Forensic DNA Research

at the U.S. National Institute of Standards and Technology

Becky Hill

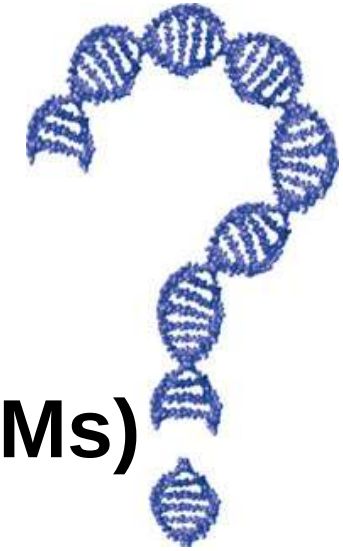
Applied Genetics Group

National Institute of Standards and Technology

Gaithersburg, Maryland

Presentation Outline

Please ask questions



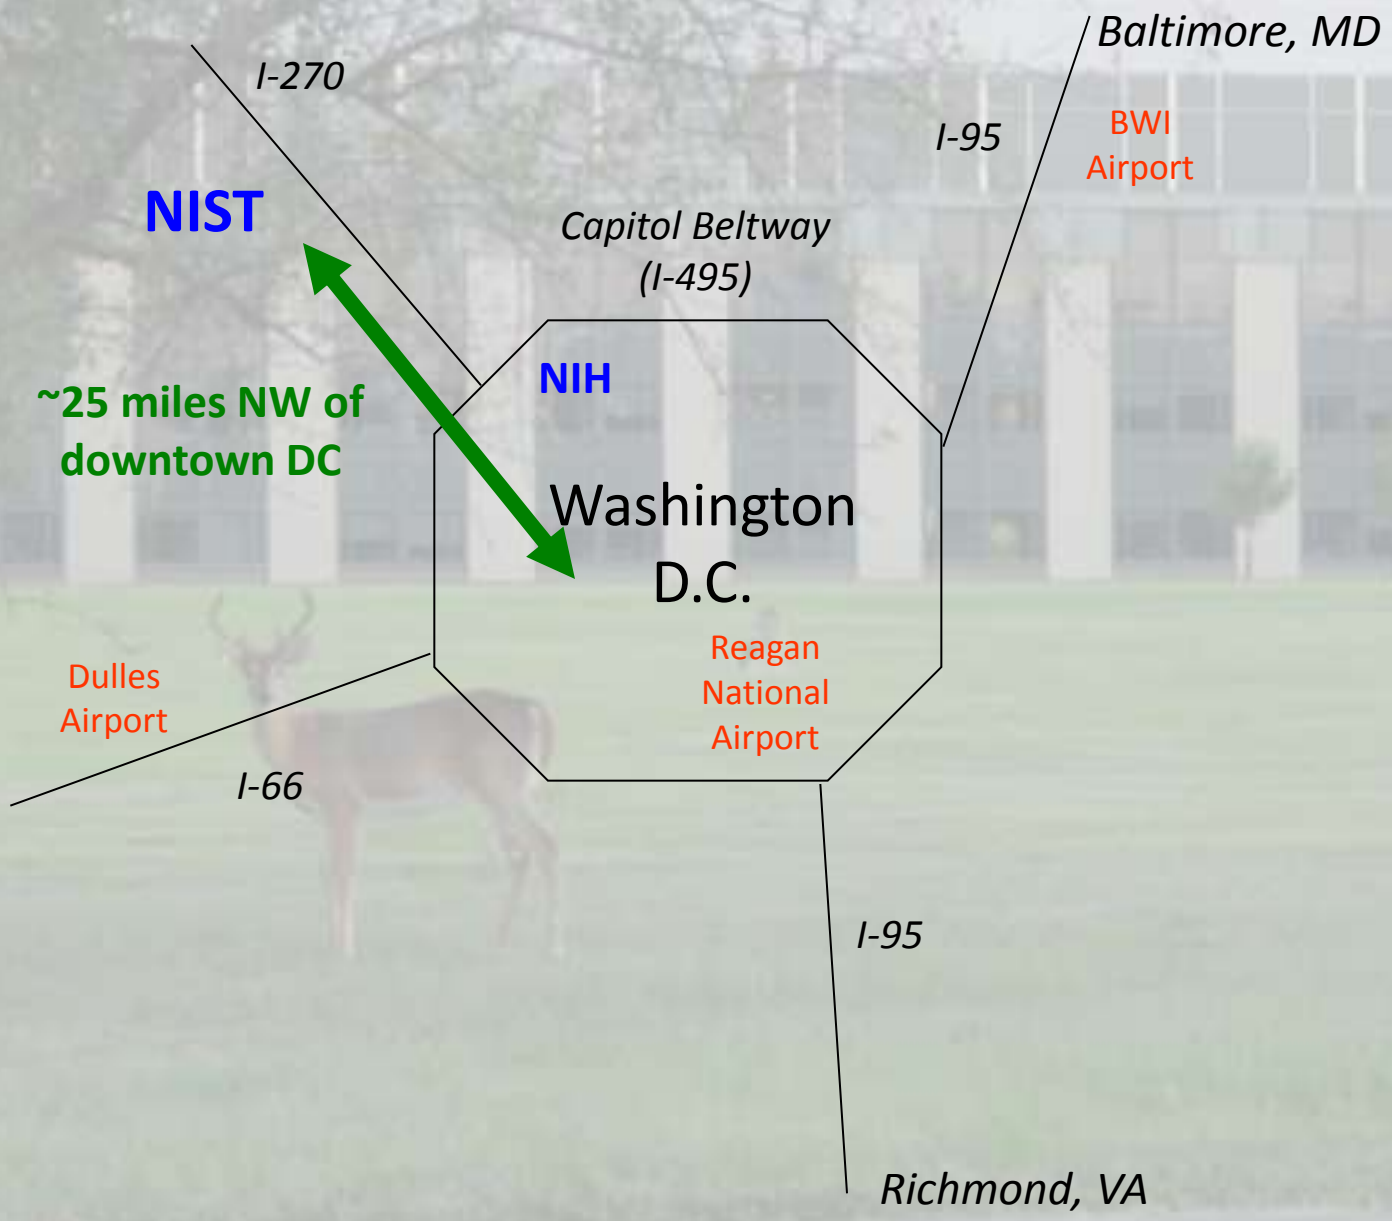
- **NIST**
  - location, role, organizational structure, funding
- **Applied Genetics Group**
  - members, expertise, funding
- **Standard Reference Materials (SRMs)**
  - SRM 2391c: DNA Profiling Standard
- **Forensic DNA Research**
  - Concordance studies, miniSTRs and 26plex
- **Final thoughts and some advice for you…**

