Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R021	Volumetric water content of the cover material	not used	5.000E-02	---	PH2OCV
R021	Volumetric water content of the foundation	not used	3.000E-02	---	PH2OFL
R021	Diffusion coefficient for radon gas (m/sec):				
R021	in cover material	not used	2.000E-06	---	DIFCV
R021	in foundation material	not used	3.000E-07	---	DIFFL
R021	in contaminated zone soil	not used	2.000E-06	---	DIFCZ
R021	Radon vertical dimension of mixing (m)	not used	2.000E+00	---	HMIX
R021	Average building air exchange rate (1/hr)	not used	5.000E-01	---	REXG
R021	Height of the building (room) (m)	not used	2.500E+00	---	HRM
R021	Building interior area factor	not used	0.000E+00	---	FAI
R021	Building depth below ground surface (m)	not used	-1.000E+00	---	DMFL
R021	Emanating power of Rn-222 gas	not used	2.500E-01	---	EMANA (1)
R021	Emanating power of Rn-220 gas	not used	1.500E-01	---	EMANA (2)
TITL	Number of graphical time points	32	---	---	NPTS
TITL	Maximum number of integration points for dose	17	---	---	LYMAX
TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	2.700E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	3.620E-01	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	3.620E-01	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.190E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	1.180E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	1.180E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	2.700E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	3.620E-01	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	3.620E-01	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	2.625E+02	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	7.130E-02	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.190E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	1.180E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	1.180E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	2.625E+02	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	7.130E-02	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	2.700E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	3.620E-01	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	3.620E-01	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	3.500E+03	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	9.590E-01	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.190E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	1.180E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	1.180E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.270E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.113E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.113E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.760E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.121E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.121E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.270E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.113E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.113E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Summary : RESRAD Default Parameters

#For DCF1(xxx) only, factors are for infinite depth & area. See ETFG table in Ground Pathway of Detailed Report.

*Base Case means Default.Lib w/o Associate Nuclide contributions.

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\6.5\USERFILES\PARCEL E IRO2 SE RES ADULT TOT.RAD

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.760E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.121E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.121E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R021	Volumetric water content of the cover material	not used	5.000E-02	---	PH2OCV
R021	Volumetric water content of the foundation	not used	3.000E-02	---	PH2OFL
R021	Diffusion coefficient for radon gas (m/sec):				
R021	in cover material	not used	2.000E-06	---	DIFCV
R021	in foundation material	not used	3.000E-07	---	DIFFL
R021	in contaminated zone soil	not used	2.000E-06	---	DIFCZ
R021	Radon vertical dimension of mixing (m)	not used	2.000E+00	---	HMIX
R021	Average building air exchange rate (1/hr)	not used	5.000E-01	---	REXG
R021	Height of the building (room) (m)	not used	2.500E+00	---	HRM
R021	Building interior area factor	not used	0.000E+00	---	FAI
R021	Building depth below ground surface (m)	not used	-1.000E+00	---	DMFL
R021	Emanating power of Rn-222 gas	not used	2.500E-01	---	EMANA (1)
R021	Emanating power of Rn-220 gas	not used	1.500E-01	---	EMANA (2)
TITL	Number of graphical time points	32	---	---	NPTS
TITL	Maximum number of integration points for dose	17	---	---	LYMAX
TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.270E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.113E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.113E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	2.625E+02	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	7.130E-02	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.760E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.121E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.121E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	2.625E+02	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	7.130E-02	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.270E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.113E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.113E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Summary : RESRAD Default Parameters

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICKO
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	3.760E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.121E+02	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.121E+02	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVERO
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Summary : RESRAD Default Parameters

D-5	Pb-210+D , crustacea and mollusks	1.000E+02	1.000E+02	BIOFAC(2,2)
D-5	Ra-226+D , fish	5.000E+01	5.000E+01	BIOFAC(3,1)
D-5	Ra-226+D , crustacea and mollusks	2.500E+02	2.500E+02	BIOFAC(3,2)

#For DCF1(xxx) only, factors are for infinite depth & area. See ETFG table in Ground Pathway of Detailed Report.

*Base Case means Default.Lib w/o Associate Nuclide contributions.

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 ADULT RESIDENT INCREMENTAL.RAD

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	9.910E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	3.386E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	3.386E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	1.000E-03	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 ADULT RESIDENT INCREMENTAL.RAD

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	7.000E+03	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	2.400E+01	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	9.590E-01	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

#For DCF1(xxx) only, factors are for infinite depth & area. See ETFG table in Ground Pathway of Detailed Report.

*Base Case means Default.Lib w/o Associate Nuclide contributions.

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 ADULT RESIDENT TOTAL.RAD

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	1.093E+00	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.205E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.205E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	1.000E-03	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 ADULT RESIDENT TOTAL.RAD

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	7.000E+03	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	2.400E+01	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	9.590E-01	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

R021	Emanating power of Rn-222 gas	not used	2.500E-01	---	EMANA (1)
R021	Emanating power of Rn-220 gas	not used	1.500E-01	---	EMANA (2)
TITL	Number of graphical time points	32	---	---	NPTS
TITL	Maximum number of integration points for dose	17	---	---	LYMAX
TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 ADULT RESIDENT TOTAL.RAD

Contaminated Zone Dimensions

Initial Soil Concentrations, pCi/g

Area:	2000.00 square meters	Cs-137	1.093E+00
Thickness:	2.00 meters	Pb-210	4.205E+00
Cover Depth:	0.00 meters	Ra-226	4.205E+00

Total Dose TDOSE(t), mrem/yr

Basic Radiation Dose Limit = 2.500E+01 mrem/yr

Total Mixture Sum M(t) = Fraction of Basic Dose Limit Received at Time (t)

t (years):	0.000E+00	1.000E+00	3.000E+00	1.000E+01	3.000E+01	1.000E+02	3.000E+02	1.000E+03
TDOSE(t):	4.527E+01	4.508E+01	4.471E+01	4.346E+01	4.030E+01	3.213E+01	1.815E+01	2.544E+00
M(t):	1.811E+00	1.803E+00	1.788E+00	1.738E+00	1.612E+00	1.285E+00	7.262E-01	1.018E-01

Maximum TDOSE(t): 4.527E+01 mrem/yr at t = 0.000E+00 years

#For DCF1(xxx) only, factors are for infinite depth & area. See ETFG table in Ground Pathway of Detailed Report.

*Base Case means Default.Lib w/o Associate Nuclide contributions.

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 CHILD RESIDENT INCREMENTAL.RAD

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	9.910E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	3.386E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	3.386E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	1.000E-03	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 CHILD RESIDENT INCREMENTAL.RAD

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H (1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ (1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ (1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ (1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ (1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ (1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ (1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC (1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU (1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS (1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH (1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC (2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU (2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS (2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH (2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC (3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU (3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS (3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH (3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (3)
R017	Inhalation rate (m**3/yr)	3.500E+03	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	9.590E-01	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R021	Volumetric water content of the cover material	not used	5.000E-02	---	PH2OCV
R021	Volumetric water content of the foundation	not used	3.000E-02	---	PH2OFL
R021	Diffusion coefficient for radon gas (m/sec):				
R021	in cover material	not used	2.000E-06	---	DIFCV
R021	in foundation material	not used	3.000E-07	---	DIFFL
R021	in contaminated zone soil	not used	2.000E-06	---	DIFCZ
R021	Radon vertical dimension of mixing (m)	not used	2.000E+00	---	HMIX
R021	Average building air exchange rate (1/hr)	not used	5.000E-01	---	REXG
R021	Height of the building (room) (m)	not used	2.500E+00	---	HRM
R021	Building interior area factor	not used	0.000E+00	---	FAI
R021	Building depth below ground surface (m)	not used	-1.000E+00	---	DMFL
R021	Emanating power of Rn-222 gas	not used	2.500E-01	---	EMANA (1)
R021	Emanating power of Rn-220 gas	not used	1.500E-01	---	EMANA (2)
TITL	Number of graphical time points	32	---	---	NPTS
TITL	Maximum number of integration points for dose	17	---	---	LYMAX
TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 CHILD RESIDENT INCREMENTAL.RAD

Contaminated Zone Dimensions		Initial Soil Concentrations, pCi/g	
Area:	2000.00 square meters	Cs-137	9.910E-01
Thickness:	2.00 meters	Pb-210	3.386E+00
Cover Depth:	0.00 meters	Ra-226	3.386E+00

Total Dose TDOSE(t), mrem/yr

Basic Radiation Dose Limit = 2.500E+01 mrem/yr

Total Mixture Sum M(t) = Fraction of Basic Dose Limit Received at Time (t)

t (years):	0.000E+00	1.000E+00	3.000E+00	1.000E+01	3.000E+01	1.000E+02	3.000E+02	1.000E+03
TDOSE(t):	3.775E+01	3.759E+01	3.727E+01	3.620E+01	3.352E+01	2.666E+01	1.505E+01	2.109E+00
M(t):	1.510E+00	1.503E+00	1.491E+00	1.448E+00	1.341E+00	1.066E+00	6.020E-01	8.437E-02

Maximum TDOSE(t): 3.775E+01 mrem/yr at t = 0.000E+00 years

D-5	Ra-226+D , crustacea and mollusks	2.500E+02	2.500E+02	BIOFAC(3,2)

#For DCF1(xxx) only, factors are for infinite depth & area. See ETFG table in Ground Pathway of Detailed Report.

*Base Case means Default.Lib w/o Associate Nuclide contributions.

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 CHILD RESIDENT TOTAL.RAD

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	2.000E+03	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Cs-137	1.093E+00	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.205E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.205E+00	0.000E+00	---	S1(3)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(3)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	1.000E-03	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 CHILD RESIDENT TOTAL.RAD

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H(1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ(1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ(1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ(1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ(1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ(1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ(1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC(1)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU(1,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS(1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH(1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(1)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC(2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU(2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS(2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH(2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(2)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC(3)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU(3,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS(3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH(3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(3)
R017	Inhalation rate (m**3/yr)	3.500E+03	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	6.000E+00	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	9.590E-01	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS

TITL	Maximum number of integration points for dose	17	---	---	LYMAX
TITL	Maximum number of integration points for risk	257	---	---	KYMAX

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\USERFILES\PARCEL E IR-04 CHILD RESIDENT TOTAL.RAD

Contaminated Zone Dimensions

Initial Soil Concentrations, pCi/g

Area:	2000.00 square meters	Cs-137	1.093E+00
Thickness:	2.00 meters	Pb-210	4.205E+00
Cover Depth:	0.00 meters	Ra-226	4.205E+00

Total Dose TDOSE(t), mrem/yr

Basic Radiation Dose Limit = 2.500E+01 mrem/yr

Total Mixture Sum M(t) = Fraction of Basic Dose Limit Received at Time (t)

t (years):	0.000E+00	1.000E+00	3.000E+00	1.000E+01	3.000E+01	1.000E+02	3.000E+02	1.000E+03
TDOSE(t):	4.648E+01	4.629E+01	4.591E+01	4.464E+01	4.143E+01	3.307E+01	1.869E+01	2.620E+00

D-5	U-233 , fish	1.000E+01	1.000E+01	BIOFAC(7,1)
D-5	U-233 , crustacea and mollusks	6.000E+01	6.000E+01	BIOFAC(7,2)

#For DCF1(xxx) only, factors are for infinite depth & area. See ETFG table in Ground Pathway of Detailed Report.
 *Base Case means Default.Lib w/o Associate Nuclide contributions.

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\6.5\USERFILES\PARCEL E SHACK 79 RES ADULT TOT.RAD

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	3.716E+01	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Am-241	2.360E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Cs-137	1.370E-01	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Pb-210	2.007E+00	0.000E+00	---	S1(4)
R012	Initial principal radionuclide (pCi/g): Ra-226	2.007E+00	0.000E+00	---	S1(5)
R012	Concentration in groundwater (pCi/L): Am-241	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(4)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(5)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT

Summary : RESRAD Default Parameters

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H(1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ(1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ(1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ(1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ(1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ(1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ(1)
R016	Distribution coefficients for Am-241				
R016	Contaminated zone (cm**3/g)	2.000E+01	2.000E+01	---	DCNUCC(1)
R016	Unsat. zone 1 (cm**3/g)	not used	2.000E+01	---	DCNUCU(1,1)
R016	Saturated zone (cm**3/g)	not used	2.000E+01	---	DCNUCS(1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	8.245E-03	ALEACH(1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(1)
R016	Distribution coefficients for Cs-137				
R016	Contaminated zone (cm**3/g)	4.600E+03	4.600E+03	---	DCNUCC(2)
R016	Unsat. zone 1 (cm**3/g)	not used	4.600E+03	---	DCNUCU(2,1)
R016	Saturated zone (cm**3/g)	not used	4.600E+03	---	DCNUCS(2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.623E-05	ALEACH(2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(2)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC(4)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU(4,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS(4)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH(4)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(4)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC(5)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU(5,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS(5)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH(5)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(5)
R016	Distribution coefficients for daughter Np-237				
R016	Contaminated zone (cm**3/g)	-1.000E+00	-1.000E+00	2.574E+02	DCNUCC(3)
R016	Unsat. zone 1 (cm**3/g)	not used	-1.000E+00	---	DCNUCU(3,1)
R016	Saturated zone (cm**3/g)	not used	-1.000E+00	---	DCNUCS(3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	6.469E-04	ALEACH(3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(3)

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	3.716E+01	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Am-241	3.910E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Cs-137	7.664E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Pb-210	3.649E+00	0.000E+00	---	S1(4)
R012	Initial principal radionuclide (pCi/g): Ra-226	3.649E+00	0.000E+00	---	S1(5)
R012	Concentration in groundwater (pCi/L): Am-241	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Cs-137	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(4)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(5)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT

Site-Specific Parameter Summary

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R011	Area of contaminated zone (m**2)	3.716E+01	1.000E+04	---	AREA
R011	Thickness of contaminated zone (m)	2.000E+00	2.000E+00	---	THICK0
R011	Fraction of contamination that is submerged	0.000E+00	0.000E+00	---	SUBMFRACT
R011	Length parallel to aquifer flow (m)	not used	1.000E+02	---	LCZPAQ
R011	Basic radiation dose limit (mrem/yr)	2.500E+01	3.000E+01	---	BRDL
R011	Time since placement of material (yr)	0.000E+00	0.000E+00	---	TI
R011	Times for calculations (yr)	1.000E+00	1.000E+00	---	T(2)
R011	Times for calculations (yr)	3.000E+00	3.000E+00	---	T(3)
R011	Times for calculations (yr)	1.000E+01	1.000E+01	---	T(4)
R011	Times for calculations (yr)	3.000E+01	3.000E+01	---	T(5)
R011	Times for calculations (yr)	1.000E+02	1.000E+02	---	T(6)
R011	Times for calculations (yr)	3.000E+02	3.000E+02	---	T(7)
R011	Times for calculations (yr)	1.000E+03	1.000E+03	---	T(8)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(9)
R011	Times for calculations (yr)	not used	0.000E+00	---	T(10)
R012	Initial principal radionuclide (pCi/g): Am-241	3.910E-01	0.000E+00	---	S1(1)
R012	Initial principal radionuclide (pCi/g): Co-60	7.713E+00	0.000E+00	---	S1(2)
R012	Initial principal radionuclide (pCi/g): Pb-210	4.467E+00	0.000E+00	---	S1(4)
R012	Initial principal radionuclide (pCi/g): Ra-226	4.467E+00	0.000E+00	---	S1(5)
R012	Concentration in groundwater (pCi/L): Am-241	not used	0.000E+00	---	W1(1)
R012	Concentration in groundwater (pCi/L): Co-60	not used	0.000E+00	---	W1(2)
R012	Concentration in groundwater (pCi/L): Pb-210	not used	0.000E+00	---	W1(4)
R012	Concentration in groundwater (pCi/L): Ra-226	not used	0.000E+00	---	W1(5)
R013	Cover depth (m)	0.000E+00	0.000E+00	---	COVER0
R013	Density of cover material (g/cm**3)	not used	1.500E+00	---	DENSCV
R013	Cover depth erosion rate (m/yr)	not used	1.000E-03	---	VCV
R013	Density of contaminated zone (g/cm**3)	1.500E+00	1.500E+00	---	DENSCZ
R013	Contaminated zone erosion rate (m/yr)	0.000E+00	1.000E-03	---	VCZ
R013	Contaminated zone total porosity	4.000E-01	4.000E-01	---	TPCZ
R013	Contaminated zone field capacity	2.000E-01	2.000E-01	---	FCCZ
R013	Contaminated zone hydraulic conductivity (m/yr)	1.000E+01	1.000E+01	---	HCCZ
R013	Contaminated zone b parameter	5.300E+00	5.300E+00	---	BCZ
R013	Average annual wind speed (m/sec)	2.000E+00	2.000E+00	---	WIND
R013	Humidity in air (g/m**3)	not used	8.000E+00	---	HUMID
R013	Evapotranspiration coefficient	5.000E-01	5.000E-01	---	EVAPTR
R013	Precipitation (m/yr)	1.000E+00	1.000E+00	---	PRECIP
R013	Irrigation (m/yr)	2.000E-01	2.000E-01	---	RI
R013	Irrigation mode	overhead	overhead	---	IDITCH
R013	Runoff coefficient	2.000E-01	2.000E-01	---	RUNOFF
R013	Watershed area for nearby stream or pond (m**2)	not used	1.000E+06	---	WAREA
R013	Accuracy for water/soil computations	not used	1.000E-03	---	EPS
R014	Density of saturated zone (g/cm**3)	not used	1.500E+00	---	DENSAQ
R014	Saturated zone total porosity	not used	4.000E-01	---	TPSZ
R014	Saturated zone effective porosity	not used	2.000E-01	---	EPSZ
R014	Saturated zone field capacity	not used	2.000E-01	---	FCSZ
R014	Saturated zone hydraulic conductivity (m/yr)	not used	1.000E+02	---	HCSZ
R014	Saturated zone hydraulic gradient	not used	2.000E-02	---	HGWT

Summary : RESRAD Default Parameters

File : C:\RESRAD_FAMILY\RESRAD\6.5\USERFILES\PARCEL E SHACK 80 RES ADULT TOT.RAD

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R014	Saturated zone b parameter	not used	5.300E+00	---	BSZ
R014	Water table drop rate (m/yr)	not used	1.000E-03	---	VWT
R014	Well pump intake depth (m below water table)	not used	1.000E+01	---	DWIBWT
R014	Model: Nondispersion (ND) or Mass-Balance (MB)	not used	ND	---	MODEL
R014	Well pumping rate (m**3/yr)	not used	2.500E+02	---	UW
R015	Number of unsaturated zone strata	not used	1	---	NS
R015	Unsat. zone 1, thickness (m)	not used	4.000E+00	---	H(1)
R015	Unsat. zone 1, soil density (g/cm**3)	not used	1.500E+00	---	DENSUZ(1)
R015	Unsat. zone 1, total porosity	not used	4.000E-01	---	TPUZ(1)
R015	Unsat. zone 1, effective porosity	not used	2.000E-01	---	EPUZ(1)
R015	Unsat. zone 1, field capacity	not used	2.000E-01	---	FCUZ(1)
R015	Unsat. zone 1, soil-specific b parameter	not used	5.300E+00	---	BUZ(1)
R015	Unsat. zone 1, hydraulic conductivity (m/yr)	not used	1.000E+01	---	HCUZ(1)
R016	Distribution coefficients for Am-241				
R016	Contaminated zone (cm**3/g)	2.000E+01	2.000E+01	---	DCNUCC(1)
R016	Unsat. zone 1 (cm**3/g)	not used	2.000E+01	---	DCNUCU(1,1)
R016	Saturated zone (cm**3/g)	not used	2.000E+01	---	DCNUCS(1)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	8.245E-03	ALEACH(1)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(1)
R016	Distribution coefficients for Co-60				
R016	Contaminated zone (cm**3/g)	1.000E+03	1.000E+03	---	DCNUCC(2)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+03	---	DCNUCU(2,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+03	---	DCNUCS(2)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.666E-04	ALEACH(2)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(2)
R016	Distribution coefficients for Pb-210				
R016	Contaminated zone (cm**3/g)	1.000E+02	1.000E+02	---	DCNUCC(4)
R016	Unsat. zone 1 (cm**3/g)	not used	1.000E+02	---	DCNUCU(4,1)
R016	Saturated zone (cm**3/g)	not used	1.000E+02	---	DCNUCS(4)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	1.663E-03	ALEACH(4)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(4)
R016	Distribution coefficients for Ra-226				
R016	Contaminated zone (cm**3/g)	7.000E+01	7.000E+01	---	DCNUCC(5)
R016	Unsat. zone 1 (cm**3/g)	not used	7.000E+01	---	DCNUCU(5,1)
R016	Saturated zone (cm**3/g)	not used	7.000E+01	---	DCNUCS(5)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.374E-03	ALEACH(5)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(5)
R016	Distribution coefficients for daughter Np-237				
R016	Contaminated zone (cm**3/g)	-1.000E+00	-1.000E+00	2.574E+02	DCNUCC(3)
R016	Unsat. zone 1 (cm**3/g)	not used	-1.000E+00	---	DCNUCU(3,1)
R016	Saturated zone (cm**3/g)	not used	-1.000E+00	---	DCNUCS(3)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	6.469E-04	ALEACH(3)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK(3)

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R016	Distribution coefficients for daughter Th-229				
R016	Contaminated zone (cm**3/g)	6.000E+04	6.000E+04	---	DCNUCC (6)
R016	Unsaturated zone 1 (cm**3/g)	not used	6.000E+04	---	DCNUCU (6,1)
R016	Saturated zone (cm**3/g)	not used	6.000E+04	---	DCNUCS (6)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	2.778E-06	ALEACH (6)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (6)
R016	Distribution coefficients for daughter U-233				
R016	Contaminated zone (cm**3/g)	5.000E+01	5.000E+01	---	DCNUCC (7)
R016	Unsaturated zone 1 (cm**3/g)	not used	5.000E+01	---	DCNUCU (7,1)
R016	Saturated zone (cm**3/g)	not used	5.000E+01	---	DCNUCS (7)
R016	Leach rate (/yr)	0.000E+00	0.000E+00	3.319E-03	ALEACH (7)
R016	Solubility constant	0.000E+00	0.000E+00	not used	SOLUBK (7)
R017	Inhalation rate (m**3/yr)	7.000E+03	8.400E+03	---	INHALR
R017	Mass loading for inhalation (g/m**3)	1.000E-04	1.000E-04	---	MLINH
R017	Exposure duration	2.400E+01	3.000E+01	---	ED
R017	Shielding factor, inhalation	4.000E-01	4.000E-01	---	SHF3
R017	Shielding factor, external gamma	7.000E-01	7.000E-01	---	SHF1
R017	Fraction of time spent indoors	0.000E+00	5.000E-01	---	FIND
R017	Fraction of time spent outdoors (on site)	9.590E-01	2.500E-01	---	FOTD
R017	Shape factor flag, external gamma	1.000E+00	1.000E+00	>0 shows circular AREA.	FS
R017	Radii of shape factor array (used if FS = -1):				
R017	Outer annular radius (m), ring 1:	not used	5.000E+01	---	RAD_SHAPE (1)
R017	Outer annular radius (m), ring 2:	not used	7.071E+01	---	RAD_SHAPE (2)
R017	Outer annular radius (m), ring 3:	not used	0.000E+00	---	RAD_SHAPE (3)
R017	Outer annular radius (m), ring 4:	not used	0.000E+00	---	RAD_SHAPE (4)
R017	Outer annular radius (m), ring 5:	not used	0.000E+00	---	RAD_SHAPE (5)
R017	Outer annular radius (m), ring 6:	not used	0.000E+00	---	RAD_SHAPE (6)
R017	Outer annular radius (m), ring 7:	not used	0.000E+00	---	RAD_SHAPE (7)
R017	Outer annular radius (m), ring 8:	not used	0.000E+00	---	RAD_SHAPE (8)
R017	Outer annular radius (m), ring 9:	not used	0.000E+00	---	RAD_SHAPE (9)
R017	Outer annular radius (m), ring 10:	not used	0.000E+00	---	RAD_SHAPE (10)
R017	Outer annular radius (m), ring 11:	not used	0.000E+00	---	RAD_SHAPE (11)
R017	Outer annular radius (m), ring 12:	not used	0.000E+00	---	RAD_SHAPE (12)
R017	Fractions of annular areas within AREA:				
R017	Ring 1	not used	1.000E+00	---	FRACA (1)
R017	Ring 2	not used	2.732E-01	---	FRACA (2)
R017	Ring 3	not used	0.000E+00	---	FRACA (3)
R017	Ring 4	not used	0.000E+00	---	FRACA (4)
R017	Ring 5	not used	0.000E+00	---	FRACA (5)
R017	Ring 6	not used	0.000E+00	---	FRACA (6)
R017	Ring 7	not used	0.000E+00	---	FRACA (7)
R017	Ring 8	not used	0.000E+00	---	FRACA (8)
R017	Ring 9	not used	0.000E+00	---	FRACA (9)
R017	Ring 10	not used	0.000E+00	---	FRACA (10)
R017	Ring 11	not used	0.000E+00	---	FRACA (11)
R017	Ring 12	not used	0.000E+00	---	FRACA (12)

Site-Specific Parameter Summary (continued)

Menu	Parameter	User Input	Default	Used by RESRAD (If different from user input)	Parameter Name
R018	Fruits, vegetables and grain consumption (kg/yr)	not used	1.600E+02	---	DIET(1)
R018	Leafy vegetable consumption (kg/yr)	not used	1.400E+01	---	DIET(2)
R018	Milk consumption (L/yr)	not used	9.200E+01	---	DIET(3)
R018	Meat and poultry consumption (kg/yr)	not used	6.300E+01	---	DIET(4)
R018	Fish consumption (kg/yr)	not used	5.400E+00	---	DIET(5)
R018	Other seafood consumption (kg/yr)	not used	9.000E-01	---	DIET(6)
R018	Soil ingestion rate (g/yr)	3.500E+01	3.650E+01	---	SOIL
R018	Drinking water intake (L/yr)	not used	5.100E+02	---	DWI
R018	Contamination fraction of drinking water	not used	1.000E+00	---	FDW
R018	Contamination fraction of household water	not used	1.000E+00	---	FHHW
R018	Contamination fraction of livestock water	not used	1.000E+00	---	FLW
R018	Contamination fraction of irrigation water	not used	1.000E+00	---	FIRW
R018	Contamination fraction of aquatic food	not used	5.000E-01	---	FR9
R018	Contamination fraction of plant food	not used	-1	---	FPLANT
R018	Contamination fraction of meat	not used	-1	---	FMEAT
R018	Contamination fraction of milk	not used	-1	---	FMLK
R019	Livestock fodder intake for meat (kg/day)	not used	6.800E+01	---	LFI5
R019	Livestock fodder intake for milk (kg/day)	not used	5.500E+01	---	LFI6
R019	Livestock water intake for meat (L/day)	not used	5.000E+01	---	LWI5
R019	Livestock water intake for milk (L/day)	not used	1.600E+02	---	LWI6
R019	Livestock soil intake (kg/day)	not used	5.000E-01	---	LSI
R019	Mass loading for foliar deposition (g/m**3)	not used	1.000E-04	---	MLFD
R019	Depth of soil mixing layer (m)	1.500E-01	1.500E-01	---	DM
R019	Depth of roots (m)	not used	9.000E-01	---	DROOT
R019	Drinking water fraction from ground water	not used	1.000E+00	---	FGWDW
R019	Household water fraction from ground water	not used	1.000E+00	---	FGWHH
R019	Livestock water fraction from ground water	not used	1.000E+00	---	FGWLW
R019	Irrigation fraction from ground water	not used	1.000E+00	---	FGWIR
R19B	Wet weight crop yield for Non-Leafy (kg/m**2)	not used	7.000E-01	---	YV(1)
R19B	Wet weight crop yield for Leafy (kg/m**2)	not used	1.500E+00	---	YV(2)
R19B	Wet weight crop yield for Fodder (kg/m**2)	not used	1.100E+00	---	YV(3)
R19B	Growing Season for Non-Leafy (years)	not used	1.700E-01	---	TE(1)
R19B	Growing Season for Leafy (years)	not used	2.500E-01	---	TE(2)
R19B	Growing Season for Fodder (years)	not used	8.000E-02	---	TE(3)
R19B	Translocation Factor for Non-Leafy	not used	1.000E-01	---	TIV(1)
R19B	Translocation Factor for Leafy	not used	1.000E+00	---	TIV(2)
R19B	Translocation Factor for Fodder	not used	1.000E+00	---	TIV(3)
R19B	Dry Foliar Interception Fraction for Non-Leafy	not used	2.500E-01	---	RDRY(1)
R19B	Dry Foliar Interception Fraction for Leafy	not used	2.500E-01	---	RDRY(2)
R19B	Dry Foliar Interception Fraction for Fodder	not used	2.500E-01	---	RDRY(3)
R19B	Wet Foliar Interception Fraction for Non-Leafy	not used	2.500E-01	---	RWET(1)
R19B	Wet Foliar Interception Fraction for Leafy	not used	2.500E-01	---	RWET(2)
R19B	Wet Foliar Interception Fraction for Fodder	not used	2.500E-01	---	RWET(3)
R19B	Weathering Removal Constant for Vegetation	not used	2.000E+01	---	WLAM
C14	C-12 concentration in water (g/cm**3)	not used	2.000E-05	---	C12WTR
C14	C-12 concentration in contaminated soil (g/g)	not used	3.000E-02	---	C12CZ
C14	Fraction of vegetation carbon from soil	not used	2.000E-02	---	CSOIL

Summary of Pathway Selections

Pathway	User Selection
1 -- external gamma	active
2 -- inhalation (w/o radon)	active
3 -- plant ingestion	suppressed
4 -- meat ingestion	suppressed
5 -- milk ingestion	suppressed
6 -- aquatic foods	suppressed
7 -- drinking water	suppressed
8 -- soil ingestion	active
9 -- radon	suppressed
Find peak pathway doses	suppressed

Section C1. Purpose

This appendix identifies and evaluates potential federal and State of California applicable or relevant and appropriate requirements (ARARs), based on regulations, requirements, and guidance, and sets forth the Department of the Navy (Navy) determinations on those potential ARARs for each remedial action alternative retained for detailed analysis in this radiological addendum to the “Final Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard, San Francisco, California” (Engineering/Remediation Resources Group, Inc. [ERRG], 2012). The ARARs identified as part of this evaluation are specific to the radioactive chemicals and radiological components of the remedial alternatives for Parcel E, and are in addition to the ARARs identified in Appendix B of the Final FS Report for Parcel E. The radiological components of the remedial alternatives would apply to the following radiologically impacted sites at Parcel E, as identified in Volume II of the Historical Radiological Assessment ([Naval Sea Systems Command, 2004](#)) (see [Figure 3](#) of this radiological addendum):

- Building 406
- Building 414
- Former Building 500 Series Site, which includes the following sites and surrounding area:
 - Building 500
 - Building 503 Site
 - Building 506 Site
 - Building 507 Site
 - Building 508 Site
 - Building 509 Site
 - Building 510 Site
 - Building 510A Site
 - Building 517 Site
 - Building 520 Site
 - Building 521 Site
 - Building 529 Site
- Building 701 Site
- Building 704 Animal Pens
- Building 704 Former Radioactive Storage Yard
- Building 707 and Kennels
- Building 707B Site
- Building 707C Site
- Building 707 Triangle Area
- Building 708
- Building 807 Site
- Building 810
- Building S-719 Site (suspected incinerator site in IR-02 Northwest)
- Shack 79 Site
- Shack 80 Site
- IR-02 (Bay Fill Area)
- IR-03 (Former Oil Reclamation Ponds Area)
- IR-04 (Former Scrap Yard)
- Former Salvage Yard
- Parcel E Shoreline
- Piers 2 and 3 (including Building 527)
- Sanitary Sewer System
- Storm Drain Lines
- Septic Sewer Lines

The evaluation provided in this appendix includes an initial determination of whether the potential ARARs actually qualify as ARARs, and a comparison for stringency between the federal and state regulations to identify the controlling ARARs. The identification of ARARs is an iterative process. The final determination of ARARs will be made by the Navy in the Record of Decision (ROD), after public review, as part of the response action selection process.

