

## Household Products Database

This database links over 12,000 consumer brands to health effects from Material Safety Data Sheets (MSDS) provided by manufacturers and allows consumers to research products based on chemical ingredients. The database is designed to help answer the following typical questions:

- What are the chemical ingredients and their percentage in specific brands?
- Which products contain specific chemical ingredients?
- Who manufactures a specific brand? What is the manufacturer contact information?
- What are the acute and chronic effects of chemical ingredients in a specific brand?
- What other information is available about chemicals in the toxicology-related databases of the National Library of Medicine?