NIST Background

U.S. National Institute of Standards and Technology

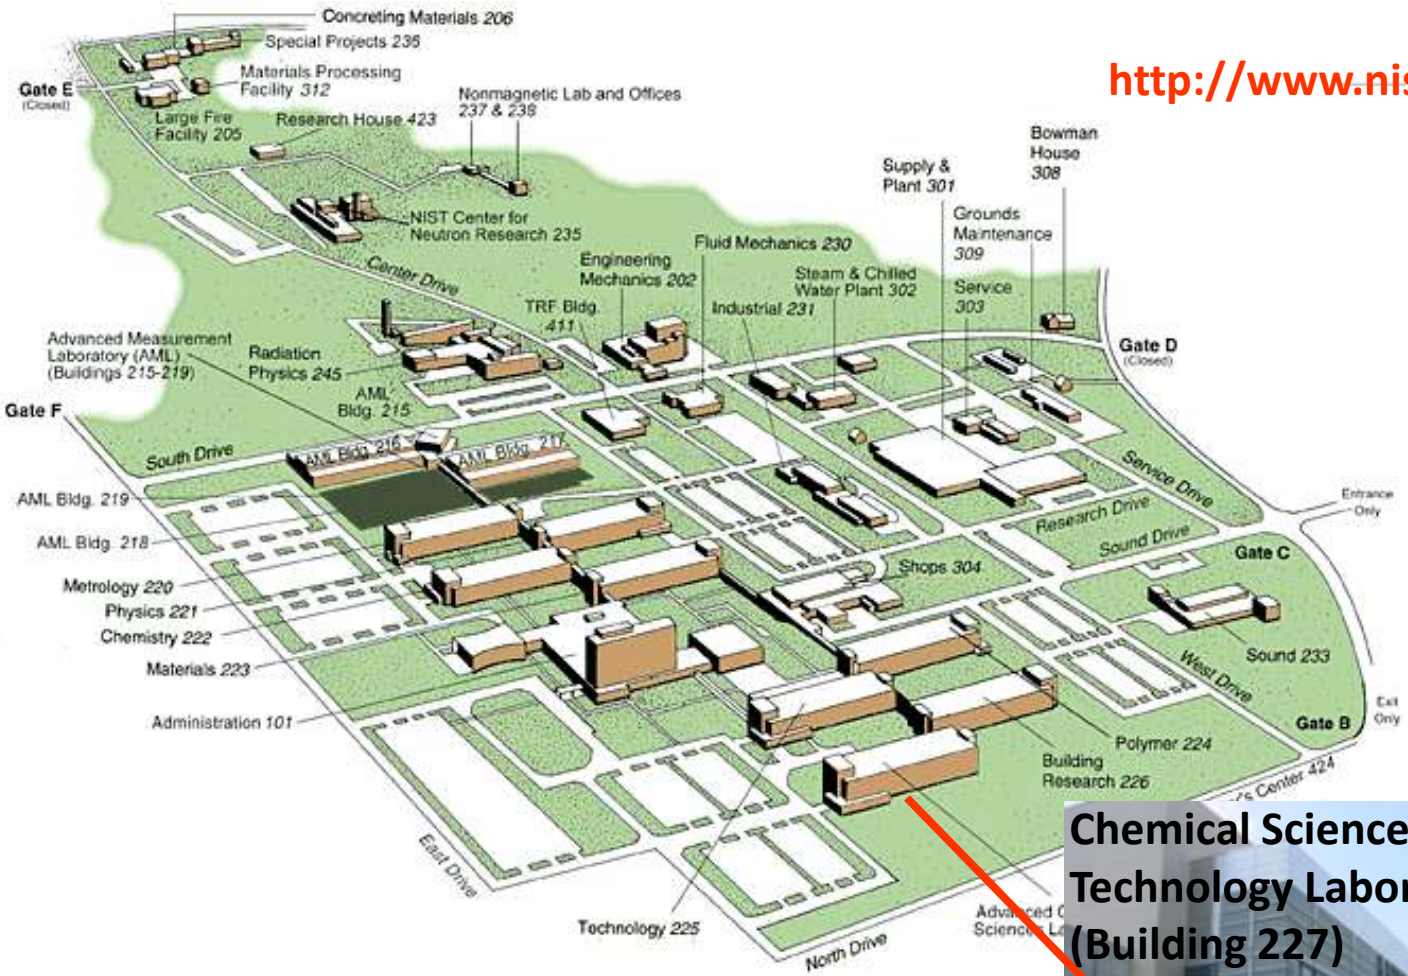
Department of Commerce

Location of NIST



NIST Gaithersburg Campus

http://www.nist.gov



National Institute of Standards & Technology (NIST)

- **Non-regulatory agency** established in 1901 in the US Department of Commerce.
- Mission to promote US innovation and industrial competitiveness by advancing measurement science, standards & technology.
- NIST is at the top of the US standards pyramid for a wide variety of physical standards, test methods, and calibrations.

Early Driver for U.S. Standards

1904

- Out-of-town fire companies arriving at a Baltimore fire cannot couple their hoses to the hydrants. 1526 buildings razed.

1905

- National Fire Protection Association adopted NBS-developed national hose coupling standard.

NIST Today

Major Assets

- ~ 2,900 employees
- ~ 2600 associates and facilities users
- ~ 400 NIST staff on about 1,000 national and international standards committees
- 3 Nobel Prizes in past 15 years

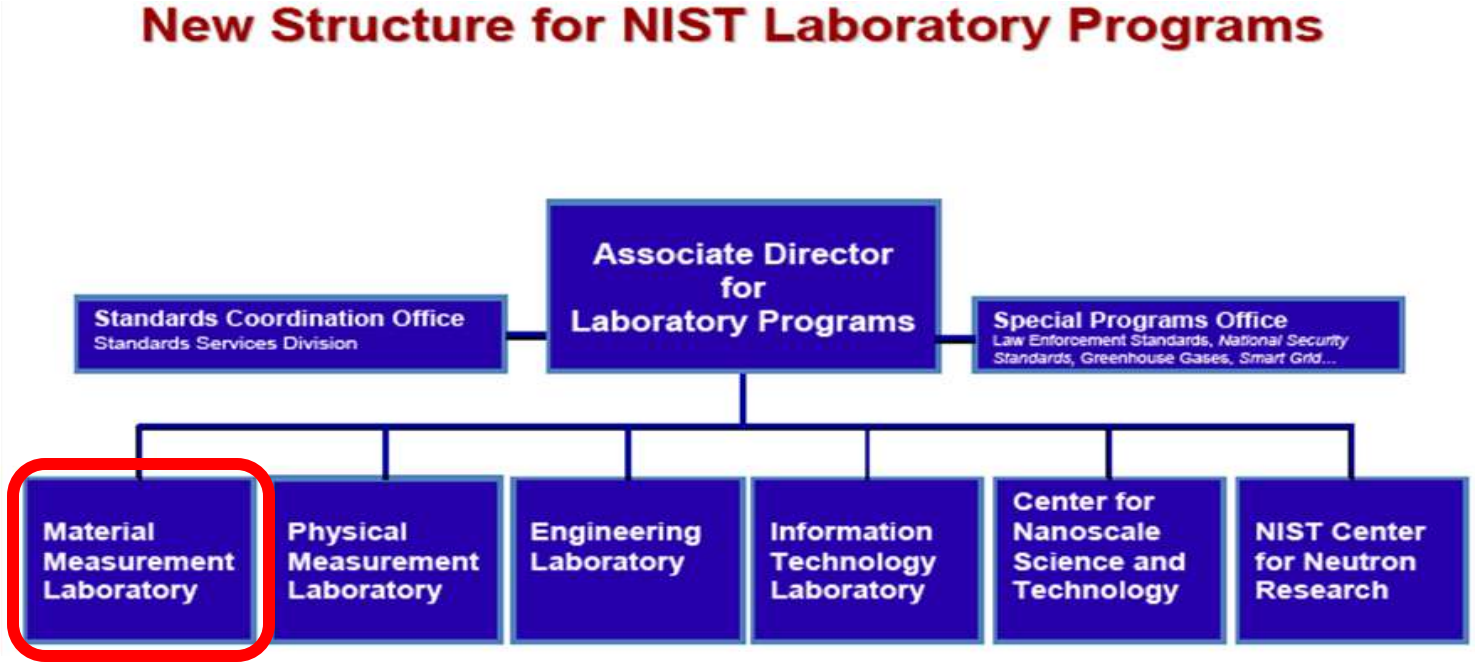
Major Programs

- **NIST Laboratories**
- Baldridge National Quality Program
- Hollings Manufacturing Extension Partnership
- Technology Innovation Program

Joint NIST/University Institutes:

- JILA
- Joint Quantum Institute
- Institute for Bioscience & Biotechnology Research
- Hollings Marine Laboratory

The NIST Laboratories



Traditionally focused research and measurement service activities on physical science and engineering disciplines

Bioscience and Health identified as a new area for significant emphasis for NIST labs

NIST Biochemical Science Division

Laurie Locascio
Division Chief

Process Sensing

NIST Applied Genetics Group

NIST
Applied
Genetics

Applied Genetics
Group Mission Statement

Advancing technology and traceability through quality genetic measurements to aid work in

- **forensic DNA testing**
- **clinical diagnostics**
- **cell line authentication**
- **agricultural biotechnology**
- **DNA biometrics**

NIST Applied Genetics

APPLIED GENETICS Group

Major Programs Currently Underway

- **Forensic DNA**
  - New loci and assays (26plex)
  - STR kit testing
  - Ancestry SNP assays
  - Low-template DNA studies
  - Mixture interpretation
  - STR nomenclature
  - Variant allele cataloging and sequencing
  - Expert systems review
  - Training workshops to forensic DNA laboratories
  - Validation information and software tools
  - Textbook – 3rd ed. (2 vol.)

- **Clinical Genetics**
  - Huntington's Disease SRM
  - CMV SRM
  - Exploring future needs

- **Ag Biotech**
  - "universal" GMO detection/ quantitation (35S promoter)

- **DNA Biometrics**
  - Rapid PCR methods
  - Efforts to standardize testing of future portable DNA systems
  - Kinship analysis

- **Cell Line Authentication**

NIST Applied Genetics

Group Expertise and Funding Sources

Group Expertise

- Reference Material Characterization
- Standard Information Resource Development
- Rapid Multiplex PCR Assay Construction
- Short Tandem Repeat (STR) Genotyping
- Single Nucleotide Polymorphism (SNP) Genotyping
- DNA Sequencing
- Training Materials and Workshops (validation info)

Current Funding Sources

- **National Institute of Justice** (Forensic DNA)
- **FBI Science & Technology Branch** (DNA Biometrics)
- **NIST SRM Program** (SRM development and production)
- **Base funding from Congress (clinical DNA)**

NIST Human Identity Project Teams
within the Applied Genetics Group

Forensic DNA Team

Funding from the **National Institute of Justice (NIJ)** through NIST Office of Law Enforcement Standards