C1.1. SUMMARY OF COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT AND NATIONAL OIL AND HAZARDOUS SUBSTANCES POLLUTION CONTINGENCY PLAN REQUIREMENTS

Section (§) 121(d) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) (Title 42 United States Code [U.S.C.] § 9621[d]), as amended, states that remedial actions on CERCLA sites must attain (or the decision document must justify the waiver of) any federal or more stringent state environmental standards, requirements, criteria, or limitations that are determined to be legally applicable or relevant and appropriate.

Applicable requirements are those cleanup standards, standards of control, and other substantive environmental protection requirements, criteria, or limitations promulgated under federal or state law that specifically address circumstances at a CERCLA site. The requirement is applicable if the jurisdictional prerequisites of the standard show a direct correspondence when objectively compared to the conditions at the site. An applicable federal requirement is an ARAR. An applicable state requirement is an ARAR only if it is more stringent than federal ARARs.

If the requirement is not legally applicable, then the requirement is evaluated to determine whether it is relevant and appropriate. Relevant and appropriate requirements are those cleanup standards, standards of control, and other substantive environmental protection requirements, criteria, or limitations promulgated under federal or state law that, while not applicable, address problems or situations similar to the circumstances of the proposed response action and are well suited to the conditions of the site (U.S. Environmental Protection Agency [EPA], 1988a). A requirement must be determined to be both relevant and appropriate to be considered an ARAR. The criteria for determining relevance and appropriateness are listed in Title 40 Code of Federal Regulations (C.F.R.) § 300.400(g)(2) and include the following:

- The purpose of the requirement and the purpose of the CERCLA action
- The medium regulated or affected by the requirement and the medium contaminated or affected at the CERCLA site
- The substances regulated by the requirement and the substances found at the CERCLA site
- The actions or activities regulated by the requirement and the response action contemplated at the CERCLA site
- Any variances, waivers, or exemptions of the requirement and their availability for the circumstances at the CERCLA site

- The type of place regulated and the type of place affected by the release or CERCLA action
- The type and size of structure or facility regulated and the type and size of structure or facility affected by the release or proposed in the CERCLA action
- Any consideration of use or potential use of affected resources in the requirement and the use or potential use of the affected resources at the CERCLA site

According to CERCLA ARARs guidance (EPA, 1988a), a requirement may be “applicable” or “relevant and appropriate,” but not both. Identification of ARARs must be done on a site-specific basis and involve a two-part analysis: first, a determination of whether a given requirement is applicable; then, if it is not applicable, a determination of whether it is both relevant and appropriate. When the analysis determines that a requirement is both relevant and appropriate, such a requirement must be complied with to the same degree as if it were applicable (EPA, 1988a).

Tables included in this appendix present each potential ARAR with an initial determination of ARAR status (i.e., applicable, relevant and appropriate or not an ARAR). For the determination of relevance and appropriateness, the pertinent criteria were examined to determine whether the requirements addressed problems or situations sufficiently similar to the circumstances of the response action contemplated, and whether the requirement was well suited to the site. A negative determination of relevance and appropriateness indicates that the requirement did not meet the pertinent criteria. Negative determinations are documented in the tables of this appendix.

To qualify as a state ARAR under CERCLA and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), a state requirement must be:

- A state law or regulation
- An environmental or facility siting law or regulation
- Promulgated (of general applicability and legally enforceable)
- Substantive (not procedural or administrative)
- More stringent than federal requirements
- Identified in a timely manner
- Consistently applied

To constitute an ARAR, a requirement must be substantive. Therefore, only the substantive provisions of requirements identified as ARARs in this analysis are considered ARARs. Permits are considered procedural or administrative requirements. Provisions of generally relevant federal and state statutes and regulations that were determined to be procedural or nonenvironmental, including permit requirements, are not considered ARARs. CERCLA § 121(e)(1), 42 U.S.C. § 9621(e)(1), states, “No Federal, State, or local permit shall be required for the portion of any removal or remedial action conducted entirely on-site, where such remedial action is selected and carried out in compliance with this section.” The term “on-site” is defined for this ARAR discussion as “the areal extent of contamination and all suitable areas in

very close proximity to the contamination necessary for implementation of the response action” (40 C.F.R. § 300.5).

Nonpromulgated advisories or guidance issued by the federal or state governments are not legally binding and do not have the status of ARARs. Such requirements, however, may be useful and are “to be considered” (TBC). TBC requirements (40 C.F.R. § 300.4700[g][3]) complement ARARs but do not override them. They are useful for guiding decisions regarding cleanup goals or methodologies when regulatory standards are not available.

Pursuant to EPA guidance (EPA, 1988a), ARARs are generally divided into three categories: chemical-specific, location-specific, and action-specific requirements. This classification was developed to aid in identifying ARARs; some ARARs do not fall precisely into one group or another. ARARs are identified on a site-specific basis for remedial actions where CERCLA authority is the basis for cleanup.

As the lead federal agency, the Navy has primary responsibility for identifying federal ARARs at Hunters Point Shipyard (HPS) Parcel E. Potential federal ARARs are discussed in [Section C1.2.2](#). Pursuant to the definition of “on-site” in 40 C.F.R. § 300.5, the on-site areas that are part of this action include all of Parcel E.

Identification of potential state ARARs was initiated through Navy requests that the California Department of Toxic Substances Control (DTSC), the San Francisco Bay Regional Water Quality Control Board, and the San Francisco Bay Conservation and Development Commission identify potential state ARARs. Potential state ARARs for Parcel E were identified and evaluated in Appendix B of the Final FS Report (ERRG, 2012). One potential state ARAR specific to radioactive chemicals or radiologically specific actions, California Code of Regulations (Cal. Code Regs.) Title (tit.) 17 § 30256, was identified for Parcel E (DTSC, 2009).

C1.2. DESCRIPTION OF METHODOLOGY

The process of identifying and evaluating potential federal and state ARARs is described in this subsection.

C1.2.1. General

As the lead federal agency, the Navy has primary responsibility for identification of potential ARARs for Parcel E. In preparing this ARARs analysis, the Navy undertook the following measures, consistent with CERCLA and the NCP:

- Identified potential federal ARARs for each remedial action alternative in this addendum to the Parcel E FS Report, taking into account site-specific information for Parcel E
- Reviewed potential ARARs identified by the state to determine whether they satisfy CERCLA and NCP criteria that must be met to constitute state ARARs
- Evaluated and compared federal ARARs and their state counterparts to determine whether state ARARs were more stringent than the federal ARARs or were in addition to the federally required actions
- Reached a conclusion as to which federal and state ARARs were the most stringent or “controlling” for each alternative

Section 3.1 of the radiological addendum presents the RAO for the radiological components of the remedial action at Parcel E. The RAO for remediation of the radionuclides of concern (ROCs) is based on the medium of concern, ROCs, potential exposure pathways, and potential ARARs. In accordance with EPA guidance (EPA, 1988b), the environmental objectives should be expressed in terms of the medium of interest and target cleanup levels whenever possible. Therefore, the following RAO was identified for remediation of ROCs in the radiologically impacted portions of Parcel E:

- Prevent exposure to ROCs at activity levels that exceed the proposed remediation goals (RGs) for all potentially complete exposure pathways.

Table 7 of the radiological addendum for Parcel E presents the proposed RG for each ROC. The ROCs at Parcel E are Americium-241, Cesium-137, Cobalt-60, Tritium, Plutonium-239, Radium-226 (²²⁶Ra), Strontium-90, and Uranium-235. Table 1 of the radiological addendum identifies which ROCs are potentially present at each radiologically impacted area at Parcel E.

As discussed in Section 4 of the radiological addendum, the following alternatives were identified to address radioactive contamination at Parcel E:

- Alternative R-1 – No Action
- Alternative R-2 – Survey, Removal, and Disposal (with 2-foot-thick soil cover and institutional controls at IR-02 and IR-03)
- Alternative R-3 – Survey, Removal, and Disposal (with 3-foot-thick soil cover and institutional controls at IR-02 and IR-03)

A description of each alternative is presented in Section C4 of this appendix.

C1.2.2. Identifying and Evaluating Federal ARARs

The Navy is responsible for identifying federal ARARs as the lead federal agency under CERCLA and the NCP. The final determination of federal ARARs will be made when the Navy issues the ROD. The federal government implements a number of federal environmental statutes that are the source of potential federal ARARs, either in the form of the statutes or regulations promulgated thereunder. Examples

include the Resource Conservation and Recovery Act (RCRA), the Clean Water Act, the Safe Drinking Water Act, the Toxic Substances Control Act, and their implementing regulations.

EPA guidance recommends that the lead federal agency consult with the state when identifying state ARARs for remedial actions (EPA, 1988b). In essence, the CERCLA and NCP requirements at 40 C.F.R. § 300.515 for remedial actions provide that the lead federal agency request that the state identify chemical-specific and location-specific state ARARs upon completion of site characterization. The requirements also provide that the lead federal agency request identification of all categories of state ARARs (chemical-, location-, and action-specific) upon completion of identification of remedial alternatives for detailed analysis. As part of the agreement, the Navy is responsible for identifying potential federal ARARs, and DTSC is responsible for coordinating with State of California and local governmental agencies and identifying potential state ARARs.

Section C2. Chemical-Specific ARARs

Chemical-specific ARARs are generally health- or risk-based numerical values or methodologies applied to site-specific conditions that result in the establishment of a cleanup goal. Many potential ARARs associated with particular response alternatives (such as closure or discharge) can be characterized as action-specific but include numerical values or methodologies to establish them; therefore, they fit into both categories (chemical- and action-specific). To simplify the comparison of numerical values, action-specific requirements that include numerical values are included in this chemical-specific section and, if repeated in the action-specific section, the discussion refers back to this section.

This section presents the ARARs determination conclusions that address numerical values for the cleanup of radiologically contaminated soil and radioactive waste (see discussion below) at Parcel E. This section also evaluates potential ARARs for ambient air that, while not posing a risk to human health based on current conditions, may be affected during cleanup of radiologically contaminated soil and radioactive waste at Parcel E. Potential federal and state chemical-specific ARARs are summarized in [Tables C-1 and C-2](#) at the end of this appendix.

C2.1. POTENTIAL FEDERAL CHEMICAL-SPECIFIC ARARS

NRC Licensing Regulations for Land Disposal of Radioactive Waste

The requirements to obtain a license are not potential ARARs because they are not substantive. The Navy investigates and responds to hazardous substances released from its sites in a remedial action selected pursuant to its authority under CERCLA §104 as amended, the Defense Environmental Restoration Program (10 U.S.C. § 2701, et seq.), and federal Executive Order 12580 as amended. The Navy's CERCLA remedial action selection decision will address all hazardous substances released at the site, including radionuclides, and will be documented in a ROD.

Permits, licenses, or similar regulatory approvals are not required for a CERCLA response action. More specifically, § 121(e)(1) of CERCLA states, “No Federal, State, or local permit shall be required for the portion of any removal or remedial action conducted entirely on-site, where such remedial action is selected and carried out in compliance with this section.” The term “on-site” is defined as “the areal extent of contamination and all suitable areas in very close proximity to the contamination necessary for implementation of the response action” (40 C.F.R. § 300.5).

U.S. Nuclear Regulatory Commission (NRC) licensing requirements include those pertaining to license termination under both restricted and unrestricted conditions. License termination under restricted conditions typically involves implementation of land use restrictions to ensure that exposure to unacceptable levels of radioactivity is prevented. License termination under unrestricted conditions typically does not involve land use restrictions regarding exposure to radioactivity.

The remedial alternatives evaluated in the FS Report and this radiological addendum would leave in place soil and waste that contains potential radioactive contamination at IR-02 and IR-03. As a result, land use and activity restrictions are proposed under these alternatives to meet the RAOs, including the RAO specific to radioactive chemical exposure. However, the remedial alternatives include others areas where all potential radioactive contamination exceeding the proposed RGs would be removed and therefore would not require land use and activity restrictions regarding exposure to radioactivity. Specifically, all radiologically impacted areas at Parcel E, except for IR-02 and IR-03, would not, following remediation, require land use and activity restrictions regarding exposure to radioactivity. IR-02 and IR-03 would require land use and activity restrictions to prevent exposure to ROCs at activity levels that exceed the proposed RGs. [Figure 3](#) in this radiological addendum identifies each radiologically impacted area at Parcel E, including IR-02 and IR-03.

NRC Licensing Requirements for Land Disposal of Radioactive Waste (10 C.F.R. Part [pt.] 61, Subparts [subpts.] C and D) are not applicable because Parcel E (and the rest of HPS) is not an NRC-licensed site. The requirement to obtain a license is not a potential ARAR because CERCLA actions are exempt from procedural and administrative provisions and are exempt from having to obtain a permit of any kind.

Substantive requirements that may be relevant and appropriate federal ARARs for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03, are contained in subpt. C of 10 C.F.R. pt. 61. Subpt. C of 10 C.F.R. pt. 61 contains performance objectives for land disposal facilities, including exposure limitations for members of the public and implementation of mechanisms to protect inadvertent intrusion into the disposal site. The substantive provisions of the following specific 10 C.F.R. pt. 61, subpt. C requirements are potentially relevant and appropriate for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03:

“Concentrations of radioactive material which may be released to the general environment in ground water, surface water, air, soil, plants, or animals must not result in an annual dose exceeding an equivalent of 25 millirem to the whole body, 75 millirem to the thyroid, and 25 millirem to any other organ of any member of the public. Reasonable effort should be made to maintain releases of radioactivity in effluents to the general environment as low as is reasonably achievable” (10 C.F.R. § 61.41).

NRC Standards for Protection Against Radiation

The substantive radiological criteria for termination of a license for an existing NRC-licensed, radioactive waste-contaminated site when future unrestricted use is proposed are found at 10 C.F.R. § 20.1402. These regulations provide that a site will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from (i.e., above) background radiation results in a total effective dose equivalent (TEDE) to an average member of the critical group that does not exceed 25 millirems per year (mrem/y) (or 0.25 millisievert per year)—including that contributed from groundwater sources of drinking water, and that the residual radioactivity has been reduced to levels that are as low as reasonably achievable. The TEDE is the sum of the deep-dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures). These criteria apply only to ancillary surface facilities that support radioactive waste disposal activities regulated, as discussed earlier, under 10 C.F.R. pt. 61.

The substantive provisions of 10 C.F.R. § 20.1402 are potentially relevant and appropriate for all radiologically impacted areas except IR-02 and IR-03. At these areas, potential radioactive contamination exceeding the proposed RGs would be removed, thus these areas would not require land use restrictions regarding exposure to radioactivity. EPA does not believe this NRC requirement is protective of human health and the environment, and believes that the proposed RGs are more protective.

NRC Radiation Dose Limits for Individual Members of the Public

Radiation dose limits for the public are required in the substantive provisions of 10 C.F.R. § 20.1301. This section requires that the TEDE to individual members of public not exceed 100 mrem/y from licensed operations.

The remedial alternatives for Parcel E include leaving radioactive waste on site but, as previously discussed, Parcel E (and the rest of HPS) is not an NRC-licensed site. Because the remedial alternatives are similar to the regulated activity of closure of a licensed waste disposal site, the substantive provisions of 10 C.F.R. § 20.1301 are potentially relevant and appropriate.

Uranium Mill Tailings Radiation Control Act

The Uranium Mill Tailings Radiation Control Act (UMTRCA) standards are not applicable because Parcel E (and the rest of HPS) is not a mill site to which UMTRCA standards specifically apply. Specific UMTRCA requirements are therefore evaluated as to whether they are potentially relevant and appropriate for the remedial action at Parcel E.

Substantive requirements for cleanup of radioactive contaminants are found in UMTRCA standards for land and buildings contaminated with residual radioactive materials from inactive uranium processing

sites. Dose limits for ^{226}Ra in soil are found at 40 C.F.R. § 192.12(a), which states that as a result of residual radioactive materials from any designated processing site:

- (a) The concentration of ^{226}Ra in land averaged over any area of 100 square meters shall not exceed the background level by more than:
 - (1) 5 picocuries per gram (pCi/g), averaged over the first 15 centimeters (cm) of soil below the surface, and
 - (2) 15 pCi/g, averaged over 15-cm-thick layers of soil, more than 15 cm below the surface.

The substantive provisions of 40 C.F.R. §§ 192.12(a) and 192.32(b)(2) are potentially relevant and appropriate for all radiologically impacted areas except IR-02 and IR-03. At these areas, potential radioactive contamination exceeding the proposed RGs would be removed, thus the areas would not require land use restrictions regarding exposure to radioactivity.

The criteria at 40 C.F.R. pt. 40 Appendix A, Part I, Criterion 6(6) provide a benchmark approach for setting radionuclide cleanup levels as a supplement to 40 C.F.R. pt. 192, and are applicable only if 40 C.F.R. pt. 192 has been identified as an ARAR.

The substantive provisions of 40 C.F.R. § 192.12(b)(1), 192.12(b)(2), and 192.41(b) are determined to be potentially relevant and appropriate to the remedial alternatives at Parcel E because they contemplate excavation of material with radiological contamination that may produce the dose levels described in the regulations.

National Emissions Standards for Hazardous Air Pollutants Requirements for Radionuclides

Emission limitations are provided under National Emissions Standards for Hazardous Air Pollutants (NESHAPs) for facilities owned or operated by U.S. Department of Energy (DOE) that emit radionuclides other than radon-222 and radon-220 into the air. Under 40 C.F.R. pt. 61 subpt. H § 61.92, emissions of radionuclides into ambient air from DOE facilities shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 10 mrem/y.

Under 40 C.F.R. pt. 61 subpt. I § 61.102, emissions of iodine into ambient air from a facility regulated under this subpart shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 3 mrem/y. Similarly, emissions of all radionuclides (including iodine) shall not exceed amounts that would cause an effective dose equivalent of 10 mrem/y.

These requirements are limited to the cleanup action at a CERCLA site. Part II of the CERCLA Compliance with Other Laws Manual states ([EPA, 1988a](#)):

“...these subparts (Subparts H and I) would not be applicable or relevant and appropriate for airborne emissions from residual contamination after cleanup, when the facility is no longer in operation (the standards were developed to limit radiation doses caused by operations that yield a beneficial product).”

Therefore, after removal or handling of radionuclide waste at a site, the requirements under subpts. H and I of 40 C.F.R. pt. 61 are not potential ARARs.

C2.2. POTENTIAL STATE CHEMICAL-SPECIFIC ARARS

Cal. Code Regs. tit. 17, division 1, chapter 5, subchapter 4, group 3, – Standards for Protection Against Radiation

The State of California identified, in conjunction with the FS Report for Parcel E (DTSC, 2009), Cal. Code Regs. tit. 17 § 30256 as a potential state ARAR specific to radioactive chemicals. The Navy evaluated Cal. Code Regs. tit. 17 § 30256 to determine whether it satisfies CERCLA and NCP criteria that must be met to constitute state ARARs.

The Navy and EPA do not agree that Cal. Code Regs. tit. 17 § 30256 satisfies promulgated criteria, specified in CERCLA and the NCP, for a state chemical-specific ARAR. The Navy determined that it is not an ARAR for the Parcel E CERCLA remedy because it is not (1) substantive, (2) either “applicable” or “relevant and appropriate,” or (3) more stringent than federal standards. A state law or regulation must satisfy all of these criteria in order to meet CERCLA and NCP requirements for state ARARs and does not qualify as a state ARAR if any one of them is not satisfied. The Navy has prepared, in consultation with EPA counsel, the following specific input regarding Cal. Code Regs. tit. 17 § 30256, which is also presented in [Table C-2](#).

The State regulation at Cal. Code Regs. tit. 17§ 30256 is not substantive.

The Navy and EPA assert that Cal. Code Regs. tit. 17 § 30256 is not substantive. These regulations describe the process by which California Department of Public Health (CDPH) makes its decisions to terminate a specific license and therefore, read in that context, the three criteria of Subsection 30256 (k) should be characterized as procedural rather than substantive. The Navy does not have a State license administered by CDPH nor were any of the activities subject to State license requirements (see discussion above regarding “applicability”). Even if the criteria were considered substantive, the NCP (40 C.F.R. § 300.400[g]) specifies that substantive provisions of promulgated regulatory requirements must be either “applicable” or “relevant and appropriate” to qualify as ARARs for CERCLA cleanup actions.

The State regulation at Cal. Code Regs. tit. 17§ 30256 is not applicable.

The Navy and EPA assert that Cal. Code Regs. tit. 17 § 30256 is not “applicable” because these regulations by their express terms apply to facilities licensed by the State of California that are

undergoing a license termination process. The remediation of Parcel E under CERCLA is not part of a decommissioning or license termination procedure nor has any State license ever been issued because California laws and regulations regarding possession of radioactive materials do not apply to land possessed by the federal government.

The CDPH website acknowledges that CDPH does not regulate U.S. Department of Defense (DoD) sites:

“While owned by the Federal government, DoD facilities are not under the radiological control of the State of California, but when property is to be transferred to parties other than U.S. government agencies, California’s radiation regulations are then enforceable. Therefore decommissioning standards used for radioactive materials licenses in California are applied to the clean-up efforts at the military facilities.”¹

CDPH suggests in its comments that the regulations should be considered “applicable” ARARs because, although they are not applicable now, they would or might become applicable if the property were conveyed to a non-federal entity. The Navy and EPA disagree and assert that (1) CERCLA requires the decision-maker to evaluate ARARs at the time the remedy is selected; (2) these regulations are not applicable ARARs for the reasons noted above; and (3) the Navy will still own the site at the time the remedy is selected. Prospective future changes in jurisdiction cannot serve as a basis for identifying applicable ARARs. CDPH currently lacks subject matter jurisdiction over the property and may never obtain subject matter jurisdiction if the Navy retains title or transfers the property to another federal department or agency. Therefore, the Navy does not consider the regulation to be an “applicable” ARAR.

The State regulation at Cal. Code Regs. tit. 17§ 30256 is not relevant and appropriate.

The Navy and EPA also assert that Cal. Code Regs. tit. 17 § 30256 is not “relevant and appropriate” because standards for decommissioning a licensed facility are not “appropriate” for Parcel E because they do not address a set of circumstances similar to the remediation of Parcel E. The NCP specifies a series of factors to be used to compare the proposed CERCLA action with potential ARARs to determine if a requirement is both “relevant” and “appropriate” (40 C.F.R. § 300.400[g][2]). The activity addressed by the CDPH regulation can be distinguished from the selected remedial action for Parcel E on a number of bases, including the medium addressed, type of action/activity regulated, and type of place regulated (see 40 C.F.R. §§ 300.400[g][2][ii], [iv], and [vi]).

More specifically, the license termination process described in the regulation appears to be intended to reach the conclusion that the facility is suitable for release for unrestricted use. This requirement is one among a detailed set of requirements for the “cradle to grave” management of licensed radiological material that were never applied to Parcel E. The radionuclides addressed in Parcel E were not subject to

¹ <http://www.cdph.ca.gov/HealthInfo/environhealth/Pages/DOD.aspx>

such regulatory controls when they were utilized by the Navy or when they were released into the environment, thus the CERCLA response must address very different issues (for example, very high volume of potentially impacted soil, low concentrations of radionuclides in soil, high cost of removal, etc.).

CDPH appears to have focused their comments (as detailed in [Appendix E](#) of this radiological addendum) upon perceived similarities of purpose of the State regulations and the CERCLA response action pursuant to the factor at 40 C.F.R. §300.400(g)(2)(i) rather than the three factors at 40 C.F.R. §§ 300.400(g)(2)(ii), (iv), and (vi) that are identified in the previous paragraph. The Navy and EPA determinations under those three factors are sufficient in and of themselves to support the conclusion that the regulation is not “relevant and appropriate.” There is no requirement in §300.400(g)(2) that the Navy or EPA make specific findings for each of the eight factors listed in §§300.400(g)(2)(i) through (viii) for each potential state ARAR. The criteria are to be examined “where pertinent” with pertinence “depending, in part, on whether a requirement addresses a chemical, location, or action.”

Furthermore, the Navy and EPA do not agree with CDPH’s assertions about the similarity of purpose. Although CERCLA response action and the State regulations share the broad goal of protecting human health and the environment, they operate in a very different manner and address different site conditions.

CDPH further asserts that the threshold for determining under State law if a license or exemption is required when a licensed entity pursues a license termination is similar to the questions of whether a license or exemption is required when an entity takes possession of a site that has been contaminated by the previous owner. This is a general procedural and jurisdictional issue under State law and is unrelated to the question as to whether or not these specific regulations are “relevant and appropriate” under CERCLA and the NCP.

The State regulation at Cal. Code Regs. tit. 17 § 30256 is not more stringent than federal standards.

The Navy and EPA assert that Cal. Code Regs. tit. 17 § 30256(k) is not more stringent than risk-based cleanup levels because the standard requiring “reasonable effort to eliminate residual radioactive contamination” is by its terms flexible and cannot be assumed to require a more stringent cleanup than the selected CERCLA remedial action. CDPH, in recent correspondence on the CERCLA cleanup at HPS Parcel C ([CDPH, 2010](#)), has asserted that the regulation provides for cleanup to background. The regulation does not require cleanup to background conditions and elimination of residual contamination; furthermore, it can be interpreted to require a “reasonable effort” to eliminate residual contamination regardless of risk. Cal. Code Regs. tit. 17 § 30256 (k) neither contains a numerical standard nor describes a narrative standard that would inform the question of whether (or what quantity of) radiological material can remain at the site. If there were a means to derive an objective standard from § 30256(k), that standard has not been identified by the State. Without an identified objective standard, there can be no

basis for asserting that the requirement is more stringent than the CERCLA risk-based standards for Parcel E.

