

NCI Enterprise Services to Support Research and Care

George Komatsoulis, Ph.D.
Deputy Director
National Cancer Institute
Center for Biomedical Informatics and
Information Technology

“If You Don't Know Where You're Going, Any Road Will Get You There.”

-Lewis Carroll: *Alice's Adventures in Wonderland*, 1865

21st Century Biomedicine

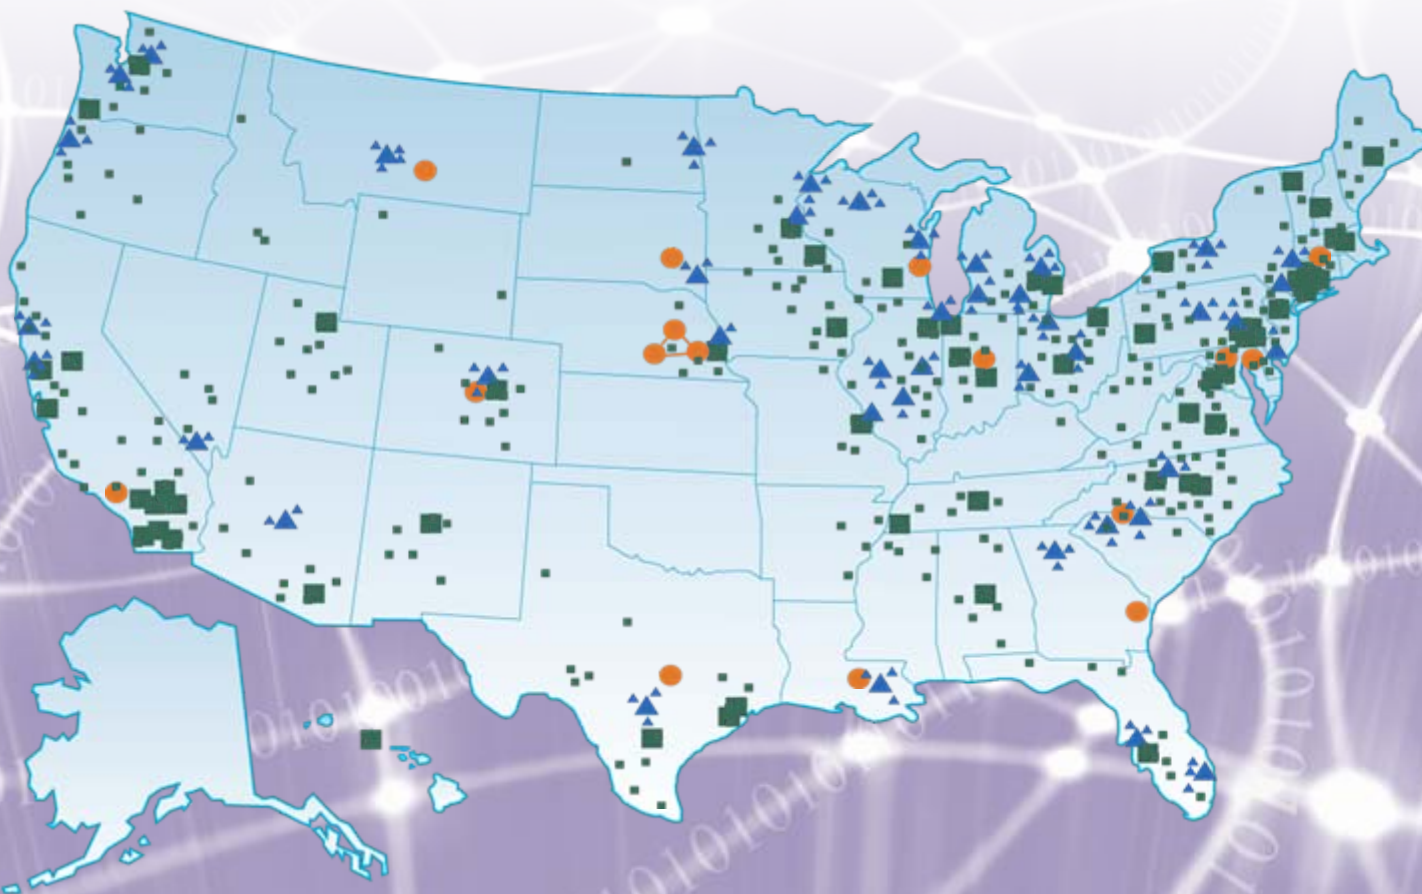

- **Personalized, Predictive, Preemptive, Participatory...**
- **Unifies** discovery, clinical research, and clinical care (bench-bedside-bench) into a seamless continuum - a Learning Health System
- **Results in** improved clinical outcomes
- **Accelerates** the time from discovery to patient benefit
- **Enables** a health care system, not a disparate "sector"
- **Empowers** consumers in managing their health over a lifetime

Linking the NCI-supported Cancer Community

■ - NCI Designated Cancer Centers ● - NCI Community Cancer Center Program Sites ▲ - Community Oncology Practices

Oncology-Extended Electronic Health Record: A Collaborative National Effort

- **American Society of Clinical Oncologists (ASCO)**
 - Began evaluating issue, involving end users
 - Engaged the vendor community EHR lab (30), utilizing unique case scenarios
 - High level requirements document/white paper outlining the issue
- **cancer Biomedical Informatics Grid (caBIG[®])**
 - Vendor technology evaluation
 - Problem assessment
 - Technical Specification
- **NCI Community Cancer Center Program (NCCCP)**
 - Oncology EHR Laboratory
- **Other domain experts**

Semantically-aware Services Oriented Architecture

- **Semantically-aware Service Oriented Architecture (sSOA) supports the challenges of integrating diverse classes of information distributed across a distributed, heterogeneous cancer research and care community**
- **In addition to data integration, sSOA enables the coordination of functionality between the various information systems that reside within those organizations and enable collaborative data processing and work flow execution**
- **Services can be implemented in a largely standalone fashion to allow for the rapid creation of composite applications via service marshalling or integrated with existing applications**