John Butler

Workshops & Textbooks

Mike Coble

Mixtures, mtDNA & Y

Becky Hill

Concordance & LT-DNA

Margaret Kline

SRM work, variant alleles & Cell Line ID

Guest Researcher

Manuel **Fonde**vila Alvarez

Data Analysis Support

Dave Duewer

DNA Biometrics Team

Funding from the **FBI S&T Branch** through NIST Information Access Division

Pete Vallone

Rapid PCR, Direct PCR & Biometrics

Erica Butts

ABI 3500 & DNA Extraction

Kevin Kiesler

mtDNA & Mass Spec

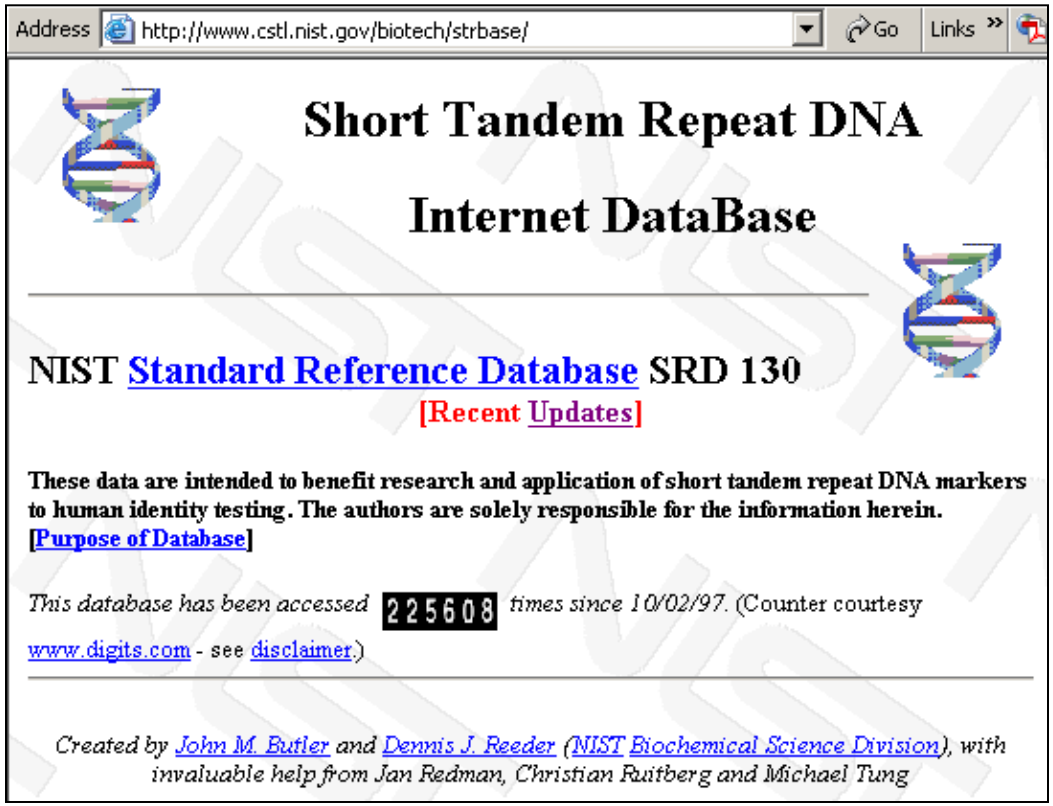
Current Areas of NIST Effort with Forensic DNA

- **Standards**
  - Standard Reference Materials
  - Standard Information Resources (STRBase website)
  - Interlaboratory Studies
- **Technology**
  - Research programs in STRs, SNPs, miniSTRs, Y-STRs, mtDNA, qPCR, LT-DNA, mixtures, rapid PCR
  - Assay and software development, expert system review
- **Training Materials**
  - Textbooks, review articles and workshops on STRs, CE, validation
  - PowerPoint and pdf files available for download
  - Training workshops conducted to scientists, lawyers, and students

http://www.cstl.nist.gov/biotech/strbase/NIJprojects.htm

Information Resource

http://www.cstl.nist.gov/biotech/strbase



Includes information on:

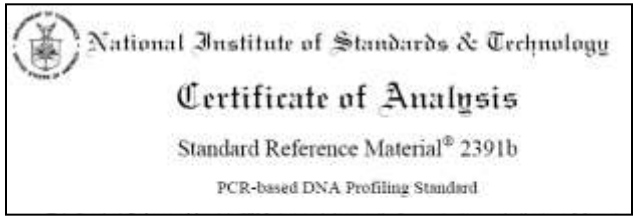
- Core STR loci
- Validation
- STR reference list
- NIST publications
- miniSTRs
- Forensic SNPs
- Variant STR alleles
- Population data resources
- Addresses of scientists

Provides up-to-date information and has been used in court cases to support application of DNA technology

Standard Reference Materials (SRMs)

http://www.nist.gov/srm

Traceable standards to ensure accurate and comparable measurements between laboratories



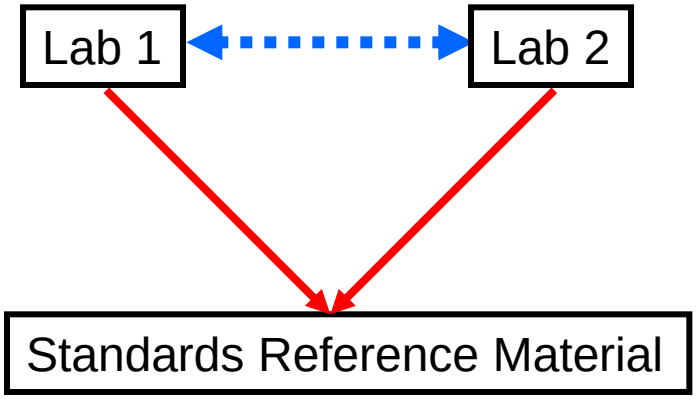
National Institute of Standards & Technology

Certificate of Analysis

Standard Reference Material® 2391b

PCR-based DNA Profiling Standard

SRM 2391b – autosomal STRs
SRM 2392 &-I – mtDNA sequencing
SRM 2395 – Y-STRs
SRM 2372 – DNA quantitation
SRM 2394 – mtDNA heteroplasmy
SRM 2399 – Fragile X



Calibration with SRMs enables confidence in comparisons of results between laboratories

Helps meet ISO 17025 needs
for traceability to a national metrology institute

2003: NIST SRM 2391b

Driven primarily by commercial kit loci…

National Institute of Standards & Technology

Certificate of Analysis

Standard Reference Material® 2391b

PCR-based DNA Profiling Standard

This Standard Reference Material (SRM) is intended primarily for use in the standardization of forensic and paternity quality assurance procedures for Polymerase Chain Reaction (PCR)-based genetic testing and for instructional law enforcement or non-clinical research purposes. This SRM can also be used for quality assurance when assigning values to in-house control materials. It is not intended for any human or animal clinical diagnostic use. Note that SRM 2391b is slightly modified from SRM 2391, in that there is more emphasis on Short Tandem Repeats (STRs) and less emphasis on D1S80 [1,2] reflecting the growing interest and utility of STRs [3 to 14]. Additional information on each STR locus can be found at a NIST-sponsored database on the internet: http://www.cstl.nist.gov/biotech/strbase [14].

This SRM is composed of well-characterized human deoxyribonucleic acid (DNA) in two forms: genomic DNA and DNA to be extracted from cells spotted onto filter paper. A unit of the SRM is composed of 12 frozen components packaged in one box. See the section in this certificate entitled *Description of Components* for a complete listing of the components.

Certified Values: The SRM is certified for genetic loci of forensic interest that were commercially available at the time of production. Genetic types for these loci can be found in Tables 1, 2, and 3. The tables are organized as follows: Table 1 lists the genetic types for the Federal Bureau of Investigation's (FBI's) CODIS (COmbined DNA Index System) core STR loci; Table 2 lists additional STR loci of interest; and Table 3 lists the genetic types for D1S80, AmpliType® PM + HLADQA1, and Amelogenin.

Expiration of Certification: The certification of this SRM is valid until **31 December 2008**, provided the SRM is handled and stored in accordance with the instructions given in this certificate. However, the certification is invalid if the SRM is contaminated or otherwise modified.

Maintenance of SRM Certification: NIST will monitor this SRM over the period of its certification. If substantive technical changes occur that affect the certification before the expiration of certification, NIST will notify the purchaser. Return of the attached registration card will facilitate notification.

Storage: Store frozen at a temperature of -20 °C. **DO NOT** use a self-defrosting freezer because periodic cycling of temperatures may cause shortened shelf life of this SRM.

The overall direction and coordination of the technical activities leading to certification were under the chairmanship of J.M. Butler of the NIST Biotechnology Division.

Analytical determination and technical measurements leading to the certification of this SRM were performed by M.C. Kline and J.W. Redman of the NIST Biotechnology Division.

The support aspects involved in the preparation, certification, and issuance of this SRM were coordinated through the NIST Standard Reference Materials Group by C.S. Davis.

Vincent Vilker, Acting Chief
Biotechnology Division

48 autosomal STRs characterized across 12 DNA samples

NIST Standard Reference Material (SRM) for Forensic DNA Testing

SRM 2391b (2003-2011)

- **48 autosomal STR loci** with certified values
- **10 liquid genomic DNA** components + **2 punches** (cells on 903 paper)
- All single source samples
- 4 males + 6 females
- 9947A & 9948 included

SRM 2391c (2011-future)

- **23 autosomal STR loci and 17 Y-STRs** certified
- **4 liquid genomic DNA** components + **2 punches** (cells on **FTA** & 903 paper)
- 5 single source + 1 mixture
- 3 males + 2 females (unique)
- All new samples
  - no 9947A or 9948

SRM 2391c to replace SRM 2391b and SRM 2395 (price reduction)