In summary, CDPH has provided no evidence that their regulations are more stringent than federal ARARs and CERCLA risk-based cleanup levels.

Section C3. Location-Specific ARARs

Potential location-specific ARARs were identified and evaluated in the Final FS Report for Parcel E (ERRG, 2012), and no additional location-specific ARARs have been identified based on the radiological-specific components of the remedial alternatives.

Section C4. Action-Specific ARARs

The Navy is evaluating alternatives for the remediation of radionuclides at Parcel E. As discussed in [Section C1](#), the remedial alternatives evaluated in this radiological addendum identify actions that are needed to meet the RAO for radioactively contaminated media. The remedial alternatives are summarized in [Section C4.1](#). Potential action-specific ARARs were identified and evaluated in the Final FS Report for Parcel E (ERRG, 2012), and [Section C4.2](#) identifies additional action-specific ARARs based on the radiological-specific components of the remedial alternatives.

All of the potential action-specific ARARs for radiological-specific components of the remedial alternatives also contain chemical-specific requirements and were discussed in [Section C2](#) and [Tables C-1 and C-2](#). [Table C-3](#), included at the end of this appendix, identifies other federal action-specific requirements that were evaluated and determined to not be potential ARARs. No additional potential state ARARs specific to radiological-specific actions were identified.

C4.1. REMEDIAL ALTERNATIVES FOR RADIONUCLIDES

Three radiological remedial alternatives were evaluated for Parcel E. The action-specific requirements identified for Alternatives R-2 and R-3 are also identified as chemical-specific ARARs in this appendix. These potential ARARs pertain to Alternatives R-2 and R-3.

C4.1.1. Alternative R-1 – No Action

Under Alternative R-1, no remedial action would be taken. Radiologically impacted sites would be left as is without implementing any response actions (for example, monitoring, institutional controls, containment, or removal). The no action alternative is included throughout the FS process as required by the NCP to provide a baseline for comparison with and evaluation of other alternatives. There is no need to identify action-specific ARARs for the no action alternative because ARARs apply to “any removal or remedial action conducted entirely on-site” and “no action” is not a removal or remedial action.

C4.1.2. Alternative R-2 – Survey, Removal, and Disposal (with 2-foot-thick soil cover and institutional controls at IR-02 and IR-03)

Alternative R-2 would involve (1) scoping or characterization surveys in accordance with Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM) and consistent with the recommendations in the Historical Radiological Assessment (HRA); (2) excavation and off-site disposal of soil, sediment, and debris containing ROCs exceeding the RGs, as identified during scoping or characterization surveys;

(3) decontamination and/or demolition of structures containing elevated radioactivity, as identified during scoping or characterization surveys; (4) final status surveys in accordance with MARSSIM; and (5) a 2-foot-thick soil cover, shoreline protection, institutional controls, and groundwater monitoring to address residual radioactivity at IR-02 and IR-03.

C4.1.3. Alternative R-3 – Survey, Removal, and Disposal (with 3-foot-thick soil cover and institutional controls at IR-02 and IR-03)

Alternative R-3 would involve (1) scoping or characterization surveys in accordance with MARSSIM and consistent with the recommendations in the HRA; (2) excavation and off-site disposal of soil, sediment, and debris containing ROCs exceeding the RGs, as identified during scoping or characterization surveys; (3) decontamination and/or demolition of structures containing elevated radioactivity, as identified during scoping or characterization surveys; (4) final status surveys in accordance with MARSSIM; and (5) a 3-foot-thick soil cover, shoreline protection, institutional controls, and groundwater monitoring to address residual radioactivity at IR-02 and IR-03.

C4.2. POTENTIAL FEDERAL ACTION-SPECIFIC ARARS FOR REMEDIAL ALTERNATIVES R-2 AND R-3

As discussed in [Section C2.3](#), the substantive provisions of the following requirements are relevant and appropriate for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03. At these areas, potential radioactive contamination exceeding the proposed RGs would be removed; therefore, these areas would not require land use restrictions regarding exposure to radioactivity

- 40 C.F.R. §§ 192.12(b)(1) and 192.41(b)
- 40 C.F.R. § 192.12(b)(2)
- 40 C.F.R. §§ 192.12(a) and 192.32(b)(2)
- 10 C.F.R. § 20.1301
- 10 C.F.R. § 20.1402

The substantive provisions of the requirements summarized below are identified in [Section C2.3](#) and are accepted as potential ARARs for IR-02, including sanitary sewer, storm drain, and septic sewer lines within IR-02, and IR-03, which will be transferred with engineering and institutional controls for radioactive chemicals.

- 40 C.F.R. §§ 192.12(b)(1) and 192.41(b)
- 40 C.F.R. § 192.12(b)(2)
- 10 C.F.R. § 20.1301
- 10 C.F.R. § 61.41

Table C-1. Potential Federal Chemical-Specific ARARs for Radionuclides^a

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL				
Uranium Mill Tailings Radiation Control Act (42 U.S.C., ch. 88, § 192.02, 192.12(a,b), and 192.42)^c				
Standards for cleanup of land and buildings contaminated with radium-226, radium-228, and thorium from inactive uranium processing sites. As a result of residual radioactive materials from any designated processing site: (a) The concentration of radium-226 in land averaged over any area of 100 square meters shall not exceed the background level by more than: (1) 5 pCi/g, averaged over the first 15 cm of soil below the surface, and (2) 15 pCi/g, averaged over 15-cm-thick layers of soil more than 15 cm below the surface.	UMTRCA sites	40 C.F.R. §§ 192.12(a) and 192.32(b)(2)	Relevant and appropriate	Not applicable because Parcel E is not an UMTRCA site, but is potentially relevant and appropriate for sites with soil contaminated with radioactive waste. The surface and subsurface concentration of 5 pCi/g is potentially relevant and appropriate for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03. These areas, following remediation of ROCs exceeding the proposed RGs, will not require land use restrictions regarding exposure to radioactivity. Not an ARAR for radiologically impacted areas (IR-02 and IR-03) that will be transferred with engineering and institutional controls for radioactive chemicals.
In any occupied or habitable building, the objective of the remedial action shall be, and reasonable effort shall be made to achieve, an annual average (or equivalent) radon decay product concentration (including background) not to exceed 0.02 WL. In any case, the radon decay product concentration (including background) shall not exceed 0.03 WL. Provisions applicable to radon-222 shall also apply to radon-220.	UMTRCA sites	40 C.F.R. §§ 192.12(b)(1) and 192.41(b)	Relevant and appropriate	Not applicable because Parcel E is not an UMTRCA site. Potentially relevant and appropriate because the alternatives will result in excavation of material with radiological contamination that may produce this level of dose.
Concentration limits for cleanup of gamma radiation in buildings at inactive uranium processing sites designated for remedial action. In any occupied or habitable building, the level of gamma radiation shall not exceed the background level by more than 20 microroentgens per hour.	UMTRCA sites	40 C.F.R. § 192.12(b)(2)	Relevant and appropriate	Not applicable because Parcel E is not an UMTRCA site. Potentially relevant and appropriate because the alternatives will result in excavation of material with radiological contamination that may produce this level of dose.

SOIL (continued)				
Radiological Criteria for License Termination				
<p>A site will be considered acceptable for unrestricted use if residual radioactivity that is distinguishable from background radiation results in a TEDE to an average member of the critical group that does not exceed 25 mrem/y, including that from groundwater sources of drinking water, and that the residual radioactivity has been reduced to ALARA.</p>	Existing NRC-licensed site	10 C.F.R. § 20.1402	Relevant and appropriate	<p>Not applicable because Parcel E is not an NRC-licensed site. This ARAR is potentially relevant and appropriate for all radiologically impacted areas at Parcel E, except for IR-02 and IR-03. These areas, following remediation of ROCs exceeding the proposed RGs, will not require land use restrictions regarding exposure to radioactivity. EPA does not believe this NRC regulation is protective of human health and the environment, and believes the proposed RGs are more protective.</p> <p>Not an ARAR for radiologically impacted areas (IR-02 and IR-03) that will be transferred with engineering and institutional controls for radioactive chemicals.</p>
<p>A site will be considered acceptable for license termination under restricted conditions if:</p> <p>(a) The licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of § 20.1402 would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA. Determination of the levels that are ALARA must consider any detriments, such as traffic accidents, expected to potentially result from decontamination and waste disposal.</p> <p>(b) The licensee has made provisions for legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 mrem (0.25 mSv) per year.</p>	Existing NRC-licensed site	10 C.F.R. § 20.1403(a),(b),(c),(d),(e)	Not an ARAR	<p>This NRC requirement is not applicable because Parcel E is being remediated pursuant to CERCLA rather than pursuant to a decommissioning plan required by NRC licensing regulations. The requirement is not relevant and appropriate because it does not address a set of circumstances similar to the remediation of Parcel E under CERCLA. The NCP specifies a series of factors to be used to compare the proposed CERCLA action with potential ARARs to determine if a requirement is both relevant and appropriate (40 CFR § 300.400[g][2]). The requirements can be distinguished from the selected remedial action for the site based on a number of factors, including the medium addressed, type of action/activity regulated, and type of place regulated.</p>

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL (continued)				
Uranium Mill Tailings Radiation Control Act (42 U.S.C., ch. 88, § 192.02, 192.12(a,b), 192.42)^c				
<p>Control of residual radioactive materials shall be designed to:</p> <ul style="list-style-type: none"> ▪ be effective for up to 1,000 years, to the extent reasonably achievable, and in any case for at least 200 years; and ▪ provide reasonable assurance that releases of radon-222 from residual radioactive material to the atmosphere will not: <ol style="list-style-type: none"> (1) Exceed an average release rate of 20 picocuries per square meter per second. This average shall apply over the entire surface of the disposal site and over at least a 1-year period. Radon will come from both residual radioactive materials and from materials covering them. Radon emissions from the covering materials should be estimated as part of developing a remedial action plan for each site. The standard, however, applies only to emissions from residual radioactive materials to the atmosphere. Or, (2) Increase the annual average concentration of radon-222 in air at or above any location outside the disposal site by more than 0.5 pCi/L. 	<p>Inactive uranium processing sites</p>	<p>40 C.F.R. § 192.02(a),(b)</p>	<p>Not an ARAR</p>	<p>Not applicable since Parcel E was not a uranium processing site. Not relevant and appropriate because the criteria for releases of radon-222 from residual radiological material into the atmosphere would not be exceeded at Parcel E. This determination is based on measurements collected during the Phase I surface confirmation radiation survey.</p>

Table C-1. Potential Federal Chemical-Specific ARARs for Radionuclides^a (continued)

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
AIR				
NESHAPs under CAA that Apply to Radionuclides				
Emissions of radionuclides to ambient air from DOE facilities shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 10 mrem/y.	Facility owned or operated by the DOE that emits any radionuclide other than radon-222 and radon-220 into the air.	40 C.F.R. pt. 61, subpt. H, § 61.92	Relevant and appropriate	Not applicable because Parcel E is not a DOE site, but may be relevant and appropriate if there is the potential for airborne emissions of radionuclides other than radon. Only an ARAR until cleanup action is completed. Not an ARAR for residual contamination after cleanup.
Emissions of radionuclides, including iodine, to ambient air from a facility regulated under this subpart shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 10 mrem/y. Emissions of iodine to ambient air from a facility regulated under this subpart shall not exceed those amounts that would cause any member of the public to receive in any year an effective dose equivalent of 3 mrem/y.	Facilities owned or operated by any federal agency other than the DOE and not licensed by the NRC.	40 C.F.R. pt. 61 subpt. I, § 61.102	Applicable	The requirements are applicable because fugitive dust may be generated during implementation of the remedial action at Parcel E. Exposure to the public from remedial action operations at Parcel E is not likely to exceed 10 mrem/y because of the following reasons: (1) the concentrations of any radionuclide in dust are relatively low as previously measured in air samples, and (2) the concentration of any radionuclide in dust will be reduced by use of engineering controls such as wetting of soils.
GROUNDWATER				
MCLs for radionuclides <ul style="list-style-type: none"> • Combined radium-226 and radium-228 – 5 pCi/L • Gross alpha (including radium-226 but excluding radon and uranium) – 15 pCi/L • Tritium – 20,000 pCi/L • Strontium-90 – 8 pCi/L • Beta and photon – 4 mrem/y • Uranium – 30 µg/L 	Potentially contaminated groundwater within the boundaries of the response action designated for beneficial use.	40 C.F.R. § 141.66	Not an ARAR	Not an ARAR because groundwater at Parcel E has not been impacted by radionuclides at activities that warrant evaluation in this radiological addendum.

Table C-1. Potential Federal Chemical-Specific ARARs for Radionuclides^a (continued)

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SURFACE WATER				
Concentration limits for liquid effluent from facilities that extract and process uranium, radium, and vanadium ores: Radium-226 (dissolved) 10.0 pCi/L maximum per day 3.0 pCi/L average 30 days Radium-226 (total) 30.0 pCi/L maximum per day 10.0 pCi/L average 30 days Uranium 4.0 mg/L maximum per day 2.0 mg/L average 30 days	Discharges to surface water from mines and mills producing uranium, radium, and vanadium ores.	40 C.F.R. pt. 440, subpt. C, §§ 440.32 and 440.33	Not an ARAR	Not applicable because Parcel E is not a mine or mill. Not relevant and appropriate because the type of activity regulated (point source discharges) does not match any element of the proposed response actions.

Notes:

- a The potential chemical-specific ARARs also contain action-specific requirements; these potential ARARs are not repeated in the action-specific ARAR tables.
- b Only the substantive provisions of the requirements cited in this table are potential ARARs.
- c Statutes and policies, and their citations, are provided as headings to identify general categories of potential ARARs for the convenience of the reader; listing the statutes and policies does not indicate that the Navy accepts the statutes or policies in their entirety as potential ARARs. Specific potential ARARs are addressed in the table below each general heading; only pertinent substantive requirements of the specific citations are considered potential ARARs

§ = section

µg/L = microgram per liter

ALARA = as low as reasonable achievable

ARAR = applicable or relevant and appropriate requirement

Table C-2. Potential State Chemical-Specific ARARs for Radionuclides^a

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL				
California Department of Public Health				
<p>This regulation requires each person granted a specific license to do the following:</p> <ul style="list-style-type: none"> • keep records of information important to the decommissioning of a facility • notify CDPH prior to vacating an installation that may have been contaminated with radioactive material • complete certain activities if the person does not submit a specific license renewal application • submit a decommissioning plan for approval by CDPH, and if approved, complete decommissioning <p>The regulation also provides that if the information submitted does not adequately demonstrate that the premises are suitable for release for unrestricted use, CDPH shall inform the licensee of appropriate further actions and that specific licenses shall be terminated by written notice to the licensee when CDPH determines that: (1) radioactive material has been properly disposed; (2) reasonable effort has been made to eliminate residual radioactive contamination, if present; and (3) a radiation survey has been performed which demonstrates that the premises are suitable for release for unrestricted use; or other information submitted by the licensee is sufficient to demonstrate that the premises are suitable for release for unrestricted use.</p>	<p>A person with a specific license granted pursuant to Group 2 of Title 17, Division 1, Chapter 5, Subchapter 4.</p>	<p>Cal. Code Regs. tit. 17, § 30256</p>	<p>Not an ARAR</p>	<p>The Navy determined that Cal. Code Regs. tit. 17 § 30256 is not an ARAR for the Parcel E CERCLA remedy because it is not (1) substantive; (2) either “applicable” or “relevant and appropriate”; or (3) more stringent than federal standards. A state law or regulation must satisfy all of these criteria to meet CERCLA and NCP requirements for state ARARs and does not qualify as a state ARAR if any one of them is not satisfied. The Navy has prepared, in consultation with EPA counsel, the following specific input regarding Cal. Code Regs. tit. 17 § 30256.</p> <p><u>The State regulation at Cal. Code Regs. tit. 17 § 30256 is not substantive</u></p> <p>The Navy and EPA assert that Cal. Code Regs. tit. 17 § 30256 is not substantive. These regulations describe the process by which the CDPH makes its decisions to terminate a specific license and, therefore, read in that context, the three criteria of § 30256 (k) should be characterized as procedural rather than substantive. The Navy does not have a State license administered by CDPH nor were any of the activities subject to State license requirements (see discussion below regarding “applicability”). Even if the criteria were considered substantive, the NCP (40 CFR § 300.400[g]) specifies that substantive provisions of promulgated regulatory requirements must be either “applicable” or “relevant and appropriate” to qualify as ARARs for CERCLA cleanup actions.</p>

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL (continued)				
California Department of Public Health (continued)				
(see above)	(see above)	(see above)	(see above)	<p><u>The State regulation is not applicable.</u> The Navy and EPA assert that Cal. Code Regs. tit. 17 § 30256 is not “applicable” because these regulations by their express terms apply to facilities licensed by the State of California that are undergoing a license termination process. The remediation of Parcel E under CERCLA is not part of a decommissioning or license termination procedure nor has any State license ever been issued because California laws and regulations regarding possession of radioactive materials do not apply to land possessed by the federal government.</p> <p>The CDPH website acknowledges that CDPH does not regulate DoD sites: “While owned by the Federal government, DoD facilities are not under the radiological control of the State of California, but when property is to be transferred to parties other than U.S. government agencies, California’s radiation regulations are then enforceable. Therefore decommissioning standards used for radioactive materials licenses in California are applied to the clean-up efforts at the military facilities.”</p> <p>CDPH suggests in its comments (see Appendix E) that the regulations should be considered “applicable” ARARs, because, although they are not applicable now, they would or might become applicable if the property were conveyed to a non-federal entity. The Navy and EPA disagree and assert that (1) CERCLA requires the</p>

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL (continued)				
California Department of Public Health (continued)				
(see above)	(see above)	(see above)	(see above)	<p>decision-maker to evaluate ARARs at the time the remedy is selected; (2) these regulations are not applicable ARARs for the reasons noted above; and (3) the Navy will still own the site at the time the remedy is selected. Prospective future changes in jurisdiction cannot serve as a basis for identifying applicable ARARs. CDPH currently lacks subject matter jurisdiction over the property and may never obtain subject matter jurisdiction if the Navy retains title or transfers the property to another federal department or agency. Therefore, the Navy does not consider the regulation to be an "applicable" ARAR.</p> <p><u>The State regulation is not relevant and appropriate.</u></p> <p>The Navy and EPA also assert that Cal. Code Regs. Title 17 § 30256 is not "relevant and appropriate" because standards for decommissioning a licensed facility are not "appropriate" for Parcel E because they do not address a set of circumstances similar to the remediation of Parcel E. The NCP specifies a series of factors to be used to compare the proposed CERCLA action with potential ARARs to determine if a requirement is both relevant and appropriate (40 CFR § 300.400[g][2]). The activity addressed by the CDPH regulation can be distinguished from the selected remedial action for Parcel E on a number of bases, including the medium addressed, type of action/activity regulated, and type of place</p>

Table C-2. Potential State Chemical-Specific ARARs for Radionuclides^a (continued)

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL (continued)				
California Department of Public Health (continued)				
<i>(see above)</i>	<i>(see above)</i>	<i>(see above)</i>	<i>(see above)</i>	<p>regulated (see 40 C.F.R. §§ 300.400[g][2][ii], [iv], and [vi]). More specifically, the license termination process described in the regulation appears to be intended to reach the conclusion that the facility is suitable for release for unrestricted use. This requirement is one among a detailed set of requirements for the “cradle-to-grave” management of licensed radiological material that were never applied to Parcel E. The radionuclides addressed in Parcel E were not subject to such regulatory controls when they were used by the Navy or when they were released into the environment, thus the CERCLA response must address very different issues (e.g., very high volume of potentially impacted soil, low concentrations of radionuclides in soil, high cost of removal, etc.)</p> <p>CDPH appears to have focused their comments (see Appendix E) upon perceived similarities of purpose of the State regulations and the CERCLA response action pursuant to the factor at 40 C.F.R. §300.400(g)(2)(i) rather than the three factors at 40 C.F.R. §§300.400(g)(2)(ii), (iv), and (vi) that are identified in the previous paragraph. The Navy and EPA determinations under those three factors are sufficient in and of themselves to support the conclusion that the regulation is not “relevant and appropriate.” There is no requirement in §300.400(g)(2) that the Navy or EPA make specific findings for each of the eight factors listed in §§300.400(g)(2)(i) through (viii) for each</p>

Table C-2. Potential State Chemical-Specific ARARs for Radionuclides^a (continued)

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL (continued)				
California Department of Public Health (continued)				
(see above)	(see above)	(see above)	(see above)	<p>potential state ARAR. The criteria are to be examined “where pertinent” with pertinence “depending, in part, on whether a requirement addresses a chemical, location, or action.”</p> <p>Furthermore, the Navy and EPA do not agree with CDPH’s assertions about the similarity of purpose. Although CERCLA response action and the State regulations share the broad goal of protecting human health and the environment, they operate in a very different manner and address different site conditions. CDPH further asserts that the threshold for determining under State law if a license or exemption is required when a licensed entity pursues a license termination is similar to the questions of whether a license or exemption is required when an entity takes possession of a site that has been contaminated by the previous owner. This is a general procedural and jurisdictional issue under State law and is unrelated to the question as to whether or not these specific regulations are “relevant and appropriate” under CERCLA and the NCP.</p> <p><u>The State regulation at Cal. Code Regs. tit. 17§ 30256 is not more stringent than federal standards.</u></p> <p>The Navy and EPA assert that Cal. Code Regs. tit. 17 § 30256(k) is not more stringent than risk-based cleanup levels because the standard requiring “reasonable effort to eliminate residual radioactive contamination” is by its terms flexible and cannot be assumed to require a more stringent cleanup than the selected CERCLA remedial action.</p>

Table C-2. Potential State Chemical-Specific ARARs for Radionuclides^a (continued)

Requirement	Prerequisite	Citation ^b	ARAR Determination	Comments
SOIL (continued)				
California Department of Public Health (continued)				
(see above)	(see above)	(see above)	(see above)	<p>CDPH, in recent correspondence on the CERCLA cleanup at HPS Parcel C, has asserted that the regulation provides for cleanup to background. The regulation does not require cleanup to background conditions and elimination of residual contamination; furthermore, it can be interpreted to require a "reasonable effort" to eliminate residual contamination regardless of risk. Cal. Code Regs. tit. 17 § 30256(k) neither contains a numerical standard nor describes a narrative standard that would inform the question of whether (or what quantity of) radiological material can remain at the site. If there were a means to derive an objective standard from § 30256(k), that standard has not been identified by the State. Without an identified objective standard, there can be no basis for asserting that the requirement is more stringent than the CERCLA risk-based standards for Parcel E.</p> <p>In summary, CDPH has provided no evidence that their regulations are more stringent than federal ARARs and CERCLA risk-based cleanup levels.</p>

Notes:

a The potential chemical-specific ARARs also contain action-specific requirements; these potential ARARs are not repeated in the action-specific ARAR tables.

				A	RA	TBC	
Radioactive material and waste storage and control	The licensee shall secure from unauthorized removal or access licensed materials that are stored in controlled or unrestricted areas.	Existing NRC-licensed site	10 C.F.R. § 20.1801		✓		Not applicable because Parcel E is not an existing NRC-licensed site. The substantive provisions of this requirement are relevant and appropriate for staging excavated soil containing ROCs activities exceeding the RGs prior to off-site disposal.
	The licensee shall control and maintain constant surveillance of licensed material that is in a controlled or unrestricted area and that is not in storage.	Existing NRC-licensed site	10 C.F.R. § 20.1802		✓		Not applicable because Parcel E is not an existing NRC-licensed site. The substantive provisions of this requirement are relevant and appropriate for staging excavated soil containing ROCs activities exceeding the RGs prior to off-site disposal.
Radioactive waste disposal	Performance objectives for the land disposal of LLRW. Concentrations of radioactive material that may be released to the general environment must not result in an annual dose exceeding 25 mrem to the body or any organ of a member of the general public.	NRC-licensed LLRW disposal site	10 C.F.R. § 61.41		✓		Not applicable because Parcel E is not an NRC-licensed disposal site. Potentially relevant and appropriate for sites with radionuclides.
	Design, operation, and closure of the land disposal facility must ensure protection of any individual inadvertently intruding into the disposal site and occupying the site or contacting the waste at any time after active ICs over the disposal site are removed.	NRC-licensed LLRW disposal site	10 C.F.R. § 61.42				Not an ARAR. Not applicable because Parcel E is not an NRC-licensed disposal site. Not relevant and appropriate for Parcel E because the alternatives include maintaining active ICs in perpetuity.
	Discharges to surface water from certain kinds of mines and mills	NRC-licensed LLRW disposal site	10 C.F.R. § 61.43				Not an ARAR. Not applicable because Parcel E is not an NRC-licensed disposal site. Not relevant and appropriate because the alternatives do not include discharge to surface water, nor is Parcel E a mine or mill.

Table C-3 Potential Federal Action-Specific ARARs for Radionuclides ^a (continued)

Action	Requirement	Prerequisite	Citation ^b	ARAR Determination			Comments
				A	RA	TBC	
Radioactive waste disposal	The disposal facility must be sited, designed, used, operated, and closed to achieve long-term stability of the disposal site and to eliminate to the extent practicable the need for ongoing active maintenance of the disposal site following closure, so that only surveillance, monitoring, or minor custodial care are required.	NRC-licensed LLRW disposal site	10 C.F.R. § 61.44				Not an ARAR. Not applicable because Parcel E is not an NRC-licensed LLRW disposal site. Not relevant and appropriate because the requirements are not more stringent than the proposed RGs for Parcel E.

Notes:

a The potential chemical-specific ARARs identified in [Table C-1](#) also contain action-specific requirements; these potential ARARs are not repeated in [Table C-2](#).

b Only the substantive provisions of the requirements cited in this table are potential ARARs.

§ = section

A = applicable

ARAR = applicable or relevant and appropriate requirement

C.F.R. = Code of Federal Regulations

Ci = curie

GBq = gigabecquerel

ICs = institutional controls

LLRW = low-level radioactive waste

mrem = millirem

NRC = Nuclear Regulatory Commission

pt. = part

RA = relevant and appropriate

RGs = remediation goals

ROCs = radionuclides of concern

TBC = to be considered

Section D1. Introduction

This appendix presents cost estimates of the alternatives developed and evaluated for remediation of radiologically impacted media at Parcel E, Hunters Point Shipyard in San Francisco, California. Alternative R-1 is the no action alternative for radiologically impacted media; thus, it has no costs associated with its implementation and does not necessitate any formal cost documentation. Radiologically impacted media at Parcel E has three remedial alternatives, including Alternative R-1.

This appendix describes the methodology used to prepare these estimates. Following the text, the estimated costs for Alternatives R-2 and R-3 are documented in [Tables D-1 through D-15](#).

Cost estimates were prepared in accordance with U.S. Environmental Protection Agency (EPA) guidance entitled “A Guide to Developing and Documenting Cost Estimates during the Feasibility Study” ([EPA, 2000](#)).

Section D2. Purpose of Estimates

Cost estimates developed for the detailed analysis of each alternative are used for comparative purposes in the Feasibility Study (FS) and to ultimately support remedy selection in the Record of Decision. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) includes the following language in its description of the cost criterion for the detailed analysis and remedy selection:

“The types of costs that shall be assessed include the following: 1) Capital costs, including both direct and indirect costs; 2) Annual operations and maintenance costs; and 3) Net present value of capital and operation and maintenance (O&M) costs (Title 40 Code of Federal Regulations, Section 300.430 [e][9][iii][G]).”

Accordingly, the estimates for each of the alternatives have been divided into these three main categories.

The costs presented in this appendix have an estimated accuracy of plus 50 percent to minus 30 percent in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 guidelines for conducting FSs ([EPA, 1988](#)).

Section D3. Cost Estimate Methodology

For the most part, costs were developed using the Environmental Cost Handling Options and Solutions (ECHOS) cost database developed by the RS Means Company, Inc. The ECHOS publications used were the *Environmental Remediation Cost Data – Assemblies, 11th Annual Edition* and *Environmental Remediation Cost Data – Unit Price, 11th Annual Edition*, which provide unit and assembly costs for activities specific to remediation projects (RS Means Company, Inc., 2005a and 2005b). ECHOS is maintained and published by the RS Means Company, Inc.

Costs were also developed using the RS Means Company, Inc. publication *Heavy Construction Cost Data, 23rd Annual Edition*, which provides unit and assembly costs for activities specific to heavy construction projects (RS Means Company, Inc., 2009).

Costs provided in the RS Means Company, Inc. publications are national averages. These average costs were adjusted for local labor, material, and equipment costs. The costs do not reflect project safety levels, project management, project design, project oversight, contingencies, or profit. Means provides guidelines for applying design, oversight, contingency, overhead and profit; for relating national-average unit costs to specific regions of the country; and for applying markups related to site safety levels.