sSOA ensures working interoperability between differing systems that need to exchange specific classes of information and/or coordinate cross-application behaviors

Classes of Services

- **NCI Services are classified into four primary types loosely based on the CBDI service taxonomy**
- **Infrastructure/Utility**
 - Services that are required or utilized by virtually all other services
- **Core**
 - Services that provide information components to capability and business services
- **Business Capability**
 - Services that provide “business atoms”, the data most business processes utilize
- **Business/Process**
 - Arbitrarily complex services that utilize the other three service types to carry out business functions

Periodic Table of Services

“CAPABILITY” “BUSINESS”

R Registration	Pt Protocol	Oc Study Outcomes	Po Patient Outcomes	E Eligibility	Ae Adverse Event	Hx Hx and Physical	Dx Discharge Note	Ds Decision Support	Ra Referral and Authorization

Cr Credentialing

S Specimen

Tp Treatment Plan

I Image	L Lab	Rx Pharmacy
-------------------	-----------------	-----------------------

Sc Scheduling

“CORE”

Sd SDTM	Qr Data Query
-------------------	-------------------------

C Correlation	O Organization	P Person	Pa Protocol Abstraction	D Disease	A Agent
-------------------------	--------------------------	--------------------	-----------------------------------	---------------------	-------------------

Mp Master Problem List	Ay Allergy
----------------------------------	----------------------

“Infra / UTILITY”

Km Knowledge Management	Cm Contract Management	Ev Enterprise Vocabulary	Va Validation	Tx Translation	Au Audit
-----------------------------------	----------------------------------	------------------------------------	-------------------------	--------------------------	--------------------

Id Id Management	Tr Trust Management	Aa Authorization Authentication	Py Policy
----------------------------	-------------------------------	---	---------------------

Periodic Table of Services: Business/Process

“CAPABILITY” “BUSINESS”

The Trial Registration service provides investigators with the ability to submit descriptive information about a clinical trial. It also provides the ability to search registered trials based on various criteria

