, what have you done now to make  
24 "E" safer to go in as opposed to what was going on out  
25 there in '86, '87, '88, '89? I lost three uncles out

1 there to the exposure, and they were in "D" and "E."

2           Now, at the same time, there was, like, man, at  
3 least 150 law firms involved with these cases, but we  
4 were defendants, so they were suing us, so we had to pay  
5 plaintiffs.

6           It was determined in 1989 that Parcel D and E  
7 should never be touched, based on the IMEs that the  
8 plaintiffs were coming back with, the levels of  
9 asbes- -- I suppose asbestosis but from the asbestos,  
10 the mesothelioma, the upper respiratory problems. It  
11 was awful. I never seen anything like it in my life.

12           So now you're saying "D" and "E," we can  
13 actually approach those two areas? I mean, if we did  
14 investigation and stuff, 'cause we were the defendants,  
15 so we were trying to save money. So the first thing we  
16 needed to do is get investigators out there to really  
17 see what was going on.

18           We had plaintiffs from Mare Island and Oakland  
19 Army Base as well; but the Hunters Point Shipyard,  
20 Parcel E and D, and laid them out.

21           So I need to know what have you done that's  
22 going to make "E," I mean, accessible where people that  
23 have already died from this stuff? You're going to send  
24 truckers in there to move all the yards. Once you start  
25 digging and moving stuff, it's airborne. So what -- I

1 mean, how is this going to be handled?

2           We got this [indicating] Thursday at City Hall  
3 where a superior court judge has already ruled that the  
4 Hunters Point Shipyard parcels, until they are federally  
5 mandated, the remediation process has to be complete.  
6 He ruled that the City of San Francisco's redevelopment  
7 plan for the former Hunters Point Naval Shipyard, they  
8 failed to properly evaluate the environmental and health  
9 risk from allowing the Navy to transfer ownership of a  
10 contaminated Superfund site before the cleanup of the  
11 area is complete.

12           So we're talking vital now. We're talking  
13 serious at the areas. This other stuff I heard,  
14 truckers, is lightweight. I have truckers that have had  
15 heart attacks out there. They are bleeding from  
16 orifices. Now, we're talking about going into an area  
17 which they're not suited up either.

18           So whoever is responsible for that, Navy, EPA,  
19 my men need masks; they need respirators. They don't  
20 wear suits. All this stuff is being dredged up. It's  
21 airborne. So now we getting ready to go into "E" and  
22 then probably "D" next?

23           I know somebody -- The truckers are not  
24 responsible for our deal. I know that for a fact. So  
25 somebody in this room with a name badge on needs to take

1 a look at this, because I have a few truckers here I  
2 think you already know. They have been out there  
3 trucking.

4 But we had three guys that had a heart attack.  
5 One of them died. And then we have had another guy, he  
6 has constant nose bleeds. And they have gotten sick a  
7 couple days out there, and they have had to shut that  
8 job down.

9 Now, I don't know exactly where they are, but  
10 what I do know is they are in an area that would be a  
11 little more subtle than "E," and I guess after "E" you  
12 going to do "D."

13 So what I would request and I'd like to see is  
14 somebody directly from the Navy and someone from the EPA  
15 work closely with the community, because we do have  
16 truckers here that are certified for HAZMAT. They have  
17 got their credentials, everything through the EPA,  
18 Washington D.C. But it needs to be monitored a little  
19 better as far as what they are being exposed to --

20 MR. FORMAN: Yes, ma'am.

21 MS. MOORE: -- 'cause this one time  
22 Mr. Blankenship, he has a nose bleed every day.

23 So, I mean, you know, it really makes you  
24 wonder.

25 MR. FORMAN: Well --

1 MS. MOORE: So I'm hoping someone will take  
2 responsibility for that.

3 MR. FORMAN: Yes, ma'am. Okay. Here -- Thank  
4 you.

5 MR. ROBINSON: Your question for the Navy  
6 is . . . ?

7 MS. MOORE: Yeah. What you going to do? I  
8 mean, you're going into "E."

9 MR. FORMAN: Yes, ma'am. I think I got it.

10 MS. MOORE: Thank you.

11 MR. FORMAN: Thank you.

12 MS. MOORE: You going to answer?

13 MR. FORMAN: Yes, ma'am.

14 MS. MOORE: Okay.

15 MR. FORMAN: I think there's a lot here that  
16 you may not be aware of that we can make folks better  
17 aware of if they have an interest level that you've  
18 indicated.

19 And it's this: We very closely characterize a  
20 site before we go in and do any digging and hauling.  
21 We're required to do that. So we don't dig and haul in  
22 any areas where we don't already know the contaminants,  
23 the contaminant levels, and the areas of those  
24 contaminants that are going to be found.

25 When we do that, we have a dust -- a basewide

1 dust control plan which has to gain the approval of all  
2 the regulators, and that includes not only the U.S. EPA,  
3 the state EPA, California EPA, but also the Bay Area Air  
4 Quality Management District.

5           In addition to getting that plan, that  
6 dust-control plan, approved -- very stringent plan, I  
7 might add -- we have a representative from the  
8 area called Air -- from the Air Quality Management  
9 District in the Bay Area that is overlooking the  
10 operation. She's -- often spends all of her day on the  
11 base looking at operations in that area. So wherever  
12 we're digging, we do have oversight for that.

13           We're also required within the air-monitoring  
14 plans to present data, and we do so. If you go to our  
15 Web site, the Web site that's listed in the Proposed  
16 Plan, you can actually see the data that is posted on  
17 the Web site, the air quality data.

18           MS. URIZAR: So, Keith, I just want to . . .

19           We do test for asbestos, and I've had one  
20 really large construction excavation project on  
21 Parcel E-2, and we have not had a single exceedance of  
22 anything we tested for, and that includes not only  
23 asbestos, but rad and other chemicals that we're digging  
24 up there.

25           MR. FORMAN: Yeah.

1           So I think the good news is -- and I hope this  
2 is a satisfying enough answer for now. The good news is  
3 we have many plans in place, many controls in place; and  
4 whenever we do something like dig and haul, there's a  
5 lot of controls and a lot of supervision and scrutiny  
6 that the Navy gets not after the operation but actually  
7 while it's occurring, and that's the good news.

8           The other things you cited now of which I  
9 understand the heartbreak there; I understand the  
10 tragedy of having folks that have contacted these  
11 diseases, many of which are based on industrial activity  
12 and exposure. Much of which you were talking about, the  
13 methos- --

14           I can't said that word. Thank you.

15           -- and other diseases that are related to  
16 asbestos exposure did in fact occur and are connected to  
17 industrial activities during the shipyard operations.

18           That was when the operations for shipping and  
19 some repair were in full swing, which occurred from  
20 about 1939, 1940, up till 1974.

21           Those operations are long past since the  
22 shipyard's been closed. So we don't face that set of  
23 risks anymore.

24           What you were, I believe, referring to was the  
25 cap bins that were left in the soil and the

1 groundwater.

2           And again, just in summary, there's everything  
3 from dust-control plans, air -- air monitoring that's  
4 done along with very strict work plans that have to be  
5 approved by the regulators before the Navy can go out  
6 and address those problems. To date, it's usually been  
7 with -- with digging them up and removing them from the  
8 base.

9           So I am very confident that we do that very  
10 well and very successfully and that we are closely  
11 scrutinized every day that we're out there doing field  
12 work.

13           MR. ROBINSON: All right. Next question,  
14 please.

15           MS. ROBERTSON: Thank you for taking the time  
16 to answer our questions and our concerns. My name is  
17 Mary Jean Robertson, and I'm a resident of the city  
18 council.

19           And my question has to do with how you're doing  
20 this piecemeal, you know, like he was saying, doing  
21 Parcel E-2 and then ultimately going to do "F."

22           When, for example, the City decides that they  
23 are going to put in sewers and, you know, or electrical  
24 work or phone company, there are times when it feels  
25 like the street is torn up three times when it could

1 likely have been done all at the same time.

2           So when you do things piecemeal, like you were  
3 saying that you were going to do "F" after E-2, what  
4 happens when you're doing some dredging and found some  
5 difficulties and you're going to be dredging out the --  
6 behind the -- under the water and then you're going to  
7 go right through E-2 with some more of that contaminated  
8 stuff after you've already cleared E-2? Do you see what  
9 I'm saying, you know? What's the planning on the  
10 process?

11           The second question that I have -- and you did  
12 mention something about how you were trying to work  
13 through this. But we are in one of the most seismically  
14 active areas. And not that many bases, although who  
15 knows, Washington, D.C., just -- the monument just  
16 cracked. So who knows?

17           But we are in very seismically active --  
18 What -- what reassurances do we have that the capping is  
19 going to last longer than, say, ten years if we have a  
20 large major earthquake?

21           MR. FORMAN: Well, first of all, when it comes  
22 to seismic activity, the Navy will assure and the  
23 regulators will demand it that we do the proper studies  
24 and have enough information so that we know when it  
25 comes to the design phase how to design a remedy that is

1 going to be protective in this area. That's really a  
2 bottom-line requirement for it.

3           Now, today we have done something called --  
4 there's a phenomenon called liquefaction that you might  
5 be familiar with. We have done a liquefaction study,  
6 actually, that was completed a number of years ago that  
7 looked specifically at the landfill in Parcel E-2.

8           In addition to that, Lara Urizar is doing  
9 geotechnical studies that involve soil borings and using  
10 sophisticated equipment in order to better refine these  
11 conditions there and then to use professionals in this  
12 field in order to determine what the risks are and then  
13 use further professionals when we construct -- design  
14 and construct a remedy to make sure that it is fit to a  
15 couple of different things, the seismic activities that  
16 you -- the maximum probable seismic activity you would  
17 encounter and also sea levelwise and also weather  
18 conditions.

19           So all that has to be taken into account in  
20 order to get a design approved by the regulatory  
21 agencies.

22           MS. URIZAR: We should also mention that once  
23 the remedy is in place and once the cap is in place, we  
24 have operation and maintenance ongoing. So people will  
25 go out and after a certain earthquake, 6.0 or whatever,

1 that will go out and inspect the ground and then look if  
2 there's a crack in the cover or if, you know, looks like  
3 it needs maintenance; and then we will do that and we'll  
4 fix it.

5           So that's been going forward through time to  
6 make sure that we are protective.

7           MS. ROBERTSON: What about the -- what  
8 about --?

9           MR. FORMAN: Madam, if you could go to the  
10 microphone.

11           MS. ROBERTSON: I'm sorry.

12           What about the -- doing Parcel F after E-2?  
13 Or, you know, what -- how did you plan how to do which  
14 parcel when? How -- and how is that affecting  
15 recontaminating the ones that are cleared?

16           MR. FORMAN: Okay. Well, certainly, it is  
17 never in anybody's interest, you know, not the  
18 community's, not the Navy's, not the regulators, to ever  
19 recontaminate an area.

20           And I can tell you I'm responsible for a lot of  
21 what goes on in the program; and if I recontaminate an  
22 area, I'd have some -- some definite questions to  
23 answer. So it's in everybody's best interest not to do  
24 that.

25           When you talk about doing the base "piecemeal,"

1 that's interesting. In a sense, we do that; but every  
2 month the Navy and regulators get together in an  
3 official meeting, and we look at the project as a  
4 whole. If you were to look at the base and we would  
5 talk about every parcel on the base today, you'd see  
6 that there's a lot of activities on many of the parcels  
7 that are going concurrently.

8           So we really don't piecemeal it in the sense  
9 that just one area is looked at at a time. But there is  
10 a limited amount you can do for a lot of good reasons at  
11 any one time. One of them's budget. You know, we have  
12 a very substantial budget -- cleanup budget on Hunters  
13 Point, but you don't have enough budget to do cleanup in  
14 one year or two years.

15           And the other thing is, you run out of area to  
16 do cleanup in. When you do cleanup, you have to have  
17 routes planned; you to have ways for trucks to get in  
18 and out; you have to have lay-down areas to screen soil,  
19 and then you have to have areas to store the clean soil  
20 because every time the Navy digs a big hole, it's  
21 required to fill that hole with clean fill.

22           So all of these things are real-estate  
23 demands. And if we were to show you a map that has all  
24 the screening yards, the lay-down areas, the places  
25 where the contractors have to work and put trucks and

1 the digging areas and the safety associated with that,  
2 we are doing so much on the base right now, we couldn't  
3 do any more projects right now if we wanted to because  
4 we've just run out of land in which to do it safely. We  
5 have to do it safely.

6           So we're doing a lot of things concurrently on  
7 different parcels, and we have been doing a lot of work  
8 over the last few years on "B" and "G" concurrently and  
9 on "D"; and the large project is the largest project  
10 this year, and it's -- it might be on E-2, but we also  
11 had a huge project removing major piers in Parcel F this  
12 year. So we did a lot in different places.

13           But we do get together with the regulators on a  
14 monthly basis, and we go over the program  
15 comprehensively just to make sure that we're doing it in  
16 the right order and doing as much as we can do and the  
17 right way to do it concurrently.

18           MS. ROBERTSON: Thank you.

19           MR. FORMAN: But I can assure you, a component  
20 of that is the regulators and the Navy looking always to  
21 make sure that we don't recontaminate an area. That  
22 within and of itself would be a serious mistake and cost  
23 a lot of extra funds in the outreach to go back and  
24 clean something up again.

25           MR. ROBINSON: Okay. Great. Thank you, Keith.

1           Let's go to our next question. Public comment  
2 or question?

3           MR. FORMAN: Right.

4           MR. ROBINSON: Have we any other questions  
5 about the proposal?

6           MR. FORMAN: Questions or comments. Yeah,  
7 again, I --

8           REV. TOWNSEND: I just have a quick question.  
9 I'll wait for the comments for comment --

10          MR. FORMAN: Okay.

11          REV. TOWNSEND: -- comment period for my  
12 comments.

13          But just real quickly, you mentioned --

14          MR. FORMAN: Sir, if you can state your name.

15          REV. TOWNSEND: Oh. Reverend Arnold Townsend.

16          MR. FORMAN: Thank you, sir.

17          REV. TOWNSEND: You mentioned earlier --  
18 someone did -- about using liners, and I would like to  
19 know if that -- those -- if that technology has been  
20 used anywhere else in the Bay Area.

21          Hold on. And -- 'cause I'm going to let you  
22 answer both, and I'm going to sit down.

23          And then can you give me an idea of the shelf  
24 life of those liners?

25          Thanks.

1 MS. URIZAR: Right. So this [indicating] is an  
2 example that I showed you what the liners looked like,  
3 and it's called high-density polyethylene, HDPE. And  
4 then on top we have the dredge layer. And this is a  
5 very common material. It's used in every landfill  
6 anywhere after landfill is covered.

7 And I think that during our evaluation of how  
8 long this would last, it's hundreds of years. And the  
9 operation and maintenance period that comes after, we  
10 look at that, and so we'll see if it's starting to break  
11 down or there's settling. So, you know, if it needs to  
12 be repaired going forward, you would -- we would take  
13 care of that.

14 REV. TOWNSEND: Thank you.

15 MS. URIZAR: You're welcome.

16 MR. FORMAN: Thank you.

17 MR. ROBINSON: Thank you.

18 Any other questions about the Proposed Plan?

19 Okay. Then let's of move on to the next phase,  
20 which is our comment period. Here is your opportunity  
21 to give comment on the E-2 project.

22 Some basic rules again. For the comment  
23 period, we want to hold your comments to three minutes.  
24 We have a timer up here, and I will also be letting you  
25 know just as backup that we have two minutes, one

20:45:53 1 I'm going to be fairly easy on my comments  
2 tonight because we're going to give extensive commentary  
3 in writing.

20:45:59 4 As you know, the best way to comment on  
5 Proposed Plan is to actually comment on the Feasibility  
6 Study. So we're going to be going back through the  
7 Feasibility Study. We're bringing our consultants in,  
8 and we are going to have a very, very thorough look at  
9 that.

20:46:13 10 But I want to point to the landfill cap  
11 construction 2000, 2001 because there's some historical  
12 inaccuracies in the statement. The statement says, "a  
13 protective liner and soil cover were installed over part  
14 of the landfill, about 14.5 --" [background noise]

20:46:39 15 THE COURT REPORTER: I'm not hearing you. I'm  
16 hearing other things going on. Covering part of the  
17 landfill what?

20:46:39 18 MR. BLOOM: Can I get my time back?

20:46:39 19 THE NAVY: Yes.

20:46:39 20 MR. BLOOM: Thank you. I'll just jump ahead.

20:46:41 21 (Reading:) The fire started on  
22 August 16th, 2000, and was extinguished at the  
23 surface within six hours, but small areas  
24 continued to smolder below ground for  
25 approximately one month. Because the

1 protective liner and soil cover limits the air  
2 from entering into the landfill, the effect  
3 was a smothering of any smoldering . . . below  
4 the ground.

20:47:03 5 The problem is -- is that the timing is not  
6 exactly correct. I have here the E-mail correspondence  
7 for Chein Kao from the Department of Toxic Substances  
8 Control. In that period of time, as you know, Chein Kao  
9 worked for Arc Ecology.

20:47:19 10 It shows that on -- as of September 11th,  
11 almost a month later, the Navy was first introducing the  
12 landfill expert to the public at this point. I know  
13 this isn't your problem because you weren't here at the  
14 time, so no reflection on you, but that just simply did  
15 not occur at that time.

20:47:39 16 If you jump ahead to September 12th, you have a  
17 letter from Dan Meer from the U.S. EPA, Mr. Chetnut's --  
18 Chesnutt's predecessor; and he is talking about three  
19 weeks problem getting the Navy to respond to the  
20 landfill fire.

20:48:03 21 If you jump ahead to the 15th, you find the  
22 letter that the Navy is preparing an emergency removal  
23 action plan for the proposed cap at the time.

20:48:14 24 And so the timing simply doesn't work. You  
25 need to get that right.

1 increased since moving.

20:49:38 2 I support the project, support the concept of  
3 the project, certainly. But I think it's simple to say  
4 that no one in their right mind, I hope, wants a project  
5 that is not clean and absolutely cleaned; and it is  
6 absolutely essential that you do it for the people of  
7 Hunters Point who have suffered and who have sat here  
8 all these years with the site that's basically not safe  
9 right now, a site that's basically not really clean  
10 right now. And folks are not quite sure how bad it is.

20:50:16 11 So we certainly need something to be done. The  
12 reality is we would just like to see it done right and  
13 want to make sure that there's some confidence given to  
14 the people that it is being done right.

20:50:31 15 So reality, once again, is that you need to  
16 make sure you go out of your way to assuage the fears  
17 and concerns of the people in the community and --  
18 because the things that may seem clean to -- may seem  
19 clear to those of you who work in the process are not  
20 always as clear to lay people. So you need to take the  
21 time to work and spend the money to make sure that all  
22 the questions are answered and answered publicly.

20:51:03 23 Thank you so much.

20:51:04 24 MR. FORMAN: Thank you, sir.

20:51:08 25 COMMENT

20:51:08 1 BY ESPANOLA JACKSON:

20:51:08 2 Espanola Jackson again.

20:51:12 3 I would just like to say that I been to so many  
4 of these. In fact, I was at the beginning of getting  
5 the Navy to come and -- when I learned that this was a  
6 Superfund site here in Hunters Point. I been living  
7 here since 1943, all right?

20:51:37 8 What I've seen going on over and over again is  
9 that the little millions of dollars that Congress gives  
10 that clean the shipyard has been nothing.

20:51:52 11 2001 -- and I've talked to the city  
12 officials -- I even told you, sweetheart -- that the  
13 Navy should get together with our Congress persons  
14 because I felt when those planes hit in New York and  
15 Congress decided that they will spend \$10 billion a  
16 month to fight a war over in the other countries, I'm  
17 going to say it again, I feel that you, Navy, along with  
18 the City, along with EPA and everybody else, should send  
19 to our representatives, which is Dianne Feinstein,  
20 Pelosi, and Boxer -- I called those names before -- that  
21 \$10 billion one time be set aside to clean up that  
22 Superfund site because there's no way that -- there is  
23 no way them few little million dollars just goes  
24 straight to the surface.

20:53:23 25 I'm not going to fault you, baby, 'cause you

1 weren't here. I'm not going to fault anyone. But the  
2 thing of it is, it seems as though we cannot get  
3 together to said this is what the Navy need and how it  
4 is to be done. Maybe won't take \$10 billion to clean  
5 the shipyard. Maybe it just takes 6 billion. But let's  
6 do something instead of just coming back, because you  
7 been here too long.

20:53:53 8           You know, when I went and found out that there  
9 was a need for a -- what was the name of that  
10 committee? When I went to the Navy, the Navy said that  
11 they had them in Southern California but that was done  
12 in Northern California. What's the name of that board?

20:54:09 13           MR. FORMAN: Restoration Advisory Board?

20:54:11 14           MS. JACKSON: Yeah, the RAB board.

20:54:12 15           MR. FORMAN: Right.

20:54:12 16           MS. JACKSON: I'm the one that requested and  
17 let them know to send a RAB board not only to Hunters  
18 Point, but at the day that I was speaking, the Presidio  
19 was in the process of closing.

20:54:24 20           Now, the honest side, if you -- the Navy  
21 started the same time. Honey, for the Presidio, what  
22 they had to do has been done. They got everything. Why  
23 don't we just come together here at Bayview-Hunters  
24 Point and do the same thing? That's all I'm asking.

20:54:43 25           And when you and my --

20:54:47 1 THE NAVY: Miss --

20:54:47 2 MS. JACKSON: Excuse me, baby. You just --

3 Hold it, honey, because, you see, I'm 78 years old. I

4 been living too long. And when I come here to speak,

5 I'm speaking for the rest of the people in my community

6 because you don't have that many people here from the

7 community, and you need to hear what I'm saying. And

8 I'm not arguing. I just want to make sure you all

9 understand what we are talking about.

20:55:09 10 I want to -- My husband was in the Navy. He

11 go back. And I was out there at the shipyard, and

12 everybody know that.

20:55:16 13 But I just want to thank you all for coming,

14 and please take under consideration what I'm saying

15 tonight about how we get it done of cleaning up that

16 shipyard.

20:55:29 17 Thank you very much.

20:55:30 18 MR. FORMAN: Thank you very much, Miss Jackson.

20:55:33 19 COMMENT

20:55:33 20 BY JEFFREY BUTRON:

20:55:33 21 My name is Jeff Butron. I spell my last name

22 B-u-t-r-o-n. I'm a Costanoan Rumsen Ohlone. I come to

23 represent my people today.

20:55:43 24 You know what? It's only apparent a lot of

25 people are really concerned about this cleanup here.

1 And it's kind of like cleaning the house. You know,  
2 when you clean the house and you sweep all the dirt  
3 underneath the rug, guess what: The house is still  
4 dirty.

20:55:56 5           And you know what? I think that we should take  
6 into consideration all the concerns that were said here  
7 today. But also, what my tribe is requesting, we're not  
8 taking -- asking for consideration. We're requesting.  
9 Since this was once occupied by our ancestors and, of  
10 course, there's a lot of shell still out there and  
11 there's probably some villages and there's also a lot of  
12 digging that's being dug up. What we're requesting  
13 is -- we're not asking for land, but we are asking for  
14 an easement.

20:56:26 15           An easement is basically to where our tribe and  
16 other Ohlone tribes and other California tribes and even  
17 other cultures of the other ethnic cultures can come and  
18 utilize this area --

20:56:38 19           I see your two minutes.

20:56:40 20           -- come utilize this area and so that they  
21 could actually have a ceremony and some kind of  
22 spiritual, you know, gathering together.

20:56:48 23           And like I said once before, we're not asking  
24 to take into consideration. We're asking for -- We're  
25 asking the question. Thank you.

20:56:57 1 MR. FORMAN: Thank you very much.

20:57:11 2 COMMENT

20:57:11 3 BY SAUL BLOOM:

20:57:11 4 Saul Bloom again for the record, Arc Ecology.  
5 I just wanted to touch again on the Proposition P for a  
6 second.

20:57:21 7 The reason why I spent some time talking about  
8 the fire was because it was the Seminole event. It was  
9 the event that made this community concerned about this  
10 landfill more than any other event and scarred this  
11 community and continues to scar this community today.  
12 And Proposition P was now of that fire then.

20:57:41 13 Now, in Proposition P -- and I know because I  
14 wrote it -- was focused on the community acceptance  
15 criteria of the National Contingency Plan. There's no  
16 opt-out in the -- in the NCP with regard to agreeing or  
17 not agreeing. The Navy's required to look at this  
18 modifying criteria. It may not necessarily abide by it,  
19 but it is required to look at it and consider it duly.

20:58:09 20 But it's also based on BRAC policy, required to  
21 look at reuse authority. The reuse authority is a --  
22 powered by the Board of Supervisors of San Francisco.  
23 And in August 2001, the Board of Supervisors adopted the  
24 Proposition P as city policy. Proposition P was also  
25 incorporated in 2004 as a conveyance agreement that the

1 Navy signed with the City of San Francisco.

20:58:34 2 And I should also mention that the 1992 Federal  
3 Facilities Compliance Act also followed the BRAC  
4 legislation, and so that further informed BRAC  
5 legislation, which again requires the Navy to follow all  
6 federal regulations.

20:58:52 7 Reuse plan for the shipyard is silent on the  
8 matter of whether or not the use has any effect on  
9 Proposition P, in fact. One could go ahead and  
10 remediate that site fully to Proposition P levels, and  
11 there's nothing to say that that will not be fully  
12 compliant with the use.

20:59:10 13 And there are long-term interests that people  
14 have within that site. In fact, the failure to provide  
15 Prop P guidance does in fact dictate what the City's  
16 options are with regard to future uses of that site. We  
17 can't do certain little things, wetlands and other  
18 activities on that site. They are required for  
19 excavation because it would violate the institutional  
20 controls and land-use controls and instruments the Navy  
21 plans to have in place at that site.

20:59:38 22 So Proposition P is an important thing for the  
23 Navy to take into consideration and to give its due  
24 weight too.

20:59:44 25 So again, thank you for your time, comments on

1 Proposition P.

20:59:48 2 MR. FORMAN: Thank you very much.

20:59:57 3 MR. JENNISON: Could I just make one --

20:59:58 4 THE NAVY: Yes.

20:59:58 5 MR. JENNISON: -- one quick comment?

20:59:58 6 COMMENT

20:59:58 7 BY ELL JENNISON:

20:59:58 8 And I -- and I kind of -- Ell Jennison.

21:00:01 9 I kind of brought it up in my question, but I

10 think that there should be a total cleanup before the

11 land is turned over to the City for redevelopment.

21:00:10 12 And I think that it is very important that

13 these -- the high standards. And you are our Navy. You

14 know, it's not like the Navy Navy.

21:00:19 15 And I -- and I think that we should realize

16 that we're all in this together as far as not just the

17 community but the whole nation. This is part of --

18 This -- this and the -- and the toxicity that was

19 generated there in Hunters Point was to protect this

20 country.

21:00:37 21 And so then I think it's important to realize

22 that you are our Navy and that I think that you should

23 stipulate to our city government that this is completely

24 cleaned up before it is -- any type of development is

25 allowed in that area.

21:00:54 1 Thank you.

21:00:55 2 MR. FORMAN: Thank you very much, sir.

21:00:57 3 MS. JACKSON: Very good, babe.

21:00:59 4 MR. ROBINSON: Any other --? Anyone want to  
5 make a comment on Parcel E-2? The mike is open.

21:01:15 6 Okay. Well, thank you very much, folks.  
7 Remember, the comment portion isn't over yet. You have  
8 until October 24th to make comments. The Navy will take  
9 the comments in the course and put them into the Record  
10 of Decision.

21:01:30 11 Any -- any words, Keith?

21:01:37 12 MR. FORMAN: Did someone ask for an extension?

21:01:41 13 AUDIENCE MEMBERS: Yes.

21:01:42 14 MR. FORMAN: Mr. -- Thank you. Did you  
15 quantify that extension?

21:01:48 16 MR. BLOOM: No. No, no. One of the concerns  
17 that we have, to answer your question, is that we know  
18 we have a mayor's race, and everybody's --

21:01:57 19 THE COURT REPORTER: I'm not hearing you.

21:01:57 20 MR. ROBINSON: Could you come up to the  
21 microphone and get it on the record?

21:02:01 22 MR. BLOOM: Yes, yes, yes. Sorry, sorry,  
23 sorry.

21:02:01 24 MR. FORMAN: Again, I'm sorry. Maybe I  
25 shouldn't have opened up --

21:02:03 1 MR. BLOOM: You know what, I just want to --

21:02:03 2 MR. FORMAN: -- open this one up because my  
3 sense of it is you did want some more immediate answer  
4 than you suggest.

21:02:09 5 MR. BLOOM: No, no. I mean, I'm perfectly  
6 happy to hear back from you about when you think -- you  
7 ask the question about why. One of the reasons why is,  
8 of course, we do the analysis where it's going to take  
9 us a little bit of time.

21:02:20 10 But the other part of the thing is -- is that  
11 we are in the middle of a mayor's race, and people are  
12 extremely focused on that race. And I had several  
13 meetings today where I talked to people about the fact  
14 that this is going on now. And they were, like, Oh, my  
15 God, it's the mayor's race. What am I supposed to do  
16 about it? So -- and that was at least three members of  
17 the Board of Supervisors.

21:02:40 18 So I think that these are things that we need  
19 to take into account. We have had many a time to look  
20 at, and that's all.

21:02:50 21 I understand that we need to be -- I -- you  
22 know, I wouldn't ask you to go up to the Thanksgiving  
23 holiday, of course. I don't think that's necessary.  
24 But I think sometime after the holiday would be  
25 appropriate so folks can then take a look finally and

1 say, okay, here's what, you know, we talked about. You  
2 have some time to respond then, and I think that would  
3 be very helpful.

21:03:13 4 Thank you so much.

21:03:14 5 MR. FORMAN: Thank you again.

21:03:17 6 MR. ROBINSON: Any concluding comments  
7 tonight?

21:03:18 8 MR. FORMAN: No. I think that --

21:03:18 9 I want to thank everybody for coming. I -- We  
10 realize this is on your time, and we really appreciate  
11 not only your interest; you listen to the presentation,  
12 but then offering questions and comments. We really  
13 appreciate that.

21:03:32 14 And I look forward to this being a continuing  
15 process. This isn't the last time you'll have a chance  
16 to interact with us.

21:03:41 17 And take -- please take the handouts with you,  
18 and you can reach me by cell phone, or you can reach me  
19 by E-mail. And please continue to interact with me,  
20 give me your input and hold my feet to the fire to get  
21 answers to your questions because I think that's one of  
22 our obligations here that we take very seriously.

21:04:00 23 And I want to thank you, once again, everybody,  
24 for coming tonight. I appreciate it.

25 (Off record at 9:04 p.m., 9/20/11.)

## **Attachment 3. Responsiveness Summary**

---

## INTRODUCTION

The responsiveness summary provides the views of the public and regulatory agencies as expressed during the public comment period on the Proposed Plan, and documents how public comments were integrated into the decision-making process. Because of the large number of comments received on the Proposed Plan, this introduction summarizes the most commonly expressed views and the Navy's associated responses. This introduction is intended to facilitate a better understanding of how public comments were integrated into the decision-making process, but is not intended to replace the complete responses to each comment received on the Proposed Plan. The complete responsiveness summary immediately follows this introduction.

### ***Issue 1 – Does the Navy know enough about the Parcel E-2 Landfill to select a remedy?***

Yes. The Navy has worked closely with the EPA<sup>1</sup>, DTSC, Water Board, CCSF DPH, and other project stakeholders for more than 20 years to obtain and evaluate data from the Parcel E-2 Landfill. Section 3 of the RI/FS Report (ERRG and Shaw, 2011) details the previous environmental investigations performed in and around the Parcel E-2 Landfill. During these investigations, the Navy installed 28 soil borings and 18 monitoring wells and excavated 25 test pits within the Parcel E-2 Landfill (from which over 300 soil and over 240 groundwater samples were analyzed) to evaluate the nature and extent of contamination. As demonstrated by the approval of the Final RI/FS by the EPA, DTSC, and Water Board, the investigations at Parcel E-2 have satisfied the regulatory stakeholders and have provided adequate data to support an informed risk management decision.

When the Navy began preparing the RI/FS Report in 2004, the first step involved evaluating existing site data and reviewing pertinent EPA guidance to develop a preliminary list of remedial alternatives for Parcel E-2. Based on the review, the Navy determined that (1) conditions at the Parcel E-2 Landfill support use of the presumptive containment remedy, and (2) conditions at the Panhandle Area, East Adjacent Area, and Shoreline Area do not support use of the presumptive containment remedy but, consistent with the streamlined approach outlined in the NCP preamble (55 Federal Register 8704-8705, March 8, 1990) and in EPA RI/FS guidance (EPA, 1988), support evaluation of remedial alternatives focused on containment and excavation. The Navy consulted with the EPA, DTSC, Water Board, and CCSF DPH during this initial stage and, based on their input and input from the community, determined that complete removal of the Parcel E-2 Landfill should also be evaluated as one of the remedial alternatives. This approach is consistent with EPA's directive regarding presumptive remedies (EPA, 1993b), which states that "*there may be unusual circumstances (such as, complex contaminant mixtures, soil conditions, or extraordinary State and community concerns) that may require the site manager to look beyond the presumptive remedies for additional (perhaps more innovative) technologies or remedial approaches.*" The information contained in the RI/FS Report demonstrates that Parcel E-2 is characterized adequately to support an evaluation of the focused set of remedial alternatives developed in

---

<sup>1</sup> Acronyms and abbreviations are summarized at [the end of this responsiveness summary](#).

consultation with the EPA, DTSC, Water Board, and CCSF DPH. In addition, the information contained in the RI/FS Report supports the use of the presumptive containment remedy for the Parcel E-2 Landfill and explains the relative risks of that option compared to complete excavation.

***Issue 2 – Why was Alternative 5 selected instead of Alternative 2?***

The Navy acknowledges the input from many community members expressing their support for Alternative 2 instead of Alternative 5. The Navy is obligated to consider the community's input regarding the cleanup decision for Parcel E-2 because community acceptance is one of nine CERCLA remedy selection criteria identified in the federal regulation called the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.

The Navy's evaluation of the remedial alternatives is summarized on pages 15, 16, and 17 of the Proposed Plan. Additional information is included in Sections 2.8 and 2.9 of this ROD. In summary, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P as explained on the following pages (under Issue 4). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.

***Issue 3 – How are Environmental Justice principles considered in the remedy selection process?***

The Navy and EPA are firmly committed to achieving the goals identified in the Executive Order on Environmental Justice (E.O. 12898) at HPNS. Both agencies are dedicated to consistent, fair treatment and meaningful participation in environmental decision-making for minority, low-income, and indigenous populations that are disproportionately impacted by pollution. The Navy and EPA, in performing environmental cleanup work at HPNS with support from DTSC and the Water Board, have worked together to achieve the environmental justice goals of fully protective cleanup actions, fair and equal

treatment, and meaningful involvement for all people in the Bayview-Hunters Point community. Our efforts to satisfy these goals include:

- Substantial regulatory review and oversight of all Navy cleanup activities. The EPA, DTSC, Water Board, CCSF, California Department of Public Health, Bay Area Air Quality Management District, and San Francisco Bay Conservation and Development Commission all have dedicated significant additional staff to HPNS to ensure that the Navy’s cleanup work is performed in a way that is protective of the Bayview-Hunters Point community and complies with federal and state laws and regulations.
- Substantial financial commitment from the Navy to HPNS cleanup. The Navy has spent approximately \$716M over the past 20 years on the HPNS cleanup program, and these expenditures have made HPNS one of the nation’s largest BRAC cleanup programs. The Navy’s cleanup efforts to date have successfully removed, treated, or contained a significant volume of contamination that would otherwise pose an unacceptable risk to site workers and future occupants.
- EPA’s Technical Assistance Grants to the Community.
  - Technical Assistance Grants (TAG). Since 1993, EPA has consistently provided various community groups with grant money to hire an independent technical advisor to review and provide independent input on the Navy’s plans and reports, and to help further explain the Navy’s cleanup work to interested community members.
  - Technical Assistance Services for Communities (TASC). EPA used its TASC contract program to provide the community with an independent asbestos technical expert to review the “Draft 2010 U.S. EPA’s Review of Dust/Asbestos Control Measures and Air Monitoring at Hunters Point Shipyard Parcel A Report” and other supporting documentation. A community meeting was held where the independent technical advisor presented his findings. In addition, TASC services were used by the community to review the San Francisco Redevelopment Agency’s Environmental Impact Report (EIR) for HPNS related to land use and site cleanup. The technical advisor presented formal comments to the CCSF and held a meeting to present independent findings to the broader community.
  - Region 9 Environmental Justice Grant for HPNS. Prior to the national program, the Region 9 EPA Superfund Program developed and awarded a “one-time” HPNS Environmental Justice Small Grant to encourage new activity or improve the quality of existing activities related to environmental justice and cleanup of the HPNS.
- Meaningful Community Engagement under the Navy’s Updated Community Involvement Plan (CIP). The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). The Navy conducts the following specific community outreach efforts in accordance with the CIP: (1) publishing an annual calendar of outreach events; (2) dedicating a Navy team member to serve as Community Involvement Manager; (3) publishing fact sheets on important technical topics; (4) holding regularly scheduled community meetings; (5) publishing an annual overview of the HPNS cleanup program; (6) regularly updating a hardcopy mail and e-mail distribution list to maximize communication; (7) holding periodic bus tours of HPNS to describe the cleanup program; (8) participating in local radio programs to answer questions from the local community; (9) presenting technical

information to a variety of existing community groups; (10) making translation services available to interested community members; and (11) publishing notices in local newspapers to announce public meetings associated with important document reviews.

- **Employment.** The Navy works closely with their existing contractors to emphasize the importance of hiring community members to assist in the cleanup program, and works with interested stakeholders (such as the CCSF) to promote job training programs. These efforts have proven successful based on recent estimates—from 2009 to 2011 over 1,000 community members have been employed under Navy contracts (on either full-time, part-time, or temporary basis) to assist in the cleanup program. In addition, the Navy and their contractors have identified a large network of local businesses to assist in the cleanup program, such as those providing document production services, supplying building materials and consumables (drinking water and ice), renting heavy equipment, and transporting soil and rock. These efforts have proven successful based on recent estimates of over \$11 million worth of goods and services from local businesses.
- **Commitment to Protective Cleanup Actions.** Most importantly, the Navy, EPA, and the State of California regulatory agencies are committed to fully protective cleanup actions at Parcel E-2 and throughout HPNS. As described in previous responses, the selected remedy for Parcel E-2 will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife. Since 2005, the Navy has undertaken a great deal of early action to remove contaminated soil at Parcel E-2, involving the excavation and off-site disposal of over 90,000 cubic yards (over 6,400 truckloads). For the Parcel E-2 landfill itself, the Navy, EPA, and State of California jointly believe that safely isolating and capping the Parcel E-2 Landfill (as specified in Alternative 5) presents less overall risk to the adjacent community when compared with the risks of other cleanup alternatives evaluated, including complete removal of the Parcel E-2 Landfill (in Alternative 2). The combination of removal and containment proposed under Alternative 5 reduces risk sooner, is easier to implement, and is much more cost-effective as compared with Alternative 2. In addition, Alternative 5 provides additional risk reduction as compared with Alternatives 3 and 4.

#### ***Issue 4 – How is Alternative 5 consistent with City and County of San Francisco Proposition P?***

Proposition P was adopted by the CCSF Board of Supervisors in Resolution 634-01 in August of 2001. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible. The Navy, in its RI/FS Report that was concurred upon by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.

Proposition P was later addressed in the “*Conveyance Agreement Between the United States of America Acting by and Through the Secretary of the Navy United States Department of the Navy and the San Francisco Redevelopment Agency for the Conveyance of Hunters Point Naval Shipyard*” executed on March 31, 2004. Recital paragraphs 10 and 11 of the Conveyance Agreement referenced Proposition P and reiterated community support for cleanup to the highest level practical. Furthermore, Article 1(q)(iv) of the Conveyance Agreement specifically addresses Parcel E (which at the time of execution also included Parcel E-2) and states in relevant part: “*In any event, the remedies selected for Parcels E and F shall meet applicable Federal and State regulatory requirements, including the nine criteria set forth in 40 CFR 300.430(e)(9)(iii), one of which is community acceptance.*” Recital 10 also acknowledges that the Navy is required under CERCLA to take community acceptance into account in its cleanup decision. The Navy has done so in this ROD and responsiveness summary in accordance with CERCLA and the NCP and has also addressed technical feasibility and cost effectiveness in the ROD in a manner that is consistent with CERCLA, the NCP, Proposition P, the Conveyance Agreement, and the Hunters Point Shipyard Redevelopment Plan.

The Navy’s environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA’s amended Hunters Point Shipyard Redevelopment Plan (SFRA, 2010), which was approved 9 years after the adoption of Proposition P and 6 years after execution of the Conveyance Agreement. The Redevelopment Plan was initially approved in 1997 and adopted as the official Redevelopment Plan for HPNS by the CCSF Board of Supervisors (Ordinance 285-97 pursuant to Chapter 4.5 of California Community Redevelopment Law, California Health and Safety Code § 33492). The Redevelopment Plan was subsequently amended in 2010, and the selected remedy would accommodate the future reuses identified in the amended plan.

The Navy also notes that Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E-2.

***Issue 5 – How will the Navy involve the community during the design of the selected remedy?***

Once the ROD for Parcel E-2 is finalized, the Navy will work closely with federal and state regulatory agencies, representatives from the CCSF, and members of the local community to develop a remedial design document. This document will identify the actions necessary to (1) properly implement the selected remedy for Parcel E-2, and (2) perform maintenance and monitoring of the remedy as long as necessary to protect people and wildlife and comply with the pertinent federal and state requirements (as identified in Attachment 4 of this ROD). The remedial design document will also include a detailed analysis of several important elements of the selected remedy that are of interest to the community, including:

- Shoreline Protection,
- Landfill Gas Treatment, and
- Liquefaction Potential.

The remedial design document will be submitted for review and approval by EPA, DTSC, and the Water Board. The Navy will also solicit comments from representatives from the CCSF and members of the local community.

***Issue 6 – How will the Navy ensure that the selected remedy will protect people and wildlife in the long-term?***

The selected remedy includes the following monitoring and maintenance activities that would be performed as long as necessary to protect human health and the environment and to comply with pertinent federal and state requirements (as identified in Attachment 4 of this ROD):

- Groundwater monitoring will be performed, consistent with the pertinent federal and state requirements, to verify that chemical concentrations in groundwater do not exceed concentrations designated by the RAOs at the compliance boundary.
- Landfill gas monitoring will be performed to demonstrate compliance with the pertinent state requirements.
- Stormwater and erosion controls will be installed and maintained, and stormwater discharges will be monitored as required under the pertinent federal and state requirements.
- The cover will be inspected and maintained to ensure its integrity as required under the pertinent state requirements.

The long-term monitoring and maintenance program will be detailed in the post-closure operation and maintenance plan for Parcel E-2, and submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the remedial design. Regulatory oversight will continue during long-term operation and maintenance of the selected remedy. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment.

|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | <p>(Reading from page 7 of Proposed Plan): “The fire started on August 16<sup>th</sup>, 2000, and was extinguished at the surface within six hours, but small areas continued to smolder below ground for approximately one month. Because the protective liner and soil cover limits the air from entering into the landfill, the effect was a smothering of any smoldering . . . below the ground.”</p> <p>The problem is -- is that the timing is not exactly correct. I have here the E-mail correspondence for Chein Kao from the Department of Toxic Substances Control. In that period of time, as you know, Chein Kao worked for Arc Ecology.</p> <p>It shows that on -- as of September 11<sup>th</sup>, almost a month later, the Navy was first introducing the landfill expert to the public at this point. I know this isn't your problem because you weren't here at the time, so no reflection on you, but that just simply did not occur at that time.</p> <p>If you jump ahead to September 12<sup>th</sup>, you have a letter from Dan Meer from the U.S. EPA, Mr. Chestnut's -- Chesnut's predecessor; and he is talking about three weeks problem getting the Navy to respond to the landfill fire.</p> <p>If you jump ahead to the 15<sup>th</sup>, you find the letter that the Navy is preparing an emergency removal action plan for the proposed cap at the time.</p> <p>And so the timing simply doesn't work. You need to get that right.</p> <p>And we all know that ATSDR began a program on -- in November that was finalized in December. And at that point, the land -- the air documentation came, and the Navy proposed in February that stopped sampling there; and in March it was announced. So thank you. That it was closed.</p> <p>So I think the record needs to be adjusted to reflect that time line. It's easy to have it.</p> <p>And the problem that I have with seeing an error like that is that it worries me about the rest of the analysis because it's a very, very simple thing to check. [Refer to the transcript of the public meeting on pages 97 through 100 for the complete comment.]</p> | <p>The subject statement in the Proposed Plan correctly states that the surface fire was extinguished in 6 hours, but subsurface smoldering continued for approximately 1 month. This information was published previously in fact sheets prepared by the Navy (Navy, 2000a, 2000b, and 2000c) and a health consultation performed by the ATSDR<sup>2</sup> (2001). Information relating to the fire and associated response actions is provided in the document titled “Removal Action Landfill Cap Closeout Report.” This document, which was finalized in February 2005 after review and comment by the EPA, DTSC, and Water Board, was provided as Appendix E to the RI/FS Report for Parcel E-2 (ERRG and Shaw, 2011). Based on this information, the Navy believes that the administrative record accurately reflects the timeline of activities regarding the landfill fire and associated response actions, and that no correction is required.</p> |

|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.          | <p>Now, in Proposition P -- and I know because I wrote it -- was focused on the community acceptance criteria of the National Contingency Plan. There's no opt-out in the -- in the NCP with regard to agreeing or not agreeing. The Navy's required to look at this modifying criteria. It may not necessarily abide by it, but it is required to look at it and consider it duly.</p> <p>But it's also based on BRAC policy, required to look at reuse authority. The reuse authority is a -- powered by the Board of Supervisors of San Francisco. And in August 2001, the Board of Supervisors adopted the Proposition P as city policy. Proposition P was also incorporated in 2004 as a conveyance agreement that the Navy signed with the City of San Francisco. And I should also mention that the 1992 Federal Facilities Compliance Act also followed the BRAC legislation, and so that further informed BRAC legislation, which again requires the Navy to follow all federal regulations.</p> <p>Reuse plan for the shipyard is silent on the matter of whether or not the use has any effect on Proposition P, in fact. One could go ahead and remediate that site fully to Proposition P levels, and there's nothing to say that that will not be fully compliant with the use.</p> <p>And there are long-term interests that people have within that site. In fact, the failure to provide Prop P guidance does in fact dictate what the City's options are with regard to future uses of that site. We can't do certain little things, wetlands and other activities on that site. They are required for excavation because it would violate the institutional controls and land-use controls and instruments the Navy plans to have in place at that site.</p> <p>So Proposition P is an important thing for the Navy to take into consideration and to give its due weight too. [Refer to the transcript of the public meeting on pages 106 through 108 for the complete comment.]</p> | <p>As described on page 16 of the Proposed Plan, the community acceptance criterion is one of two modifying criteria and has been evaluated based on comments provided in the course of the CERCLA remedy selection process, including those received on the Proposed Plan, and other community input, including Proposition P. Consistent with the NCP [40 CFR § 300.430(e) and (f)], the Navy's evaluation of the community acceptance criterion is documented in this ROD, which includes the subject responsiveness summary. The Navy notes that the SFRA and the Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan and their agreement documents community acceptance.</p> <p>Proposition P was adopted by the CCSF Board of Supervisors in Resolution 634-01 in August of 2001. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure <u>unless other remedies are technically infeasible</u>. The Navy, in its RI/FS Report that was concurred upon by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.</p> |

|-----------------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. <i>(see above)</i><br><i>(cont.)</i> |         | <p>Proposition P was later addressed in the “<i>Conveyance Agreement Between the United States of America Acting by and Through the Secretary of the Navy United States Department of the Navy and the San Francisco Redevelopment Agency for the Conveyance of Hunters Point Naval Shipyard</i>” executed on March 31, 2004. Recital paragraphs 10 and 11 of the Conveyance Agreement referenced Proposition P and reiterated community support for cleanup to the highest level <u>practical</u>. Furthermore, Article 1(q)(iv) of the Conveyance Agreement specifically addresses Parcel E (which at the time of execution also included Parcel E-2) and states in relevant part: “<i>In any event, the remedies selected for Parcels E and F shall meet applicable Federal and State regulatory requirements, including the nine criteria set forth in 40 CFR 300.430(e)(9)(iii), one of which is community acceptance.</i>” Recital 10 also acknowledges that the Navy is required under CERCLA to take community acceptance into account in its cleanup decision. The Navy has done so in this ROD and responsiveness summary in accordance with CERCLA and the NCP and has also addressed technical feasibility and cost-effectiveness in the ROD in a manner that is consistent with CERCLA, the NCP, Proposition P, the Conveyance Agreement, and the Hunters Point Shipyard Redevelopment Plan.</p> <p>The Navy’s environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA’s amended Hunters Point Shipyard Redevelopment Plan (<a href="#">SFRA, 2010</a>), which was approved 9 years after the adoption of Proposition P and 6 years after execution of the Conveyance Agreement. The Redevelopment Plan was initially approved in 1997 and adopted as the official Redevelopment Plan for HPNS by the CCSF Board of Supervisors (Ordinance 285-97 pursuant to Chapter 4.5 of California Community Redevelopment Law, California Health and Safety Code § 33492). The Redevelopment Plan was subsequently amended in 2010, and the selected remedy would accommodate the future reuses identified in the amended plan.</p> <p>The Navy also notes that Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E-2.</p> |

|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | <p>I'm associate pastor at Without Walls Church, which happens to be located at 860 Innes Street, which is right down the block from the shipyards. So quite naturally, we have concerns, had concerns before we moved there. The concerns have only been -- have only increased since moving.</p> <p>I support the project, support the concept of the project, certainly. But I think it's simple to say that no one in their right mind, I hope, wants a project that is not clean and absolutely cleaned; and it is absolutely essential that you do it for the people of Hunters Point who have suffered and who have sat here all these years with the site that's basically not safe right now, a site that's basically not really clean right now. And folks are not quite sure how bad it is.</p> <p>So we certainly need something to be done. The reality is we would just like to see it done right and want to make sure that there's some confidence given to the people that it is being done right.</p> <p>So reality, once again, is that you need to make sure you go out of your way to assuage the fears and concerns of the people in the community and -- because the things that may seem clean to -- may seem clear to those of you who work in the process are not always as clear to lay people. So you need to take the time to work and spend the money to make sure that all the questions are answered and answered publicly. [Refer to the transcript of the public meeting on pages 100 and 101 for the complete comment.]</p> | <p>The Navy understands the desire of community members to have HPNS<sup>3</sup> cleaned up to the highest standards. The Navy also recognizes its responsibility to properly communicate the potential risks at Parcel E-2 to community members, and to answer all questions posed regarding the Navy's preferred alternative published in the Proposed Plan. This responsiveness summary is an important tool that the Navy uses to meet these obligations. The Navy understands the challenges of reaching out to the community and directly answering their questions; we continue to work on improving our CIP to help more people understand recommended cleanup actions at HPNS. The following paragraphs provide the Navy's responses to questions about the potential risks at and the degree of cleanup for Parcel E-2.</p> <p>The potential risks at Parcel E-2 are summarized in pages 9 and 10 of the Navy's Proposed Plan. Additional information is included in Section 2.5 of this ROD. In summary, the Navy estimated potential risk from exposure to contamination (based on current conditions if no action was taken) and determined that there were unacceptable risks that required remedial (cleanup) action. The Navy determined that Remedial Alternatives 2 through 5, once properly implemented, would each protect humans and wildlife from these potential risks. The EPA, DTSC, Water Board, and CCSF DPH have reviewed and have agreed with the Navy's findings. The Navy will continue to make its staff available to participate in various community outreach activities, and will answer questions regarding the cleanup process at HPNS (including Parcel E-2). The next community meeting is scheduled for April 2012, at which the draft ROD for Parcel E-2 will be discussed. Navy staff will be available at this meeting to answer questions about the proposed cleanup activities at Parcel E-2.</p> |

|---------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. (see above)<br>(cont.) |         | <p>The Navy is obligated to consider the community's input regarding the cleanup decision for Parcel E-2 because community acceptance is one of nine CERCLA remedy selection criteria identified in the federal regulation called the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> <p>The Navy's evaluation of the remedial alternatives is summarized on pages 15, 16, and 17 of the Proposed Plan. Additional information is included in Sections 2.8 and 2.9 of this ROD. In summary, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the responses to comments from Arc Ecology (see pages 8 and 9 of this responsiveness summary). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