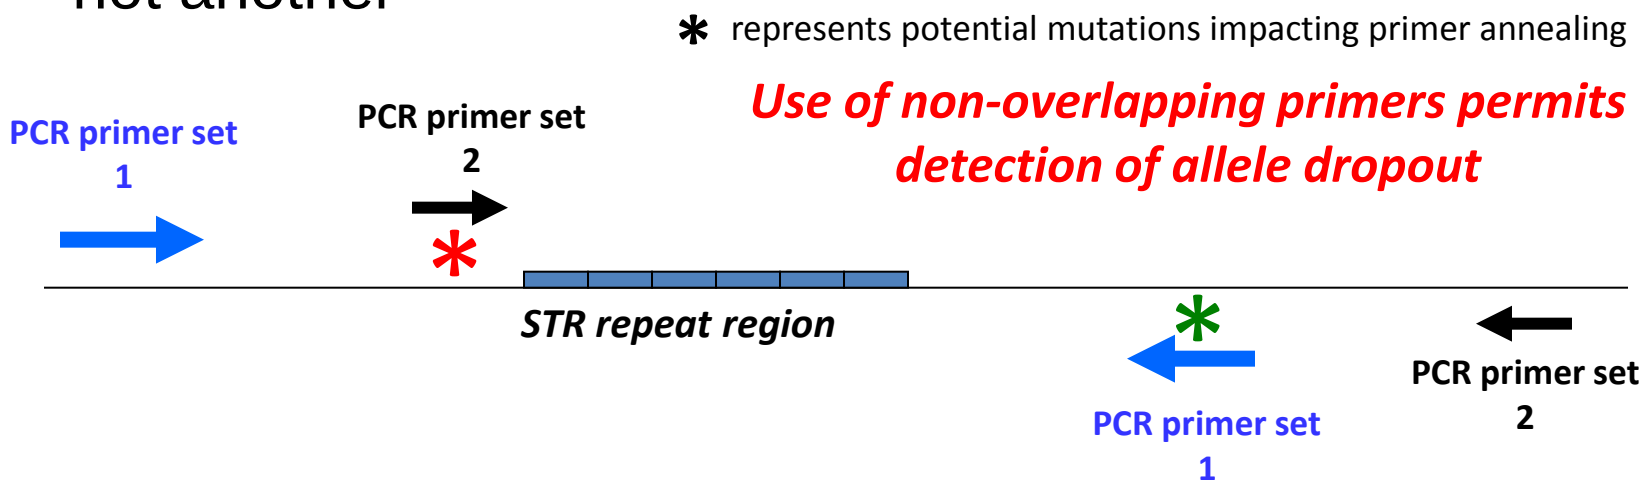
~1/3 of all STR kits were released in the last year

STR Kit Concordance Testing

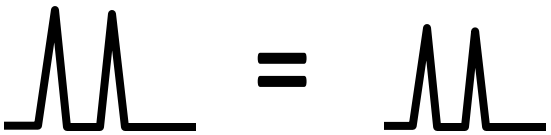
- Many of these STR kits have different primer sequences for amplifying the same STR locus
- Need to analyze the same DNA samples with different STR typing kits looking for differences
- In some rare cases, allele dropout (null alleles) may occur due to mutations in primer binding regions

Purpose of Concordance Studies

When different primer sets are utilized, there is a concern that allele dropout may occur due to primer binding site mutations that impact one set of primers but not another



If no primer binding site mutations



Set 1 Amplicons Set 2 Amplicons

If a primer binding site mutation exists

Set 1 Amplicons Set 2 Amplicons

Strategies for Concordance Testing

Carolyn R. Hill, Margaret C. Kline, David L. Duewer and John M. Butler
National Institute of Standards and Technology, Biochemical Science Division, Gaithersburg, Maryland, USA

Concordance evaluations are important to conduct to determine if there are any allelic dropout or "null alleles" present in a data set. These studies are performed because there are a variety of commercial short tandem repeat (STR) multiplex kits with different configurations of STR markers available to the forensic community. The placement of the markers can vary between kits because the primer sequences were designed to amplify different polymerase chain reaction (PCR) product sizes. When multiple primer sets are used, there is concern that allele dropout may occur due to primer-binding-site mutations that affect one set of primers but not another.