R Registration	Pt Protocol	Oc Study Outcomes	Po Patient Outcomes	E Eligibility	Ae Adverse Event	Hx Hx and Physical	Dx Discharge Note	Ds Decision Support	Ra Referral and Authorization
--------------------------	-----------------------	-----------------------------	-------------------------------	-------------------------	----------------------------	------------------------------	-----------------------------	-------------------------------	---

The Protocol Management service will support creation of a Study Protocol by providing a capability to create a computable part of the protocol

Cr Credentialing	S Specimen	Tp Treatment Plan	I Image	L Lab	Rx Pharmacy	Sc Scheduling
----------------------------	----------------------	-----------------------------	-------------------	-----------------	-----------------------	-------------------------

Study Outcomes establishes a set of reporting patterns for collecting data and validating it in order to report on a particular intervention outcome

“CORE”

Sd SDTM	Qr Query	C Correlation	O Organization	P Person	Pa Protocol Abstraction	D Disease	A Agent	Mp Master Patient List	Ay Allergy
-------------------	--------------------	-------------------------	--------------------------	--------------------	-----------------------------------	---------------------	-------------------	----------------------------------	----------------------

Patient Outcomes provides clinicians or administrators at clinicians' offices with the ability to submit outcome data for the cancer patients. It also provides them with the ability to query the outcomes data they submitted

“Infra / UTILITY”

Km Knowledge Management	Cm Contract Management	Ev Enterprise Vocabulary	Va Validation	Tx Translation	Au Audit	Id Id Management	Tr Trust Management	Aa Authorization Authentication	Py Policy
-----------------------------------	----------------------------------	------------------------------------	-------------------------	--------------------------	--------------------	----------------------------	-------------------------------	---	---------------------

Eligibility service provides the capabilities associated with establishing eligibility for a patient to register on a Study based on criteria specified in the Study Protocol

Periodic Table of Services: Business/Process

The Adverse Event service manages, queries, reports adverse events and the associated work flows

“CAPABILITY” “BUSINESS”

R Registration	Pt Protocol	Oc Study Outcome	Po Patient Outcomes	E Eligibility	Ae Adverse Event	Hx History and Physical	Dx Discharge Note	Ds Discharge Support	Ra Referral and Authorization
--------------------------	-----------------------	----------------------------	-------------------------------	-------------------------	----------------------------	-----------------------------------	-----------------------------	--------------------------------	---

The History and Physical service provides access to patient's History and Physical document. This service will facilitate requests for and provision documents that capture the clinical history of the patient during a specific encounter

Cr Credentialing	S Specimen	Tp Treatment Plan	I Image	L Lab	Rx Pharmacy	Sc Scheduling
----------------------------	----------------------	-----------------------------	-------------------	-----------------	-----------------------	-------------------------

Provides access to a patient's Discharge Notes for a given encounter

“CORE”

Sd SDTM	Qr Data Query	C Compliance	O Organization	P Process	Pa Patient Abstraction	D Disease	A Assessment	Mp Medical Problem List	Ay Allergy
-------------------	-------------------------	------------------------	--------------------------	---------------------	----------------------------------	---------------------	------------------------	-----------------------------------	----------------------

This service provides an algorithmically neutral way to manage decision support services for patients

“Infra / UTILITY”

Km Knowledge Management	Cm Contract Management	Ev Enterprise Vocabulary	Va Validation	Tx Translation	Au Audit	Id Identity Management	Tr Transaction Management	Aa Authorization / Authentication	Py Policy
-----------------------------------	----------------------------------	------------------------------------	-------------------------	--------------------------	--------------------	----------------------------------	-------------------------------------	---	---------------------

Referral is intended to provide core capabilities needed by health care organizations to facilitate the business process of patient referrals and consultations among providers

Periodic Table of Services: Business Capability Services

Credentialing Management allows the credentials of a given investigator to be enumerated and validated by a trusted third party

Specimen Management Service provides the core specification for specimen management from both the clinical and research perspectives regardless of the nature of specimen transactions that occur or the type of specimen

The Treatment Plan service provides the ability to create and update Treatment Plan templates, generate and view prospective calendars of patient activities, track activities as they occur and manage patient calendars as they change during a plan

Image Management service includes the ability to manage image, including intersections with order reporting.

