NIST Research Update

Michael Coble
 Peter M. Vallone, Margaret C. Kline, Amy E. Decker, Janette W. Redman, Becky Hill, David L. Duewer, John Butler

April 6, 2005

Strathclyde Police DNA Laboratory – Glasgow, Scotland

NIST Human Identity Project Team

John Butler (Project Leader) Pete Vallone Margaret Kline Jan Redman

Amy Decker Mike Coble Dave Duewer

Becky Hill (new hire)

Funding:
 Interagency Agreement between National Institute of Justice and NIST Office of Law Enforcement Standards

National Institute of Justice
 The Research, Development, and Evaluation Agency of the U.S. Department of Justice

Current Areas of NIST Research Effort

- **Standard Information Resources** (STRBase information, training materials/review articles, validation standardization, calibration datasets)
- **Interlaboratory Studies** (Real-time PCR, mixture interpretation)
- **Resources for “Challenging Samples”** (miniSTRs for degraded DNA)
- **Information on New Loci** (Y-Chromosome, new STRs)

Standard Information Resources

STRBase, training materials, variant allele sequencing etc.

STRBase Updates (since July 2004)

- Validation section
- miniSTR section
- Y-chromosome information (multiplexes & databases)
- Population data summary & OmniPop program download (courtesy of Brian Burritt)
- Reference Sequences for Commonly Used STR Markers

More minor additions

- Additional commercial STR kit schematics (Yfiler, PowerPlex Y)
- Published Promega primers (added PP16)
- Additional NIST publications/presentations (14 new talks, 12 new papers)
- Additional variant alleles & scientist addresses

<http://www.cstl.nist.gov/biotech/strbase/>

NEAFS Workshop Slide Handouts

Handouts available as downloadable pdf files from <http://www.cstl.nist.gov/biotech/strbase/NISTpub.htm#NEAFSworkshop>

2 day workshop with **>500 slides** describing STRs and CE (ABI 310 and ABI 3100)

NEAFS CE-DNA Workshop (Butler and McCord) Sept 29-30, 2004

Capillary Electrophoresis in DNA Analysis

STR Analysis

NEAFS Workshop
 Mystic, CT
 September 29-30, 2004
 Dr. John M. Butler
 Dr. Brian R. McCord

Outline for Workshop

- Introductions
- STR Analysis
- Introduction to CE and ABI 310
- Data Interpretation
- Additional Topics – Real-time PCR and miniSTRs
- Higher Throughput Approaches
- Troubleshooting the ABI 310 (Participant Roundtable)
- Additional Topics – Y-STRs, validation, accuracy
- Review and Test

Review Article on STRs and CE

pdf available from <http://www.cstl.nist.gov/biotech/strbase/NISTpub.htm>

Electrophoresis 2004, 25, 1397-1412

Validation Standardization Efforts

Presentation at Promega meeting (October 2004)

<http://www.cstl.nist.gov/biotech/strbase/validation.htm>

Can Validation be Standardized?

Validation Standardization Questionnaire (conducted June-August 2004)

Statements from survey responders...
Over 86% (45/52) said yes

Those who responded "no" said

- "to some degree it can be, however, validation is specific to the platform, kits, ...",
- "a start-up lab should do much more than an experienced lab...",
- "validation builds on previous work by lab or published data",
- "parts of it can be standardized; I don't think the non-probative cases could be", and
- "only in a general way, as with the SWGDAM guidelines. The uniqueness of each new procedure would make standardization difficult."

Our Conclusion...
to a certain extent it can...but everyone will always have a different comfort level...and inflexible, absolute numbers for defined studies will not likely be widely accepted

New Validation Homepage on STRBase

<http://www.cstl.nist.gov/biotech/strbase/validation.htm>

Validation Information to Aid Forensic DNA Laboratories

Validation Summary Sheets

We are initiating an effort to catalog literature. The purpose of this effort is to list the number of samples tested, and the number of samples analyzed by forensic DNA laboratories. The SWGDAM Revised Validation Guidelines are documented and summarized.

Below is listed a compilation of reference STR kits, in-house assays, instruments, and references. A bibliography is listed at the bottom of each sheet.