http://www.promega.com/profiles/1301/1301_08.html

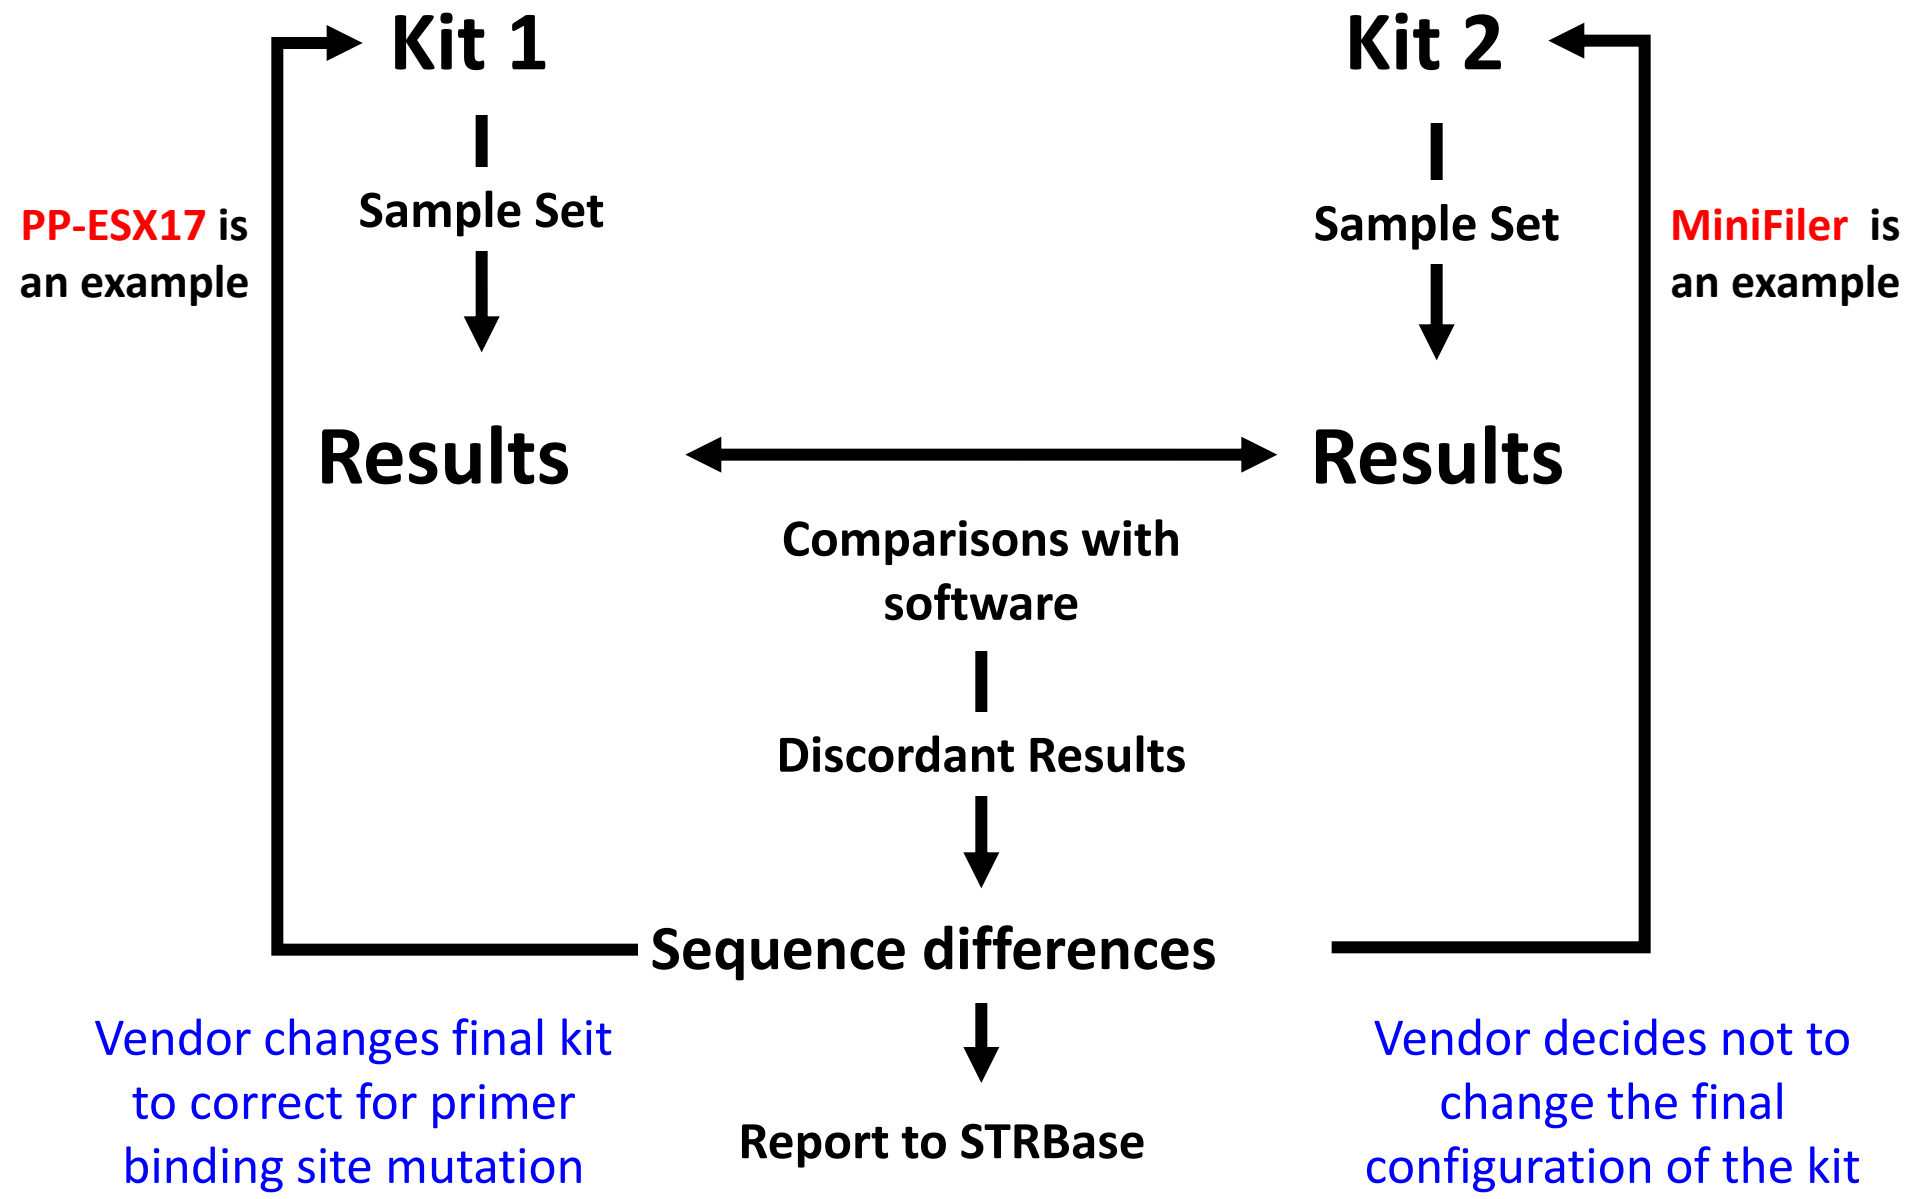
The 4 “S’s” of Concordance

- NIST Standard Samples
  - Run same samples with multiple kits to compare results
- Concordance Software
  - Allows comparison of data sets using NIST developed software

    http://www.cstl.nist.gov/biotech/strbase/software.htm
- DNA Sequencing
  - To validate and determine the exact cause for the null allele
- STRBase website
  - To report verified null alleles and discordant results to the forensic community

    http://www.cstl.nist.gov/biotech/strbase/NullAlleles.htm

NIST Concordance Testing Steps



NIST Sample Set (>1450 Samples)

- **NIST U.S. population samples**
  - 260 African American, 260 Caucasian, 140 Hispanic, 3 Asian

- **U.S. father/son paired samples**
  - ~**100 fathers/100 sons for each group**: 200 African American, 200 Caucasian, 200 Hispanic, 200 Asian

- **NIST SRM 2391b**, PCR-based DNA Profiling Standard (highly characterized)
  - 10 genomic DNA samples, 2 cell line samples
  - Includes 9947A and 9948

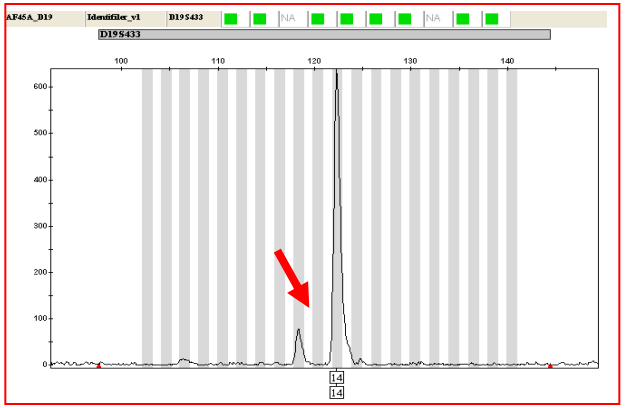
- **NIST SRM 2391c**, PCR-based DNA Profiling Standard
  - 4 genomic DNA (one mixture)
  - 2 cell lines (903 and FTA paper)

Extra (Degenerate) Primers Added with NGM SElect

	NGM (original)		NGM SElect and NGM’	
D2S441 9.1 allele missing in 7 Asians		**11,11**		**9.1,11**
D22S1045 15 allele missing in 4 samples		**17,17**		**15,17**
Amelogenin X allele missing in 3 samples		**Y,Y**		**X,Y**

D19S433 Discordance

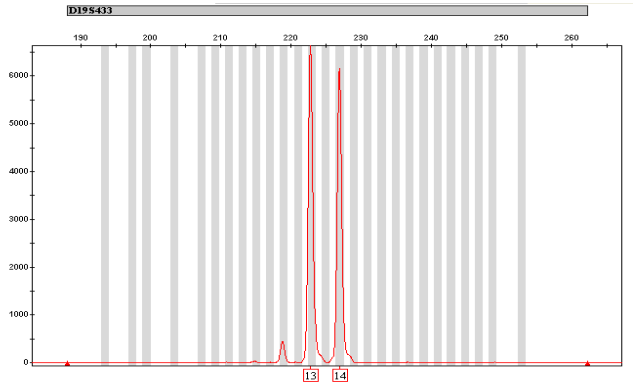
Identifiler & NGM = 14,14



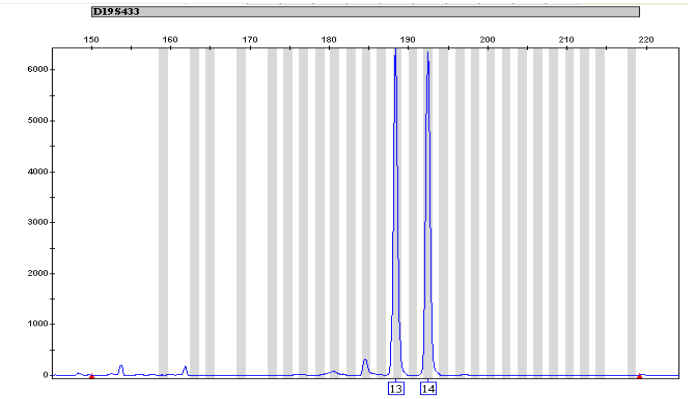
AF45A (Asian)

Allele 13 was missing in **two different Asian samples** with ABI primers
= 2/2886 =
0.07% discordance

ESX 17 = 13,14



ESI 17 = 13,14



Frequencies [for] the silent allele were determined to be 0.0114 in 176 people from Shizuoka (Honshu) and 0.0128 in 156 people from Okinawa

Completed Concordance Studies

Kits compared	Samples	Loci Compared	Comparisons	# Differences	Concordance (%)
111	102,345	1,021	948,301	1,109	99.883