Lab Management service includes the ability to order, track, and manage laboratory orders from a clinical perspective, including intersections with specimen management and pathology reporting

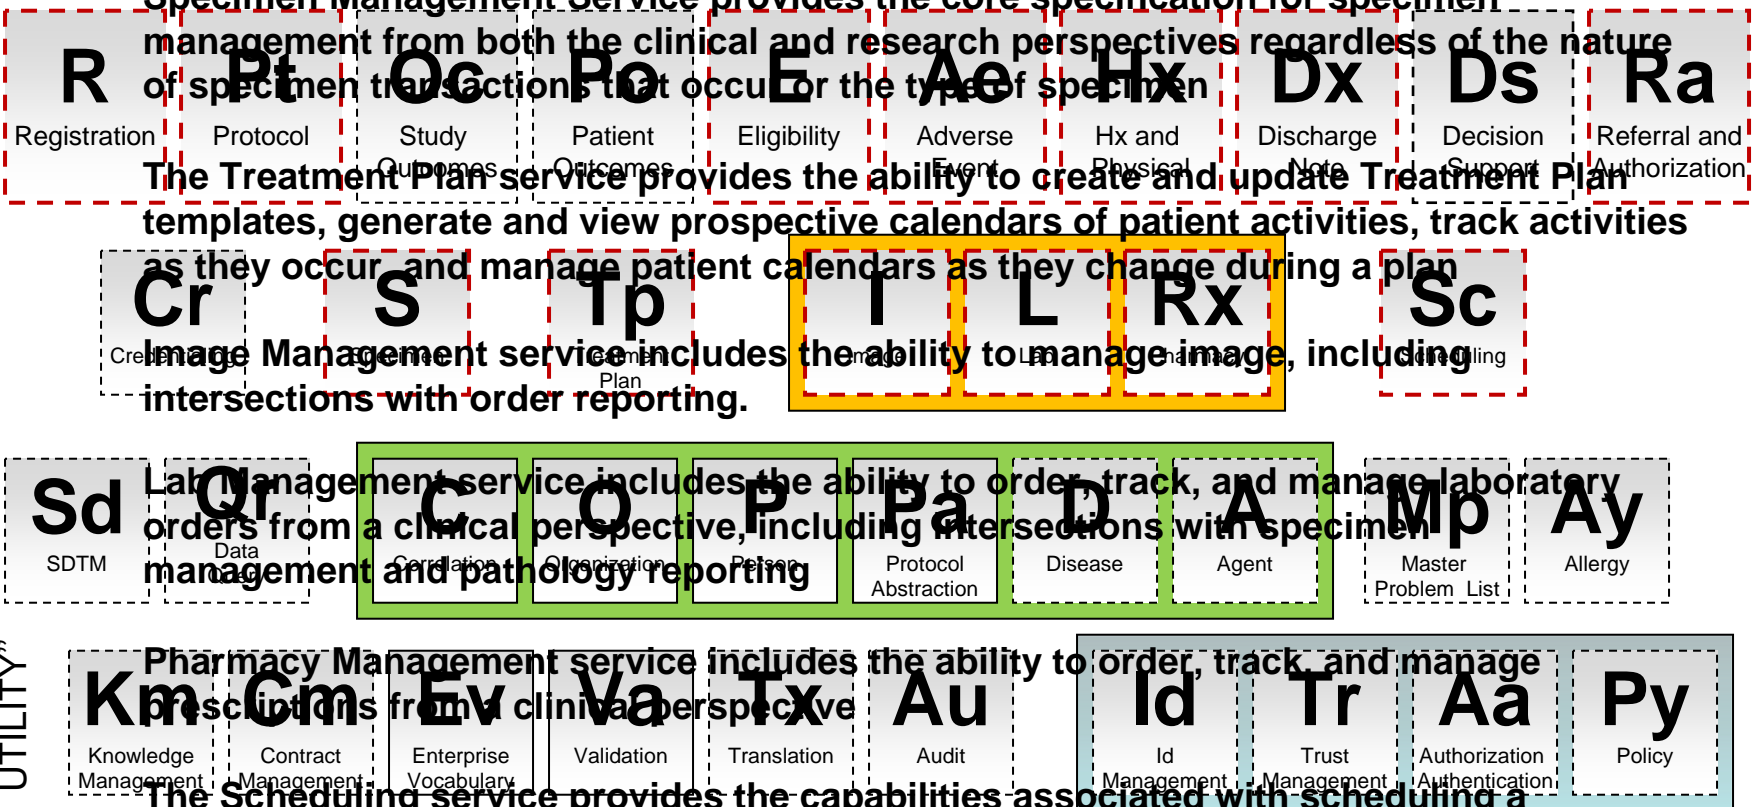

Pharmacy Management service includes the ability to order, track, and manage prescriptions from a clinical perspective

The Scheduling service provides the capabilities associated with scheduling a particular appointment for a particular encounter

“CAPABILITY” “BUSINESS”

“CORE”

“Infra / UTILITY”

Periodic Table of Services: Core Services

"CAPABILITY" "BUSINESS"

Correlation Service establishes a central service of record for relationships between core information components (Persons to Organizations, etc.)

R Registration	Pt Protocol	Oc Study Outcomes	Po Patient Outcomes	E Eligibility	Ae Adverse Event	Hx History and Physical	Dx Discharge Note	Ds Decision Support	Ra Referral and Authorization
--------------------------	-----------------------	-----------------------------	-------------------------------	-------------------------	----------------------------	-----------------------------------	-----------------------------	-------------------------------	---

Organization Service establishes a central service of record for the **Organization information type**

Cr Credentialing	S Specimen	Tp Treatment Plan	I Image	L Lab	Rx Pharmacy	Sc Scheduling
----------------------------	----------------------	-----------------------------	-------------------	-----------------	-----------------------	-------------------------

Person Service establishes a central service of record for the **Person Information**

"CORE"

The Protocol Abstraction Service establishes a central service of record for non-annotated "flat" information about Protocols and their relation to trials

Sd SDTM	Qr Data Query	C Correlation	O Organization	P Person	Pa Protocol Abstraction	D Disease	A Agent	Mp Master Problem List	Ay Allergy