Kit, Assay, or Instrument	Ref	How?
PowerPlex Y	100	100
Profiler Plus	101	101
COiler	102	102
AmplifSTR Blue	103	103
AmplifSTR Green 1	104	104

Other information and conclusions

Validation Summary Sheet for PowerPlex Y

Study Completed (17 studies done)	Description of Samples Tested (performed in 7 labs and Promega)	# Run
Single Source (Concordance)	5 samples x 8 labs	40
Mixture Ratio (male:female)	6 labs x 2 M:F mixture series x 11 ratios (1:0, 1:1, 1:10, 1:50, 1:100, 0.5:300, 0.25:300, 0.125:300, 0.0625:300, 0.03300 ng M:F)	132
Mixture Ratio (male:male)	6 labs x 2 MM mixtures series x 11 ratios (1:0, 19:1, 9:1, 5:1, 2:1, 1:1, 1:2, 1:5, 1:9, 1:19, 0:1)	132
Sensitivity	7 labs x 2 series x 6 amounts (1/0.5/0.25/0.125/0.06/0.03)	84
Non-Human	24 animals	24
NIST SRM	6 components of SRM 2395	6
Precision (ABI 3100 and ABI 377)	10 ladder replicates + 10 sample replicated + [8 ladders + 8 samples for 377]	36
Non-Probative Cases	65 cases with 102 samples	102
Stutter	412 males used	412
Peak Height Ratio	N/A (except for DYS385 but no studies were noted)	
Cycling Parameters	5 cycles (28/27/26/25/24) x 8 punch sizes x 2 samples	80
Annealing Temperature	5 labs x 5 temperatures (54/58/60/62/64) x 1 sample	25
Reaction volume	5 volumes (50/25/15/12.5/6.25) x [5 amounts + 5 concentrations]	50
Thermal cycler test	4 models (480/2400/9600/7000) x 1 sample + [3 models x 3 sets x 12 samples]	76
Male-specificity	2 females x 1 titration series (0-500 ng female DNA) x 5 amounts each	10
TaqGold polymerase titration	5 amounts (1.382, 0.692, 0.346, 0.173, 0.086) x 4 quantities (10, 50, 250, 13 ng DNA)	20
Primer pair titration	5 amounts (0.5x/0.75x/1.5x/2x) x 4 quantities (10, 50, 250, 13 ng DNA)	20
Magnesium titration	5 amounts (1.1, 2.5, 5.1, 7.5, 2 mM Mg) x 4 quantities (10, 50, 250, 13 ng DNA)	20
Krenke et al. (2005) Forensic Sci. Int. 148: 1-14		TOTAL SAMPLES EXAMINED 1269

Laboratory Internal Validation Summaries

We invite updates to this table. Please contact John Butler <john.butler@nist.gov> if you would like to add a summary of your laboratory's validation studies with a particular forensic DNA test, instrument, or software program. Please submit information in a standard format summarizing the studies conducted, a description of samples run, and the number of samples examined using the downloadable Excel file ([click here](#)).

Summaries of Validation Studies Conducted in Individual Laboratories (not published in the literature)

Kit, Assay or Instrument	Laboratory	Submitter
PowerPlex 16 Kit with ABI 310	Pennsylvania State Police	Christina Tomasz
Quantifiler with ABI 3100	Alabama Department of Forensic Sciences	Angelo D'ella Mascia

Soliciting Information on Studies Performed by the Community

Study Category	Description of Samples Run with Comments on Validation	# of Samples	# of Laboratories
Single Source (Concordance)	8 samples (8 samples concordance) x 200 samples each (if population concordance study)	200	100
Mixtures	48	45	10
Mixture Ratio	1 sample x 11 ratios (1:1, 1:1.1, 1:1.1, 1:1.2, 1:1.4, 1:1.8, 1:1.9, 1:2) x 2 replicates (500 replicates)	22	33
Sensitivity	5 samples x 5 amounts (500f, 50f, 25f, 12.5f, 6.25f) x 5 replicates x 3 points (4800-60000) (30000)	55	33
Non-Human	11 animals	11	0
NIST SRM 2391b	12 components	12	12
Precision (ABI 310)	(5 samples x 10 replicates each) x 10 replicates of allele ladders	60	60
Non-Probable Cases	5 cases x 4 samples each (evidence EP37/AR6/US/AS/CT)	20	20
Stutter	200 samples (data used from population samples)	-	-
Peak Height Ratio	200 samples (data used from population samples)	-	-
Cycling Parameters	14 samples x 2 different cycle numbers (2002) x 2 fraction times (35 seconds)	56	-
Annealing Temperature	3 samples x 4 concentrations (2.0f, 5.0f, 10.0f, 25.0f) x 5 temperatures (55/56/57/58/59)	60	0
Proficiency	8 sets x 4 samples per set	36	12
Substrate	9 common substrates x 1 sample each	9	0
Environment	5 conditions (cold/dry/dark/low humidity) x 6 time points (24h/120h/480h/168h)	30	0
Various Issues	Bone, hair, teeth, semen, perspiration, urine, blood, semen, vaginal fluid (minimum of one sample each)	9	0
TOTAL SAMPLES RUN		633	200