Costs for the unique characteristics of some elements of the remediation alternatives, that are not included in the RS Means Company, Inc. publications, were estimated based on past experience with similar activities. Spreadsheets were used to tabulate annual costs for each alternative and present value.

Section D4. Cost Estimate Components

Cost estimates for the remedial alternatives include capital costs, annual O&M costs, and periodic costs. Costs are presented as present worth and as present value (PV) to consider the PV calculated based on a discount factor. Each of these costs is discussed in further detail in the following subsections.

D4.1. CAPITAL COSTS

Capital costs include direct and indirect costs. Costs incurred for equipment, material, labor, construction, development, and implementation of remedial technologies are included as direct costs. Indirect costs include health and safety supplies, site supervision, engineering oversight, overhead, profit, and start up. Indirect costs are included in the estimate as either a separate line item or as a percentage of the direct capital cost.

D4.2. ANNUAL OPERATION AND MAINTENANCE AND PERIODIC COSTS

Annual O&M costs include costs incurred after construction. These costs are necessary to ensure the effectiveness of a remedial action. Annual O&M costs typically include operating labor, consumable materials, purchased services (e.g., laboratory analyses), equipment replacement, maintenance, sampling, permit fees, annual reports, and site reviews.

Periodic costs occur once every few years or once during the entire O&M period. Examples include periodic reviews, equipment replacement or rehabilitation, site closeout, and remedy failure and replacement. Periodic reviews include 5-year reviews, as required by the NCP; however, because 5-year reviews are performed for all of Hunters Point Shipyard under the environmental restoration program, these costs are a small component of the periodic costs. A small incremental cost was added to the annual O&M costs for each the alternatives evaluated in the FS Report to account for the 5-year reviews; therefore, these costs were not included for the radiological remedial alternatives.

D4.3. PRESENT VALUE ANALYSIS

Remedial action projects typically involve construction costs that are expended at the beginning of a project (capital costs) and costs in subsequent years (O&M and periodic costs). PV analysis is a method to evaluate expenditures that occur over different periods of time. This standard methodology allows for cost comparisons of different remedial alternatives on the basis of a single cost figure for each alternative. This single value, referred to as the PV, is the amount needed to be set aside at the initial point in time

(base year) to ensure that funds will be available in the future as they are needed. PV analysis uses a discount rate and period of analysis to calculate the PV of each expenditure.

D4.3.1. Discount Rate

A discount rate is the difference between interest and inflation rates. When inflation is neglected, the discount rate is simply an interest rate and is used to account for the time value of money. A dollar is worth more today than in the future because, if invested today, the dollar would earn interest. The choice of a discount rate is important because the selected rate directly affects the PV of a cost estimate, which is then used in making a remedy selection decision.

EPA policy on the use of discount rates for cost analysis is stated in the preamble to the NCP (55 Federal Register 8722) and in Office of Solid Waste and Emergency Response (OSWER) Directive 9355.3-20 (EPA, 1993). Discount rates used in economic analysis by the federal government are specified in the Office of Management and Budget (OMB) Circular A-94 (OMB, 1992). The current real discount rate for a 30-year stream of payments is 2.7 percent, as specified by OMB Circular No. A-94, Appendix C, Revised December 2008 (OMB, 2008). A real discount rate is a forecast of real interest rates from which the inflation premium has been removed and based on the economic assumptions from the current fiscal year's budget. Real rates are to be used for discounting real (constant-dollar) flows, as is often required in cost-effectiveness analyses.

D4.3.2. Present Value

The PV of a series of equal annual future payments, such as annual O&M payments, is calculated using the following equation:

$$PV = \sum_{t=1}^n \frac{x_t}{(1+i)^t}$$

where:

<i>PV</i>	=	present value
<i>x_t</i>	=	payment in year t (t = 0 for present or base year)
<i>i</i>	=	discount factor
<i>t</i>	=	number of years following construction that expenditure start
<i>n</i>	=	number of years that the stream of equal annual future payments will run

The PV of a single periodic future payment is calculated using the following equation:

$$PV = \frac{x_t}{(1+i)^t}$$

where

PV	=	present value
x_t	=	payment in year t (t = 0 for present or base year)
i	=	discount factor
t	=	number of years following construction that expenditure occur

The PV of a remedial alternative represents the sum of the PVs of all future payments associated with the project. The PV for this cost estimate is determined using present dollars.

D4.4. CONTINGENCY ALLOWANCES

Contingency allowances are included in cost estimates to cover unknowns or unanticipated conditions associated with construction and O&M activities. Contingency is typically added as a percentage to the total cost of those activities. A common approach is to assign a contingency percentage to FS costs based on engineering judgment (EPA, 2000). A contingency allowance of 20 percent was included in each alternative's cost estimate. The assigned 20-percent contingency is consistent with EPA guidance for developing cost estimates for FSs (EPA, 2000)

Notes:

1. Equipment operator rates are included in equipment operation estimates
2. Labor rates are based on a 2006 rate schedule

Table D-7. Alternatives R-2 and R-3 - Quantity Estimates

Radiological Addendum to Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Area Name	Quantity	Units	Remarks
IR Sites 02 and 03			
IR-02 (Bay Fill Area) and IR-03 (former oil reclamation ponds)	1,943,650	square feet	Total area of IR-02 and IR-03 located within Parcel E
Other IR Sites and Areas Outside Buildings			
500 Series Buildings	999,094	square feet	includes area outside of existing and former 500 Series Buildings
707 Triangle Area	223,045	square feet	
Former radiological storage yard	2,984	square feet	near Building 704, includes animal pens
IR-04 (former scrap yard)	49,855	square feet	area outside of former Bldg 807
Salvage yard	142,584	square feet	area outside of former Bldg 702
South piers and berths	155,335	square feet	
Former Buildings			
Building 503	26,881	square feet	
Building 506	9,375	square feet	
Building 507	6,650	square feet	
Building 508	6,650	square feet	
Building 509	5,000	square feet	
Building 510/510A	3,150	square feet	
Building 517	2,500	square feet	
Building 520	7,040	square feet	
Building 529	510	square feet	
Building 701	5,836	square feet	
Building 702	5,713	square feet	
Building 707B	1,000	square feet	
Building 707C	1,000	square feet	
Building 807	1,680	square feet	
Building S-719	720	square feet	
Shack 79	400	square feet	exact dimensions not available from historic documentation
Shack 80	400	square feet	exact dimensions not available from historic documentation
Existing Buildings			
Building 406	42,885	square feet	40 Class 1 and 4 Class 2
Building 414	31,058	square feet	29 Class 1 and 3 Class 2
Building 500	13,450	square feet	13 Class 1 and 2 Class 2
Building 521	7,040	square feet	7 Class 1 and 1 Class 2
Building 527	408	square feet	
Building 527	6,120	cubic feet	
Building 707	13,000	square feet	13 Class 1 and 2 Class 2
Building 707	195,000	cubic feet	
Building 708	1,000	square feet	1 Class 1 and 1 Class 2
Building 708	15,000	cubic feet	
Building 810	34,111	square feet	32 Class 1 and 4 Class 2
Utility Lines			
Storm drain lines (outside of IR-02)	39,423	linear feet	
Storm drain lines (within of IR-02)	8,633	linear feet	lines not proposed for removal
Sanitary sewer lines (outside of IR-02)	21,744	linear feet	
Sanitary sewer lines (within of IR-02)	2,836	linear feet	lines not proposed for removal
Septic sewer lines (outside of IR-02)	500	linear feet	exact length not available from historic documentation
Septic sewer lines (within of IR-02)	--	linear feet	no historic structures within IR-02 potentially served by septic sewers

Table D-8. Alternatives R-2 and R-3 - Radiological Scoping Survey Cost Detail

Radiological Addendum to Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Description	Quantity	Unit	Unit Price	Cost	Remarks
Scoping Surveys - Surface Scans					
500 Series Buildings	999,094	SF	\$ 0.30	\$ 302,068	Assumes 4-person crew scan 2,500 SF in two-hour period, includes rental of Ludlum Model 44-2 1"x 1" NaI GAMMA Scintillators (4)
Former radiological storage yard	2,984	SF	\$ 0.30	\$ 902	
Salvage yard	142,584	SF	\$ 0.30	\$ 43,109	
South piers and berths	155,335	SF	\$ 0.30	\$ 46,964	
Building 500	13,450	SF	\$ 0.30	\$ 4,066

Table D-11. Alternatives R-2 and R-3 - Radiological Remediation at Building Sites Cost Detail

Radiological Addendum to Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Description	Quantity	Unit	Unit Price	Cost	Remarks
Remediation at Existing Buildings - to remain in place					
Building 406	4,288	SF	\$ 8.55	\$ 36,666	Assumes 10 percent of area requires remediation by hydraulic scrubbling; Means 2009 Heavy Construction. Pg 23; 02 41 13.15 0015
Building 414	3,106	SF	\$ 8.55	\$ 26,555	Assumes 10 percent of area requires remediation by hydraulic scrubbling; Means 2009 Heavy Construction. Pg 23; 02 41 13.15 0015
Building 500	0	SF	\$ 8.55	-	Assumes scoping survey will verify that no remediation is required; Means 2009 Heavy Construction. Pg 23; 02 41 13.15 0015
Building 521	2,112	SF	\$ 8.55	\$ 18,058	Assumes 30 percent of area requires remediation by hydraulic scrubbling; Means 2009 Heavy Construction. Pg 23; 02 41 13.15 0015
Building 810	0	SF	\$ 8.55	-	Assumes scoping survey will verify that no remediation is required; Means 2009 Heavy Construction. Pg 23; 02 41 13.15 0015
Disposal of low-level radioactive waste	106	CY	\$ 820.00	\$ 86,613	Assumes 2-inch scrubbling depth with 50% bulking factor
Remediation at Existing Buildings - to be demolished					
Building 527	0	SF	\$ 8.55	-	Assumes no spot remediation required prior to demolition
Building 707	1,300	SF	\$ 8.55	\$ 11,115	Assumes 10 percent of area requires spot remediation prior to demolition
Building 708	0	SF	\$ 8.55	-	Assumes no spot remediation required prior to demolition
Disposal of low-level radioactive waste	14	CY	\$ 820.00	\$ 11,844	Assumes 2-person team compile and analyze data from 20,000 SF per hour
Demolition of Existing Buildings					
Building 527	6,120	CF	\$ 0.42	\$ 2,570	Assumes no spot remediation required prior to demolition; Means 2009 Heavy Construction. Pg 33-34; 02 41 16.13 0600 ; cost includes demolition and 20 mile truck haul of debris.
Building 707	195,000	CF	\$ 0.32	\$ 62,400	Assumes 10 percent of area requires spot remediation prior to demolition; Means 2009 Heavy Construction. Pg 33-34; 02 41 16.13 0700; cost includes demolition and 20 mile truck haul of debris.
Building 708	15,000	CF	\$ 0.32	\$ 4,800	Assumes no spot remediation required prior to demolition; Means 2009 Heavy Construction. Pg 33-34; 02 41 16.13 0500; cost includes demolition and 20 mile truck haul of debris.
Screening/segregation of demolition debris	2,001	CY	\$ 19.40	\$ 38,822	Means 2009 Heavy Construction. Pg 36; 02 41 19.23 3080
Disposal of low-level radioactive waste	200	CY	\$ 820.00	\$ 164,091	Assumes 10 percent of debris requires disposal as LLRW
Disposal of construction debris	1,801	CY	\$ 23.67	\$ 42,630	Quote from Norcal Waste Systems, Inc., San Francisco, CA
TOTAL				\$ 506,163	

Table D-12. Alternatives R-2 and R-3 - Radiological Remediation at Non-Building Sites Cost Detail
 Radiological Addendum to Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Description	Quantity	Unit	Unit Price	Cost	Remarks
Remediation of Open Space Areas					
500 Series Buildings	1,857	CY	\$ 2.86	\$ 5,311	Means 2009 Heavy Construction. Pg 219. 31 23 16.42 0250; assumes 20 CY of LLRW is generated per 1,000 square meters of area
Former radiological storage yard	6	CY	\$ 2.86	\$ 17	(which correlates to 5 percent of the volume within the upper foot)
Salvage yard	265	CY	\$ 2.86	\$ 758	
IR-03 (Oil Reclamation Ponds)	84	CY	\$ 2.86	\$ 240	
IR-02 (Bay Fill Area)	3,528	CY	\$ 2.86	\$ 10,090	
707 Triangle Area	415	CY	\$ 2.86	\$ 1,187	
IR-04 (former scrap yard)	93	CY	\$ 2.86	\$ 266	
South piers and berths	7,767	SF	\$ 8.55	\$ 66,408	Assumes 5 percent of area requires remediation by hydraulic scrubbling; Means 2009 Heavy Construction. Pg 23; 02 41 13.15 0015
Remediation of Former Building Sites					
Building 506	18	CY	\$ 2.86	\$ 51	Assumes 20 CY of LLRW is generated per 1,000 square meters of area
Building 507	13	CY	\$ 2.86	\$ 37	(which correlates to 5 percent of the volume within the upper foot)
Building 508	13	CY	\$ 2.86	\$ 37	
Building 509	10	CY	\$ 2.86	\$ 29	
Building 510/510A	6	CY	\$ 2.86	\$ 17	
Building 517	5	CY	\$ 2.86	\$ 14	
Building 520	14	CY	\$ 2.86	\$ 40	
Building 529	1	CY	\$ 2.86	\$ 3	
Building 702	11	CY	\$ 2.86	\$ 31	
Building 707B	2	CY	\$ 2.86	\$ 6	
Building 707C	2	CY	\$ 2.86	\$ 6	
Building S-719	2	CY	\$ 2.86	\$ 6	
Shack 79	1	CY	\$ 2.86	\$ 3	
Pier Demolition and Construction Debris Disposal					
Saw cut concrete pier deck (1,400 ft. x 60 ft.)	16,800	LF	\$ 10.77	\$ 180,936	Means 2009 Heavy Construction. Pg 74; 03 81 13.50 0400 and 0420
Relocate concrete pier deck sections by barge crane	1,400	LF	\$ 179.00	\$ 250,600	Means 2009 Heavy Construction. Pg 30-31; 02 41 13.72 0500
Demolition of concrete pier deck (1,400 ft. x 60 ft.)	84,000	SF	\$ 22.00	\$ 1,848,000	Means 2009 Heavy Construction. Pg 30-31; 02 41 16.17 2500
Demolition of wooden pier decking (2,000 ft. x 30 ft.)	60,000	SF	\$ 9.80	\$ 588,000	Means 2009 Heavy Construction. Pg 30-31; 02 41 13.72 0700
Demolition of wood piles (up to 14" dia.)	38,400	LF	\$ 9.80	\$ 376,320	Means 2009 Heavy Construction. Pg 31; 02 41 13.74 2000
Disposal of concrete construction debris	3,800	CY	\$ 69.60	\$ 264,480	Based on \$58/ton quote for transportation/disposal; assumes 1.2 tons/CY
Disposal of wood construction debris	4,600	CY	\$ 11.60	\$ 53,360	Based on \$58/ton quote for transportation/disposal; assumes 0.2 tons/CY
Backfilling of Excavation Areas					
Soil analysis for import soil (1 per 1000 CY) (4 pt. composite samples)	7	EA	\$ 1,042.00	\$ 7,294	Assumes sampling for chemical and rad analyses
Backfill excavations (delivered, spread, compacted in 6-in. lifts)	10,935	ton	\$ 13.61	\$ 148,825	Means 2005 Environmental Remediation - Unit Price. Pg 4-23. 17 03 0423
Radioactive Waste Characterization and Disposal					
Waste Characterization	13	EA	\$ 1,042.00	\$ 13,546	Assumes 1, 4 pt. composite sample (for chemical and rad analyses) per 500 CY
Disposal of low-level radioactive waste	9,648	ton	\$ 120.00	\$ 1,157,814	
TOTAL				\$ 4,973,733	

Table D-13. Alternatives R-2 and R-3 - Utility Line Removal Cost Detail

Radiological Addendum to Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Description	Quantity	Unit	Unit Price	Cost	Remarks
Excavate trench along utility line alignment with 1/2 CY excavator	66,496	CY	\$ 7.86	\$ 522,745	Means 2009 Heavy Construction. Pg 211. 31 23 16.13 0050
Confirmation sample analysis	1,357	each	\$ 209.00	\$ 283,545	Assume one sample per 50 feet of line + 10% QC samples; see "LAB COST" Worksheet
Over excavate contaminated soils (25% contingency)	16,624	CY	\$ 7.86	\$ 130,686	Means 2009 Heavy Construction. Pg 211. 31 23 16.13 0050
Haul soil to radiological screening yard with 8 CY trucks	83,120	CY	\$ 4.16	\$ 345,753	Means 2009 Heavy Construction. Pg 230. 31 23 23.20 0114
Radiological screening	2,244,240	SF	\$ 0.30	\$ 673,272	Assumed to be 10 times the cost of the portable scintillator (x6)
Soil analysis for disposal (1 per 500 CY) (4 pt. composite samples)	166	each	\$ 1,042.00	\$ 173,222	See "LAB COST" Worksheet for Detail
Transport and disposal of excavated material					
Class II Beneficial Reuse Soil to Altamont	70,652	ton	\$ 38.82	\$ 2,742,711	Assumed Fraction of Total Waste: 50%
Class II Soil to Altamont	42,391	ton	\$ 72.42	\$ 3,069,971	Assumed Fraction of Total Waste: 30%
Class I Non-RCRA Soil to Kettleman Hills	21,196	ton	\$ 81.15	\$ 1,720,023	Assumed Fraction of Total Waste: 15%
Disposal of radiologically impacted waste	7,065	ton	\$ 120.00	\$ 847,824	Assumed Fraction of Total Waste: 5%
Soil analysis for import soil (1 per 1000 CY) (4 pt. composite samples)	83	each	\$ 1,042.00	\$ 86,611	See "LAB COST" Worksheet for Detail
Backfill excavations (delivered, spread, compacted in 6-in. lifts)	141,304	ton	\$ 13.61	\$ 1,923,147	Means 2005 Environmental Remediation - Unit Price. Pg 4-23. 17 03 0423
TOTAL				\$ 12,519,510	

Table D-14. Alternatives R-2 and R-3 - Soil Laboratory Analyses Cost Detail

Radiological Addendum to Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California

Analysis⁽¹⁾	Cost per Sample	
Radiochemical Analysis	\$	503.00
Gamma Radium-226, Cesium-137, Cobalt-60, and Americium-241	\$	90.00
Strontium-90	\$	119.00
Isotopic Plutonium	\$	98.00
Isotopic Uranium	\$	98.00
Tritium	\$	98.00
Encore Samplers for TPH-purgeable range (3 per sample)	\$	39.00
Chemical Analysis	\$	500.00
Volatile Organic Compounds (VOCs)	\$	100.00
Semivolatile Organic Compounds (SVOCs)	\$	190.00
Pesticides	\$	80.00
Polychlorinated Biphenyls (PCBs)	\$	65.00
Total Petroleum Hydrocarbons (TPH), purgeable range	\$	90.00
Total Petroleum Hydrocarbons (TPH), extractable range	\$	55.00
Total Threshold Limit Concentration (TTLC), CA Title 22 Metals (Sb, As, Ba, Be, Cd, Cr, Co, Cu, Pb, Hg, Mo, N, Se, Ag, Tl, V, Zn)	\$	110.00
Toxic Characteristic Leaching Procedure (TCLP), CA Title 22 Metals	\$	50.00
Soluble Threshold Limit Concentration (STLC), CA Title 22 Metals	\$	50.00
Total Cost/Sample:	\$	1,042.00

			Subtotal	\$ 946,543	
			20 percent contingency	\$ 189,309	
			TOTAL	\$ 1,135,851	

Notes:

In the Final FS Report for Parcel E, a 2-foot thick soil cover was assumed at Redevelopment Blocks EOS-1 through EOS-5 for soil alternatives S-2 through S-4. Since these Redevelopment Blocks encompass all of IR-02 and IR-03, no additional soil cover costs are presented in the Radiological Addendum to avoid duplication. Radiological Alternative R-3 includes a 3-foot soil cover to offer additional protection from residual radioactivity; therefore, the soil cover costs for IR-02 and IR-03 reflect the costs of construction an additional foot of soil cover (from 2 feet to 3 feet). These costs are limited to IR-02 and IR-03, rather than all of Redevelopment Blocks EOS-1 through EOS-5.

**Appendix E. Responses to Regulatory Agency
Comments on the Draft and Draft
Final Radiological Addendum to the
FS Report for Parcel E**

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
1.	--	--	The Draft Radiological Addendum to the Feasibility Study for Parcel E (the FS Addendum) has significant subsurface data gaps; thus, the alternatives proposed include what are essentially presumptive remedies for radiological contamination at two sites. The surface clearance and containment approach for Installation restoration (IR) Site 02 and IR Site 03 requires further justification. Considering that significant subsurface data gaps do exist for IR-02 and IR-03, the FS Addendum must include a more robust discussion of remedial alternatives for these sites beyond the alternatives presented. The next revision of the FS Addendum should at least include an alternative that allows for additional surveys and excavation beyond one foot if hot spots are found during the initial excavation. This is of particular importance if subsurface sampling results indicate the possible presence of radiological devices.	<p>Consistent with the NCP¹ and EPA RI/FS guidance (EPA, 1988), the Navy developed remedial alternatives by combining various process options that were retained following a screening-level analysis based on effectiveness, implementability, and cost. The RA presents a set of streamlined remedial alternatives, consistent with the streamlining approach outlined in the NCP (pp. 8704-8705 of NCP Preamble). The proposed approach for addressing radionuclides at IR Sites 02 and 03 under Alternatives R-2 and R-3 is consistent with the radiological remedy selected for IR Sites 07 and 18 at Parcel B, as outlined in the Final Amended Parcel B ROD (Navy, 2009a). The remedy for IR Sites 07 and 18 at Parcel B was co-selected by the Navy and EPA, with concurrence by DTSC and the RWQCB. The Draft Final RA was revised to clarify the approach for how radionuclides will be addressed at IR Sites 02 and 03 under Alternatives R-2 and R-3, as outlined in the paragraphs below.</p> <p>Under Alternatives R-2 and R-3, a radiological characterization surface scan will initially be conducted over 100 percent of the area at IR Sites 02 and 03 to identify areas with elevated activity. Following the surface scan, soil containing ROCs at activity levels exceeding the RGs would be removed, with the excavation generally limited to 1 foot bgs. However, the radiological removal may be extended deeper, if necessary, to ensure that the radiological dose at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) will be consistent with background activity levels.</p>

¹ Abbreviations and acronyms used throughout this table are identified on page 49.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
1. (cont.)	--	--	(see above)	<p>The dose levels at the surface will not exceed 15 mrem/yr based upon residential reuse; this dose level is generally considered protective of human health and is applied to response actions under CERCLA (EPA, 1997). Given the historical operations at IR Sites 02 and 03 and potential subsurface data gaps, it is possible that elevated activity levels may be encountered following surface remediation and that additional excavation may be required deeper than 1 foot bgs to ensure an acceptable dose level at the final ground surface.</p> <p>Following the radiological removal described above, all excavations would be backfilled to the existing ground surface with soil that meets appropriate acceptance criteria for radioactive and nonradioactive chemicals. Subsequently, a soil cap (2-foot-thick for Alternative R-2 and 3-foot-thick for Alternative R-3) would be installed at and above original grade at IR Sites 02 and 03. The soil cover would be underlain by a demarcation layer, consisting of a permeable geosynthetic material and magnetic marking tape, to ensure proper identification of the bottom of the soil cap. The proposed soil cap and demarcation layer would reduce the dose and residual risk associated with ROCs at the RGs, at and below the original surface, to meet the RAO.</p>
2.	--	--	Proposed remedial alternatives R-2 and R-3 include removal of approximately 1 foot of soil exceeding RGs at IR Site 02 and IR Site 03; however, the text does not explain how this depth was determined. Given the stated unknown extent of subsurface radioactive soil impacts, it is not clear how this 1-foot depth was selected. Please revise the FS Addendum to provide supporting information for the proposed removal of approximately 1 foot of soil from these areas.	<p>The proposed excavation depth was initially determined based upon the Navy's previous experience evaluating radionuclides at radiologically impacted areas of Parcels B and E-2. RESRAD modeling was performed and is included in Appendix B, and these modeling results demonstrate that the removal of radiological anomalies within 1 foot of the existing ground surface and subsequent backfilling and soil cover installation would generally result in a background dose at the final ground surface. However, as indicated in the response to EPA General Comment 1, excavation in some areas may be extended deeper, if necessary, to ensure that the radiological dose at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) is consistent with background activity levels. The Draft Final RA was revised to further clarify the excavation approach proposed under Alternatives R-2 and R-3 for IR Sites 02 and 03.</p>

<i>General Comments</i>				
3.	--	--	The containment process option retained for evaluation in the FS Addendum included a 2-foot and 3-foot soil cover at IR Site 02 and IR Site 03; however, a detailed evaluation of the thickness proposed for the soil cover was not included. Section 3.3.1.4, Containment, states, "The Navy evaluated a 2-foot thick soil cover at radiologically impacted areas of Parcel E-2 and has selected a 3-foot thick soil cover at radiological impacted areas of Parcel B, IR-07 and IR-08;" however, a discussion was not included comparing these sites to IR Site 02 and IR Site 03. For example, there was no discussion of the level of radiological impacts at the sites, the final site use, or other site details. Please revise the FS Addendum to include additional details on how the covers were evaluated and selected at these other sites and a comparison to the conditions at IR Site 02 and IR Site 03.	Section 3.3.1.4 was revised to briefly compare the operational history and site conditions at IR Sites 02 and 03 with Parcel E-2 and Parcel B, IR Sites 07 and 18. As stated in the response to EPA General Comment 1, excavation in some areas at IR Sites 02 and 03 may be extended deeper, if necessary, to confirm that the radiological dose at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) is consistent with background activity levels. This clarification is warranted for Parcel E based on the different site conditions at IR Sites 02 and 03.
4.	--	--	The radiological risk assessment uses the USDOE RESRAD model, rather than comparison with U.S. EPA Preliminary Remediation Goals (PRGs), for soil, outdoor surfaces and buildings. Please include a brief discussion of how the models differ and why the RESRAD model is comparable to the U.S. EPA PRGs in terms of calculating risk at Parcel E.	PRGs for radionuclides are isotope concentrations that correspond to certain levels of risk in soil, water, and biota. PRGs for radionuclides are developed based upon generic exposure assumptions, which may not be consistent with anticipated land use. RESRAD was used for site-specific dose and risk modeling of radiologically impacted sites, and the use of RESRAD allows for the selection of receptor-specific exposure assumptions consistent with the assumptions and inputs used in the nonradiological HHRA for Parcel E in the Final Revised RI Report for Parcel E (Barajas and Associates, 2008).