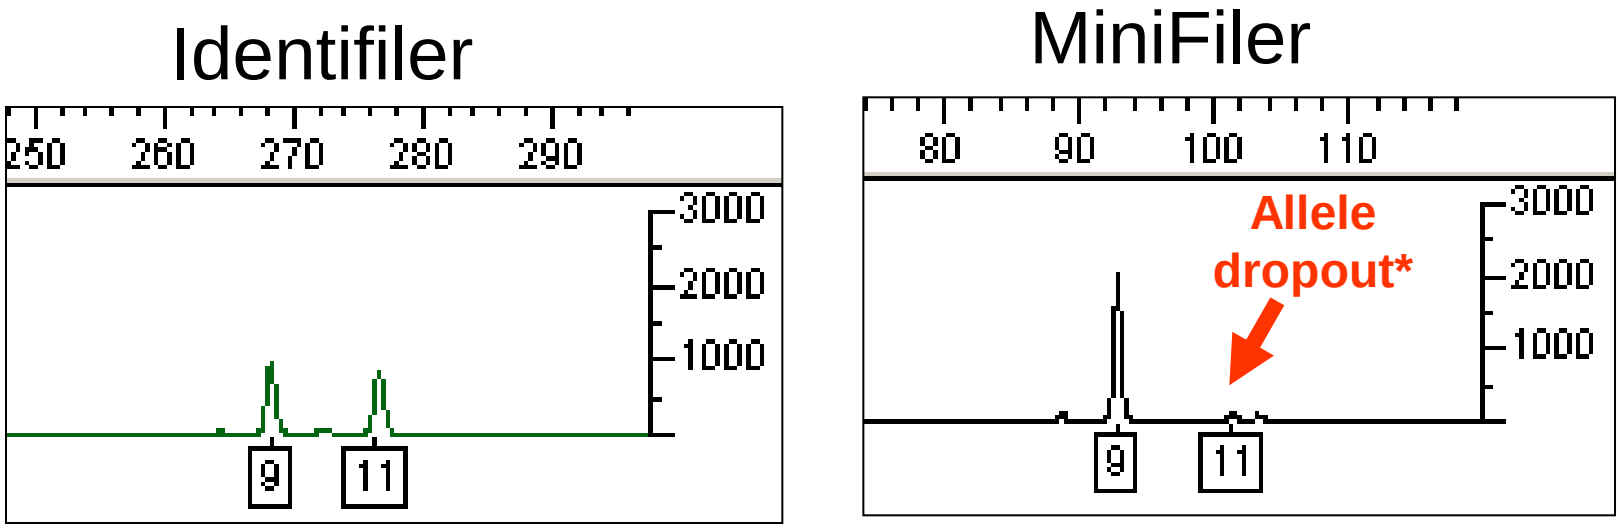
948,301 allele comparisons

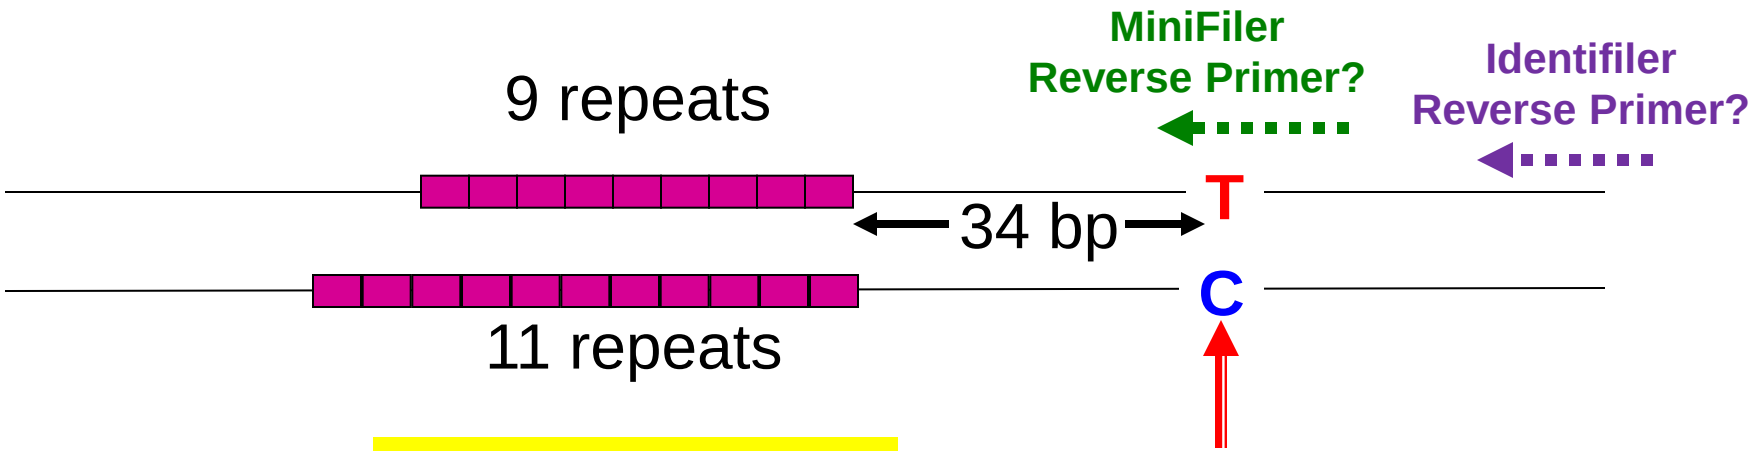
1,109 total differences

99.88% concordance

Kits (except Identifiler) were kindly provided by ***Promega, Qiagen and Applied Biosystems*** *for concordance testing performed at NIST*

SRM 2391b Genomic 8 with D16S539

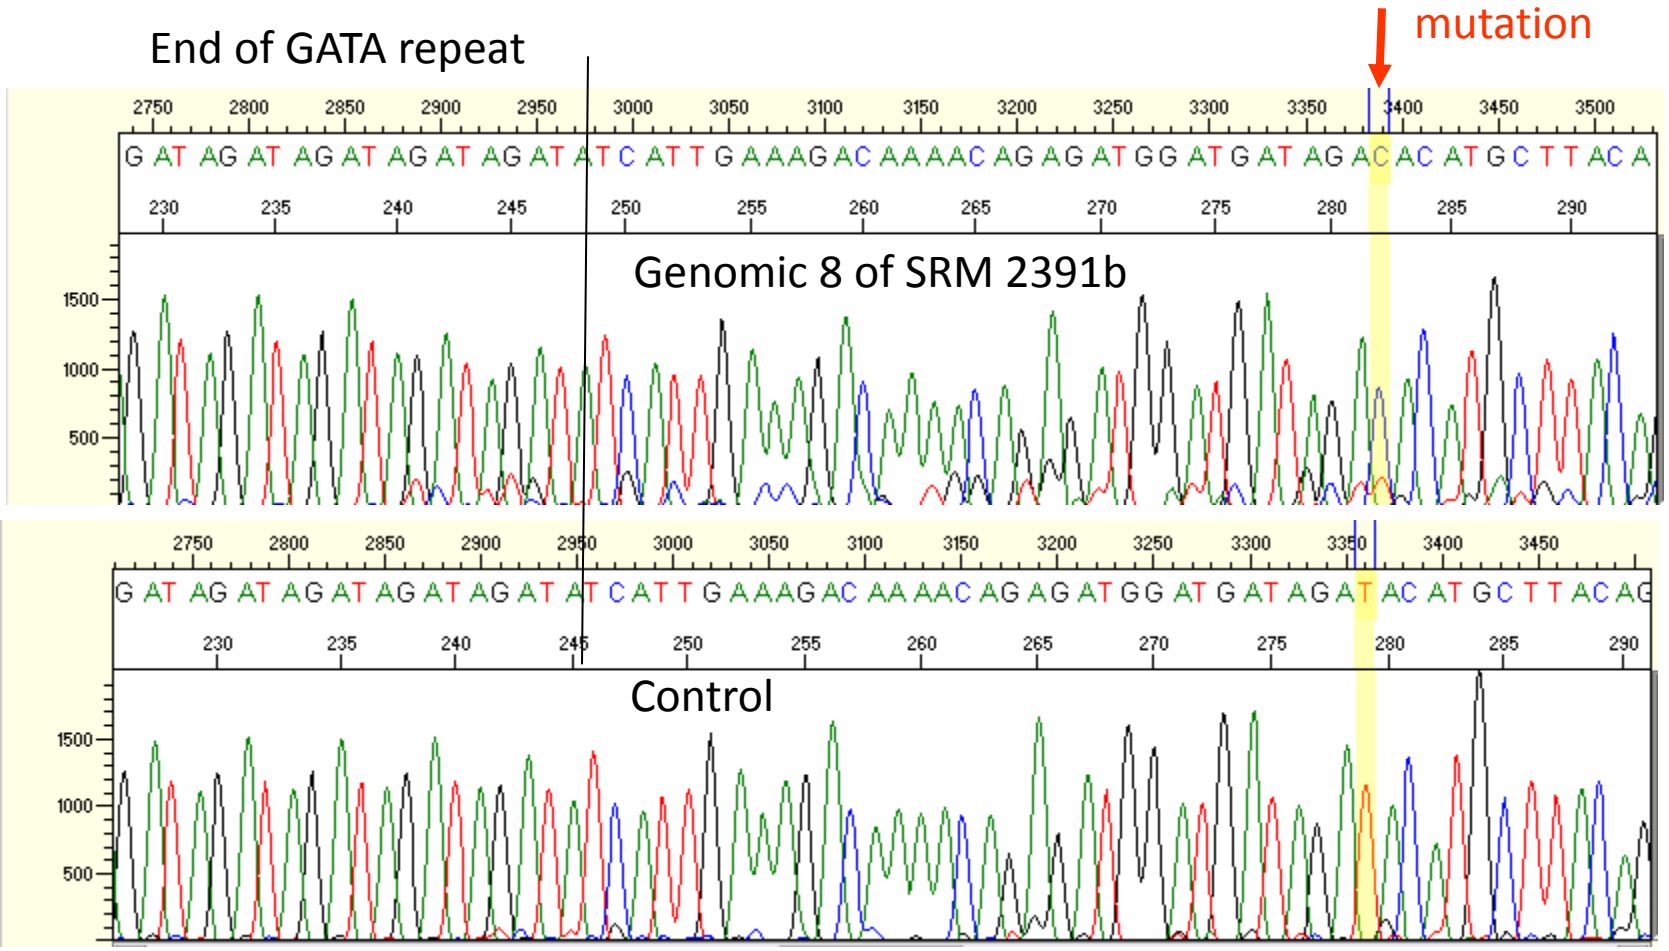




Type 9T,11C

D16S539 SRM 2391b Genomic 8

T→C mutation 34 bp downstream of the repeat



Position of the T→C probably affects the reverse primer of Minifiler and is the 3rd base found the 5'end of the Reverse PP16 primer. This could explain the imbalance of the allele seen when using PP16.

miniSTRs and the 26plex

More Loci are Useful
in Situations Involving Relatives

- **Missing Persons** and Disaster Victim Identification (kinship analysis)
- Immigration Testing (often limited references)
  - Recommendations for 25 STR loci
- Deficient Parentage Testing
  - often needed if only one parent and child are tested

Relationship testing labs are being pushed to answer more difficult genetic questions…and **we want to make sure the right tools are in place**