| 1.          | <p>What I've seen going on over and over again is that the little millions of dollars that Congress gives that clean the shipyard has been nothing.</p> <p>...I feel that you, Navy, along with the City, along with the EPA and everybody else, should send to our representatives, which is Dianne Feinstein, Pelosi, and Boxer -- I called those names before -- that \$10 billion one time be set aside to clean up that Superfund site because there's no way that -- there is no way them few little million dollars just goes straight to the surface.</p> <p>Maybe won't take \$10 billion to clean the shipyard. Maybe it just takes 6 billion. But let's do something instead of just coming back, because you been here too long. [Refer to the transcript of the public meeting on pages 102 through 104 for the complete comment.]</p> | <p>The Navy has spent approximately \$716M over the past 20 years on the HPNS<sup>4</sup> cleanup program, and these expenditures have made HPNS one of the nation's largest BRAC cleanup programs. The Navy's cleanup efforts to date have successfully removed, treated, or contained a significant volume of contamination that would otherwise pose an unacceptable risk to site workers and future occupants. The cleanups are consistent with the SFRA's Redevelopment Plan (SFRA, 2010). In addition, the Navy has worked closely with the EPA, DTSC, Water Board, and CCSF to investigate and study all of the contaminated sites at HPNS and make sure that these efforts are performed and documented to comply with federal and state regulations. The Navy will continue to work with the EPA, DTSC, Water Board, and CCSF, the community, and the congressional representatives from San Francisco to move forward with the cleanup program as quickly and efficiently as possible.</p> |

| 1.          | <p>I'm a Costanoan Rumsen Ohlone. I come to represent my people today. But also, what my tribe is requesting, we're not taking -- asking for consideration. We're requesting. Since this was once occupied by our ancestors and, of course, there's a lot of shell still out there and there's probably some villages and there's also a lot of digging that's being dug up. What we're requesting is -- we're not asking for land, but we are asking for an easement.</p> <p>An easement is basically to where our tribe and other Ohlone tribes and other California tribes and even other cultures of the other ethnic cultures can come and utilize this area -- and so that they could actually have a ceremony and some kind of spiritual, you know, gathering together. [Refer to the transcript of the public meeting on pages 104 through 106 for the complete comment.]</p> | <p>The Navy understands its obligation, as required by the National Historic Preservation Act, to consider and properly address potential impacts upon cultural resources at HPNS<sup>5</sup>, including shellmounds from native people who used the land prior to the Navy's occupancy. To meet this obligation, the Navy, in consultation with the Advisory Council on Historic Preservation and State Historic Preservation Office, identified potential archaeological resources at HPNS and established a process by which all proposed underground construction must be reviewed to make sure that potential archaeological resources are not adversely affected. The Navy identified a potential buried shellmound in the northwest portion of Parcel E-2, but determined that the proposed remedial alternatives would not adversely affect this potential resource because the underground construction is limited to excavation of artificial fill and solid waste placed by the Navy and placement of clean imported soil. Further information is included in Appendix N (Section N3.4.1) of the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>).</p> <p>Regarding the request for an easement, the Navy wishes to clarify that SFRA has identified the planned redevelopment and future use of HPNS in coordination with the Navy's cleanup program. As discussed in the Proposed Plan, Parcel E-2 is planned for open space use. The SFRA's Redevelopment Plan for HPNS states that the planned open space in Parcel E-2 may include recreational areas and plazas that will be open to the public (<a href="#">SFRA, 2010</a>).</p> |

| 1.          | <p>I kind of brought it up in my question, but I think that there should be a total cleanup before the land is turned over to the City for redevelopment.</p> <p>And I -- and I think that we should realize that we're all in this together as far as not just the community but the whole nation. This is part of -- This -- this and the -- and the toxicity that was generated there in Hunters Point was to protect this country.</p> <p>And so then I think it's important to realize that you are our Navy and that I think that you should stipulate to our city government that this is completely cleaned up before it is -- any type of development is allowed in that area. [Refer to the transcript of the public meeting on pages 108 and 109 for the complete comment.]</p> | <p>The Navy understands the desire of community members to have HPNS<sup>6</sup> cleaned up to the highest standards. The Navy is obligated to consider the community's input regarding the cleanup decision for Parcel E-2 because community acceptance is one of nine CERCLA remedy selection criteria identified in the federal regulation called the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> <p>The Navy's evaluation of the remedial alternatives is summarized on pages 15, 16, and 17 of the Proposed Plan. Additional information is included in Sections 2.8 and 2.9 of this ROD. In summary, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P as explained in the responses to comments from Arc Ecology (see pages 8 and 9 of this responsiveness summary). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

|-------------|---------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | We need to assess the feasibility and risk including short-term implementability of using barges to transport the wastes from Parcel E-2.   | <p>The Navy’s RI/FS<sup>7</sup> Report considered a range of options to transport wastes from Parcel E-2, but the analysis focused mostly on a combination of truck and rail transport (ERRG and Shaw, 2011). Transport by barge was not evaluated in detail because of several factors, most notably:</p> <ul style="list-style-type: none"> <li>• Suitable dock facilities are not available near Parcel E-2, and the lack of nearby dock facilities would require picking up and moving the waste multiple times before loading onto a barge. This handling process would be significantly less efficient and more expensive as compared to truck and rail transport.</li> <li>• Relatively few licensed disposal facilities located in the western U.S. accept the range of wastes types that would be generated during cleanup at HPNS. None of these facilities are located close to waterways that allow for barge transport. As a result, the material to be transported by barge would also need to be picked up and transported significant distances by either truck or rail. This handling process would be significantly less efficient and more expensive as compared to truck and rail transport.</li> </ul> |
| 2.          | I don’t see how this is a plan for <u>closure</u> of a landfill when it is just a sequestered landfill. Radium dials, etc. are left behind. | <p>“Closure” is broad term used in federal and state regulations regarding actions performed at inactive landfill sites to prevent exposure to buried solid waste. The most common closure action for large landfills (like that at Parcel E-2) is to contain and manage the waste in place, although complete removal is performed sometimes for small landfills. Based on the evaluation presented in the RI/FS Report and summarized in the Proposed Plan, the selected remedy for Parcel E-2 involves containment and professional management (including ongoing monitoring and maintenance in accordance with federal and state ARARs) of the Parcel E-2 Landfill.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 3.          | Landfill cannot be hermitically sealed. So why not use permeable barriers that filter toxic materials but not water? | The Navy evaluated the potential contaminant migration pathways from the landfill waste to surrounding groundwater and San Francisco Bay. The site data indicate that the primary area of potential concern is along the Parcel E-2 shoreline, at the PCB Hot Spot Area and the adjoining portions of the Parcel E-2 Landfill located close to San Francisco Bay. The Navy evaluated the potential use of permeable reactive barriers to treat groundwater near the Parcel E-2 shoreline and determined that it was not a viable technology because of issues with its effectiveness, implementability, and cost in addressing the site-specific conditions at Parcel E-2. Additional information is provided in Section 11.5.5.5 of the RI/FS Report ( <a href="#">ERRG and Shaw, 2011</a> ).                                                                                                                                                                                                                                                                                 |
| 4.          | If we leave a landfill in place, we need real-time monitoring. Can this be made a reality?                           | Certain types of contaminants (for example, methane in landfill gas) can be monitored in real-time using field instruments. However, other chemicals in landfill gas and groundwater require collection and analysis of samples at a licensed laboratory to obtain data that meets federal and state requirements for quality and accuracy. Accordingly, with the exception of some landfill gas monitoring, real-time monitoring is not currently a viable option for long-term monitoring at Parcel E-2. The Navy will evaluate the best available technologies when developing the long-term monitoring plan for Parcel E-2 (after the ROD is finalized and in conjunction with the remedial design). In addition, the Navy will reevaluate the monitoring program on a regular basis to ensure that activities are being performed as efficiently as possible. As previously discussed, professional management, including ongoing monitoring and maintenance in accordance with federal and state ARARs, is an essential component of the selected remedy for Parcel E-2. |

|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Introduction | <p><b>Proposed Plan for Parcel E-2, Hunters Point Shipyard, dated September 2011</b></p> <p>The San Francisco Redevelopment Agency through the San Francisco Department of Public Health and its consultants, Treadwell and Rollo, have closely monitored the Regulatory Agencies' oversight and the Navy's investigation and cleanup of the Hunters Point Shipyard including Parcel E-2 for the past 18 years. We have reviewed many technical documents written about Parcel E-2 (Attachment A). Based on our review and involvement in this process, it is our opinion that the Navy has adequately studied and understands the nature and extent of the contamination on Parcel E-2 and that the remedial alternatives listed in the Parcel E-2 Proposed Plan are, in our technical judgment, feasible and follow accepted scientific understanding and industry standards for the range of possible remedies for dealing with the contamination at Parcel E-2.</p> <p>We support the process being implemented by the Navy and the Regulatory Agencies to select a preferred alternative that best meets all CERCLA criteria. We strongly encourage that substantial consideration and weight are given in this process to input from the public and all stakeholders.</p> <p><b>We have a few technical comments on some elements of the Alternatives as follows:</b></p> | <p>The Navy understands its obligation to consider the community's input regarding the cleanup of Parcel E-2. The Navy's evaluation of the community acceptance criterion is documented in this ROD<sup>8</sup>, which includes the subject responsiveness summary.</p>                                                               |
| 1.           | <p>Where feasible and practical, we support the removal of contaminants to off-site disposal facilities to facilitate the intended reuse of the property as set forth in the Hunters Point Shipyard Redevelopment Plan, amended August 3, 2010.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>The Navy's selected remedy incorporates excavation and off-site disposal in areas that pose substantial risk to humans and wildlife, with remaining contamination being safely contained to facilitate future use of Parcel E-2 in accordance with the Hunters Point Shipyard Redevelopment Plan (<a href="#">SFRA, 2010</a>).</p> |

|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.          | We support the use of land use and activity restrictions, as needed, in order to protect the remedies and public health and the environment. We look forward to working with the Navy to design land use and activity restrictions that will allow for full use of the property for the intended use without an undo burden on the local government or other future property owners.                                                                                                      | The Navy will work closely with stakeholders from the CCSF to develop a LUC RD for Parcel E-2. The LUC RD will build upon similar documents developed for other HPNS parcels and will identify the actions (including inspections, enforcement, and reporting) necessary to properly implement land use and activity restrictions at Parcel E-2. The LUC RD will also identify the roles and responsibilities of federal, state, and local government in implementing the land use and activity restrictions at Parcel E-2. |
| 3.          | For the wetlands design, as long as the sediment contamination issues have been adequately addressed by other elements of the remedy, we encourage the selection of an alternative that allows for construction of unlined wetlands because it will allow for better freshwater interaction with groundwater which might make the wetlands more sustainable in the long run. We look forward to the Navy's further analysis of the design of the wetlands in the Remedial Design process. | The Navy's selected remedy includes restoration of tidal and freshwater wetlands without a liner (to promote a more natural hydrologic function within the wetlands and underlying groundwater). As noted in Section 14.1 of the RI/FS Report ( <a href="#">ERRG and Shaw, 2011</a> ), additional analysis would be performed during the remedial design to verify that the net inflow of potentially contaminated groundwater into the proposed freshwater wetlands would be negligible.                                   |

| 1.          | <p>The United States Navy has harmed millions of people all over the world. In recent times using missiles and other dangerous bombs sometimes with justification at other times without. It is no exception at Hunters Point Naval Shipyard - in San Francisco at Bayview Hunters Point.</p> <p>The U.S. Navy took a large area of land over 800 acres by eminent domain as part of its World War II operations and contaminated pristine land. It filled the pristine wetlands and destroyed two hills containing serpentine rock, crushed the rock containing and released Asbestos structures and spread the contaminated material all over Hunters Point Naval Shipyard - as part of the fill in operations and created of the piers and naval operations.</p> <p>The United States Navy known well for its “jettison orders” from around 1850 to late 1970s continued to contaminate the entire Hunters Point Naval Shipyard. When the U.S. Navy shut down its operations in 1974 - it leased the Shipyard to entities like AAA Shipyard Repairs who further contaminated the Hunters Point Naval Shipyard - dumping contaminated wastes of the worst order.</p> <p>Most egregious behavior of the U.S. Navy was the desecration of the Hunters Point Naval Shipyard by spreading the remains of the Ohlone the First People of San Francisco and the immediate area. The U.S. Navy well knows that it cannot run away from its obligation to first apologize and then offer restitution. The U.S. Navy has shunned addressing the archeological survey mandated by Federal Regulation and linked to the First People in this case the Ohlone.</p> <p>Thus as the Spokesperson on all matters linked to Base Closures, Infrastructure and related issues representing the Muwekma Ohlone, the First People of the San Francisco area and having Patrimonial Jurisdiction over Hunters Point Naval Shipyard - I said; and stand by my statement: “No good will ever come at Hunters Point Naval Shipyard.” Aho.</p> | <p>The Navy has spent approximately \$716M over the past 20 years on the HPNS<sup>9</sup> cleanup program, and these expenditures have made HPNS one of the nation’s largest BRAC cleanup programs. The Navy’s cleanup efforts to date have successfully removed, treated, or contained a significant volume of contamination that would otherwise pose an unacceptable risk to site workers and future occupants. The cleanups are consistent with the SFRA’s Redevelopment Plan (SFRA, 2010). In addition, the Navy has worked closely with the EPA, DTSC, Water Board, and CCSF to investigate and study all of the contaminated sites at HPNS and make sure that these efforts are performed and documented in a way that meets federal and state regulations.</p> <p>The Navy understands its obligation, as required by the National Historic Preservation Act, to consider and properly address potential impacts upon cultural resources at HPNS, including shellmounds from native people who used the land prior to the Navy’s occupancy. To meet this obligation, the Navy, in consultation with the Advisory Council on Historic Preservation and State Historic Preservation Office, identified potential archaeological resources at HPNS, and established a process by which all proposed underground construction must be reviewed to make sure that potential archaeological resources are not adversely affected. The Navy identified a potential buried shellmound in the northwest portion of Parcel E-2, but determined that the proposed remedial alternatives would not adversely affect this potential resource because the underground construction is limited to excavation of artificial fill and solid waste placed by the Navy and placement of clean imported soil. Further information is included in Appendix N (Section N3.4.1) of the RI/FS Report (ERRG and Shaw, 2011).</p> |

| 1.<br>(cont.) | <p>The United States must apologize and do it soon - if it does not - Mother Earth will teach the corrupt a lesson and it does not matter what remediation, abatement; the unjust have in mind and what Environmental Impact Report or California Environmental Quality Act or other act is evoked and followed.</p> <p>The presentation offered by some Navy personnel at the Land Use meeting at City Hall on October 24, 2011 in Room 263 was to say the least drab, more shallow, and a very pathetic representation of the ability of the United States Navy to tell the truth and facilitate an open dialog with the constituents of the Bayview Hunters Point and neighboring areas. More San Francisco and San Franciscans; our politicians have told their souls and Big Developers want to take pride building 10,500 homes on very contaminated land. Go Figure!</p> | <p>The Navy recognizes its responsibility to properly communicate with community members regarding the proposed cleanup at Parcel E-2 and has attended the following community meetings to discuss the cleanup program at Parcel E-2:</p> <ul style="list-style-type: none"> <li>• On August 24, 2011, Navy staff presented to the Mayor's Hunters Point Shipyard Citizens Advisory Committee. At this meeting, Navy staff summarized the cleanup activities at Parcel E-2 and answered questions about the cleanup process at Parcel E-2.</li> <li>• On September 20, 2011, the Navy held a public meeting to present its preferred alternative for Parcel E-2. At the public meeting, the Navy gave presentations on the conditions at Parcel E-2, and the representatives from the Navy, EPA, DTSC, Water Board, and CCSF DPH were available to answer questions.</li> <li>• On October 24, 2011, the Navy, EPA, DTSC, Water Board, and CCSF DPH presented to the CCSF Board of Supervisors regarding the preferred alternative for Parcel E-2.</li> <li>• On February 22, 2012, the Navy held a community meeting to summarize recent cleanup activities at Parcel E-2 and answer questions about the cleanup process at Parcel E-2.</li> </ul> <p>The Navy will continue to make its staff available to participate in various community outreach activities, and will answer questions regarding the cleanup process at HPNS (including Parcel E-2). The next community meeting is scheduled for April 2012, at which the draft ROD for Parcel E-2 will be discussed. Navy staff will be available at this meeting to answer questions about the proposed cleanup activities at Parcel E-2.</p> |

| 1.<br>(cont.) | <p>In the year 2000 the voting constituents in San Francisco by an overwhelming majority of eighty seven percent voted for Proposition P - and mandated that the entire Hunters Point Naval Shipyard be cleaned to the highest standards.</p> <p>Local politicians; led by Diane Feinstein, Nancy Pelosi, Willie L. Brown Jr., Sophie Maxwell, Gavin Newsom pressured the U.S. Navy to hand over Parcel A against the wished of the people. Today Parcel A is contaminated and daily reports some of us receive - show elevated Asbestos Structures on Parcel A. However, the wind carries these dangerous particles all over the Shipyard and beyond.</p> <p>Some of us in the know including myself because of my position working at the Presidio of San Francisco for Sixth U.S. Army and Presidio of San Francisco having had access to manifests and other sensitive documents and know a lot about the landfill material and its containment at Parcel E and more at the much seriously contaminated, Parcel E-2.</p> | <p>The Navy understands the desire of community members to have HPNS cleaned up to the highest standards. The Navy is obligated to consider the community's input regarding the cleanup decision for Parcel E-2 because community acceptance is one of nine CERCLA remedy selection criteria identified in the federal regulation called the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> <p>The preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the following paragraph. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>Proposition P was adopted by the CCSF Board of Supervisors in Resolution 634-01 in August of 2001. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible.</p> |

| 1.<br><i>(cont.)</i> | <p>The U.S. Navy's own document the Final Historical Radiological Assessment Report and the following amendments all of which I have copies and are available at the San Francisco, Main Library at 11 Grove Street - reveal in detail the contents of this very polluted area. Elements; more radiological in nature with very, very high and dangerous levels of toxic elements, methane gas, and of course radiological in nature because of the atomic bomb experiments, depleted uranium, and other tests all sensitive and part of the World War II operations.</p> <p>One Atomic Bomb left Hunters Point to be dropped on Japan during World War Two. The U.S. Navy has an obligation whatever the amount to clean up the entire Hunters Point Naval Shipyard. Now.</p> <p>The Naval Radiological Defense Laboratory was located just outside Parcel E-2. You do not have to be a Rocket Scientist to know why and this close proximity to Parcel E-2; - contains so much of Radiological Waste that the United States Navy lies about any opportunity it gets.</p> | <p>The Navy, in its RI/FS Report that was concurred upon by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.</p> <p>Regarding the potential presence of radioactive waste at Parcel E-2, Section 8.2.3.1 of the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>) states that, based on the findings of the HRA (<a href="#">NAVSEA, 2004</a>), low-level radioactive wastes may be present at Parcel E-2. These wastes consist primarily of buried radioluminescent devices (typically covered with paint containing radium-226), but may also include sandblast waste used to decontaminate ships used during atomic testing. Section 4.2 of the Radiological Addendum to the RI/FS Report (<a href="#">ERRG and RSRS, 2011</a>) provides detailed information on the potential sources of radioactive contamination at Parcel E-2. Based on information from removal actions at Parcel E-2, low-level radioactive wastes at Parcel E-2 are found in low proportion relative to other waste types. EPA's presumptive remedy guidance for military landfills specifically identifies "low-level radioactive waste" among the "low-hazard military-specific waste" that "generally are no more hazardous than some wastes found in municipal landfills" (EPA, 1996; page 3). Consistent with the analysis presented in Section 8.2.3.4 of the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>), the presence of low-level radioactive waste does not preclude the Navy from selecting a remedy that contains waste in place at Parcel E-2. The Navy worked collaboratively with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders to solicit input on the RI/FS Report and associated radiological addendum. As a result of this effort, the Navy's conclusions in the RI/FS Report and associated radiological addendum have been reviewed and agreed upon by the EPA, DTSC, Water Board, and CCSF DPH.</p> |

| 1.<br>(cont.) | <p>The U.S Navy wants to cap the area using some plastic material which in the Bay Area on many sites has failed. At Midway Village; off Geneva Avenue in Daly City and by the Cow Palace - Pacific Gas and Electric; experimented on this so called plastic cap and it has failed miserably. What are more hundreds of people have died from Cancer in this area and more will die slowly in the future. The United States Navy knows about this area; is devoid of understanding, less compassion, and is on a deliberate course to challenge the community and for this very reason will fall on its knees and face; and regret for not listening to the community and those that have spoken and told the TRUTH.</p> <p>None of the models for abatement and mitigation have been vetted by the community. The U.S. Navy failed; because may be for the first time in the history of the United States Navy and its link with the history and formation of all the Restoration Advisory Boards (RABs) the U.S. Navy chose and went against the wishes of the people to dismantle the only body that could give a qualified opinion and represent the community at large at Hunters Point Naval Shipyard.</p> <p>By dismantling the Restoration Advisory Board (RAB) the U.S. Navy clearly demonstrated that it does not want to shoulder its responsibilities, has something to hide, and is a despicable, coward. More a disgrace to this Nation and I served well as the last Congressional Liaison of Sixth U.S. Army and Presidio of San Francisco and won two Commander Awards. I also participate in Desert Shield and Storm and was awarded for my participation at the highest level. The United States Navy should feel ashamed of itself for the cover up, dishonest behavior, unbecoming on any so called professional organization. President George Washington would feel ashamed of such behavior and so would a President such as President Jimmy Carter.</p> | <p>High-density plastic liners (which will be used at the Parcel E-2 Landfill) are a common and proven way to reduce water infiltration at inactive landfills and be protective of future site users. Additional information is provided in Section 11.5.1.2 of the RI/FS Report (ERRG and Shaw, 2011). Based on a review of publicly available information at the California DTSC website<sup>10</sup>, the cleanup efforts at the Midway Village site did not use plastic liners but rather consisted of removing contaminated soil near the ground surface, and then covering the surface with either soil, concrete, or asphalt to prevent residents from being exposed to contamination in subsurface soil (DTSC, 2003). Further, the cover at the Midway Village site is regularly inspected and maintained, and has been shown to remain protective of human health (DTSC, 2011).</p> <p>From 1994 through 2009, the primary means of community involvement was the Navy's RAB. Although the RAB was dissolved in December 2009 because it was no longer fulfilling its purpose, the Navy continues to involve the community in the details of the environmental cleanup program for HPNS in a manner that fully complies with and exceeds the requirements of CERCLA and the NCP. The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). Some of the specific community outreach efforts that the Navy conducts in accordance with the CIP include (1) preparation of topic-specific fact sheets; (2) use of a calendar of outreach events; (3) holding regularly scheduled community meetings; and (4) conducting bus tours. The Navy will regularly reevaluate the community involvement program, and determine if additional outreach efforts will help better inform the public of the HPNS cleanup program.</p> |

| 1.<br><i>(cont.)</i> | <p>My work as the Congressional Liaison gives me a unique purview of the U.S. Navy and its shallow and unprofessional manner of operating - the word “jettison“ is well known to the United States Navy and that “word“ and many operations linked to that word - were common at the Hunters Point Naval Shipyard - more during World War Two and the many sordid experiments much before the Environmental Protection Agency came to be an off shoot of the National Radiological Defense Laboratory established first at Hunters Point now carried on at Lawrence Livermore Laboratory and other sites.</p> <p>All the experiments conducted at “Bikini Islands” the exposure of the many ships in close proximity to the experimental Atomic Bombs. The large animals that were exposed on purpose and radiated to be tested latter, the many other experiments that one can review today - through the Freedom of Information Act and written in many books - are clear about the experiments and the adverse impacts to the Polynesian People the people that were adversely impacted on Bikini Islands and the neighboring islands and the Pacific Ocean.</p> <p>The ships that participated in these experiments were towed to Hunters Point Naval Shipyard and sand blasted as part of the cleanup operations. The particles collected landed mostly on Parcel E and Parcel E-2 for burial - but knowing the nonchalant, hazarded behavior of the United States Navy - they buried and dumped all over the place. In keeping with its mentality - “jettison”.</p> <p>Large animals that were radiated were buried on Parcel E and Parcel E-2. We have witnesses who are alive and live in the community who can testify to this. These witnesses will not talk to the U.S. Navy - they are afraid that they will be killed.</p> | <p>Section 4.2 of the Radiological Addendum to the RI/FS Report (ERRG and RSRS, 2011) provides detailed information on the potential sources of radioactive contamination at Parcel E-2. Also, in conjunction with the Proposed Plan, the Navy distributed a fact sheet titled “Frequently Asked Questions About the Shipyard Landfill” (Navy, 2011b). As described on page 2 of the fact sheet, “From the late 1940s through the late 1960s, the Navy conducted experiments on the health effects of radiation on animals, and some of those animals may have been buried in the landfill. However, any animals buried in the landfill were not radioactive since the radiation levels they were exposed to were low (similar to those of an x-ray). Any animals that were radioactively contaminated were disposed of at licensed on-site disposal facilities or drummed and disposed of at sea. Sandblast waste from cleaning ships used during weapons testing in the South Pacific may also have been disposed of at the landfill. However, historic records suggest that waste with the highest levels of radioactivity was controlled and not disposed of at the landfill.”</p> <p>Because of the potential for sandblast waste to contain radioactive contamination, the Navy samples and analyzes any sandblast waste encountered during excavation activities at HPNS. This procedure was followed during previous removal actions at Parcels E and E-2 and the sandblast waste was found to not be radioactively contaminated. This finding is consistent with the history of the shipyard in that, throughout shipyard operations (early 1940s through the early 1970s), abrasive sandblast material was commonly used to clean ships not associated with radiological operations.</p> |

| 1.<br><i>(cont.)</i> | <p>This all happening in the year 2011. These men earned more for doing the burying and tell us that these animals were cut open and tested by University of California San Francisco. They gave us details; how the animals were transported, where they were transported to, at what time of the night these burials were performed, and how much money they were paid. Of course the U.S. Navy with all its investigative operations, highly trained operatives; pretend they are NOT aware of such nefarious and shameful operations. “Nothing good will happen at Hunters Point Naval Shipyard”. I said this before and I say it again.</p> <p>The UCSF still has a laboratory on the edge of the U.S. Navy Shipyard at Hunters Point by the Palou Gate - now mostly conducting experiments on rats and other such animals like monkeys. Such devious experiments by the UCSF; but UCSF often times likes to boast about the Bio-Medical operations at Mission Bay. But, rarely mentions its devious and sly operations at Hunters Point Naval Shipyard adversely impacting our community. So, much for our politicians that I have mentioned, the sell outs that are many and of Lennar the Rogue Developer and its minions who want to build 10,500 homes at Hunters Point and adjoining Candlestick Point.</p> <p>In the year 2000 there was a raging fire that went on for over two months. The U.S. Navy was fined a measly; \$250 but the people living by Mariner’s Village, Kiska Road, beyond - suffered from the many ailments - severe headaches, burning of the eyes and throats, vomiting and so on.</p> <p>We discussed this issue of the raging fire in the year 2000 at the Restoration Advisory Board and were told lies and the matter was delayed. Years later a model from the East Coast was brought to the West Coast that is San Francisco to explain the fire. When we asked in what direction was the wind blowing; the culprits fully understood their model would not work. The wind caused most of the trouble and we knew in what direction the wind was blowing, causing untold misery to the community.</p> | <p>Information relating to the fire and associated response actions is provided in the document titled “Removal Action Landfill Cap Closeout Report.” This document, which was finalized in February 2005 after review and comment by the EPA, DTSC, and Water Board, was provided as Appendix E to the RI/FS Report for Parcel E-2 (<a href="#">ERRG and Shaw, 2011</a>). Based on this information, the Navy believes that the administrative record accurately reflects the timeline of activities regarding the landfill fire and associated response actions, and that no correction is required beyond that provided by the soil cover and liner component of the selected remedy for Parcel E-2.</p> |

| 1.<br>(cont.) | <p>It is the same with the Asbestos Dust and other toxic dust some from the operations of the U.S. Navy and others from the Rogue Developer - Lennar - even today nothing much has changed. The community daily in adversely impacted by clandestine operations going on at Hunters Point Naval Shipyard conducted by the United States Navy and Tetra Tech the Prime Contractors whose term will soon - expire.</p> <p>The United States Navy must be ashamed of itself. It should adhere to Proposition P passed in the years 2000 and many proposals vetted at the Restoration Advisory Board and bring back the Restoration Advisory Board. Failure to do that the people will STOP the operations.</p> <p>The U.S. Navy and the failed politicians, the sell outs, the many Poverty Pimp Pastors, cannot fool all the people all the time. Aho.</p> <p>The Muwekma Ohlone demand the entire Hunters Point Naval Shipyard restores the once pristine wetlands. Clean the watershed and remove all the contaminants. Conduct an Archeological Survey and initiated the process of Restitution. In the year 1991 the Muwekma Ohlone Tribe exercised its Rights of First Refusal. All Bases Closed under BRAC and declared Excess Property must first contact the Native American Tribes closely associated with the deactivated base and having jurisdiction - in this case Patrimonial Jurisdiction.</p> <p>The United States Navy deadline for this proposal and its abatement and mitigation of Parcel E-2 was October 24, 2011 - this was extended to November 21, 2011. Written comments can be sent to:</p> <p>Mr. Keith Forman<br/>BRAC Environmental Coordinator<br/>BRAC Program Management Office West<br/>1455 Frazee Road, Suite 900<br/>San Diego, California 92108-4310<br/>Telephone: (619) 532-0913<br/>Cell Phone: (415) 308-1458<br/>Fax: (619) 532-0995E-mail: <a href="mailto:keith.s.forman@navy.mil">keith.s.forman@navy.mil</a></p> | <p><i>[Please refer to the response on pages 21 and 22 regarding the degree of cleanup proposed for Parcel E-2 and the Navy's consideration of Proposition P during its evaluation of the community acceptance criterion.]</i></p> <p>Although the RAB was dissolved in December 2009 because it was no longer fulfilling its purpose, the Navy continues to involve the community in the details of the environmental cleanup program for HPNS. The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (<a href="#">Navy, 2011a</a>).</p> <p><i>[Please refer to the response on page 19 regarding the Navy's activities to properly address archaeological resources at HPNS.]</i></p> |

| Introduction | The following comments on the Proposed Plan for Parcel E-2 of the Hunters Point Naval Shipyard are submitted on behalf of People Organized to Win Empowerment Rights (POWER) and Stop Lennar Action Movement (SLAM).                                                                                                                                                                                                                     | See below for the Navy's response to the subject comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1.           | <p><b>Proposition P</b></p> <p>According to Proposition P, adopted by the voters of San Francisco in 2000, and the legally binding Conveyance Agreement implementing the covenant agreement executed in 2004, regarding the cleanup and the transfer of the Shipyard between the Navy and the City, the Navy, EPA and Cal EPA should pursue the highest practicable level of cleanup for Parcel E-2 of Hunters Point Naval Shipyard.</p> | <p>Proposition P was adopted by the CCSF<sup>11</sup> Board of Supervisors in Resolution 634-01 in August of 2001. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible. The Navy, in its RI/FS Report that was concurred with by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.</p> <p>Proposition P was later addressed in the <i>“Conveyance Agreement Between the United States of America Acting by and Through the Secretary of the Navy United States Department of the Navy and the San Francisco Redevelopment Agency for the Conveyance of Hunters Point Naval Shipyard”</i> executed on March 31, 2004. Recital paragraphs 10 and 11 of the Conveyance Agreement referenced Proposition P and reiterated community support for cleanup to the highest level <u>practical</u>. Furthermore, Article 1(q)(iv) of the Conveyance Agreement specifically addresses Parcel E (which at the time of execution also included Parcel E-2) and states in relevant part: <i>“In any event, the remedies selected for Parcels E and F shall meet applicable Federal and State regulatory requirements, including the nine criteria set forth in 40 CFR 300.430(e)(9)(iii), one of which is community acceptance.”</i></p> |

|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. (see above)<br>(cont.) | <p>Recital 10 also acknowledges that the Navy is required under CERCLA to take community acceptance into account in its cleanup decision. The Navy has done so in this ROD and responsiveness summary in accordance with CERCLA and the NCP and has also addressed technical feasibility and cost effectiveness in the ROD in a manner that is consistent with CERCLA, the NCP, Proposition P, the Conveyance Agreement, and the Hunters Point Shipyard Redevelopment Plan.</p> | <p>The Navy's environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA's amended Hunters Point Shipyard Redevelopment Plan (SFRA, 2010), which was approved 9 years after the adoption of Proposition P and 6 years after execution of the Conveyance Agreement. The Redevelopment Plan was initially approved in 1997 and adopted as the official Redevelopment Plan for HPNS by the CCSF Board of Supervisors (Ordinance 285-97 pursuant to Chapter 4.5 of California Community Redevelopment Law, California Health and Safety Code § 33492). The Redevelopment Plan was subsequently amended in 2010, and the selected remedy would accommodate the future reuses identified in the amended plan.</p> <p>The Navy also notes that Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E-2.</p> |

| 2.          | <p><b>Remedial Alternative 2</b></p> <p>The remedial alternative developed in the Parcel E-2 Remedial Investigation/Feasibility Study, March 5, 2011, which most closely complies with Proposition P and implementing Conveyance Agreement for the pursuit of the highest practical level of cleanup for Parcel E-2 is presented as Remedial Alternative 2. Remedial Alternative 2 consist of excavation of all waste and contaminated soil in the landfill area and under the waste in the landfill of Parcel E-2. The alternative also requires the excavation of all shallow waste, soil and sediment in the Panhandle Area, East Adjacent Area and Shoreline Area. The alternative requires the off site disposal of all excavated waste and contaminated soil and sediment. Remedial Alternative 2 also includes Wetland Restoration in the Panhandle Area and Shoreline Area, Groundwater Monitoring, Institutional Controls, and additional radiological actions. The Institutional Controls are required to protect people from being exposed to the remaining contaminants (after remedial activities) in deep soil in the Panhandle Area, East Adjacent Area and Shoreline Area.</p> <p>An evaluation of the Remedial Alternative indicates that Remedial Alternative 2, even with the need for Institutional Controls to control human exposure to remaining contamination, comes the closest to the “highest practical level of cleanup for Parcel E-2” identified in Proposition P and the Conveyance Agreement regarding the cleanup.</p> <p>Remedial Alternative 2 is estimated to cost \$351.5 million and will require four years to excavate the contaminated material on Parcel E-2, dispose of the excavated contaminated material off site and fill the excavation with clean soil. The Remedial Alternative 2 would be protective of human health and the environment, comply with applicable or relevant and appropriate requirements (ARARs) and reduce toxicity, mobility and volume of contaminants. Remedial Alternative 2 was the only Remedial Alternative that would fully insure long-term effectiveness and permanence of the remedy. This remedy would be the most effective in the long-term due to the excavation and off site disposal of waste posing unacceptable risks. However, Remedial Alternative 2 was identified as presenting many short-term risks, difficulties in implementation and very expensive by the Navy.</p> | <p>The Navy understands the desire of community members to have HPNS cleaned up to the highest standards, and is obligated to consider the community’s input regarding the cleanup decision for Parcel E-2 because community acceptance is one of nine CERCLA remedy selection criteria identified in the federal regulation called the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> <p>The Navy’s evaluation of the remedial alternatives is summarized on pages 15, 16, and 17 of the Proposed Plan. Additional information is included in Sections 2.8 and 2.9 of this ROD. In summary, the preferred alternative published in the Proposed Plan complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy’s evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor’s Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained previously in the response to comment 1. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the “community acceptance” criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.<br>(cont.) | <p>Thus, as a result of the Navy's evaluation of Remedial Alternative 2, as being protective of human health and the environment, reduce toxicity, mobility and volume of contamination and fully insure long term effectiveness, the Navy focused on the many short-term risks, difficulty in carrying out the remedy and being very expensive, as the reasons to dismiss Remedial Alternative 2. Thus, in combination with the large volume of waste and soil to be excavated and removed, the Navy removed Remedial Alternative 2 from consideration. The removal from consideration of Remedial Alternative 2, by the Navy, is contrary to the conditions contained in Proposition P and the Conveyance Agreement and is thus unacceptable. Remedial Alternative 2 must continue to be considered as a viable option for the remedial activities to be performed at Parcel E-2.</p>                                                                                                                                                                                                                                                                         | <i>(see responses on pages 27, 28, and 29)</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 3.            | <p><b>Cap as Remedy for Parcel E-2</b></p> <p>In July 2010, the Board of Supervisors of the City and County of San Francisco adopted Resolution No. 347-10 (File No. 100572). The Resolution stated in part on page 5, that "the Board of Supervisors hereby (i) declares the adoption of these findings shall not in any way imply support for a cap for Parcel E-2."</p> <p>With the Navy's dismissal of consideration of Remedial Alternative 2, the Navy has focused the Remedial Activity on excavation and off site disposal of radioactive contamination and capping the remaining waste on Parcel E-2 with a soil cover over all of Parcel E-2. As stated in the July 2010 Board of Supervisor resolution, the findings (in the resolution) shall not in any way imply support for a cap for Parcel E-2. Thus the Navy has forced the Board of Supervisors to only have a Remedial Alternative that requires the waste, other than radioactive contamination, to remain on site and be capped with a soil cover. This approach is unacceptable. Remedial Alternative 2 must continue to be considered by the Navy as a viable remedial alternative.</p> | <p>The subject resolution by the CCSF Board of Supervisors does not preclude the Navy from selecting a remedial alternative for Parcel E-2, pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD, that includes a cap. The subject resolution also urges the Navy, EPA, and the State of California to participate in a hearing before the CCSF Board of Supervisors prior to selecting a remedy for Parcel E-2. In accordance with this request, the Navy, EPA, DTSC, Water Board, and CCSF DPH participated in a hearing before the CCSF Board of Supervisors on October 24, 2011. The Navy's environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA's Hunters Point Shipyard Redevelopment Plan (SFRA, 2010). The Navy's selected remedy will allow for future use of Parcel E-2 in accordance with the Hunters Point Shipyard Redevelopment Plan. The Navy has followed the process established in the NCP (40 CFR § 300.430) to evaluate potential remedial alternatives in the RI/FS Report (ERRG and Shaw, 2011) and identify a preferred alternative in the Proposed Plan, and now is in the process of selecting a remedial action in the ROD.</p> |

|--------------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. <i>(cont.)</i> <i>(see above)</i> |         | <p>The preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria identified in the NCP. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained previously in the response to comment 1. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4.          | <p><b>Remedial Alternatives 3, 4 and 5- Soil Cap</b></p> <p>Remedial Alternatives 3, 4 and 5 approach the Parcel E-2 waste containment through the use of a soil cap. As detailed in the previous section of these comments, the approval of using a soil cap to contain the waste on site, does not meet the requirements of Proposition P and the associated Conveyance Agreement for “highest practical level of cleanup for Parcel E-2” and goes against the Board of Supervisors lack of support for a cap remedy. However, with that stated, the following comments are provided to clarify the more acceptable of Remedial Alternatives 3, 4 and 5.</p> <p>Remedial Alternatives 3, 4 and 5 propose a soil cap over Parcel E-2. Remedial Alternatives 4 and 5 also require additional excavation and off site disposal of contaminated soil and waste from the Panhandle Area, East Adjacent Area and Shoreline Area. Remedial Alternatives 4 and 5 require a below ground barrier along the shoreline to limit the flow of contaminated groundwater to San Francisco Bay. This barrier is very important due to the fact that the landfill was not lined and the groundwater exist in contact with the waste disposed of in the landfill. The contaminated groundwater in contact with the waste in the landfill will continue to negatively impact the quality of the groundwater. The additional excavation and groundwater controls contained in Remedial Alternatives 4 and 5 are a much needed approach if a soil cap is selected as the remedy.</p> <p>Remedial Alternatives 4 and 5 have a greater long-term effectiveness and performance when compared to Remedial Alternative 3. Thus Remedial Alternative 3 is unacceptable when considering Remedial Alternatives 3, 4 and 5.</p> | <p>As previously discussed, the environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA’s amended Hunters Point Shipyard Redevelopment Plan (<a href="#">SFRA, 2010</a>). The Navy’s selected remedy will allow for future use of Parcel E-2 in accordance with the Hunters Point Shipyard Redevelopment Plan. Also, as previously discussed, Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E-2. However, Proposition P provides pertinent input regarding the cleanup program at HPNS. This input is considered in the Navy’s evaluation of the community acceptance criterion, as provided in this ROD. Consistent with the NCP [40 CFR § 300.430(e) and (f)], the community acceptance criterion is one of two modifying criteria and has been evaluated based on comments provided in the course of the CERCLA remedy selection process, including those received on the Proposed Plan, and other community input, including Proposition P.</p> <p>The Navy acknowledges that Alternatives 4 and 5 offer improved long-term effectiveness relative to Alternative 3, and the Navy’s considered this information in identifying Alternative 5 as the preferred alternative in the Proposed Plan.</p> |

| Comment No. | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5.          | <p><b>Institutional Controls</b></p> <p>Remedial Alternative 2 through 5 all require Institutional Controls to limit the use of the land and restrict activities on Parcel E-2. The Institutional Controls are necessary because the contaminants remaining on site threaten to contaminate human health and the environment if the remedy fails. After remediation, Parcel E-2, will be subject to restricted use in order to restrict exposure. The contamination remaining on site will continue to impact the ground water and air quality.</p> <p>The proposed Institutional Controls are lacking in timely monitoring of restrictions. The superfund program requires reviews of the effectiveness of the remedy every five years. In the case of Remedial Alternatives 3, 4 and 5, which utilize a soil cap to isolate the waste, the five year review process is not adequate. Parcel E-2 must be evaluated on a yearly basis for effectiveness of the remedy and on a quarterly basis for impacts to the soil cover/cap. If the soil cover/cap is breached, the groundwater and air quality will be degraded by the waste remaining on the site.</p> | <p>The Navy will work closely with stakeholders from the CCSF to develop a remedial design document that, consistent with similar documents developed for other HPNS parcels, will identify the actions (including inspections, enforcement, and reporting) necessary to properly implement the institutional controls at Parcel E-2. The remedial design document will also identify the roles and responsibilities of federal, state, and local government in implementing the institutional controls at Parcel E-2.</p> <p>In addition, the selected remedy includes the following monitoring and maintenance activities that would be performed on a regular schedule and for as long as necessary to protect human health and the environment, and to comply with pertinent state and federal ARARs:</p> <ul style="list-style-type: none"> <li>• Groundwater monitoring will be performed, consistent with the requirements of Title 22 CCR § 66264.100(d) and § 66264.310(b)(3), to verify that chemical concentrations in groundwater do not exceed concentrations designated by the RAOs at the compliance boundary.</li> <li>• Landfill gas monitoring will be performed to demonstrate compliance with Title 27 CCR § 20917 through § 20934.</li> <li>• Stormwater and erosion controls will be installed and maintained as required under Title 27 CCR § 20365(c) and (d), and stormwater discharges will be monitored as required under Title 22 CCR § 66264.97(c)(1) and (c)(2)(B).</li> <li>• The cover will be inspected and maintained to ensure its integrity as required under Title 27 CCR § 21180(a).</li> </ul> <p>The long-term monitoring and maintenance program will be detailed in the post-closure operation and maintenance plan for Parcel E-2, consistent with content requirements as provided in Title 27 CCR § 21800(c), and submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the remedial design. Regulatory oversight will continue during long-term operation and maintenance of the selected remedy.</p> |

| Introduction | <p><b>Comments on Proposed Plan (PP) for Parcel E-2, Hunters Point Shipyard (HPS), San Francisco, California</b></p> <p>The California Department of Fish and Game, Office of Spill Prevention and Response (DFG-OSPR) has completed its review of the subject document, received on September 7, 2011. The comments that follow are provided as part of our role as a natural resource Trustee for the State of California's fish and wildlife, and their habitats. DFG-OSPR's review focused on the ecological risk assessment and biological resource related sections of the document. The DFG is the State's Trustee for fish and wildlife resources pursuant to Fish and Game Code Section 711.7. The DFG is also designated as a Trustee for natural resources pursuant to Comprehensive Environmental Response, Compensation, and Liability Act Section 107 (1)(2)(B).</p> <p><b>Background</b></p> <p>HPS, located in southeast San Francisco on a peninsula that extends east into San Francisco Bay, was identified for closure during the Base Realignment and Closure process of 1991. The shipyard is approximately 936 acres in size, 443 acres of which are on land with the remaining acreage under water (Tetra Tech, 2000). HPS is bounded on the north and east by San Francisco Bay and on the south and west by the Hunters Point district of San Francisco, which consists of public and private housing and commercial &amp; industrial buildings. The north and east shores of HPS are developed for ship repair with dry docks and berths; there are no shipping facilities on the southwest shore.</p> <p>HPS was operated as a commercial dry dock facility from 1869 until 1939. In 1940, the Navy obtained ownership of the shipyard for ship building, repair, and maintenance activities. Activities shifted from ship repair to submarine servicing and testing after World War II. HPS was deactivated in 1974 and remained relatively unused until 1976. Between 1976 and 1986, the Navy leased most of the property to a privately-owned ship repair firm. In 1986, the Navy again occupied the shipyard and began a program to investigate and clean up contamination resulting from past activities (Engineering/Remediation Resources, 2009).</p> | <p>Comment acknowledged. The following pages provide responses to the general and specific comments from the CDFG<sup>12</sup>.</p> |

| Introduction<br>(cont.) | <p>HPS is divided into six parcels (A through F). Parcel E-2 is about 48 acres in size and is located in the southwestern part of HPS, adjacent to San Francisco Bay. It includes former portions of Parcel E, including Installation Restoration (IR)-01/21, the Panhandle Area, a small area of IR-02 Northwest, and the area east of IR-01/21 that does not have an IR site designation. Habitats in Parcel E-2 include ruderal, non-native annual grassland, intertidal and saline emergent wetlands, and a seasonal freshwater wetland. Base habitats that include upland, tidal wetlands, and offshore habitats are used by many wildlife species representing different trophic levels. The planned reuse for Parcel E-2 is open space, except for a small area in the East Adjacent Area, which is designated as part of the Shipyard South Multi-Use District.</p> <p>In a memorandum dated July 26, 1999, DFG-OSPR provided comments on the Draft Validation Study Report, Parcel E, HPS, San Francisco, California (Chernoff, 1999). DFG-OSPR commented on the Draft Wetlands Mitigation and Monitoring Plan, Metal Debris Reef and Metal Slag Areas Parcels E and E-2, HPS (Gray, 2007a). DFG-OSPR commented on the Parcel E-2 Remedial Investigation/Feasibility Study, HPS (Gray and Huang, 2007). DFG-OSPR provided Applicable or Relevant and Appropriate Requirements (ARARs) for the Parcel E-2 Feasibility Study in a memorandum dated September 7, 2007 (Gray, 2007b). DFG-OSPR commented on the Draft Final Wetlands Mitigation and Monitoring Plan, Metal Debris Reef and Metal Slag Areas Parcels B, E and E-2, HPS (Huang and Nakahara, 2009). DFG-OSPR commented on the Draft Final Remedial Investigation/Feasibility Study for Parcel E-2, HPS (Nakahara et al, 2009). DFG-OSPR commented on the Final Wetlands Mitigation and Monitoring Plan, Metal Debris Reef and Metal Slag Areas Parcels B, E and E-2, HPS (Nakahara, 2010). DFG-OSPR provided Applicable or Relevant and Appropriate Requirements (ARARs) for the Time-Critical Removal Action at the Experimental Ship Shielding Range, Parcel E-2, Hunters Point Naval Shipyard in a memorandum dated July 27, 2011 (Nakahara, 2011).</p> | The following pages provide responses to the general and specific comments from CDFG. |

| General<br>Comment 1 | <p>DFG-OSPR was not provided the opportunity to review the PP during the regulatory agency review period. DFG-OSPR received a copy of the PP during the public comment period. Please include DFG-OSPR on the regulatory agency document distribution list, for all future document reviews at Hunters Point Shipyard for parcels with natural resource concerns, including Preliminary Assessments, Site Inspections, Remedial Investigations, Feasibility Studies, Proposed Plans, Records of Decision (ROD), Remedial Designs, Work Plans, Restoration Plans, Operations and Maintenance Plans, and Action Completion Reports. This memorandum will serve to inform the Navy of our continuing interest in coordinating any natural resource issues, as one of the designated State natural resource Trustees.</p> | <p>The Navy has revised the distribution list to ensure that CDFG personnel are provided copies of future documents for HPNS parcels with natural resource concerns.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| General<br>Comment 2 | <p>DFG-OSPR is in general concurrence with the remedial alternative 4 or 5 (excavation and off-site disposal, groundwater containment, and natural clay liner for freshwater wetlands [Alternative 4], or no clay liner for freshwater wetlands [Alternative 5]), with inclusion of at least one the following recommendations: incorporation of an adequate biotic barrier under the soil cover over all of Parcel E-2 except the wetlands, incorporation of a soil cover of at least four feet in depth over all of Parcel E-2, or the addition of other methods of post-closure monitoring, such as soil and surface water monitoring for contaminants.</p>                                                                                                                                                        | <p>The Navy will perform post-closure inspections, maintenance, and monitoring necessary to comply with pertinent federal and state requirements, as identified in Attachment 4 of this ROD. The planned activities are briefly described in Section 2.9.1 of this ROD and will be detailed in the post-closure operation and maintenance plan. The post-closure operation and maintenance plan will satisfy the content requirements provided in Title 27 CCR § 21800(c), and will be submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the remedial design. Regulatory oversight will continue during long-term operation and maintenance of the selected remedy. The planned activities, which include surface water monitoring, will be adequate to ensure the protection of human health and the environment. Please refer to the response to specific comment 2 regarding the Navy's position on CDFG's request for an additional biotic barrier and thicker soil cover.</p> |

| Specific<br>Comment 1 | <p>Page 11, Table 4. Based on soil Remedial Action Objectives in Appendix L (Engineering/Remediation Resources Group, 2009), DFG-OSPR agrees with the preliminary remediation goals (PRGs) for wildlife on the land and on the shoreline at Parcel E-2 for copper and lead, but not for total Polychlorinated biphenyls (PCBs) (37 mg/kg). However, based on the ecological receptors and habitat present at Parcel E-2, DFG-OSPR may accept total PCB concentrations in soils within the range of 0.74 mg/kg (e.g., based on a human-use recreational exposure scenario). These site-specific PRGs are developed only for Parcel E-2 and should not be extended to other parcels. No further response is required from the Navy for this comment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Comment acknowledged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Specific<br>Comment 2 | <p>Page 17, Section “Summary of the Preferred Alternative”. The PP states, <i>“The liner will minimize water seeping into the contaminated material, control animals from burrowing under the cover, and serve as a visual marker for the bottom of the cover.”</i></p> <p>a. Geomembrane liners are designed to reduce stormwater infiltration into the contaminated material. Geomembranes are not designed to function as biotic barriers to prevent burrowing animals and plant roots from infiltrating the landfill cap and exposing contaminants. On June 7, 2011, DFG-OSPR contacted the manufacturer of the geomembrane samples the Navy provided for Parcel E-2 (GSE Lining Technology, Inc.), and inquired if any studies had been conducted to document the geomembrane was an effective biotic barrier against burrowing animals. The manufacturer has not responded to date. Therefore, unless the Navy can provide specific documentation that substantiates their claim that the geomembrane liner will <i>“control animals from burrowing under the cover”</i>, they should not make that claim and remove that statement from the text.</p> <p>b. DFG-OSPR commented on the Draft Final Remedial Investigation/ Feasibility Study Report for Parcel E-2 and asked the Navy to explain why a biotic barrier was not incorporated into the design of the landfill cover since gophers can dig up to six feet deep, which exceeds the depth of the proposed 2-foot soil cover (Nakahara et al., 2009).</p> | <p>a. The language in the Proposed Plan was, in this particular instance, simplified relative to the more detailed information presented in the RI/FS Report (ERRG and Shaw, 2011). Specifically, the term “liner” was used in the Proposed Plan to focus on that material’s primary function to limit surface water infiltration. Section 11.5.1.2 of the RI/FS Report describes the complete range of functions of a geosynthetic cap, which include the geocomposite drainage layer that is placed on top of the geomembrane. This layer would provide a drainage path for water infiltrating through the vegetative layer and, consistent with its use at other landfill sites, would also deter burrowing animals. The Navy believes that the information in the RI/FS Report adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment.</p> <p>b. |-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Specific<br>Comment 2<br><i>(cont.)</i> | <p>1) The Navy responded DFG-OSPR's comment, in the Final Remedial Investigation/Feasibility Study Report for Parcel E-2 (Engineering/Remediation Resources Group, Inc., 2011), by providing an example of another former Naval base (Moffett Field Site 1) that has had a similar multilayer landfill cap in place since 1998, with maintenance of the cap and monitoring of landfill gas and groundwater since 1999. According to the Navy, two Five-Year Reviews were completed in 2002 and 2007 and the remedy continues to be protective of human health and the environment. Twelve years of maintenance and monitoring is a relatively short period in the life of a landfill that is supposed to function and be maintained in perpetuity. Even the half-life of the geomembrane is only predicted to be 100 years at an average temperature of 25°C (Koerner et al., 2011). If conditions change (i.e., temperature increases, damage to the geomembrane), the length of the half-life decreases. The bottom line is that the geomembrane will naturally degrade over time and will eventually need to be replaced. Damage from burrowing animals will just speed up this process. Therefore, due to the relatively short existence of the Moffett Field Site 1 landfill cap, this example is not adequate to support the Navy's claim that "placement of a high-density plastic liner under at least 2 feet of clean soil will prevent exposure to remaining contamination" (page 17 of Parcel E-2 PP).</p> | <p>1) The Navy believes that the demonstrated performance of the cover at Site 1 at the former NAS Moffett Field is useful in evaluating the efficacy of the proposed cover at Parcel E-2. Further, the reviewer's statement that "the half-life of the geomembrane is only predicted to be 100 years at an average temperature of 25°C" is not accurate. The document cited in the subject comments is the same one that was referenced in Section 11.5.1.2 of the RI/FS Report (ERRG and Shaw, 2011); however, the reviewer appears to have cited data collected for exposed geomembrane whereas, as clearly stated in Section 4 of the referenced document, covered geomembranes are used in all landfill liner and cover applications. Table 2 in the referenced document indicates that the estimated lifetime of a covered geomembrane at a temperature of 25°C is nearly 270 years. As described in Section 12.2.3.6 of the RI/FS Report, the geomembrane will be covered by a geocomposite drainage layer and 2 feet of soil, which exceeds the requirements for erosion-resistant layers at Title 27 CCR § 21090(a)(3). The complete discussion from Section 4 of the referenced document is included below.</p> <p><i>"This White Paper is bifurcated into two very different parts; covered (or buried) lifetime prediction of HDPE geomembranes and exposed (to the atmosphere) lifetime prediction of a number of geomembrane types. In the covered geomembrane study we chose the geomembrane type which has had the majority of usage, that being HDPE as typically used in waste containment applications. Invariably whether used in landfill liner or cover applications the geomembrane is covered. After ten-years of research Table 2 (repeated here) was developed which is the conclusion of the covered geomembrane research program. Here it is seen that HDPE decreases its predicted lifetime (as measured by its half-life) from 446-years at 20°C, to 69-years at 40°C."</i></p> <p>The Navy believes that the information in the RI/FS Report adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment.</p> |