-------------------	-------------------------	-------------------------	--------------------------	--------------------	-----------------------------------	---------------------	-------------------	----------------------------------	----------------------

The Disease service establishes a central service of record for information about various diseases found in trials

"Infra / UTILITY"

Km Knowledge Management	Cm Contract Management	Ev Enterprise Vocabulary	Va Validation	Tx Translation	Au Audit	Id Id Management	Tr Trust Management	Aa Authorization Authentication	Py Policy
-----------------------------------	----------------------------------	------------------------------------	-------------------------	--------------------------	--------------------	----------------------------	-------------------------------	---	---------------------

The Agent service establishes a central service of record for information about various agents found in trials

Periodic Table of Services: Other Core Services

"CAPABILITY" "BUSINESS"

SDTM Represents a key data structure that is reused in regulatory

R Registration	Pt Protocol	Oc Study Outcomes	Po Patient Occurrences	E Eligibility	Ae Adverse Event	Hx Hx and History	Dx Discharge Code	Ds Decision Support	Ra Referral and Authorization
--------------------------	-----------------------	-----------------------------	----------------------------------	-------------------------	----------------------------	-----------------------------	-----------------------------	-------------------------------	---

Data Query provides a consistent mechanism to query and retrieve information from information systems

Cr Credentialing	S Specimen	Tp Treatment Plan	I Image	L Lab	Rx Pharmacy	Sc Scheduling
----------------------------	----------------------	-----------------------------	-------------------	-----------------	-----------------------	-------------------------

Master Problem service establishes a central service of record for the Problems tied to patients

"CORE"