Goals of this Validation Standardization Project

- To help the community gain a better understanding of the validation process and how others have implemented validation in their labs so that validation in one's own lab may be performed more quickly
- To help with establishing uniformity throughout the field to aid auditors in their inspections

NIST QA/QC Software

Tool being developed by Dave Duewer for STR Process Control

Tracks Kit size standard in samples

Will be available soon for beta-testing; still working on user's manual (and will need NCBI file conversion program to be more easily accessible)

This software does not perform genotyping.
It merely permits a view of analytical parameters over time.

Variant Allele Sequencing

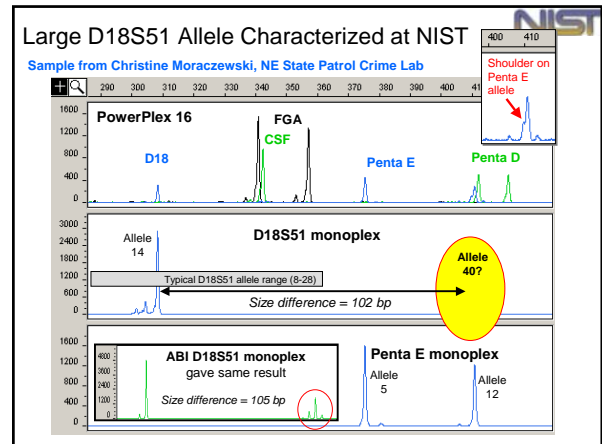

- Recent examples:
 - D18 null alleles
 - D18 large allele
 - DYS392 variant
- AAFS talk (Feb 26, 2005) by Margaret Kline on sequencing methods and applications
- We are happy to sequence unusual variant alleles for laboratories

Extreme D18S1 Variants

Range 258 – 396 bp

Samples amplified with Identifiler. Nominal range 8 - 28
Small D18 allele just outside of the TPOX allele range.
Large D18 is 46 bp larger than the D18 allele range.

Gel Separation Of D18 Variant Alleles

Analysis of Common STR Variant Alleles

- We have monoplex primers for all common STR loci and kits
- We have sequencing primers that bind outside of STR kit primer sequence positions to enable view of polymorphic nucleotides that cause primer binding site mutations
- NIJ has funded us to characterize STR variants for the forensic DNA community

D16S539 (bottom strand)

Interlaboratory Studies

DNA Quantitation (2004) – in press (May issue JFS)

Mixture Interpretation (2005) – under evaluation

Mixture Interpretation Interlab Study (MIX05)

- Only involves interpretation of data
- As of early March, ~97 labs are enrolled for participation (22 from overseas) – Data are currently being evaluated.
- Four mock cases supplied with "victim" and "evidence" electropherograms (GeneScan .fsa files – that can be converted for Mac or GeneMapper; gel files MAC & NT made available to FMBIO labs)
- Data available with Profiler Plus, COfiler, SGM Plus, PowerPlex 16, Identifiler, PowerPlex 16 BIO (FMBIO) kits
- Summary of results with involve training materials to illustrate various approaches to solving mixtures

Perpetrator Profile(s) ??

Along with reasons for making calls and any stats that would be reported

Resources for Challenging Samples

Degraded DNA and Mixtures

NIST

Degraded DNA work

- ENFSI study participation
 - compared STRs, miniSTRs, and autosomal SNPs on same set of degraded DNA samples provided by Peter Gill
- miniSTR website
 - <http://www.cstl.nist.gov/biotech/strbase/miniSTR.htm>
- New miniSTR loci published
 - http://www.cstl.nist.gov/biotech/strbase/pub_pres/Coble2005miniSTR.pdf
- SNP markers and assays
 - <http://www.cstl.nist.gov/biotech/strbase/SNP.htm>
- Performance of miniSTRs on shed hairs
 - Mike Coble spoke at AAFS (Feb 25, 2005)

NIST

STR Size Reduction

Through Moving Primer Positions Closer to Repeat

Forward flanking region *Reverse flanking region*

STR repeat

Primer positions define PCR product size
Repeat information is independent of amplicon size

Advantages of Approach:
 Size reduction enhances success rate with degraded DNA
 Retains same marker information (database compatibility)
 Uses highly polymorphic STR loci (high discriminatory power)

NIST

New STR loci beyond CODIS