|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|
| Specific<br>Comment 2<br>(cont.) | <p>2) The Navy responded DFG-OSPR's comment DFG-OSPR's comment by providing information from a 1999 study by the Air Force Center for Engineering and the Environment on "Landfill Covers for Use at Air Force Installations" that stated, "Although animals cannot generally penetrate a flexible membrane cover (FMC), they can widen an existing hole or tear through wrinkled material (Karr at al., 1992). Gee and Ward (1997) reported that animal burrows did not significantly affect percolation of water into landfill covers at Hanford, Washington. A biointrusion layer is not included as a component in most landfill covers." According to the Installation Quality Assurance Manual for Geomembrane Products (GSE Lining Technology, Inc. , 2011), there are numerous ways a geomembrane can be damaged during installation and the manual provides installation guidelines to minimize damage, such as:</p> <ul style="list-style-type: none"> <li>• Unroll geomembrane using methods that will not damage geomembrane and will protect underlying surface from damage.</li> <li>• Place temporarily ballast, such as sandbags, on geomembrane that will not damage the geomembrane</li> <li>• Personnel walking on geomembrane shall not engage in activities or wear shoes that could damage it.</li> <li>• Do not allow heavy vehicular traffic directly on geomembrane.</li> <li>• Prior to driving on geomembrane layer, please check for sharp edges, embedded rocks, or other foreign objects that may protrude in the tires and tracks.</li> <li>• Path driven on geomembrane shall be as straight as possible with no sharp turns, sudden stops or quick starts.</li> </ul> | (see the response on the following page) |

| Specific<br>Comment 2<br>(cont.) | <p>Based on this information, it is possible to damage the geomembrane during installation. Therefore, it is also possible for burrowing animals to breach the geomembrane through holes or wrinkles created during installation. Furthermore, according to the installation guidelines, the seams of the geomembrane should be sealed by welding them together. If the seams are not properly sealed, this would provide openings for burrowing animals and stormwater to infiltrate the contaminated material. DFG-OSPR is also concerned that over time, the cumulative damage from burrowing animals may significantly affect infiltration of water into the landfill cover. Although biotic barriers may not have been included in most landfill covers back in 1999, based on the potential for burrowing animals to cause significant damage to the landfill cover over time, it would be prudent to be proactive in installing biotic barriers during the landfill cover construction to prevent damage to the cover rather than trying to repair the damage in perpetuity.</p> <p>3) The Navy also responded to DFG-OSPR's comment by providing information from a 1992 study on "Waste Containment Systems, Waste Stabilization, and Landfills, which stated, <i>"Damage to geomembranes by burrowing animals such as mice and other rodents has often been discussed, but there seems to be little to no evidence of this occurring in field installations. The only potential food sources for these animals provided by geomembranes are plasticizers and some additives."</i> First, has there been any actual scientific research done on long-term damage to geomembranes by burrowing animals in field installations or is the above statement based on anecdotal evidence? Second, rodents would not necessarily be chewing on geomembranes as potential food source. A rodent's incisors continuously grow throughout its life so it must gnaw on objects to keep its incisors worn down. As a result, rodents have been known to gnaw on a variety of objects from wood to plastic sprinkler pipes to electrical wiring (Salmon and Gorenzel, 2011; Salmon and Baldwin, 2011; Timm et al., 2011). Therefore, it would not be unlikely for a rodent to gnaw on a geomembrane.</p> | <p>2) The manufacturer's installation guidance, as cited by the reviewer, would be incorporated into the remedial action work plan that would detail specific installation procedures, supplemented by rigorous quality control testing and inspections, to ensure that the liner is not damaged during installation and that individual liner panels are properly sealed. These specific installation procedures and rigorous quality control practices are industry standards that have been implemented successfully at numerous landfill sites throughout the United States. The Navy believes that the information in the RI/FS Report (ERRG and Shaw, 2011) adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. Further, the Navy does not believe that CDFG has presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the landfill cover over time.</p> <p>3) The Navy is not aware of any scientific research being done to evaluate the long-term damage to geomembranes by burrowing animals. However, as previously stated, the Navy does not believe that CDFG has presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the landfill cover over time. As described in Section 11.5.1.2 of the RI/FS Report (ERRG and Shaw, 2011), the geomembrane and associated soil cover and drainage geocomposite <i>"is proven and reliable in the climatic conditions present at Parcel E-2. Proper design and maintenance would minimize erosion, liquefaction, and slope stability concerns. The cap is durable and could handle foot traffic. In addition, this cap would resist damage from burrowing animals, deep-rooted plants, and desiccation cracking more effectively than a low permeability soil cap."</i> The Navy believes that the information in the RI/FS Report adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. The post-closure operation and maintenance plan will identify the inspection and maintenance actions, and will be submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the remedial design.</p> |

|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Specific<br>Comment 2<br>(cont.) | <p>4) If the Navy is convinced that the geomembrane, along with regular inspections and maintenance, such as installing raptor perches for controlling burrowing animals, is adequate to prevent burrowing animals from breaching the landfill cap at Parcel E-2, then please explain why the Navy at Moffett Field Site 22 believed it was necessary to install a biotic barrier consisting of cobblestone with cement slurry to prevent burrowing animals from breaching their landfill cap? Please also explain why the Navy at Port Hueneme Site 14 believes it is necessary, as part of their long-term landfill maintenance, to poison gophers with Fumitoxin on a weekly basis? DFG-OSPR does not support the use of pesticides such as Fumitoxin for landfill maintenance because of their ability to kill non-target species.</p> <p>5) The Navy proposes the future reuse of Parcel E-2 as open space and the panhandle area for new, created tidal and freshwater wetlands. Although, the Navy may not currently have problems with burrowing animals on their existing Parcel E-2 landfill cap, once the remediation is completed and the habitat restored, additional wildlife may be attracted to the new habitat, including burrowing animals. If the number of burrowing animals increase at Parcel E-2 in the future, how will the Navy adequately prevent these animals from damaging the landfill cap?</p> | <p>4) The Navy considers existing site conditions when developing and evaluating remedial alternatives, and different site conditions often warrant selection of different response actions. For example, the conditions at Site 22 at the former NAS Moffett Field did not warrant installation of a geosynthetic cap to prevent infiltration but required a biotic barrier to prevent exposure to solid waste that was buried between 0.5 and 2.0 feet below the ground surface. In contrast, the existing conditions at the Parcel E-2 Landfill require a geosynthetic cap to prevent infiltration and the waste is currently buried at least 2.5 below the ground surface and, in most areas, is buried greater than 5 feet or more below the ground surface (see cross sections in Section 2 of the RI/FS Report) (ERRG and Shaw, 2011). The difference in existing site conditions between the Parcel E-2 Landfill and NAS Moffett Field Site 22 warrant selection of different response actions. Therefore, the direct comparison of the preferred alternative for Parcel E-2 with the selected response action for NAS Moffett Field Site 22 is inappropriate. Regarding the potential use of pesticides to control burrowing animals, the Navy has previously responded to CDFG concerns on this matter by stating that low-impact control measures (such as raptor perches) would be preferred over higher impact measures (such as poisons) (see Sections 12.2.3.6 and 12.2.3.10 and Appendix S of the RI/FS Report).</p> <p>5) To clarify, the SFRA is the entity responsible for determining the future reuse of Parcel E-2. Further, the Navy's wetlands restoration activities are proposed in the Panhandle Area and are not planned for the Parcel E-2 Landfill. Therefore, the Navy does not believe that it is accurate to assert that increased biological activity within the restored wetlands will result in an increase in burrowing animal activity on the Parcel E-2 Landfill cover. The Navy believes that the information in the RI/FS Report (ERRG and Shaw, 2011) adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment.</p> |

| Specific<br>Comment 2<br>(cont.) | <p>6) DFG-OSPR disagrees that the geomembrane liner will adequately function as a biotic barrier. The Navy has not provided sufficient evidence to support their claim that the liner is an effective biobarrier. Therefore, DFG-OSPR requests the Navy include in the ROD for Parcel E-2, that the proposed landfill cover will include a biotic barrier that has been documented to be effective against damage from burrowing animals and plant roots, not merely that the cover will include a geomembrane and two feet of soil cover. Another option would be to install <u>at least</u> four feet of clean soil on top of the geomembrane to deter burrowing animals from reaching the geomembrane. The Navy could also include in the ROD that they will conduct additional monitoring such as soil and surface water monitoring for contaminants to ensure that the membrane maintains its integrity. Please provide more information in the ROD regarding how the Navy will adequately maintain, and detect and repair damage to the geomembrane in perpetuity. The general information provided in the PP is not sufficient to determine if the proposed remedial alternative will be adequate to protect ecological receptors. Please also explain how the Navy will deal with the geomembrane once it is damaged (by burrowing animals) or degrades to the point where it no longer functions properly. As stated before, DFG-OSPR does not support the use of pesticides for burrowing animal control. In addition, we question whether it is wise to install raptor perches, and attract predators to an area that is being restored to provide future habitat for State and Federal special status species. The increase in raptors may increase the amount of predation on special status bird and mammals species at HPS.</p> | <p>6) As previously stated in the response to part (a) of this comment, the language in the Proposed Plan was not intended to assert that the geomembrane would serve as a biotic barrier. The Navy's plan to address burrowing animals at Parcel E-2 is discussed in Sections 12.2.3.6 and 12.2.3.10 of the RI/FS Report (ERRG and Shaw, 2011). The Navy believes that the information in the RI/FS Report adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. The Navy does not believe that CDFG has presented a sufficient technical basis to support their requests for a thicker soil cover or a biointrusion barrier, or their assertions that burrowing animals will damage the geomembrane or the geomembrane will require replacement because of degradation. In preparing the remedial design, the Navy will work with the EPA, DTSC, and Water Board to develop an adaptable set of control measures that satisfies the pertinent postclosure requirements and maintains an appropriate degree of protection for wildlife in restored wetlands.</p> |

|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Specific<br>Comment 3 | Page 17, Section “Summary of the Preferred Alternative”. The PP states, The groundwater would be pumped and treated if necessary to keep contaminants from flowing into San Francisco Bay.” Please explain what criteria the Navy will use to determine if groundwater needs to be pumped and treated. Where would the groundwater be pumped to and how would it be treated?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Section 12.2.3.8 of the RI/FS Report (ERRG and Shaw, 2011) describes the planned approach for addressing groundwater flow from the Parcel E-2 Landfill. Pumping may be required to prevent buildup of hydraulic head along the southern perimeter of the cover system and to comply with the leachate control requirements. The remedial design will include specific criteria to determine what conditions will require pumping. Based on the operational data from the previous groundwater extraction system at Parcel E-2, groundwater that may need to be pumped from the area will likely be suitable for discharge to a publicly owned treatment works; however, the remedial design will include a contingency action for on-site treatment prior to discharge to a publicly owned treatment works.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Specific<br>Comment 4 | <p>Attachment 1, Key Applicable or Relevant and Appropriate Requirements. The PP states a complete list of potential ARARs identified for the Preferred Alternative is provided in Appendix N of the Parcel E-2 RI/FS Report. Under Appendix N, several potential biological resource ARARs were not included as ARARs, such as the Federal Endangered Species Act, California Fish and Game Code (F&amp;GC) Sections 1908, 4700, and 5050. DFG-OSPR requests these ARARs be added to the list of ARARs for the remedial activities at Parcel E-2.</p> <p>a. The Federal Endangered Species Act is relevant and appropriate because a nesting pair of California Clapper Rails and their two chicks, which are Federally endangered species, were confirmed to be present in San Francisco’s Heron’s Head Park, near Hunters Point during the summer of 2011 (Fimme, 2011). Therefore, this species also has the potential to be present in the salt marsh at Hunters Point. Please note, this species is also State-listed as endangered and is a State fully protected species, so it is also covered by F&amp;GC Sections 2080 and 3511. In addition, the salt marsh harvest mouse (SMHM), a Federally endangered species, has the potential to be present in the salt marsh at Hunters Point. The SMHM is also State-listed as endangered and is a State fully protected species, so it is also covered by F&amp;GC Sections 2080 and 4700.</p> | <p>The Navy has previously responded to CDFG comments regarding the various requirements identified by CDFG as potential ARARs and has provided adequate information to support the determinations of which requirements may qualify as ARARs for the potential response actions at Parcel E-2. Brief responses to the CDFG’s current comment are provided below. Please refer to Appendix S of the Final RI/FS Report (ERRG and Shaw, 2011) for further information.</p> <p>a. The Navy does not agree that past observations at Heron’s Head Park are relevant to Parcel E-2 because the Navy has performed site-specific studies, as detailed in the RI/FS Report (see Section 2.4) (ERRG and Shaw, 2011), to demonstrate that neither the California Clapper Rail nor the salt marsh harvest mouse is present at Parcel E-2. The Navy’s findings are confirmed by information provided in the SFRA’s recent EIR (SFRA, 2009). California F&amp;GC § 2080 was previously identified as a potential ARAR because the American peregrine falcon is present on site and is listed as a state endangered species (as of 2008). However, in November 2009, the American peregrine falcon was delisted as an endangered species by the State of California (list published in January 2011). As a result, California F&amp;GC § 2080 is not an ARAR for the selected remedy at Parcel E-2. The Navy recognizes that the American peregrine falcon remains a fully protected species; therefore, California F&amp;GC § 3511 is an ARAR for the selected remedy at Parcel E-2.</p> |

|----------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Specific<br>Comment 4<br>(cont.) | <i>(see above)</i> | <p>California F&amp;GC § 4700 was not previously identified by CDFG as a potential ARAR for Parcel E-2; this requirement is not an ARAR for the selected remedy at Parcel E-2 because none of the fully protected mammals (including the salt marsh harvest mouse) are present at the site.</p> <p>In response to CDFG comments on this responsiveness summary (see Attachment 5 to the Draft Final ROD), the Navy recognized that the ongoing restoration effort at Yosemite Slough may change site conditions prior to the remedial action at Parcel E-2. Accordingly, the Navy will perform a focused biological survey, in conjunction with the RD, to determine the extent to which the future wetlands at Yosemite Slough may have attracted endangered species to Parcel E-2. The RD will identify the specific objectives of and procedures for the biological survey, and will discuss potential follow-on actions based on the survey results. DTSC and CDFG requested that the following statement be incorporated into the CERCLA administrative record to identify the enforcement mechanisms that will ensure the protection of wildlife during implementation of the selected remedy for Parcel E-2.</p> <p><i>“Since the Parcel E-2 Record of Decision (ROD) is enforceable as a primary document under the Federal Facilities Agreement (FFA) and if the ROD needs to be amended in the future, the FFA accounts for that process, the California Department of Fish and Game (CDFG) is not inclined to insist on additional Explanation of Significant Differences (ESD) language in the comments. The CDFG comments clearly explain its position and puts all on notice that this issue is a concern, along with the expectation that any Fully Protected Species or CESA issues will be addressed if they come up in the future. Therefore, if CESA or Fully Protected Species issues come up in the future, there appears to be enough authority and notice in the ROD, ROD comments and FFA to make sure that any fully protected, endangered or threatened species on the property will be protected.”</i></p> |

|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Specific<br>Comment 4<br>(cont.) | <p>b. F&amp;GC Section 1908 (native plant protection) is relevant and appropriate because there is potential habitat for rare or endangered plants, such as bristly sedge (<i>Carex comosa</i>), Diablo helianthella (<i>Helianthella castanea</i>), seaside tarplant (<i>Hemizonia congesta</i> ssp. <i>congesta</i>), rose leptosiphon (<i>Leptosiphon rosaceus</i>), and California seablite (<i>Suaeda californica</i>) on or near Parcel E-2. The Navy states, “<i>Cal. Fish and Game Code § 1908 is not an ARAR because none of the pertinent rare and endangered plant species are present at the site.</i>” If the Navy has not conducted a rare plant survey according to DFG rare plant survey protocols (DFG, 2009) within the past two years, they will have to conduct another rare plant protocol survey during the appropriate time of year when the species are evident and identifiable, before remedial activities begin, in order to determine if rare plant species are present at Parcel E-2.</p> <p>c. F&amp;GC Section 4700 (fully-protected mammals) is relevant and appropriate because potential habitat for the salt marsh harvest mouse is located on or near Parcel E-2.</p> <p>d. F&amp;GC Section 5050 (fully-protected reptiles and amphibians) is relevant and appropriate because Parcel E-2 is within the known range of the San Francisco garter snake and habitat for this species may be present on or near Parcel E-2.</p> | <p>b. As previously cited in responses to CDFG comments on the RI/FS Report (see Appendix S of the RI/FS Report) (<a href="#">ERRG and Shaw, 2011</a>), the Navy does not agree with CDFG’s assertion that rare or endangered plants are present at Parcel E-2 or elsewhere at HPNS. The Navy concluded in Section 2.4 of the RI/FS Report that, based on past biological surveys performed by the Navy, no rare or endangered plants are present at HPNS. This finding is confirmed by information provided in the SFRA’s recent EIR. Specifically, Appendix N1 of the SFRA EIR summarizes past plant surveys as follows (<a href="#">SFRA, 2009</a>):</p> <p><i>“Jones &amp; Stokes conducted botanical habitat assessments of the Candlestick Point and HPS on October 29, 2004; March 1, 2006; October 6, 2006; and May 17, 2007. PBS&amp;J botanists conducted rare plant surveys for the Candlestick Point area in May 2008. The general absence of suitable habitat over a majority of the Study Area in conjunction with the absence of observed special-status plants, either as observed during focused surveys or cited in CNDDDB species accounts, supports the conclusion that no sensitive plant species occur within the Study Area.”</i></p> <p>Further, no promulgated requirement exists to support the CDFG’s request that a rare plant survey is to be performed within the last 2 years. Therefore, California F&amp;GC § 1908 is not an ARAR.</p> <p>c. California F&amp;GC § 4700 is not an ARAR for the selected remedy at Parcel E-2 because none of the fully protected mammals (including the salt marsh harvest mouse) are present at the site.</p> <p>d. As previously cited in responses to CDFG comments on the RI/FS Report (see Appendix S of the RI/FS Report) (<a href="#">ERRG and Shaw, 2011</a>), the Navy does not agree with CDFG’s assertion that fully protected reptiles and amphibians are present at Parcel E-2 or elsewhere at HPNS.</p> |

| Introduction | <p>Arc Ecology would like to thank the Navy for the opportunity to comment on the Hunters Point Shipyard Proposed Plan for Parcel E2. Furthermore, we would like to express our appreciation to the Navy for the extension of the public comment provided in response to our request to enable these comments to be developed. These comments have been consolidated and are being submitted by Arc Ecology's Executive Director Saul Bloom. These comments are a compilation of research and extensive reviews conducted by Arc Ecology's Environmental Scientist Mike McGowan and environmental consultant Martha Walters.</p> <p>Arc Ecology recognizes and would like to acknowledge the significant concerns of this site to the US Navy, the environmental regulatory community and to the Bayview Hunters Point community. The response to pollution in the United States has been an iterative process and the military's environmental remediation program presents unique challenges. Arc Ecology recognizes also that Navy departmental priorities, concerns, and policies also factor into recommendations made in this document. Finally, we would like to express our sincere appreciation for the current Navy and environmental regulatory team (including the City of San Francisco), who in our opinion, have been one of the most constructive environmental teams we have worked with in our 27 years of engagement with this site.</p> <p>While acknowledging the participants in this process, we have reviewed the Proposed Plan for E2 and submit the following comments:</p> | <p>The following pages provide responses to the general and specific comments provided in writing by Arc Ecology. The Navy previously responded to spoken comments by Arc Ecology at the public meeting on September 20, 2011 (see pages 8 and 9 of this responsiveness summary). Acronyms and abbreviations used in these responses are summarized at <a href="#">the end of this responsiveness summary</a>.</p> |

|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 1 | <p><b>While Arc Ecology recognizes that current preferred alternative for the Parcel E2 Landfill conforms to both DoD and EPA policy in terms of adequacy of characterization and response, we disagree that the landfill has been adequately characterized.</b></p> <p>ARC believes that the historic predisposition toward capping this site has prejudiced the characterization to suit that alternative. This historic predisposition toward the resolution of this remedial response has left us questioning:</p> <ul style="list-style-type: none"> <li>• estimates of quantities for removal in Alternative 2,</li> <li>• the seemingly oppositional arguments that on the one hand, the site is simply a municipal landfill, and yet on the other hand, it is too dangerous to conduct additional sampling within its confines; and</li> <li>• that the response to any contamination found in subsequent sampling would lead to capping anyway, so why bother with further characterization when there is no sunset on CERCLA 120(h) and DoD is bound to return should new uncharacterized contamination be found, and found to be a problem.</li> </ul> | <p>As the reviewer acknowledges, the Navy's preferred alternative (which is now identified as the selected remedy) conforms to federal policy and guidance regarding the adequacy of characterization and types of response actions requiring consideration. However, the Navy does not agree with the reviewer's assertion that "<i>the historic predisposition toward capping this site has prejudiced the characterization to suit that alternative.</i>"</p> <p>Section 3 of the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>) details the previous environmental investigations performed in and around the Parcel E-2 Landfill including (1) preliminary assessment and investigation in 1984 and 1987, respectively; (2) two separate phases of an RI from 1988 to 1996; and (3) three supplemental data gaps investigations in 2002. During these investigations, the Navy installed 28 soil borings and 18 monitoring wells and excavated 25 test pits within the Parcel E-2 Landfill to evaluate the nature and extent of contamination. The previous environmental investigations were developed in consultation with the EPA, DTSC, Water Board, and CCSF DPH. As demonstrated by the approval of the Final RI/FS by the EPA, DTSC, and Water Board, the investigations at Parcel E-2 have satisfied the regulatory stakeholders and have provided adequate data to support an informed risk management decision.</p> <p>When the Navy began preparing the RI/FS Report in 2004, the first step involved evaluating existing site data and reviewing pertinent EPA guidance to develop a preliminary list of remedial alternatives for Parcel E-2. Based on the review, the Navy determined that (1) conditions at the Parcel E-2 Landfill support use of the presumptive containment remedy, and (2) conditions at the Panhandle Area, East Adjacent Area, and Shoreline Area do not support use of the presumptive containment remedy but, consistent with the streamlined approach outlined in the NCP preamble (55 Federal Register 8704-8705, March 8, 1990) and in EPA RI/FS guidance (EPA, 1988), support evaluation of remedial alternatives focused on containment and excavation. The Navy consulted with the EPA, DTSC, Water Board, and CCSF DPH during this initial stage and, based on their input and input from the community, determined that complete removal of the Parcel E-2 Landfill should also be evaluated as one of the remedial alternatives (in addition to one or more containment alternatives).</p> |

|---------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 1<br>(cont.) | <i>(see above)</i> | <p>This approach is consistent with EPA's directive regarding presumptive remedies (EPA, 1993b) which states that "<i>there may be unusual circumstances (such as, complex contaminant mixtures, soil conditions, or extraordinary State and community concerns) that may require the site manager to look beyond the presumptive remedies for additional (perhaps more innovative) technologies or remedial approaches.</i>" The information contained in the RI/FS Report demonstrates that Parcel E-2 is characterized adequately to support an evaluation of the focused set of remedial alternatives developed in consultation with the EPA, DTSC, Water Board, and CCSF DPH. In addition, the information contained in the RI/FS Report supports the use of the presumptive containment remedy for the Parcel E-2 Landfill and explains the relative risks of that option compared to complete excavation.</p> <p>The Navy considered and addressed concerns raised about the remedial alternatives in the draft and draft final versions of the RI/FS Report, public review and comment upon those reports, and Navy responses to those comments. For example, the Navy solicited input from community groups, including Arc Ecology, throughout its preparation of the RI/FS Report. In comments submitted on the draft and draft final versions of the RI/FS Report, Arc Ecology did not express concerns with the adequacy of the Navy's characterization efforts at Parcel E-2. To the contrary, Arc Ecology's first comment on the draft RI/FS Report stated that the "<i>study is well organized with copious information provided in the tables, figures, appendices, and list of references that thoroughly document the results so far of the remedial investigation.</i>" Appendix S of the RI/FS Report provides all comments received and the Navy's associated responses.</p> |

|---------------------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 1<br>(cont.) | <i>(see above)</i> | <p>In response to the specific concerns raised in this comment, the Navy offers the following information:</p> <ul style="list-style-type: none"> <li>• The estimated quantities for solid waste, soil, and sediment to be excavated under Alternative 2 are detailed in Appendix R of the RI/FS Report (Table R-6) and are based on detailed geologic cross sections (Figures 2-3 through 2-8) for the Parcel E-2 Landfill and surrounding area.</li> <li>• Section 8.2.1 of the RI/FS Report describes the type and volume of waste identified at the Parcel E-2 Landfill, including municipal-type waste, construction debris, and industrial wastes. The Navy has not asserted that additional sampling within the Parcel E-2 Landfill is “too dangerous” but, as provided in Section 8.2.3.1 of the RI/FS Report, has demonstrated that the landfill has been characterized adequately to support an evaluation of the focused set of remedial alternatives.</li> </ul> <p>Using criteria specified in EPA guidance, the Navy evaluated several potential hot spots within the Parcel E-2 Landfill to determine if further characterization was warranted. As documented in Section 8.2.3.2 of the RI/FS Report, further characterization of the potential hot spots is not warranted because the contaminants do not pose a principal threat to human health or the environment and can be reliably contained.</p> |

| General<br>Comment 2 | <p><b>II. Proposed Plan does not conform to BRAC policy</b></p> <p>The summary generally applied to BRAC policy toward cleanup is that “reuse drives cleanup.” If this is indeed the DoD’s approach to cleanup, it has not been applied for this site. <u><i>The Navy’s historic approach to this site has in fact driven the proposed reuse for this site.</i></u></p> <p><b>A. The proposed capping of Parcel E2 has been the presumptive remedy for the property since 1989 and the sites inclusion on the NPL.</b> As a consequence the Navy’s presumptive remedy has driven reuse planning instead of allowing the reuse planning to flow from a community dialogue over other proposed uses. The evidence for this perspective is that there have been a number of alternative use studies of the site, most focusing on some form of wetland.</p> <p>For example,</p> <ul style="list-style-type: none"> <li>In 2001, CALFED funded a study of the possible use of the Parcel E landfill site as the location for a storm water treatment wetlands.</li> <li>In 2003, the California State Coastal Conservancy funded a park usage study for the Shipyard’s southern shoreline and waterfront. In that study the area of the Parcel E2 landfill was also identified as a wetlands site. The same landscape architectural firm that designed Crissy Field in the Presidio including its wetlands, Hargreaves Associates, were commissioned to develop the study. The study was conducted under a cooperative agreement with the San Francisco Redevelopment Agency and Commission. The resulting report earned the American Society of Landscape Architects National Award for Research and Planning in 2007.</li> <li>In 2009, San Francisco International Airport contracted for a study of a wetlands design for a 20 acre portion of the Shipyard’s southern shoreline. The original selected site was Parcel E2 based on the prior studies outlined above. HOWEVER: during the negotiations over the SFO contract, both the Mayors Office of Economic and Workforce Development and the San Francisco Regional Water Quality District requested the site be moved from Parcel E2 to elsewhere on Parcel E because of the belief that the Navy was committed to capping the E2 landfill and would not consider any alternative to that view.</li> </ul> | <p>The reviewer’s assertion that “<i>proposed capping of Parcel E2 has been the presumptive remedy for the property since 1989</i>” is inaccurate and unsubstantiated. As described in the response to general comment 1, the Navy’s environmental investigation activities at Parcel E-2 were initiated in 1984, were developed in consultation with the EPA, DTSC, Water Board, and CCSF DPH, and included two separate phases of an RI from 1988 to 1996 and three supplemental data gaps investigations in 2002.</p> <p>The Navy’s environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA’s amended Hunters Point Shipyard Redevelopment Plan (SFRA, 2010). The Redevelopment Plan was initially approved in 1997 and adopted as the official Redevelopment Plan for HPNS by the CCSF Board of Supervisors (Ordinance 285-97 pursuant to Chapter 4.5 of California Community Redevelopment Law, California Health and Safety Code § 33492). The Redevelopment Plan was subsequently amended in 2010, and the selected remedy would accommodate the future reuses identified in the amended plan. The selected remedy includes restored wetlands in the Panhandle Area that is consistent with the concepts presented in the Redevelopment Plan. Specifically, Map 1 of the original 1997 Redevelopment Plan identifies a combination of open space reuses in the area encompassing Parcel E-2, including passive and active recreation at the Parcel E-2 Landfill and East Adjacent Area, and restored wetlands in the Panhandle Area.</p> <p>In addition, the Navy’s selected remedy for Parcel E-2 complies with pertinent BRAC law and policy (DoD, 2006) because it is consistent with the reasonably anticipated future land use, as identified by the local redevelopment authority (in this case, the SFRA) in their approved redevelopment plan.</p> |

| General<br>Comment 2<br><i>(cont.)</i> | <p>More than \$1 million in state funds have been expended on Parcel E2 landfill and related Yosemite Slough and Park planning. Arc Ecology and various members of our staff and teams have discussed these plans with the Navy and regulators over the past decade. A briefing and tour was conducted by the Navy in 2006 during which Mr. Arthur Feinstein of the Sierra Club outlined the concept of a wetlands located in the current place of the Parcel E2 landfill.</p> <p>It is therefore our opinion that the reuse of E2 as open space is based solely on the assumption that capping the site is all the Navy has been willing to do.</p> <p><b>B. The Proposed Plan does not appear to conform to the December 1997 DoD Base Reuse Implementation Manual.</b> The Manual identifies the following items as principles for guiding the cleanup of a closing military base:</p> <ul style="list-style-type: none"> <li>• <b>CONSIDER COMMUNITY NEEDS.</b> <i>Think about how decisions will affect the ability of communities to redevelop the base.</i></li> <li>• <b>COMPROMISE.</b> <i>Reaching agreements early in the process will save time and money later.</i></li> <li>• <b>BE FLEXIBLE.</b> <i>Do not be wedded to a particular approach to a problem. Creativity, within the applicable laws and regulations, is essential to successful base closure and reuse.</i></li> <li>• <b>BE INNOVATIVE.</b> <i>Do not be hamstrung by past practices. This is a new process, and decisions should be new and different.</i></li> <li>• <b>EXERCISE COMMON SENSE.</b> <i>Solutions should be site-specific. There will rarely be cookie-cutter solutions that apply to all cases. [and:]</i></li> <li>• <i>Refocus current environmental cleanup, compliance, and natural and cultural resources strategies and schedules in light of the LRA's land-use plan and redevelopment priorities.</i></li> </ul> | <p><i>(see response on pages 47 through 50)</i></p> <p>As previously described, the Navy's selected remedy for Parcel E-2 complies with the most current BRAC policy document, the 2006 "Base Redevelopment and Realignment Manual", DoD 4165.66-M. This 2006 manual canceled the 1997 Base Reuse Implementation Manual (see "Base Redevelopment and Realignment Manual" Forward dated March 1, 2006), and reflects the most current statutes and regulations.</p> |

| General<br>Comment 2<br>(cont.) | <b>DoD Base Reuse Implementation Manual December 1997</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                                 | <p>i. <b>Consider Community Needs:</b> Bayview Hunters Point is the City's most polluted of San Francisco's neighborhoods. Leaving a 22 acre parcel not adequately uncharacterized but known to be contaminated landfill in place, even capped with institutional and structural controls is nevertheless in our view contrary to this community's need for a healthy and safe environment. The Navy's reliance of CERCLA 120(h) as a guarantor of future remedial response should controls fail is not reliable because, as the Navy has frequently stated, the Anti-Deficiency Act prevents the Department from binding Congress to future actions and expenditures. Congress could vote to deny funding for a future response, as it nearly did this year for disaster relief – another traditional guarantee of the federal government – and it could vote to abolish 120(h) entirely.</p> <p><b><u>Therefore the remedy that best considers community needs is one that is not dependent upon the future good will of Secretaries of the Navy or Congress.</u></b></p> <p>ii. <b>Compromise:</b> The preferred remedy is the same remedy expected for this site for some 20 years, which includes shoreline rip rap and revetments that the community has expressed consistent opposition to, and is hardly a demonstration of compromise.</p> <p>iii. <b>Flexibility:</b> "Do not be wedded to a particular approach to a problem." <b>Innovation:</b> "Do not be hamstrung by past practices." <b>Common Sense:</b> "There will rarely be cookie-cutter solutions that apply to all cases." The preferred alternative is nothing if it is not all of these. It relies on standard practice implemented Department wide with regard to landfills and shoreline armoring and it is rooted in past practice while ignoring the the substantive benefits of living shorelines and other strategies that could be implemented for the entire E2 Parcel. It appears that the proposed alternative <u>is</u> a cookie cutter approach to a problem that should have a more considered response.</p> | <p>The Navy understands the desire of community members to have HPNS cleaned up to the highest standards. The Navy is obligated to consider the community's input regarding the cleanup decision for Parcel E-2 because community acceptance is one of nine CERCLA remedy selection criteria identified in the federal regulation called the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> <p>The preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the responses to spoken comments from Arc Ecology (see pages 8 and 9 of this responsiveness summary). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

|---------------------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 2<br>(cont.) | <i>(see above)</i> | <p>The selected remedy includes the following monitoring and maintenance activities that would be performed as long as necessary to protect human health and the environment and to comply with pertinent state and federal ARARs:</p> <ul style="list-style-type: none"> <li>• Groundwater monitoring will be performed, consistent with the requirements of Title 22 CCR § 66264.100(d) and § 66264.310(b)(3), to verify that chemical concentrations in groundwater do not exceed concentrations designated by the RAOs at the compliance boundary.</li> <li>• Landfill gas monitoring will be performed to demonstrate compliance with Title 27 CCR § 20917 through § 20934.</li> <li>• Stormwater and erosion controls will be installed and maintained as required under Title 27 CCR § 20365(c) and (d), and stormwater discharges will be monitored as required under Title 22 CCR § 66264.97(c)(1) and (c)(2)(B).</li> <li>• The cover will be inspected and maintained to ensure its integrity as required under Title 27 CCR § 21180(a).</li> </ul> <p>The long-term monitoring and maintenance program will be detailed in the post-closure operation and maintenance plan for Parcel E-2, consistent with content requirements as provided in Title 27 CCR § 21800(c), and submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the remedial design. Regulatory oversight will continue during long-term operation and maintenance of the selected remedy. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment.</p> |

| General<br>Comment 3 | <p><b>III. The Proposed Plan does not conform to US EPA Environmental Justice policy.</b></p> <p>The Proposed Plan is not in our view in conformance with US EPA EJ policy. The Proposed Plan clearly does not consider Environmental Justice as a criteria for decision-making with regard to Parcel E2. It is difficult to see how EPA Region 9 can, as it has stated publicly, support the Alternative proposed in the Navy's Proposed Plan given its failure to comply with the interim guidance on Environmental Justice published by the Agency in July 2010. In fact none of the discussion presented in the Proposed Plan refers to environmental justice, the responsibilities to comply with EJ guidelines, or the fact that the Shipyard is located in an EJ community.</p> <p><b>A. Both the DoN and EPA are bound by E.O. 12898 - 59 FR 7629 Feb. 16, 1994</b></p> <p><b>Title 3 - The President</b></p> <p><i>"By the authority invested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:"</i></p> <p><b>Section 1-1. Implementation.</b></p> <p><b>1-101. Agency Responsibilities.</b> <i>To the greatest extent practicable and permitted by law, and consistent with the principles set forth in the report on the National Performance Review, each Federal agency shall make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low-income populations in the United States and its territories and possessions, the District of Columbia, the Commonwealth of Puerto Rico, and the Commonwealth of the Mariana Islands.</i></p> <p><b>1-102. Creation of an Interagency Working Group on Environmental Justice.</b> <i>(a) Within 3 months of the date of this order, the Administrator of the Environmental Protection Agency ("Administrator") or the Administrator's designee shall convene an interagency Federal Working Group on Environmental Justice ("Working Group"). The Working Group shall comprise the heads of the following executive agencies and offices, or their designees: (a) Department of Defense; (b) Department of Health and Human Services;</i></p> | <p>The Navy and EPA are firmly committed to achieving the goals identified in the Executive Order on Environmental Justice (E.O. 12898) at HPNS. Both agencies are dedicated to consistent, fair treatment and meaningful participation in environmental decision-making for minority, low-income, and indigenous populations that are disproportionately impacted by pollution. The Navy and EPA, in performing environmental cleanup work at HPNS with support from DTSC and the Water Board, have worked together to achieve the environmental justice goals of fully protective cleanup actions, fair and equal treatment, and meaningful involvement for all people in the Bayview-Hunters Point community. Our efforts to satisfy these goals include:</p> <ul style="list-style-type: none"> <li>• Substantial regulatory review and oversight of all Navy cleanup activities. The EPA, DTSC, Water Board, CCSF, California Department of Public Health, Bay Area Air Quality Management District, and San Francisco Bay Conservation and Development Commission all have dedicated significant additional staff to HPNS to ensure that the Navy's cleanup work is performed in a way that is protective of the Bayview-Hunters Point community and complies with federal and state laws and regulations.</li> <li>• Substantial financial commitment from the Navy to HPNS cleanup. The Navy has spent approximately \$716M over the past 20 years on the HPNS cleanup program, and these expenditures have made HPNS one of the nation's largest BRAC cleanup programs. The Navy's cleanup efforts to date have successfully removed, treated, or contained a significant volume of contamination that would otherwise pose an unacceptable risk to site workers and future occupants.</li> <li>• EPA's Technical Assistance Grants to the Community: <ul style="list-style-type: none"> <li>- Technical Assistance Grants (TAG). Since 1993, EPA has consistently provided various community groups with grant money to hire an independent technical advisor to review and provide independent input on the Navy's plans and reports, and to help further explain the Navy's cleanup work to interested community members.</li> </ul> </li> </ul> |

| General<br>Comment 3<br>(cont.) | <p>(c) Department of Housing and Urban Development; (d) Department of Labor; (e) Department of Agriculture; (f) Department of Transportation; (g) Department of Justice; (h) Department of the Interior; (i) Department of Commerce; (j) Department of Energy; (k) Environmental Protection Agency; 59 FR 7629, Feb. 16, 1994.</p> <p><b>B. The Proposed Plan does not appear to be consistent with the goals and objectives outline in the July of 2010 Interim Guidance on Considering Environmental Justice During the Development of an Action developed by the US EPA.</b> The guidance, excerpted below, shows that Environmental Justice considerations must be a part of any remedy decision involving EPA. Furthermore it directs EPA staff to the maximum extent feasible to incorporate environmental justice concerns:</p> <p><i>E.O. 12898 applies to agency “programs, policies, and activities” and in general calls on each federal agency to make achieving EJ part of its mission (see Appendix A for full text of E.O. 12898). It directs agencies such as EPA, “[t]o the greatest extent practicable and permitted by law,” to “identify[...] and address[...], as appropriate, disproportionately high and adverse human health or environmental effects” of agency programs, policies, and actions on minority populations and low-income populations.”</i></p> <p><i>Consistent with the emphasis in the Presidential Memorandum accompanying E.O. 12898, regarding the use of existing environmental laws to help achieve the goal of EJ, EPA uses existing environmental statutes and regulations to consider and address EJ concerns. These authorities encompass the breadth of the Agency’s activities, including setting standards. Some authorities direct the Agency to consider specific affected populations when setting standards, whereas others provide discretionary opportunities to incorporate EJ concerns into the action.</i></p> <p><b>i. The Interim Guidance establishes some criteria to guide EPA staff:</b></p> <p><i>Your action may involve an EJ concern if it could: Present opportunities to address existing disproportionate impacts on minority, low-income, or indigenous populations that are addressable through the action under development. You are encouraged to consider how your action may impact these populations, and this list is intended to aid in those considerations.</i></p> | <ul style="list-style-type: none"> <li>- Technical Assistance Services for Communities (TASC). EPA used its TASC contract program to provide the community with an independent asbestos technical expert to review the “Draft 2010 U.S. EPA’s Review of Dust/Asbestos Control Measures and Air Monitoring at Hunters Point Shipyard Parcel A Report” and other supporting documentation. A community meeting was held where the independent technical advisor presented his findings. In addition, TASC services were used by the community to review the San Francisco Redevelopment Agency’s EIR for HPNS related to land use and site cleanup. The technical advisor presented formal comments to the CCSF and held a meeting to present independent findings to the broader community.</li> <li>- Region 9 Environmental Justice Grant for HPNS. Prior to the national program, the Region 9 EPA Superfund Program developed and awarded a “one-time” HPNS Environmental Justice Small Grant to encourage new activity or improve the quality of existing activities related to environmental justice and cleanup of the HPNS.</li> <li>• Meaningful Community Engagement under the Navy’s Updated Community Involvement Plan (CIP). The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). The Navy conducts the following specific community outreach efforts in accordance with the CIP: (1) publishing an annual calendar of outreach events; (2) dedicating a Navy team member to serve as Community Involvement Manager; (3) publishing fact sheets on important technical topics; (4) holding regularly scheduled community meetings; (5) publishing an annual overview of the HPNS cleanup program; (6) regularly updating a hardcopy mail and e-mail distribution list to maximize communication; (7) holding periodic bus tours of HPNS to describe the cleanup program; (8) participating in local radio programs to answer questions from the local community; (9) presenting technical information to a variety of existing community groups; (10) making translation services available to interested community members; and (11) publishing notices in local newspapers to announce public meetings associated with important document reviews.</li> </ul> |

| General<br>Comment 3<br>(cont.) | <ul style="list-style-type: none"> <li>• <b>Proximity and Exposure to Environmental Hazards.</b> <i>Disproportionate public health and environmental effects can be related to a community's or population's differential proximity and exposure to environmental hazards. There are many prominent examples, empirical and anecdotal, of communities affected by their proximity to environmental hazards.</i></li> <li>• <b>Susceptible Populations.</b> <i>Susceptible populations are groups that are at a high risk of suffering the adverse effects of environmental hazards. Certain factors may render different groups less able to resist or tolerate an environmental stressor. These susceptibility factors may be intrinsic in nature, based on age, sex, genetics, race, or ethnicity. In addition, some susceptibility factors may be acquired (such as chronic medical conditions, lack of health care access, poor nutrition, or fitness) or be related to other pollutant exposures. Minority, low-income, and indigenous children are at greater risk because factors such as poverty, poor nutrition, pre-existing health conditions, lack of access to health care, lack of information, lack of exercise, psychosocial stress, and lack of social capital contribute to greater susceptibility to environmental hazards.</i></li> <li>• <b>Unique Exposure Pathways.</b> <i>An exposure pathway is the route a substance takes from its source to its endpoint. Some populations sustain unique environmental exposures because of practices linked to their cultural background or socioeconomic status. For example, as a cultural practice, some indigenous populations rely on a diet that may include subsistence fishing and/or farming. Subsistence diets may expose these populations to toxic chemicals, such as mercury from a fish diet or other chemicals from a diet high in contaminated vegetation. There are also nondietary exposure pathways that may be unique to some indigenous populations. For example, in populations that practice basket weaving, exposure to toxic chemicals may occur when contaminated materials are placed in the mouth during the weaving process.</i></li> </ul> | <ul style="list-style-type: none"> <li>• Employment. The Navy works closely with their existing contractors to emphasize the importance of hiring community members to assist in the cleanup program, and works with interested stakeholders (such as the CCSF) to promote job training programs. These efforts have proven successful based on recent estimates—from 2009 to 2011 over 1,000 community members have been employed under Navy contracts (on either full-time, part-time, or temporary basis) to assist in the cleanup program. In addition, the Navy and their contractors have identified a large network of local businesses to assist in the cleanup program, such as those providing document production services, supplying building materials and consumables (drinking water and ice), renting heavy equipment, and transporting soil and rock. These efforts have proven successful based on recent estimates of over \$11 million worth of goods and services from local businesses.</li> <li>• Commitment to Protective Cleanup Actions. Most importantly, the Navy, EPA, and the State of California regulatory agencies are committed to fully protective cleanup actions at Parcel E-2 and throughout HPNS. As described in previous responses, the selected remedy for Parcel E-2 will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife. Since 2005, the Navy has undertaken a great deal of early action to remove contaminated soil at Parcel E-2, involving the excavation and off-site disposal of over 90,000 cubic yards (over 6,400 truckloads). For the Parcel E-2 landfill itself, the Navy, EPA, and State of California jointly believe that safely isolating and capping the Parcel E-2 Landfill (as specified in Alternative 5) presents less overall risk to the adjacent community when compared with the risks of other cleanup alternatives evaluated, including complete removal of the Parcel E-2 Landfill (in Alternative 2). The combination of removal and containment proposed under Alternative 5 reduces risk sooner, is easier to implement, and is much more cost-effective as compared with Alternative 2. In addition, Alternative 5 provides additional risk reduction as compared with Alternatives 3 and 4.</li> </ul> |

| Comment No.                     | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Response                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 3<br>(cont.) | <ul style="list-style-type: none"> <li>• <b>Multiple and Cumulative Effects.</b> <i>Minority, low-income, and indigenous populations are likely to suffer a wide range of environmental hazards, ranging from poor air quality to poor housing. Numerous empirical studies and anecdotal accounts describe minority, low-income, and indigenous communities that are impacted by multiple environmental hazards, such as industrial facilities, landfills, transportation-related air pollution, poor housing, leaking underground tanks, pesticides, and incompatible land uses. Analyzing cumulative effects from multiple stressors allows a more realistic evaluation of a population's risk to pollutants. The chemical-specific focus to assessing environmental risk fails to account for the fact that these populations may be exposed to several different pollutants. EPA's Framework for Cumulative Risk Assessment can enhance an evaluation of the various aspects of cumulative risk experienced by these populations.</i></li> <li>• <b>Ability to Participate in the Decision-Making Process.</b> <i>The ability, or inability, to participate in the environmental decision-making process may contribute to disproportionate impacts. Factors that contribute to the inability of a community to participate fully in the decision-making process include:</i> <ul style="list-style-type: none"> <li>✓ <i>Lack of trust</i></li> <li>✓ <i>Availability or lack of information</i></li> <li>✓ <i>Language barriers</i></li> <li>✓ <i>Socio-cultural issues</i></li> <li>✓ <i>Inability to access traditional communication channels</i></li> <li>✓ <i>Limited capacity to access technical and legal resources</i></li> </ul> </li> </ul> <p><b>Physical Infrastructure.</b> <i>Physical infrastructure, such as poor housing, poorly maintained public buildings (e.g., schools), or proximity to transportation hubs, contributes to making certain populations more vulnerable to environmental hazards.</i></p> | <p>The reviewer's expectation that the Proposed Plan address environmental justice as a specific criterion is not consistent with the NCP (which identifies nine specific criteria, including community acceptance). This responsiveness summary provides the Navy's and EPA's responses to community comments on the Proposed Plan, and Section 2.8.2 of this ROD documents the Navy's evaluation of the community acceptance criterion.</p> |

|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 3<br>(cont.) | <p><b>ii. The above criteria clearly speaks to Bayview Hunters Point</b></p> <ul style="list-style-type: none"> <li>✓ <b>Proximity and Exposure to Environmental Hazards.</b> <i>Disproportionate public health and environmental effects.</i> Bayview Hunters Point and the Potrero neighborhood of Dog Patch are San Francisco's last two remaining industrial neighborhoods. It is well documented that residents of Bayview Hunters Point face a greater number of environmental health threats than any other community in San Francisco. These studies include the 1991 study by the San Francisco Department of Health reporting an elevated level of respiratory ailment and specifically asthma within the population of Bayview Hunters Point over the rest of the City.</li> <li>✓ <b>Susceptible populations</b> <i>are groups that are at a high risk of suffering the adverse effects of environmental hazards.</i> Here again, Bayview Hunters Point has already documented elevated levels of respiratory ailments and other diseases over the general population of San Francisco. Given the disproportionate impact of industry on the neighborhood Bayview is a quintessential <b>example of pollution driving</b> health.</li> <li>✓ <b>Unique Exposure Pathways.</b> <i>This is of particular concern with regard to subsistence fishing that goes on in South Basin the body of water adjacent to E2 and whose sediments compose a portion of Parcel F.</i> Asian, Hispanic and African American fisherpersons regularly frequent the southern shoreline of South Basin at Candlestick Point State Recreational Area. Arc Ecology has photographs of Asians crabbing around the inlet of Yosemite Slough. These areas in which people fish in, have documentation, which indicates that there are elevated levels of hazardous substances.</li> </ul> | <p>The Navy and EPA are firmly committed to achieving the goals identified in the Executive Order on Environmental Justice (E.O. 12898) at HPNS. Both agencies are dedicated to consistent, fair treatment and meaningful participation in environmental decision-making for minority, low-income, and indigenous populations that are disproportionately impacted by pollution. The Navy and EPA, in performing environmental cleanup work at HPNS with support from DTSC and the Water Board, have worked together to achieve the environmental justice goals of fully protective cleanup actions, fair and equal treatment, and meaningful involvement for all people in the Bayview-Hunters Point community. Our efforts to satisfy these goals are detailed previously in this response.</p> <p>Contamination in offshore Parcel F is being addressed by the Navy as part of a separate CERCLA action. The Navy is working to finalize the RI/FS process for Parcel F, at which point it will identify a preferred alternative for Parcel F in a Proposed Plan. Further, the Navy is working with various stakeholders to integrate the cleanup program for Parcel F with the adjoining portions of Parcel E-2 and the neighboring Yosemite Slough. The Navy will select a final remedy for Parcel F that is protective of human health and the environment.</p> |