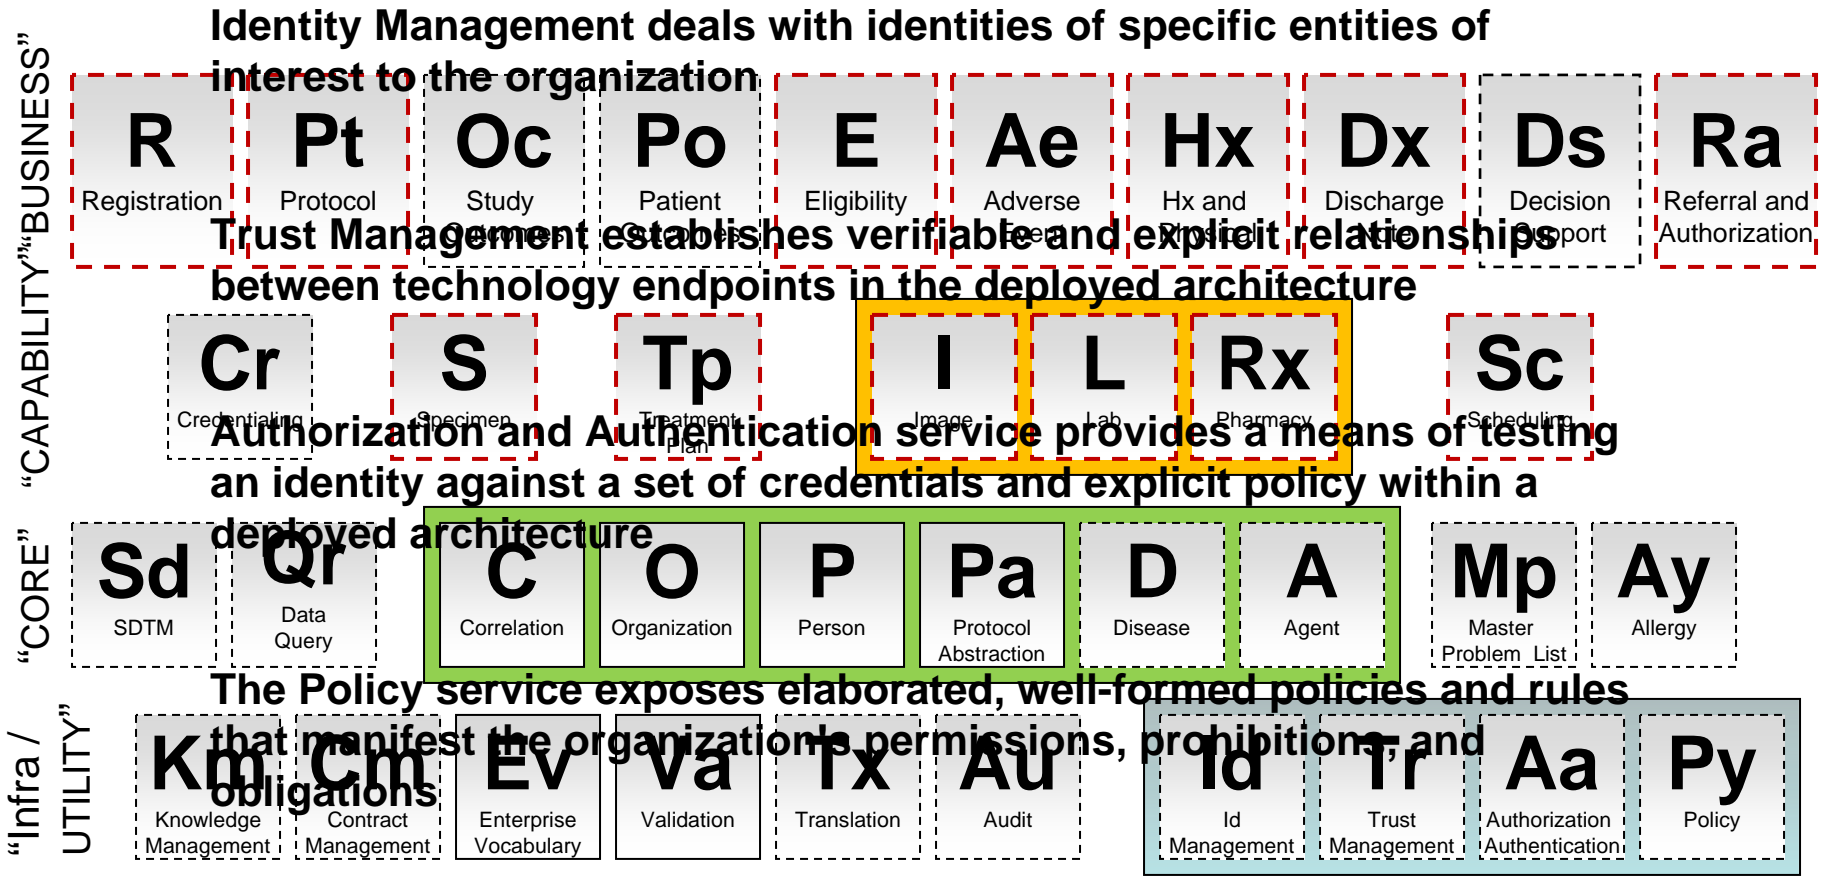

Sd SDTM	Qr Data Query	C Correlation	O Organization	P Person	Pa Protocol Abstraction	D Disease	A Agent	Mp Master Problem List	Ay Allergy
-------------------	-------------------------	-------------------------	--------------------------	--------------------	-----------------------------------	---------------------	-------------------	----------------------------------	----------------------

Allergy service establishes a central service of record for the Allergies tied to patients

"Infra / UTILITY"

Km Knowledge Management	Cm Contract Management	Ev Enterprise Vocabulary	Va Validation	Tx Translation	Au Audit	Id Id Management	Tr Trust Management	Aa Authorization Authentication	Py Policy
-----------------------------------	----------------------------------	------------------------------------	-------------------------	--------------------------	--------------------	----------------------------	-------------------------------	---	---------------------

Periodic Table of Services: Infrastructure/Utility

Periodic Table of Services: Infrastructure/Utility

Knowledge Management service represents a series of capabilities around the storage, versioning, and expression of the semantics supporting key capabilities

“CAPABILITY” “BUSINESS”

The Validation service verifies structural and semantic consistency across messages used in interoperability scenarios

“CORE”

The Transformation service provides a functional end point to manage and enact mappings between syntactically disparate information types

“Infra / UTILITY”

Periodic Table of Services: Expanding the Ecosystem

Usage Patterns for NCI Services

- **Service Specifications:** NCI services layered service specifications (conceptual model, platform independent model and platform specific model) for organizations wishing to build or adapt products that can interoperate with NCI services