Selection of New Autosomal Loci

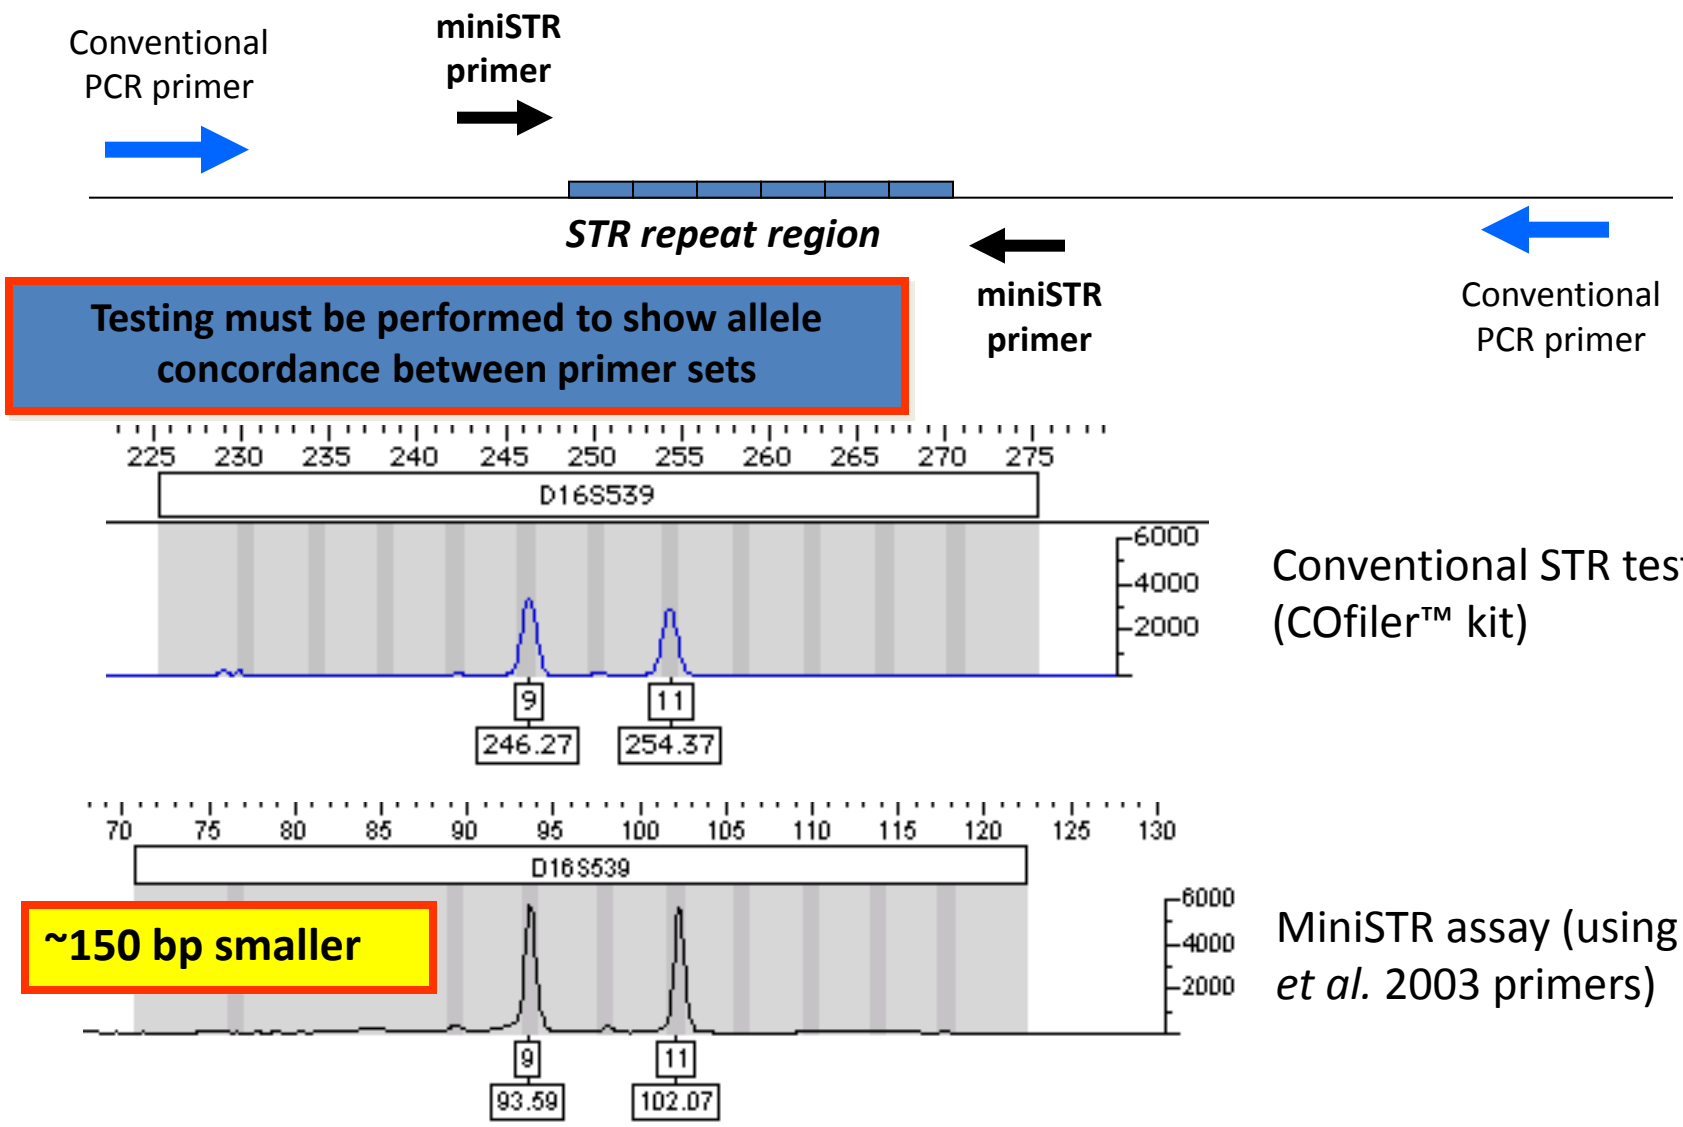
- Aim to have candidate sets for optimal **miniSTRs**
  - Obtaining additional information with degraded DNA samples

- Using ~900 STR loci with some literature data as a starting point…
  - Loci with high heterozygosities (>0.7)
  - Loci with small allele ranges (<24 bp) – low mutation?
  - Tetra (some tri-)nucleotide repeats without variants
  - Clean flanking regions (PCR products <140 bp)

- **26 loci** met criteria and were fully characterized…

Coble and Butler (2005) Characterization of new miniSTR loci to aid analysis of degraded DNA *J. Forensic Sci.* 50(1): 43-53

A miniSTR is a reduced size STR amplicon that enables higher recovery of information from degraded DNA samples



Characterization of New Loci

"Computer Work"

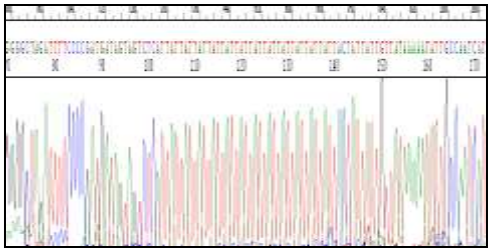
Candidate STR marker selection → **Pull down sequence data from the web** → **Identify Chromosome Location** → **Screen for PCR Primers** → **Test primers for Multiplex-ability**

(e.g. literature searches) (e.g. NCBI) (e.g. Human BLAT Search) (e.g. Primer3) (e.g. AutoDimer - NIST)

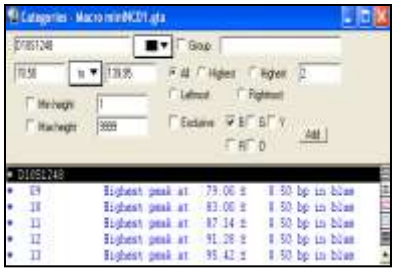
"Laboratory Work"

Test Markers on Population samples

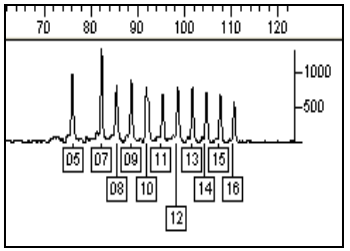
Sequence homozygotes to determine allele sizes