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
5.	--	--	<p>It appears that some of the more than 30 radiologically impacted sites in Parcel E (see Table ES-1, Parcel E Impacted Sites, Radionuclides of Concern Historical Uses, and Planned Reuse) are not fully accounted for in the FS Addendum. Section 2.3.1.2 describes 16 sites of them in terms of Redevelopment Blocks.</p> <p>The opening paragraph of Section 2.3.1.2 acknowledges that “data are inadequate [at several radiologically impacted Parcel E sites] to support a detailed evaluation of the nature and extent of radionuclides in subsurface soil at the sites, [and...] in the absence of such data, this radiological addendum assumes that radiologically impacted subsurface soil...will require remedial option analysis.” Based on the site descriptions in Section 2.3.1.2, it is not clear that all the sites missing from the discussion in Section 2.3.1.2 – for example, Building 503 in Redevelopment Block 41; Building 708 in Redevelopment Block 44; Former Salvage Yard in Redevelopment Block 45; and Building 521 in EMI-1 – were deemed as requiring remedial option analysis. To ensure that all radiologically impacted sites in Parcel E are accounted for, please revise the opening paragraph of Section 2.3.1.2 – and elsewhere in the FS Addendum, as appropriate – to specify radiologically impacted sites requiring remediation based on adequate data availability, as well as the radiological impacted sites with inadequate data that required remedial option analysis.</p>	<p>A brief description of every radiologically impacted site at Parcel E (based on the findings of the HRA [NAVSEA, 2004]), along with the potential for radiological contamination and ROCs, is presented in Section 2.1.2 of the RA. The HRA identified several sites at Parcel E that had not been previously considered radiologically impacted prior to issuance of the HRA. Accordingly, previous radiological investigations or removal actions had not been conducted at these sites.</p> <p>Section 2.3.1.2 presents the nature and extent of radionuclides detected in soil and associated structures at each radiologically impacted site Parcel E; the evaluation is based on the results of the previous radiological investigations at Parcel E, as outlined in Section 2.2. Radiologically impacted sites with no previous radiological data are not discussed in this section; however, all radiologically impacted sites at Parcel E (as listed in Table 2) are accounted for in the remedial options analysis (as listed in Table 9). The text in Section 2.3.1.2 was revised to indicate that the radionuclide nature and extent discussion presented in the section is limited to the sites for which radiological data are available. The text was also revised to indicate that radiologically impacted sites identified in Table 2 but not discussed in Section 2.3.1.2 are assumed to require remedial options analysis.</p>

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
6.	--	--	The FS Addendum refers to “release criteria” and “release limits” throughout the document, including statements about exceedences of these values in Section 2.0, Site Characterization and Risk Evaluation; and Appendix B, Parcel E Risk Screening Analysis. However, the source and specific values of these release criteria and limits are unclear. Please clarify this information in appropriate sections in the FS Addendum.	The release criteria used in the RA were obtained from the “Final Basewide Radiological Removal Action, Action Memorandum – Revision 2006, Hunters Point Shipyard, San Francisco, California,” dated April 21, 2006, and are referenced in Section 2 as the most appropriate preliminary criteria under which to evaluate the existing site data. Section 2 was revised to indicate the source of the release criteria. The RGs identified in Table 7 are consistent with the release criteria, but the term “remedial goal” is used in Sections 3, 4, and 5 to clarify that these goals will apply to the future remedial action for ROCs.
7.	--	--	The FS Addendum indicates that reference (background) data from samples collected from locations within Parcel E during the Phase V investigation were used in the HHRA to estimate incremental risks; however, it is unclear how samples collected from locations within Parcel E could be representative of background levels when multiple sites are associated with radionuclide releases from site operations. Please provide supporting justification for identifying background samples collected from locations within Parcel E.	Section 2.2.1.14 was revised to indicate that the 16 reference samples for the Phase V investigation were collected from areas within Parcels B, C, D, and E that were determined, in consultation with the Navy’s RASO, to not be potentially impacted by previous radiological operations at HPS. This determination was aligned with the historical records used to develop the HRA (NAVSEA, 2004).
8.	--	--	The FS Addendum should include more information about how the Remedial Goals (RGs) were developed. Please revise the FS Addendum to include a summary of how RGs were selected at these sites and the appropriateness of these RGs for Parcel E.	Table 7 was revised to indicate the regulatory criteria used to develop the RGs (e.g., EPA PRGs for soil and sediment). As discussed in Section 3.1.4 and Table 7, the RGs are consistent with the selected RGs in the RODs for Parcels B, G, and D-1 and UC-1 (Navy, 2009a , 2009b , and 2009c , respectively).

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
9.	--	--	As presented, the costing information is unclear as to what is represented (i.e., does it only represent costs associated with the radiological constituents which are the primary focus of the FS Addendum, or does it represent costs associated with all of the Parcel E proposed remedial activities). Please revise the FS Addendum costing information to clearly indicate what is represented by the costs presented.	As specified on page 5-1, the information presented in Section 5 focuses solely on the three remedial alternatives developed for radionuclides. As such, information on the costs for the radiological-specific remedial alternatives does not include the costs associated with the remedial alternatives presented in the Parcel FS for soil and sediment, groundwater, and nonaqueous-phase liquids. Sections 5.2.2.7 and 5.2.3.7 were revised to indicate that the costs presented are in addition to costs for the remedial alternatives for nonradioactive chemicals (that are presented in the FS Report for Parcel E).
10.	--	--	<p>This FS Addendum indicates that it addresses radionuclides of concern (ROCs) but indicates that both chemical and radiological contaminants will be addressed together in the Proposed Plan and Record of Decision (ROD). While the FS Addendum presents the chemical remedial alternatives and indicates that the remedial alternative for radionuclides will complement the chemical alternative, only a limited discussion of this is included in the FS Addendum.</p> <p>A process was not included in the FS Addendum that will allow for an assessment of the compatibility of the radiological contaminant remedial technologies and the non-radiological contaminant technologies to assess their synergies and compatibilities. Please revise the FS Addendum to discuss how this process will occur so that the Proposed Plan and ROD can be appropriately prepared and substantiated.</p>	<p>As stated in Section 4.1, the remedial alternatives for radioactive chemicals identify additional actions, beyond those specified in the FS Report for Parcel E, that are needed to meet the RAO for radioactively contaminated media. As such, the radiological-specific remedial alternatives in the RA are evaluated independently of the remedial alternatives in the FS Report. The only common component to the remedial alternatives for both nonradioactive and radioactive chemicals is the proposed soil cover at IR Sites 02 and 03 (this component was included in the RA, so the two variations of the soil cover could be evaluated).</p> <p>The soil alternatives in the Draft Final FS Report were revised to include a 2-foot soil cover throughout IR Sites 02 and 03, consistent with the expanded open space district identified in the 2010 amended redevelopment plan (San Francisco Redevelopment Agency, 2010). The costs of the radiological-specific alternatives were revised in the Draft Final RA as follows to avoid duplication with the Draft Final FS Report:</p> <ul style="list-style-type: none"> • Alternative R-2: Costs for the 2-foot soil cover in IR Sites 02 and 03 were removed because these costs were already included in the soil alternatives in the Draft Final FS Report. • Alternative R-3: Costs for an additional 1 foot of soil cover in IR Sites 02 and 03 were added to provide a basis of comparing the 2-foot- and 3-foot-thick soil covers at IR Sites 02 and 03.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
10. (cont.)	--	--	(see above)	Section 4.1 was revised to clarify that “Consistent with the remedy selection process for Parcels B, G, and D-1 and UC-1 (Navy, 2009a, 2009b, and 2009c, respectively), the Navy will identify preferred remedial alternatives for both nonradioactive chemicals and radionuclides in the proposed plan for Parcel E. The final remedy for Parcel E, to be selected in the ROD following public comment on the proposed plan, will specify the actions necessary to satisfy the RAOs established for both radionuclides and nonradioactive chemicals.”
11.	--	--	The Parcel E FS is still in draft format so comments have not been addressed. This FS Addendum appears to include all of the alternatives from the Parcel E FS, but it is unclear exactly how they apply. The FS Addendum will need to ensure that any residual issues that may impact this document are sufficiently resolved prior to submission of the final. Please ensure that the two Parcel E FS reports are revised so as to be complementary.	The Draft Final RA and FS Reports were revised to reflect regulatory agency input and to ensure consistency between the two documents. In addition, Section 4.1 in the Draft Final RA was revised to clarify that the radiological-specific remedial alternatives are independent of those evaluated in the FS Report, and that the remedial alternatives for nonradioactive chemicals are briefly summarized in the RA for information purposes only.
12.	--	--	The FS Addendum refers to various background data sets, but does not cite them appropriately to allow for verification of the information or include the information to allow for a thorough understanding of the implications associated with using these data sets. Please revise the FS Addendum to either include the background data sets referred to or include full citations for where this information is located.	Appendix A of the Draft Final RA was revised to include the background data set for the Phase V investigation.

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>General Comments</i>				
13.	--	--	Section 2 should state which buildings were designated as radioactive materials storage and use areas. Of those buildings the report should state which radioactive materials storage and use areas have been decommissioned according to the requirements of 10CFR20.1401-1406, U.S. NRC <i>Radiological Criteria for License Termination</i> .	By definition, all buildings listed in Section 2 have been associated with the use and/or storage of radioactive materials. Section 2.2.1 discusses the available information on decontamination and surveying of individual buildings at the time radiological operations ceased. It is important to note that the radionuclides addressed in Parcel E were not subject to such regulatory controls (such as those at Title 10 CFR §§ 20.1401 through 20.1406) when they were used by the Navy or when they were released into the environment. The CERCLA response actions for radioactive chemicals must comply with ARARs, as identified in Section 3.2 and discussed in Appendix C.
<i>Specific Comments</i>				
1.	ES-4	ES.2	Executive Summary, Section ES.2, Radionuclides in Groundwater Page ES-4: The text does not consistently present the groundwater results. First, the text states, “The results of the statistical analysis indicates, several ROCs in groundwater at Parcel E exceed both the fixed drinking water criteria and statistically exceeded background data sets.” The text further states, “radionuclide activities in groundwater at Parcel E do not exceed drinking water standards.” Although it was clear that these two statements referred to different sampling events (2001/2001 versus 2007/2008, respectively), the text does not include a comparison of the scope of sampling between the two events nor was a discussion of background comparisons in the 2007/2008 data presented. Please revise the text to clarify these results by providing the missing substantiating information.	Section ES.2 was revised to better summarize the existing groundwater data and clarify how the data support the conclusion that, as stated in Section 2.3.2.3, groundwater does not appear to have been impacted by radionuclides at concentrations that warrant further evaluation in the FS. Additional information on the scope of the sampling events is provided in Section 2.3.2, and the complete radiological data set is provided as Table A-4. Background data were not collected during the 2007/2008 investigation, so a comparison similar to that conducted using the 2001/2002 investigation data could not be conducted.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
2.	1-2	1	Section 1.0, Introduction, Page 1-2: Please revise the second paragraph to reflect that EPA and the Navy jointly select the remedy.	The second paragraph on Page 1-2 was revised to indicate that the final remedy will be jointly selected by the Navy and EPA, with concurrence from DTSC and RWQCB.
3.	1-2	1.1	Section 1.1, Parcel E Study Areas, Page 1-2: To help the reader understand references to IR sites, a brief explanation should be included in this section. Please revise the text to include a brief explanation that historical investigations were done at IR sites.	The large number of IR sites at Parcel E, coupled with the numerous past investigations performed at these sites, does not lend itself to a concise summary of historical operations. Section 1.1 was revised to refer to Tables 2-1, 2-2, and 2-3 of the FS Report, which present detailed information (over the course of 27 pages) on the overall investigation history at Parcel E. As indicated in Section 2.1.1, chemical site investigations were generally conducted by IR site, and radiological investigations were conducted based on the radiological history of each IR site or building (as designated in the HRA [NAVSEA, 2004]). Sections 2.1.2 and 2.2.1 discuss the radiological history and previous investigations, respectively, of the various radiologically impacted IR site or building.
4.	--	2.2.1	Section 2.2.1, Previous Radiological Investigation: The subsections of Section 2.2.1 do not consistently present the results of the surveys or indicate that the results are discussed in Section 2.3. For example, Section 2.2.1.4 does not discuss the results of the Radiological Affairs Service Office (RASO) survey of former Navy Radiological Defense Laboratory (NRDL) Buildings nor are the results of these surveys consistently discussed in Section 2.3. Similarly the results of the Site Reconnaissance (1988-1989) and the Phase III Survey are not discussed. Please review the Section 2.2.1 subsections and either include a discussion of the results of the activity(ies) discussed in each subsection or reference the subsection of Section 2.3 where the results can be found.	As stated in the second paragraph of Section 2.2.1, the associated subsections briefly describe each radiological investigation conducted at Parcel E, with specific radiological data from the investigations presented in Section 2.3 (for individual radiologically impacted sites). The available data for the investigations referenced in the comment are in fact provided in Section 2.3.1; however, the previous radiological investigations did not collect data at each radiologically impacted site at Parcel E. Table 3 summarizes the radiologically impacted sites evaluated during each past investigation. For example, Table 3 identifies that RASO surveys of former NRDL buildings were performed in 1978 at four locations (506 Site, 517 Site, 529 Site, and 707 Kennels), and a brief summary of the survey findings at each location is provided in Section 2.3.1.2. No change was made to the document in response to this comment.

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
5.	2-8	2.1.2.6	Section 2.1.2.6, Building 704 Former Radioactive Storage Yard, Page 2-8: This section states, “The HRA concluded that potential contamination is likely in this area;” however, Table 2, Parcel E Area Assessment and Classification, indicates that the contamination potential for Building 704 Former Radioactive Storage Yard is unlikely. Please revise Section 2.1.2.6 or Table 2 to address this discrepancy.	Table 2 inadvertently switched the specified contamination potential for the Former Radioactive Storage Yard (outside Building 704) with that of the Former Animal Pens (outside Building 704). Consistent with Table 8-2 in the HRA, the contamination potential for the Former Radioactive Storage Yard is likely, and the contamination potential for the Former Animal Pens is unlikely (NAVSEA, 2004). Table 2 was revised to correct this error and be consistent with Table 8-2 from the HRA.
6.	2-12	2.1.2.19	Section 2.1.2.19, Former Salvage Yard, Page 2-12: This section states, “The HRA concluded that contamination is likely in this area;” however, this section also indicates that no previous radiological investigations were performed at the site. Please revise Section 2.1.2.19 to addresses this discrepancy and provide additional information on how the HRA determined contaminated areas throughout Parcel E.	As discussed in Section 2.3.1.1, the HRA evaluated the potential for residual radioactive contamination based on historical information and previous radiological survey results, where available (NAVSEA, 2004). The document was not revised in response to this comment.
7.	2-25	2.2.2.1	Section 2.2.2.1, IR Site 02 Northwest and Central Area (2005 to 2007), Page 2-25: Five grid samples and four random samples had results that exceeded the radiological remedial objectives (RROs), but it is unclear where these samples were located and if further action is necessary. Please provide a figure depicting the location of the samples that exceeded RROs and revise the text to clarify if the anomalies will be removed.	Section 2.2.2.1 was revised to clarify that “ <i>The nine samples with activity levels exceeding the RRO for ²²⁶Ra (ranging from 2.1 to 6.2 pCi/g) were isolated spatially and were collected at the bottom of the excavation at depths greater than 11 feet.</i> ” Figure 4 was revised to include the location of the samples and to note that the samples with activity levels exceeding the RRO were surrounded by 243 other samples with no activity levels exceeding the RRO. As stated in the existing text in Section 2.2.2.1, all post-excavation sample locations are presented on Figure 4-3 from the “Final Removal Action Completion Report [RACR], IR Site 02 Northwest and Central” (TtECI, 2007c). Figure 4-3 from the RACR also presents the results of the nine isolated samples with activity levels that exceeded the RROs.

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
7. (cont.)	2-25	2.2.2.1	(see above)	<p>As discussed in Section 2.2.2.1, the available information demonstrates that the RROs for radiological materials were achieved within the predetermined excavation boundary, as demonstrated by the 26 sidewall samples that exhibited activity levels less than the RROs. The characterization results in and around the excavation at IR Site 02 Northwest and Central will be considered in developing the remedial alternatives. For example, the remedial alternatives evaluated for Parcel E include a complete surface survey of IR Site 02 and an appropriate level of remediation based on the survey results (please see the response to EPA General Comment 1).</p> <p>The grid samples with activity levels that exceeded the RROs were located on the excavation bottom; however, as specified in Section 2.2.2.1, the excavation, which extended to a maximum depth of 11 feet bgs, was backfilled with either clean import soil (from 0 to 3 feet bgs) or excavated soil that, following radiological screening, was released for backfill. As discussed in Section 2.2.2.1, Figure 4-3 in the Removal Action Completion Report (Tetra Tech EC, Inc., 2007) identifies the locations of the grid samples with activity levels that exceeded the RROs. The document was not revised in response to this comment.</p>
8.	2-23	2.2.1.14	<p>Section 2.2.1.14, Phase V Radiological Investigation (2002 to 2003) Page 2-23: This section states, “The data from the Phase V investigations are compiled in Appendix A; however, the locations of the soil samples collected during the Phase V investigation are not available.” It is not clear why the soil sample locations were not provided. Please revise the FS Addendum to show these sample locations or clarify why these locations were not included.</p>	<p>The background information relating to the incomplete documentation of the Phase V investigation is provided in the paragraph below. The Navy believes that documenting this issue within this response to comment is adequate, and that this explanation does not need to be included in Section 2.2.1.14 because this section is intended to provide a concise factual summary of past findings..</p> <p>Prior to completing the Phase V investigation, the Navy’s radiological program at HPS was focused on achieving two critical milestones: (1) finalization of the HRA (which was completed in 2004), and (2) performing radiological removal actions at sites in Parcels E and E-2) that had significant radioactive contamination and sites in Parcels B, D-2, G, UC-1, and UC-2 that were most critical to the cleanup and transfer of real property to the CCSF.</p>

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
8. (cont.)	2-23	2.2.1.14	(see above)	Resources necessary to accomplish these critical milestones were allocated at the expense of timely documentation of the Phase V investigation. As a result of this delay, the documentation of the Phase V investigation is incomplete (most notably figures depicting the locations of sample locations are not available). However, the missing information will not hinder the Navy's ability to complete the necessary surveys and remediation at each radiologically impacted site at Parcel E. The document was not revised in response to this comment.
9.	2-28	2.3.1.2	<p>Section 2.3.1.2, Radionuclides Detected in Soil, Page 2-28: This section indicates that detections of radionuclides in soil at Parcel E will be discussed; however, several sites with apparent detections were not included. For example, Section 2.1.2.8, Building 707B Site, states, "The HRA concluded that potential contamination is unlikely in this area, but recommended an additional characterization survey;" however, no information was provided for the Building 707B Site under Section 2.3.1.2. Further, Table 2, Parcel E Area Assessment and Classification, indicates that the Building 707B Site has contaminated soil.</p> <p>Based on this information, it is not clear whether characterization activities had occurred at the Building 707B Site or how the HRA determined the likelihood of contamination. Other buildings/sites that are not discussed include, but are not limited to, existing or former Buildings 500, 521, 527, 707B, 707C, 708, 807, 810, etc. Please include additional information in the FS Addendum on potential contamination at all impacted sites and buildings in Parcel E.</p>	<p>Please see the response to EPA General Comment 5. Building 707B is not included in Section 2.3.1.2 because no previous radiological investigations have been conducted at the site. A similar situation applies to the other buildings referenced in the comment.</p> <p>In addition, Table 2 is derived directly from the HRA (as noted in the first footnote). The HRA provides detailed information on how the buildings and sites were classified (NAVSEA, 2004). The reader appears to have misinterpreted the information presented in Table 2. For example, surface and subsurface soil at Building 707B is classified as having a low potential for contamination which, as described in the "L" footnote of Table 2, indicates that a remote potential exists for contamination, not that contamination does exist. The document was not revised in response to this comment.</p>

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
10.	2-28	2.3.1.2	Section 2.3.1.2, Radionuclides Detected in Soil, Redevelopment Block 31B/36, Building 406, Page 2-28: This section states, “Areas containing 226Ra exceeding release limits were identified, remediated, and the building was resurveyed.” However, the results of the resurvey were not described. Please revise this section to include a brief discussion of the resurvey results.	As discussed in the response to EPA Specific Comment 8, the documentation of the Phase V investigation is incomplete and no additional information is currently available on Building 406. Prior to the remedial action, the Navy will verify that this information remains unavailable and, if necessary, perform additional surveys at Building 406 to support its radiological closure. The document was not revised in response to this comment.
11.	2-28	2.3.1.2	Section 2.3.1.2, Radionuclides Detected in Soil, Redevelopment Block 31B/36, Building 414, Page 2-28 and Table 2, Parcel E Area Assessment and Classification: This section indicates that several radiological constituents exceed release criteria for soil; however, Table 2, Parcel E Area Assessment and Classification, indicates that no evidence of soil contamination was present. Please revise Section 2.3.1.2 or Table 2 to address this discrepancy.	Please see the response to EPA Specific Comment 9. The document was not revised in response to this comment.
12.	2-29	2.3.1.2	Section 2.3.1.2, Radionuclides Detected in Soil, Redevelopment Block 40, Building 529 Site, Page 2-29: It is unclear if the location of the 18394 count per minute (cpm) anomaly is known and whether it will be addressed during the RA. Please clarify.	Based upon a further review of available information, the gamma anomaly was located near the foundation of Building 520, rather than Building 529. The exact location of the gamma anomaly is depicted on Figure E1-4 of Appendix E of the “Parcel E Remedial Investigation, Draft Final Report” (Tetra Tech EM, Inc., Levine-Fricke-Recon, and Uribe & Associates, 1997). According to the HRA, radium contamination was found near the foundation of Building 520, indicating contamination was likely present in the drain system (NAVSEA, 2004). Any remaining radiological contamination at Building 520 will be addressed under Alternatives R-2 and R-3. The Draft Final RA was revised to clarify the location of the gamma anomaly.

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
13.	2-31	2.3.1.2	Section 2.3.1.2, Radionuclides Detected in Soil, Redevelopment Block 41, Building 507 Site, Page 2-31 and Table 2, Parcel E Area Assessment and Classification: The text indicates that soil contamination was present, but Table 2 does not. Please resolve this discrepancy.	The contamination potential as presented in Table 2 was taken directly from the HRA (NAVSEA, 2004). However, because the Phase V investigation concluded that the Building 507 Site was incorrectly classified and ²²⁶ Ra activity levels exceed the release criterion, the classification in Table 2 for the Building 507 Site was changed to “Known – Continued Access.” In addition, the “Surface Soil” and “Subsurface Soil” columns under “Contaminated Media” were revised from “L” (low) to “M” (moderate).
14.	2-40 and 2-41	2.3.1.3	Section 2.3.1.3, Fate and Transport of Radioactive Chemicals in Soils, Pages 2-40 through 2-41: The FS Addendum lists several radionuclides and associated half-lives/decay radiation, but many of the radionuclides are typically found in association with other isotopes. While it is agreed that Plutonium 239 (Pu239) and Uranium 235 (U235) are likely the most common isotopes by activity, please clarify whether other isotopes associated with weapons-grade materials are anticipated (e.g. Pu240), and whether these, too, should be included in this analyses.	The HRA provides a thorough summary of ROCs at HPS and was prepared by conducting an extensive review of historical information on previous radiological operations and Atomic Energy Commission licenses that authorized specific quantities and uses of radioactive material (NAVSEA, 2004). All radionuclides used at HPS are presented in Table 4-2 of the HRA. The HRA clarifies that the NRDL handled samples of unspent weapons material and fission products from atomic weapons testing; however, this material was subject to strict controls from the Atomic Energy Commission and the Armed Forces Special Weapons Program. In addition, ²³⁹ Pu was used by NRDL in sealed check sources for use in radiography and instrument calibration. Accordingly, no additional radionuclides other than those identified in the HRA are evaluated in the RA. No change was made to the document in response to this comment.
15.	2-42 thru 2-44	2.3.2.1	Section 2.3.2.1, Summary of 2001/2002 Groundwater Investigation, Pages 2-42 through 2-44: The FS Addendum presents a summary statistical evaluation of groundwater data, which indicates that Radium 226 (Ra226) is generally present above background but below drinking water standards, but it is unclear how many individual samples and wells had results that exceeded background. Please revise the text to clarify whether individual groundwater data points exceed background before statistical evaluation.	Background threshold activity levels for radionuclides were not calculated during the 2001/2002 groundwater investigation. Rather, comparison of groundwater data to background were conducted using a two-sample statistical test, where a site data set comprising several wells and sampling events is compared with a background data set using standard parametric and nonparametric two-sample statistical tests. The results of the two-sample test indicated whether or not the radionuclide activity levels in the site data set statistically exceeded those of the background data set. Accordingly, it is not possible to evaluate individual sample locations with results that exceed background threshold activity levels. The document was not revised in response to this comment.

Comment	Page	Section	Comment	Response									
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010													
<i>Specific Comments</i>													
16.	2-44	2.3.2.2	<p>Section 2.3.2.2, Summary of 2007/2008 Groundwater Investigations, Page 2-44: Since the ²²⁶Ra and ²²⁸Ra activities at MWIR02101A2 exceeded the drinking water standard, the Navy should compare the 2007/2008 data to the 2000/2001 data for that area to support the conclusion that groundwater does not appear to have been impacted.</p>	<p>Samples were collected from monitoring well IR02MW101A2 for analysis of radionuclides during the 2001/2002 groundwater investigation only. Samples were not collected from the well as part of the 2007/2008 BGMP sampling event. Further, the 2001/2002 groundwater investigation was completed prior to the HRA and included analysis for some radionuclides that the HRA later determined were not ROCs for HPS. Radium-228 (²²⁸Ra) was one of those radionuclides tested for in 2001/2002 but later determined to not be an ROC for HPS. As described in Section 2.3.2.2, samples collected in 2007/2008 were analyzed for the three primary ROCs at Parcel E (¹³⁷Cs, ²²⁶Ra, and ⁹⁰Sr). Therefore, a comparison between the two sampling events is not possible for well IR02MW101A2.</p> <p>The reported activity levels for ²²⁶Ra and ²²⁸Ra at well IR02MW101A2 are presented in Table A-4 and summarized below.</p> <table border="1"> <thead> <tr> <th align="left">Sample Date</th> <th align="left">²²⁶Ra Activity Level (pCi/L)</th> <th align="left">²²⁸Ra Activity Level (pCi/L)</th> </tr> </thead> <tbody> <tr> <td>8/17/2002</td> <td>4.8</td> <td>8.2</td> </tr> <tr> <td>9/18/2002</td> <td>2.7</td> <td>6.7</td> </tr> </tbody> </table> <p>These results do not change the Navy's conclusions regarding radionuclides in groundwater because:</p> <ul style="list-style-type: none"> The exceedance at well IR02MW101A2 is isolated spatially because it is surrounded by other A-aquifer wells that were tested in 2001/2002 and did not contain ²²⁶Ra and ²²⁸Ra at activity levels exceeding the drinking water standard. As shown on Figure 6, the wells tested in 2001/2002 that surround IR02MW101A2 include IR02MWB-1, IR02MW93A, IR02MW147A, IR02MW149A, and IR02MW298A. 	Sample Date	²²⁶ Ra Activity Level (pCi/L)	²²⁸ Ra Activity Level (pCi/L)	8/17/2002	4.8	8.2	9/18/2002	2.7	6.7
Sample Date	²²⁶ Ra Activity Level (pCi/L)	²²⁸ Ra Activity Level (pCi/L)											
8/17/2002	4.8	8.2											
9/18/2002	2.7	6.7											

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
16. (cont.)	2-44	2.3.2.2	Also, please discuss any removal actions that may have taken place between 2001 and 2007 in the vicinity of MWIR02101A2.	<ul style="list-style-type: none"> The exceedance at well IR02MW101A2 is based on a simple threshold comparison and, consistent with the evaluation methodology presented in Section 2.3.2, the next evaluation step is a one-sample statistical test to determine if mean activity levels exceed the drinking water standard. As described in Section 2.3.2.2, the sum of ²²⁶Ra and ²²⁸Ra activity levels did not statistically exceed the drinking water standard (using a one-sample t-test). Based on the historic information provided in the HRA, neither ²²⁸Ra nor its parent isotope (Thorium-232) are ROCs for Parcel E. Further, ²²⁸Ra is not as persistent in the environment when compared with ²²⁶Ra because of its relatively short half-life (5.76 years for ²²⁸Ra and 1,599 years for ²²⁶Ra). <p>Well IR02MW101A2 is located east of Building 600 in an area that has not undergone any previous radiological cleanup.</p> <p>In addition, ²²⁶Ra from well IR02MW101A1, which was sampled during the BGMP in 2008 and 2009, provides additional information to support the Navy's conclusions. Well IR02MW101A1 is located in approximately the same location as well IR02MW101A2, but is screened in a shallower part of the A-aquifer (well IR02MW101A1 is screened from 7 to 17 feet bgs, whereas well IR02MW101A2 is screened from 27 to 34 feet bgs). ²²⁶Ra activity levels in well IR02MW101A1 during the three sampling events (in 2008 and 2009) were less than the minimum detectable activity (MDA), with a maximum MDA of 0.379 pCi/L.</p> <p>Table A-4 in Appendix A was revised to include radionuclide groundwater data collected during the fourth quarter of 2008 (2 wells were sampled) and the first quarter of 2009 (14 wells were sampled). Data from this sampling event were not available for inclusion in the Draft RA but were included in the Draft Final RA. No additional radionuclide analysis was conducted for monitoring wells in Parcel E through the first quarter 2010, the most recent quarter for which data are available.</p>