- **Reference Implementations:** NCI provides reference implementations of these services that provide Application Programming Interfaces implemented in many technologies
- **NCI Hosted Services:** NCI maintains hosted versions of its services (either standalone or part of larger systems depending on the nature of the service) that are accessible to appropriately authorized entities
- All NCI specifications and reference implementations are made available via a non-viral Open Source license that explicitly allows for commercial, closed source reuse and derivative works

Technology Bindings Utilized by NCI Services

NCI Services are designed to be readily accessed using a variety of technologies. These include:

- **Application Programming Interfaces:** Commonly implemented as Remote Enterprise Java Beans (EJB's), but increasingly including API's that utilize .NET frameworks
- **Grid Services:** Access via the NCI's semantically aware SOA infrastructure, caGrid
- **Web Services:** Access via WS-I compliant web services
- **REST APIs:** Simple APIs that allow for easy connection to services but can't utilize the advanced semantic capabilities of caGrid

**NCI is working with FHA to make
NCI Enterprise Services available via the NHIN**

Interoperability: Standards

- **NCI Services are based, wherever possible, on existing standards to enhance interoperability**
- **NCI Enterprise Service payloads are derived from the HL7 v3 Reference Information Model and reference relevant standards wherever possible**
- **NCI Enterprise Services utilize ISO 21090 data types**
- **NCI Enterprise Services utilize standard controlled biomedical terminologies such as LOINC and the NCI Thesaurus and the ISO 11179 metadata specification**