| General<br>Comment 3<br><i>(cont.)</i>                                                                                                                                    | ✓ <b>Multiple and Cumulative Effects.</b> As mentioned earlier in the Proximity and Exposure section, the BVHP community is exposed to numerous sources of environmental pollution. We question the efficacy of capping and containing a source of potential contamination within a community already awash in numerous other sources.                                                                                                                                                                            | As described in the response to general comment 2, the Navy's analysis of potential remedial alternatives for Parcel E-2 has shown that the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife. |
| <b>iii. The Proposed Plan demonstrates that the concept of Environmental Justice is clearly not well understood. The EPA's Guidance defines environmental justice as:</b> | <i>"the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies."</i>                                                                                                                                                                                                                                                                     | <i>(see the response on the following page)</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                                                                                                                                                           | <i><b>Fair Treatment</b> means that no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.</i>                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                                                                                                                                                           | <i><b>Meaningful Involvement</b> means that: 1) potentially affected community members have an appropriate opportunity to participate in decisions about a proposed activity that will affect their environment and/or health; 2) the public's contribution can influence the regulatory agency's decision; 3) the concerns of all participants involved will be considered in the decision-making process; and 4) the decision-makers seek out and facilitate the involvement of those potentially affected.</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| General<br>Comment 3<br>(cont.) | <p>a. <b>Fair Treatment: <u>All landfills are not equal.</u></b> Perhaps the best example of the failure of the proposed plan to treat BVHP fairly is the use of the equivalence argument regarding landfill capping in other locations. At public hearings, the City and Navy have compared the Parcel E2 landfill to other large capped landfills in the Bay Area; and that this strategy is sanctioned by EPA's own large landfill closure guidance. The examples are Caesar Chavez Park in Berkeley, Shoreline Amphitheater in Santa Clara, and Alameda Point. However these landfills are significantly different from Parcel E2 in that they are all at least half a mile from residences. Parcel E2 is <u>in close proximity to housing, specifically the low-income "Oakdale" public housing development, and the low-income affordable development of Mariners Village.</u> According to one mapping program, Parcel E2 is located within 900' of Mariners Village.</p> <p>After the October 24, 2011 briefing and public hearing on the Parcel E2 Proposed Plan before the San Francisco Board of Supervisors Land Use Committee where Arc Ecology had raised this point, the EPA's current Project Manager for the Shipyard countered that we had failed to bring up that at the Presidio a capped landfill was even closer to a residential site. While this is in-fact correct, the problem with using the Presidio as an analogy is of course that:</p> <p>The Presidio is not a comparable comparison. <u>The Presidio is not an environmental justice community.</u></p> <ul style="list-style-type: none"> <li>o Historically, the Presidio was an administrative military base, whereas the Shipyard was an industrial <u>manufacturing military base.</u></li> <li>o The Presidio landfill is smaller and not thought to contain radiological contamination or pose a potentially equivalent threat to the Parcel E2 landfill.</li> <li>o Unlike the Bayview, the Presidio is not surrounded and does not surround a heavily concentrated industrial area with ongoing sources of unregulated pollution.</li> </ul> | <p>The reviewer's comments incorrectly suggest that the remedy selection process for Parcel E-2 has focused on the comparison of the Parcel E-2 Landfill with other large landfills in the Bay Area. The Navy's analysis of remedial alternatives for Parcel E-2, which serves as the foundation for the remedy selection process, has followed the NCP and other pertinent regulatory guidance (EPA, 1988, 1991, 1993a, 1993b, 1994, and 1996). Alternative 2 includes removal of the Parcel E-2 Landfill and was compared with three other alternatives involving hot spot removal and containment. The preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold NCP criteria, and provides the best balance of tradeoffs with respect to the five balancing NCP criteria. The Navy's evaluation of the two modifying NCP criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the responses to spoken comments from Arc Ecology (see pages 8 and 9 of this responsiveness summary). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>The Navy has engaged the local community in an effort to communicate the findings of the RI/FS Report and to solicit their input. The Navy's descriptions have emphasized the process by which they have fully evaluated excavation of the Parcel E-2 Landfill, and compared it to other remedial alternatives involving hotspot removal and containment. The Navy's descriptions of other landfill sites in comparison with the Parcel E-2 Landfill were provided for illustrative purposes to explain that large landfills, regardless of their specific location, are commonly managed in place. Ample evidence exists to support this conclusion and is the primary reason that EPA developed the containment presumption for large landfills planned for closure under CERCLA.</p> |

| General<br>Comment 3<br><i>(cont.)</i> | <ul style="list-style-type: none"> <li>○ The Presidio is not located in nor is it populated by a majority minority and poor community           <ul style="list-style-type: none"> <li>▪ Rents and leases for the Presidio are well above what is affordable to most BVHP residents in close proximity to the Shipyard. Some residents of the adjacent San Francisco neighborhoods of Richmond, Sea Gate, Pacific Heights, and the Marina, have annual incomes that exceed the entire resident population of public housing developments adjacent to the Shipyard like Alice Griffiths, Oakdale, Kiska, and West Point.</li> </ul> </li> </ul>                                                  | <p>As previously stated, the selected remedy will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p><i>(please see the response on page 60)</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                        | <p>The confusion regarding the applicability of the Presidio to Hunters Point speaks to why EJ concerns are absent from the Proposed Plan for E2.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                                        | <p><b>Several Bayview Hunters Point residents spoke to similar concerns</b> at the October 2011 Board of Supervisors Land Use Committee Meeting including:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>The CCSF Board of Supervisors informed the Navy that the purpose of the October 2011 meeting was for members of the public to provide comments to the Board of Supervisors for their consideration in formulating CCSF's comments on the proposed plan. Although a Navy representative attended this meeting to describe the preferred alternative identified in the Proposed Plan and answer questions from the Board of Supervisors, the public comments provided to the Board of Supervisors at this meeting were not directed to the Navy for consideration or response. However, many of the same community members who attended the October 2011 Board of Supervisors meeting also provided comments directly to the Navy on the Proposed Plan. Please refer to the responses to comments provided by other community members (including Ms. Jackson, Ms. Harrison, and members of POWER), as provided in this responsiveness summary.</p> |
|                                        | <ul style="list-style-type: none"> <li>○ Long-time community leader Espanola Jackson spoke directly regarding her opposition to the preferred alternative in the proposed plan requesting instead that the Landfill be removed to address the hazard it posed to the community as well as long-term cumulative impacts of pollution on this environmental justice community. Ms. Jackson expressed a general community sentiment that odor, delay of property transfer and transportation considerations were of less concern to the majority of Bayview Hunters Point residents than was the possibility that E2 would remain intact albeit capped under the Preferred Alternative.</li> </ul> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| General<br>Comment 3<br>(cont.) | <ul style="list-style-type: none"> <li>o Green Action's Bayview Hunters Point Organizer and community resident Marie Harrison raised similar issues and spoke in opposition to the Proposed Plan.</li> <li>o Other community residents associated with POWER echoed these similar concerns.</li> <li>o These comments and others from the community would have been vetted in the months leading up to the publication of the Proposed Plan had the HPS RAB been revamped instead of disbanded.</li> </ul> <p>b. <b>Meaningful Public Involvement: All methods of community engagement are not equal.</b> The Navy's failure to replace the RAB for Hunters Point Shipyard is a clear example of BVHPs limitation in participating in the decision making process surrounding E2. This omission of the RAB at the Shipyard, severely limits any formal and meaningful public participation or community involvement, especially for Parcel E2.'s Proposed Plan. Arc Ecology voiced this same concern with regard to the Navy's Community Involvement Plan and we have seen this problem in action at the meetings associated with the Proposed Plan. While we agree with the Navy that the prior RAB needed revamping, we vehemently disagree with its determination to use other methods to engage the public now. Part of the purpose of a RAB is to create a committee of well-informed community advisors able to participate in a meaningful dialogue with regard to the concepts eventually presented in action documents like the Proposed Plan for E2. The lack of a RAB fundamentally undermined our confidence that this Plan was appropriately vetted in the community.</p> <p>iv. <b>Although the Proposed Plan is not in conformance with the USEPA EJ Guidance, it is important to note that DoN has for nearly twenty years not been in conformance with E.O. 12898 - 59 FR 7629, Feb. 16, 1994.</b> Thus it is not entirely the responsibility of the Shipyard's project team for having left environmental justice concerns out of the formulation of their Proposed Plan for E2.</p> | <p>As previously discussed, input from the local community was considered by the Navy under the community acceptance criterion. As specified in the NCP [40 CFR § 300.430(e)(9)(iii)(I)], the community acceptance criterion cannot be evaluated "<i>until comments on the proposed plan are received.</i>" The Navy's evaluation of the community acceptance criterion is documented in this ROD, which includes the subject responsiveness summary.</p> <p>From 1994 through 2009, the primary means of community involvement was the Navy's RAB. Although the RAB was dissolved in December 2009 because it was no longer fulfilling its purpose, the Navy continues to involve the community in the details of the environmental cleanup program for HPNS. The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). Some of the specific community outreach efforts that the Navy conducts in accordance with the CIP include (1) preparation of topic-specific fact sheets; (2) use of a calendar of outreach events; (3) holding regularly scheduled community meetings; and (4) conducting bus tours. Section 2.10 of this ROD identifies the Navy's efforts to involve the local community in the cleanup program at HPNS, including soliciting input on the proposed cleanup for Parcel E-2. Additional efforts by the Navy and EPA to achieve the environmental justice goals of fully protective cleanup actions, fair and equal treatment, and meaningful involvement for all people in the Bayview-Hunters Point community are detailed previously in this response.</p> |

|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 4 | <p><b>IV. The Proposed Plan fails to address the National Contingency Plan community acceptance criteria adopted by the City of San Francisco’s electorate, Proposition P, in November 2000 and implemented by the Board of Supervisors by unanimous vote in July 2001.</b></p> <p>A. <b>The Navy <i>refuses</i> to recognize Proposition P</b>, San Francisco’s November 2000 plebiscite which called on the Navy to clean the Shipyard to highest attainable level.</p> <ol style="list-style-type: none"> <li>i. Prop P was a direct response to the Parcel E2 landfill fire &amp; the Navy’s probable capping solution.</li> <li>ii. Prop P was passed by 87% of San Francisco voters City-wide, 93% of Bayview Hunters Point voters, and adopted as official City policy by a unanimous vote of the Board of Supervisors.</li> </ol> <p>B. <b>The NCP does not provide the Navy with a “Get out of Conformance Free Card.”</b> While community acceptance is a modifying criteria, <b><u>the Navy is nevertheless bound by that plebiscite to explain why it is selecting a preferred alternative that does not conform to the Community’s Acceptance Criteria.</u></b></p> <p>C. <b>The Community Acceptance Criteria is also important from an EJ perspective</b> because by ignoring it the Navy is further demonstrating its failure to conform to the criteria of Meaningful Involvement identified in President Clinton’s Executive Order on Environmental Justice.</p> | <p>The reviewer’s expectation that the Proposed Plan address the community acceptance criterion is not consistent with the NCP [40 CFR § 300.430(e)(9)(iii)(I)], which specifies that the community acceptance criterion cannot be evaluated “<i>until comments on the proposed plan are received.</i>” As described on page 16 of the Proposed Plan, the community acceptance criterion is one of two modifying criteria and has been evaluated based on comments provided in the course of the CERCLA remedy selection process, including those received on the Proposed Plan, and other community input, including Proposition P. Consistent with the NCP [40 CFR § 300.430(e) and (f)], the Navy’s evaluation of the community acceptance criterion is documented in this ROD, which includes the subject responsiveness summary.</p> <p>The Navy does not agree with the reviewer’s assertion that it refuses to recognize Proposition P. As described above, Proposition P was considered, along with other community input provided in the course of the CERCLA remedy selection process, in the Navy’s evaluation of the community acceptance criterion. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible. The Navy, in its RI/FS Report that was concurred with by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.</p> |

|---------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 4<br>(cont.) | <i>(see above)</i> | <p>However, as previously discussed, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained above. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>In addition, the Navy's environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA's Hunters Point Shipyard Redevelopment Plan (SFRA, 2010), which was approved 9 years after the adoption of Proposition P. The Redevelopment Plan was initially approved in 1997 and adopted as the official Redevelopment Plan for HPNS by the CCSF Board of Supervisors (Ordinance 285-97 pursuant to Chapter 4.5 of California Community Redevelopment Law, California Health and Safety Code § 33492). The Redevelopment Plan was subsequently amended in 2010, and the selected CERCLA remedy would accommodate the future reuses identified in the amended plan.</p> <p>The Navy also notes that Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E-2.</p> |

| General<br>Comment 5 | <p><b>V. The Grid Sample Survey Model presented in Appendix E of the Parcel E Feasibility Study and applied to Parcel E2 as a rationale for not doing such as survey is fundamentally flawed.</b></p> <p><b>A. A variety of assumptions and confidence levels and sizes of hot spots were considered and presented in figures and tables.</b> There were some differences with the different input values but the following example sums up the resulting impracticality of implementing grid-based sampling. To detect a 25' diameter hot spot with reasonable confidence would require 54 samples within each 150' x 150' square of the parcel (approximately 1/2 acre). A 20-acre parcel such as the E-2 landfill would require approximately 2000 samples at each of two depths to detect a 25' diameter spherical hot spot.</p> <p>i. <b>The problem with this analysis is the size of the hot spots considered was too small.</b> A 25' diameter hot spot is approximately the size of the average backyard in San Francisco. While such a hot spot could be problematic, in the context of the Parcel E2 Landfill the concern is not that something that small would be missed but that something relatively large has been missed. Multi-acre plumbs slightly smaller than the "Dog and Bird" spills on Parcel C could be entirely missed by the current state of sampling of the site. A much larger courser grid survey of the kind Arc Ecology has been proposing would be sufficient to find such a multi-acre plumb or a field of PCB laden transformers strewn over several acres. If something were to be identified in this courser survey, then a finer grained grid would be appropriate. However if nothing were found than the fear of missing a large would be allayed.</p> | <p>The reviewer is incorrect in his assertion that the grid sample survey model was applied to the Parcel E-2 Landfill. The subject appendix was published in the Revised RI Report for Parcel E and provides information that was requested by the EPA, DTSC, and Water Board during development of the standard data gaps investigation at Parcel E (which at the time included the area now referred to as Parcel E-2). As described in Section 3 of the RI/FS Report for Parcel E-2 (<a href="#">ERRG and Shaw, 2011</a>), the standard data gaps investigation was performed in 2002 to further define the nature and extent of chemicals in soil within areas outside of the Parcel E-2 Landfill, and was performed concurrent with several other data gaps investigations focused on the Parcel E-2 Landfill. These landfill-specific investigations, which are referred to as nonstandard data gaps investigations, were developed in consultation with the EPA, DTSC, Water Board, and CCSF DPH and implemented in a manner that provided adequate information to support the RI/FS Report for Parcel E-2. During development of the data gaps investigations for Parcels E and E-2, the Navy, EPA, DTSC, Water Board, and CCSF DPH reviewed existing data collected between 1987 and 1996 and determined that the data gaps at the Parcel E-2 Landfill consisted of (1) defining the nature and extent of landfill gas, (2) refining the lateral extent of solid waste, (3) evaluating liquefaction potential of the landfill, and (4) delineating wetlands areas adjacent to the landfill. These nonstandard data gaps were addressed during investigations performed from October 2001 to September 2002, and the information was evaluated in a series of reports that were appended to the RI/FS Report.</p> |

|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General<br>Comment 5<br><i>(cont.)</i> | ii. <b>The argument that if there was some form of chemical contamination or plumb on</b> site the contaminants would be found in the ground water samples is also speculative. Slow moving contaminants like PCBs might not be identified but could still pose a long-term hazard. | <p>Section 4 of the RI/FS Report provides a detailed evaluation of all available data for Parcel E-2 (Sections 4.2 through 4.4), identifies potential hot spots (Section 4.5.3.1), and documents the adequacy of existing data to evaluate a focused set of remedial alternatives for Parcel E-2 (Section 4.5.4). Please refer to the response to Arc Ecology general comment 1 for more information on the Navy's efforts, beginning in 2004, to develop the RI/FS Report in consultation with the EPA, DTSC, Water Board, and CCSF DPH.</p> <p>The draft and draft final versions of the RI/FS Report were reviewed by the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders, including Arc Ecology. The Navy responded to all comments received on the draft and draft final versions of the RI/FS Report and incorporated input from various reviewers, as appropriate, into the final version of the RI/FS Report that was published in May 2011. The Final RI/FS Report documents that the Parcel E-2 Landfill has been adequately characterized to support a focused set of remedial alternatives developed in consultation with the EPA, DTSC, Water Board, and CCSF DPH. The information contained in the administrative record, which includes pertinent regulatory guidance (<a href="#">EPA, 1993a, 1993b, 1994, and 1996</a>) and site-specific input from various stakeholders, adequately supports this determination.</p> |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Specific<br>Comment 1                              | <b>p. 3.</b> What happened to the drainage channel shown in 1969 photo? Have the remedial actions taken into account the natural drainage patterns in this watershed?                                                                   | The drainage channel shown in the 1969 photograph was a manmade feature created during the filling of Parcel E-2. Section 1.7.2 of the RI/FS Report summarizes the filling activities at Parcel E-2 and indicates that the drainage channel was filled in by 1975, at which time the Parcel E-2 Landfill was closed and covered with soil ( <a href="#">ERRG and Shaw, 2011</a> ). The Navy collected soil, sediment, and groundwater samples near the intersection of the former drainage channel and San Francisco Bay to evaluate the nature and extent of contamination in this area. Elevated concentrations of certain chemicals were identified in this area, but these concentrations were not as high or as laterally extensive as the elevated concentrations found in the PCB Hot Spot Area located immediately to the southeast. The PCB Hot Spot Area is included as a hot spot to be excavated as part of the selected remedy. The Navy is taking early action by excavating this area because it was included as a part of Alternatives 2, 3, 4, and 5 (and was therefore assured of being part of the selected remedy).                                                                                                           |
| Specific<br>Comment 2                              | <b>p. 4.</b> Volume estimates seem calculated to intimidate. As I recall, the waste may be 25' deep at the deepest but very thin around the edges so the average depth may be only 12-15'. This alone cuts the volume estimate in half. | The estimated quantities of solid waste, soil, and sediment to be excavated under Alternative 2 are detailed in Appendix R of the RI/FS Report (Table R-6) and are based on detailed geologic cross sections (Figures 2-3 through 2-8) for the Parcel E-2 Landfill and surrounding area ( <a href="#">ERRG and Shaw, 2011</a> ). Using this information, the Navy determined that the waste extends over 22 acres and ranges from 10 to 25 feet thick, with an average thickness of 13 feet. The estimated volume of landfill waste is 473,000 cubic yards. This information was also used to estimate the volume of existing soil over the landfill (393,500 cubic yards). Most of this soil was placed during two separate actions in 1974 and 2000. In 1974, after landfill operations ended, the Navy placed between 2 and 5 feet of soil over the entire 22-acre landfill. In 2000, in response to the landfill fire, the Navy placed another 1.5 to 3.5 feet of soil over the 14.5-acre part of the landfill surface that had burned. In addition, the volume estimates include an average of 4 feet of soil under the 22-acre landfill (141,750 cubic yards) that is likely contaminated and would need to be removed under Alternative 2. |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specific Comment 3                                 | <b>p. 4.</b> Volume estimates: what does it mean, “likely contaminated” soil under the landfill waste? What is the basis for this statement and how much of the 1,000,000 cubic yards estimate was unspecified soil underneath the landfill waste?                                                                                                                                                                                                                                                                                                                           | The phrase “likely contaminated” relates to the Navy’s conceptual model for the Parcel E-2 Landfill, which assumes that soil underneath the landfill waste has been contaminated. In developing Alternative 2, the Navy applied this conceptual model and assumed that soil below the landfill waste would need to be removed to support complete removal of the Parcel E-2 Landfill. Section 12.2.2.4 of the RI/FS Report describes the assumptions made in estimating the excavation volumes for Alternative 2 ( <a href="#">ERRG and Shaw, 2011</a> ).                                                                                                                                                                                                                                                                                            |
| Specific Comment 4                                 | <b>p. 4.</b> Shoreline. Above mean sea level in E-2 but below mean sea level in F. This means that both are in the intertidal zone and have bay water sloshing over them twice a day. How will these be remediated separately?                                                                                                                                                                                                                                                                                                                                               | Remediation along the Parcel E-2 shoreline, as well as offshore Parcel F, will require various controls to prevent discharge of contaminants to San Francisco Bay and ensure proper implementation of the selected remedy. The implementation procedures for the selected remedy will be specified in the remedial design (and the associated remedial action work plan).                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Specific Comment 5                                 | <b>p. 5.</b> Adequacy of sampling seems presented deceptively. For example, 2000 soil samples since the landfill was covered (1974 photo on p. 3) is 54 samples per year but consider that E-2 is 47.4 acres (p. 2) so the average sampling for chemicals and radioactivity was 1.1 sample per acre per year. Some areas were undoubtedly sampled more frequently than this but that means that some were sampled less, perhaps much less. Please come up with a better measure of sampling adequacy than simple number that doesn’t seem so impressive by year and acreage. | The Navy identified the number of environmental samples collected at Parcel E-2 for informational purposes in the Proposed Plan. Consistent with the NCP and EPA guidance, the RI/FS Report provides a detailed evaluation of all available data for Parcel E-2 (Sections 4.2 through 4.4) and documents the adequacy of existing data to evaluate a focused set of remedial alternatives for Parcel E-2 (Section 4.5.4) ( <a href="#">ERRG and Shaw, 2011</a> ). Please refer to the responses to Arc Ecology general comments 1 and 5 for more information on the Navy’s efforts to characterize Parcel E-2 in consultation with the EPA, DTSC, Water Board, and CCSF DPH. Further, the Navy wishes to clarify that there is no technical basis for determining the adequacy of soil characterization relative to the temporal sampling frequency. |
| Specific Comment 6                                 | <b>p. 5.</b> Conclusion that knowledge is adequate to support Navy’s preferred alternative is true only if not all benefits of excavation are considered. For example, see next comment.                                                                                                                                                                                                                                                                                                                                                                                     | As discussed in the responses to Arc Ecology general comments 1 and 5, the RI/FS Report documents the adequacy of existing data to evaluate a focused set of remedial alternatives for Parcel E-2, including Alternative 2 that evaluates complete removal of the Parcel E-2 Landfill ( <a href="#">ERRG and Shaw, 2011</a> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Specific Comment 7                                 | <b>p. 6.</b> Groundwater extraction system, sheet pile wall, and monitoring and O&M in perpetuity would not be needed if the landfill were removed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | The RI/FS Report evaluates the various remedial alternatives, and the results of this evaluation are summarized on pages 12 through 16 of the Proposed Plan. The RI/FS Report evaluates the benefits of Alternative 2 relative to the criteria specified in the NCP ( <a href="#">ERRG and Shaw, 2011</a> ). For example, the improved long-term effectiveness and decreased monitoring and maintenance costs are reflected in the Navy's evaluation of Alternative 2.                                                                                                                                                                                                                       |
| Specific Comment 8                                 | <b>p. 6.</b> Landfill cap to prevent oxygen reaching smoldering or potential incendiary items would not be needed if the contents of the landfill were removed. No debris = no fire potential.                                                                                                                                                                                                                                                                                                                                                                                                                                | Please refer to the response to specific comment 7 above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Specific Comment 9                                 | <b>p. 6.</b> Landfill gas removal system and monitoring and potential explosive methane hazard would all be removed along with the contents of the landfill. If there is no buried organic matter, then there is no anaerobic production of methane and carbon dioxide (CO <sub>2</sub> ), and no need to be concerned about O&M and monitoring and land use restrictions/institutional controls for this area. Methane and CO <sub>2</sub> are greenhouse gases (GHG) that contribute to global warming and sea level rise. Capping the landfill means that these gases will be emitted from Parcel E-2 for decades or more. | Please refer to the response to specific comment 7 above. In addition, the Navy performed a preliminary analysis of the greenhouse gas emissions associated with implementing Alternatives 2 and 5, accounting for both the remedial action construction and long-term monitoring activities. The Navy determined that a significantly greater volume of greenhouse gases would be emitted under Alternative 2 as compared with Alternative 5. This difference is attributed to the emissions from excavating, transporting, and disposing of the estimated 1,166,000 cubic yards of soil, sediment, and solid waste.                                                                        |
| Specific Comment 10                                | <b>p. 6.</b> PCB hot spot removals have already removed over 100,000 cubic yards of material. This is 10% of the estimated 1 million cubic yards that were estimated for the removal alternative. Even if the estimate is accurate, it doesn't seem that the Navy has trouble moving and removing dirt when it wants to.                                                                                                                                                                                                                                                                                                      | The Navy wishes to clarify that the previous removal actions differ substantially from Alternative 2 because: <ol style="list-style-type: none"> <li>1. The estimated excavation volume of over 1 million cubic yards (for Alternative 2) is not comparable with the volume of material removed under previous removal actions at Parcel E-2 (less than 100,000 cubic yards).</li> <li>2. The previous removal actions dealt with soil containing isolated debris, whereas Alternative 2 would deal with debris and with lesser quantities of soil. The excavation, screening, and segregation processes are much more labor-intensive when dealing with large volumes of debris.</li> </ol> |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Specific<br>Comment 10<br><i>(cont.)</i>           | <i>(see above)</i>                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>3. The previous removal actions dealt with relatively shallow soil that could be removed using conventional excavation techniques and without extensive shoring or dewatering efforts. As described in Section 12.2.2 of the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>), implementation of Alternative 2 would require extensive shoring and dewatering efforts.</p> <p>4. The previous removal actions addressed soil with very high concentrations of PCBs along the shoreline that posed a risk to aquatic wildlife in the Bay. Although similarly high concentrations of PCBs have been reported within the Parcel E-2 Landfill, they are located deep below the ground surface, are located much farther from the shoreline, and are not impacting groundwater.</p> <p>Therefore, the Navy's ability to implement the previous removal action does not change the Navy's evaluation of the significant implementation challenges posed by Alternative 2 (as described in Section 13.2.6 of the RI/FS Report [<a href="#">ERRG and Shaw, 2011</a>]).</p> |
| Specific<br>Comment 11                             | <p><b>p. 12.</b> The Navy estimates that it would take 4 years to excavate the landfill and replace it with clean fill. Why not excavate it and not fill it with clean fill or anything else? Restore it to the natural wetlands and waters of the United States that it was before it was filled? This would also eliminate the need for agencies and property owners to be concerned about institutional controls and deed restrictions.</p> | <p>As detailed in a response to Arc Ecology's comments on the Draft RI/FS Report (see response to general comment 9, Appendix S in the Final RI/FS Report) (<a href="#">ERRG and Shaw, 2011</a>), Alternative 2 was not modified to evaluate wetlands restoration throughout the entire Parcel E-2 Landfill because (1) although the estimated backfilling costs would be substantially reduced, such changes would not significantly affect the overall cost of Alternative 2 beyond the required accuracy required by EPA RI/FS guidance (+50/-30 percent) (<a href="#">EPA, 1988</a>); and (2) such a large-scale expansion of the planned wetlands restoration is not required by the RAOs, ARARs, or planned reuse, which play an important role in the remedy evaluation process under CERCLA.</p>                                                                                                                                                                                                                                                                |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Specific<br>Comment 12                             | <b>p. 15.</b> The Navy admits that excavation and removal would be the most effective long-term solution. I prefer this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The improved long-term effectiveness of Alternative 2 does not offset its disadvantages relative to other criteria specified in the NCP. The preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria specified in the NCP. As explained previously, the Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific<br>Comment 13                             | <b>p. 16.</b> The Table 8 is a biased and unscientific figure prejudicial to the Navy's preferred alternative. For example, Alternative 2 is clearly implementable. Dig it up and remove it. What's difficult about this? It should have a dark, completely filled circle, making it the highest ranking alternative. The short-term effectiveness circle should also have more, if not all, quarters filled in because there is plenty of time to remove the contents of the landfill before it is scheduled to be transferred to the SF Redevelopment Agency. In the present state it is not a risk to human health or the environment so short-term effectiveness is not as critical or important as long-term effectiveness of the remedy and should not have equal weight. | The Navy does not agree with the reviewer's assertion that its evaluation of the remedial alternatives is biased and unscientific. Section 13.2.6 of the RI/FS Report ( <a href="#">ERRG and Shaw, 2011</a> ) summarized the technical factors that are unique to the Parcel E-2 Landfill and adequately support the implementability rating for Alternative 2 relative to this criterion. Primary among these factors is the extremely large excavation volume for Alternative 2, which is not comparable with the volume of material removed under previous removal actions at Parcel E-2, nor is it comparable with the volume of material that would be removed as part of Alternatives 3, 4, or 5.<br><br>As described on page 15 of the Proposed Plan, short-term effectiveness pertains to the ability to protect humans and wildlife during implementation of the remedy, and does not relate to its current condition as suggested by the reviewer. Section 13.2.5 of the RI/FS Report ( <a href="#">ERRG and Shaw, 2011</a> ) summarized the technical factors that are unique to the Parcel E-2 Landfill and adequately support the short-term effectiveness rating for Alternative 2 relative to this criterion. Primary among these factors is the slope failure hazard associated with deep excavation into saturated waste. The Navy believes that this information is adequate to support the ratings detailed in Sections 13 and 14 of the Final RI/FS Report (and summarized in the Proposed Plan). The Navy does not believe that any changes to these ratings are warranted. |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Specific<br>Comment 14                             | <p><b>p. 17.</b> Calling the Navy’s preferred alternative the “presumptive remedy” is not accurate because the landfill contains more than municipal waste, it is unlined, it is adjacent to San Francisco Bay, and presumptive remedies do not undergo the careful consideration of alternatives that has taken place in the RI/FS. Use of the term “presumptive remedy” is prejudicial to an objective, impartial, and scientific comparison of alternatives.</p> | <p>In accordance with EPA’s presumptive remedy guidance for military landfills (EPA, 1996), the Navy prepared and included a detailed analysis of the Parcel E-2 Landfill in Section 8.2.3 of the RI/FS Report (ERRG and Shaw, 2011). The Navy considered each of the factors include in the EPA guidance, which included the presence of military-specific wastes and the close proximity of Parcel E-2 to San Francisco Bay, and concluded that the Parcel E-2 Landfill met the requirements for a presumptive remedy set forth in that guidance. However, as described in the response to general comment 1, the Navy consulted with the EPA, DTSC, Water Board, and CCSF DPH and, based on their input, determined that the remedial alternatives should also include complete removal of the Parcel E-2 Landfill (Alternative 2) in addition to one or more containment alternatives (Alternative 3, 4, and 5). This approach is consistent with EPA’s directive regarding presumptive remedies (EPA, 1993b) which states that “<i>there may be unusual circumstances (such as, complex contaminant mixtures, soil conditions, or extraordinary State and community concerns) that may require the site manager to look beyond the presumptive remedies for additional (perhaps more innovative) technologies or remedial approaches.</i>” The information contained in the RI/FS Report supports the use of the presumptive containment remedy for the Parcel E-2 Landfill and explains the relative risks of that option compared to complete excavation.</p> <p>The Navy wishes to clarify that the term “presumptive remedy” on page 17 of the Proposed Plan was not used to describe the Navy’s preferred alternative. Rather, the statement indicates that EPA’s presumptive remedy guidance, which was developed based on a nationwide analysis of numerous other large landfills, supports the Navy’s analysis of potential remedial alternatives for Parcel E-2. Specifically, the poor performance of Alternative 2 relative to Alternatives 3, 4, and 5 is consistent with EPA’s findings from similar studies of other large landfills similar to the Parcel E-2 Landfill.</p> |

| <b>SPECIFIC COMMENTS – Prepared by Dr. McGowan</b> |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specific<br>Comment 15                             | <b>p. 17.</b> Based on experience in other landfills around San Francisco Bay the proposed liner will not effectively protect from burrowing animals such as the California ground squirrel. Rodent control will likely be a much more expensive and contentious issue at E-2 than has been presented in the RI/FS or this Proposed Plan. | The language in the Proposed Plan was simplified relative to the more detailed information presented in the RI/FS Report. Specifically, the term “liner” was used in the Proposed Plan to focus on that material’s primary function to limit surface water infiltration. Section 11.5.1.2 of the RI/FS Report fully describes the functions of a geosynthetic cap, which include the geocomposite drainage layer that is placed on top of the geomembrane. This layer would drain water infiltrating through the vegetative layer and, consistent with its use at other landfill sites, would also deter burrowing animals ( <a href="#">ERRG and Shaw, 2011</a> ). The Navy believes that the information in the RI/FS Report is adequate to demonstrate that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. Please refer to the response to specific comment 2 from the CDFG for more detailed information regarding this topic. |
| Specific<br>Comment 16                             | <b>p. 19.</b> Rock revetment is ideal habitat for ground squirrels and rats and not a natural bay shoreline. The former Berkeley city landfill at the edge of the bay is a good nearby example.                                                                                                                                           | The Navy has identified rock revetment as the most viable option for armoring parts of the Parcel E-2 shoreline; however, the Navy will further evaluate this option during the remedial design. The evaluation will consider ways to enhance the recreational uses and aesthetics of the shoreline while maintaining a similar level of long-term effectiveness, implementability, and cost compared to rock revetment. The Navy does not believe that the potential presence of ground squirrels is a sufficient technical reason for selecting an alternative shoreline protection approach. Sections 12.2.3.6 and 12.2.3.10 of the RI/FS Report describe the means by which burrowing animals, such as ground squirrels, will be effectively managed to ensure that the cover system remains protective of human health and the environment ( <a href="#">ERRG and Shaw, 2011</a> ).                                                                                                                                                                                  |

| Specific Comment 17                                | <p><b>p. 24.</b> The criterion for cancer risk of 1 in 1 million only applies to contaminants in soil, not to groundwater or radiation risk. Radiation additional risk of cancer may be as high as 1 in 10 thousand. The blanket statement about 1 in 1 million is inaccurate and misleading.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>The reviewer's statement is not correct. As summarized in Table 2 of the Proposed Plan (and detailed in the RI/FS Report and radiological addendum), the Navy estimated chemical and radiological cancer risks from exposure to soil. As summarized in Table 3 of the Proposed Plan, the Navy also estimated chemical cancer risks from exposure to groundwater (radioactive chemicals were not found in groundwater at concentrations requiring a risk assessment). The subject statement on page 24 of the Proposed Plan describes the threshold cancer risk level (1 in 1 million).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>RECOMMENDATIONS – Prepared by Saul Bloom</b>    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Specific Comment 18                                | <p><b>Alternative 1: Remove the E2 Landfill in its entirety.</b></p> <p>The Preferred Alternative in the Proposed Plan continues to subject Bayview Hunters Point to disproportionate levels of contamination within the confines of the community. Arc Ecology recognizes that the Navy and regulatory community believes the protection afforded by a cap is sufficient to protect the public's safety. This solution however does not meet current Environmental Justice standards as discussed previously in this comment.</p> <p>Arc Ecology rejects the argument of the CERCLA 120(h) covenant as a viable guarantor of the integrity of the Preferred Alternative. The Anti-Deficiency Act itself raises question with regard to the viability of this covenant. Government programs and promises wink out of existence with alarming regularity. Members of Congress are currently discussing the elimination of both the EPA and the centuries old Department of Education. Congress is free within its wisdom to amend or eliminate all but constitutionally guaranteed protections, and even some of the most sacred of our constitutional protections such as the First Amendment are not well guarded. As such the only meaningful remedy that will ensure the hazard posed by the Parcel E2 landfill is eliminated is removal.</p> | <p>The preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria specified in the NCP. As explained previously, the Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>As discussed in the response to Arc Ecology general comment 3, the Navy has worked with EPA toward achieving environmental justice goals (that is, the fair treatment and meaningful involvement of all people) in developing the cleanup program for HPNS in accordance with CERCLA, the NCP, and DoD policy (DoD, 1995). This responsiveness summary provides the Navy's and EPA's responses to community comments on the Proposed Plan, and Section 2.8.2 of this ROD documents the Navy's evaluation of the community acceptance criterion. In addition, Section 2.10 of this ROD identifies the Navy's and EPA's efforts to involve the local community in the cleanup program at HPNS, including soliciting input on the proposed cleanup for Parcel E-2.</p> |

| <b>RECOMMENDATIONS – Prepared by Saul Bloom</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Specific<br>Comment 18<br>(cont.)               | <p>Removal will have numerous and substantial benefits to the environment, public health and environmental justice. Removal of the landfill will have benefits to the health and well being of the San Francisco Bay. The portion of San Francisco Bay filled to create Parcel E2 was at one time an extremely productive fishery and coastal wetlands. It could be again. Savings could be derived through simply removing and not replacing the landfill, allowing San Francisco Bay to reclaim what was once a part of it. Removing the landfill would benefit water quality in Yosemite Slough by improving water circulation. It would have economic benefits to local fisheries as well as to the planned development of the Shipyard and surrounding neighborhood because it will void the negative impact on property valuation imposed by being adjacent to a closed toxic landfill.</p> <p>As mentioned above, removal of the E2 Landfill will end the threat to public health posed by the containment of the pollution therein, the need for ongoing institutional and mechanical controls, and the ongoing maintenance required to insure the ongoing viability of those controls. It is the simplest and most effective way of protecting the health of Bayview Hunters Point from the all too frequent failures of humanity.</p> <p>If the Navy will not remove the E2 landfill it should in its place provide San Francisco with a bond valued at twice the cost estimate of replacing the cap and the other stabilization infrastructure so as to protect the City of San Francisco from the possibility of Congress eliminating or amending the CERCLA 120 (h) covenant. Furthermore guarantees must be provided that the impacts of an earthquake or other natural disaster will not be considered “force majeure” within future transfer documents.</p> | <p>As discussed in the response to Arc Ecology general comment 2, the selected remedy includes the numerous monitoring and maintenance activities that would be performed as long as necessary to protect human health and the environment and to comply with pertinent state and federal ARARs. Regulatory oversight will continue during long-term operation and maintenance of the selected remedy. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment.</p> <p>The Navy believes that Alternative 2 was evaluated properly in the RI/FS Report, and that its potential advantages and disadvantages were adequately considered. As detailed in a response to Arc Ecology’s comments on the Draft RI/FS Report (see response to general comment 9, Appendix S in the Final RI/FS Report) (<a href="#">ERRG and Shaw, 2011</a>), Alternative 2 was not modified to evaluate wetlands restoration throughout the entire Parcel E-2 Landfill because (1) although the estimated backfilling costs would be substantially reduced, such changes would not significantly affect the overall cost of Alternative 2 beyond the required accuracy required by EPA RI/FS guidance (+50/-30 percent) (<a href="#">EPA, 1988</a>); and (2) such a large-scale expansion of the planned wetlands restoration is not required by the RAOs, ARARs, or planned reuse, which play an important role in the remedy evaluation process under CERCLA. The Navy believes that this information is adequate to address the reviewer’s concerns and support the ratings detailed in Sections 13 and 14 of the Final RI/FS Report (and summarized in the Proposed Plan). The Navy does not believe that any changes to these ratings are warranted.</p> |

| <b>RECOMMENDATIONS – Prepared by Saul Bloom</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Specific<br>Comment 19                          | <p><b>Alternative 2: Withdraw the Proposed Plan.</b></p> <p>If the Navy will not remove the E2 landfill, it should withdraw the Proposed Plan for having inadequately characterized the landfill and nonconformance with E.O. 12898 - 59 FR 7629, Feb. 16, 1994 and existing Environmental Justice Guidance's and BRAC policies.</p> <p>Arc Ecology's recommendation would be for the Navy to initially develop a course gridded survey of the Parcel E2 landfill with grid segments no larger than quarter to half acres in size with further refinements developed should findings warrant. Efforts should be made to assess the true quantity and strata of fill material to provide better estimates for the various alternative responses evaluated in a revised Proposed Plan.</p> <p>The prejudice with which the Navy pursued a single strategy for response to the E2 Landfill has been discussed above. It's impacts on the clarity of the data acquired, property reuse, public confidence in the selection of the Preferred Alternative, and Arc Ecology's own confidence in this choice can only be repaired if the Navy returns to the drawing board and develops a sampling regime that will allow for greater confidence in the neutral characterization of the contents of the landfill.</p> | <p>As discussed in the responses to Arc Ecology general comments 1 and 5, the Navy has worked closely with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders for more than 20 years to obtain data from the Parcel E-2 Landfill. The Navy does not believe that a grid-based sampling approach is necessary or appropriate to characterize the Parcel E-2 Landfill because, as described in the response to Arc Ecology general comment 5, the Final RI/FS Report documents that the Parcel E-2 Landfill has been adequately characterized to support a focused set of remedial alternatives developed in consultation with the EPA, DTSC, Water Board, and CCSF DPH. The information contained in the administrative record, which includes pertinent regulatory guidance (EPA, 1993a, 1993b, 1994, and 1996) and site-specific input from various stakeholders, adequately supports this determination.</p> <p>As discussed in the response to Arc Ecology general comment 2, the Navy's selected remedy for Parcel E-2 complies with the most current BRAC policy document, the 2006 Base Redevelopment and Realignment Manual. As discussed in the response to Arc Ecology general comment 3, the Navy and EPA, in performing environmental cleanup work at HPNS with support from DTSC and the Water Board, have worked together to achieve the environmental justice goals of fully protective cleanup actions, fair and equal treatment, and meaningful involvement for all people in the Bayview-Hunters Point community.</p> |
| Specific<br>Comment 20                          | <p><b>OTHER RECOMMENDATIONS</b></p> <p><b>1. Replace Proposed Rip Rap and Revetments with a living shoreline</b></p> <p>The community has continually expressed its desire to see a more ecological, environmentally sustainable and visually pleasant alternative to the Rip Rap and Revetments. Such strategies are cost effective and Arc Ecology would be pleased to assist the Navy with design.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>The Navy understands the community's desires for restoration of natural shoreline and has incorporated such approaches into the selected remedy where they can be implemented cost effectively. Specifically, the proposed tidal wetlands will result in approximately one-third of the Parcel E-2 shoreline being restored at gradual slopes with natural soil and vegetation. However, the construction of tidal and freshwater wetlands will require excavation of existing material and consolidation on other parts of Parcel E-2. The surface topography following on-site consolidation will result in steeper slopes along the remaining portions of the Parcel E-2 shoreline, including adjacent to the Parcel E-2 Landfill, that require more robust protection (that is, the armoring identified in the selected remedy).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>RECOMMENDATIONS – Prepared by Saul Bloom</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Specific<br>Comment 21                          | <p><b>2. Improve meaningful public participation from the BVHP community by installing a new RAB.</b></p> <p>There is no substitute for a RAB. Restoration Advisory Boards, though occasionally trying, represent the best way to communicate with the public about a restoration plan. The benefits of a RAB were outlined above. It is our view that the Navy’s community meetings, though quieter, are less informative for both the community as well as the Navy and regulatory community. RABs need not be as problematic as the former HPS committee. As outlined in our comments on the CIP, there are numerous strategies the Navy could use to improve the dialogue and its partnership with the BVHP community.</p>                                                                                                                               | <p>Although the RAB was dissolved in December 2009 because it was no longer fulfilling its purpose, the Navy continues to involve the community in the details of the environmental cleanup program for HPNS. The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). Some of the specific community outreach efforts that the Navy conducts in accordance with the CIP include (1) preparation of topic-specific fact sheets; (2) use of a calendar of outreach events; (3) holding regularly scheduled community meetings; and (4) conducting bus tours. The Navy will regularly reevaluate the community involvement program, and determine if additional outreach efforts will help better inform the public of the HPNS cleanup program.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Specific<br>Comment 22                          | <p><b>3. Recognize Proposition P</b></p> <p>The Navy’s orientation toward Proposition P is untenable in a democracy. We may not like or have voted for the candidates our fellow citizens choose to elect, but we are not given the option of ignoring them. We may not like what an elective body like Congress does but we are bound to the laws this nation’s legislature creates. Proposition P was approved as the Community Acceptance Criteria under the NCP. The Navy and regulators must acknowledge Proposition P and begin addressing its objectives within its decisions. Arc Ecology recognizes that Proposition P does not bind DoN to a course of action. It’s existence as a plebiscite and City Policy however does bind DoN to address Prop P in its discussions relative to the merits of decisions like the Parcel E2 Proposed Plan.</p> | <p>As discussed in the response to Arc Ecology general comment 4, the Navy has considered Proposition P in its evaluation of the community acceptance criterion. However, as previously discussed, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy’s evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor’s Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the responses to general comment 4. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the “community acceptance” criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

| Specific<br>Comment 23                          | <p data-bbox="306 418 1125 472"><b>4. Evaluate other methods of transporting excavated materials to avoid shipment through BVHP neighborhoods</b></p> <p data-bbox="306 488 1125 846">The BVHP Community has consistently requested that the Navy explore other means of transporting excavated materials than by truck. DoN cannot on the one hand bind the community to the use of trucks for the transportation of this material; while at the same time threaten the community that a particular cleanup decision will result in dramatic increases of its preferred mode for conveying this material. From an environmental justice perspective, this situation is particularly problematic as it dramatically increases the disproportionate impacts felt by these communities. Doing so continually pits one aspect of the community's interest against the other, clean air and clean streets versus the cleanup of a large contaminated landfill that will remain in the neighborhood in perpetuity.</p> <p data-bbox="306 862 1125 1036">Alternative means such as barging of waste from the Shipyard to Pier 98 remain viable means of preventing such transportation through the neighborhood. This would provide the DoN with the option of either transporting materials to licensed landfills for disposal via train, truck or barge. Barging can accommodate larger loads potentially reducing the time it would take for any of the alternatives considered to be implemented.</p> <p data-bbox="306 1052 1125 1320">If DoN cannot do without trucks, Arc Ecology proposes that it consider a southerly route through the Bayview industrial flats across Ingalls to the Hunters Point Expressway, Harney Way to 101 South. This would dramatically limit the amount of material being transported through San Francisco on the approach to Highway 101 or 280 along Potrero Hill and downtown and over the Bay Bridge through the densest portions of the East Bay's communities. Instead trucks utilizing a southerly route would avoid densely populated areas in favor of 101 South to the San Mateo Bridge and I 680 through largely suburban and low- density rural areas.</p> | <p data-bbox="1150 418 1990 532">In preparing the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>), the Navy considered a range of options to transport wastes from Parcel E-2, but the analysis focused on a combination of truck and rail transport. Transport by barge was not evaluated in detail because of several factors, most notably:</p> <ul data-bbox="1150 548 1990 922" style="list-style-type: none"> <li>• No suitable dock facilities are close to Parcel E-2, and the lack of nearby dock facilities would require picking up and moving the waste multiple times before loading onto a barge. This handling process would be significantly less efficient and more expensive as compared to truck and rail transport.</li> <li>• Relatively few licensed disposal facilities located in the western U.S. accept the range of wastes types that would be generated during cleanup at HPNS. None of these facilities are located close to waterways that allow for barge transport. As a result, the material to be transported by barge would also need to be picked up and transported significant distances by either truck or rail. This handling process would be significantly less efficient and more expensive as compared to truck and rail transport.</li> </ul> <p data-bbox="1150 938 1990 1105">The Navy will continue to work with Arc Ecology and other stakeholders on determining the most appropriate methods for off-site disposal of excavated waste from HPNS. The specific transport methods for the selected remedy at Parcel E-2 will be developed in the remedial action work plan, which will be submitted to the EPA, DTSC, CDFG, CDPH, Water Board, CCSF DPH, and other interested stakeholders (including Arc Ecology) for review.</p> |

| 1.          | <p>Please consider these comments on the Navy's proposed cleanup of Parcel E-2, in the Hunter's Point Shipyard.</p> <p>Parcel E-2 has been separated out from the rest of the shipyard because its history includes pollution from use as a landfill over several decades when there was little oversight and less forethought about dumping contaminants including heavy metals, radioactive waste, and pcbs.</p> <p>I am not qualified to say whether the Navy's clean up plan successfully protects the public or fulfills its responsibility to avoid harm in the future. About the cleanup, I am concerned that there are too many unknowns.</p> <p>About how the area will be used, which includes trails and a shoreline park, I see that it acknowledges the extreme natural beauty of E-2, where the bay, the mud flat, and the fresh water outflows combine to make a unique and potentially wonderful restoration possible. The Navy may understand that salt marshes and mud flats are one of the most life generating types of nature. Many scientists believe that life itself emerged from such salt marsh areas. The Ohlone certainly feel this way. When we lived there we prayed there every day. What we want in the future is to pray again in a wetland like what we had before.</p> <p>I see no evidence that the Navy considered that if E-2 could be healed, it could contribute more to the health of the bay than any other region in San Francisco. Nor do I see evidence that the Navy considered the chance to give the Ohlone a heal to heal by returning this mud flat to as natural a state as possible and allowing us to practice our culture there. It seems to me that your cleanup plan does not take this chance to restore health and reverse destruction seriously enough.</p> <p>The proposal for a rock barrier is unnatural, short term thinking that losses the potential for giving life that salt marshes hold. The proposal for a cement cap is likewise a short term solution, a convenient solution, that seems not to have much else to say for itself.</p> | <p>The Navy has worked closely with the EPA<sup>13</sup>, DTSC, Water Board, and CCSF DPH to investigate potential contamination at Parcel E-2 in accordance with federal and state regulations. The Navy has also developed cleanup alternatives in consultation with the EPA, DTSC, Water Board, and CCSF DPH to support the planned reuse outlined in the SFRA's Hunters Point Shipyard Redevelopment Plan (SFRA, 2010). The development and evaluation of cleanup alternatives was guided by the Hunters Point Shipyard Redevelopment Plan and pertinent federal and state regulations. Using these guidelines, the Navy determined that there was no technical or regulatory basis for restoring all of Parcel E-2 as coastal wetlands. The Navy's selected remedy will allow for future use of Parcel E-2 in accordance with the Hunters Point Shipyard Redevelopment Plan and will comply with the federal and state regulations identified as ARARs (see Attachment 4 of this ROD).</p> <p>The Navy understands the community's desires for restoration of natural shoreline and has incorporated such approaches into the selected remedy where they can be implemented cost effectively. Specifically, the proposed tidal wetlands will result in approximately one-third of the Parcel E-2 shoreline being restored at gradual slopes with natural soil and vegetation. However, construction of the tidal and freshwater wetlands will require excavation of existing material and consolidation on other parts of Parcel E-2. The surface topography following the on-site consolidation will result in steeper slopes along the remaining portions of the Parcel E-2 shoreline, including the area adjacent to the Parcel E-2 Landfill, that require more robust protection (that is, the armoring identified in the selected remedy).</p> <p>The Navy believes that Alternative 2, which considered complete removal of the Parcel E-2 Landfill, was evaluated properly in the RI/FS Report, and that its potential advantages and disadvantages were adequately considered. The Navy's evaluation of the remedial alternatives, which were developed in consultation with EPA, DTSC, Water Board, and CCSF DPH, is detailed in Sections 13 and 14 of the Final RI/FS Report (ERRG and Shaw, 2011) and is summarized in the Proposed Plan.</p> |

| 1.<br>(cont.) | <p>I don't think the Navy has considered what this area means to San Francisco's Native Americans. I know that it has not consulted us, and that the city Planning Department, in its EIR explicitly avoided contacting us. I can't say that the Navy actively excluded us because I don't have those documents. But I can say there has been no effort to include us.</p> <p>I think you know that there are sixteen ancient sites within the Shoreline Development area or within 1/4 mile of it. This marks the shoreline as the most heavily used area of San Francisco by native people. E-2 and its surroundings include enough sites that it would be possible to understand more about the Ohlone from studying this place than anywhere else that remains in San Francisco, and possibly anywhere in the Bay Area. When Scotts Valley near Santa Cruz was excavated documented human history was pushed back from 3,000 to 13,000 years. When the BART and Yerba Buena Center were built Ohlone presence in San Francisco was no longer characterized as fleeting and barren, but rather seen as complex and exciting.</p> <p>I do not say this in order to ask you to study our graves. I say it because you still seem to treat us as if we never had any merit and in any case, are dead. What's true is that E-2 and its surroundings could be a source of pride for us, and in turn, for you. This could be a place where Ohlone culture was welcomed, fostered, and celebrated. You have the chance to restore the land and sea in a way that shows you are taking responsibility for what you have done. I'm humbled to say that it seems to have fallen on my shoulders to remind you of this.</p> <p>Our tribe wants to participate in the cleanup, to encourage and contribute to taking it as far back to a healthy place as it is possible to do by restoring a salt marsh. It would be an honor to participate in that way. I want to partner with you to do that. So I am asking you to invite our participation and consultation in restoring this place to a higher standard than you are proposing.</p> | <p>The Navy does not believe that any changes to these ratings are warranted. Further, the reviewer's suggestion to restore all of Parcel E-2 as coastal wetlands is not required by the RAOs, ARARs, or planned reuse, which play an important role in the CERCLA remedy evaluation process.</p> <p>The Navy understands its obligation, as required by the National Historic Preservation Act, to consider and properly address potential impacts upon cultural resources at HPNS, including shellmounds from native people who used the land prior to the Navy's occupancy. To meet this obligation, the Navy, in consultation with the Advisory Council on Historic Preservation and State Historic Preservation Office, identified potential archaeological resources at HPNS and established a process by which all proposed underground construction must be reviewed to make sure that potential archaeological resources are not adversely affected. The Navy identified a potential buried shellmound in the northwest portion of Parcel E-2, but determined that the proposed remedial alternatives would not adversely affect this potential resource because the underground construction is limited to excavation of artificial fill and solid waste placed by the Navy and placement of clean imported soil. Further information is included in Appendix N (Section N3.4.1) of the RI/FS Report.</p> <p>The Navy will continue to work with community members and other stakeholders on maintaining adequate public participation regarding the cleanup for Parcel E-2.</p> |

| 1.          | <p>In response to the Navy's Preferred Alternative (Alternative 5) as stated in the Proposed Plan for Parcel E-2 of the Hunters Point Naval Shipyard, Greenaction for Health and Environmental Justice submits the following comments.</p> <p>We submit these comments on behalf of our low-income and people of color constituents who reside near the Shipyard, and out of concern for future residents who may be living on top of or next to contamination at the Shipyard if it is not cleaned properly and thoroughly.</p>                                                                                                                                                                                                                                                                                                                                                                                             | See below for the Navy's response to the subject comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2.          | <p>Greenaction opposes Alternative 5, the Navy's Preferred Alternative, as it is not protective of public health or the environment. We also cannot support the other proposed Alternative Remedial Actions with the sole exception of Alternative 2.</p> <p>We support and urge adoption of Alternative 2 as it is the only Alternative that involves a full cleanup of contamination as part of the remediation process. Alternative 5 only removes 'hotspots' of contaminated soil and would 'cap' areas with a plastic liner and soil overlay. These methods are insufficient to ensure the protection of human health to the highest degree for the immediate community of Bayview Hunters Point's current and future residents. Capping may be cheaper in the short run, but will be expensive due to the lack of full cleanup and the threat to public health and the environment that will be allowed to remain.</p> | <p>As stated on page 15 of the Proposed Plan, the Navy determined that Alternatives 2, 3, 4, and 5 each provide adequate protection of human health and the environment. Section 13 of the RI/FS<sup>14</sup> Report details the basis of the Navy's determination (<a href="#">ERRG and Shaw, 2011</a>). The draft and draft final versions of the RI/FS Report were reviewed by the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders. The Navy responded to comments regarding its evaluation of the remedial alternatives, as documented in Appendix S of the Final RI/FS Report. The Navy believes that this information is adequate to address the reviewer's concerns and support the ratings detailed in Sections 13 and 14 of the Final RI/FS Report (and summarized in the Proposed Plan). The Navy does not believe that any changes to these ratings are warranted.</p> <p>The Navy understands the desire of community members to have Parcel E-2 cleaned up to the highest standards and has considered this input in its evaluation of the community acceptance criterion. However, the Navy is also required to consider eight other criteria that are specified in the NCP. As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> |

| 2.<br>(cont.) | <i>(see above)</i> | <p>The Navy's evaluation of the remedial alternatives is summarized on pages 15, 16, and 17 of the Proposed Plan. Additional information is included in Sections 2.8 and 2.9 of this ROD. In summary, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the responses to comments from Arc Ecology (see pages 8 and 9 of this responsiveness summary). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> <p>Regarding the assertion of inadequate characterization, the Navy has worked closely with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders for more than 20 years to obtain and evaluate data from the Parcel E-2 Landfill. The Navy's collaborative effort with the EPA, DTSC, Water Board, and CCSF DPH resulted in the identification of a focused set of remedial alternatives that included complete removal of the Parcel E-2 Landfill (in addition to one or more containment alternatives). The available data are adequate to support an evaluation of the focused set of remedial alternatives, and the Navy does not believe that further characterization is necessary or appropriate to select a remedy for Parcel E-2. The information contained in the administrative record, which includes pertinent regulatory guidance (EPA, 1993a, 1993b, 1994, and 1996) and site-specific input from various stakeholders, adequately supports this position.</p> |