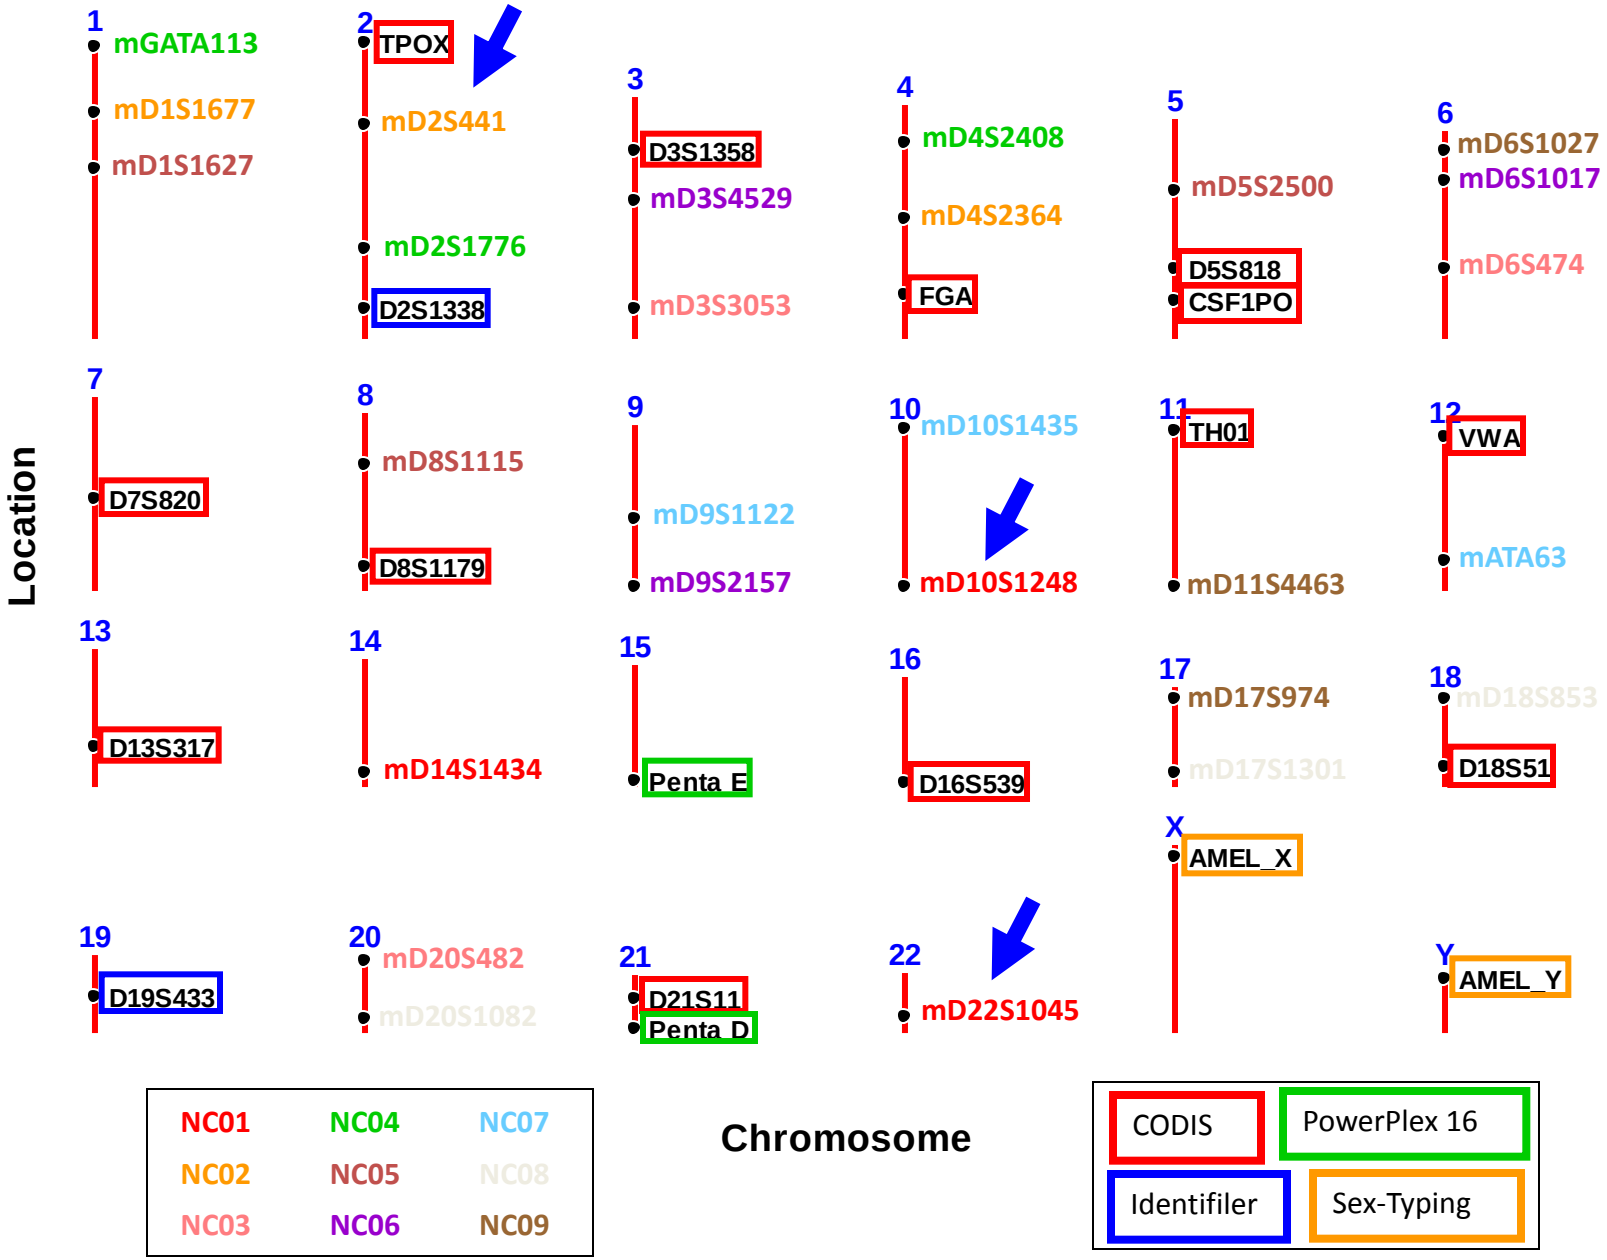
Build Macros for Genotyping



Construct Allelic Ladders



Chromosomal Locations of New miniSTR Loci



Multiple Miniplexes

- **26 characterized loci** divided into 10 miniplexes
- One locus per dye color
- Allelic ladders created
- **Amplicons <140 bp**
- miniSTRs
- Work with 100 pg DNA
- **For degraded samples**
  (bones in missing persons cases)

NC = Non-CODIS or non-core

FSI (2006) **156(2):** 242-244

Short communication

The evolution of DNA databases—Recommendations for new European STR loci

These 3 loci are included in the new European multiplex kits: Applied Biosystems NGM kits and the Promega PowerPlex ESX 16/17 and ESI 16/17 systems

[c] *Department of Forensic Genetics, Institute of Forensic Medicine, University of Copenhagen, Denmark*
[d] *Institute of Legal Medicine, University of Cologne, Germany*

Received 25 May 2005; accepted 26 May 2005

…recommended that existing multiplexes are re-engineered to enable small amplicon detection, and that three new mini-STR loci with alleles <130 bp (D10S1248, D14S1434 and D22S1045) are adopted as universal. This will increase the number of European standard Interpol loci from 7 to 10.

(D14 has been replaced with D2S441 from NC02)

The Design of the Multiplex

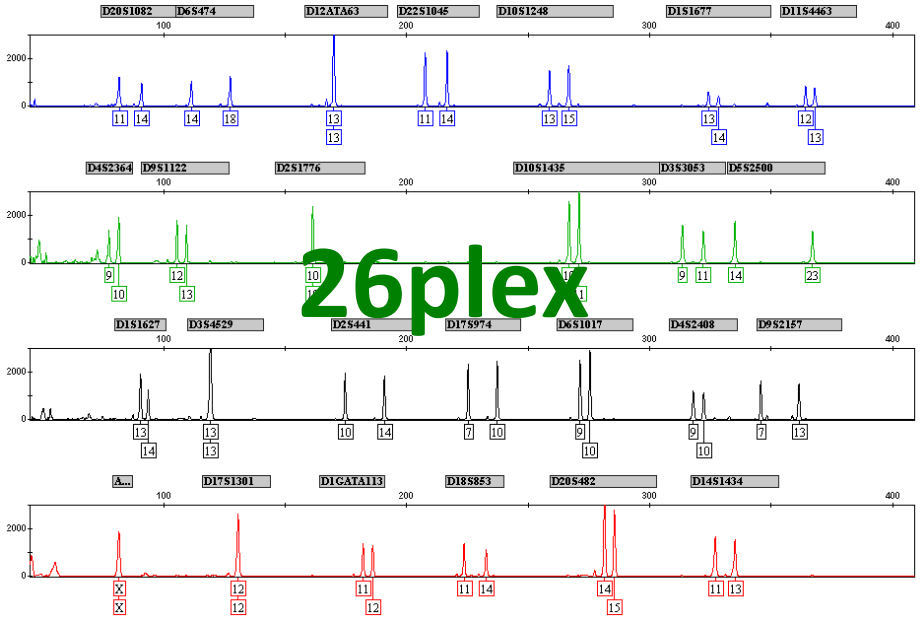
- **Goal**: A single amplification 5-dye multiplex to combine the 26 new autosomal loci + Amelogenin in one reaction (27plex)
- How can this be achieved?
  - Initial placement of all loci within 6FAM, VIC, NED, and PET dye channels (the size standard is in the LIZ channel)
  - Primer redesign for all but 7 of the original miniSTR loci
  - Trial and error of primer compatibility, as well as balancing for all working primers

26plex STR Multiplex

- So far **25 STRs and amelogenin** in single multiplex (Eventual goal to have all 26 loci)
- Multiple loci in four dye channels
- **Amplicons 70 to 400 bp**

  (No longer ‘miniSTRs’)
- Typically use 1 ng DNA, 30 cycles
- **For reference samples**
  (a missing person’s relatives)

“Autoplex” or
“miniMegaplex”



All loci unlinked from core (CODIS) STRs

NIST STR 26plex

Final Thoughts and Advice

Support to the Community

…Bringing traceability and technology to the scales of justice…

- Conduct interlaboratory studies
- Perform beta-testing of new human identity testing products
- **We collaborate with other NIJ grantees**
- We provide input to (or have aided):
  - Scientific Working Group on DNA Analysis Methods (**SWGDAM**)
  - Department of Defense Quality Assurance Oversight Committee for DNA Analysis
  - Virginia DFS Science Advisory Committee
  - American Prosecutor's Research Institute (**APRI**) DNA Forensics Program "Course-in-a-Box" for training lawyers
  - WTC Kinship and Data Analysis Panel (**KADAP**) and Hurricane Katrina efforts
  - NIJ Expert System Testbed (**NEST**) Project

A Few Words of Advice

- Hard work and studying are of the utmost importance in any field and really determining where your interests lie
- Penn State is an excellent school that opens many professional doors, especially in the forensic community
- Making contacts and having professional relationships in the field is crucial to getting your foot in the door, but the rest is up to you!
- Having skills in speaking and writing is essential in this field
  - DNA analysts: writing reports and going to court
  - Research scientists: writing journal articles and giving presentations about your research