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
17.	2-45	2.3.2.3	Section 2.3.2.3, Conclusions from Groundwater Investigations, Page 2-45: The FS Addendum states that current data do not exceed drinking water standards; however, it is unclear whether comparisons with historic data show increasing or decreasing concentrations of radionuclides in groundwater, which is also important when evaluating the potential for future contaminant occurrence. Please provide this analysis.	Please see the response to EPA Specific Comment 16.
18.	2-45 and 2-46	2.3.2.3 and 2.4.2	Section 2.3.2.3, Conclusions from Groundwater Investigations, Page 2-45 and Section 2.4.2, Affected Environmental Media, Page 2-46: These sections reference Table 3, for the evaluation of radioactive contamination potential; however, this information is presented in Table 2. Please reference the correct table.	The text in Sections 2.3.2.3 and 2.4.2 was revised to refer to Table 2.
19.	2-46	2.4.3	Section 2.4.3, Potentially Exposed Receptors, Page 2-46: This section indicates that Table 1 (Parcel E Impacted Sites, Radionuclides of Concern Historical Uses, and Planned Reuse) “shows the impacted areas of Parcel E, the planned reuse, and associated exposure scenario” for each impacted area, but some impacted areas are not included in the HHRA. Table 1 lists 38 impacted areas; however, the HHRA addresses only 17 of these areas. According to Appendix B, Parcel E Risk Screening Analysis, Section B3.3. Potentially Exposed Receptors, risks were only characterized for areas for which radionuclide data are available. For clarity, please revise the FS Addendum to state earlier in the document that only 17 of the 38 impacted areas were quantitatively evaluated in the HHRA; and Section 2.4.3 should provide the rationale for conducting risk characterization on 17 of the 38 impacted areas.	Section 2.5 provides a better location for clarifying the scope of the risk evaluation. Section 2.5 was revised to clarify that (1) as summarized in Table 3, not every radiologically impacted site at Parcel E has been previously investigated; (2) based on the historic information, not every radiologically impacted site requires collection of soil samples (that are included in the risk evaluation); and (3) in the absence of site-specific data, the findings and recommendations from the HRA (NAVSEA, 2004) are used to guide the remedial option analysis.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
20.	2-48	2.5	Section 2.5, Risk Assessment, Page 2-48: Throughout most of the report, Version 6.5 of the Residual Radioactive (RESRAD) Model, issued by Argonne National Laboratory (ANL) in 2009, is cited as the computer code used to model radiological risk at impacted sites in Parcel E. However, Section 2.5 states that RESRAD Model Version 6.4 (ANL 2007) was used to perform the dose and risk modeling. Please ensure that the latest version of the RESRAD Model was used to conduct the screening-level radiological HHRA and correct this typographical error.	RESRAD Model Version 6.5 is the correct model used in the radiological HHRA. The Draft Final RA was revised to use the correct 2009 citation and the reference title.
21.	2-51	2.5.4	Section 2.5.4, Uncertainty Analysis for Critical Assumptions, Page 2-51: This section refers to the EPA increased-lifetime cancer risk of 1E-06 and the U.S. Nuclear Regulatory Commission (NRC) dose limit of 25 millirems per year (mrem/year) as the regulatory targets for the HHRA. However, discussions of HHRA results in the FS Addendum text only address cancer risk. Also, the EPA CERCLA dose limit in OSWER Directive 9200.4-18 of 15 mrem/yr should also be considered and discussed, since this directive indicates that 25 mrem/yr corresponds to approximately a 5E-04 increased lifetime cancer risk. Please also include discussions of sites that exceeded the NRC dose limit and the OSWER Directive 9200.4-18 15 mrem/yr dose limit.	The text in Section 2.5.4 was revised to further discuss the standard of 15 mrem/year.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
22.	3-2 and 3-3	3.1.4	Section 3.1.4 Remedial Action Objectives for Soil, Sediment, and Structures, Pages 3-2 and 3-3: The text in this section states that the industrial RGs will be used for the recreational exposure scenario at Parcel E, but footnote a of Table 7 states that the residential scenario will be used for the recreational exposure scenario at Parcel E. Please resolve this discrepancy.	Section 3.1.4 was revised to indicate that the residential RGs will be used for the recreational exposure scenario.
23.	3-12	3.3.1.3	Section 3.3.1.3, Removal by Excavation, Page 3-12: This section indicates that removal by excavation is an effective process option for soil, but does not discuss whether it is effective for sediments. Please revise this section to include a discussion of technologies and process options for sediment removal or clarify if the sediments will have limited moisture and therefore will resemble soils.	Section 3.3.1.3 was revised to clarify that removal by excavation is an effective process option for sediment, but one that requires additional dewatering effort, similar to that required for saturated soil excavated from below the groundwater table prior to radiological screening and sampling.
24.	3-12	3.3.1.3	Section 3.3.1.3, Removal by Excavation, Page 3-12: In Section 3.3.1.3, Removal by Excavation, removal and disposal of soil to Remedial Action Objectives (RAOs) at IR Site 02 and IR Site 03 is excluded as an option due to practicality, effectiveness, implementability and costs; however, adequate justification for this screening was not provided. For example, this section indicates that there are “high costs,” but does not provide an estimate. Please revise the FS Addendum to include a more detailed discussion of criteria for excluding removal of all impacted soils at IR Site 02 and IR Site 03, including an estimate of the associated costs.	To better support the streamlining of the remedial alternatives, consistent with the streamlining approach outlined in the NCP (pp. 8704-8705 of NCP Preamble), the Navy revised Section 3.3.1.3 to more thoroughly evaluate (relative to effectiveness, implementability, and cost) the process option involving excavation and off-site disposal of all soil with radionuclide concentrations exceeding risk-based cleanup goals. However, it should be noted that, in accordance with EPA RI/FS guidance (EPA, 1988), this screening-level evaluation does not need to include a detailed cost estimate. Regarding hotspot excavation at IR Sites 02 and 03, please see the response to EPA General Comment 1.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
24. (cont.)	3-12	3.3.1.3	Further, it is unclear why this section does not consider hot spot excavation for IR-02 and IR-03. While the volume involved makes complete removal expensive and difficult to implement, hot spot excavation would be cost-effective and relatively easy to implement. Please revise the FS Addendum to include hot spot excavation at IR-02 and IR-03 as a process option.	(see above)
25.	3-13	3.3.1.3	Section 3.3.1.3, Removal by Excavation, Page 3-13: The first full paragraph begins with the statement, "Excavation is possible but may be difficult to implement," but excavation with radiological screening, characterization, and confirmation sampling has been done in many areas of HPS, so this should be considered readily implementable. Also, the fourth bullet and following text indicate that control of potential releases of chemicals from waste and soil during transport and the resulting traffic makes excavation difficult to implement, but large volumes of soil already have been excavated and transported off site. Further, the text does not appear to consider the potential for transport of soils by rail or barge. Therefore, the text should not use these issues to conclude that excavation would be difficult to implement. Please delete the quoted sentence and issues/bullet points discussed in this comment or provide additional justification to explain why excavation would be difficult to implement.	Please see the response to EPA Specific Comment 24.

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
26.	4-7	4.2	<p>Section 4.2. Remedial Alternatives for Radionuclides, Soil and Sediment, Page 4-7: The remedial strategy for radioactively impacted soil and sediment involves removal of the upper one foot of soil at concentrations exceeding RGs; radioactively contaminated soil at depth will be removed if collocated with non-radiological contamination that requires removal. However, it is also possible that radiological contamination may occur at depths beyond the upper one foot of soil without collocated non-radiological contamination. It is unclear if these hot spots will be addressed by excavation; for example, the anomalies identified outside the IR-02 radium dial disposal area should be removed even if they are buried at a depth greater than one foot.</p> <p>Also, surface scans after removal of anomalous soil to a depth of 1 foot may indicate that there is a radiological device; such devices should be removed if identified. Please clarify whether soil and radiological devices, regardless of depth, will be removed if data indicate radiological contamination occurs beyond the upper 1 foot of soil at IR Site 02 and IR Site 03.</p>	Please see the response to EPA General Comment 1.
27.	4-9	4.2.2.1	<p>Section 4.2.2.1, Scoping or Characterization Surveys, Page 4-9: This section states, “The only exception to this assumption are building sites (Building 406, 414, 701 and 708) where scoping surveys and remediation were previously completed; at these site[s], only a final status survey is required.”</p>	The text in Section 4.2.2.1 refers to scoping and characterization surveys, and not associated decontamination. Since scoping surveys and remediation have been completed at Buildings 406, 414, 701, and 708, these buildings are not included in Tables D-8 and D-9, which outline the costs associated with scoping and characterization surveys. However, as discussed in Sections 4.2.2.3 and 4.2.2.4, it is assumed that limited decontamination would be required at these buildings.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
27. <i>(cont.)</i>	4-9	4.2.2.1	<p>However, Table 9, Components of Alternatives R-2 and R-3, indicates that these buildings include one or more of these elements (scoping survey, structure decontamination, and removal) in addition to the final survey.</p> <p>Further, Appendix D, Remedial Alternative Cost Summary, Table D-11, Alternatives R-2 and R-3 – Radiological Remediation at Building Sites Cost Detail, includes remediation costs for Buildings 406, 414 and 708. Please revise this section to address these discrepancies.</p>	The costs associated with spot remediation at these buildings (assumed to be 10 percent of the area) are presented in Table D-11. The text was not revised in response to this comment.
28.	4-9	4.2.2.2	<p>Section 4.2.2.2, Soil, Sediment, and Debris Removal, Page 4-9: This section states, “At all other sites than IR Site 02 and IR Site 03, excavations would extend as deep as necessary to remove soil containing ROCs at activities exceeding RGs.” However, given the lack of subsurface soil data, it was not clear how a soil removal quantity was determined for costing. In addition, the extent of sediment removal was not discussed. Please revise the FS Addendum to clearly explain how removal volumes were calculated for soils and sediment for costing purposes.</p>	The cost assumptions made for soil removal under Alternatives R-2 and R-3 are detailed in Tables D-11 (for building sites) and D-12 (for nonbuilding sites). The assumptions were made using past experience in performing radiological remediation at HPS and are considered adequate to support a complete cost estimate that meets the accuracy prescribed in EPA guidance (+50/-30 percent) (EPA, 2000).

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
29.	4-9	4.2.2.3	Section 4.2.2.3, Structure Decontamination and Release, Page 4-9: This section states, “Building materials containing elevated radioactivity exceeding the RGs for surfaces (Table 7), as identified during scoping or characterization surveys, would be removed by either scabbling or partial demolition;” however, it was not clear how the quantities of scabbling or partial demolition that were used for costing purposes were determined. Similarly, this section discusses assumptions that certain buildings would be decontaminated and released, but it is not clear what criteria were used to classify each building addressed for either demolition or release. Please revise the FS Addendum to provide more details on how these volumes were determined and how the structures were categorized.	Section 4.2.2.3 was revised to indicate that (1) the Navy assumed that it would be more cost effective to perform partial demolition and decontamination at most large complex structures, (2) the Navy assumed that it would be more cost-effective to completely demolish relatively small buildings, and (3) the Navy assumed that the large offshore piers at Parcel E would be completely demolished based on their deteriorating condition. The cost assumptions made for remediation of existing buildings are detailed in Table D-11. These assumptions were made using past experience in performing radiological remediation at HPS and are considered adequate to support a complete cost estimate that meets the accuracy prescribed in EPA guidance (+50/-30 percent) (EPA, 2000).
30.	4-10	4.2.2.6	Section 4.2.2.6, Soil Cover, Shoreline Protection, and Institutional Controls (IR Site 02 and IR Site 03 only), Page 4-10: The text discusses identifying and removing ROCs within the upper one foot of soil but does not state whether the surface will be surveyed after this upper foot of soil is removed. A surface scan, as well as the prescribed sampling for characterization should be done. If radiological anomalies such as radiological devices are identified during this scan, they should be removed. Please revise the FS Addendum to incorporate this approach.	The costs associated with radiological surveys conducted at IR Sites 02 and 03 are detailed in Tables D-9 and D-10 of Appendix D. It is assumed that 100 percent of the area at IR Sites 02 and 03 will require a characterization survey, and that 100 percent of the area will require a final status survey. Regarding the removal of radiological anomalies encountered during the final status survey, please see the response to EPA General Comment 1.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
31.	4-10	4.2.2.6	Section 4.2.2.6, Soil Cover, Shoreline Protection, and Institutional Controls (IR Site 02 and IR Site 03 only), Page 4-10: The section states, “The specific type of shoreline protection (such as a rock revetment wall or other more natural options) is being evaluated as part of the FS Report;” however, it is not clear if these costs were included in the FS Report or this FS Addendum. Please revise this section to include a description of cost implications of the shoreline protection.	The costs associated with the specific type of shoreline protection are being addressed under the Parcel E FS and not the RA to the FS. Costs associated with various types of shoreline protection are independent of the costs associated with the remedial alternatives for radionuclides; therefore, it is not necessary to discuss or include these costs in the RA.
32.	5-5	5.2.2.5	Section 5.2.2.5, Short-Term Effectiveness, Page 5-5 and Appendix D, Remedial Alternative Cost Summary: This section states, “the risk of contaminant release into San Francisco Bay during construction in the adjacent areas would be alleviated through engineering controls (such as silt curtains and stormwater best management practices);” however, costs were not included in Appendix D, Remedial Alternative Cost Summary, for these controls. Please revise Appendix D to include these costs or provide an explanation for not including these costs.	The costs associated with the engineering controls needed to construct the cover adjacent to and within the shoreline are included in the soil alternatives evaluated in the Parcel E FS Report and are independent of the costs associated with the remedial alternatives for radionuclides; therefore, it is not necessary to discuss or include these costs in the RA.
33.	5-8	5.3	Section 5.3, Comparative Evaluation of Radiological Remedial Alternatives, Page 5-8: The FS Addendum indicates that Remedial Alternative R-2 is more highly rated than R-3 due to implementability and cost considerations, but the FS Addendum does not include information pertaining to any added benefits of additional cover thickness as offered by Alternative R-3. Please provide this information.	As discussed in Section 5.3.3, the additional cover thickness proposed under Alternative 3 provides additional shielding from radionuclides, resulting in an incremental cancer risk of 5E-10 for the future recreational receptor, as opposed to 2E-08 under Alternative 2. Because both estimated cancer risks are less than 1E-06, both are considered to be adequately protective of human health and the environment and both provide a comparable level of long-term effectiveness.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
33. (cont.)	5-8	5.3	(see above)	In addition, Section 5.3.8 states that “Relative to Alternative R-2, Alternative R-3 is more difficult and slightly more expensive to implement, and these relative disadvantages are not offset by a corresponding improvement in long-term effectiveness. As a result, Alternative R-2 was rated very good overall, while Alternative R-3 was rated good overall.” The text was not revised in response to this comment.
34.	5-10	5.3.7	Section 5.3.7, Cost, Page 5-10: This section states, “As detailed in Tables D-15 and D-16 in Appendix D, the cost to install an additional 1 foot of soil cover at IR Site 02 and IR Site 03, which is included in Alternative R-2 and R-3, is estimated at about \$950,000. This cost difference does not match the difference between Alternatives R-2 and R-3 because a portion of the soil cover costs...was already included in...the FS Report.” It is not clear why Appendix D, Remedial Alternative Cost Summary, does not include a clear breakdown of costs incurred as part of this FS Addendum and the FS Report, for all aspects of the cost estimate. Please revise the FS Addendum and Appendix D, to include a clear breakdown of costs associated with both the FS Report and this FS Addendum. In addition, Table 10 indicates that the difference in costs between alternatives R-2 and R-3 is about \$600,000, not \$950,000. Please resolve the cost discrepancy between Table 10 and the description in the text of Section 5.3.7.	As stated in the response to EPA General Comment 10, the Draft Final RA and FS Report were revised to evaluate the proposed soil cover at IR Sites 02 and 03 only as part of the radiological-specific remedial alternatives. As a result, the Draft Final RA will clearly identify the cost difference between the 2- and 3-foot-thick soil covers.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
35.	--	--	Figure 2, Reuse Areas, Redevelopment Blocks, and IR Sites at Parcel E: The difference between an impacted site and an “impacted site with designation” is unclear. Please revise the legend to clarify the distinction between these two types of impacted sites.	As presented in the HRA, an “Impacted Site with Designation” refers to an entire geographic unit that has been radiologically impacted, such as an IR Site (NAVSEA, 2004). At Parcel E, the entirety of IR Sites 02, 03, and 04 are considered radiologically impacted. An “Impacted Site or Building” refers to an individual site or building that has been radiologically impacted. Figure 3 (rather than Figure 2 as referenced in the comment) was revised in response to this comment.
36.	--	--	Table 2, Parcel E Area Assessment and Classification: Table 2 is missing the Building 503 Site. Also, it has an extra line (mostly blank) at the bottom of the table for Pier 2 and Berths. Further, it appears to be missing Pier 3 and Building 527. Finally, the table does not explain the criteria for assigning low, moderate, and high likelihood for contaminant occurrence or contaminant migration. Please revise this table to include all of the impacted buildings and sites and delete the extraneous line. Also, please clarify the criteria for assigning low, moderate, and high likelihood for contaminant occurrence or contaminant migration.	Table 2 was revised to include the assessment and classification information for Building 503, which was formerly located at Parcel D, as well as Pier 3. The information for Building 527 and Pier 2 and Berths are presented in Table 2; however, an extra line was erroneously included at the bottom of the table. Table 2 was revised to correct the errors. The classification criteria presented in Table 2 correspond to the potential for radioactive contamination, as presented in the HRA. Please refer to the HRA for additional detail on how the criteria were determined (NAVSEA, 2004).
37.	--	--	Table 4, Fate and Transport Properties of Radionuclides of Concern: The basis for the distinctions in this table is unclear. Please provide the criteria for the low, moderate and high transport characteristics, particularly with respect to solubility or other parameters that can be quantified. Please clarify whether the low, moderate, and high migration potentials are based on comparison to the other radionuclides on the table, or whether this analysis is posed with respect to other non-radioactive [<i>sic</i>] chemicals, compounds, or contaminants.	The fate and transport properties summarized in Table 4, although specific to radionuclides, are qualitative in nature and intended only to support a preliminary fate and transport evaluation (which, based on the existing characterization data, is considered adequate for Parcel E).

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
38.	--	--	Table 8, Identification and Screening of Technology Types and Process Options, Page 3 of 4: The effectiveness entries for Excavation and Manual Screening state, “Fugitive dust and gas generated during excavation and processing may pose health and safety risks to workers and the local community,” but dust suppression techniques have been used for other excavations at HPS and are readily implementable. Also, it is unclear what gas might be generated. Please revise these entries to state that dust suppression will be necessary and clarify what gas is expected to be generated during excavation.	Table 8 was revised accordingly.
39.	5-6 and 5-8	5.2.2.7 and 5.2.3.7	Table 10, Comparative Analysis of Alternatives Summary; Section 5.2.2.7, Cost, Page 5-6; and Section 5.2.3.7, Cost, Page 5-8: The present value cost rating for Alternative R-2 is very good and the rating for Alternative R-3 is good, but the difference in costs is only 0.6 million, which about 1 percent of the total costs. This does not appear to be sufficient to justify different ratings. Please revise the present value cost ratings in Table 10 and the text to be the same or provide justification for the difference.	Please refer to the responses to EPA Specific Comments 33 and 34. The text was not revised in response to this comment.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Sarah Kloss, Project Manager, dated June 9, 2010				
<i>Specific Comments</i>				
40.	--	--	<p>Appendix B, Parcel E Risk Screening Analysis, Section B2.1.4, Exposure Duration, Page B-5: This section states that RESRAD modeling for the screening-level radiological HHRA used the exposure duration “values of 25, 6, and 24 years based on receptor type and age,” consistent with the Revised Final Parcel E Remedial Investigation (RI) Report. However, it does not specify which receptors are associated with these exposure duration values. For clarity, please revise Section B2.1.4 to identify the receptors that are associated with these exposure duration values – for example, 25 years for the industrial worker, 24 years for the adult resident and adult recreational user, and 6 years for the child resident and child recreational user.</p>	The text in Section B2.1.4 was revised to indicate the receptors associated with the various exposure duration values.
41.	--	--	<p>Appendix B, Parcel E Risk Screening Analysis, Section B5.1, Exposure Points and Exposure Point Concentrations, Page B-11: Based on a review of Table B-4, Radionuclide Soil Data Summary, it appears that the EPC for evaluating incremental risk represents the maximum activity in each study area, excluding background conditions; and the total risk EPC represents the maximum activity, including background conditions. Please clarify in the text the approach used to calculate EPCs for consistency between the text and supporting tables.</p> <p>As part of this clarification, discuss how the calculation of incremental risk and the total risk EPCs differ (in terms of background data).</p>	The approach used to select the EPCs is explained in Section B5.2. As indicated in Section B5.2, the maximum reported activity within each site was used to estimate total radiological risk, and the mean background activity levels were subtracted from the maximum reported activity to estimate incremental radiological risk. This approach is relatively conservative, but is considered appropriate given the relatively small number of samples collected at each radiologically impacted site. The text was not revised in response to this comment.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Additional comments provided by Mark Ripperda, Project Manager, dated June 13, 2011				
<i>Additional Comments (provided following review of the draft responses to comments submitted by the Navy in May 2011)</i>				
42.	--	--	RTC #1 – We disagree with the Navy’s response concerning the approach if rad contaminants are found in the top foot during surface scans. The Navy is over-applying the concept of streamlining the FS. The FS must include an alternative for treating rad contamination similar to chemical contaminants at Parcel E, i.e., chasing contamination above a specified trigger level more than one-foot below the surface.	<p>While the response to general comment 1 makes note of the streamlining approach in the NCP, the response acknowledges that the radiological removal at IR Sites 02 and 03 may be extended deeper, if necessary, to ensure that the radiological dose at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) will be consistent with background activity levels. The Navy believes that this approach will adequately protect human health and the environment.</p> <p>Further, the exposure mechanisms for radionuclides (i.e., external radiation exposure mechanism in addition to the traditional dermal exposure and inhalation mechanisms) are different than nonradioactive chemicals, with resulting radiological doses varying based on the specific radionuclides (including combinations of multiple radionuclides), their activity levels, and depths. This important difference precludes development of quantitative “trigger levels” for radionuclides that could be used to verify that the radiological dose at the final ground surface meets acceptable levels. Rather, the residual activity levels of individual radionuclides of concern (and their depth below the final ground surface) would be used in radiological dose modeling to verify the adequacy of the remediation.</p> <p>In summary, the Navy does not believe that information is available to require development of another remedial alternative that would extend the excavation depth at IR Sites 02 and 03, beyond what is already described above.</p>
43.	--	2.2.2.1	RTC 7, Section 2.2.2.1 – The response did not address the comment. Where were the 5 grid samples and 4 random samples collected that exceeded the RROs? Just because they may have been outside of a “predetermined boundary” for the removal action does not obviate the potential need to address them. What was their depth, location, and activity level or concentration?	The response to comment 7 was revised to answer the questions posed and concerns raised by EPA.

Table 1. Responses to Comments from the U.S. Environmental Protection Agency on the Draft Radiological Addendum to the Feasibility Study Report for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Additional comments provided by Mark Ripperda, Project Manager, dated June 13, 2011				
<i>Additional Comments (provided following review of the draft responses to comments submitted by the Navy in May 2011)</i>				
43. (cont.)	--	2.2.2.1	Please do not make pre-decisional statements like “the Navy has no plans for further excavation” in an FS or RTCs. Finally, this FS is the only document which pulls all the various rad components together, so it should include the requested data.	<i>(see above)</i>
44.	--	2.3.2.3	RTC 16, Section 2.3.2.3 – The response still doesn’t address whether there is Ra-228 contamination in the deeper portion of the A aquifer (well IR02101A2). It was there in 2002 and no sampling has been done since then. Please provide a better discussion of why only having shallower data in 2008/2009 is an adequate characterization, or include re-sampling of IR02101A2 as a data gap.	The response to comment 16 was revised to answer the questions posed and concerns raised by EPA.
45.	--	5.3	RTC 33, Section 5.3 – The answer only addresses the added protectiveness due to increased rad shielding from a thicker cover. However, a thicker cover also provides extra protection because of increased erosion and digging or other cover penetration mechanism safety margins. Please change the rating on the 3-foot cover to match the 2-foot cover. The trade-off of extra cost does result in better long-term effectiveness.	Both the 2-foot-thick and 3-foot-thick soil covers would be subject to numerous regulatory requirements to ensure proper erosion control and prevent exposure of contaminated material from under the cover (from erosion, digging, etc.). In addition, institutional controls would restrict any land-disturbing activities in covered areas and would effectively prevent exposure to contaminated material. The regulatory requirements, which are described in the FS Report for Parcel E, and institutional controls would maintain the design thickness of the soil cover. Therefore, there is no technical basis for changing the long-term effectiveness rating for Alternative R-3.

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Ryan Miya, Senior Hazardous Substances Scientist, dated June 9, 2010				
1.	--	ES.5	Executive Summary, Subsection ES.5 – Detailed and Comparative Analyses of Remedial Alternatives. Paragraph two. The RESRAD modeling using the residential remedial goals as surrogate concentrations should present incremental cancer risks for future residential receptors (most conservative) instead of a future recreational receptor. The same comment applies to Section 2.5.1 as described below.	Section ES.5 and Sections 2.5.1, 2.5.2, 5.2, and 5.3 were revised to specify post-remediation risk estimates for both residential and recreational exposure scenarios at IR ² Sites 02 and 03, where a soil cover and institutional controls are proposed. The text in Section ES.5 (as well as Sections 5.2 and 5.3) is intended to demonstrate the protectiveness of Alternatives R-2 and R-3 under the anticipated reuse at IR Sites 02 and 03. The Draft RA only specified post-remediation risk estimates for a recreational exposure scenario because the anticipated reuse at IR Sites 02 and 03 is open space. However, the residential exposure scenario was evaluated elsewhere in the document to present an upper-bound estimate of dose and risk. For consistency, the post-remediation risk estimates were revised to also evaluate the residential exposure scenario.
2.	--	2.1.2.23 and 2.1.2.24	Sections 2.1.2.23 and 2.1.2.24. Please verify if the Parcel E storm drain and septic sewer lines are going to be removed as a component of and in accordance with the 2008 Base-wide Storm Drain and Sanitary Sewer Removal Final Project Work Plan, Revision 3.	Sections 2.1.2.23 and 2.1.2.24 were revised to indicate that the storm drain and sewer lines at Parcel E are currently being removed under a basewide removal action and in accordance with the 2010 “Base-Wide Storm Drain and Sanitary Sewer Removal Final Project Work Plan, Revision 4.” Sections 4 and 5 were revised to clarify that (1) the ongoing storm drain and sewer line removal, as well as other radiological removal action work at Parcel E building sites, is being implemented in phases and may not be completed by the time the Parcel E ROD is issued, and (2) the radiological remedial alternatives include all necessary remediation to support closure and ensure that removal action work can be continued, if necessary, as part of the remedial action.
3.	--	2.2.1.4	Section 2.2.1.4 – RASO Survey of Former NRDL Buildings (1978). Please specify that Building 815 exists in the already-transferred Parcel A (not within the boundaries of Parcel E).	The text in Section 2.2.1.4 was revised to indicate that Building 815 is located on a formerly utilized defense site, which was transferred to a private owner in 1984 (NAVSEA, 2004). Similar text revisions were also made in Sections 2.1.2.3 and 2.2.1.1.

² Abbreviations and acronyms used throughout this table are identified on page 49.

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Ryan Miya, Senior Hazardous Substances Scientist, dated June 9, 2010 (continued)				
4.	2-28	2.3.1.2	Section 2.3.1.2 – Radionuclides Detected in Soil. Page 2-28, Building 406 subsection. Please clarify why this building information is presented as a component of the soil subsection. It appears to be an existing building with only surface scan data. Area data from soil samples available for this location for comparison with the release criteria that can be added?	Section 2.3.1.2 is intended to provide available data on the nature and extent of radionuclides in soil and associated structures. At some sites, such as Building 406, no soil data were collected. At other sites, such as Building 707, surface scan data and soil data are available; all available data are presented in Section 2.3.1.2.
5.	--	2.5.1	Section 2.5.1 – Potential Receptors and Exposure Pathways. The text states that the residential scenario is provided for information purposes only. However, given that planned reuses are potentially subject to change over time, the residential (most conservative) RESRAD incremental and total risk estimates from exposure to Radionuclides of Concern (ROCs) should therefore be carried forward, independent of currently planned reuses at Parcel E. The same comment also applies to Sections 2.5.2, 5.2.2.3, 5.2.3.3, and Table 6.	Section 2.5.1 was revised to delete the phrase “for information purposes only.” As discussed in the response to DTSC Specific Comment 1 and Section 2.5.1 of the RA, the residential exposure scenario was evaluated to present an upper-bound estimate of dose and risk. In addition, the text in Sections 2.5.2, 5.2.2.3, and 5.2.3.3 was revised to include the RESRAD incremental and total risk estimates for residential reuse. Table 6 was also revised to include the RESRAD residential risk estimates. The Navy wishes to clarify that the remedial option analysis focuses on the reasonably anticipated reuse of Parcel E but considers residential risk estimates where appropriate. Please see the response to DTSC Specific Comment 6 for further information.
6.	--	3.1.4	Section 3.1.4 – Remedial Action Objectives for Soil, Sediment, and Structures. The remedial goals (RGs) for radionuclides should be established using the most conservative residential exposure scenario. The radionuclide RGs for the industrial scenario should also be removed from Table 7 for consistency with historic Record of Decision documents.	The appropriate portions of Sections 3, 4, and 5 were revised to clarify the following regarding the application of RGs for radionuclides: <ul style="list-style-type: none"> ▪ Residential RGs will apply in all areas that the Navy does not propose to transfer with institutional controls for radionuclides (specifically, all Parcel E areas except IR Sites 02 and 03). ▪ Although the residential exposure scenario does not apply to IR Sites 02 and 03, residential RGs will be used at IR Sites 02 and 03 to enhance the protectiveness of the remedial action for Parcel E.