The landfill in E-2 contained hazardous and radioactive materials, yet has not been fully characterized; soil bores and samples have not been systematically taken for the entire area, and therefore it is not acceptable to cap the landfill without even knowing what is buried inside of it. Not only is the landfill not fully characterized, but it is in very close proximity to the community, compared to other areas where capping was used as a method of containment. The landfill is across the street from where people live, with the only separation being a wire fence.

| Comment No.   | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.<br>(cont.) | <p>Capping and lining are not permanent solutions. After the fire of 2000, the Navy has had to recap portions of the landfill in E-2 because the gases had migrated off-site to UCSF in 2002. In 2003, the Navy had to work the extraction pumps again to remove the gases migrating beneath the capped portions. With capping proposed as a permanent solution, current gas-control measures would be expanded to take care of the entire landfill on the large-scale. Combustible methane would still be building up below the cap and need to be extracted in the future to maintain the 5% combustion cut-off rate recommended to prevent the gas from combusting. Proposed methods also include flare burning of methane and filters to remove organic compounds. Without knowing what is in the landfill, filters and the flare method for burning methane may not be the best course of action. Likewise, gas monitoring of the landfill is stated as an ongoing part of the clean up plan, but without any protocol for evacuation or notification of the community in the event of an emergency. The Navy has already failed to notify the community in a timely manner when the fire broke out in the landfill in 2000. In light of the fact that degradation of the landfill contents will take place over hundreds of years and produce many unknown flammable and toxic and combustible gases, and the fact that there already was a fire within the landfill, we feel this represents a lack of foresight that can impact the community in the future.</p> <p>Furthermore, below-ground barriers near the San Francisco Bay are not sufficient to prevent leachate from contaminating San Francisco Bay; the landfill is situated right over the water table that feeds into the Bay. Even though the Navy proclaims that their barrier will prevent leachate in the event of an earthquake, there has been no independent testing to confirm this. Despite the planned monitoring and maintenance, nowhere in the plan is a contingency plan mentioned should monitoring levels for water, air, or soil pollution be exceeded. Without any oversight, monitoring efforts are not useful in protecting the nearby community, nor people who use the area in the future.</p> | <p>Regarding the concerns over the long-term effectiveness of the preferred alternative, the Navy believes that the information in the RI/FS Report is adequate to demonstrate that the proposed cover and other containment systems, which will be inspected regularly and maintained in accordance with the ARARs identified in Attachment 4 of this ROD, will be protective of human health and the environment. Sections 11.5 and 12.2.3 of the RI/FS Report (ERRG and Shaw, 2011) provide detailed information on the elements of the containment systems proposed under the preferred alternative. The Navy believes that this information is adequate to address the reviewer's concerns. In addition, the Navy wishes to clarify several points raised by the reviewer:</p> <ul style="list-style-type: none"> <li>• No effort was made to "recap" the Parcel E-2 Landfill in 2002. The landfill gas control system installed from 2002 to 2003 was a separate action from the interim cover that was placed from 2000 to 2001. These two actions are briefly described on page 7 of the Proposed Plan. Detailed information on both actions is presented in the RI/FS Report (Sections 3.8.4 and 3.8.5, and Appendices E and F).</li> <li>• The Navy has identified two potential options to treat landfill gas but, as stated on page 19 of the Proposed Plan, will further evaluate the treatment options during the remedial design and will consult with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders to determine which treatment option will be used.</li> <li>• The Navy will inspect, maintain, and monitor the cover and containment systems to comply with pertinent federal and state requirements, as identified in Attachment 4 of this ROD. The planned activities will include emergency response procedures necessary to comply with the pertinent state requirement (Title 27 CCR § 21130). The planned activities are briefly described in Section 2.9.1 of this ROD and will be detailed in the post-closure operation and maintenance plan.</li> <li>• The planned activities will include groundwater and surface water monitoring that will be adequate to ensure the protection of human health and the environment. The EPA, DTSC, and Water Board will continue to oversee the Navy's long-term management of Parcel E-2 to ensure that it complies with pertinent federal and state requirements.</li> </ul> |

| 2.<br>(cont.) | <p>Greenaction supports the implementation of a full cleanup of contaminants as described in Alternative 2, with proper monitoring of contamination and cleanup activities as well as enforcing laws related to air, land, and water. Greenaction has never supported capping as an effective or permanent solution to the problem of toxic contamination at Hunters Point Naval Shipyard or anywhere else. The community of Bayview Hunters Point deserves the best clean up possible, regardless of the fiscal impacts to those responsible, because health should be considered before wealth. As a low-income community of color that has already been negatively impacted by the Shipyard's contamination in the past and also is impacted by multiple contamination and pollution sources, cumulative effects must be taken into consideration when choosing a plan that effects the long-term health of Bayview Hunters Point residents. Greenaction for Health and Environmental Justice, Bayview Hunters Point community members, and the majority of city residents, want a full cleanup of the pollution in Parcel E-2. Greenaction also demands that toxic waste not be transferred to other impacted communities, shifting the burden to another community with cumulative health problems and pollution sources.</p> <p>As a federal agency, the US Navy is subject to the Executive Order on Environmental Justice, Executive Order 12898. This Executive Order requires the Navy to comply with environmental justice, and environmental justice mandates will be violated if the Navy merely requires capping of a massive toxic mess instead of a safe, thorough and comprehensive site remediation so that the health of future and current residents are fully protected.</p> <p>The Navy also failed to provide meaningful opportunities for public involvement in this decision-making process, especially in light of the disbanding of the Restoration Advisory Board. Public involvement in decisions that affect the well-being of a community is a right of all citizens.</p> <p>We therefore request that the Navy adopt and implement Alternative 2, the most health protective and just solution to the contamination at the Hunters Point Shipyard.</p> | <p>The Navy and EPA are firmly committed to achieving the goals identified in the Executive Order on Environmental Justice (E.O. 12898) at HPNS. Both agencies are dedicated to consistent, fair treatment and meaningful participation in environmental decision-making for minority, low-income, and indigenous populations that are disproportionately impacted by pollution. The Navy and EPA, in performing environmental cleanup work at HPNS with support from DTSC and the Water Board, have worked together to achieve the environmental justice goals of fully protective cleanup actions, fair and equal treatment, and meaningful involvement for all people in the Bayview-Hunters Point community. Our efforts to satisfy these goals include:</p> <ul style="list-style-type: none"> <li>• Substantial regulatory review and oversight of all Navy cleanup activities. The EPA, DTSC, Water Board, CCSF, California Department of Public Health, Bay Area Air Quality Management District, and San Francisco Bay Conservation and Development Commission all have dedicated significant additional staff to HPNS to ensure that the Navy's cleanup work is performed in a way that is protective of the Bayview-Hunters Point community and complies with federal and state laws and regulations.</li> <li>• Substantial financial commitment from the Navy to HPNS cleanup. The Navy has spent approximately \$716M over the past 20 years on the HPNS cleanup program, and these expenditures have made HPNS one of the nation's largest BRAC cleanup programs. The Navy's cleanup efforts to date have successfully removed, treated, or contained a significant volume of contamination that would otherwise pose an unacceptable risk to site workers and future occupants.</li> <li>• EPA's Technical Assistance Grants to the Community: <ul style="list-style-type: none"> <li>- Technical Assistance Grants (TAG). Since 1993, EPA has consistently provided various community groups with grant money to hire an independent technical advisor to review and provide independent input on the Navy's plans and reports, and to help further explain the Navy's cleanup work to interested community members.</li> </ul> </li> </ul> |

| 2. (see above)<br>(cont.) |         | <ul style="list-style-type: none"> <li>- Technical Assistance Services for Communities (TASC). EPA used its TASC contract program to provide the community with an independent asbestos technical expert to review the “Draft 2010 U.S. EPA’s Review of Dust/Asbestos Control Measures and Air Monitoring at Hunters Point Shipyard Parcel A Report” and other supporting documentation. A community meeting was held where the independent technical advisor presented his findings. In addition, TASC services were used by the community to review the San Francisco Redevelopment Agency’s EIR for HPNS related to land use and site cleanup. The technical advisor presented formal comments to the CCSF and held a meeting to present independent findings to the broader community.</li> <li>- Region 9 Environmental Justice Grant for HPNS. Prior to the national program, the Region 9 EPA Superfund Program developed and awarded a “one-time” HPNS Environmental Justice Small Grant to encourage new activity or improve the quality of existing activities related to environmental justice and cleanup of the HPNS.</li> <li>• Meaningful Community Engagement under the Navy’s Updated Community Involvement Plan (CIP). The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). The Navy conducts the following specific community outreach efforts in accordance with the CIP: (1) publishing an annual calendar of outreach events; (2) dedicating a Navy team member to serve as Community Involvement Manager; (3) publishing fact sheets on important technical topics; (4) holding regularly scheduled community meetings; (5) publishing an annual overview of the HPNS cleanup program; (6) regularly updating a hardcopy mail and e-mail distribution list to maximize communication; (7) holding periodic bus tours of HPNS to describe the cleanup program; (8) participating in local radio programs to answer questions from the local community; (9) presenting technical information to a variety of existing community groups; (10) making translation services available to interested community members; and (11) publishing notices in local newspapers to announce public meetings associated with important document reviews.</li> </ul> |

|---------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. (see above)<br>(cont.) |         | <ul style="list-style-type: none"> <li>• Employment. The Navy works closely with their existing contractors to emphasize the importance of hiring community members to assist in the cleanup program, and works with interested stakeholders (such as the CCSF) to promote job training programs. These efforts have proven successful based on recent estimates—from 2009 to 2011 over 1,000 community members have been employed under Navy contracts (on either full-time, part-time, or temporary basis) to assist in the cleanup program. In addition, the Navy and their contractors have identified a large network of local businesses to assist in the cleanup program, such as those providing document production services, supplying building materials and consumables (drinking water and ice), renting heavy equipment, and transporting soil and rock. These efforts have proven successful based on recent estimates of over \$11 million worth of goods and services from local businesses.</li> <li>• Commitment to Protective Cleanup Actions. Most importantly, the Navy, EPA, and the State of California regulatory agencies are committed to fully protective cleanup actions at Parcel E-2 and throughout HPNS. As described in previous responses, the selected remedy for Parcel E-2 will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife. Since 2005, the Navy has undertaken a great deal of early action to remove contaminated soil at Parcel E-2, involving the excavation and off-site disposal of over 90,000 cubic yards (over 6,400 truckloads). For the Parcel E-2 landfill itself, the Navy, EPA, and State of California jointly believe that safely isolating and capping the Parcel E-2 Landfill (as specified in Alternative 5) presents less overall risk to the adjacent community when compared with the risks of other cleanup alternatives evaluated, including complete removal of the Parcel E-2 Landfill (in Alternative 2). The combination of removal and containment proposed under Alternative 5 reduces risk sooner, is easier to implement, and is much more cost-effective as compared with Alternative 2. In addition, Alternative 5 provides additional risk reduction as compared with Alternatives 3 and 4.</li> </ul> |

|----------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.<br><i>(cont.)</i> | <i>(see above)</i> | The Navy agrees that contamination should not be transferred to other communities and that is one of the reasons for selecting a safe, protective containment remedy for Parcel E-2. |

|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Introduction | <p>We are the members of Citizen's Advisory Committee for the San Francisco Hunters Point Shipyard Redevelopment Project (HPCAC), and we are writing to comment on the US Navy's proposed remedial alternatives for Parcel E-2. For the past 18 years, the HPCAC has worked toward the revitalization of the southeast sector of the City in concert with many stakeholders, including current residents of the project area, the master developer and the San Francisco Redevelopment Agency. The Parcel E-2 remediation is a major milestone in the progress of the overall project.</p> <p>Our end goal is a redeveloped area that is economically, socially, and environmentally successful and sustainable. We review all actions within the total redevelopment project with that perspective. In our review of the proposed Parcel E-2 remediation, we are looking for solutions that provide:</p> <ol style="list-style-type: none"> <li>1. Healthy and safe environment for future residents, employees, and visitors;</li> <li>2. Flexible land uses that maintain maximum ability to adjust as City land needs change;</li> <li>3. Maximum ability to be completed in a reasonable timeframe so as not to delay the buildout of the Shipyard.</li> </ol> <p>After reviewing the proposed remedial alternatives, we generally agree with the Navy's recommended alternative (Alternative #4). We agree that it best meets the federal requirements within the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) as well as the particular goals of the HPCAC listed above. However, there are certain issues that we would wish for the Navy to address in the final design of the remedial action. These are the following:</p> | <p>The following pages provide responses to the specific comments from the Mayor's Hunters Point Shipyard Citizens Advisory Committee.</p> |

|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | Evaluation of the rock revetment. As part of the environmental remediation, we understand the purpose of the upland's rock revetment, but considered in light of our goal to maintain flexible land uses, we are concerned that the rock revetment limits potential recreational uses of the Parcel E-2. While we would never support a recreational use that would inflict long-term environmental damage on the new wetland area, we feel it is in the community's interest to maintain land use flexibility. To that end, we would ask that alternatives to the rock revetment be considered. | The Navy has determined that armoring will be required along steeply sloped portions of the Parcel E-2 shoreline, including the area adjacent to the Parcel E-2 Landfill. The Navy has identified rock revetment as the most viable option for armoring these parts of the Parcel E-2 shoreline; however, the Navy will further evaluate potential refinement to this option during the remedial design. The evaluation will consider ways to enhance the recreational uses and aesthetics of the shoreline while maintaining a similar level of long-term effectiveness, implementability, and cost compared to rock revetment. |
| 2.          | Landfill gas treatment. We understand that the Navy plans to review methods of treating extracted landfill gas. We would ask that the Navy disclose the potential risks of enclosed flare in an urban environment should that continue to be a potential method of remediation.                                                                                                                                                                                                                                                                                                                  | The Navy will further evaluate the option to treat landfill gas during the remedial design and will consult with the EPA <sup>15</sup> , DTSC, Water Board, CCSF DPH, and other project stakeholders to determine which treatment option will be used. The Navy will describe the potential hazards associated with the landfill gas treatment options when the specific design has been chosen after extensive discussion with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders.                                                                                                                            |
| 3.          | Liquefaction. While the Navy has addressed this topic previously, we would ask that potential risks of liquefaction present in the recommended alternative be laid out in the remedial action design documents.                                                                                                                                                                                                                                                                                                                                                                                  | The Navy will describe the potential risks associated with liquefaction in the remedial design and will further evaluate this very important part of the design, including consulting with other technical experts, to make sure that the final cover is built to withstand the appropriate design earthquake and comply with numerous other regulatory requirements for landfill covers.                                                                                                                                                                                                                                        |

| <b>Comment No.</b> | <b>Comment</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Response</b>             |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 4.                 | We feel it is important to address why we are not endorsing Alternative #2, characterized by complete removal of all waste and contaminated soils in the Parcel E-2 landfill and additional identified radiological wastes. This is a remedial action that a contingent of the community has long advocated for. Although we agree with the end goals of maximum long-term environmental safety for the community, we don't feel that Alternative #2 best meets those goals. From our understanding there is a great amount of exposure risk associated with complete removal – this understanding is supported by recommendations from the Environmental Protection Agency. These exposure risks are elevated and would continue for the entire timeframe of the remediation action, which could be years. In addition, there is no guarantee that the remediated land parcel would allow for a greater flexibility in land uses. For these reasons, we cannot support Alternative #2. | Thank you for your comment. |

| 1.          | <p>While this message is certainly ‘down to the wire’, it seems that there is still time to express my continuing concern about the relatively wide dispersion of monitoring wells for “Parcel E-2” at HPS. With that kind of dispersion and not very specific information about the overall depth of measure, it would seem that there is much room for critical threshold chemistry to be missed (rad count ?). It would seem appropriate that SF takes all of the the proposed restrictions (“Institutional Controls”), as a non negotiable prerequisite, enforced and enforceable by both state and federal authorities. [The Navy’s “Overview of Proposed Institutional Controls,” as published in the Proposed Plan, was attached for reference purposes.]</p> | <p>The Navy has worked closely with the EPA<sup>16</sup>, DTSC, Water Board, CCSF DPH, and other project stakeholders for more than 20 years to obtain and evaluate data from Parcel E-2 and has determined that the available data are adequate to support an evaluation of the focused set of remedial alternatives.</p> <p>In addition to the specified institutional controls, the selected remedy includes the numerous monitoring and maintenance activities that would be performed as long as necessary to protect human health and the environment and to comply with pertinent state and federal ARARs. Regulatory oversight will continue during long-term operation and maintenance of the selected remedy. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment.</p> |

| 1.          | <p><b>Re: Comments and 60-days notice of Citizens Suit following approval of the plan</b></p> <p>Dear US Navy,</p> <p>We wish to object to and protest to the U.S. Department of the Navy, in coordination with state and federal environmental regulatory agencies, <i>Proposed Plan for cleanup of Parcel E-2</i> at the former Naval Shipyard at Hunters Point San Francisco, California. This letter also constitutes a 60-days notice of intent to bring a Citizens suit against you pursuant to Administrative Procedures Act (APA) Chapter 5; Clean Air Act (CAA) 42 USC § 7604 Citizen suits; Clean Water Act (Federal Water Pollution Control Act (FWPCA)) 33 USC § 1365 Citizen suits; and, Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) 42 USC § 9659 (a) Citizen suits</p> <p>The Navy’s proposed cleanup plan regarding uncharacterized contaminants is to provide only for “Containment: Install soil cover over all of Parcel E-2 and place a protective liner under the soil cover in all areas except the new tidal wetlands in the Panhandle Area. Build shoreline revetment at the edge of the soil cover. Perform active landfill gas extraction and treatment. Install below ground barrier and drain at western boundary to divert groundwater flow into the landfill. Inspect and maintain soil cover, protective liner, groundwater barrier/drain, and gas control system”.</p> <p>The proposed plan if implemented would be in direct violation of the voter approved San Francisco Proposition P in 2000 its Board of Supervisors Implementation Resolution 06304-1 [Exhibit A], and Bay View Hunters Points’ residence, and out civil rights under color of law [federal and state].</p> <p>“WHEREAS, The Hunters Point Bayview community wishes the Hunters Point Shipyard to be cleaned to a level which would enable the unrestricted use of the property – the highest standard for cleanup established by the United States Environmental Protection Agency; and</p> | <p>Proposition P was adopted by the CCSF<sup>17</sup> Board of Supervisors in Resolution 634-01 in August of 2001. Although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible. The Navy, in its RI/FS Report that was concurred upon by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.</p> <p>Proposition P was later addressed in the “<i>Conveyance Agreement Between the United States of America Acting by and Through the Secretary of the Navy United States Department of the Navy and the San Francisco Redevelopment Agency for the Conveyance of Hunters Point Naval Shipyard</i>” executed on March 31, 2004. Recital paragraphs 10 and 11 of the Conveyance Agreement referenced Proposition P and reiterated community support for cleanup to the highest level <u>practical</u>. Furthermore, Article 1(q)(iv) of the Conveyance Agreement specifically addresses Parcel E (which at the time of execution also included Parcel E-2) and states in relevant part: “<i>In any event, the remedies selected for Parcels E and F shall meet applicable Federal and State regulatory requirements, including the nine criteria set forth in 40 CFR 300.430(e)(9)(iii), one of which is community acceptance.</i>”</p> |

| 1.          | <p>WHEREAS, The 87% of voters in the City and County of San Francisco in November 2000, who opposed increasing the risk for cancer as a result of using lower standards for cleanup, supported the Hunters Point Bayview community's request that the federal government - through its Department of the Navy - allocate funds sufficient to clean the Shipyard to a level that will enable unrestricted use and approved Proposition P urging that the initiative be adopted as City policy; and</p> <p>WHEREAS, A cleanup to unrestricted levels under Proposition P would (1) protect the community and future residents of the Shipyard from past pollution,..” [Exhibit A page 7]</p> <p>The US Navy has authority to act in behalf of the affected Bay View Hunters Point community under Federal laws to insure compliance with all federal environmental, restoration, civil rights and base reuse laws (i.e., Laws Ordinance Regulations and Standards), but has failed to do so; including, but not limited to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 U.S.C. § 9601 et seq.; 40 CFR Parts 300–311, the Resource Conservation and Recovery Act (RCRA), 42 U.S.C. § 6901 et seq.; 40 CFR Parts 240–281, the Clean Water Act (CWA), 33 U.S.C. §§ 1251–1387; 33 CFR Parts 320–330, 335–338; 40 CFR Parts 104–140, 230–233, 401–471; Executive Order 11990 (Protection of Wetlands), the Clean Air Act (CAA), 42 U.S.C. § 7401 et seq.; 40 CFR Parts 50, 60, 61, and 80, the Safe Drinking Water Act (SDWA), 42 U.S.C. §§ 300f–300j- 26; 40 CFR Parts 141–149, the Base Closure Community Redevelopment and Homeless Assistance Act of 1994 (Redevelopment Act), Pub. L. 103-421; 32 CFR Part 176, the National Environmental Policy Act (NEPA) 42 U.S.C. § 4321 et seq.; and the Civil Rights Act of 1964, 28 U.S.C. § 1447, 42 U.S.C. §§1971, 1975a–1975d, 2000a– 2000h-6, by the CCSF, the SFRA, and US Navy, and other federal (US EPA), state (DTSC), and local agencies of the government, in all its programs, plans, and actions. And the US Navy has a specific duty under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 U.S.C. § 9601 et seq., and its implementing regulations, 40 CFR Parts 300–311, which requires the federal government to take community acceptance into account in all its cleanup decisions</p> | <p>Recital 10 also acknowledges that the Navy is required under CERCLA to take community acceptance into account in its cleanup decision. The Navy has done so in this ROD and responsiveness summary in accordance with CERCLA and the NCP and has also addressed technical feasibility and cost effectiveness in the ROD in a manner that is consistent with CERCLA, the NCP, Proposition P, the Conveyance Agreement, and the Hunters Point Shipyard Redevelopment Plan.</p> <p>The Navy's environmental cleanup program at HPNS addresses the planned reuse outlined in the SFRA's amended Hunters Point Shipyard Redevelopment Plan (SFRA, 2010). The Redevelopment Plan was initially approved in 1997 and adopted as the official Redevelopment Plan for HPNS by the CCSF Board of Supervisors (Ordinance 285-97 pursuant to Chapter 4.5 of California Community Redevelopment Law, California Health and Safety Code § 33492). The Redevelopment Plan was subsequently amended in 2010, 9 years after Proposition P was approved and 6 years after execution of the Conveyance Agreement. The CERCLA remedial action selected in this ROD is consistent with and will accommodate the future reuses identified in the amended Redevelopment Plan.</p> <p>The Navy also notes that Proposition P is a local governmental resolution and is not a federal or state statute or promulgated regulation. Therefore, Proposition P is not a CERCLA federal or state ARAR for purposes of CERCLA remedy selection in Parcel E-2.</p> <p>The Navy has, in consultation with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders, complied with the requirements of CERCLA 42 U.S.C. § 9601, et seq., the NCP (40 CFR Part 300) and pertinent EPA guidance to (1) obtain and evaluate data regarding potential contamination at Parcel E-2; (2) develop and evaluate an appropriate range of remedial alternatives in the RI/FS Report addressing CERCLA and NCP requirements, including federal and State ARARs (ERRG and Shaw, 2011); (3) identify a preferred alternative in the Proposed Plan and solicit public comments, and (4) select a CERCLA remedial action in this ROD as documented and supported in the CERCLA administrative record for Parcel E-2 (see administrative index in Attachment 4).</p> |

| 1.<br>(cont.) | <p>But the US Navy and US EPA has failed to comply with civil rights requirements to “take community acceptance into account in all its cleanup decisions” despite our repeated complaints to that effect starting with our October 20, 2004 Title VI civil rights complaint [Exhibit B] to the US EPA, US Navy, and US DOJ which the United States government has swept under the rug and has failed to address over seven years later.</p> <p>“The SFRA took discretionary action on December 2, 2003, by approving the DDA for the development of the Hunters Point Shipyard<sup>1</sup>. The minutes of the December 20, 2003 meeting of the RAB reflects they unanimously adopted my motion before the RAB.<sup>2</sup></p> <p>Mr. Brown reintroduced a document that concerned a civil rights violation by the Redevelopment Agency related to the Disposition Development Agreement (DDA). He made a motion to accept the document.... and Ms. Pendergrass called the question and the RAB supported Mr. Brown’s motion.</p> <p>Additionally, by and through Mayor Gavin Newsom, CCSF took what is clearly discretionary action by approving (<i>i.e.</i>, entering into) the CA with the U.S. Navy. The CA sets a specific timetable for giving CCSF a portion of the Hunters Point Shipyard for residential development (herein referred to as Parcel A), as well as giving commercial development rights to Lennar/BVHP, a private, non-governmental organization.</p> <p>To my knowledge (and please advise me immediately if and how I am wrong), neither of the discretionary actions involving the CA and DDA previously described has been subjected to public review or comment, nor have these actions been subjected to environmental review as required by CEQA for such projects.</p> | <p>As described on page 16 of the Proposed Plan, the community acceptance criterion is one of two modifying criteria and has been evaluated based on comments provided in the course of the CERCLA remedy selection process, including those received on the Proposed Plan, and other community input, including Proposition P. Consistent with the NCP [40 CFR § 300.430(e) and (f)], the Navy’s evaluation of the community acceptance criterion is documented in this ROD, which includes the subject responsiveness summary.</p> <p>The reviewer’s allegations concerning the SFRA and the Disposition Development Agreement are directed to local governmental decisions relating to local California Environmental Quality Act compliance and do not relate to CERCLA remedy selection by the Navy and EPA.</p> |
|               | <p><sup>1</sup> See attached Exhibit B <a href="http://mecresources.com/RABonViolations1.htm">http://mecresources.com/RABonViolations1.htm</a> motion unanimously adopted by the RAB at its December 20, 2004 meeting.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.<br>(cont.) | <p>On November 7, 2000, CCSF voters passed, with 87% approval, Proposition P calling upon the US Navy to remediate the Hunters Point Naval Shipyard to the highest levels practical to assure the flexible reuse of the property. The Navy is required under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 U.S.C. § 9601 <i>et seq.</i>, and its implementing regulations, 40 CFR Parts 300–311, to take community acceptance into account in its cleanup decisions. On July 30, 2001, CCSF’s Board of Supervisors (the Board) passed unanimously a resolution implementing the will of the voters as expressed by Proposition P. The Board’s vote confirmed as the policy of CCSF that the Navy should clean the Hunters Point Naval Shipyard of toxic and hazardous pollution to the highest practical level. Since the voters empowered the Board to enforce Proposition P, and the Board then proceeded to do so, the Board clearly has a duty to also vote on the CA.</p> <p>Both the CA and the DDA must be subjected to all applicable government approvals including all required environmental reviews under both CEQA and its federal counterpart, the National Environmental Policy Act (NEPA). There are a number of additional governmental approvals that must be obtained prior to the development allowed by the CA and DDA, including General Plan amendment(s) and redevelopment area mergers. There are also legal mandates for a subsequent or supplemental environmental analysis to augment the study done in 1999, which provides no complete or adequate environmental analysis of the impacts associated with the development envisioned and allowed by the CA and DDA. The impacts that are being ignored pose imminent threats of grave if not fatal harm to human life and safety, as well as the environment.</p> <p>The impacts and their potentially grave harm must be analyzed by considering the pertinent documentation from the Navy and the Hunters Point and San Francisco Fire Departments, particularly in regard to the residential</p> | <p>As previously stated, although Proposition P does express a recommendation from the Hunters Point Bayview community for cleanup to a level allowing unrestricted use of the property, Proposition P also urges the Navy to clean up the shipyard in a manner that does not rely on future owners to maintain barriers to protect the public from exposure unless other remedies are technically infeasible. The Navy, in its RI/FS Report that was concurred upon by the other Federal Facility Agreement signatories, has determined that Alternative 2 (which involves excavation and off-site disposal of the entire Parcel E-2 Landfill) poses many complex engineering challenges and borders on being technically infeasible. In addition, Alternative 2 is not cost-effective pursuant to the CERCLA and NCP remedy selection criteria addressed in the Proposed Plan and ROD. The containment remedy selected in the ROD includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.</p> |

| 1.<br>(cont.) | <p>development being planned for Parcel A under the CA and DDA. It is common knowledge that this area has been the site of a series of fires during the summer months of the years 2003, 2002, 2001 and 2000. The ignition of these fires was fueled by flammable, explosive chemicals whose presence is documented in the Parcel A Record of Decision and include petroleum products, pesticides, volatile organic compounds in the air and soil, and gaseous emissions from the partially capped industrial landfill on Parcel E, which is immediately adjacent to Parcel A.<sup>3</sup> [Exhibit B page 3 to 5]</p> <p>Subsequent actions by the US Navy, including but not limited to the December 23, 2009 [Exhibit C] Memo from BRAC Program Management Office West Recommendation to Dissolve the Hunters Point Restoration Advisory Board demonstrates conclusively a failure by the US Navy [in concert with US EPA] to comply with their specific duty under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 U.S.C. § 9601 et seq., and its implementing regulations, 40 CFR Parts 300–311, to take community acceptance into account in all its cleanup decisions.</p> <p>We allege that the US Navy, US EPA, and other federal officials; in their official capacities, are participating in an unlawful “civil conspiracy” with City and County of San Francisco, the San Francisco Redevelopment Agency, and Lennar/BVHP, a private, non-governmental organization to violate our federal civil rights under color of law; both state and federal.</p> | <p>As previously stated, the reviewer’s allegations concerning the SFRA and the Disposition Development Agreement are directed to local governmental decisions relating to local California Environmental Quality Act compliance and do not relate to CERCLA remedy selection by the Navy and EPA. In addition, conditions at the former Parcel A, which was transferred to the CCSF in 2004, have no bearing on Parcel E-2.</p> <p>Although the RAB was dissolved in December 2009 because it was no longer fulfilling its purpose, the Navy continues to involve the community in the details of the environmental cleanup program at HPNS. The Navy updated their CIP in 2011 to present the communication and community involvement program activities that were designed to meet the specific needs and desires of the HPNS community (Navy, 2011a). Some of the specific community outreach efforts that the Navy conducts in accordance with the CIP include (1) preparation of topic-specific fact sheets; (2) use of a calendar of outreach events; (3) holding regularly scheduled community meetings; and (4) conducting bus tours. Section 2.10 of this ROD identifies the Navy’s efforts to involve the local community in the cleanup program at HPNS, including soliciting input on the proposed cleanup for Parcel E-2.</p> <p>The Navy does not agree with the reviewer’s assertion of a “civil conspiracy” or any violations of the civil rights of members of the local community. As previously stated, the Navy has, in consultation with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders, followed the process established in the NCP (40 CFR § 300.430) and pertinent federal guidance to (1) obtain and evaluate data regarding potential contamination at Parcel E-2; (2) develop and evaluate an appropriate range of remedial alternatives in the RI/FS Report (ERRG and Shaw, 2011); and (3) identify a preferred alternative in the Proposed Plan and solicit public comments. The information contained in the administrative record, which includes pertinent regulatory guidance (EPA, 1993a, 1993b, 1994, and 1996) and site-specific input from various stakeholders, is consistent with and supports the selection of the remedial action for Parcel E-2 by the Navy and EPA pursuant to CERCLA and the NCP.</p> |

|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 1.<br>(cont.) | <p>We are in the belief and understanding that a civil conspiracy is defined as an agreement between two or more people to participate in an unlawful act or a lawful act in an unlawful manner. See <i>Halberstam v. Welch</i>, 705 F.2d 472, <i>Hampton v. Hanrahan</i>, 600 F.2d 600, 620-21 (7th Cir.1979), modified on other grounds, 446 U.S. 754, 100 S.Ct. 1987, 64 L.Ed.2d 670 (1980). An express agreement among all conspirators is not necessary. “A plaintiff ... need not prove that each participant in a conspiracy knew the exact limits of the illegal plan or the identity of all participants therein.” <i>Hampton</i>, 600 F.2d at 621 (quoting <i>Hoffman-LaRoche, Inc. v. Greenberg</i>, 447 F.2d 872, 875 (7<sup>th</sup> Cir.1971)). The conspirators “must share the general conspiratorial objective, but they need not know all the details of the plan ... or possess the same motives.” <i>Id.</i> Thus, to “demonstrate the existence of a conspiratorial agreement, it simply must be shown that there was a single plan, the essential nature and general scope of which [were] known to each person who is to be held responsible for its consequences.” <i>Id.</i> (quoting <i>Hoffman-LaRoche, Inc. v. Greenberg</i>, 447 F.2d 872, 875 (7th Cir.1971)).</p> <p>To make the conspiracy actionable, there must also be an overt act in furtherance of the object of the conspiracy that injures plaintiff in his person or property or, in a section 1985(3) action, which deprives him of having or exercising any right or privilege of a citizen of the United States.</p> <p>We are alleging, that individual decision makers, by knowingly specifically authorizing the exposure of surrounding Bay View Hunters Point residents to harmful environmental hazards and failing to provide for remedial measures, that this deprives us and these residents of having or exercising any right or privilege under the Constitution.</p> | (see above) |

| 2.          | <p><b>Conclusion</b></p> <p>The relief requested is for the US Navy to adopt a modified Alternative 2 “Excavation and Off-Site Disposal: Excavate all waste and contaminated soil in the Parcel E-2 Landfill and all shallow waste, soil, and sediment in the Panhandle Area, East Adjacent Area, and Shoreline Area. Dispose of excavated waste and contaminated soil and sediment at an off-site landfill.</p> <p>Wetlands Restoration in Panhandle Area and Shoreline Area: Build new tidal and freshwater wetlands with appropriate soil and vegetation. Maintain and monitor wetlands. Groundwater Monitoring: Implement long-term monitoring of groundwater to assess whether chemicals are migrating and to monitor changes in ambient conditions. ICs: Impose ICs to limit the use of land or restrict activities that take place within an area. The ICs for Parcel E-2 are listed on page 21. Additional Radiological Actions: Excavate potential radioactive contamination from (1) drain lines that extend into the East Adjacent Area but are located outside of the boundary of IR Site 01/21, and (2) ship-shielding berm in Panhandle Area. Dispose of excavated waste and soil at an off-site landfill. Perform final radiological surveys at all excavated areas prior to backfilling with clean, imported soil.”</p> <p>The modifications must also implement SF BOS Resolution 06304-1 [Exhibit A at page 9] requiring “the Navy to more fully characterize the nature and extent of contaminants in the landfill on Parcel E, off-shore sediments in Parcel F, <u>soils below ten feet and contaminated ground water plumes</u>, so that remedies can be selected and implemented that are fully protective of persons residing in close proximity to the landfill and the Bay shoreline and that fully protect future occupants and residents from any unacceptable exposures posed by soil and ground water on other portions of the Shipyard; and, be it FURTHER RESOLVED, That the Board hereby urges City departments and the Agency <u>to establish community-based monitoring programs to ensure that the adjacent community is protected and that the remediation process for the respective Parcels are accomplished in a manner that is fully protective of human health and the environment</u>”.</p> | <p>The Navy understands the desire of community members to have Parcel E-2 cleaned up to the highest standards and has considered this input in its evaluation of the community acceptance criterion, which is one of nine criteria identified in the federal regulation called the NCP. However, the Navy is also required to consider the other eight criteria that are specified in the NCP.</p> <p>As described on page 15 of the Proposed Plan, Criteria 1 and 2 (protection of human health and the environment, and compliance with ARARs) are threshold criteria that each alternative must meet to be eligible for selection. Criteria 3, 4, 5, 6, and 7 are balancing criteria used to weigh major tradeoffs in the benefits and limitations among alternatives. Criteria 8 and 9 (state acceptance and community acceptance) are modifying criteria considered in the ROD.</p> <p>The Navy’s evaluation of the remedial alternatives is summarized on pages 15, 16, and 17 of the Proposed Plan. Additional information is included in Sections 2.8 and 2.9 of this ROD. In summary, the preferred alternative published in the Proposed Plan (Alternative 5) complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria. The Navy’s evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor’s Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained previously in the response to comment 1. The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the “community acceptance” criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

| 2.<br>(cont.) | <p>Therefore in the absence of providing the requested relief either of us, and any Bay View Hunters Point resident adversely affected, may assert in the federal court that they are the victim of a civil conspiracy<sup>4</sup> by any so named respondent to violate those civil rights, all actionable under 42 U.S.C. § 1985(3) (Supp. V 1981) and 42 U.S.C. §1983, to redress violations of federal violations of federal laws committed by the same, i.e. to inter alia compel the enforcement of federal laws, for the affected residents' and the public's interests, and to secure remedial relief for damages caused by those violations, including but not limited to from the Decision Makers themselves.</p> | <p>The Navy has worked closely with the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders for more than 20 years to obtain and evaluate data from the Parcel E-2 Landfill. The Navy's collaborative effort with the EPA, DTSC, Water Board, and CCSF DPH resulted in the identification of a focused set of remedial alternatives that included complete removal of the Parcel E-2 Landfill (in addition to one or more containment alternatives). The available data are adequate to support an evaluation of the focused set of remedial alternatives, and the Navy does not believe that further characterization is necessary or appropriate to select a remedy for Parcel E-2. The information contained in the administrative record, which includes pertinent regulatory guidance (EPA, 1993a, 1993b, 1994, and 1996) and site-specific input from various stakeholders, adequately supports this position.</p> <p>The Navy will inspect, maintain, and monitor the cover and containment systems to comply with CERCLA and the NCP and federal and state ARARs, as identified in Attachment 4 of this ROD, and to ensure the protection of human health and the environment. The EPA, DTSC, and Water Board will continue to oversee the Navy's long-term management of Parcel E-2 to ensure that it complies with these federal and state requirements.</p> |

---

<sup>4</sup> We also define a civil conspiracy or collusion as an agreement between two or more parties to deprive a third party of legal rights or deceive a third party to obtain an illegal objective.

| Introduction | <p>I am submitting these comments to point out, and insist upon correction of, serious inadequacies, in your department's selection of Preferred Alternative 5 for the Proposed Plan for cleanup of Parcel E-2, which includes a landfill along the shoreline at Hunters Point Naval Shipyard in San Francisco, California</p> <p>I will focus my comments in two categories -</p> <p>1) SERIOUS INADEQUACIES IN ADDRESSING, AND FAILURES TO ACCOUNT FOR, PROJECTED SEA LEVEL RISE</p> <p>2) FAILURE TO ACCOUNT FOR AND AVOID HEALTH AND ENVIRONMENTAL HAZARDS OF TOXIC MATERIALS, INCLUDING BUT NOT LIMITED TO CHRYSOTILE ASBESTOS AND IONIZING RADIATION; AND, FAILURE TO MEET THE LEGAL PRECAUTIONARY PRINCIPLE ESTABLISHED BY ORDINANCE IN THE SAN FRANCISCO, CALIFORNIA, ENVIRONMENT CODE CHAPTER 1: - PRECAUTIONARY PRINCIPLE POLICY STATEMENT - SECTIONS 100-104</p> <p>Comments:</p> | <p>Please see below for the response to specific comments from the San Francisco Green Party.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1            | <p>SERIOUS INADEQUACIES IN ADDRESSING, AND FAILURES TO ACCOUNT FOR, PROJECTED SEA LEVEL RISE</p> <p>As is now commonly understood and established by widespread and overwhelming scientific consensus, the Earth's oceans and the San Francisco Bay are now undergoing sea level rise due to planetary climate warming.</p> <p>Until very recently, science policy groups, including and especially the Intergovernmental Panel on Climate Change (IPCC) had been projecting that the worst case scenario for global sea level rise would be no higher than 1.5 meters by the year 2100.</p>                                                                                                                                                                                                                                                                                                 | <p>The selected remedy provides an adequate level of shoreline protection which, based on the most recent estimates from the IPCC<sup>18</sup>, can reasonably accommodate rising sea levels over the next 100 years. Figures 12-1 and 12-2 in the Final RI/FS Report, which present a preliminary design for the selected remedy, show that the top of the revetment structure is anticipated to be approximately 14 to 15 feet above mean sea level, or about 11 to 12 feet above the mean high tide level (ERRG and Shaw, 2011). The revetment structure will be further evaluated in the remedial design relative to several factors, including but not limited to potential rise in sea level. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment. The five-year reviews will consider multiple technical factors, including but not limited to potential rise in sea level.</p> |

|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.<br>(cont.) | <p>However new data and reports released in November 2009 now indicate that the worst case scenario for global sea level rise is now projected to be at least 2 meters by the year 2100. More importantly, NASA's James Hansen, widely recognized as the preeminent climate change expert on Earth, argued credibly as early as 2007 that worst case scenario sea level rise will instead be 5 meters by the year 2100. In light of the fact that the IPCC's predictions of sea level rise from just two years ago have been found to be inadequate by an entire one half meter, and that James Hansen had previously argued in 2007 that the IPCC's projections were indeed inadequate, Hansen's projection of a worst case scenario of 5 meters sea level rise by the year 2100, must now be assumed as the guide for the Proposed Plan for cleanup of Parcel E-2.</p> <p>The following data and reports prove this case:</p> <ul style="list-style-type: none"> <li>- On Nov 22, 2009 NASA released new satellite gravimetric data from a 7 year study of Antarctica showing that the massive East Antarctic Ice Sheet, which scientists previously thought was gaining in volume, is suddenly (as of 2006) undergoing rapid and widespread melting. See <a href="http://www.guardian.co.uk/environment/2009/nov/22/east-antarctic-ice-sheet-nasa">http://www.guardian.co.uk/environment/2009/nov/22/east-antarctic-ice-sheet-nasa</a></li> </ul> <p>The NASA study report itself can be ordered from Nature Geoscience at <a href="http://www.nature.com/ngeo/journal/v2/n12/full/ngeo694.html">http://www.nature.com/ngeo/journal/v2/n12/full/ngeo694.html</a></p> <p>This research also shows massive new and more rapid melting in West Antarctica and Greenland.</p> <ul style="list-style-type: none"> <li>- As of November 24, 2009, in a report entitled 'The Copenhagen Diagnosis', even historically overly equivocal IPCC scientists revised their sea level rise projections to a possible 2 meters (6.5 feet) by the year 2100. See the Reuters news release on the report at <a href="http://www.reuters.com/article/idUSTRE5AN4L620091124">http://www.reuters.com/article/idUSTRE5AN4L620091124</a> and the actual report itself at <a href="http://www.copenhagendiagnosis.org/download/default.html">http://www.copenhagendiagnosis.org/download/default.html</a></li> </ul> | <p>The Navy does not agree with the reviewer's assertion that the selected remedy must account for a worst-case scenario of a 5 meter rise in sea level. The revetment structure will be further evaluated in the remedial design relative to the most current IPCC estimates for a rise in sea level. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment. The five-year reviews will consider multiple technical factors, including but not limited to potential rise in sea level.</p> |

|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.<br>(cont.) | <p>The portion of this report which describes new sea level rise projections begins on page 37 of the report.</p> <p>- In a March 2007 report, NASA's James Hansen, who first alerted the general public and policy makers to the global climate crisis, discusses the probability of a 5 meter (16.25 feet) sea level rise. See Hansen's report at: <a href="http://www.iop.org/EJ/article/1748-9326/2/2/024002/er17_2_024002.html">http://www.iop.org/EJ/article/1748-9326/2/2/024002/er17_2_024002.html</a></p> <p>Note that Hansen's report is speculative by nature, simply because ice sheet melting and other data will not exist to prove the case that he argues, until that level of melting is already happening. However, given that the NASA gravimetric data noted above shows that Antarctic and Greenland ice sheets are currently undergoing rapidly accelerating melting at previously unforeseen rates (and at rates which continue to accelerate even further) there is absolutely no reason whatsoever to doubt Hansen's predictions; especially in light of the fact that Hansen's past predictions have consistently proved to be correct.</p> <p><b>CONCLUSIONS - SEA RISE:</b></p> <p>Hence, since James Hansen's prediction of a worst case 5 meter sea level rise by the year 2100 is highly credible, it is, at the very least, that standard of a predicted 5 meter rise which must be used as the guideline for the Proposed Plan for cleanup of Parcel E-2.</p> <p>More importantly, good engineering practice (especially when dealing with a factor with such high unpredictability and potentially severe and costly outcomes as climate induced sea level rise) would call for at least an additional 100% margin of safety over worst case projections to be adopted for the Proposed Plan for cleanup of Parcel E-2. This means that the standard for assumed sea level rise in the project should be at least 10 meters (32.5 feet) of sea level rise by the year 2100. Even if planners were to use the likely far too equivocal 2 meter worst case sea rise projection in The Copenhagen Diagnosis, an additional 100% margin of safety would still demand a minimum 4 meter rise assumption.</p> | <p>The Navy does not agree with the reviewer's assertion that the selected remedy must account for a worst-case scenario of a 5 meter (or greater) rise in sea level. The revetment structure will be further evaluated in the remedial design relative to the most current IPCC estimates for a rise in sea level. In addition, the selected remedy will be subject to statutory reviews every 5 years (pursuant to CERCLA) to ensure that it remains protective of human health and the environment. The five-year reviews will consider multiple technical factors, including but not limited to potential rise in sea level.</p> |

| 1.<br>(cont.) | <p>To get a sense of the profound potential sea rise impacts on Parcel E-2, see the following online interactive sea level rise projection maps:</p> <p>The Project Area At 2 Meters Sea Level Rise:<br/> <a href="http://flood.firetree.net/?ll=37.7293,-122.3995&amp;z=3&amp;m=2">http://flood.firetree.net/?ll=37.7293,-122.3995&amp;z=3&amp;m=2</a></p> <p>The Project Area At 5 Meters Sea Level Rise:<br/> <a href="http://flood.firetree.net/?ll=37.7293,-122.3995&amp;z=3&amp;m=5">http://flood.firetree.net/?ll=37.7293,-122.3995&amp;z=3&amp;m=5</a></p> <p>Even at the minimum 2 meter rise worst case assumption, the sea inundations into the project area clearly and profoundly impact that entire area in fundamental ways that are not adequately addressed by the selection of Alternative 5 for the Proposed Plan for cleanup of Parcel E-2. And the 5 meter projection map is undeniably astounding in its implications.</p> <p>Sea Level Rise Interactions With Liquefaction &amp; Hazardous Materials</p> <p>The most important inadequacies of the selection of Alternative 5 for the Proposed Plan for cleanup of Parcel E-2 lie in their failure to account adequately for the potential of sea level rise to severely exacerbate both liquefaction and the leaching and harmful interactions of hazardous materials in the project area.</p> <p>Liquefaction</p> <p>In the report entitled ‘Vulnerability assessment to liquefaction hazard induced by rising sea-levels due to global warming’ (see <a href="http://www.thefreelibrary.com/_/print/PrintArticle.aspx?id=155784183">http://www.thefreelibrary.com/_/print/PrintArticle.aspx?id=155784183</a> - or purchase the full article with graphics at <a href="http://eproceedings.worldscinet.com/9789812701602/preserved-docs/9789812701602_0069.pdf">http://eproceedings.worldscinet.com/9789812701602/preserved-docs/9789812701602_0069.pdf</a>) the report authors establish clearly that liquefaction dangers increase as sea levels rise, and increase rapidly after sea level rise exceeds 1 meter.</p> | <p>As described on pages 18 and 19 of the Proposed Plan, the preferred alternative includes a preliminary plan, developed with input from various technical experts, that would control soil movement during the maximum probable earthquake. The Navy studied soil in and around the Parcel E-2 Landfill and found that most soil would not liquefy even during the maximum probable earthquake, and the soil layers that might liquefy would be controlled through proper design and construction of the final cover using methods that are well established for sites in the San Francisco Bay area. The Navy will further evaluate this very important part of the remedial design, including collecting additional geotechnical data and consulting with other technical experts, to make sure that the final cover is built to withstand the appropriate design earthquake and comply with numerous other regulatory requirements for landfill covers.</p> <p>In addition, the Navy’s previous study revealed that the potentially liquefiable soil layers in and around the Parcel E-2 Landfill are located 10 feet or deeper below the ground surface, meaning that these soil layers are already saturated with groundwater and the degree of saturation would not be significantly affected by rising water levels. Appendix C in the RI/FS Report details the findings of the Navy’s previous study of liquefaction potential at the Parcel E-2 Landfill (ERRG and Shaw, 2011).</p> |

| 1.<br>(cont.) | <p>This likely increased liquefaction danger clearly exacerbates potential hazardous materials releases from the site and therefore all hazardous materials must be completely removed from Parcel E-2 before any development occurs in the project area.</p> <p>Hazardous Materials</p> <p>By far the most troubling aspect of the selection of Alternative 5 for the Proposed Plan for cleanup of Parcel E-2 is in the failure to sufficiently address potential sea level rise interaction with hazardous materials in and on the site.</p> <p>In 'Implications of Sea Level Rise for Hazardous Waste Sites in Coastal Floodplains' (see <a href="http://www.epa.gov/climatechange/effects/downloads/Challenge_chapter9.pdf">http://www.epa.gov/climatechange/effects/downloads/Challenge_chapter9.pdf</a>) the authors establish clearly the extensive dangerous interactions that can occur as sea level rise exacerbates flooding and triggers other negative impacts in hazardous waste sites, such as those in and around Parcel E-2.</p> <p>The dramatic sea level rise scenarios projected above could so overwhelm the project area that unforeseen and unavoidable extremely dangerous leaching, flushing, mixing, out-gassing and dispersion of a veritable toxic soup of hazardous materials could take place in the project area. It is therefore imperative that all hazardous materials be completely removed from Parcel E-2 before any development is permitted to proceed. Under a scenario of sea level rise between 2 and 5 meters, no capping or other on-site containment of any hazardous wastes can be adequate to assure the prevention of unacceptably dangerous leaching, flushing, mixing, out-gassing and dispersion of hazardous materials; all which in turn would lead to the inevitable poisoning of the environment, animals, and people, living in, working in, and visiting the area.</p> <p>Therefore all hazardous materials must be completely removed from Parcel E-2 before any development occurs in the project area.</p> | <p>As described on page 17 of the Proposed Plan, the preferred alternative also includes the following elements to control potential leaching of chemicals from the Parcel E-2 Landfill: (1) the protective liner would limit infiltration from the ground surface into the landfill waste; (2) below-ground barriers would control the flow of contaminated groundwater into San Francisco Bay; (3) groundwater along the shoreline would be regularly monitored; and (4) groundwater would be pumped and treated if necessary to keep contaminants from flowing into San Francisco Bay.</p> <p>The Navy does not believe there is a sufficient technical basis to support the reviewer's request. As previously discussed, the selected remedy would (1) provide an adequate level of shoreline protection that can reasonably accommodate rising sea levels over the next 100 years; (2) control soil movement during the appropriate design earthquake; and (3) control potential leaching of chemicals from the Parcel E-2 Landfill. In addition, the Navy wishes to clarify that, from a perspective of environmental sustainability, the implementation of Alternative 5 would have a smaller impact as compared to Alternative 2. The Navy performed a preliminary analysis of the greenhouse gas emissions associated with implementing Alternatives 2 and 5, accounting for both the remedial action construction and long-term monitoring activities. The Navy determined that a significantly greater volume of greenhouse gases would be emitted under Alternative 2 as compared with Alternative 5. This difference is attributed to the emissions from excavating, transporting, and disposing of the estimated 1,166,000 cubic yards of soil, sediment, and solid waste.</p> |

| 1.<br>(cont.) | These remarks on sea level rise disrupted hazardous materials now segue well into the second and final category of my comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <i>(please see the response on pages 100 through 104)</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2             | <p>FAILURE TO ACCOUNT FOR AND AVOID HEALTH AND ENVIRONMENTAL HAZARDS OF TOXIC MATERIALS, INCLUDING BUT NOT LIMITED TO CHRYSOTILE ASBESTOS AND IONIZING RADIATION; AND, FAILURE TO MEET THE LEGAL PRECAUTIONARY PRINCIPLE ESTABLISHED BY ORDINANCE IN THE SAN FRANCISCO, CALIFORNIA, ENVIRONMENT CODE CHAPTER 1: - PRECAUTIONARY PRINCIPLE POLICY STATEMENT - SECTIONS 100-104</p> <p>Chrysotile Asbestos</p> <p>Two recent European Union (EU) directives can be viewed at <a href="http://eur-lex.europa.eu/smartapi/cgi/sga_doc?smartapi!celexapi!prod!CELEXnumdoc&amp;lg=EN&amp;numdoc=31999L0077&amp;model=guichett">http://eur-lex.europa.eu/smartapi/cgi/sga_doc?smartapi!celexapi!prod!CELEXnumdoc&amp;lg=EN&amp;numdoc=31999L0077&amp;model=guichett</a> and at <a href="http://eur-lex.europa.eu/smartapi/cgi/sga_doc?smartapi!celexapi!prod!CELEXnumdoc&amp;lg=EN&amp;numdoc=32003L0018&amp;model=guichett">http://eur-lex.europa.eu/smartapi/cgi/sga_doc?smartapi!celexapi!prod!CELEXnumdoc&amp;lg=EN&amp;numdoc=32003L0018&amp;model=guichett</a></p> <p>In those directives, the EU establishes that “No threshold level of exposure has yet been identified below which chrysotile asbestos does not pose carcinogenic risks;”.</p> <p>In those directives, the EU also bans all applications and uses of chrysotile asbestos as of the year 2005.</p> <p>Chrysotile or ‘white’ asbestos is the same type existing naturally in serpentine rock at the Candlestick Point-Hunters Point Shipyard Phase II Development Plan Project area and in other development areas in the Bayview Hunters Point. Previous grading and other development activities in those other development areas has resulted in chrysotile dust contamination on the Candlestick Point-Hunters Point Shipyard Phase II Development Plan Project area.</p> | <p>The Navy has, in consultation the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders, followed the process established in the NCP (40 CFR § 300.430) and pertinent federal guidance to (1) obtain and evaluate data regarding potential contamination at Parcel E-2; (2) develop and evaluate an appropriate range of remedial alternatives in the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>); and (3) identify a preferred alternative in the Proposed Plan and solicit public comments. The information contained in the administrative record, which includes pertinent regulatory guidance (<a href="#">EPA, 1993a, 1993b, 1994, and 1996</a>) and site-specific input from various stakeholders, is consistent with and supports the selection of the remedial action for Parcel E-2 by the Navy and EPA pursuant to CERCLA and the NCP.</p> <p>The Navy understands that chrysotile asbestos occurs naturally in the serpentinite rock present at HPNS and is considered a background condition under CERCLA rather than a release of hazardous substances potentially requiring a CERCLA response action. Nonetheless, the Navy, in accordance with Title 17 CCR § 93105, implements a rigorous dust control and air monitoring program as part of its cleanup actions at HPNS to control potential exposures to naturally occurring asbestos and other chemicals that may be disturbed during implementation of CERCLA response actions. The same dust control and air monitoring requirements will apply during implementation of the selected remedy at Parcel E-2 because Title 17 CCR § 93105 is an ARAR (see Attachment 4 of this ROD). Although the Navy cannot speak directly to the development process outside of HPNS, we understand that a similar dust control and air monitoring program is in place to comply with Title 17 CCR § 93105. We recommend that the reviewer consult with the Bay Area Air Quality Management District, the regulatory agency that oversees both the Navy and developer’s dust control and air monitoring programs.</p> |

|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.<br>(cont.) | <p>Because it has been established that there is no safe level of exposure to chrysotile asbestos, all asbestos dust which has arisen from other construction sites must be completely removed from Parcel E-2 before any any development can begin in the area.</p> <p>Ionizing Radiation</p> <p>In June 2005 the National Academies of Science reported that there is no safe dose of ionizing radiation (see <a href="http://www8.nationalacademies.org/onpinews/newsitem.aspx?RecordID=11340">http://www8.nationalacademies.org/onpinews/newsitem.aspx?RecordID=11340</a>)</p> <p>Therefore no development can be allowed to proceed in and around Parcel E-2 until all radiological waste materials are completely removed from the area. Proceeding with any development while such wastes remain anywhere in Parcel E-2, presents unnecessary and unacceptable risks to human health.</p> <p>The Precautionary Principle And All Hazardous Materials</p> <p>Furthermore, because San Francisco's own legally established Precautionary Principle also requires that no person be unnecessarily exposed to chrysotile asbestos, ionizing radiation, or any other hazardous materials, it is doubly mandated that all radiological and other hazardous materials must be completely removed from Parcel E-2 before any development can proceed in the area.</p> | <p>The Navy believes adequate information is available to demonstrate that chrysotile asbestos occurs naturally in the serpentinite rock present at HPNS and does not constitute a release of hazardous substances potentially requiring a CERCLA response action. Accordingly, the Navy does not believe there is a sufficient technical basis to support the reviewer's request for removal of said "chrysotile dust contamination." Further, the Navy believes that the dust control and air monitoring programs implemented to comply with Title 17 CCR § 93105 are sufficient.</p> <p>The Navy has, in consultation the EPA, DTSC, Water Board, CCSF DPH, and other project stakeholders, followed the process established in the NCP (40 CFR § 300.430) and pertinent federal guidance to (1) obtain and evaluate data regarding potential contamination at Parcel E-2, including from radiological material; (2) develop and evaluate an appropriate range of remedial alternatives in the RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>); and (3) identify a preferred alternative in the Proposed Plan and solicit public comments. Following this process, the Navy has identified Alternative 5 as the preferred alternative for Parcel E-2 because it complies with the two threshold criteria, and provides the best balance of tradeoffs with respect to the five balancing criteria specified in the NCP. The Navy's evaluation of the two modifying criteria did not warrant changes to the preferred alternative. The State of California, through DTSC and the Water Board, and segments of the community, represented by the SFRA and Mayor's Hunters Point Shipyard Citizens Advisory Committee, as well as a number of engaged residents who live in close proximity to HPNS, have agreed with the preferred alternative published in the Proposed Plan. In addition, the preferred alternative is generally consistent with Proposition P, as explained in the responses to comments from Arc Ecology (see pages 8 and 9 of this responsiveness summary). The information presented by members of the community that disagree with the preferred alternative does not justify modification of the preferred alternative based upon the "community acceptance" criteria of the NCP. The preferred alternative will remove significant amounts of contaminants and safely contain the remaining material, and will prevent unacceptable exposure to humans (both future site users and the surrounding community) and wildlife.</p> |

| 2.<br>(cont.) | (see above) | The information contained in the administrative record, which includes pertinent regulatory guidance (EPA, 1993a, 1993b, 1994, and 1996) and site-specific input from various stakeholders, is consistent with and supports the selection of the remedial action for Parcel E-2 by the Navy and EPA pursuant to CERCLA and the NCP. |

| 1. | In my comments sent to you previously on the Proposed Plan for cleanup of Parcel E-2, which are recopied below, I have discovered that the second link in the section discussing ‘The Copenhagen Diagnosis’ is incorrect. The correct link is:<br><a href="http://www.copenhagendiagnosis.com/download/default.html">http://www.copenhagendiagnosis.com/download/default.html</a> | Comment acknowledged; thank you for the correction. |

| 1.                      | <p>EPA TAG Comments. The technical advisor under EPA's Technical Assistance Grant (TAG) for Hunters Point Naval Shipyard (HPNS) announced that they plan to obtain additional expertise in the matter of the appropriateness of the Parcel E-2 Selected Remedy under CERCLA and EPA technical guidance. EPA supports the HPNS TAG and its decision to obtain this additional expertise for purposes of commenting on the Draft Record of Decision (ROD) and the upcoming remedial design for Parcel E-2. EPA believes that the HPNS TAG will be able to provide its comments on the Draft ROD in a reasonable timeframe and the TAG's participation will ultimately strengthen community confidence in the Selected Remedy. EPA recommends that the Navy consult with EPA prior to issuing the Draft-Final version of the ROD. EPA will periodically coordinate with the HPNS TAG to ensure that they are proceeding in a reasonable manner and schedule. EPA anticipates that the Navy will not finalize the Final ROD until the TAG advisor has had a reasonable opportunity to present the views of its expert.</p> | <p>The Navy understands and supports EPA's<sup>1</sup> decision to solicit input from the HPNS TAG reviewers. The Navy received and agreed to a request from EPA to delay the submittal of the Draft Final ROD and allow time for the Navy to address comments and incorporate input received from the HPNS TAG reviewers. The Navy received and responded to all comments provided by the HPNS TAG reviewers (which are included in this attachment).</p>                                                                                                                                                                                                                                                                                                                |
| 2.                      | <p>Integration of Removal Actions and Remedial Actions. The Navy must meet all the requirements of the Selected Remedy in the Final Parcel E-2 ROD, including all remedial goals, in all locations inside Parcel E-2. Therefore, the ROD needs to clearly describe the relationship and consistency between the past and upcoming removal actions in Parcel E-2 and the Selected Remedy. EPA assumes that all response actions in Parcel E-2 will be fully consistent with the final Selected Remedy. Past removal actions (e.g. PCBs Hot Spot Removal Actions, VOC Hot Spot Removal Action, and Metal Slag Removal Action) need to be checked for compliance with ROD remedial goals. If ROD remedial goals have not been met, then the ROD needs to indicate, in Section 2.9.2 (Selected Remedy) the general</p>                                                                                                                                                                                                                                                                                                     | <p>The Selected Remedy will meet all the requirements specified in the ROD, including satisfying all RAOs including remediation goals, which will serve as the basis for the containment elements of the remedy, and meeting the hot spot goals, which will guide the hot spot removal portion of the remedy. The relationship between remediation goals and hot spot goals is described in Section 2.5.3 of the ROD, and is briefly summarized below.</p> <p>The HHRA for Parcel E-2 identified numerous nonradioactive COCs that posed an unacceptable cancer risk or noncancer hazard. The widespread extent of these COCs prompted the Navy to develop a cleanup approach that included removal of the soil areas that posed the most significant risk to humans.</p> |

| 2.<br>(cont.)                       | <p>scope of work remaining to be completed at each of these locations. Removal actions scheduled to be implemented in 2012 (e.g. Experimental Ship Shielding TCRA) and prior to the Final ROD signature date, must also be identified with the commitment to ultimately meet Parcel E-2 Final ROD requirements and remedial goals. EPA fully supports the Navy early actions at HPNS to address hot spots including all of the Navy's removal actions in Parcel E-2. However, the results of all early actions must ultimately be consistent with the E-2 ROD. If, as occurred on Parcel B, some of the work currently which was to be conducted as a removal is not expected to be completed prior to the signature of the E-2 ROD (e.g. removal of radiological impacted stormdrain and sewers), provision should be made to continue those activities as part of the remedial action and stated as such in Section 2.9.2 (Selected Remedy) of the ROD.</p> | <p>The Navy focused the list of COCs to those nonradioactive chemicals present at concentrations that exceeded the remediation goals or a noncancer HI of 1, by a factor of 10 or 100. These areas are referred to as hot spots. The hot spots were categorized based on their potential risk to humans and wildlife:</p> <ul style="list-style-type: none"> <li>• Near-shore hot spots were determined to pose the most substantial risk because they are a continuing source to groundwater contamination and are located in close proximity to San Francisco Bay. These hot spot goals were established at 10 times the remediation goals.</li> <li>• Upland hot spots were determined to pose a slightly lower risk because they do not appear to be a continuing source to groundwater contamination and are located farther inland from San Francisco Bay. These hot spot goals were established at 100 times the remediation goals.</li> <li>• An area was identified that appears to be a continuing source of VOCs to groundwater. Although this source area does not pose a risk to future recreational users at Parcel E-2, it could migrate to the adjacent Parcel E property at concentrations that may pose an unacceptable risk to future occupants. For VOCs at these locations, hot spot goals were established equal to the remediation goals for future residential occupants (consistent with the planned reuse at the adjacent Parcel E property).</li> </ul> <p>The Navy is excavating some of the hot spots identified in the ROD pursuant to a Phase 2 TCRA Action Memorandum for the PCB Hot Spot Area, but the TCRA results are not available at the date of ROD signature. Accordingly, the excavation to achieve hot spot goals will be completed as a remedial action pursuant to this ROD. Upon completion of excavation and achievement of the hot spot goals pursuant to the TCRA Action Memorandum and ROD, the Navy will construct the cover pursuant to the remedy selected in the ROD in order to achieve the final remediation goals through breaking the pathway of potential exposure.</p> <p>The Navy is also excavating potential radiological contamination at the Ship-Shielding Area pursuant to a TCRA Action Memorandum (distinct from the Phase 2 TCRA Action Memorandum for the PCB Hot Spot Area). Consistent</p> |

| 2.<br>(cont.)                       | <i>(see above)</i> | <p>with the remediation approach identified in the ROD, the TCRA at the Ship-Shielding Area will identify and remove Cobalt-60 contamination exceeding the remediation goals within 1 foot of ground surface. However, because the TCRA results are not available at the date of ROD signature, the RD will analyze the conditions after the TCRA, and will specify the additional excavation to achieve the Cobalt-60 remediation goal that, if required, would be completed as a remedial action pursuant to this ROD.</p> <p>The ROD was revised to better describe the previously completed removal actions (including the Phase 1 TCRA at the PCB Hot Spot Area and the TCRA at the Metal Slag Area) and the ongoing removal actions (including the Phase 2 TCRA at the PCB Hot Spot Area and the TCRA at the Ship-Shielding Area). Post-excavation data from the previously completed removal actions were evaluated in the RI/FS and these findings are reflected in the ROD. However, the results of the ongoing removal actions are not yet published. Accordingly, a detailed analysis of the post-excavation data for the ongoing removal actions cannot be provided in this ROD. Section 2.9.2 of the Draft ROD indicates the Navy's intent to evaluate post-excavation conditions in the RD and perform additional excavation as part of the remedial action, if necessary to achieve the appropriate goals specified in the ROD. Section 2.9.2 was revised to further clarify that the Phase 2 TCRA at the PCB Hot Spot Area and the TCRA at the Ship-Shielding Area are ongoing and post-excavation results are not yet available. Section 2.9.2 was also revised to specify that, because the TCRA results are not available at the date of ROD signature, the excavation to achieve the goals specified in the action memoranda (which are identical to those specified in this ROD) will be completed as a remedial action pursuant to this ROD.</p> |

| <i>Specific Comments</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1.                       | Section 1.2, Statutory Determinations, Page 1-2, 1-3. With respect to the last sentence on Page 1-2, EPA understands that additional PCB Hot Spot Removal work will occur pursuant to the Parcel E-2 remedial action. This comment applies to Page 2-18 and 2-25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The cited passages on Pages 2-18 and 2-25, which refer to the completion of the Phase 2 TCRA at the PCB Hot Spot Area, will be revised to refer the reader to Section 2.9.2. Please refer to the response to general comment 2 for a description of how the removal action relates to the future remedial action (and a description of clarifications made to Section 2.9.2).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2.                       | Section 2.1, Site Description and History, Page 2-1: The Guide to Preparing Superfund Proposed Plans, Records of Decision, and Other Remedy Selection Decision Documents (EPA ROD Guidance) suggests that the lead and support agencies and the source of cleanup monies be included in this section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The ROD was streamlined in accordance with EPA guidance from September 2011 (titled " <i>Toolkit for Preparing CERCLA Records of Decision</i> " and developed in collaboration with the Navy), and is consistent with similar RODs prepared for other HPNS parcels. The ROD declaration (Section 1) identifies the lead and support agencies. The Navy anticipates that the BRAC funding will continue to be used for the HPNS cleanup program, including implementation of the selected remedy at Parcel E-2. The document was not revised in response to this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3.                       | <p>Section 2.2, Site Characteristics, Page 2-4, and Figure 3 and 4:</p> <p>a. The third bullet on Page 2-4 states that "drain lines in Parcel E and any contamination in them are currently being excavated as part of an ongoing removal action". However, this work does not address the Parcel E-2 storm drain lines, which are depicted on Figures 3 and 4. It is unclear if the Parcel E-2 drain lines will be removed or if they will be capped and left in place. Further, it is unclear if the action to be taken for the Parcel E-2 drain lines will depend on whether radiological contamination is found in the "upstream" lines in Parcel E. Please clarify how the Parcel E-2 storm drain lines will be addressed, including the removal and/or remedial action(s) to be taken, and if such response actions depend on whether upstream lines are found to be contaminated with radionuclides. EPA recommends full removal of the radiological impact storm and sewer lines throughout Parcel E-2 to the extent practicable.</p> | <p>a. Section 2.2 describes existing site conditions within and adjacent to Parcel E-2, and this section is not intended to describe the components of the selected remedy, including removal of drain lines in Parcel E-2. Section 2.9.2 was revised to clarify that drain lines extending into the East Adjacent Area, but located outside of the IR Site 01/21 boundary, and radiological contamination exceeding the remediation goals within these trenches will be removed. The new sentence within Section 2.9.2 will include an electronic reference to more detailed information in Section 12.1 of the Final Radiological Addendum to the RI/FS Report, which states that: "<i>Remaining sections of sanitary sewer, storm drain, and septic sewer lines that extend into the IR Site 01/21 site boundary would not be removed because the potential radioactivity within these lines is similar to that potentially present in subsurface soil throughout IR Site 01/21 which, as described in Section 11.3, requires containment and</i></p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 3.<br>(cont.)                        | <p>b. Furthermore, with respect to Figure 4, the designation of the wetlands area in this figure may confuse the reader with future planned wetlands areas as part of the E2 remedy. Perhaps, current/temporary features shown in this figure should be explained as such.</p> <p>c. The forth bullet on Page 2-4 concerning the description of waste from NRDL needs clarification. As currently written, it states that NRDL waste may have more likely been disposed of in the Panhandle and East Adjacent areas which were filled earlier (pre NRC oversight) rather than solely in the E-2 landfill. Is this the intended message?</p> | <p><i>institutional controls to achieve the radiological RAOs. Remaining sections of sanitary sewer, storm drain, and septic sewer lines that extend into the IR Site 01/21 site boundary would be cut and capped (with an appropriate cement-based grout)."</i></p> <p>b. The title of Figure 4 was revised as "<i>Parcel E-2 Existing Site Features</i>" to clarify that all features shown on the figure are based on existing site conditions.</p> <p>c. The cited bullet was revised as follows: "<i>Materials used during radiological experiments by NRDL may have been disposed of at the Parcel E-2 Landfill and portions of the Panhandle Area and the East Adjacent Area (located within IR Sites 01/21 and 02). However, historical records presented in the HRA suggest that such material was strictly controlled, particularly after 1954 when the U.S. Atomic Energy Commission began regulating the use of radionuclides at HPNS. This information indicates that the volume of NRDL waste potentially disposed of in and around the Parcel E-2 Landfill was relatively low because most of these landfill areas were filled after 1955.</i>"</p> |
| 4.                                   | <p>Section 2.2, Site Characteristics:</p> <p>a. Groundwater Flow Patterns, Page 2-5. Groundwater flow patterns are described here and elsewhere in the Draft ROD (e.g. Section 2.3.5). However, a figure indicating groundwater flow direction(s) is not provided. Please add approximate groundwater flow direction arrows this figure.</p> <p>b. Parcel E-2 Ecology, Page 2-6. The social and ecological significance of current wetlands are not low solely due to being located on manmade poor quality land but more likely due being impacted and degraded by physical disturbance, grading and site contamination.</p>               | <p>a. Figure 4 was revised to include arrows corresponding to the approximate groundwater flow direction in the A-aquifer (based on Figure 2-14 from the Final RI/FS Report).</p> <p>b. The subject text in Section 2.2 was revised as follows: "<i>The existing wetlands provide habitat for wintering and migrating wildlife; however, their value in terms of social significance, effectiveness, and opportunity is low because the wetlands are located on a CERCLA site on manmade land that has been disturbed by human activities and contains chemical contamination.</i>"</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 5.                                   | Section 2.3. Previous Investigations. Was the Navy's past geophysical investigation parcel-wide? If so, then this past investigation warrants its own bullet with a short explanation as to what the geophysical investigation found.                                                                                                                                                                                                                                                                                                                                                                          | The past geophysical investigations were not performed parcel-wide. Table 1 describes the investigation phases (specifically the Confirmation Study/Verification Step and the OU-1 RI) that included geophysical techniques used to assist in identifying the extent of waste in the Parcel E-2 Landfill.                                                                                                                                                                                                     |
| 6.                                   | Figure 7. Please edit the legend of Figure 7 so removal action nomenclature is consistent with Table 1. For example, the Orange Zone should be called "PCB Hot Spot Removal Action - Phase 1". It is recommended to call the Purple Zone "PCB Hot Spot Removal Action - Phase 2" and the Green Zone should be called "Metal Slag Removal Action". Why are the Ship Shielding removal action and the Interim Landfill Cap missing from Figure 7 since they are listed in Table 1?                                                                                                                               | Figure 7 was revised as suggested. Figure 7 was also revised to include the Ship-Shielding Area and the interim landfill cap.                                                                                                                                                                                                                                                                                                                                                                                 |
| 7.                                   | Section 2.3.3, Shoreline Sediment. This section omits reference to PCBs found in E-2 shoreline sediments that are potential sources of contamination to Parcel F. Please explain why or add text describing PCBs in Parcel E-2 as a potential source to Parcel F PCB contamination.                                                                                                                                                                                                                                                                                                                            | Section 2.3.3 was revised to indicate that, consistent with Appendix G of the Final RI/FS Report, PCBs in shoreline sediment are a potential source of contamination to Parcel F. The Navy wishes to clarify that the electronic reference provided in Section 2.3.3 describes the previous conclusions in more detail. Specifically, the previous assessment identified some uncertainty regarding the potential for PCBs in shoreline sediment to serve as a potential source of contamination to Parcel F. |
| 8.                                   | Section 2.3.6. Radionuclides in Soil, Sediment, and Groundwater. Will this ROD document the final Cobalt-60 release criterion developed under the Ship Shielding Action Memo process? If this release criterion is different than what was used in the Parcel E-2 Feasibility Study and Proposed Plan, then this new remediation level should be documented in the Parcel E-2 ROD in accordance with the EPA ROD guidance.                                                                                                                                                                                     | Section 2.3.6 was revised to note that the Navy has initiated a removal action in the Ship-Shielding Area to address potential radiological contamination and, in the process of planning the removal action, has revised the release criterion for Cobalt-60 (0.252 pCi/g; as documented in the action memorandum for the removal action at the Ship-Shielding Area). Section 2.7 and Table 6 were revised to document the remediation goal for Cobalt-60.                                                   |
| 9.                                   | Section 2.3.6. Radionuclides in Soil, Sediment, and Groundwater. <ol style="list-style-type: none"> <li data-bbox="306 1203 1125 1403">a. The information presented regarding the extent of Ra-226 and Cobalt-60 contamination requires further clarification. EPA assumes that the Navy has screened all radiological data to date for purposes of identifying radiological exceedences in soil including exceedences or hot spots appropriate for either early removal action or remedial action under this ROD. Please describe the Navy efforts to screen all radiological data for Parcel E-2.</li> </ol> | <ol style="list-style-type: none"> <li data-bbox="1152 1203 1992 1370">a. Section 2.3.6 states that past radiological investigations have involved collecting over 1,000 soil samples near the ground surface, and explains that the data have been compared against residential and outdoor worker remediation goals. The previous radiological investigations are identified in Table 1, and additional information is provided in the electronic references embedded within Section 2.3.6.</li> </ol>      |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 9.<br>(cont.)                        | b. EPA also understands that Parcel E-2 will be re-scanned, re-tested, and any radiological exceedences for purposes of pre-remedial design delineation and appropriate for remedial action will be removed to a minimum of 1 foot deep. Please clearly describe the Navy's planned remedial action with respect to radiological contamination in the Selected Remedy section of the ROD (Section 2.9.2).<br><br>c. Also, please clarify if the previous Cobalt-60 exceedences were located in the Experimental Ship Shielding area.                                                                                                                                                                                                                                                                                                                     | b. Section 2.9.2 was revised to state that (1) the selected remedy would include radiological screening to be performed throughout Parcel E-2 in conjunction with the proposed excavation activities; (2) radiologically contaminated soil, sediment, or debris identified during the screening process would be removed and disposed of off site; (3) final radiological surveys would be performed to demonstrate the successful removal of radiological contamination (exceeding the remediation goals) within the upper 1 foot of the excavated subgrade; and (4) radiological risk modeling would be performed to verify that residual radiological risk at the final ground surface (following installation of a demarcation layer and soil cover) is within the risk management range specified in the NCP ( $10^{-6}$ to $10^{-4}$ ).<br><br>c. Yes, Cobalt-60 was reported in the Ship-Shielding Area at activity levels exceeding the criteria specified in Section 2.3.6. Section 2.3.6 summarizes the Cobalt-60 data for the eight survey units that fall within the Ship-Shielding Area (the only area in Parcel E-2 where Cobalt-60 is an ROC). |
| 10.                                  | Section 2.4, Current and Future Site Uses.<br><br>a. Potential chemical soil contamination in the Shipyard South Multi-Use District portion of Parcel E-2 must be addressed by the ROD's selected remedy (Section 2.9.2) just as will other areas in Parcel E-2. Containment only, as discussed in this section, may not be acceptable for the Shipyard South Multi-Use District. As described in Section 2.9.2, all soil hot spots as defined are to be excavated and removed to depth (up to 10 feet bgs) and then covered by a liner and two feet of clean soil cover. In accordance with Section 2.9.2, soil contamination within Parcel E-2, including soil contamination located in the Shipyard South Multi-Use District, would first have to checked again the criteria for hot spots as described in Table 4 of the ROD so a determination if a | a. As described in Section 2.9.2 of the Draft ROD, the Navy previously determined that, with relatively minor adjustments, the selected remedy could properly contain low-level soil contamination in the small portion of the Shipyard South Multi-Use District portion located in Parcel E-2, thereby accommodating future industrial or residential use in this area. In making this prior determination, the Navy verified that soil concentrations in the area do not exceed either the upland hot spot goals or the VOC source area goals (per ROD Table 4). However, in response to this comment (and another comment from CCSF), the Navy has reevaluated its position and decided that a boundary change for Parcels E and E-2 is the most effective way to align the CERCLA documentation with the                                                                                                                                                                                                                                                                                                                                                  |

| 10.<br><i>(cont.)</i>                | <p>hot spot removal is first applicable prior to the required containment remedial actions.</p> <p>b. Any changes to the Proposed Plan recommended alternative (Alternative 5) must be documented in this ROD in accordance with the EPA's ROD guidance.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>CCSF's 2010 amended redevelopment plan (<a href="#">SFRA, 2010</a>). Specifically, the boundary between Parcels E and E-2 will be changed so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space.</p> <p>b. The Navy understands and agrees with EPA's request. The only changes from the Proposed Plan pertain to the revised criterion for Cobalt-60 and the revised boundary between Parcels E and E-2. These changes will be described in pertinent sections of the Draft Final ROD (Sections 2.3.6 and 2.4), and will be summarized in new Section 2.9.5 (consistent with EPA's ROD guidance).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 11.                                  | <p>Section 2.5.3, Basis for Response Action, Page 2-21: The text of the last bullet on page 2-21 discusses risk to recreational users in Parcel E-2 and to future Parcel E occupants, but does not discuss the potential risk to occupants of the small mixed reuse area in Parcel E-2. Based on a comparison of Figures 8 and 10, it appears that a small portion of the volatile organic compound (VOC)-contaminated soil underlies the Shipyard South Multi-Use District (mixed reuse area). This area was not fully excavated during the 2010-2012 removal action. Please revise the text to acknowledge the potential risk to future occupants of this mixed reuse area and add the continuation of this work to the Selected Remedy (Section 2.9.2).</p> | <p>As stated in the response to specific comment 10, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space. This change will be reflected, as appropriate, throughout the Draft Final ROD.</p> <p>For informational purposes, the Navy verified that soil concentrations in the subject portion of the Shipyard South Multi-Use District do not exceed the hot spot goals for the VOC source area (per ROD Table 4, which are consistent with residential risk-based concentrations for Parcel E). The recent VOC data will be published in the removal action completion report for the Phase 2 PCB Hot Spot Area TCRA, and will be further evaluated in the FS Report for Parcel E. In addition, the Navy has collected soil gas and groundwater data in this area as part of a treatability study for the PCE plume that crosses the Parcel E/E-2 boundary (Shaw, 2011). The soil gas and groundwater data in this area did not exceed conservative risk-based screening levels. Specifically, Figures 35 and 36 of the 2011 summary report present the pertinent results for four locations (IR12B053 and IR12B054 [soil gas] and IR12MW44A and IR12MW46A [groundwater wells]) within this area.</p> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12.                                  | Section 5.3, Basis for Response Action, Page 2-24 and Figure 11, Groundwater Areas Posing a Potential Risk to Aquatic Wildlife, Page 2-24: The text states that un-ionized ammonia and sulfide may pose a risk to aquatic wildlife, but these constituents are not included on Figure 11. Since the other constituents that may pose a risk to aquatic wildlife are included on Figure 11, please include the areas with un-ionized ammonia and sulfide on this figure.                                                                                                                                                          | Section 5 and Appendix M of the Parcel E-2 RI/FS Report presented a conservative screening of un-ionized ammonia and sulfide concentrations relative to surface water criteria. Although this conservative evaluation identified a potential risk to aquatic wildlife, the properties of these compounds did not warrant identification of specific groundwater areas of concern. Accordingly, Section 2.5.3 states that: “ <i>Un-ionized ammonia and sulfide are not shown on Figure 11 because these COPECs are generated during decomposition of organic matter (both naturally occurring and anthropogenic) in reducing environments, and are readily transformed to non-toxic compounds upon discharge to oxygenated surface water. Accordingly, neither source removal nor containment is needed to protect aquatic wildlife from exposure to these COPECs; however, monitoring for these COPECs will be performed to verify the protectiveness of the remedy.</i> ” Figures 5-5 and 5-6 of the RI/FS Report present the un-ionized ammonia and sulfide results in groundwater and compare them with surface water criteria. |
| 13.                                  | Section 2.6, Principal Threat Waste, Page 2-25: This section and the hot-linked text from the Final Remedial Investigation/Feasibility Study Report for Parcel E-2 (Final E-2 RI/FS) do not acknowledge the lead that remains in place at the conclusion of the 2010-2012 removal action. This high-concentration lead contamination is fairly shallow and was not excavated from the East Adjacent Area. Please revise the discussion of principal threat waste to include the lead contamination that remains in place after the removal actions and add the continuation of this work to the Selected Remedy (Section 2.9.2). | Section 2.6 was revised to discuss the elevated lead concentrations in the East Adjacent Area. Specifically, Section 2.6 was revised to state: “ <i>In addition, elevated lead concentrations in the East Adjacent Area were identified as potential principal threat wastes because concentrations exceed the remediation goals by more than 100 times and are located at relatively shallow depths (4 feet bgs). To promptly address this potential threat, the Navy added this area to the Phase 2 TCRA at the PCB Hot Spot Area. As discussed previously, the Phase 2 TCRA is scheduled to be completed in 2012 (see Section 2.9.2 for further information on potential follow-on action in this area).</i> ” The Navy wishes to clarify that the elevated lead concentrations cited by the reviewer were found at Tier 3 hotspot excavations performed as part of the Phase 2 TCRA at the PCB Hot Spot Area. This removal action is not yet complete and therefore the cited data (which has been shared during past BCT meetings) have not yet been published for incorporation into the ROD.                                |

| 14.                                  | Section 2.7, Remedial Action Objectives, Page 2-26: It is unclear why the remedial action objectives (RAOs) do not include preventing vapor intrusion from groundwater (and soil) in the VOC source area shown on Figure 2-10. Please include an RAO to address vapor intrusion from VOC contamination in groundwater and soil (re: Shipyard South Multi-Use District mixed reuse area).          | As stated in the response to specific comment 10, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space. RAOs for vapor intrusion will not be added to the Draft Final ROD because the vapor intrusion pathway is incomplete for future recreational exposure. Potential risks to future residents in the Shipyard South Multi-Use District (from complete exposure pathways such as vapor intrusion) and appropriate remedial alternatives will be evaluated in the Parcel E Feasibility Study Report.                                                                                                                                                                                                                                                                                                      |
| 15.                                  | Table 6. Remediation Goals for Radionuclides in Soil and Sediment. Please add a footnote regarding the Radium-226 remediation goal (i.e. 1.0 pCi/g above radium background for Parcel E-2). State that calculation of the Radium-226 background level for Parcel E-2 is subject to Regulatory agency approval.                                                                                    | Table 6 was revised to include a footnote describing the regulatory negotiation that led to identification of this remediation goal. The footnote also specifies the current background levels for surface soil and storm drain and sewer lines (0.633 and 0.485 pCi/g, respectively). The footnote in Table 6 was also revised to state: <i>“The background levels for radium-226 may be reevaluated in the Parcel E-2 RD and are subject to regulatory agency approval.”</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16.                                  | Table 7, Remediation Goals for Groundwater. Are the groundwater standards presented in Table 7 protective of the Bay and compliant with State ARARs (i.e. California Toxics Rule). In Section 2.9.2, please identify the process for identifying the groundwater "points of compliance" and the process for triggering if/when groundwater extraction will occur (i.e. remedial design decision). | Attachment 4 identifies the chemical-specific ARARs for surface water that include water quality criteria specified in the California Toxics Rule and the Basin Plan. These water quality criteria are incorporated into the groundwater and surface water RAOs in a manner that will ensure protection of aquatic wildlife in San Francisco Bay. However, these water quality criteria apply to surface water at the interface of A-aquifer groundwater, and were not identified as remediation goals for in-situ A-aquifer groundwater. Section 2.7 was revised to explain, consistent with statements in Section 9.3 of the Final RI/FS Report, that: <ul style="list-style-type: none"> <li>• With the exception of total TPH, chemicals in groundwater that may pose a risk to aquatic wildlife in San Francisco Bay are considered COPECs given the conservative nature of the groundwater SLERA. As such, groundwater remediation goals have not been developed for these COPECs.</li> </ul> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16.<br>(cont.)                       | <i>(see above)</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <ul style="list-style-type: none"> <li>The water quality criteria, as referenced in the groundwater RAO, are based on standards for aquatic wildlife in San Francisco Bay, apply to surface water at the interface of A-aquifer groundwater, and do not apply to in-situ A-aquifer groundwater at Parcel E-2. Development of specific monitoring criteria for A-aquifer groundwater that address the potential risk to aquatic wildlife in San Francisco Bay requires a more refined fate and transport modeling to more rigorously assess the groundwater-to-surface water transport mechanism. Such refined modeling is not considered necessary to proceed with the ROD because the source removal, containment, and monitoring actions, as evaluated in the remedial alternatives, will address the potential risk to aquatic wildlife in San Francisco Bay.</li> </ul> <p>Section 2.9.2 was revised to specify that the RD will develop specific monitoring criteria for A-aquifer groundwater that address the potential risk to aquatic wildlife in San Francisco Bay. The groundwater point of compliance is defined, in accordance with the NCP and Cal. Code Regs., tit. 22 § 66264.95, at the downgradient edge of the waste management unit. Consistent with information presented in Appendix N of the RI/FS Report, the downgradient edge of the waste management unit is the Parcel E-2 boundary. The electronic reference provided in Section 2.7 contains a map showing the point of compliance for Parcel E-2.</p> |
| 17.                                  | Table 9, Relative Ranking of Remedial Alternatives, Page 2-33 and Section 2.8.2, Comparative Analysis of Alternatives, Page 2-34: It is unclear why the alternatives are scored with half-filled circles, indicating good ranking for the criterion reduction in toxicity, mobility, or volume through treatment, when treatment is not a significant component of these alternatives (as stated on page 2-34). This criterion requires treatment, so alternatives that do not involve significant treatment should be scored fair or poor. Please make this change. | Table 9 was updated to change the ratings for “reduction in toxicity, mobility, or volume through treatment” for Alternatives 2, 3, 4, and 5 from “Moderate” to “Fair.” Each of these alternatives involves ancillary treatment that is not a significant component of the proposed actions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 18.                                  | <p>Section 2.8.2, Comparative Analysis of Alternatives, Page 2-34.</p> <p>a. Under Short-term Effectiveness, it is EPA's opinion that for Alternative 2, site workers and the nearby surrounding community may be exposed to potentially unsafe levels of landfill contaminants during excavation work in addition to exposure to increased dust, noise and construction traffic. Please check the Introduction section the Responsiveness Summary to see if additional text could be introduced here to bolster the rationale for the selection of Alternative 5.</p> <p>b. Under Community Acceptance, please replace "citizens" with "residents" for describing local community members who favor Alternative 5.</p>                                                                                                                                                                                                                                                                                                          | <p>a. The second sentence in Section 2.8.2 was revised to state: <i>“Because of its invasive nature, Alternative 2 would pose more short-term risks to site workers and the surrounding community than the containment remedies (Alternatives 3, 4, and 5). These risks could include exposure to dust, noise, <u>contaminated material</u>, <u>objectionable odors</u>, and increased construction traffic.”</i></p> <p>b. The cited sentence in Section 2.8.2 was revised as suggested. Similar statements in the responsiveness summary were revised accordingly.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 19.                                  | <p>Figure 12, Hot Spot Excavations and Groundwater Containment Features, Page 2-37: The legend on Figure 12 includes a note regarding the Upland Hot Spot that "some of these areas were recently excavated as part of a removal action;" however, this figure does not indicate which hot spots were fully removed (to ROD remediation goals) and which contain residual contamination to be addressed by remedial actions under this ROD. As noted in earlier comments, some of the potential hot spots with VOC, PCB and metals contamination remain in place at or near past early action removal actions. Please revise Figure 12 to identify hot spots that still remain in place or revise the note to state that portions of some upland hot spot areas were not excavated. In addition, it is unclear why this figure does not include the removal action being conducted at the Experimental Ship-Shielding Area in the Panhandle Area. Please revise this figure to include the Experimental Ship-Shielding Area.</p> | <p>Figure 12 was revised to distinguish between hot spot excavations that have been initiated under removal actions and those where excavation will not be initiated until the remedial action. However, the Navy wishes to clarify several additional points regarding this comment:</p> <ul style="list-style-type: none"> <li>• As discussed in the response to general comment 2, results of the ongoing removal actions, specifically the Phase 2 PCB Hot Spot Area TCRA and the Ship-Shielding Area TCRA, are not yet published. Accordingly, a detailed analysis of the post-excavation data for the ongoing TCRAs cannot be provided in this ROD. Section 2.9.2 was revised to specify that, because the TCRA results are not available at the date of ROD signature, the excavation to achieve the goals specified in the action memoranda (which are identical to those specified in this ROD) will be completed as a remedial action pursuant to this ROD.</li> <li>• The proposed removal action at the Ship-Shielding Area was identified in Figure 7, as described in the response to specific comment 6. This removal action was proposed based on historical operations that may have resulted in Cobalt-60 contamination; however, the existing data do not indicate the presence of any Cobalt-60 “hot spots,” and the Navy does not believe that it is appropriate to revise Figure 12 to identify the proposed removal action area.</li> </ul> |

| <i>Specific Comments (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 20.                                  | <p>Section 2.9.2, Description of Selected Remedy, Page 2-37. The last paragraph on Page 2-37 states that "Radiological contamination near the ground surface will also be removed and disposed of at one or more approved off-site landfills, appropriate". EPA agrees with this statement but further clarification is required. First, EPA understands radiological contamination at the ground surface to mean surface soil (or sediment) containing one or more radionuclide in exceeding its remediation goal for radionuclides as identified in Table 6. In addition, the requirement for additional searching for radiological contamination via scanning technology(s) and surface soil sampling at locations of elevated scan readings is missing from Section 2.9.2 and should be added to this section (see Comment #9).</p>                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>As described in the response to specific comment 9, Section 2.9.2 was revised to state that (1) the selected remedy would include radiological screening to be performed throughout Parcel E-2 in conjunction with the proposed excavation activities; (2) radiologically contaminated soil, sediment, or debris identified during the screening process would be removed and disposed of off site; (3) final radiological surveys would be performed to demonstrate the successful removal of radiological contamination (exceeding the remediation goals) within the upper 1 foot of the excavated subgrade, and (4) radiological risk modeling would be performed to verify that residual radiological risk at the final ground surface (following installation of a demarcation layer and soil cover) is within the risk management range specified in the NCP (<math>10^{-6}</math> to <math>10^{-4}</math>).</p>                                                                                                                                                                                                                                                                                                                                                                 |
| 21.                                  | <p>Section 2.9.2, Description of Selected Remedy, Page 2-38.</p> <ol style="list-style-type: none"> <li>a. The landfill cover description needs to clarify the relationship and consistency between the interim cover and the final cover. Please make Figures 8 and 13 consistent with respect to both the extent of the interim landfill cap and extent of landfill on UCSF property.</li> <li>b. EPA agrees with the ROD inclusion of the State ARAR for compaction of the foundation layer and assumes that the landfill cover foundation layer and compaction requirements for the entire landfill will be specified during the remedial design. Please clarify.</li> <li>c. The discussion of extending the remedy onto the adjacent UCSF property requires clarification. EPA assumes that the Selected Remedy for the landfill cover will be constructed in accordance with the Final ROD requirements regardless if such cover is on Navy property or and non-Navy property (e.g. UCSF property). EPA further assumes that all land use and activity restrictions described in Section 2.9.2 will apply to both Navy property and non-Navy property (e.g. UCSF property). Please make the necessary clarifications to Section 2.9.2.</li> </ol> | <ol style="list-style-type: none"> <li>a. Section 2.9.2 was revised to state, consistent with Section 12.2.3.6 of the Final RI/FS Report, that: <i>"The new protective liner would be contiguous with the existing landfill cap; however, portions of the existing landfill cap would be removed to achieve the design grades, and a new protective liner would be constructed in these areas."</i> Figure 8 was revised to show the extent of the Parcel E-2 Landfill, consistent with Figure 13 (and other figures in the ROD). Figures 4 and 7 identify the extent of the interim landfill cap.</li> <li>b. Yes, the RD will specify the requirements for the landfill cover foundation layer, including the required compaction standards. Construction of the soil covers at Parcel E-2 will comply with the action-specific ARARs identified in Attachment 4 of the Draft ROD.</li> <li>c. Yes, the selected remedy will be constructed in accordance with the Final ROD requirements regardless whether the cover is on Navy property or non-Navy property. Section 2.9.2 was revised to clarify that the proposed landfill cover and institutional controls will apply to the small portion of the Parcel E-2 Landfill that extends north onto property owned by UCSF.</li> </ol> |

| 21.<br>(cont.)                       | d. It may be prudent for the E-2 ROD to include a contingency action (e.g. removal of solid waste from UCSF property) if pre-remedial design analysis indicates such an action is feasible and cost-effective.                                                                                                                                                                                                                                    | d. The Navy believes that solid waste that extends north onto property owned by UCSF can be safely and reliably contained, and that removal of the solid waste is not necessary to protect human health and the environment. The Navy's determination is supported by existing information presented in the RI/FS Report, which includes information demonstrating the Navy's successful removal of landfill gas that had previously migrated onto the UCSF compound. In addition, the Navy wishes to clarify that solid waste within UCSF property covers approximately 0.8 acre and may be present at depths of up to 30 feet. Section 11.6.1 of the RI/FS Report discusses the significant implementation challenges and short-term risks associated with excavating solid waste at this depth.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 22.                                  | Section 2.9.2, Description of Selected Remedy, Pages 2-39 and 2-40: The last paragraph on page 2-39 does not acknowledge that VOC contamination remains in place in the VOC hot spot area, which underlies a portion of the Shipyard South Multi-Use District. This VOC contamination should be addressed by the Selected Remedy. Please revise the ROD to include action to address this VOC contamination (see previous comment on this issue). | As discussed in the response to specific comments 10 and 11, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space. This change will be reflected, as appropriate, throughout the Draft Final ROD. In addition, consistent with the response to specific comment 11, the Navy verified that soil concentrations in the subject portion of the Shipyard South Multi-Use District (which will be moved from Parcel E-2 to Parcel E) do not exceed the hot spot goals for the VOC source area (per ROD Table 4, which are consistent with residential risk-based concentrations for Parcel E). As described in the response to general comment 2, results of the ongoing TCRA's, including excavation at the VOC source area, are not yet published. Accordingly, a detailed analysis of the post-excavation data for the portion of the VOC source area that will remain in Parcel E-2 cannot be provided in this ROD. Section 2.9.2 was revised to specify that, because the TCRA results are not available at the date of ROD signature, the excavation to achieve the goals specified in the action memorandum (which are identical to those specified in this ROD) will be completed as a remedial action pursuant to this ROD. |