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Ryan Miya, Senior Hazardous Substances Scientist, dated June 9, 2010 (continued)				
7.	--	3.3.1.3	Section 3.3.1.3 – Removal by Excavation. Please consider adding text regarding estimates of potential carbon footprint impact(s) related to offsite excavation and onsite clean fill importation for this potential remediation option.	To better support streamlining of the remedial alternatives, consistent with the streamlining approach outlined in the NCP (pp. 8704-8705 of NCP Preamble), the Navy revised Section 3.3.1.3 to more thoroughly evaluate (relative to effectiveness, implementability, and cost) the process option involving excavation and off-site disposal of all soil with radionuclide concentrations exceeding risk-based cleanup goals. The revised evaluation relative to effectiveness includes a qualitative evaluation of greenhouse gas emissions associated with this option.
8.	--	4.1.2.3	Section 4.1.2.3 – Alternative GW-3. (a) Please briefly describe how groundwater containment will be achieved (with subsurface barriers in place or extraction and containment onsite?). (b) Last sentence. Please clarify that institutional controls would remain in effect as long as contaminant concentrations exceed unrestricted residential remedial goals.	Groundwater containment as proposed in Alternative GW-3, as well as Alternatives GW-4A and 4B, will consist of a low-permeability barrier, such as a sheet-pile wall or a slurry wall to redirect the flow of groundwater. The proposed groundwater containment system is discussed in detail in Section 4.3.3.1 of the FS Report for Parcel E, and is not discussed in detail in the RA. However, the text in Section 4.1.2.3 of the RA has been revised to clarify that groundwater containment proposed under Alternatives GW-3, GW-4A, and GW-4B will consist of barriers rather than extraction and containment. In addition, Section 4.1.2.3 was revised to clarify that institutional controls will remain in place for as long as chemical concentrations in groundwater exceed residential RGs or soil vapor concentrations are found to pose an unacceptable risk through vapor intrusion. Additional information on the institutional controls proposed under Alternatives GW-2, GW-3, GW-4A, and GW-4B is provided in Section 4.3.2 of the FS Report for Parcel E.
9.	--	4.2	Section 4.2 – Remedial Alternatives for Radionuclides. Soil and Sediment subsection. Please provide a brief technical basis for selecting the <u>upper 1 foot</u> of the ground surface for excavation of ROCs exceeding remedial goals at IR Sites 02 and 03.	As discussed in the response to EPA General Comment 1, the Draft Final RA was revised to clarify that Alternatives R-2 and R-3 include the following actions at IR Sites 02 and 03: <ul style="list-style-type: none">▪ A radiological characterization surface scan will initially be conducted over 100 percent of the area at IR Sites 02 and 03 to identify areas with elevated activity.

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Ryan Miya, Senior Hazardous Substances Scientist, dated June 9, 2010 (continued)				
9. (cont.)	--	4.2	(see above)	<ul style="list-style-type: none"> ▪ Following the surface scan, soil containing ROCs at activity levels exceeding the RGs would be removed, with the excavation generally limited to 1 foot bgs. ▪ The radiological removal may be extended deeper, if necessary, to ensure that the radiological dose at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) will be consistent with background activity levels. The dose levels at the surface will not exceed 15 mrem/yr based upon residential reuse; this dose level is generally considered protective of human health and is applied to response actions under CERCLA (EPA, 1997). ▪ Following the radiological removal described above, all excavations would be backfilled to the existing ground surface with soil that meets appropriate acceptance criteria for radioactive and nonradioactive chemicals. Subsequently, a soil cap (2-foot-thick for Alternative R-2 and 3-foot-thick for Alternative R-3) would be installed at and above original grade at IR Sites 02 and 03. ▪ The soil cover would be underlain by a demarcation layer, consisting of a permeable geosynthetic material and magnetic marking tape, to ensure proper identification of the bottom of the soil cap. <p>The proposed soil cap and demarcation layer would effectively reduce the dose and residual risk associated with ROCs at the RGs, at and below the original surface, to the levels prescribed in the RAO.</p>
10.	--	4.2.2	Section 4.2.2 – Alternative R-2. Please specify if “release” in this context for structures is meant to be radiological free release with approval from CDPH-EMB. The same comment applies to Sections 4.2.2.3, 5.2.2, and 5.2.3.	Use of the term “release” in the titles of both Alternatives R-2 and R-3 was intended to refer to the radiological remediation and unrestricted release of a site where no institutional controls for radionuclides are proposed. To minimize confusion, the title of both Alternatives R-2 and R-3 were revised to remove reference to the term “release” because that administrative step is not part of the active remediation being evaluated in the Radiological Addendum.

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by Ryan Miya, Senior Hazardous Substances Scientist, dated June 9, 2010 (continued)				
11.	--	5.2.2	Section 5.2.2 – Alternative R-2, second item. Please verify that the statement made in item (2) may not be applicable to IR Sites 02 and 03. The same comment applies to Section 5.2.3.	The text in Sections 5.2.2 and 5.2.3 was revised to indicate that excavation and off-site disposal of soil, sediment, and debris with concentrations exceeding the RGs will not apply to all depth ranges at IR Sites 02 and 03.
12.	--	--	Editorial comments. (a) Figure 3. Buildings 505, 606, and 515 appear to be presented as non-impacted buildings within an impacted site. Therefore, the same figure tag that has been applied to Building 600 should also be applied to Buildings 505, 606, and 515. (b) Section 4.2.2.1 – Scoping or Characterization Surveys. Last sentence. The text should state “these sites”.	a. The legend on Figure 3 has been revised to indicate that Buildings 505, 606, and 515 are nonimpacted buildings located within an impacted area, similar to Building 600. b. The text in Section 4.2.2.1 has been revised to correct the error.
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
1.	--	--	CDPH-EMB has determined that the Navy wishes to proceed with restricted use for Parcel E due to partially excavated or cap IR Sites 2 and 3. CDPH-EMB noted in on page ES-4, Section “ES-1 Radionuclides in Soil” states that “Although the extent of radioactive contamination in subsurface soil has not been defined, this radiological addendum conservatively assumes, consistent with the findings of the HRA, that the potential radioactive chemicals may be present in subsurface soil at subsurface soil at Parcel E and therefore require analysis of remedial alternatives”. CDPH-EMB recommends complete removal of all radium discrete sources and contamination to allow unrestricted use of the property. CDPH-EMB does not have authority to issue a license or license exemption for any or all of Parcel E based on the Navy’s request for restricted release. CDPH-EMB further understands that the Navy will request that the property be released with institutional controls.	Consistent with the NCP and EPA RI/FS guidance (EPA, 1988), the Navy developed remedial alternatives by combining various process options that were retained following a screening-level analysis based on effectiveness, implementability, and cost. The Navy believes that the streamlined set of remedial alternatives presented in the Draft RA, consistent with the streamlining approach outlined in the NCP (pp. 8704-8705 of NCP Preamble), is the most appropriate path forward for addressing radionuclides at Parcel E. The approach proposed for IR Sites 02 and 03 under Alternatives R-2 and R-3 is consistent with the radiological remedy selected for IR Sites 07 and 18 at Parcel B, as outlined in the Final Amended Parcel B ROD (Navy, 2009a). As discussed in the response to DTSC Specific Comment 9, the Draft Final RA was revised to clarify that the proposed excavation at IR Sites 02 and 03 (under Alternatives R-2 and R-3) may be extended deeper, if necessary, to ensure that the radiological dose at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) will be consistent with background activity levels. The dose levels at the surface will not exceed 15 mrem/yr based upon residential reuse; this dose level is generally considered protective of human health and is applied to response actions under CERCLA (EPA, 1997).

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010 (continued)				
1. (cont.)	--	--	(see above)	The Navy wishes to clarify that the FS Report and RA evaluate various remedial alternatives but that a preferred remedial alternative will not be identified until the next step in the CERCLA remedy evaluation and selection process (the proposed plan). The document was not revised in response to this comment.
2.	ES-5	ES.3	Page ES-5, Section ES.3 “Remedial Investigation Conclusions and Recommendations”, first paragraph states EPA RI/FS guidance states that the objective of the RI/FS process is not attainable goal or removing all uncertainty, but rather to gather information sufficient to support an informed risk management decision in regarding which remedy appears to be most appropriate for a given site.” CDPH agrees that one of the objectives of the RI/FS process is to gather information sufficient to support an informed risk management decision in regarding which remedy appears but it also is an objective to use the Remedial Investigation to support the design for a MARSSIM final status survey. The Remedial Investigation should provide information on variations in the contaminant distribution in the survey area which will determine the classification of the survey area. If the classification of the survey area is a Class 1 additional data may need to be gathered for the final status survey.	The Draft RA discusses the previous scoping and characterization surveys performed at Parcel E. These previous surveys, as well as historical information summarized in the HRA (NAVSEA, 2004), have provided the classification of various radiologically impacted sites at Parcel E. For sites where either scoping or characterization surveys were not performed or previous surveys were inadequate, the Navy recognizes that additional surveys will be required to support the design of the remediation and final status surveys. Accordingly, Alternatives R-2 and R-3 include the additional surveys and remedial efforts.
3.	E-6	ES.4	Page ES-6, Section ES.4. “Development of Remedial Alternatives”, the remedial alternatives listed states that “Alternative R-2 and Alternative R-3 states that 2 or 3 feet soil cover and institutional controls at IR site 2 and 3 will be implemented” this may require a license from the radiological health branch.	Comment noted.

Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
4.	--	--	Based on the Navy's intent to request restricted use of the property IR Sites 2 and 3, it is recommended that the Navy consult and apply for a license or license exemption from the Radiological Health Branch of the California Department of Public Health. Please contact Gary Butner, Chief (916) 327-5106 Radiological Health Branch Department of Public Health Radiologic Health Branch P.O. Box 997414, MS 7610 Sacramento, CA 95899-7414	The Navy will not apply for a CDPH license because, as CDPH has acknowledged in past correspondence, the CDPH does not have jurisdiction over Navy activities while the Navy maintains ownership of the property.
5.	2-12 and 2-13	2.1.2.22, 2.1.2.23, and 2.1.2.24	Page 2-12 and 2-13, Sections 2.1.2.22, "Sanitary Sewer System", Section 2.1.2.23 Storm Drain Lines and Section 2.1.2.24 Septic Sewer Lines states the portion of the sanitary sewer system that extends into Parcel E has not been removed, but is considered by the HRA to likely be contaminated and are recommended for a characterization survey with remediation of areas of elevated radioactivity and a final status survey to be completed following remediation". Is the Navy plan to remove the sanitary sewer system, storm drain lines and septic sewer lines in parcel E and then perform a final status survey on the remediated areas?	Yes, with the exception of storm drain and sewer lines located in IR Sites 02 and 03, the Navy plans to remove these lines and perform a final status survey on the remediated areas.
6.	--	--	Page 1 of 1, Appendix Tables, Table 7, "Remedial Goals for Radionuclide of Concern", lists the Soil and Sediment (pCi/g) remedial goals for industrial worker and residential. The buildings and sites seeking unrestricted release the residential remedial goals is preferred remediation goal to remediate the areas at a reasonable effort and applying the ALARA concept.	As discussed in the response to DTSC Specific Comment 6, the Draft Final RA was revised to clarify that residential RGs will apply in all areas.

7.	C-11	C2.2	<p>Page C-11, Appendix C, Section C2.2 Potential State Chemical Specific ARARS, listed below is CDPH response to Specific State Chemical ARARS. CDPH believes that Title 17 of the California Code of Regulations, Section 30256 meets the criteria for a State chemical-specific ARAR and, therefore, should be included in this section.</p> <p><u><i>The state regulations at Cal Code Regs. Title. 17 30256 is not applicable</i></u></p> <p><i>CERCLA must comply with promulgated state requirements, which are either “applicable” or “relevant” and “appropriate” requirements. The Navy and EPA assert that the provisions of Cal Code Regs Title 17 30256 are not “applicable” requirements because these regulations by their expressed terms apply to facilities licensed by the state of California that are undergoing a license termination process. The remediation of Parcel E under CERCLA is not part of a decommissioning or license termination process. The remediation of Parcel E under CERCLA is not part of decommissioning or license termination procedure nor has any state license ever been issued because California laws and regulations regarding possession of radioactive materials do not apply to land possessed by the federal government.</i></p>	<p>The Navy and EPA do not agree that Title 17 Cal. Code Regs. § 30256 satisfies promulgated criteria, specified in CERCLA and the NCP, for a state chemical-specific ARAR. The Navy presented a detailed evaluation of the subject requirement in Appendix C, Section C2.2, and determined that it is not an ARAR for the Parcel E CERCLA remedy because it is not (1) substantive, (2) either “applicable” or “relevant and appropriate”, or (3) more stringent than federal standards. A state law or regulation must satisfy all of these criteria to meet CERCLA and NCP requirements for state ARARs and does not qualify as a state ARAR if any one of them is not satisfied. The Navy has prepared, in consultation with EPA counsel, the following specific input regarding Title 17 Cal. Code Regs. § 30256.</p> <p><u><i>a. The State Regulation is Not Substantive</i></u></p> <p>The Navy and EPA continue to assert, as stated in Section C2.2 of Appendix C, that Title 17 Cal. Code Regs. § 30256 is not substantive. These regulations describe the process by which CDPH makes its decisions to terminate a specific license and therefore, when read in that context, the three criteria of Subsection 30256 (k) should be characterized as procedural rather than substantive. The Navy does not have a state license administered by CDPH nor were any of the activities subject to state license requirements (see discussion below regarding “applicability”). Even if the criteria were considered substantive, the NCP (40 CFR § 300.400[g]) specifies that substantive provisions of promulgated regulatory requirements must be either “applicable” or “relevant and appropriate” to qualify as ARARs for CERCLA cleanup actions.</p>

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
7. (cont.)	C-11	C2.2	<p><u>CDPH Response:</u></p> <p>Section 30256 is applicable because it contains the requirements that must be met at a site that is being decommissioned, and establishes the standard for clean up of radioactive contamination. Clean up of a site pursuant to CERCLA is very similar to a license termination because in both cases it is contemplated that an entity will be permitted to possess property which was formerly contaminated by radiologic materials and will not be required to apply for a license.</p> <p><u>The State Regulation is not Relevant and Appropriate</u></p> <p>The Navy and EPA also assert that the provisions of this regulation are not “relevant and appropriate” because standard for de-commissioning a licensed facility are not “appropriate” for this site because they do not address a set of circumstances similar to remediation of Parcel C. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) specifies a series of factors to be used to compare the proposed CERCLA action with potential ARARs to determine if a requirement is both relevant and appropriate (Title 40 Code of Federal Regulations (CFR) 300.400 (g) (2)). The CDPH regulation can be distinguished from the selected remedial action for Parcel C on a number of factors, including the medium addressed, the type of action/activity regulated, and the type of place regulated.</p>	<p><u>b. The State Regulation is Not “Applicable”</u></p> <p>The Navy and EPA continue to assert, as stated in Section C2.2 of Appendix C, that Title 17 Cal. Code Regs. § 30256 is not “applicable” because these regulations by their express terms apply to facilities licensed by the State of California that are undergoing a license termination process. The remediation of Parcel E under CERCLA is not part of a decommissioning or license termination procedure nor has any state license ever been issued because California laws and regulations regarding possession of radioactive materials do not apply to land possessed by the federal government. The CDPH website acknowledges that CDPH does not regulate DoD sites:</p> <p>“While owned by the Federal government, DoD facilities are not under the radiological control of the State of California, but when property is to be transferred to parties other than U.S. government agencies, California's radiation regulations are then enforceable. Therefore decommissioning standards used for radioactive materials licenses in California are applied to the clean-up efforts at the military facilities...” (http://www.cdph.ca.gov/HealthInfo/environhealth/Pages/DOD.a.spx).</p> <p>CDPH suggests in its comments that the regulations should be considered “applicable” ARARs, because even though they are not applicable now, they would or might become applicable if the property were conveyed to a non-federal entity. The Navy and EPA disagree and assert that (1) CERCLA requires the decision-maker to evaluate ARARs at the time the remedy is selected, (2) the regulations are not applicable ARARs for the reasons noted above, and (3) the Navy will still own the site at the time the remedy is selected. Prospective future changes in jurisdiction cannot serve as a basis for identifying applicable ARARs. CDPH currently lacks subject matter jurisdiction over the property and may never obtain subject matter jurisdiction if the Navy retains title or transfers the property to another federal department or agency. Therefore, the Navy does not consider the regulation to be an “applicable” ARAR.</p>

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
7. (cont.)	C-11	C2.2	<p><i>More specifically, the license termination process described in the regulation appears to be intended to reach the conclusion that the facility is suitable for release for unrestricted use. This requirement is one among a detailed set of requirements for the “Cradle to grave” management o licensed radiological material that were never applied to Parcel C were not subject to such regulatory controls when they were utilized by the Navy or when they were released into the environmental and, hence, present very different issues, (ie very high volume of potential impacted soil, low concentrations of radionuclides in the soil, high cost of removal etc...</i></p> <p><i>The selected remedy for radiologically impacted soil and structures consists of surveying radiologically impacted buildings and former building sites with documented radiological impacts for unrestricted release. Decontamination will be performed and buildings will be dismantled if necessary. Radiologically impacted storm drains and sanitary sewer lines throughout Parcel C will be removed and dispose of off site.</i></p> <p><u>CDPH Response:</u></p> <p>Title 17 Section 30256 meets the criteria of “relevant and appropriate.” “Relevant and appropriate requirements mean those cleanup standards [that] ... address problems or situations sufficiently similar to those encountered at the CERCLA site that their use is well suited to the particular site” (55FR 8817). The purpose of the requirement and the purpose of the CERCLA action are very similar. The title of the regulation is “Vacating Installations: Records and Notices”, and it describes in subdivision (k) when a license may be terminated.</p>	<p><i>c. The State Regulation is Not “Relevant and Appropriate”</i></p> <p>The Navy and EPA continue to assert, as stated in Section C2.2 of Appendix C, that Title 17 Cal. Code Regs. § 30256 is not “relevant and appropriate” because standards for decommissioning a licensed facility are not “appropriate” for Parcel E because they do not address a set of circumstances similar to the remediation of Parcel E. The NCP specifies a series of factors to be used to compare the proposed CERCLA action with potential ARARs to determine if a requirement is both “relevant” and “appropriate” (40 CFR §300.400[g][2]). The activity addressed by the CDPH regulation can be distinguished from the selected remedial action for Parcel E on a number of bases, including the medium addressed, type of action and activity regulated, and type of place regulated (see 40 CFR Subsections 300.400[g][2][ii], [iv], and [vi]). More specifically, the license termination process described in the regulations appears to be intended to reach the conclusion that the facility is suitable for release for unrestricted use. This requirement is one among a detailed set of requirements for the “cradle-to-grave” management of licensed radiological material that were never applied to HPS. The radionuclides addressed in Parcel E were not subject to such regulatory controls when they were used by the Navy or when they were released into the environment, thus the CERCLA response must address very different issues (e.g., very high volume of potentially impacted soil, low concentrations of radionuclides in soil, high cost of removal, etc.).</p> <p>CDPH appears to have focused their comments upon perceived similarities of purpose of the state regulations and the CERCLA response action pursuant to the factor at 40 CFR Subsection 300.400(g)(2)(i), rather than the three factors at 40 CFR Subsections 300.400(g)(2)(ii), (iv), and (vi) that are identified in the previous paragraph. The Navy and EPA determinations under those three factors are sufficient in and of themselves to support the conclusion that the regulation is not “relevant and appropriate.” There is no requirement in Subsection 300.400(g)(2) that the Navy or EPA make specific findings for each of the eight factors listed in Subsection 300.400(g)(2)(i) through (viii) for each potential state ARAR.</p>

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
7. (cont.)	C-11	C2.2	<p>Clean up of a site pursuant to CERCLA is very similar to a license termination because in both cases it is contemplated that an entity will be permitted to possess property which was formerly contaminated by radiologic materials. If parcel C is transferred to property that is within the state’s jurisdiction, it is expected that CDPH’s Radiologic Health Branch (CDPH-RHB) will require either a license or an exemption from licensing if radioactive materials are present. The threshold for determining if a license or license exemption is required is the same regardless of whether an entity is terminating the license, as described in the regulation, or taking possession of a site that has been contaminated, as would be the case of a future transfer of Parcel C to an entity regulated by CDPH.</p> <p>The Navy’s response implies that Section 30256 is not relevant and appropriate because the regulation “appears to be intended to reach the conclusion that the facility is suitable for release for unrestricted use.” However, that is not a reason to conclude that the regulation does not meet the requirement to be an ARAR. Regardless of whether the proposed ARAR is contained in a regulation that may favor unrestricted release, the fact remains that the regulation contains a standard for clean up of radiologic material. Similarly, the statement that this regulation seems to be part of a “Cradle to grave management” or radioactive material does not mandate a conclusion that the regulation is relevant and appropriate. Furthermore, in its response, the Navy states that decontamination will be performed and that radiologically impacted storm drains and sewer lines will be removed.</p>	<p>The criteria are to be examined “where pertinent” with pertinence “depending, in part, on whether a requirement addresses a chemical, location, or action.”</p> <p>Furthermore, the Navy and EPA do not agree with CDPH’s assertions about the similarity of purpose. Although CERCLA response actions and the State’s regulations share the broad goal of protecting human health and the environment, they operate in a very different manner and address different site conditions.</p> <p>CDPH further asserts that the threshold for determining under state law if a license or exemption is required when a licensed entity pursues a license termination is similar to the questions of whether a license or exemption is required when an entity takes possession of a site that has been contaminated by the previous owner. This is a general procedural and jurisdictional issue under state law and is unrelated to the question as to whether or not these specific regulations are “relevant and appropriate” under CERCLA and the NCP. Therefore, the Navy and EPA do not believe that the previous ARAR determination regarding whether or not the regulations are “relevant and appropriate” should be changed.</p> <p><u>d. The State Regulation is Not More Stringent</u></p> <p>The Navy and EPA continue to assert, as stated in Section C2.2 of Appendix C, that Title 17 Cal. Code Regs. § 30256(k) is not more stringent than risk-based cleanup levels because the standard requiring “reasonable effort to eliminate residual radioactive contamination” is by its terms flexible and cannot be assumed to require a more stringent cleanup than the selected CERCLA remedial action. CDPH, in recent correspondence on the CERCLA cleanup at HPS Parcel C, has asserted that the regulation provides for cleanup to background. The regulation does not require cleanup to background conditions and elimination of residual contamination; furthermore, it can be interpreted to require a “reasonable effort” to eliminate residual contamination regardless of risk. Title 17 Cal. Code Regs. § 30256(k) neither contains a numerical standard nor describes a narrative standard that would inform the question of whether (or what quantity of) radiological material can remain at the site.</p>

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
7. (cont.)	C-11	C2.2	<p>Thus, the Navy agrees that it is proposing decontamination, which supports the conclusion that Section 30256 is relevant and appropriate.</p> <p><u><i>The State Regulation is not more stringent then Risk-Based Cleanup Levels</i></u></p> <p><i>The State is responsible for identifying potential state ARARs that it believes are more stringent then federal ARARs or risk based clean up levels and for demonstrating why they are more stringent. The remedy for Parcel C is based on a risk based approach and the State has not demonstrated that the standards under 30256(k) would be more stringent.</i></p> <p><i>The State has asserted that the phrase “eliminate residual radioactive contamination” in Subsection 30256 (k) (2) established a more stringent standard because CERCLA does not require only ‘reasonable effort to eliminate residual radioactive contamination.’ This Standard is by its terms flexible and cannot be assumed to require a more stringent cleanup than the selected CERCLA remedial action.</i></p> <p><i>Subsection (k) neither contains a numerical standard nor describes a narrative standard which would address the question of whether (or what quantity of) radiological material can remain at the site. If there were a means to derive a narrative standard from Subsection (k), that standard has not been identified by the State. Without an identified narrative standard, there can be no basis for asserting that the requirement is more stringent than the CERCLA risk based standards for Parcel C.</i></p>	<p>If there were a means to derive an objective standard from § 30256(k), that standard has not been identified by the state. Without an identified objective standard, there can be no basis for asserting that the requirement is more stringent than the CERCLA risk-based standards for Parcel E.</p> <p>In summary, CDPH has provided no evidence that their regulations are more stringent than federal ARARs and CERCLA risk-based cleanup levels.</p> <p>The preceding narrative is intended to reinforce the Navy’s and EPA’s assertion that Title 17 Cal. Code Regs. § 30256 does not meet the legal requirements necessary to make it an ARAR. However, the Navy does appreciate the input provided by the CDPH and welcomes further collaboration.</p>

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
7. (cont.)	C-11	C2.2	<p><i>Although general goals can be considered State ARARs if they are directive in intent and enforceable (see NCP preamble at 55 fed. Reg 8746, March 8, 1990, CDPH has stated that California Laws concerning possession of radioactive materials do not apply to property that remains in the possession of the federal government. Therefore, these laws are not enforceable as required by CERCLA and the NCP.</i></p> <p><u>CDPH Response:</u></p> <p>Title 17 CCR 30256 is a state requirement that is more stringent than the present EPA specified federal cleanup requirement which allows a measurable increase of risk to human health. The intent of 17 CCR 30256 is to eliminate that increase in risk. Title 17 CCR 30256 can be said to be more stringent than the CERCLA standard in that the elimination of residual contamination will attain a cleanup to background levels. The CERCLA standard allows the use of an EPA OSWER directive which would result in cleanup levels above background. 17 CCR 30256 does not offer substantive criteria for background levels due to the variability of background from site to site. The intent of Title 17 30256 is to eliminate the increase in risk. Thus, section 30256 is more stringent than the CERCLA standard.</p> <p>The Navy's assertion that the regulation does not contain a narrative standard is incorrect, as discussed above. The assertion that the regulation does not contain a numerical standard is irrelevant as ARARs need not contain numerical standards.</p>	(see above)

Table 2. Responses to Comments from the Department of Toxic Substances Control and California Department of Public Health on the Draft Radiological Addendum to the Feasibility Study for Parcel E, Hunters Point Shipyard, San Francisco, California, April 2010

Comment	Page	Section	Comment	Response
Comments provided by the California Department of Public Health (Larry Morgan, Senior Health Physicist), dated May 20, 2010				
7. (cont.)	C-11	C2.2	The Navy also made the following statement: “Although general goals can be considered State ARARs if they are directive in intent and enforceable (see NCP preamble at 55 fed. Reg 8746, March 8, 1990, CDPH has stated that California Laws concerning possession of radioactive materials do not apply to property that remains in the possession of the federal government. There, these laws are not enforceable as required by CERCLA and the NCP.” CDPH is unable to understand why CDPH’s statement that California law regarding possession of radioactive materials does not apply when the property is under federal ownership somehow means that the proposed regulation is not directive. A standard need not be applicable in a particular instance in order to be considered an ARAR on the basis that it is relevant and appropriate.	(see above)

Comments provided by Ross Steenson, Engineering Geologist, dated June 9, 2010				
1.	--	--	I reviewed the <i>Draft Radiological Addendum to the Feasibility Study Report for Parcel E (Radiological Addendum)</i> . The <i>Radiological Addendum</i> presents information for radionuclides regarding site characterization and risk, remedial action objectives and applicable and relevant requirements, remedial alternatives, and a comparative analysis of those alternatives. My only comment is that the document should be revised to be consistent with the current version of the Parcel E Feasibility Study particularly regarding the consideration of natural shoreline options for Parcel E. I also reviewed comments on the <i>Radiological Addendum</i> provided by the California Department of Toxic Substances Control (DTSC) dated June 9, 2010, and I concur with those comments.	Comment noted.

Comment	Page	Section	Comment	Response
Comments provided by Amy Brownell, Environmental Engineer, dated June 8, 2010				
1.	--	4.1.1.2	Section 4.1.1.2, Alternative S-2, Covers, Institutional Controls, and Shoreline Revetment – Asphalt parking lots may not be in good enough condition to warrant rehabilitation and may require complete replacement as was found on Parcel B. A site walk will be required to confirm current site conditions.	The proposed asphalt covers are discussed in detail in Section 4.2.2.1 of the FS ³ Report for Parcel E and are not discussed in detail in the RA. The Navy acknowledges that site conditions of certain asphalt-covered areas may require further evaluation and will revise the Draft Final FS Report accordingly.
2.	--	4.2.2.6	Section 4.2.2.6, Soil Cover, Shoreline Protection, and Institutional Controls (IR 02 and 03 only) – For consistency please use “soil cover” throughout the section.	Section 4.2.2.6 was revised accordingly.

³ Abbreviations and acronyms used throughout this table are identified on page 49.