Landfill Gas Control.                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                      | a. Please clarify that landfill gas control system will comprehensively control landfill gas in accordance with ARARs managing landfill gas required by this ROD.<br><br>b. In addition, EPA understands that the landfill gas controls to consist of an absorbent material (for NMOCs) and (not "or") an enclosed flare (for the methane gas). Please change the "or" to an "and" in the sentence regarding control technologies. | a. Section 2.9.2 was revised to clarify that the system will control landfill gas in accordance with pertinent state and federal ARARs (as detailed in Attachment 4).<br><br>b. Section 2.9.2 was revised to state: <i>“Extracted landfill gas would be treated by <del>either</del> an enclosed flare <u>and/or</u> adsorbent material (such as a charcoal filter).”</i> However, the Navy wishes to clarify the following points, as detailed in the RI/FS Report, that indicate that both adsorbent material and an enclosed flare may not be necessary to treat landfill gas: <ul style="list-style-type: none"> <li>• BAAQMD Regulation 8, Rule 34 pertains to landfill gas collection and emission control and includes requirements for the treatment of NMOCs. However, as detailed in Appendix N of the RI/FS Report, BAAQMD Regulation 8, Rule 34 (and its associated requirements for treatment of NMOCs) is not an ARAR for the selected remedy because the Parcel E-2 Landfill meets the exemption criteria: (1) the landfill is a closed landfill or an inactive landfill with no design capacity available for future waste deposition; (2) the landfill last received solid waste at least 30 years ago; and (3) the landfill has an in-place tonnage of less than 1,000,000 tons.</li> <li>• A potential landfill gas control system at Parcel E-2 would be subject to BAAQMD Regulation 8, Rule 2, which limits carbon emissions from any miscellaneous operation. Because the vast majority of carbon emissions from the Parcel E-2 Landfill are associated with methane, future landfill gas treatment, if necessary, would need to focus on methane removal to ensure compliance with BAAQMD Regulation 8, Rule 2.</li> </ul> |

| <i>Specific Comments (continued)</i> |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 23.<br>(cont.)                       | <i>(see above)</i> | <ul style="list-style-type: none"> <li>• Preliminary modeling results (provided in Appendix P2 of the RI/FS Report) indicate that landfill gas generation rates from Parcel E-2 would be relatively low compared to active landfills. Additional studies will be performed in conjunction with the RD to better estimate the gas generation rates and to determine the content of the landfill gas. This study could reveal that treatment of landfill gas prior to discharge is required.</li> <li>• To address the potential need for landfill gas treatment, the Navy evaluated several technologies in Section 11.5.4 of the RI/FS Report and then identified two potential landfill gas treatment options for Alternatives 3, 4, and 5. As described in Section 12.2.3.9 of the RI/FS Report, two mutually exclusive options were identified for potential treatment of landfill gas at Parcel E-2: (1) enclosed flare, and (2) adsorbent material (GAC and potassium permanganate).</li> <li>• An enclosed flare is a demonstrated effective technology that, when properly designed and operated, typically destroys 99 percent of methane and NMOCs in landfill gas (and minimizes the potential for creation of dioxins as a combustion byproduct). In contrast, adsorbent material would effectively remove NMOCs but would not be effective in removing methane.</li> </ul> |

| 1.          | Section 1.1 – Selected Remedy. Paragraph two, third bullet. The text states that the selected remedy will include installation of “a protective liner and soil cover over all of Parcel E-2”. However, the selected remedy (Alternative 5) includes unlined freshwater wetlands. Please clarify.                                                                                                                                                                                                                                                                                                               | The subject bullet item was revised, based on this comment and comment 2 from CCSF <sup>2</sup> , to state: “ <i>Install a <del>protective liner and soil cover</del> over all of Parcel E-2, with a protective liner (consisting of a geomembrane with an overlying geocomposite drainage layer) where needed to minimize water seeping into the contaminated material.</i> ”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Tsuji; Unit Chief”.                                                                                                                                                                                                                                                                                                                                                                                                                                              | Section 1.4 was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 3.          | Section 2.5.1 – Human Health Risk Assessment (HHRA). The HHRA results presented in Table 2 and described in the text present cancer risks and noncancer hazards for each Parcel E-2 area. Chemical risks and noncancer hazards for all areas should be evaluated using the residential exposure scenario independent of planned reuse. The residential exposure scenario is the most conservative and is necessary because reuse areas may change in the future. Furthermore, exceedances of the unrestricted (residential) land use scenario risks can then be used to justify the need for remedy selection. | <p>The HHRA, as presented in the Draft Final RI/FS Report (published in February 2009), was focused on the reasonably anticipated reuse of Parcel E-2, which did not include residential use. The RI/FS Report (and associated HHRA) was finalized in May 2011, and no revisions or updates to the HHRA were required. This decision is consistent with the preamble to the NCP and EPA risk assessment guidance, as detailed below.</p> <ul style="list-style-type: none"> <li>• <u>NCP Preamble, 55 Fed. Reg. 8710-8711</u>: “<i>Residential land use assumptions generally result in the most conservative exposure estimates. The assumption of residential land use is not a requirement of the program but rather is an assumption that may be made, based on conservative but realistic exposures, to ensure that remedies that are ultimately selected for the site will be protective. An assumption of future residential land use may not be justifiable if the probability that the site will support residential use in the future is small.</i>”</li> <li>• <u>Land Use in the CERCLA Remedy Selection Process (OSWER Directive 9355.7-04)</u>: “<i>The baseline risk assessment generally needs only to consider the reasonably anticipated future land use; however it may be valuable to evaluate risks associated with other land uses.</i>”</li> <li>• <u>Risk Assessment Guidance for Superfund, Volume 1 (EPA/540/1-89/002)</u>: “<i>Because residential land use is most often associated with the greatest exposures, it is generally the most conservative choice to make</i></li> </ul> |

| 3.<br>(cont.) | <i>(see above)</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p data-bbox="1199 370 1990 488"><i>when deciding what type of alternate land use may occur in the future. However, an assumption of future residential land use may not be justifiable if the probability that the site will support residential use in the future is exceedingly small.”</i></p> <p data-bbox="1150 500 1990 797">In addition, exclusion of the residential exposure scenario from the HHRA does not represent a deficiency in the evaluation of potential remedial alternatives for Parcel E-2. As presented in the RI/FS Report, the risk assessment results for less conservative exposure scenarios (recreational and construction worker) indicated that existing conditions at Parcel E-2 posed an unacceptable risk to human health requiring evaluation of remedial alternatives. Because a risk evaluation using more conservative exposure factors associated with potential residential reuse would have reached the same conclusion, it is not necessary to quantify nonradiological risk for the residential exposure scenario.</p> <p data-bbox="1150 813 1990 927">The remedial alternatives evaluated for Parcel E-2 include a combination of removal and containment actions, combined with institutional controls, that will be adequately protective of human health and will prevent exposure associated with potential residential use.</p> |
| 4.            | <p data-bbox="306 951 1125 976">Section 2.7 – Remedial Action Objectives.</p> <p data-bbox="306 992 1125 1138">a. Groundwater RAOs, Protection of Wildlife subsection. The corresponding “water quality criteria for aquatic wildlife” to which this RAO applies does not appear in any of the remediation goals tables. Please provide additional information clarifying this objective either in the form of an additional table or in the subsection text.</p> | <p data-bbox="1150 951 1990 1373">a. Attachment 4 identifies the chemical-specific ARARs for surface water that include water quality criteria specified in the California Toxics Rule and the Basin Plan. These water quality criteria are incorporated into the groundwater and surface water RAOs in a manner that will ensure protection of aquatic wildlife in San Francisco Bay. However, these water quality criteria apply to surface water at the interface of A-aquifer groundwater, and were not identified as remediation goals for in-situ A-aquifer groundwater. Section 2.7 was revised to explain, consistent with statements in Section 9.3 of the Final RI/FS Report, the rationale for not specifying remediation goals for each COPEC in groundwater (further detail is provided in the response to EPA specific comment 16). In addition, Section 2.9.2 was revised to specify that the RD will develop specific monitoring criteria for A-aquifer groundwater that address the potential risk to aquatic wildlife in San Francisco Bay.</p>                                                                                                                                                                                                                                                                                                                  |

| 4.<br>(cont.) | b. Surface Water RAOs subsection. Same comment as above regarding the corresponding “water quality criteria for aquatic wildlife” also applies to this subsection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | b. See response to comment 4a above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 5.            | Section 2.8 – Description and Evaluation of Remedial Alternatives. The text should be modified to include a brief description of what is planned for sections of sanitary sewer, storm drain, and septic sewer lines that may extend into the IR 01/21 site. In accordance with the 2011 Radiological Addendum to the Remedial Investigation / Feasibility Study Report for Parcel E-2, the lines will be cut, capped, and grouted at the IR 01/21 site boundary under Alternatives 2, 3, 4, and 5 in order to prevent these lines from serving as potential preferential pathways for groundwater flow.                                                                                                                | Section 2.8 was revised to specify, consistent with the radiological addendum to the RI/FS Report, that Alternatives 2, 3, 4, and 5 include removal and remediation of sanitary sewer, storm drain, and septic sewer lines that extend into the East Adjacent Area but are located outside of the IR Site 01/21 boundary. Also, as described in the response to EPA specific comment 3a, Section 2.9.2 was revised to specify that the selected remedy includes this same action and to provide an electronic reference to the more detailed description in the radiological addendum to the RI/FS Report (that describes the proposed cutting and capping of drain lines at the IR Site 01/21 boundary).                                                                                                             |
| 6.            | Table 5 – Remediation Goals for Nonradioactive Chemicals in Soil and Sediment. Residential cleanup goals should be applied independent of future planned reuse and must be included. As stated previously, the residential exposure scenario is the most conservative and is necessary because reuse areas may change in the future. Furthermore, exceedances of the unrestricted (residential) land use scenario risks can then be used to justify the need for remedy selection. Presentation of all the non-residential exposure scenario remediation goals also potentially confuses readers as to what condition each remediation goal applies and consideration should be given for their removal from the table. | The Navy does not agree that residential cleanup goals should be applied independent of future planned reuse, and wishes to clarify that such an approach is inconsistent with the selected remedies for other HPNS parcels. Please see the response to comment 3 regarding the justification for not revising the HHRA to include a residential exposure scenario. Consistent with the previous RODs for other HPNS parcels, the Draft ROD for Parcel E-2 includes RAOs and remediation goals for each exposure scenario evaluated in the HHRA, which includes construction worker exposure. In addition, the Navy wishes to clarify that the proposed institutional controls provide legal and administrative mechanisms by which future changes in land use would be reviewed and approved by the FFA signatories. |
| 7.            | Table 6 – Remediation Goals for Radionuclides in Soil and Sediment. Footnote “a”. The footnote states that residential use is not planned for Parcel E-2. However, the text in section 2.4 (Current and Potential Future Site Uses) states that a small area (about 0.42 acres) in the East Adjacent Area is part of the “Shipyard South Multi-Use District,” and may be used for recreational, industrial, and residential purposes. Please clarify.                                                                                                                                                                                                                                                                   | As described in the response to EPA specific comment 10a, the Navy has reevaluated its position and decided that a boundary change for Parcels E and E-2 is the most effective way to align the CERCLA documentation with the CCSF’s 2010 amended redevelopment plan. Specifically, the boundary between Parcels E and E-2 will be changed so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space.                                                                                                                                                                                                                                                                                                    |

| 8.          | Table 7 – Remediation Goals for Groundwater. Residential cleanup goals should be applied to all Parcel E-2 areas independent of future planned reuse and must be included. Presentation of construction worker exposure scenario remediation goals potentially confuse readers as to what condition each remediation goal applies and consideration should be given for its removal from the table.                                                                                                                                                                                                                                | Please see the response to comment 6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 9.          | Section 2.8.1 – Description of Remedial Alternatives. Alternative 2. It is unclear why institutional controls and monitoring would be necessary for this alternative as all waste and contaminated soil would be removed. Either consideration should be given to remove it or a brief description of why these would be necessary should be included in the text. In addition, please consider providing additional text describing that this alternative would also require clean backfill of comparable volume or more to be brought back onsite prior to freshwater wetland construction. The same comment applies to Table 8. | <p>Consistent with information presented in the RI/FS Report, Alternative 2 was not developed to facilitate unrestricted reuse of Parcel E-2 and therefore Alternative 2 includes institutional controls and monitoring to ensure protection of human health and the environment. Alternative 2 evaluates complete removal of the Parcel E-2 Landfill, which satisfies the NCP requirement at Title 40 CFR § 300.430(e)(3)(i), but does not include complete removal of all low-level contamination in the Panhandle Area, East Adjacent Area, and Shoreline Area because such an action was not required to satisfy the RAOs. Section 2.8.1 was revised to clarify that for Alternative 2:</p> <ul style="list-style-type: none"> <li>• The proposed excavation within the Panhandle Area, East Adjacent Area, and Shoreline Area would eliminate exposure to contamination, in accordance with the exposure depths specified in the risk assessments (3 to 4 feet deep in most areas), and would extend deeper in areas with known nonradiological chemical hot spots (up to 16 feet deep).</li> <li>• The excavations would be backfilled with an estimated 400,000 cubic yards of clean imported soil, meeting stringent chemical and radiological acceptance criteria, that would result in lower final ground surface elevations (as compared to existing conditions).</li> </ul> <p>Section 2.8.1 was also revised to clarify, consistent with information presented in the RI/FS Report, that for Alternatives 2, 3, 4, and 5:</p> <ul style="list-style-type: none"> <li>• A demarcation layer would be installed within the IR Site 01/21 and 02 boundaries to identify remaining radiological hazardous substances at depth, prior to backfilling with clean imported soil.</li> <li>• Institutional controls, consisting of land use and activity restrictions, would be implemented to prevent exposure to potential residual contamination in soil left in place and to preserve the integrity of the soil cap.</li> </ul> |

|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.         | <p>Section 2.9.2 – Description of Selected Remedy.</p> <p>a. First paragraph. Soil confirmation sampling should be mentioned as a component of the remedial action following excavation and before backfilling with clean soil.</p> <p>b. First paragraph, last sentence. Please consider revising and/or removing this sentence due to the potential confusion that arises from “hot spot goals” which are not presented in the ROD.</p> <p>c. Page 2-39, second paragraph. The study that the Navy conducted to serve as the basis for the statement that most soil in and around the Parcel E-2 Landfill would not liquefy, even during the maximum probable earthquake (MPE), should be referenced in the text and included in the list of references. In addition, please also include some established methods as examples that could be incorporated into the cover design that would help stabilize and control any potential soil layers that might liquefy even during the MPE.</p> <p>d. Page 2-41 and Figure 14. The technical basis for identification of the areas highlighted in brown (Area Requiring Institutional Controls for Nonradioactive Chemicals in Soil, Soil Gas, and Groundwater) is required. Is this area going to require radiological remediation and subsequent recommendation of radiological free release from the California Department of Public Health? Is the remedy for radiological constituents different in these areas compared to the rest of the parcel?</p> | <p>a. The first paragraph of Section 2.9.2 was revised to state (consistent with the RI/FS Report): <i>“The lateral and vertical extent of hot spots would be refined through pre-excavation characterization to be performed during the RD. Following excavation, confirmation samples would be collected for analysis to verify that residual chemical concentrations were less than the hot spot goals. Upon receipt of acceptable confirmation sampling results, the excavations would be backfilled with clean imported soil in accordance with the final grading plan.”</i></p> <p>b. The subject sentence was revised to reference Table 4, which presents the hot spot goals. The hot spot goals identified in Table 4 are consistent with information presented in the RI/FS Report (specifically Section 12.1.6 and Table 12-2), and are intended to guide the hot spot removals performed as part of the selected remedy. Please refer to the response to EPA general comment 2 for a description of the relationship between the hot spot goals and remediation goals.</p> <p>c. The electronic reference (number 56) embedded in the subject paragraph provides the requested information. The Navy wishes to clarify that the Parcel E-2 ROD was streamlined in accordance with the EPA guidance from September 2011 (developed in collaboration with the Navy), and is consistent with similar RODs prepared for other HPNS parcels. The streamlined ROD format summarizes key information and provides electronic references (embedded within the document) to more detailed technical information contained in the administrative record.</p> <p>d. The subject paragraph of Section 2.9.2 was revised to state (consistent with the radiological addendum to the RI/FS Report): <i>“Figure 14 also identifies the ARIC for radionuclides (green pattern on Figure 14; also referred to as the radiological ARIC), which consists of all of Parcel E-2 except for portions of the East Adjacent Area located outside of the IR Site 01/21 boundary (see Figure 3). Outside of the radiological ARIC, potential radioactive contamination exceeding the remediation goals would be removed, thus these areas would not require institutional controls regarding exposure to radioactivity.”</i></p> |

| Comment No.    | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.<br>(cont.) | <p>e. General Activity Restrictions subsection. Page 2-44. Prohibition for growing vegetables or fruits in “native soil” for human consumption. DTSC’s recommended language for prohibition application that should be added for clarification consistent with the January 2011 Draft Parcel B and G Post - Remedial Action Completion Report (RACR) Risk Management Plan is as follows: “Plants for human consumption may be grown if they are planted in raised beds (above the RACR-approved cover) containing non-native soil. Fruit trees (including nut-bearing trees) may also be planted provided that they are grown in containers with a bottom that prevents the roots from penetrating the native soil.”</p> <p>f. General Activity Restrictions subsection. Page 2-44. Prohibited use of groundwater throughout HPNS Parcel E-2 should be revised to also include access to groundwater so that it can only occur with approval by the FFA signatories. This will ensure that a work plan is in place if groundwater is to be exposed and ensure protection of human health from contact with contaminated groundwater. The prohibition on use by itself is also not adequate to protect someone from coming into contact with contaminated groundwater.</p> <p>g. Additional Activity Restrictions Related to Radionuclides at Parcel E-2 subsection. Page 2-45. Radiological management requirements should be revised to include information stating that the transferee will be required to apply for a radiological license or license exemption from the Radiological Health Branch of the California Department of Public Health (CDPH-RHB) since institutional controls will be required for the Parcel E-2 radiological remediation.</p> | <p>e. The provision allowing future growth of fruits and vegetables was included for other HPNS parcels with planned residential reuse. However, the Navy does not believe that the requested revision is necessary because, as described in the response to comment 7, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space.</p> <p>f. The subject bullet was revised to state: “Use of <u>or access to groundwater</u>”.</p> <p>g. The Navy understands the expectations of the State of California regarding radiological license or license exemption following property transfer. However, the Navy does not agree that the ROD should be revised to specify this expectation because remediation of Parcel E-2 under CERCLA does not involve radiological licensing (because California laws and regulations regarding possession of radioactive materials do not apply to land possessed by the federal government).</p> |

|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.         | Editorial comments:<br>a. Section 2.8.1, first paragraph. Reference to Table 8 on page 37 should either be corrected to page 2-32 or removed from the text.<br>b. Section 2.9.1, first paragraph. The United States Environmental Protection Agency should be included in the list of entities who support selection of Alternative 5.<br>c. Section 2.9.2, last paragraph, page 2-42. Any references to findings of suitability for <u>early</u> transfer should be removed from the document. | a. The subject reference was removed from the text.<br>b. The subject sentence was not revised because it is describing the Navy's evaluation of the two modifying criteria (state and community acceptance). Further, as described in Section 1, the Navy and EPA jointly select the remedy for Parcel E-2.<br>c. The subject sentence in Section 2.9.2 was revised to state: <i>"In addition to being set forth in the "Covenant(s) to Restrict Use of Property" and Quitclaim Deed(s) as described above, restrictions applied to specified portions of the property will be described in findings of suitability to transfer <del>and findings of suitability for early transfer.</del>"</i> This sentence is the only location in the document where the term "early transfer" is used. |

| Comment No. | Comment                                                                                                                                                                                       | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | Page 1-2, 6th bullet – this is too broad since this activity will only deal with a limited area and not all such materials will be disposed. Add “in selected areas” or some other qualifier. | The first two bullets describing the selected remedy were revised as follows: <ul style="list-style-type: none"> <li>• <i>“Remove and dispose of contaminated soil in selected areas <u>that contain high concentrations of nonradioactive chemicals, and separate and dispose of materials and soil with radiological contamination found in these areas</u>”</i></li> <li>• <i>“Perform radiological surveys throughout Parcel E-2 and separate and dispose of materials and soil with radiological contamination found <u>during the surveys</u>–<del>Separate and dispose of materials and soil with radiological contamination</del>”</i></li> </ul> |
| 2.          | Page 1-3, last sent above Section 1.3 – I believe the NCP indicates, “unlimited use and unrestricted exposure.”                                                                               | Correct. The subject sentence was revised to be consistent with the statement in the NCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3.          | Page 2-15, Section 2.4, 4th sentence – add “and approved by the FFA signatories” to the end of the sentence.                                                                                  | As described in the response to comment 7 from the DTSC Project Manager, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space. As a result, Section 2.4 (and other locations in the ROD) was revised to eliminate reference to potential residential use in Parcel E-2, including the subject sentence.                                                                                                                                                           |
| 4.          | Page 2-16, Section 2.5, 2nd sentence – Please consider replacing the term “subsurface air” with “soil gas (from gas emanating from the landfill)”.                                            | The subject sentence was revised to use the term “soil gas” instead of “subsurface air.”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 5.          | Page 2-17, Section 2.5.1, 1st paragraph, last sentence – what is the relevance of this sentence? I prefer it be deleted.                                                                      | The subject sentence was deleted as requested. For informational purposes, the subject sentence was included in the Parcel E-2 ROD to be consistent with identical statements in recent RODs for other HPNS parcels.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 6.          | Page 2-18, last sentence – end the sentence after E-2 and delete the remaining language. Access and use of GW will be restricted so the language is unnecessary.                              | The subject sentence was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 7.          | Page 2-26, bullets – why are these items separated and why are there differences in depths? Why wouldn’t it just say any depth if above remediation goals?                                    | The RAOs for soil and sediment are consistent with the RI/FS Report and align with the exposure scenarios (including exposure depths) in the human health and ecological risk assessments. Because of the variety of exposure                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Comment No.   | Comment                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7.<br>(cont.) | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                 | scenarios triggering a potential risk (and prompting remedial action), the Navy believes that this level of detail is necessary for the ROD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 8.            | Page 2-26 and 2-27– why is the phrase “or minimize” used? I suggest it be deleted. The goal of the remedy is to prevent exposure.                                                                                                                                                                                                                                                                                                                           | As requested, the phrase “ <i>or minimize</i> ” was deleted from most RAOs pertaining to direct exposure to contaminated media. However, consistent with text from the RI/FS Report, the phrase was retained for RAOs pertaining to construction worker exposure to A-aquifer groundwater.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 9.            | Page 2-26, Groundwater RAOs – why is the breakdown necessary? Instead, please revise to instead state: “Prevent exposure to and migration of contaminated groundwater at concentrations greater than remediation goals”.                                                                                                                                                                                                                                    | Consistent with text from the RI/FS Report, the separate RAOs are based on the Navy’s evaluation of chemical-specific ARARs for B-aquifer groundwater. Specifically, Appendix N (page N-21) of the Final RI/FS Report determined that, for containment remedies, drinking water MCLs are not ARARs for B-aquifer groundwater underlying Parcel E-2, but are ARARs for B-aquifer groundwater downgradient of the point of compliance. The groundwater point of compliance is defined, in accordance with the NCP and Cal. Code Regs., tit. 22 § 66264.95, at the downgradient edge of the waste management unit. Consistent with information presented in Appendix N of the RI/FS Report, the downgradient edge of the waste management unit is the Parcel E-2 boundary. |
| 10.           | Page 2-36, Section 2.9.1, 1st paragraph, last sentence – this sentence does not seem consistent with the statements made in Sections 2.4 and 2.7 regarding the demonstration of suitability.                                                                                                                                                                                                                                                                | As described in the response to comment 3, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space. As a result, Sections 2.4 and 2.7 (and other locations in the ROD) were revised to eliminate reference to potential residential use in the Shipyard South Multi-Use District (and the conditions for regulatory approval of such uses).                                                                                                                                                                                                                                        |
| 11.           | Page 2-42, 4th paragraph, 1st sentence – add “and” between “Navy” and “reviewed” and end the sentence after the first “FFA signatories.” If there is a Risk Management Plan (RMP), it will not “implement” land use and activity restrictions, which are implemented by the deed and covenant. The RMP will only be a document if used that describes conditions and protocols that shall be used to conduct what would otherwise be restricted activities. | The subject sentence was revised as follows: “ <i>The land use and activity restrictions in the “Covenant(s) to Restrict Use of Property” and Quitclaim Deed(s) shall be further defined in the land use control remedial design (LUC RD) report that would be prepared by the Navy and reviewed and approved by the other FFA signatories, and, if deemed necessary, implemented through the Parcel E-2A risk management plan (RMP) may to be prepared by the CCSF and approved by the Navy, other FFA signatories and the California Department of Public Health (CDPH) that may set forth certain requirements and protocols used to conduct restricted activities.</i> ”                                                                                            |

| Comment No. | Comment                                                                                                                                                                                                                                                                                                                             | Response                                                                                                                                                                                                                                                                                                                                                   |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.         | Page 2-42, last paragraph regarding UCSF property – if contamination remains in place at this property that does not allow for unrestricted use then a Covenant to Restrict Use of Property will be required. Therefore, the Navy will be required to negotiate with UCSF to that end and that requirement should be included here. | The Navy has previously communicated with UCSF regarding the proposed remedial action at Parcel E-2, including the small portion of the Parcel E-2 Landfill located on UCSF property. The Navy will work with UCSF and DTSC to establish appropriate legal mechanisms that ensure the protection of human health and the integrity of the selected remedy. |
| 13.         | Page 2-43, Land Use Restrictions, last line – it is not my understanding that the RMP (if necessary) will control land use. The restrictions will be in the deed and covenant.                                                                                                                                                      | The subject sentence refers to the approval process for removing the specified land use restrictions, and clarifies that approval would need to comply with the “ <i>Covenant(s) to Restrict Use of the Property, Quitclaim Deed(s), LUC RD report, and Parcel E-2 RMP, if applicable.</i> ”                                                               |
| 14.         | Page 2-45, Additional Activity Restrictions Related to Radionuclides at Parcel E-2, 2nd line – explain the phrase “(in most areas)” in a little more detail. If it is just in the wetlands area then state that here.                                                                                                               | The subject parenthetical notation was revised to state: “ <i>in <del>most</del> <u>all</u> areas outside of the future wetlands</i> ”.                                                                                                                                                                                                                    |
| 15.         | Attachment 4, Page 35, California Civil Code – I would prefer that it just say “1471” and in the comments it can just say the substantive requirements or provisions.                                                                                                                                                               | The subject citation was revised as requested.                                                                                                                                                                                                                                                                                                             |
| 16.         | Attachment 4, Page 35, below section on 1471 – add the section title “California Health and Safety Code” above the 25202.5 section.                                                                                                                                                                                                 | A new header row (titled “California Health and Safety Code”) was added as requested.                                                                                                                                                                                                                                                                      |
| 17.         | Attachment 4, Page 37, Cal. Code Regs. Section – please just cite section 67391.1 and the comment can remain the same.                                                                                                                                                                                                              | The subject citation was revised as requested, and the corresponding comment was revised to be consistent with the most recent ROD signed for HPNS (for Parcel C).                                                                                                                                                                                         |

| 1.          | <p>The Navy submitted their decision in a Record of Decision (ROD) for Parcel E-2. It appears the intended remedy will result in a future “federal-to-nonfederal” transfer of the Parcel E-2 property with land use conditions (LUCs). These prescribed restrictions include items to address specific issues that remain with the property upon transfer. Since this property transfer will be considered a “restricted release” and some of the restrictions are related to and address radiological issues that remain with the property, the transferee or future overseer receiving the property will be required to submit an application for a State of California radioactive materials license or license exemption to the Radiologic Health Branch (RHB) of the CDPH. It is highly recommended that the known and designated transferee contact RHB as soon as possible to avoid any delays in the license process.</p> <p>Please be aware that the role of EMS is to consult DTSC in matters of radiologic concern specific to DoD sites. This role is limited to properties that are to be transferred out of federal jurisdiction with a requirement for radiological unrestricted release of sites formerly radiological impacted. Any properties transferred, from federal jurisdiction to a non-federal entity, with radiologic restrictions will be subject to RHB jurisdiction upon transfer.</p> | The Navy acknowledges CDPH’s comments. |

| <i>Introduction</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| --                  | <p>The California Department of Fish and Game, Office of Spill Prevention and Response (DFG-OSPR) has completed its review of the subject document, received on September 7, 2011. The comments that follow are provided as part of our role as a natural resource Trustee for the State of California's fish and wildlife, and their habitats. DFG-OSPR's review focused on the ecological risk assessment and biological resource related sections of the document. The DFG is the State's Trustee for fish and wildlife resources pursuant to Fish and Game Code Section 711.7. The DFG is also designated as a Trustee for natural resources pursuant to Comprehensive Environmental Response, Compensation, and Liability Act Section 107 (f)(2)(B).</p> <p>Hunters Point Naval Shipyard (HPNS), located in southeast San Francisco on a peninsula that extends east into San Francisco Bay, was identified for closure during the Base Realignment and Closure process of 1991. The shipyard is approximately 936 acres in size, 443 acres of which are on land with the remaining acreage under water (Tetra Tech, 2000). HPNS is bounded on the north and east by San Francisco Bay and on the south and west by the Hunters Point district of San Francisco, which consists of public and private housing and commercial &amp; industrial buildings. The north and east shores of HPNS are developed for ship repair with dry docks and berths; there are no shipping facilities on the southwest shore.</p> <p>HPNS was operated as a commercial dry dock facility from 1869 until 1939. In 1940, the Navy obtained ownership of the shipyard for ship building, repair, and maintenance activities. Activities shifted from ship repair to submarine servicing and testing after World War II. HPNS was deactivated in 1974 and remained relatively unused until 1976. Between 1976 and 1986, the Navy leased most of the property to a privately-owned ship repair firm. In 1986, the Navy again occupied the shipyard and began a program to investigate and clean up contamination resulting from past activities (Engineering/Remediation Resources, 2009).</p> | <p>The Navy wishes to clarify that the Draft ROD for Parcel E-2 was submitted on March 14, 2012. The Draft ROD included a responsiveness summary to comments received on the Proposed Plan for Parcel E-2 (which was submitted on September 6, 2011). The Navy's responses to CDFG comments on the responsiveness summary are provided on the following pages. The Navy wishes to clarify that the Proposed Plan and Draft ROD summarize previously published information on Parcel E-2, and all of CDFG's comments pertain to information previously published in the Final RI/FS Report for Parcel E-2 (ERRG and Shaw, 2011). As acknowledged in this comment, CDFG provided comments on the Draft and Draft Final versions of the RI/FS Report for Parcel E-2. The Navy responded to all CDFG comments, and the document was finalized in May 2011, in accordance with Section 7.9 of the HPNS FFA (Navy, DTSC, and Water Board, 1991).</p> <p>The Navy has worked with the FFA signatories (EPA, DTSC, and Water Board) and other interested regulatory agencies in preparing the RI/FS Report and Proposed Plan, and will continue this collaborative effort to finalize the ROD for Parcel E-2. The Navy's efforts include preparing written responses to all comments received on its CERCLA documentation for Parcel E-2, and holding meetings to discuss and attempt to resolve technical and regulatory issues related to the CERCLA process for Parcel E-2. However, the Navy wishes to emphasize its obligation to complete the CERCLA documentation for Parcel E-2 in accordance with the schedule developed per the FFA.</p> <p>As described in Section 7.10 of the FFA, there are specific technical requirements for any request by an FFA signatory (which, for the State of California, includes only DTSC and the Water Board) to modify a final primary document (such as the RI/FS Report for Parcel E-2), or otherwise request additional work for sites addressed in a final primary document. The Navy is not aware of any such requests from an FFA signatory endorsing and requesting modifications of the RI/FS based upon the technical concerns identified by CDFG during their review of the Draft ROD. Accordingly, the Navy does not agree that CDFG's technical concerns, as identified in these</p> |

| <i>Introduction (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| --                              | <p>HPNS is divided into six parcels (A through F). Parcel E-2 is about 48 acres in size and is located in the southwestern part of HPS, adjacent to San Francisco Bay. It includes former portions of Parcel E, including Installation Restoration (IR)-01/21, the Panhandle Area, a small area of IR-02 Northwest, and the area east of IR-01/21 that does not have an IR site designation. Habitats in Parcel E-2 include ruderal, non-native annual grassland, intertidal and saline emergent wetlands, and a seasonal freshwater wetland. Base habitats that include upland, tidal wetlands, and offshore habitats are used by many wildlife species representing different trophic levels. The planned reuse for Parcel E-2 is open space, except for a small area in the East Adjacent Area, which is designated as part of the Shipyard South Multi-Use District.</p> <p>In a memorandum dated July 26, 1999, DFG-OSPR provided comments on the Draft Validation Study Report, Parcel E, HPNS (Chernoff, 1999). DFG-OSPR commented on the Draft Wetlands Mitigation and Monitoring Plan, Metal Debris Reef and Metal Slag Areas Parcels E and E-2, HPNS (Gray, 2007a) and on the Draft Parcel E-2 Remedial Investigation/Feasibility Study (Gray and Huang, 2007). DFG-OSPR provided Applicable or Relevant and Appropriate Requirements (ARARs) for the Parcel E-2 Feasibility Study in a memorandum dated September 7, 2007 (Gray, 2007b). DFG-OSPR commented on the Draft Final Wetlands Mitigation and Monitoring Plan, Metal Debris Reef and Metal Slag Areas Parcels B, E and E-2 (Huang and Nakahara, 2009) and on the Draft Final Remedial Investigation/Feasibility Study for Parcel E-2 (Nakahara et al, 2009). DFG-OSPR also commented on the Final Wetlands Mitigation and Monitoring Plan, Metal Debris Reef and Metal Slag Areas Parcels B, E and E-2 (Nakahara, 2010). DFG-OSPR provided ARARs for the Time-Critical Removal Action (TCRA) at the Experimental Ship Shielding Range (ESSR), Parcel E-2 and commented on the Proposed Plan (PP) for Parcel E-2, and the Draft Action Memorandum for the TCRA ESSR, Parcel E-2 in memoranda dated July 27, 2011 (Nakahara, 2011), November 18, 2011 (Huang and Nakahara, 2011), and February 22, 2012 (Huang and Nakahara, 2012), respectively.</p> | <p>comments, require reconsideration under the FFA of previous conclusions presented in the Final RI/FS Report and summarized in the Draft ROD. However, because many of CDFG's technical concerns pertain to long-term maintenance and monitoring, the Navy wishes to clarify that, as required by Cal. Code Regs., tit. 27 § 20950(a) and tit. 22 § 66264.117(b)(2)(B), it will maintain and monitor the remedy for as long as the hazardous substances pose a threat to water quality and as long as necessary to protect human health and the environment. As stated in previous responses to CDFG comments on the RI/FS Report and Proposed Plan, the Navy will prepare a post-closure operation and maintenance plan (to be prepared in conjunction with the RD) that will identify the inspection and maintenance actions. The post-closure operation and maintenance plan will be submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the RD.</p> <p>In addition, CDFG's comments on the RI/FS Report, Proposed Plan, and Draft ROD request that the Navy incorporate a biotic barrier consisting of cobbles. CDFG's comments imply that a final cover without a biotic barrier consisting of cobbles would require significant long-term maintenance (to repair damage from burrowing animals). As detailed in the following responses (as well as in previous responses to CDFG comments on the RI/FS Report and Proposed Plan), the CDFG has not presented sufficient technical information to support its assertions. Further, CDFG's comments fail to acknowledge the potentially significant geotechnical issues that could arise by incorporating a cobble layer (up to 3 feet thick) with an overlying vegetative layer (up to 2 feet thick). The Navy finds that a cobble layer is unnecessary and that incorporation of such a layer could potentially affect the stability and long-term performance of the final cover.</p> |

| <i>Introduction (continued)</i>                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                           |
| --                                                                                    | On May 8, 2012, DFG-OSPR, the Department of Toxic Substances Control (DTSC), and the Navy attended a site visit to Parcel E and E-2. Immediately following the site visit, a meeting was held to discuss DFG-OSPR's concerns on the Parcel E Draft Final Feasibility Study, Parcel E-2 Draft TCRA ESSR Action Memorandum, and the Parcel E-2 Draft Record of Decision (ROD). The Navy, DFG-OSPR, and DTSC are currently working on a path forward regarding DFG-OSPR's concerns on DFG ARARs and biotic barriers.                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <i>(see response above)</i>                                                                                                               |
| <i>Comments on Navy Responses to General Comments on Proposed Plan for Parcel E-2</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                           |
| 1.                                                                                    | The Navy's response [to General Comment 1 on the Proposed Plan] is acceptable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Comment acknowledged.                                                                                                                     |
| 2.                                                                                    | DFG-OSPR commented that we are in general concurrence with remedial alternative 4 or 5 with inclusion of at least one the following recommendations: incorporation of an adequate biotic barrier under the soil cover over all of Parcel E-2 except the wetlands, incorporation of a soil cover of at least four feet in depth over all of Parcel E-2, or the addition of other methods of post-closure monitoring, such as soil and surface water monitoring for contaminants. The Navy responded, "The planned activities, which include surface water monitoring, will be adequate to ensure the protection of human health and the environment. Please refer to the response to specific comment 2 regarding the Navy's position on CDFG's request for an additional biotic barrier and thicker soil cover." Please see DFG-OSPR's responses below on the PP Specific Comment 2a1-5 and 2b1 regarding biotic barriers and damage to geomembranes from burrowing animals. | Please refer to the responses to CDFG comment 2 below (on the Navy's Responses to Specific Comments on the Proposed Plan for Parcel E-2). |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1.                                                                                     | The Navy's response [to Specific Comment 1 on the Proposed Plan] is acceptable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Comment acknowledged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2.                                                                                     | Page 17, Section "Summary of the Preferred Alternative". The PP states, "The liner will minimize water seeping into the contaminated material, control animals from burrowing under the cover, and serve as a visual marker for the bottom of the cover."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>a. The cited statement in the Responsiveness Summary is consistent with more detailed information presented in Section 11.5.1.2 of the Final RI/FS Report, which identifies several other landfills in the San Francisco Bay area where the selected CERCLA remedies included geocomposite drainage material to both provide a drainage path for infiltration and to deter burrowing animals. The Navy continues to assert its belief, as stated in previous responses to CDFG's comments on the Proposed Plan, that the information in the RI/FS Report adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. In addition, the Navy wishes to clarify the following points regarding the additional information cited by CDFG:</p> |
| a.                                                                                     | <p>DFG-OSPR commented that geomembrane liners are not designed to function as biotic barriers (Huang and Nakahara, 2011). The Navy responded, in regards to the geocomposite drainage layer that is placed on top of the geomembrane, "<i>This layer would provide a drainage path for water infiltrating through the vegetative layer and, consistent with its use at other landfill sites, would also deter burrowing animals.</i>" Geosynthetic caps, consisting of a geocomposite drainage layer (e.g., geonet) and a geomembrane, are designed to reduce stormwater infiltration into the contaminated material. Geosynthetic caps are not designed to function as biotic barriers to "<i>control animals from burrowing under the cover</i>" and exposing contaminants. There is various information in the literature that supports this view. Listed below are a few examples:</p> | <p>1. The Navy has reviewed the subject document and finds that CDFG staff has presented the quoted statements out of context. Specifically, the quoted statements are included in a section titled "<i>Failure Modes of Exposed Geomembranes</i>", indicating that the noted performance issues pertain to geomembranes exposed directly to the environment. As described in the response to CDFG specific comment 2 on the Proposed Plan, covered geomembranes are used in all landfill liner and cover applications. Further, the subject document is a 600-page technical reference manual that covers a variety of topics related to</p>                                                                                                                                                                                                                                                       |
| 1.                                                                                     | <p>According to Dr. John Scheirs, a polymer technologist with ExcelPlas Geomembrane Testing Services, "<i>Burrowing animals are a real threat to geomembranes. There are a number of documented cases of animals breaching the liners by gnawing or cutting. These include: rodents gnawing through liners; pecking damage by bird beaks; [and] gophers (prairie dogs) burrowing through pond liners...</i>" (Scheirs, 2009). Furthermore, he states, "<i>The potential for penetration into the geomembrane by burrowing animals is far greater for unconsolidated, fine-grained sand/soils than for gravel and rock. A biotic barrier (BB) can therefore be installed to reduce potential intrusion by burrowing animals (for</i></p>                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2.<br>(cont.)                                                                                      | <i>instance into landfill liners). A BB of 70 cm consisting of cobbles overlain with 30 cm of gravel can deter burrowing animals” (Scheirs, 2009).</i>                                                                                                              | landfill liners, and is not a focused study on the performance of existing landfill covers. In addition, the author (Dr. Scheirs) draws upon experience from landfills in other countries (most notably Australia) where site conditions may differ from those in the United States. For example, the author cites “ <i>crab damage on Nauru island</i> ” and “ <i>kangaroo paws</i> ” as documented cases of animals damaging exposed geomembranes. CDFG excluded these statements from their quoted excerpt, and the Navy finds CDFG’s quoted statement potentially misleading because the unusual examples excluded from CDFG’s quoted statement immediately precede and follow the examples cited by CDFG. For these reasons, the Navy does not believe that the cited reference provides pertinent information on the potential for burrowing animals to affect the performance of the covered geomembrane proposed for Parcel E-2. |
| 2.                                                                                                 | The U.S. National Research Council states, “ <i>Where burrowing animals might damage the geomembrane/low-hydraulic conductivity soil layer, a biotic barrier layer of large-sized aggregate will be needed above it</i> ” (National Research Council [U.S.], 1997). | 2. The Navy has reviewed the subject document and finds that CDFG staff has not properly identified the context of the cited study. Specifically, the document summarizes the findings from a 1-day workshop on engineered barriers that might be used for “ <i>remediation of radioactive and mixed waste located in the U.S. Department of Energy (DOE) nuclear weapons complex</i> ”. The Navy does not believe that the low level radioactive material potentially present at Parcel E-2 is comparable to wastes located in the Department of Energy’s nuclear weapons complex. For this reason, the Navy does not believe that the cited reference provides pertinent information on the potential for burrowing animals to affect the performance of the covered geomembrane proposed for Parcel E-2.                                                                                                                              |

| 2.<br>(cont.)                                                                                      | <p>3. The U.S. Environmental Protection Agency (USEPA) has also discussed the use of biotic barriers in landfill caps as a method to protect geomembranes from damage by burrowing animals in several of their publications (USEPA, 1989a; USEPA, 1989b; USEPA, 1992; USEPA, 1993). According to the USEPA, “A Biotic barrier is used in the cap of a waste containment system to prevent small burrowing animals and plant roots from penetrating the drainage layer or the low permeability layer” (USEPA, 1992).</p> <p>4. The Post-Closure Operation and Maintenance Plan for landfills at Ford Ord, California states, “Another mechanism for damaging the geomembrane is burrowing animals, which are common on the landfill. The problems burrowing animals pose are twofold: Burrows destabilize the vegetation layer which is then exposed to erosion, [and] Burrowing animals with sharp claws could directly damage the geomembrane as they excavate their burrows. Although there has been only one case documented of geomembrane damage caused by burrowing animals (Steiniger, 1968), the potential for damage to the geomembrane still exists and should be monitored” (IT Corporation, 2000). The document goes on to recommend an examination and repair procedure for geomembranes exposed in deep burrows. This procedure involves excavating and exposing geomembranes by hand, examining the geomembrane for damage, repairing the affected area by welding on a high-density polyethylene patch, testing the patch for leaks, backfilling, compacting, grading, and reseeding the affected area.</p> | <p>3. The Navy has reviewed the subject document and finds that it focuses on construction quality assurance and quality control for construction of landfill covers. The design-related elements of the 1992 guidance are abbreviated and do not compare with more detailed information presented in a 1991 EPA guidance document titled “<i>Design and Construction of RCRA/CERCLA Final Covers</i>” (EPA, 1991b). Specifically, the 1991 EPA guidance identifies a biotic barrier consisting of cobbles as an optional layer that “<i>may stop the penetration of some deep-rooted plants and the invasion of burrowing animals.</i>” The 1991 EPA guidance also states that “[M]ost research on biotic barriers has been done in, and is applicable to, arid areas.” This information indicates that biotic barriers are not typical for landfill covers in temperate climates such as San Francisco. Because of its limited scope, the Navy does not believe that the 1992 guidance cited by CDFG provides pertinent information on the potential for burrowing animals to affect the performance of the covered geomembrane proposed for Parcel E-2.</p> <p>4. The landfill covers at Fort Ord Operable Unit 2, which were constructed at five separate areas, are regularly inspected and maintained in accordance with the cited post-closure operation and maintenance plan. Four of the landfill covers were completed in 1998 and the fifth landfill cover was completed in 2002. As documented in the five-year review reports from 2002 and 2007 (Army, 2002 and 2007), the Operable Unit 2 landfill covers are functioning as designed and no performance issues related to the geomembrane liners were noted. In addition, operation and maintenance reports for the Operable Unit 2 landfill covers have not identified any instance when the inspection of animal burrows identified any damage to the geomembrane liners. For these reasons, the Navy does not believe that the cited reference provides pertinent information on the potential for burrowing animals to affect the performance of the covered geomembrane proposed for Parcel E-2.</p> |

| 2.<br>(cont.)                                                                                      | 5. The Navy also published a document entitled “Installation Restoration: Navy Landfills and EPA Cover Guidance”, which recommends the use of biotic barriers to protect the geomembrane from damage by burrowing animals (Karr et. al., 1992). According to the Navy’s publication, “ <i>The biotic barrier consists of a gravel and rock layer designed to prevent the intrusion of burrowing animals. This protection is primarily necessary around the cap but, in some cases, may also be needed at the bottom of the liner. Although animals cannot generally penetrate the flexible membrane cap (FMC), they can widen an existing hole or tear through wrinkled material. The proposed 1-meter thickness should effectively prevent penetration by all but the smallest insects</i> ” (Karr et. al., 1992). | 5. The Navy wishes to clarify that the subject document, which was referenced in Section 11.5.1.2 of the RI/FS Report, does not “recommend” the use of biotic barriers. Rather, the subject document describes required and optional layers for landfill covers, as specified in 1989 EPA guidance titled “ <i>Technical Guidance Document: Final Covers on Hazardous Waste Landfills and Surface Impoundments</i> ” (EPA, 1989a). As identified in Figure 2 of the subject document (EPA, 1989a; page 33), biotic barriers are optional layers. Also, previously cited EPA 1991 guidance states that “[M]ost research on biotic barriers has been done in, and is applicable to, arid areas.” In contrast, the subject document states that “ <i>Most Navy landfills are located in coastal areas which contributes to increased penetration by water subsurfaceally, or in areas of high precipitation, creating high infiltration and runoff.</i> ” Further, the subject document evaluated conditions at 229 Navy landfills and identified the potential generation of landfill leachate and landfill gas as the primary performance issues requiring careful evaluation and further study. For these reasons, the Navy believes that the subject document supports its position, as stated in Section 11.5.1.2 of the RI/FS Report, that the potential for burrowing animals to penetrate a geomembrane is low.<br><br>In summary, the Navy finds that CDFG has presented the additional information provided in this comment out of context. The Navy continues to assert its belief, as stated in previous responses to CDFG’s comments on the Proposed Plan, that CDFG has not presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the geomembrane liner over time, or cause unacceptable exposure of contaminated waste. CDFG repeated comments on this topic imply a direct connection between the presence of burrowing animals at any landfill site and corresponding damage to an underlying geomembrane liner that is not supported by adequate evidence. |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2.<br>(cont.)                                                                                      | <i>(see above)</i> | <p>In contrast, the Navy has identified two studies, summarized briefly below, that have evaluated the performance of landfill covers nationwide and provide more pertinent information to evaluate the potential significance of burrowing animals at existing landfill covers. Neither of these studies identified burrowing animals as a significant performance problem for geomembrane liners.</p> <p><u>Assessment of the Performance of Engineered Waste Containment Barriers (National Research Council, 2007)</u>: This study, prepared at the request of numerous federal agencies (EPA, NRC, NSF, and DOE), assessed the effectiveness of existing engineered barriers over the long term. The report concluded that “<i>Based on as much as 20 years of observations, the committee concluded that most engineered waste containment barrier systems that have been designed, constructed, operated, and maintained in accordance with current statutory regulations and requirements have thus far provided environmental protection at or above specified levels.</i>” The report did not identify burrowing animals as a significant performance problem for geomembrane liners.</p> <p><u>Assessment and Recommendations for Improving the Performance of Waste Containment Systems (Bonaparte et al., 2002)</u>: This study, prepared in consultation with EPA, included a nationwide review of landfill performance data, interviews with regulatory personnel, and evaluation of existing landfills with performance problems. Problems identified for landfill covers consisted of cover system slope failure during construction, cover system slope failure after rainfall or a thaw, and soil cover damage due to earthquakes. The study noted that “<i>the number of facilities with identified problems is relatively small in comparison to the total number of modern facilities nationwide.</i>” Overall, the study concluded that “<i>environmentally safe and effective containment of waste is attainable.</i>” The report did not provide any specific examples of locations where geomembrane liners were damaged by burrowing animals.</p> |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2.<br>(cont.)                                                                                      | <p>Although other landfill sites have chosen not to install a biotic barrier, this does not mean that their geocomposite drainage layer would prevent burrowing animals from damaging the geomembrane in these landfill caps. Based on the information in the literature, DFG-OSPR requests the Navy remove any references to the geomembrane, geocomposite drainage layer, or geocomposite cap that state these components will “<i>control animals from burrowing under the cover</i>” or imply that these components will perform the function of a biotic barrier. DFG-OSPR also requests the Navy state in the ROD that they will implement appropriate procedures, approved by the regulatory agencies, for detecting and repairing damage to the geomembrane from burrowing animals as part of the Parcel E-2 post-closure operation and maintenance plan. The cost of detecting and repairing damage to the geomembrane from burrowing animals in perpetuity will need to be factored into the costs of the selected remedy.</p> | <p>Overall, the Navy finds that the technical concerns identified by CDFG are not supported by sufficient evidence. Specifically, CDFG has not presented any significant new information or demonstrated that their primary recommendation following review of the RI/FS Report and Proposed Plan (to include a biotic barrier consisting of cobbles) is necessary to protect human health or the environment. Accordingly, the Navy does not agree that CDFG’s technical concerns, as identified in these comments, require reconsideration of previous conclusions presented in the Final RI/FS Report and summarized in the Draft ROD. The language in the Draft ROD, which is consistent with the Final RI/FS Report, will not be revised in response to CDFG’s comment.</p> <p>As stated in previous responses to CDFG’s comments on the RI/FS Report and Proposed Plan, the post-closure operation and maintenance plan (to be prepared in conjunction with the RD) will identify the inspection and maintenance actions, including those related to animal burrows, and will be submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the RD. The Navy also wishes to clarify that the various components of the selected remedy will require long-term maintenance and cost for this effort was included in the Final RI/FS Report. Potential changes to the long-term monitoring and maintenance program, to be considered as part of the regulatory review process of the postclosure maintenance plan, will not significantly affect the overall costs of the remedial alternatives beyond the accuracy required by EPA RI/FS guidance (+50/-30 percent) (EPA, 1988).</p> <p>CDFG’s comments imply that a final cover without a biotic barrier consisting of cobbles would require significant long-term maintenance (to repair damage from burrowing animals). As described previously, the CDFG has not presented sufficient technical information to support its assertions. Further, CDFG’s comments fail to acknowledge the potentially significant geotechnical issues that could arise by incorporating a cobble layer (up to 3 feet thick) with an overlying vegetative layer (up to 2 feet thick). The Navy finds that a cobble layer is unnecessary and that incorporation of such a layer could potentially affect the stability and long-term performance of the final cover.</p> |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2.<br>(cont.)                                                                                      | <p>b. DFG-OSPR commented on the Draft Final Remedial Investigation/Feasibility Study Report for Parcel E-2 and asked the Navy to explain why a biotic barrier was not incorporated into the design of the landfill cover since gophers can dig up to six feet deep, which exceeds the depth of the proposed 2-foot soil cover (Nakahara et al., 2009).</p> <p>1. The Navy responded, <i>“The Navy believes that the demonstrated performance of the cover at Site 1 at the former NAS [Naval Air Station] Moffett Field is useful in evaluating the efficacy of the proposed cover at Parcel E-2.”</i> As DFG-OSPR previously commented, the Site 1 landfill cap has been in place since 1998, which is a relatively short period in the life of a landfill that is supposed to function and be maintained in perpetuity (Huang and Nakahara, 2011). According to the County inspection reports for Moffett Field Site 1 Landfill, there are issues with gophers burrowing into the landfill cap. In March 2009, the County reported, <i>“Burrowing rodent populations (pocket gophers) have nearly doubled and are noticeably more active than during the inspection 3 months ago. Provisions must be approved for a new control method other than backfilling and compacting the soil back into the area of the burrows. The only effective control will involve active eradication of the gophers”</i> (Insight Environmental, Engineering and Construction, Inc. [Insight], 2009). In December 2009, the County reported, <i>“Burrowing rodent activity is still a concern. In response there has been an aggressive program of trapping at Site 1. A few gophers have been trapped so far, but the full effectiveness of this strategy is not yet apparent”</i> (Insight, 2009). In November 2010, the County reported, <i>“Gopher control activity control measure of using traps has met with no success to date. Of the 75 traps in use since the last inspection, no gophers have been reported trapped”</i> (Oneida Total Integrated Enterprises</p> | <p>b. The Navy continues to assert their belief, as stated in previous responses to CDFG’s comments on the RI/FS Report and Proposed Plan, that the information in the RI/FS Report for Parcel E-2 adequately demonstrates that the proposed covers, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. Section 12.2.3.10 of the Final RI/FS Report specifies the preference for low-impact measures (such as raptor perches), as compared to higher impact control measures (such as poisons), to control burrowing animals at Parcel E-2. The Navy also continues to assert its belief, as stated in previous responses to CDFG’s comments on the Proposed Plan, that CDFG has not presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the geomembrane liner over time, or cause unacceptable exposure of contaminated waste. As previously stated, CDFG repeated comments on this topic imply a direct connection between the presence of burrowing animals at any landfill site and corresponding damage to an underlying geomembrane liner that is not supported by adequate evidence.</p> <p>CDFG has not presented any significant new information or demonstrated that their primary recommendation (to include a biotic barrier consisting of cobbles) is necessary to protect human health or the environment. Accordingly, the Navy does not agree that CDFG’s technical concerns, as identified in these comments, require reconsideration of previous conclusions presented in the Final RI/FS Report and summarized in the Draft ROD. The language in the Draft ROD, which is consistent with the Final RI/FS Report, will not be revised in response to CDFG’s comment. However, as stated previously, the post-closure operation and maintenance plan (to be prepared in conjunction with the RD) will identify the inspection and maintenance actions, including those related to animal burrows, and will be submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the RD.</p> |

| 2.<br>(cont.)                                                                                      | <p>[OTIE], 2011). Based on the ineffectiveness of the trapping at Site 1, the Navy is now evaluating other alternatives, such as the use of Fumitoxin (OTIE, 2011).</p> <p>During the May 8, 2012 site visit to Parcel E and E-2 with the Navy and the Department of Toxic Substances Control, DFG-OSPR noticed numerous gopher burrows on both sites. Based on the “<i>demonstrated performance of the cover at Site 1</i>” which the Navy is using to evaluate the efficacy of the proposed cover at Parcel E- 2, there is the potential for gopher burrowing to be an issue at Parcel E-2. Backfilling and compacting the soil back into the burrows, as well as trapping, do not appear to be effective methods of controlling gophers at Site 1. Raptor perches were also installed at Site 1, but these also do not appear to be effective. DFG-OSPR does not support the use of pesticides for landfill maintenance because of their ability to kill non-target species, including State and Federal special status species. Burrowing Owls, a State species of special concern and species protected by the Federal Migratory Bird Treaty, have been observed at HPNS (TtFW, 2004). Please note DFG-OSPR will not approve the use of pesticides, such as Fumitoxin, in areas where there are State special status species such as Burrowing Owls. If the Navy has take of State and Federal special status species during landfill maintenance activities, they may be in violation of State and Federal ARARs. Therefore, the Navy may need to implement alternative methods of gopher control at Parcel E-2, than what was used at Site 1. The cost for implementing animal control measures and detecting and repairing damage to the geomembrane in perpetuity will need to be factored into the costs of the selected remedy.</p> <p>The Navy also responded to DFG-OSPR’s comment regarding the lack of a biotic barrier by referring to a White Paper on the Geomembrane Lifetime Prediction published by the Geosynthetic Institute (Koerner, et al., 2011). This paper only discusses</p> | <i>(see response on pages 30 through 36)</i> |

| 2.<br>(cont.)                                                                                      | <p>degradation mechanisms such as oxidation, chemical, and compressive stress. This paper does not discuss the effects of burrowing animals on geomembranes. In the June 2009 Geosynthetic Institute (GSI) Newsletter/Report Question and Answer column, a reader submitted the following questions: “A landfill cap design calls for a 2-foot thick vegetative layer and soil cover, consisting of topsoil and noncalcareous quarry screenings, overlying drainage composite and 40-mil VLDPE. There is a concern that the cap geosynthetics may be susceptible to damage and penetration by burrowing animals into the underlying waste. Are there any documented instances of this taking place at landfill caps in North America? Does a cap design using PE geosynthetics need to consider this possibility and, if so, would you suggest any design guidance offering preventive measures?” (Geosynthetic Institute, 2009).</p> <p>The Geosynthetic Institute responded, “You ask a common question which I will try to answer in several ways.” 1. “The only known situation of an animal clawing its way through a geomembrane that I know of was on a final cover where the animal was trapped beneath the geomembrane as it entered into its anchor trench. So as to escape the animal scratched the underside until it produced a hole of about 150 mm in diameter.” 2. “I am told that there is an old report by a German organization which concluded that the hardness of the animal’s teeth versus the geomembrane type is critical.” 3. “One way of preventing burrowing animals from getting to the geomembrane is to provide a ‘biobarrier’ in the protection soil above it. This would consist of a layer of stones/rocks of sufficient size to prevent/discourage the animal from digging through it. Stone size and layer thickness are obviously important considerations” (Geosynthetic Institute, 2009).</p> | <i>(see response on pages 30 through 36)</i> |

| 2.<br>(cont.)                                                                                      | <p>Due to the potential for burrowing animals to damage the geomembrane, DFG-OSPR does not agree with the Navy's claim that "placement of a high-density plastic liner under at least 2 feet of clean soil will prevent exposure to remaining contamination" (page 17 of Parcel E-2 PP). Please also see DFG-OSPR's response above on the PP Specific Comment 2a1-5 on the Proposed Plan regarding biotic barriers and damage to geomembranes from burrowing animals.</p>                                                                                                                                                                                                                                                                                                                                             | <i>(see response on pages 30 through 36)</i> |
|                                                                                                    | <p>2. The Navy responded, "Further, the Navy does not believe that CDFG has presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the landfill cover over time." Please see DFG-OSPR's responses above on the PP Specific Comment 2a1-5 and 2b regarding biotic barriers and damage to geomembranes from burrowing animals.</p>                                                                                                                                                                                                                                                                                                                                                                                                                |                                              |
|                                                                                                    | <p>3. DFG-OSPR commented that a rodent's incisors continuously grow throughout its life so it must gnaw on objects to keep its incisors worn down. As a result, rodents have been known to gnaw on a variety of objects from wood to plastic sprinkler pipes to electrical wiring (Salmon and Gorenzel, 2011; Salmon and Baldwin, 2011; Timm et al., 2011). Therefore, it possible for a rodent to gnaw on a geomembrane. The Navy responded, "...the Navy does not believe that CDFG has presented sufficient technical information to support its assertion that burrowing animals would cause significant damage to the landfill cover over time." Please see DFG-OSPR's responses above on the PP Specific Comment 2a1-5 and 2b1 regarding biotic barriers and damage to geomembranes from burrowing animals.</p> |                                              |
|                                                                                                    | <p>4. The Navy has asserted that the geocomposite drainage layer at Parcel E-2 will deter burrowing animals from damaging the underlying geomembrane. Based on this assertion, DFG-OSPR requested the Navy explain why Moffett Field Site 22 installed a</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                              |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                              |
| 2.<br>(cont.)                                                                                      | <p>biotic barrier of cobblestone and cement slurry in their landfill cap and Port Hueneme Site 14 is poisoning gophers on a weekly basis, to prevent burrowing animals from damaging their underlying geomembranes. The Navy responded, “<i>The difference in existing site conditions between the Parcel E-2 Landfill and NAS Moffett Field Site 22 warrant selection of different response actions. Therefore, the direct comparison of the preferred alternative for Parcel E-2 with the selected response action for NAS Moffett Field Site 22 is inappropriate. Regarding the potential use of pesticides to control burrowing animals, the Navy has previously responded to CDFG concerns on this matter by stating that low-impact control measures (such as raptor perches) would be preferred over higher impact measures (such as poisons)...</i>” As DFG-OSPR stated before, DFG-OSPR will not approve the use of pesticides, such as Fumitoxin, in areas where there are State special status species such as Burrowing Owls. If the Navy has take of State and Federal special status species during landfill maintenance activities, they may be in violation of State and Federal ARARs. Please see DFG- OSPR’s response above on the PP Specific Comment 2b1 regarding control of burrowing animals at Site 1.</p> | <i>(see response on pages 30 through 36)</i> |
| 5.                                                                                                 | <p>DFG-OSPR commented, “<i>If the number of burrowing animals increase at Parcel E-2 in the future, how will the Navy adequately prevent these animals from damaging the landfill cap?</i>” The Navy responded, “<i>The Navy believes that the information in the RI/FS Report (ERRG and Shaw, 2011) adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment.</i>” The Navy did not provide an adequate response to DFG-OSPR’s question. DFG-OSPR disagrees that the information in the RI/FS Report adequately demonstrates that the proposed cover will be protective</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                              |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |
| 2.<br>(cont.)                                                                                      | of the environment. Please see DFG-OSPR's responses above on the PP Specific Comment 2a1-5 and 2b1 regarding biotic barriers and damage to geomembranes from burrowing animals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <i>(see response on pages 30 through 36)</i> |
| 6.                                                                                                 | <p>DFG-OSPR commented, <i>"Please provide more information in the ROD regarding how the Navy will adequately maintain, and detect and repair damage to the geomembrane in perpetuity. The general information provided in the PP is not sufficient to determine if the proposed remedial alternative will be adequate to protect ecological receptors. Please also explain how the Navy will deal with the geomembrane once it is damaged (by burrowing animals) or degrades to the point where it no longer functions properly"</i> (Huang and Nakahara, 2011). The Navy responded, <i>"The Navy believes that the information in the RI/FS Report adequately demonstrates that the proposed cover, which will be regularly inspected and maintained (with animal control measures implemented as necessary), will be protective of human health and the environment. The Navy does not believe that CDFG has presented a sufficient technical basis to support their requests for a thicker soil cover or a biointrusion barrier, or their assertions that burrowing animals will damage the geomembrane or the geomembrane will require replacement because of degradation."</i> The Navy did not provide an adequate response to DFG-OSPR's questions. DFG-OSPR disagrees that the information in the RI/FS Report adequately demonstrates that the proposed cover will be protective of the environment. Please see DFG-OSPR's responses above on the PP Specific Comment 2a1-5 and 2b1 regarding the need for biotic barriers to prevent damage to geomembranes from burrowing animals.</p> |                                              |

| 3.                                                                                                 | The Navy's response [to Specific Comment 3 on the Proposed Plan] is acceptable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Comment acknowledged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 4.                                                                                                 | <p data-bbox="306 492 1121 727"><i>Attachment 1, Key Applicable or Relevant and Appropriate Requirements.</i> The PP states a complete list of potential ARARs identified for the Preferred Alternative is provided in Appendix N of the Parcel E-2 RI/FS Report. Under Appendix N, several potential biological resource ARARs were not included as ARARs, such as the Federal Endangered Species Act, California Fish and Game Code (F&amp;GC) sections 1908, 4700, and 5050. DFG-OSPR requests these ARARs be added to the list of ARARs for the remedial activities at Parcel E-2.</p> <p data-bbox="306 743 1121 1377">a. The Navy responded, "<i>The Navy does not agree that past observations at Heron's Head Park are relevant to Parcel E-2 because the Navy has performed site-specific studies, as detailed in the RI/FS Report (see Section 2.4) (ERRG and Shaw [Engineering/Remediation Resources Group, Inc.], 2011), to demonstrate that neither the California Clapper Rail nor the salt marsh harvest mouse is present at Parcel E-2. The Navy's findings are confirmed by information provided in the SFRA's [San Francisco Redevelopment Agency] recent EIR [Environmental Impact Report] (SFRA, 2009).</i>" The site-specific studies the Navy cites in Section 2.4 of the RI/FS Report were conducted in 1997, 2001, 2002, and 2004. These studies were conducted eight or more years ago and we believe that they are outdated. A pair of California Clapper Rails and their two chicks were observed in 2011 in a restored coastal salt marsh at Heron's Head Park, 2 miles north of HPNS (Fimrite, 2011). This is the first time in decades that California Clapper Rails have been documented to be breeding in San Francisco (Fimrite, 2011). California State Parks is also restoring the coastal salt marsh at Yosemite Slough, adjacent to Parcel E-2. This restoration is planned to be completed in the spring of 2012 (California State Parks Foundation, 2012) and will also provide habitat for various State and/or Federally listed species such as the California Clapper Rail, California Black Rail, and salt</p> | <p data-bbox="1150 492 1990 703">As stated in the previous responses to CDFG's comments on the Proposed Plan, the Navy has previously responded to CDFG comments (on the RI/FS Report) regarding the various requirements identified by CDFG as potential ARARs and has provided adequate information to support the determinations of which requirements may qualify as ARARs for the potential response actions at Parcel E-2. Please refer to Appendix S of the Final RI/FS Report (<a href="#">ERRG and Shaw, 2011</a>) for further information.</p> <p data-bbox="1150 719 1990 1377">a. The Navy wishes to clarify that there is no promulgated requirement mandating the frequency of biological surveys for the CERCLA remedial action at Parcel E-2. The Navy asserts that the past ecological assessments at Parcels E and E-2, as documented in the Final RI/FS Report, serve as an adequate basis for identifying potential special-status species for future remedial actions, and that the ARARs identified in the Draft ROD for Parcel E-2 are adequate to protect biological resources that have been identified at the site. However, the Navy recognizes that the ongoing restoration effort at Yosemite Slough may change site conditions prior to the remedial action at Parcel E-2. Accordingly, the Navy will perform a focused biological survey, in conjunction with the RD, to determine the extent to which the future wetlands at Yosemite Slough may have attracted endangered species to Parcel E-2. The RD will identify the specific objectives of and procedures for the biological survey, and will discuss potential follow-on actions based on the survey results. The Navy does not believe that it is appropriate to detail this information in the ROD because these documents are only intended to summarize the conceptual designs for the proposed remediation. DTSC and CDFG requested that the following statement be incorporated into the CERCLA administrative record to identify the enforcement mechanisms that will ensure the protection of wildlife during implementation of the selected remedy for Parcel E-2.</p> |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 4.<br>(cont.)                                                                                      | <p>marsh harvest mouse (SMHM). Although these species were not observed during surveys at HPNS in the past, the surrounding restored salt marshes may attract these species to these areas as well as to HPNS. The coastal salt marsh at HPNS is along the Pacific Flyway and provides potential habitat for California Clapper Rails, California Black Rails, and SMHM. In light of recent restoration activities and newly documented species occurrences in the area, these species may utilize the habitat at HPNS now and in the future.</p> <p>According to the SFRA's 2009 EIR, green sturgeon and Central California Coast Steelhead are Federally-listed as threatened and HPNS is within the designated critical habitat for both of these species (SFRA, 2009). In addition, spring-run Chinook salmon (Federally and State threatened) and winter-run Chinook salmon (Federally and State endangered) have a high likelihood to occur within the HPNS area (SFRA, 2009). Longfin smelt (State threatened) have a moderate likelihood to occur within the HPNS area (SFRA, 2009).</p> <p>In addition, the Final Work Plan for the Time-Critical Removal Action for Installation Restoration Site 02 Northwest and Central Parcel E lists State and Federally listed Chinook salmon as a species observed at or near HPNS (Tetra Tech EC, Inc. [TtECI], 2005). The Navy's 2004 Biological Assessment (BA) (Tetra Tech FW, Inc. [TtFW], 2004) also lists the following Federally listed species as potentially occurring within the Parcel E and E-2 project areas: Sacramento River Winter Run Chinook Salmon, Central Valley Spring Run Chinook Salmon, Central California Coast Steelhead, California Central Valley Steelhead, California Clapper Rail, California Brown Pelican, California Least Tern, and SMHM. Both salmon species, the Clapper Rail, the Least Tern, and the SMHM are also State listed species. The BA further determined that the actions at the Metal Slag Area and PCB Hot Spot Area "MAY AFFECT, BUT ARE NOT LIKELY TO ADVERSELY AFFECT" Central California Valley steelhead, Central</p> | <p><i>"Since the Parcel E-2 Record of Decision (ROD) is enforceable as a primary document under the Federal Facilities Agreement (FFA) and if the ROD needs to be amended in the future, the FFA accounts for that process, the California Department of Fish and Game (CDFG) is not inclined to insist on additional Explanation of Significant Differences (ESD) language in the comments. The CDFG comments clearly explain its position and puts all on notice that this issue is a concern, along with the expectation that any Fully Protected Species or CESA issues will be addressed if they come up in the future. Therefore, if CESA or Fully Protected Species issues come up in the future, there appears to be enough authority and notice in the ROD, ROD comments and FFA to make sure that any fully protected, endangered or threatened species on the property will be protected."</i></p> <p>The Navy wishes to clarify that, as detailed in the Final RI/FS Report, no special-status species were observed in the existing wetlands at Parcel E-2 and the overall value of these existing wetlands is low because they are located on manmade land that has been disturbed by human activities and contains chemical contamination. Also, as visible during the site visit on May 8, 2012, the restoration efforts at Yosemite Slough are not complete and no new wetland habitat is currently present at the adjoining property. Therefore, the Navy does not agree with CDFG's statement that habitat exists at HPNS for the cited endangered species.</p> <p>The Navy also wishes to clarify that the previous evaluations cited by CDFG, which identified the potential presence of certain fish species, considered the offshore property at HPNS and extended beyond the Parcel E-2 boundary. The offshore property is not part of the selected remedy for Parcel E-2. Further, as detailed in the Final RI/FS Report (Section 12 and Appendix O), the selected remedy would not involve placement of fill within tidal flats and shoreline construction at higher elevations would be performed in a manner that would not significantly affect the aquatic ecosystem offshore of Parcel E-2.</p> |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 4.<br>(cont.)                                                                                      | <p>California Coast steelhead, Central Valley Spring Run Chinook salmon, Sacramento River Winter Run Chinook salmon, and SMHM. These species are protected by the Federal and/or State Endangered Species Acts, which would appear to make these statutes relevant and appropriate for consideration at Parcel E-2.</p> <p>During the May 8, 2012 meeting with the Navy and DTSC, the Navy discussed the possibility of filing an Explanation of Significant Differences (ESD) to amend the finalized ROD and include the State and Federal Endangered Species Acts if State and Federally threatened and endangered species are observed at HPNS in the future. Based on these discussions, DFG-OSPR requests the ROD include a statement that if State and Federally threatened and endangered species occur at the site at some point in the future, then F&amp;GC section 2080 and the Federal Endangered Species Act will be ARARs and an ESD will be required along with appropriate protective measures approved by DFG-OSPR and the U.S. Fish and Wildlife Service (USFWS).</p> <p>b. The Navy responded, “<i>The Navy concluded in Section 2.4 of the RI/FS Report that, based on past biological surveys performed by the Navy, no rare or endangered plants are present at HPNS. This finding is confirmed by information provided in the SFRA’s recent EIR.</i>” The site-specific studies the Navy cites in Section 2.4 of the RI/FS Report were conducted in 1997, 2001, 2002, and 2004. These studies were conducted eight or more years ago and we believe that they are outdated because species composition at the site may have changed over the years. The past plant surveys in the SFRA EIR were also conducted at HPNS in 2004, 2006, 2007, and 2008 and are outdated. In addition, according to the SFRA EIR (SFRA, 2009), the August 2007 and July 2008 surveys were conducted in the dry season when most plant species were dormant or had already died back leaving only dried plant parts for identification. The May 2008 survey was also conducted during unusually dry weather and most plant species were dormant or had</p> | <p>Therefore, the previous evaluations regarding the potential presence of certain fish species (from the SFRA’s 2009 EIR and TtEC’s work plan) have no bearing on the selected remedy for Parcel E-2.</p> <p>b. As stated previously, both in this response and the response to CDFG comments on the Proposed Plan, there is no promulgated requirement mandating the frequency of plant surveys for the CERCLA remedial action at Parcel E-2. The Navy asserts that the past ecological assessments at Parcels E and E-2, as documented in the Final RI/FS Report, serve as an adequate basis for identifying potential special-status species for future remedial actions, and that the ARARs identified in the Draft ROD for Parcel E-2 are adequate to protect biological resources that have been identified at the site. Overall, the Navy finds that the technical concerns identified by CDFG during their review of the Draft ROD do not meet the requirements outlined in Section 7.10 of the FFA. Specifically, CDFG has not presented any significant new information or demonstrated that their recommendations are necessary to protect human health or the environment. Accordingly, the Navy does not agree that CDFG’s technical concerns, as identified in these comments, require</p> |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                        |
| 4.<br>(cont.)                                                                                      | <p>already died back by that time. As a result, some plants observed during the survey could only be identified to the Genus level. Therefore, it is possible that special status plant species may not have been evident and identifiable during these surveys. We also do not think the prior studies are an accurate reflection of current conditions at the site because California seablite has been documented to occur at Heron's Head Park, near HPNS (Port of San Francisco, 2012). Although special status plant species were not observed at HPNS in the past, potential habitat for these species occurs at HPNS. DFG-OSPR believes that F&amp;GC section 1908 (native plant protection) is relevant and appropriate because there is potential habitat for rare or endangered plants, such as bristly sedge (<i>Carex comosa</i>), Diablo helianthella (<i>Helianthella castanea</i>), seaside tarplant (<i>Hemizonia congesta</i> ssp. <i>congesta</i>), rose leptosiphon (<i>Leptosiphon rosaceus</i>), and California seablite (<i>Suaeda californica</i>) on or near Parcel E-2.</p> <p>Based on discussions at the May 8, 2012 meeting, DFG-OSPR requests the ROD include a statement that if State rare, threatened, and endangered plant species occur at the site at some point in the future, then Fish and Game Code section 1908 will be an ARAR and an ESD will be required along with appropriate protective measures approved by DFG-OSPR.</p> | <p>reconsideration of previous conclusions presented in the Final RI/FS Report and summarized in the Draft ROD. The language in the Draft ROD, which is consistent with the Final RI/FS Report, will not be revised in response to CDFG's comment.</p> |
| c.                                                                                                 | <p>The Navy responded, "<i>California F&amp;GC § 4700 is not an ARAR for the selected remedy at Parcel E-2 because none of the fully protected mammals (including the salt marsh harvest mouse) are present at the site.</i>" According to the Draft Final Ecological Risk Assessment Validation Study Report for Parcel E, small mammal trapping was conducted in June, July, and September 1998 (Tetra Tech EM, Inc. [TtEMI] and Levine Fricke Recon [LFR], 2000). This survey is over 13 years old and outdated. The Navy's 2004 BA concluded that "<i>Salt-marsh harvest mice are unlikely to be effected because the species is not expected to be present. However, complete habitat avoidance is not</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | c. Please refer to the response to comment 4a.                                                                                                                                                                                                         |

| <i>Comments on Navy Responses to Specific Comments on Proposed Plan for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |
| 4.<br>(cont.)                                                                                      | <p><i>possible; therefore the proposed projects 'MAY AFFECT, BUT ARE NOT LIKELY TO ADVERSELY AFFECT,' salt-marsh harvest mouse" (TtFW, 2004). DFG-OSPR continues to assert that F&amp;GC section 4700 (fully-protected mammals) is relevant and appropriate because potential habitat for the SMHM is located on or near Parcel E- 2.</i></p> <p>Based on discussions at the May 8, 2012 meeting, DFG-OSPR requests the ROD include a statement that if State fully protected mammals occur at the site at some point in the future, then Fish and Game Code section 4700 will be an ARAR and an ESD will be required along with appropriate protective measures approved by DFG-OSPR.</p> <p>d. The Navy responded, "...the Navy does not agree with CDFG's assertion that fully protected reptiles and amphibians are present at Parcel E-2 or elsewhere at HPNS." The site-specific studies the Navy cites in Section 2.4 of the RI/FS Report were conducted in 1997, 2001, 2002, and 2004. These studies were conducted eight or more years ago and we believe that they are outdated because the studies do not appear to accurately reflect the conditions at the site. F&amp;GC section 5050 (fully-protected reptiles and amphibians) should be considered relevant and appropriate because the freshwater wetlands at Parcel E- 2 may provide potential habitat for the San Francisco garter snake.</p> <p>Based on discussions at the May 8, 2012 meeting, DFG-OSPR requests the ROD include a statement that if State fully protected reptiles and amphibians occur at the site at some point in the future, then Fish and Game Code section 5050 will be an ARAR and an ESD will be required along with appropriate protective measures approved by DFG-OSPR.</p> | <i>(see above)</i>                             |
|                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | d. *Specific Comments on Draft Record of Decision for Parcel E-2*

1. *Page 2-27, Table 5.* DFG-OSPR checked the Draft Final Ecological Risk Assessment Validation Study Report, Parcel E (TtEMI and LFR, 2000), as part of this review, and found the remedial goals (RGs) for copper and lead are lower than protective soil concentrations (PSCs) for ecological receptors, which are highlighted by yellow color. Those PSCs based on soil cores at depths of 0 to 6 and 6 to 12 inches bgs were reviewed and concurred by DFG-OSPR (Chernoff, 1999). This comment is intended for the DTSC Project Manager.

This comment was not intended for the Navy and does not require a response; however, the Navy wishes to clarify that, as detailed in the Final RI/FS Report (Section 7 and Appendix L), the additional data collected during a soil data gaps investigation in 2002 resulted in the identification of new COPECs and the calculation of updated PSCs. The updated PSCs supersede the values presented in the 2000 Validation Study Report.

Table 1. Comparison of chemicals concentrations in soil and sediment for Table 5 on Page 2-27 of Draft Record of Decisions for Parcel E-2

| COEC      | RG (mg/kg) | PSC in 2000 VS (mg/kg) | Remark                                |
|-----------|------------|------------------------|---------------------------------------|
| Cadmium   | 4.2        | 4.24                   |                                       |
| Copper    | 470        | 1,083.7                |                                       |
| Lead      | 197        | 441.9                  |                                       |
| Manganese | 2,433      |                        |                                       |
| Mercury   | 1.0        |                        |                                       |
| Nickel    | 1,941      | 1,941.4                |                                       |
| Vanadium  | 117        |                        |                                       |
| Zinc      | 719        | 719.3                  |                                       |
| DDT       | 3.53       |                        |                                       |
| PCBs      | 37         |                        | 0.74 by a human recreational exposure |
| Total HMW | 231        |                        |                                       |

COECs: chemicals of ecological concern

RGs: remedial goals

PSCs: protective soil concentrations

| <i>Specific Comments on Draft Record of Decision for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2.                                                                              | <p><i>Attachment 4, page 11, Federal Location-Specific ARARs and page 12, State Location-Specific ARARs.</i> The Navy has accepted the Federal Migratory Bird Treaty Act and F&amp;GC section 3511 as ARARs. The Navy will need to consult with the USFWS and DFG-OSPR to determine the appropriate avoidance, minimization, and mitigation measures to implement to prevent impacts to special status species from remedial activities. These measures will need to include at minimum, the use of a qualified biologist approved by DFG-OSPR and USFWS to monitor for special status species on site, in order to substantively comply with these ARARs. DFG-OSPR reserves the right to conduct periodic site visits during remedial actions to confirm implementation of avoidance, minimization, and mitigation measures.</p> | <p>The Navy wishes to clarify that the administrative and procedural requirements for preparing biological assessment and biological opinion documents (which would evaluate avoidance, minimization, and mitigation measures) are not ARARs for the on-site CERCLA remedial action being selected in the ROD. As described previously, the RD will identify the specific implementation steps necessary to comply with the pertinent ARARs for protection of biological resources; however, the Navy does not believe that it is appropriate to detail these specific implementation steps in the ROD because this document is only intended to summarize the conceptual design for the proposed remediation. Also, the Navy encourages CDFG to conduct site visits during the upcoming remedial action at Parcel E-2.</p> |

| 1.          | <b>1.1 Selected Remedy:</b> This section contains a bulleted list of the actions proposed to address risks posed by contaminated media. Please edit (suggested insertion underlined) the 4 <sup>th</sup> bullet to state “Install below-ground barriers to limit groundwater flow from the landfill to San Francisco Bay <u>and pump and treat groundwater if necessary to prevent discharge of contaminants.</u> ”                                                                  | The subject bullet was revised as follows: “ <i>Install below-ground barriers to limit groundwater flow from the landfill to San Francisco Bay, including a contingency action to hydraulically control groundwater (behind the barrier) if necessary to satisfy pertinent applicable or relevant and appropriate requirements (see Section 2.9.4).</i> ”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2.          | <b>2.3.3 Shoreline Sediment:</b> This section states that wildlife are at risk from exposure to PCBs in surface sediments along the shoreline, and that source control measures are warranted in the Metal Slag Area to control potential releases of copper and lead to Parcel F. Please clarify whether these sources of metals and PCBs were removed by the PCB Hot Spot (Phase 2) and Metal Slag removal actions, or whether these sources remain to be addressed in the remedy. | Section 2.3.3 describes the site conditions along the shoreline based on information that has been published in the administrative record. This information includes post-excavation conditions following the Metal Slag Area TCRA and the Phase 1 TCRA at the PCB <sup>3</sup> Hot Spot Area (completed in 2006). As detailed in Section 2.5.3, these areas contain elevated copper, lead, and PCB concentrations that comprise several nearshore hot spots. Although the Navy, under the Phase 2 TCRA at the PCB Hot Spot Area, has addressed one nearshore hot spot, the results of this ongoing removal action are not yet published. Accordingly, a detailed analysis of the post-excavation at this area cannot be provided in this ROD. Section 2.9.2 of the Draft ROD indicates the Navy’s intent to evaluate post-excavation conditions in the RD and perform additional excavation, if necessary to achieve the hot spot goals. Section 2.9.2 was also revised to specify that, because the TCRA results are not available at the date of ROD signature, the excavation to achieve the hot spot goals specified in the action memorandum (which are identical to those specified in this ROD) will be completed as a remedial action pursuant to this ROD. Please refer to the response to EPA general comment 2 for a description of how the removal action relates to the future remedial action (including the relationship between the hot spot goals and remediation goals). Section 2.9.2 was revised to further clarify that the Phase 2 TCRA at the PCB Hot Spot Area is ongoing and post-excavation results are not yet available. |
| 3.          | <b>2.5.3 Basis for Response Action:</b> For clarity and consistency with the Remedial Investigation/Feasibility Study (RI/FS), in the discussion of hot spots, please refer to the hot spot Tier categories used in the RI/FS (e.g., near-shore hot spots are designated Tier 1).                                                                                                                                                                                                    | The Navy prefers to retain the terms “nearshore hot spots” and “upland hot spots” in the ROD because it is more readily understandable than the hot spot tiers identified in the RI/FS Report. The Navy’s rationale for this decision is summarized on the following page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 3.<br>(cont.) | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>The process of identifying hot spots in the RI/FS Report focused on the location of each hot spot relative to San Francisco Bay and its potential to serve as a continuing source to groundwater contamination. The hotspot tiers identified in the RI/FS Report were established to categorize the relative importance of source removal at each hot spot. This categorization was used in the RI/FS Report to develop different remedial alternatives with varying degrees of hotspot removal. However, upon identification of the preferred alternative in the Proposed Plan, the Navy decided that terminology using hotspot tiers was unnecessary and potentially confusing. To simplify the discussion, the Proposed Plan introduced the terms “nearshore hot spots” and “upland hot spots” that aligned with the hot spot goals identified in the RI/FS Report. Specifically, the Navy established hot spot goals for locations close to San Francisco Bay (nearshore hot spots) at 10 times the corresponding remediation goal. Hot spot goals for locations further inland (upland hot spots) were established at 100 times the corresponding remediation goal. Hot spot goals were identified in Table 12-2 of the RI/FS Report and Table 4 of the ROD. Remediation goals were identified in Section 9 of the RI/FS Report and Table 5 of the ROD.</p> |
| 4.            | <p><b>2.5.3 Basis for Response Action – text discussing groundwater areas posing a potential risk to wildlife:</b> As discussed in this section, several contaminants of ecological concern (COPECs) in groundwater may migrate to San Francisco Bay (Bay) at concentrations that exceed aquatic wildlife criteria. COPECs identified include copper, lead, zinc, un-ionized ammonia, sulfide, and cyanide. As the proposed remedy includes pumping and treatment of groundwater (if necessary), please clarify the criteria that will be used to determine whether pumping and/or treatment will be necessary. At a minimum, contaminated groundwater must not be allowed to mound behind the groundwater barrier. We understand that remedial actions to address the potential risk of COPECs migrating to the Bay will be evaluated in the Remedial Design, however this Record of Decision should make it clear that the remedy will prevent discharge of COPECs exceeding criteria for aquatic wildlife.</p> | <p>Section 2.9.2 was revised to specify, consistent with information in the RI/FS Report, that:</p> <ul style="list-style-type: none"> <li>• The groundwater would be hydraulically controlled if necessary to keep contaminants from flowing into San Francisco Bay at concentrations greater than the corresponding water quality criteria for aquatic wildlife (to comply with the surface water RAO specified in Section 2.7).</li> <li>• The RD will develop specific monitoring criteria for A-aquifer groundwater that address the potential risk to aquatic wildlife.</li> </ul> <p>The Navy wishes to clarify that the primary design objective for the slurry walls is to reduce the rate of potentially contaminated groundwater flowing into San Francisco Bay. The RD will evaluate whether additional performance criteria are necessary to ensure the long-term effectiveness of the slurry wall. For example, a performance criterion pertaining to the control of upgradient hydraulic pressure may be required if hydraulic fracturing of the slurry wall is determined to be a significant failure mechanism.</p>                                                                                                                                                                                                                                |

| 4.<br>(cont.) | (see above)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | However, available literature identifies a range of acceptable hydraulic pressures upgradient of slurry walls (EPA, 1984; Sharma and Lewis, 1994), and demonstrates that an absolute prohibition on groundwater mounding behind the wall is not necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 5.            | <p><b>2.9.2 Description of Selected Remedy:</b> The description of the selected remedy seems fragmented, with information presented in section 2.8.1, Table 8, and section 2.9.2. For clarity, please consolidate the information such that section 2.9.2 presents a complete description of the selected remedy. For example, please clarify in section 2.9.2 that the remedy includes excavations for Tiers 1-5 hot spots. It is also not clear, in section 2.9.2, which elements of the selected remedy have already been completed as prior removal actions, and which ones remain to be implemented. Figure 12 <i>Hot Spot Excavations and Groundwater Containment Features</i> depicts some excavation areas but appears to leave others out, including the Phase 1 PCB Hot Spot Removal Action and the Ship Shielding Removal Action. In addition, the excavation footprint of the Metal Slag area differs from that shown in Figure 11 <i>Groundwater Areas Posing a Potential Risk to Aquatic Wildlife</i>. We suggest enlarging Figure 12 and revising to clearly depict all removal areas and differentiating between prior and future removal areas. If a prior removal area needs to be re-excavated, a note indicating such a situation can be included on the figure. Please also add a note to Figure 12 to indicate that the nearshore slurry wall groundwater containment system includes pumping and treatment capability to prevent migration of COPECs to the Bay.</p> | <p>As stated in the response to comment 2, the ROD summarizes information that has been published in the administrative record, which includes post-excavation conditions following the Metal Slag Area TCRA and the Phase 1 TCRA at the PCB Hot Spot Area (completed in 2006) but does not include the results of the Phase 2 TCRA at the PCB Hot Spot Area. Accordingly, Section 2.9.2 describes both ongoing and future hotspot removal activities and was revised to state that, because the TCRA results are not available at the date of ROD signature, the excavation to achieve the hot spot goals specified in the action memorandum (which are identical to those specified in this ROD) will be completed as a remedial action pursuant to this ROD.</p> <p>Section 2.9.2 was also revised, in response to this comment and comments from other reviewers, to provide additional details regarding the selected remedy. For example, Section 2.9.2 was revised to:</p> <ul style="list-style-type: none"> <li>• Clarify that the Phase 2 TCRA at the PCB Hot Spot Area is ongoing and post-excavation results are not yet available.</li> <li>• Specify the Navy's plans to remove radioactive contamination at the Ship-Shielding Area under a TCRA and that, because the TCRA results are not available at the date of ROD signature, the RD will analyze the conditions after the TCRA, and will specify the additional excavation to achieve the <sup>60</sup>Co remediation goal that, if required, would be completed as a remedial action pursuant to this ROD.</li> <li>• Identify the additional actions necessary to meet the radiological RAO.</li> </ul> <p>Figure 12 was revised to identify the ongoing and future hotspot removal activities at Parcel E-2. Figure 12 was not revised to note the Ship-Shielding TCRA because this ongoing action is not a hot spot removal; however, this removal action area was added to Figure 7. Figure 12 was not revised to note the potential hydraulic control of groundwater because of (1) the limited available space on the figure (following the revisions to better distinguish between ongoing and future hot spot excavations on Figure 12), and (2) the</p> |

| 5.<br>(cont.) | <i>(see above)</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | text on page 2-39 was revised to state that groundwater would be hydraulically controlled if necessary to keep contaminants from flowing into San Francisco Bay at concentrations greater than the corresponding water quality criteria for aquatic wildlife (to comply with the surface water RAO specified in Section 2.7 and consistent with ARARs identified in Attachment 4).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 6.            | <b>2.9.2 Description of Selected Remedy- text describing new wetlands:</b> The water sources for the new wetlands must consist only of clean surface water and/or flow from the Bay. Runoff or groundwater that has come into contact with contaminant sources should not be directed or discharged to the new wetlands. Please add language to clarify this design criterion.                                                                                                                                                          | Section 2.9.2 was revised to clarify that water entering the freshwater wetlands would be monitored to ensure compliance with the surface water RAO specified in Section 2.7. However, the Navy does not agree that the water source for the new freshwater wetlands should consist only of surface water. The conceptual design evaluated in the RI/FS Report included a preliminary assessment of groundwater quality west of the Parcel E-2 Landfill. This assessment, which is detailed in Section 12.2.3.7 of the Final RI/FS Report and used the water quality criteria identified in the Basin Plan and CTR, did not identify any COECs for the freshwater wetlands other than un-ionized ammonia and sulfide, which are anions that readily transform to non-toxic compounds upon discharge to oxygenated surface water. The Navy will refine this assessment in the RD, but believes that the available data are adequate to support the conceptual design. In addition, the subsurface drain will be designed to ensure that groundwater flow is sufficiently aerated prior to discharge into the freshwater wetland.<br><br>Further, the Navy wishes to clarify that the groundwater flow diversion system (which would direct groundwater into the freshwater wetlands) is intended to reduce groundwater levels within the Parcel E-2 Landfill, thereby reducing potential groundwater mounding behind the nearshore slurry wall. As noted in the response to comment 4, the control of hydraulic pressure upgradient of slurry walls is a potentially important design consideration. Elimination of the groundwater flow diversion system would significantly constrain the performance of the selected remedy. |
| 7.            | <b>2.9.2 Description of Selected Remedy- text describing landfill gas controls:</b> This section states that extracted landfill gas would be treated by either an enclosed flare <u>or</u> adsorbent material, such as charcoal filter. Since landfill gas contains both methane and NMOCs, <u>both</u> an enclosed flare (to control methane) <u>and</u> adsorbent material (to treat NMOCs) are necessary. Please revise this section to state that both, not either, the enclosed flare and the adsorbent material will be included. | Section 2.9.2 was revised to state: “ <i>Extracted landfill gas would be treated by <del>either</del> an enclosed flare <u>and/or</u> adsorbent material (such as a charcoal filter).</i> ” The Navy responded to an identical comment from the EPA Project Manager and provided more detailed information (as previously detailed in the RI/FS Report) indicating that both adsorbent material and an enclosed flare may not be necessary to treat landfill gas. Please refer to response to EPA comment 23 for additional information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <i>General Comment</i>                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1.                                                                  | We support the Regulatory Agencies in their comments on the subject document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Comment acknowledged.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <i>Specific Comments on Draft Record of Decision for Parcel E-2</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2.                                                                  | <p><b>Section 1.1, Page 1-2, third bullet under “selected remedy consists”</b> the bullet is written as “Install a protective liner and soil cover over all of Parcel E-2” While we understand that this was the same bullet written in the Proposed Plan, there was actually additional information provided in the Glossary of the Proposed Plan that explained the words “protective liner” further. So while we appreciate wanting to maintain parallel structure between these two documents, we think this bullet should be slightly expanded in the ROD. We suggest:</p> <p style="padding-left: 40px;"><i>Install a protective liner, consisting of a geosynthetic liner with a geocomposite drainage layer, and a soil cover over all of Parcel E-2</i></p> <p>Also suggest using this expanded wording in other places in the document where protective liner is mentioned, as appropriate.</p> | The subject bullet item was revised, based on this comment and comment 1 from DTSC <sup>4</sup> , to state: “ <i>Install a <del>protective liner and</del> soil cover over all of Parcel E-2, with a protective liner (consisting of a geomembrane with an overlying geocomposite drainage layer) where needed to minimize water seeping into the contaminated material.</i> ” This clarification is consistent with existing text in Section 2.9.2. |
| 3.                                                                  | <b>Section 1.2, Page 1-3, first full sentence</b> suggest adding “of some contaminants” to the end of the sentence as a modification to the natural attenuation statement. Only some contaminants will be subject to natural attenuation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The subject sentence was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 4.                                                                  | <b>Section 2.1, Page 2-2, Figure 2</b> The sentence above Figure 2 states “A small portion of the Parcel E-2 landfill extends north onto property owned” by UCSF. But the figure does not illustrate this properly. Please show the correct UCSF property line showing the portion of the landfill on UCSF property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Figure 2 was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <i>Specific Comments on Draft Record of Decision for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 5.                                                                              | <b>Section 2.2, Page 2-3, second paragraph</b> Suggest adding that the Navy also installed a groundwater extraction system and containment barrier in 1998, an interim cap on 14.5 acres in 2001, and a landfill gas barrier wall and extraction and monitoring wells in 2003. Also, explain the breakdown of different volumes of materials in the 1 million cubic yard estimate of landfill volume – see Attachment 3, page 66, response to Specific Comment 2 from Dr. McGowan. | Section 2.2 was revised to (1) include a forward reference to Section 2.3, which discusses the Navy’s previous investigations and removal actions; (2) briefly describe the estimated volume of solid waste and overlying soil cover; and (3) briefly describe the interim landfill cap to help explain the second source of overlying soil cover (in addition to the soil cover placed in the early 1970s, which is already discussed in Section 2.2). In addition, Section 2.8.1 was revised to better explain the estimated excavation volumes at the Parcel E-2 Landfill (as evaluated in Alternative 2). |
| 6.                                                                              | <b>Section 2.2, Page 2-3, second bullet bottom of page:</b> Please indicate in the second sentence that the metal slag has been removed.                                                                                                                                                                                                                                                                                                                                           | The subject bullet in Section 2.2 was revised to state “ <i>The Metal Slag Area was partially addressed under an early removal action (see Section 2.3).</i> ” A similar statement was added to the first bullet in Section 2.2, pertaining to the PCB Hot Spot Area.                                                                                                                                                                                                                                                                                                                                         |
| 7.                                                                              | <b>Section 2.3, Page 2-6</b> Suggest title change from "Previous Investigations" to "Previous Investigations and Removals/Interim Controls."                                                                                                                                                                                                                                                                                                                                       | Consistent with the title of Table 1, the title of Section 2.3 was revised to “ <i>Previous Investigations and Removal Actions</i> ”.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 8.                                                                              | <b>Section 2.3, Page 2-8</b> Top of page, further explain the removal and interim control actions taken in this paragraph. Suggest retitle "Table 1", next page to also include "Interim Controls."                                                                                                                                                                                                                                                                                | The Navy’s previous actions to contain or control hazardous substances at Parcel E-2 have been performed under its removal action authority under CERCLA and the NCP. Accordingly, the Navy believes that it is most appropriate (and more concise) to refer to all interim actions as removal actions.                                                                                                                                                                                                                                                                                                       |
| 9.                                                                              | <b>Table 1, Page 2-9, bottom, third sentence:</b> Suggest rewording to not overstate what was known “.....limit air from entering into the landfill, <del>they smothered any smoldering areas below ground</del> <b>removing the potential for further combustion.</b>                                                                                                                                                                                                             | The subject statement in Table 1 was revised, consistent with text from the RI/FS Report, to state “ <i>Because the protective liner and soil cover limit oxygen from entering into the landfill, they prevent more fires from occurring under the capped area smothered any smoldering areas below ground.</i> ” Similar text was also added to Section 2.2 (in response to comment 5 above).                                                                                                                                                                                                                |
| 10.                                                                             | <b>Section 2.3.5, Page 2-14, first sentence:</b> Please revise to state correct number of monitoring wells or revise to clarify if these are groundwater sampling points. Based on the most recent Semiannual Groundwater Monitoring Report there appears to be 16 A-aquifer wells and 6 B-aquifer wells.                                                                                                                                                                          | Section 2.3.5 was revised to clarify that the 116 A-aquifer wells includes temporary monitoring points. Further, the Navy wishes to clarify that the total number of wells cited in Section 2.3.5 is accurate because, as stated in the subject sentence, Section 2.3.5 discusses historical groundwater data collected at Parcel E-2 between 1990 and 2008. A subset of the existing monitoring wells is used in the current groundwater monitoring program.                                                                                                                                                 |

| <i>Specific Comments on Draft Record of Decision for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 11.                                                                             | <b>Section 2.3.6, Page 2-14, last bullet</b> Suggest change to: 37 of the 73 survey units – or whatever the correct total number is.                                                                                                                                                                                     | The subject bullet was revised to clarify that the data set consists of 72 survey units. The first paragraph of Section 2.3.6 was revised to clarify, consistent with text from the Radiological Addendum to the RI/FS Report, that one of the original 73 survey units was subsequently excavated during the Phase 1 TCRA at the PCB Hot Spot Area, resulting in data remaining from 72 survey units.                                                                                                       |
| 12.                                                                             | <b>Section 2.4, Page 2-16, top paragraph:</b> This paragraph appears to be out of place and likely belongs at the bottom of page 2-18.                                                                                                                                                                                   | The subject paragraph describes the potential future uses of groundwater at Parcel E-2. This paragraph was included in Section 2.4 to be consistent with EPA guidance and similar statements in the ROD for Parcel C.                                                                                                                                                                                                                                                                                        |
| 13.                                                                             | <b>Section 2.6, Page 2-25, second sentence:</b> Items 2, 3 and 4 seem to contradict the discussion on page 2-24 regarding groundwater impacts by COPECs.                                                                                                                                                                 | The subject sentence was revised to clarify, consistent with the RI/FS Report, that the potential hot spots were identified in the northern and central portions of the Parcel E-2 Landfill. These potential hot spots are distinct from the potential principal threat waste identified at the PCB Hot Spot Area (after the Phase 1 removal action). This potential principal threat waste is discussed in the second paragraph of Section 2.6, and is the area identified in Section 2.5.3 (on page 2-24). |
| 14.                                                                             | <b>Table 5, Page 2-28:</b> Suggest clarifying the Notes to state “The <b>basis (risk-based or ambient level)</b> for the remediation goals is presented in Sections 7 and 9 of the RI/FS Report.                                                                                                                         | Table 5 was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 15.                                                                             | <b>Table 6, Page 2-28:</b> Suggest clarifying the Notes to state “The <b>basis (risk-based)</b> for the remediation goals is presented in Sections 7 and 9 of the <b>Radiological Addendum to the RI/FS Report.</b>                                                                                                      | Table 6 was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 16.                                                                             | <b>Table 7, Page 2-29:</b> Suggest clarifying the Notes to state “The <b>basis (risk-based, ambient, or regulatory level)</b> for the remediation goals is presented in Sections 7 and 9 of the RI/FS Report.                                                                                                            | Table 7 was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 17.                                                                             | <b>Section 2.9.2, Page 2-36 fifth line:</b> Suggest revising as follows “The excavation areas <del>are</del> close to the Phase 1 excavation at the PCB Hot Spot Area <del>and</del> , as discussed in Section 2.6, may contain principal threat wastes.” As not all the excavation areas are close to the PCB Hot Spot. | Section 2.9.2 was revised as requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <i>Specific Comments on Draft Record of Decision for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 18.                                                                             | <b>Section 2.9.2, Page 2-39 bottom and top of Page 2-40:</b> Thank you for your detailed description of how modifications can be made in the Remedial Design so that the remedy can accommodate the intended possible future residential or industrial uses that were approved in the 2010 Redevelopment Plan Amendments. We really appreciate the detail contained in these descriptions of all the possible aspects of the future detailed design.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | In response to EPA specific comment 10a, as well as the additional comment received from CCSF, the Navy has decided to change the boundary between Parcels E and E-2 so that the Shipyard South Multi-Use District is no longer located in Parcel E-2, thereby ensuring that the planned reuse for Parcel E-2 will be limited to open space. As a result, Section 2.9.2 (and other locations in the ROD) was revised to eliminate reference to potential residential use in Parcel E-2, including the subject paragraphs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 20.                                                                             | <b>Section 2.9.2, Additional Activity Restrictions Related to Radionuclides at Parcel E-2, Page 2-45</b> First sentence item (1) states “and a low hydraulic conductivity layer, to provide adequate shielding against residual radioactivity” Isn’t the purpose of this layer primarily to slow down water infiltration? Our understanding is that it does not have any special characteristics that make it a shield for residual radioactivity any more than the imported fill? And the imported fill isn’t really being used as a shield either? Our understanding is that the surface will be scanned and all radioactive contamination will be removed from the surface, defined as the top twelve inches of existing soil. So there will be essentially no radiological risk above background for someone standing on the surface. Then the imported fill and low hydraulic conductivity layer will be installed. The purpose of these layers, in regards to radioactivity, is to make certain that humans and wildlife can not accidentally dig under these installed layers or into the “clean” 12 inches below. And there will be institutional controls that make it clear that no one should dig under these layers. So the point is that the site will be safe from a radiological perspective and we can provide assurances that no one is accidentally digging into the wrong area. Please change the wording of this sentence. | The Navy wishes to clarify that the complete statement (“ <i>an engineered cover, consisting of clean imported fill and...a low hydraulic conductivity layer, to provide adequate shielding against residual radioactivity</i> ”) clearly indicates that the engineered cover, which consists of both a soil cover and a low hydraulic conductivity layer, provides shielding against residual radioactivity. Regarding the radiological remediation, Section 2.9.2 was revised based on comment 9 from the EPA Project Manager to state that (1) the selected remedy would include radiological screening to be performed throughout Parcel E-2 in conjunction with the proposed excavation activities; (2) radiologically contaminated soil, sediment, or debris identified during the screening process would be removed and disposed of off site; (3) final radiological surveys would be performed to demonstrate the successful removal of radiological contamination (exceeding the remediation goals) within the upper 1 foot of the excavated subgrade; and (4) radiological risk modeling would be performed to verify that residual radiological risk at the final ground surface (following installation of a demarcation layer and soil cover) is within the risk management range specified in the NCP ( $10^{-6}$ to $10^{-4}$ ). The Navy believes that these clarifications to Section 2.9.2 adequately explain the proposed radiological remediation, and that no clarifications to the subject paragraph are necessary. |

| <i>Specific Comments on Draft Record of Decision for Parcel E-2 (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 21.                                                                             | <p><b>Section 2.9.2, Additional Activity Restrictions Related to Subsurface Gas at Parcel E-2, Page 2-46</b> Several places in the section refer to just “the ARIC” and, despite the fact that it should be obvious to the reader since this reference is made under the subsurface gas heading, it is confusing with all the different types of ARICs defined for this and other parcels. We suggest referring to the “ARIC for soil gas” or a similar designation to distinguish it from the ARIC for radionuclides and other types of ARICs. This is especially important because there is an expectation that the ARIC for soil gas can be reduced in size over time as further data demonstrates that soil gas disappears or is remediated. We suggest that all references to “ARIC” make it clear if the document is referring to all ARICs or a specific type (e.g. soil gas, radionuclide, durable cover, etc).</p> | <p>Section 2.9.2 was revised to better explain the ARIC and radiological ARIC at Parcel E-2. Specifically, the text was revised to state: “<i>Figure 14 presents the area requiring institutional controls (ARIC) for nonradioactive chemicals, which comprises all of Parcel E-2 including a small portion of the Parcel E-2 Landfill that extends north onto property owned by UCSF (see Figure 2). Figure 14 also identifies the ARIC for radionuclides (green pattern on Figure 14; also referred to as the radiological ARIC), which consists of all radiologically impacted areas at Parcel E-2, except for sanitary sewer, storm drain, and septic sewer lines (and other radiologically impacted areas) that extend into the East Adjacent Area but are located outside of the IR Site 01/21 boundary (see Figure 3).</i>”</p> <p>The Navy does not agree that an additional “soil gas ARIC” should be defined for Parcel E-2 because the nature of the proposed activity restrictions are different than those proposed for other HPNS parcels. Specifically, as explained in the ROD, the activity restrictions related to subsurface gas are “<i>to ensure compliance with the substantive provisions of Cal. Code Regs. tit. 27 § 21190(a), (b), (d), (e), (f) and (g), which require that postclosure land uses be designed and maintained to protect health and safety in areas affected by landfill gas migration.</i>”</p> |

| 22.                                                                                           | <b>Introduction, Page 1, third sentence:</b> Suggest adding the number of soil and groundwater samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The subject sentence was revised as requested.       |
| 23.                                                                                           | <p><b>Various places throughout the Responsiveness Summary (noted below)</b><br/>           The Navy repeats a statement “and segments of the community, represented by the SFRA and the Mayor’s Hunters Point Shipyard Citizens Advisory Committee... have concurred with the preferred alternative” and in addition there are some locations where you state “CCSF DPH has reviewed and concurred with the Navy’s findings” or “reviewed and approved”. While we appreciate that the Navy should state, in their discussion about community acceptance, the agreement that they have from various parties, we think the use of the words “concur, concurrence and approval” in most of the contexts listed is overstating the agreement that you have obtained from SFRA or CCSF DPH. In particular, CCSF DPH is not an oversight agency of the Navy so it has no concurrence role in the CERCLA process. We do agree that we have a unique role in assisting the City Administrator’s office, as the successor agency to the SFRA, and the City in reviewing and evaluating the Navy’s remedies and clean-up strategies and the coordination with the Navy on future land uses. However, this puts us in the position, at most, to review and agree (or disagree) with the Navy’s work. Sometimes we only review and have no comment. We would appreciate that in the revision to this responsiveness summary that the nature of our agreement be accurately stated. If we reviewed and stated that we agree with the issue then please state as such. If we reviewed and have no comment then it should be portrayed as such. The use of the word “concur” should only be used for the regulatory oversight agencies. The use of the word “approve” should only be used if we specifically say that we approve of an issue. “Agree” and “agreement” seem to be better words for most situations where we agree with the Navy.</p> <p>We noted this issue on pages 2, 8, 10, 11, 22, 29, 41, 46, 51, 59, 63, 76, 81, 97 and 105 of the responsiveness summary.</p> | The responsiveness summary was revised as requested. |

| <i>Specific Comments on Responsiveness Summary (Attachment 3 to Draft Record of Decision) (continued)</i> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 24.                                                                                                       | <b>Issue 4, Page 4</b> Where cover is discussed, expand to explain the components of the elements of the cover remedy: A geosynthetic liner, a geocomposite drainage layer, two feet of clean fill, over at least 2 (or 2.5?) feet of clean soil that was put on as part of the interim cover. Further, add the other barrier components of the remedy designed to protect the public and the environment: revetment, below-grade groundwater barrier system, landfill gas barrier wall and extraction and monitoring wells, and anything else. This will make the statement that the “barrier will protect the public” more substantial. | The subject sentence was revised to state: <i>“The <del>cover component of the</del> containment remedy selected in the ROD <del>is</del> includes a surface cover and a below-ground barrier that will protect the public from exposure to contaminated soil and groundwater.”</i> The Navy does not believe that further technical terminology (such as, geosynthetic liner and geocomposite drainage layer) is appropriate for the responsiveness summary. The Navy wishes to clarify that, in response to comments received from other reviewers, Section 2.9.2 of the ROD was revised to better describe the elements of the cover remedy. |
| 25.                                                                                                       | <b>Issue 6, page 6</b> Suggest last bullet further explain what is involved in inspecting and maintaining the "cover." Does this mean soil cover inspection, liner inspection, drainage system inspection, barrier wall inspection, extraction well inspection, etc?                                                                                                                                                                                                                                                                                                                                                                      | As described in the paragraph following the last bullet: <i>“The long-term monitoring and maintenance program will be detailed in the post-closure operation and maintenance plan for Parcel E-2, and submitted for review and approval by EPA, DTSC and the Water Board in conjunction with the remedial design.”</i> The Navy does not believe that it is necessary or appropriate to specify details regarding the future inspection and maintenance program in either the responsiveness summary or ROD.                                                                                                                                    |
| 26.                                                                                                       | <b>Various Comments from DFG-OSPR regarding burrowing animals and their subsequent letter on this issue</b> If the Navy determines, in response to DFG-OSPR concerns, that addressing the burrowing animal issue will require a slightly different design (a rock layer?) or additional long term oversight and maintenance please remember to include these additional elements in description of the remedy in the ROD (if needed) and more importantly in the Remedial Design and long term O&M documents and factor these elements into the cost of the remedy.                                                                       | Please refer to the Navy’s responses to CDFG’s comments on the Draft ROD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 27.                                                                                                       | <b>Page 38, Navy response to DFG-OSPR specific comment 2</b> While the 270 year life of the geomembrane is impressive, we note that given that these remedies will most likely need to be in place in perpetuity, this means that the geomembrane will need to be replaced every couple of centuries and this fact should be accounted for in the remedial design and the cost.                                                                                                                                                                                                                                                           | Attachment 4 identifies several requirements pertinent to the question of post-closure duration, specifically as it pertains to the requirement to limit infiltration (which is the primary function of the geomembrane): <ul style="list-style-type: none"> <li>• Post-closure water entry: Cal. Code Regs., tit. 22 § 66264.310(a)(1). This section requires that the final cover be designed to prevent the downward entry of water into the closed landfill throughout a period of at least 100 years.</li> </ul>                                                                                                                           |

| <i>Specific Comments on Responsiveness Summary (Attachment 3 to Draft Record of Decision) (continued)</i> |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 27.<br><i>(cont.)</i>                                                                                     | <i>(see above)</i> | <ul style="list-style-type: none"> <li>• Post-closure care: Cal. Code Regs., tit. 22 § 66264.310(b)(1). This section requires that the integrity and effectiveness of the final cover be maintained throughout the post-closure period. This section also incorporates by reference Cal. Code Regs., tit. 22 § 66264.117(b)(2)(B), which requires that the post-closure care period be extended if necessary to protect human health and the environment.</li> <li>• Post-closure care period: Cal. Code Regs., tit. 27 § 20950(a). This section requires that the post-closure maintenance period shall extend as long as the wastes pose a threat to water quality.</li> <li>• Post-closure maintenance: Cal. Code Regs., tit. 27 § 21180(a). This section requires post-closure maintenance and monitoring of the landfill for no less than 30 years following closure.</li> </ul> <p>The predicted half-life (270 years) of a HDPE geomembrane well exceeds the established duration for preventing downward entry of water into the closed landfill. This information is considered adequate to support an evaluation of the remedial alternatives; and, consistent with the final NCP (55 Fed. Reg. 8817, March 8, 1990), additional details will be developed in the RD. Furthermore, Cal. Code Regs., tit. 27 § 20950(a) requires that post-closure maintenance (including for maintenance of the final cover) extend as long as the wastes pose a threat to water quality.</p> <p>The 30-year post-closure maintenance period was used for cost-estimating purposes in the RI/FS Report. Per Cal. Code Regs., tit. 27 § 20950(a) and tit. 22 § 66264.117(b)(2)(B), the Navy will maintain and monitor the remedy for as long as the wastes pose a threat to water quality and as long as necessary to protect human health and the environment. In the absence of site-specific modeling to predict reductions in chemical concentrations in groundwater over time, the Navy analyzed the sensitivity of the cost estimate against varying lengths of the post-closure maintenance period. The results of the sensitivity analysis (for Alternatives 3A and 3B) were presented in Appendix S of the RI/FS Report (Exhibit A to the responses to comments provided by the law office of Michael Lozeau), and show that extending the post-closure</p> |