Comment	Page	Section	Comment	Response
Comments provided by Jaime Michaels, Coastal Analyst, dated May 25, 2010				
1.	--	---	<p>According to the document, three remediation alternatives, including the No-Action, are under consideration for implementation at Parcel E, and Alternative R-2 has been characterized as “very good overall” for various reasons, including cost-effectiveness. Alternative R-2 would involve excavation, demolition, and off-site disposal of contaminated materials, structures, and infrastructure located at Parcel E. At IR Sites 02 and 03 (Parcel E), Alternative R-2 would involve excavation of a portion of the contaminated material followed by the capping of remnant material with clean soil. Additionally, along the shoreline of IR Sites 02 and 03, Alternative R-2 would possibly involve the construction of a shoreline protection system, e.g., a rock revetment wall.</p> <p>The subject document states that it would be too costly to excavate the entire volume of contaminated material, approximately 1.0 million cubic yards, at Sites 02 and 03 for off-site disposal at an approved disposal site. Although, we recognize the potential significance of costs involved with site remediation, we encourage the Navy to consider alternatives that include removing the greatest possible volume of contaminated material from the site. Alternative R-2 would involve capping the excavated site with soil and constructing a shoreline revetment system.</p>	<p>Shoreline protection options for Parcel E are being evaluated in the Parcel E FS⁴ and not the RA. The Draft Final FS Report was revised to (1) provide a more thorough evaluation of the potential impacts to coastal resources under the proposed remedial alternatives, and (2) evaluate shoreline protection options that use natural and hybrid stabilization structures (as opposed to armoring with rock revetment). For further information, please refer to the Navy’s response, dated June 10, 2010, to BCDC’s inquiry from March 26, 2010.</p> <p>Regarding the extent of remediation proposed in the Draft RA, the Navy developed remedial alternatives by combining various process options that were retained following a screening-level evaluation based on effectiveness, implementability, and cost, consistent with the NCP and EPA RI/FS guidance (EPA, 1988). The Navy believes that the streamlined set of remedial alternatives presented in the Draft RA, consistent with the streamlining approach outlined in the NCP (pp. 8704-8705 of NCP Preamble), is the most appropriate path forward for addressing radionuclides at Parcel E. The approach proposed for IR Sites 02 and 03 under Alternatives R-2 and R-3 is consistent with the radiological remedy selected for IR Sites 07 and 18 at Parcel B, as outlined in the Final Amended Parcel B ROD (Navy, 2009a).</p>

Comment	Page	Section	Comment	Response
Comments provided by Jaime Michaels, Coastal Analyst, dated May 25, 2010				
1. <i>(cont.)</i>	--	---	The subject document does not discuss whether implementation of Alternative R-2 would occur within the Commission's Bay jurisdiction (i.e., below the Mean High Water line or below the inland edge of marsh vegetation marsh), but it appears likely the alternative would result in a net increase in Bay fill. If so, remediation must be consistent with the Commission's laws and policies including those regarding Bay fill. Any proposed fill would need to constitute the minimum necessary to achieve the project purpose, have no upland alternative, and would not adversely impact Bay resources, including the eelgrass bed located directly offshore of Parcel E (within the boundaries of Parcel F). In addition, the implementation of Alternative R-2 should not adversely affect public access at or near the site. To ultimately make this determination, the Commission would need additional information regarding the proposed remediation measure as requested in our letter dated March 26, 2010.	<i>(see above)</i>

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012				
1	4-9	§4.2.2.1; Table 9	<p>Scoping or Characterization Surveys:</p> <p>EPA understands that pursuant to this section, in conjunction with Table 9, Alternatives R-2 and R-3 include a component consisting of a full MARSSIM survey (consistent with the HRA) to identify areas with elevated radioactivity using the same protocols including soil testing (typically 18 samples per Survey Unit) and comparison against the HPNS concentration based remediation goals (RGs) that the Navy has been using for its radiological program elsewhere in the HPNS. Please confirm this assumption and edit the subject document to reference the protocols the Navy intends use for the scoping and characterization surveys (with the understanding that the Navy may modify these protocols in the future as appropriate with Regulatory agency approval).</p>	<p>Section 4.2.2.1 provides the following information on scoping and characterization surveys at Parcel E:</p> <ul style="list-style-type: none"> • Scoping and characterization surveys would be performed in accordance with MARSSIM¹ and consistent with the recommendations of the HRA. • Scoping and characterization surveys at certain sites may be designed with a sufficient density of samples to serve as the final status survey if no residual radioactivity is found. • For estimating purposes, the radiological addendum assumes that radiologically impacted sites will require either a scoping or characterization survey, followed by some level of remediation and a final status survey (Table 9 provides further details on the planned actions at each site). <p>Section 4.2.2.5 briefly describes the final status surveys, and Appendix D (Tables D-8, D-9, and D-10) provides preliminary sampling densities for the scoping, characterization, and final status surveys. The Navy believes that the existing information in the radiological addendum, as listed above, is adequate to support an evaluation of the radiological remedial alternatives relative to the NCP criteria. The Navy will provide more specific details regarding the proposed radiological surveys in future planning documents (prior to remediation work).</p>

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
2a	4-9	§4.2.2.2	<p>Soil, Sediment, and Debris Removal:</p> <p>Based on the Navy's Response to DTSC Comment 2 and CDPH comment 5, it is unclear to EPA if the Navy intends to remove storm and sewer lines in IR-02 and IR-03. Please edit the subject document to clarify. If the Navy plans to leave these sewers in place in IR-02 and IR-03, please explain the rationale for this decision.</p>	<p>Section 4.2.2.2 was revised to clarify that:</p> <ol style="list-style-type: none"> (1) In general, storm drain and sewer lines in IR-02 and IR-03 would not be removed because potential exposures to residual contamination in these lines would be controlled by cutting and capping the lines at the IR site boundaries and by the proposed surface cover and institutional controls. (2) Storm drain and sewer lines may be partially removed in localized portions of IR-02 and IR-03 where lines are submerged below the groundwater table and intersect groundwater contaminant plumes (thereby serving as potential preferential pathways). At these locations, the storm drain and sewer lines would be cut and capped to control potential contaminant migration. As identified in the FS Report and this radiological addendum, the groundwater contaminant plumes at IR-02 and IR-03 consist of various nonradioactive chemicals in localized areas of IR-02 Northwest and Central and IR-03.
2b	4-9	§4.2.2.2	<p>Soil, Sediment, and Debris Removal:</p> <p>EPA understands that throughout Parcel E, including IR-02 and IR-03, the Navy will endeavor to excavate, characterize, and remove all soil, sediment, and debris containing radionuclides of concern at concentrations exceeding RGs as specified in Table B-3. However, at IR-02 and IR-03 it is possible that excavation deeper than 1 foot bgs will be limited by risk-based protocols that will allow soil with concentrations marginally greater than RGs to be contained under a 2 foot or 3 foot soil cover (per alternatives R-2 and R-3) if such residual concentrations meet a background dosage (based on a residential scenario) at the ground surface.</p>	<p>Section 4.2.2.2 describes the Navy's approach for remediation at IR-02 and IR-03 and was revised for clarity. Specifically:</p> <ul style="list-style-type: none"> • At IR-02 and IR-03, soil containing ROCs at activities exceeding the RGs would be removed, with the excavation generally limited to the upper 1 foot of the ground surface. • The Navy has demonstrated, through past evaluations performed for Parcels B (IR-07 and IR-18) and E-2, that remediation of the upper 1 foot of the ground surface followed by installation of a clean soil cover would be protective of human health. However, given the historical operations at IR Sites 02 and 03 and potential subsurface

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
2b <i>(cont.)</i>	4-9	§4.2.2.2	EPA understands that the Navy will work closely with the Regulatory agencies to develop this risk-based protocol and it will be based on the RESRAD model (or other model acceptable to the Regulatory agencies) during the Parcel E remedial design phase.	<p>data gaps, it is possible that elevated activity levels may be encountered following surface remediation and that additional excavation may be required deeper than 1 foot to ensure an appropriate level of protectiveness for humans.</p> <ul style="list-style-type: none"> • Deeper soil excavation in IR-02 or IR-03 would be performed, if necessary, to verify that the residual radiological risk at the final ground surface (following backfilling of the excavation to the existing ground surface and installation of a demarcation layer and soil cover) is acceptable. • The residual radiological risk at the final ground surface (based on residential exposure) will be within the risk management range specified in the NCP (10^{-6} to 10^{-4}). • The Navy will perform radiological risk modeling (using RESRAD or other model acceptable to the regulatory agencies), in conjunction with the final status survey for IR-02 and IR-03, to verify that the residual radiological risk is acceptable. • In preparing the RD, the Navy will work closely with the regulatory agencies to develop specific protocols for determining when deeper soil excavation is needed to verify that the residual radiological risk at the final ground surface is acceptable. <p>The Navy's approach for IR-02 and IR-03 differs from the rest of Parcel E, and is based on the evaluation of excavation and off-site disposal options for radiologically impacted sites at Parcel E. This evaluation is detailed in Section 3.3.1.3 of the Draft Final RA.</p>

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
3a	4-10	§4.2.2.6	Soil Cover, Shoreline Protection, and Institutional Controls (IR 02 and IR 03 only): EPA does not consider the 15 mrem/year dosage to be necessarily representative of residential scenario background dosage at HPNS, but as a supplemental maximum not-to-exceed criteria. Navy cleanups to date at HPNS have actually achieved much better results than the 15 mrem/year dosage criteria and the subject document should clarify this point.	Sections 4.2.2.2 and 4.2.2.6 were revised for clarity, as described in the response to comment 2b. The Navy acknowledges that the 15 mrem/year dose level is considered a supplemental criterion for response actions under CERCLA (EPA, 1997). During subsequent discussions with EPA staff, the Navy understands that EPA prefers to focus the discussion on residual radiological risk and minimize (or eliminate) reference to radiological dose criteria. Accordingly, the document was revised to eliminate reference to radiological dose criteria.
3b	4-10	§4.2.2.6	Soil Cover, Shoreline Protection, and Institutional Controls (IR 02 and IR 03 only): EPA is primarily interested in concentration-based cleanups that will result in combined, cumulative residual risk in the 10(-4) to 10(-6) risk range as described by the NCP. Please explain how the Navy's approach in Parcel E will ensure that overall residual risk is maintained within the required NCP risk range.	Sections 4.2.2.2 and 4.2.2.6 were revised to better explain the Navy's approach in satisfying this NCP requirement. Specifically: <ul style="list-style-type: none"> • The residual radiological risk at the final ground surface (based on residential exposure) will be within the risk management range specified in the NCP (10⁻⁶ to 10⁻⁴). • The Navy will perform radiological risk modeling, in conjunction with the final status survey for IR-02 and IR-03, to verify that the residual radiological risk is acceptable. • As described in the Draft Final FS Report (ERRG, 2011), risk associated with nonradioactive chemicals in soil will be mitigated through remedial alternatives that rely primarily on excavation and off-site disposal of hot spots and containment of remaining contamination.

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
3c	4-10	§4.2.2.6	Soil Cover, Shoreline Protection, and Institutional Controls (IR 02 and IR 03 only): Will the Navy or the City be the entity to have long-term management responsibility of the soil covers at IR-02 and IR-03? Either entity is acceptable to EPA as long as an enforceable agreement between that entity and the Regulatory Agencies that incorporates all intuitional controls (ICs) and IC management requirements is in place at the time of transfer.	Section 3.3.1.2 describes the implementation steps for long-term management of areas requiring institutional controls (which would include all areas where covers are proposed). Specifically, Section 3.3.1.2 states: <ul style="list-style-type: none"> • The Navy shall address and describe implementation of institutional controls and maintenance actions, including periodic inspections and reporting requirements, in the preliminary and final RD reports to be developed and submitted to the FFA Signatories and CDPH in regard to radionuclides for review pursuant to the FFA. • Although the Navy may later transfer these procedural responsibilities to another party by contract, property transfer agreement, or through other means, the Navy shall retain ultimate responsibility for integrity of the remedy.
3d	4-10	§4.2.2.6	Soil Cover, Shoreline Protection, and Institutional Controls (IR 02 and IR 03 only): As a point of clarification for Alternative R-2 and R-3, it is correct that the technical and administrative requirements for Alternatives R-2 and R-3 are identical except that R-2 includes a 2-foot clean soil cover and R-3 includes a 3-foot clean soil cover?	Yes, as described in Section 4.2.3, Alternative R-3 involves all of the components of Alternative R-2, but includes a 3-foot-thick soil cover in place of the 2-foot-thick soil cover specified in Alternative R-2. Accordingly, the Navy's comparative evaluation of Alternatives R-2 and R-3 vary only in the ratings for implementability (which account for technical and administrative requirements) and cost. As discussed in Section 5.3.3, the additional cover thickness proposed under Alternative R-3 provides additional shielding from radionuclides, resulting in an incremental cancer risk of 5E-10 for the future recreational receptor, as opposed to 2E-08 under Alternative R-2. Because both estimated cancer risks are less than 1E-06, both are considered to be adequately protective of human health and the environment and both provide a comparable level of long-term effectiveness.

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
3e	4-10	§4.2.2.6	Soil Cover, Shoreline Protection, and Institutional Controls (IR 02 and IR 03 only): Is it correct to assume that the soil cover thickness for both Alternative R-2 (two feet clean cover) and R-3 (three feet of clean cover) are measured from the original ground surface elevation (i.e. the thickness of any clean imported backfill during excavation work is not included in the calculation of the cover thickness)?	Yes, as described in Section 4.2.2.6, the soil cover thickness would be measured from an initial ground surface that would not include backfill placed during excavation work. Section 4.2.2.6 states that: "Once complete, all excavations would be backfilled to the existing ground surface with soil that meets appropriate acceptance criteria for radioactive and nonradioactive chemicals. Subsequently, a 2-foot-thick soil cover would be installed at and above original grade at IR Site 02 and IR Site 03."
4	1-2	§1.1	Response to EPA Specific Comment 3: It appears that the comment was misunderstood. The original intent of the comment was to revise the text to include a brief statement explaining that Installation Restoration (IR) Sites were used originally to designate areas with potential or known contamination and that later this approach was changed to redevelopment blocks. Please revise Section 1.1 to explain what an IR Site is and how IR Sites were used to designate areas with potential (or known) contamination.	Section 1.1 was revised to better explain how the study areas at Parcel E have developed as the CERCLA process has progressed. Specifically, Section 1.1 was revised to clarify that: <ul style="list-style-type: none"> Contaminated sites at Parcel E were designated as IR sites based on information developed during the previous investigations. Chemical site characterization activities and sampling data were mostly planned and organized by IR site. Radiological investigations were generally conducted based upon the radiological history of each individual IR site or building. Consistent with the FS Report, this radiological addendum uses redevelopment blocks, adjusted by the Navy to facilitate data presentation and evaluation, as the basis for developing remedial alternatives to address potential unacceptable radiological risk present within Parcel E. <p>The draft final versions of the FS Report and this radiological addendum use redevelopment blocks consistent with the 2010 amended HPS redevelopment plan. The Revised RI Report and draft versions of the FS Report and this radiological addendum were published prior to the 2010 amended HPS redevelopment plan, thus they used redevelopment blocks consistent with the original 1997 HPS redevelopment plan.</p>

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
5	--	Table D-12	<p>Response to EPA Specific Comment 24:</p> <p>The response and text of the FS Addendum do not estimate the volume of soil that would require removal to remediate ROC anomalies to depth in soil hot spots (i.e., those identified during surface scans and subsequent scans/sampling of trench bottoms and sidewalls). However, Table D-12 does provide volume estimate for soil remediation in former rad storage yard, salvage yard, IR-03, IR-2, 707 triangle area, IR-04 but without a reference to the source of the estimate. Please identify the source of the estimated volume of ROC-contaminated soil that was assumed to require remediation to address soil hot spots.</p>	<p>Table D-12 (under the “Remarks” column) identifies the assumption that 6 cubic yards of low-level radioactive waste will be generated for every 1,000 square meters of survey area (for both building and non-building sites). This assumption is generally consistent with past efforts at radiologically impacted sites at HPS; however, this assumption was revised to use a more conservative estimate similar to the RI/FS Report for Parcel E-2. Specifically, Table D-12 was revised to assume 20 cubic yards of low-level radioactive waste will be generated for every 1,000-square meters of survey area (or about 5 percent of the volume within the upper foot of a 1,000 square meter survey area). This assumption is consistent with the Navy’s findings during previous radiological removal actions at Parcels E and E-2. Section 4.2.2.2 was revised to describe this technical assumption.</p> <p>The Navy also wishes to clarify that EPA’s original comment, in part, requested that the Navy “include hot spot excavation at IR-02 and IR-03 as a process option.” As discussed previously in response to EPA comment 2b, the Navy has agreed to perform deeper soil excavation in IR-02 and IR-03, if necessary, to verify that the residual radiological risk at the final ground surface (following backfilling of the excavation and installation of a demarcation layer and soil cover) is acceptable. However, the Navy does not believe that sufficient data are available to define radiological anomalies in advance.</p>

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
6a	--	Table D-12	Now that the Navy has considerable site-specific remedial cost data for HPNS, has the Navy considered using such data to develop HPNS specific unit costs for purposes of cost estimating?	The cost estimates were prepared in consultation with the Navy's radiological team and are generally consistent with the procedures used during past removal actions. As described in the response to comment 5 above, Table D-12 was revised to use a more conservative volume estimate for low level radioactive waste consistent with the Navy's findings during previous radiological removal actions at Parcels E and E-2. Section 4.2.2.2 was revised to describe this technical assumption. The Navy believes that the cost estimates meet the prescribed accuracy based on EPA guidance (+50/-30 percent) (EPA, 2000).
6b	--	Table D-12	Does the \$23.67/cu yard estimate from Norcal Waste System assume disposal of all construction debris at a RCRA Subtitle D solid waste landfill?	Yes, the listed disposal cost was for a RCRA Subtitle D solid waste landfill; however, given the relative significance of this cost item, the Navy has re-examined this unit price and revised Table D-12. In the process of re-examining Table D-12, the volume estimate for pier demolition debris was found to be erroneous. The volume estimate was corrected in conjunction with refining the unit cost for disposal of the concrete and wood debris.
7	2-42	§2.3.1.2	Radionuclides Detected in Soil, IR Site 02: There appears to be a discrepancy between the last bullet, which states that the radon flux rates in 35 samples ranged from 0.47 to 74.92 picoCuries per square meter per second (pCi/m ² -s) and the last sentence in the following paragraph, which states, "the range of measured radon flux rates are well below the threshold for radon emissions (20 pCi/m ² -s) specified in the uranium Mill Tailings Radiation Control Act." Since the highest measured flux rate exceeds this standard, the quoted sentence should be revised or removed. Please address this discrepancy.	The last sentence in the cited paragraph was revised to correct this error as follows: " <i>The average radon flux rate (2.07 pCi/m²-s) measured at Parcel E during the Phase I investigation is well below the average radon emission rate (20 pCi/m²-s) specified in the Uranium Mill Tailings Radiation Control Act (40 CFR § 192.02[b][1]).</i> "

Table 1. Responses to Comments from U.S. Environmental Protection Agency (EPA) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by EPA Project Manager (Craig Cooper), dated January 6, 2012 (continued)				
8	--	General	<p>Parcel E Radiological Survey Schedules:</p> <p>What is the Navy's schedule to complete the radiological survey and characterization program in Parcel E? Does the Navy plan to complete these Parcel E surveys and removal work prior to publishing a final version of the Radiological Addendum to the FS? If not, how will significant new information collected in during these surveys, if any, be addressed by the Navy during the CERCLA process?</p>	<p>The ongoing radiological survey and removal action work will not be completed prior to finalizing this radiological addendum. The Navy will summarize pertinent information from the ongoing work in the ROD, and will describe the remaining radiological remediation work that will be completed post-ROD. The Navy believes that the radiological addendum includes relatively conservative estimates of potential radiological remediation that have produced cost estimates that meet the prescribed accuracy based on EPA guidance (+50/-30 percent) (EPA, 2000).</p>
9	--	Table B-3	<p>Release Criteria for Radionuclides of Concern:</p> <p>Per Table B-3, EPA understands that the Navy is applying residential remedial goals (RGs) for all Parcel E areas. The RGs in Table B-3 are consistent with past Navy RODs and EPA radiological preliminary remediation goals per EPA's radionuclide PRG calculator except for Ra-226 which is 1 pCi/g above background (per agreement with EPA). Does the Navy update its radiological remedial goals if changes to the EPA radionuclide calculator are made? Can the Navy's back-up calculations for these RG's be made available and referenced in the final version of the FS?</p>	<p>The Navy plans to retain the radiological RGs, as presented in the Draft Final Radiological Addendum, in the ROD. As noted in the subject comment, the radiological RGs are consistent with the past RODs for other HPS parcels.</p> <p>The radiological RGs were originally developed in the action memorandum for the basewide radiological removal action (Navy, 2006), but the backup calculations were not requested for that document. Given the time that has passed since its publication, it is not practical to locate and publish the backup calculations. Further, as noted in the subject comment, the RGs are consistent with EPA's radionuclide PRG calculator except for Ra-226, which is 1 pCi/g above background per an agreement with EPA.</p> <p>The Final Radiological Addendum was revised to specify the proposed background level of Ra-226 (0.633 pCi/g for surface soil, and 0.485 pCi/g for storm drain and sewer lines), and identify the documents that contain this information.</p>

Table 2. Responses to Comments from the Department of Toxic Substances Control (DTSC) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by DTSC Program Manager (Ryan Miya) dated January 13, 2012				
1	3-13	§3.3.1.3	Navy response to original DTSC comment #7: The qualitative evaluation of greenhouse gas emissions added to this section is adequate except that the text refers only to “greenhouse emissions” and should be changed accordingly to “greenhouse gas emissions.”	Section 3.3.1.3 was revised to use the term “greenhouse gas emissions.”
2	4-6	§4.2	Navy response to original DTSC comment #9: It does not appear that the brief technical basis for selecting the upper 1 foot of soil for radionuclides of concern exceeding remediation goals has been provided as previously requested. Is the 1 foot deep general excavation depth based on Parcel E historic radiological data, the site conceptual model, previous excavation(s), and/or other information? Please clarify.	Section 4.2.2.2 describes the Navy’s approach for remediation at IR-02 and IR-03 and was revised for clarity. Specifically: <ul style="list-style-type: none"> • At IR-02 and IR-03, soil containing ROCs at activities exceeding the RGs would be removed, with the excavation generally limited to the upper 1 foot of the ground surface. • The Navy has demonstrated, through past evaluations performed for Parcels B (IR-07 and IR-18) and E-2, that remediation of the upper 1 foot of the ground surface followed by installation of a clean soil cover is protective of human health. However, given the historical operations at IR Sites 02 and 03 and potential subsurface data gaps, it is possible that elevated activity levels may be encountered following surface remediation and that additional excavation may be required deeper than 1 foot to ensure an appropriate level of protectiveness for humans. • Deeper soil excavation in IR-02 or IR-03 would be performed, if necessary, to verify that the residual radiological risk at the final ground surface (following backfilling of the excavation to the existing ground surface and installation of a demarcation layer and soil cover) is acceptable. • The residual radiological risk at the final ground surface (based on residential exposure) will be within the risk management range specified in the NCP (10^{-6} to 10^{-4}).

Comments provided by DTSC Program Manager (Ryan Miya) dated January 13, 2012 (continued)				
2 (cont.)	4-6	§4.2	(see comment above)	<ul style="list-style-type: none"> The Navy will perform radiological risk and dose modeling (using RESRAD or other model acceptable to the regulatory agencies), in conjunction with the final status survey for IR-02 and IR-03, to verify that the residual radiological risk is acceptable. In preparing the RD, the Navy will work closely with the regulatory agencies to develop specific protocols for determining when deeper soil excavation is needed to verify that the residual radiological risk at the final ground surface is acceptable. <p>The Navy's approach for IR-02 and IR-03 differs from the rest of Parcel E, and is based on the evaluation of excavation and off-site disposal options for radiologically impacted sites at Parcel E. This evaluation is detailed in Section 3.3.1.3 of the Draft Final RA.</p>
Comments provided by California Department of Public Health, Environmental Management Branch (Larry Morgan) dated January 13, 2012				
3	--	--	Upon request by the Department of Toxic Substances Control (DTSC), the California Department of Public Health (CDPH), Environmental Health Branch (EMB) reviewed documents associated with radiological issues regarding the "Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard, San Francisco, CA" dated November 2011. EMB has no further comments with respect to radiological issues regarding the "Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard, San Francisco, CA" dated November 2011.	Comment acknowledged.

Table 3. Responses to Comments from Regional Water Quality Control Board San Francisco Bay Region (Water Board) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by Water Board Project Manager (Tina Low) dated February 15, 2012				
1	ES-6	ES.4; §2.3.2.	Radioactivity in Groundwater: Section 2.3.2.3, “Conclusions from Groundwater Investigations,” states that “based on the results of the comparison of radionuclide groundwater data with drinking water standards, groundwater does not appear to have been impacted by radionuclides at concentrations that warrant further evaluation in the FS.” Given that in both Alternatives R-2 and R-3, removal (by excavation) is generally limited to 1 ft. at IR-02 and IR-03, and that these sites are located in close proximity to the Bay, continued groundwater monitoring may be appropriate, as a conservative measure to verify that groundwater containing radionuclides is not being released into the Bay from IR-02 and/or IR-03. The historical uses of IR-02 and IR-03 also indicate the potential for radioactivity in groundwater. Will groundwater monitoring for radionuclides continue, either as part of the Basewide Groundwater Monitoring Program or as part of the Parcel E remedial alternatives for non-radioactive materials?	Sections 2.3.2.3 and 4.2 were revised to clarify that, as a conservative measure, future monitoring will include analysis for radionuclides in groundwater at IR-022 and IR-03 to verify the conclusions of this radiological addendum.
2	--	General	Shorelines Options: It would be helpful to have a more detailed discussion of how Alternatives R-2 and R-3 integrate with the shoreline options presented in the Draft Final FS for Parcel E. Where is the boundary between the shoreline protection treatment area, and the area to be treated with the surface cover types depicted on Figure 9? In the shoreline protection areas, will there still be 1 ft. of existing, radiologically cleared soil? Are the shoreline options independent of the remedial alternatives for radionuclides (i.e., does selection of a shoreline option affect selection of the remedial alternative for radionuclides)?	Section 4.2.2.6 was revised to clarify that (1) the shoreline protection actions specified in the FS Report will address the RAOs specified for both radionuclides and nonradioactive chemicals, and (2) Alternatives R-2 and R-3 include screening, removal, and disposal of radioactive contamination along the shoreline but do not include any additional shoreline protection actions beyond those specified in the FS Report.

Comments provided by Water Board Project Manager (Tina Low) dated February 15, 2012 (continued)				
3	5-4	§5.2.2; §5.2.3	These sections state that Alternatives R-2 and R-3, respectively, involve “excavation and off-site disposal of soil, sediment and debris containing ROCs exceeding the RGs...with <i>excavation generally limited to 1 ft. bgs</i> [italics added].” In Section 4.2.2.2, “Soil, Sediment, and Debris Removal,” it is stated that at all sites other than IR-02 and IR-03, “excavation would extend as deep as necessary to removal soil containing ROCs at activities exceeding the RGs.” Please revise/correct Sections 5.2.2 and 5.2.3 to be consistent with Section 4.2.2.2.	Sections 5.2.2 and 5.2.3 were revised to be consistent with Section 4.2.2.2.

Table 4. Responses to Comments from the City and County of San Francisco Department of Public Health (CCSF DPH) on the Draft Final Radiological Addendum to the Feasibility Study (FS) Report for Parcel E, Hunters Point Shipyard (HPS), November 2011

Comment #	Page #	Section (§)	Comment	Response
Comments provided by CCSF DPH Environmental Engineer (Amy Brownell) dated January 6, 2012				
1	3-7 – 3-11	§3.3.1.2	The discussion regarding Institutional Controls unfortunately still reflects the conflicting DoD vs. EPA definitions for Institutional Controls, similar to the unsatisfactory Parcel E FS and Parcel C RD language that was discussed when we met with the Navy on November 16, 2011. Our discussion encompassed all aspects of the imprecise and sometimes inaccurate Institutional Control language in some Navy documents. The City requests that the Navy continue to work toward language that is more precise, particularly as it pertains to long-term remedy implementation, monitoring, and reporting.	At the meeting on November 16, 2011, the Navy stated its position that the requested changes were not practical to implement. The technical rationale for the Navy’s position is described in the response to CCSF ³ general comment 4 on the Draft Final FS Report. In addition, the Navy wishes to clarify that the existing language has been reviewed and approved by legal counsel from the Navy, EPA, and DTSC.
2	--	General	There are several instances in this document where it appears that the Navy intended to refer to Parcel E but inadvertently referred to Parcel E-2. Examples include: p. 1-3, first full paragraph; p. 2-42, paragraph below bullet list; Section 3.3, first paragraph; p. 3-15, first full paragraph; among others.	The document was revised to correct references to Parcel E-2.