Interoperability: SAIF and ECCF

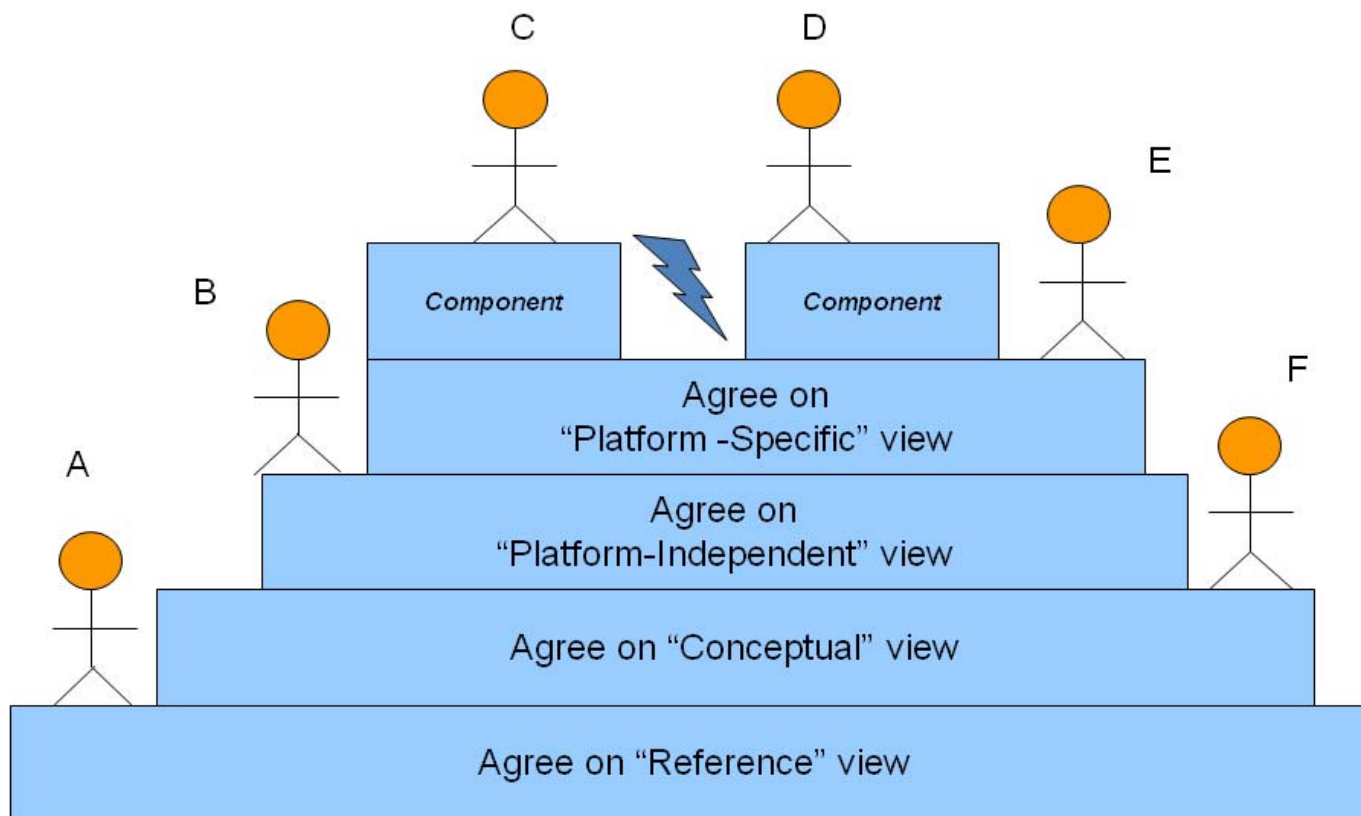

- The Enterprise Conformance and Compliance Framework (ECCF) is based on the RM-ODP viewpoints and the HL7 Services-Aware Interoperability Framework (SAIF)
- Three specification levels: Conceptual Model, Platform Independent Model and Platform Specific Model

	Enterprise / Business Viewpoint	Information Viewpoint	Computational Viewpoint	Engineering Viewpoint
<i>Model</i>	Covenances	Model, Localized Information Model	Interaction Types and Collaboration Participations, Contracts Parts	etc.
<i>Platform Specific Model</i>	Rules, Procedures	Localized Information Model Transforms, Schema	Collaboration scripts, Orchestrations, Realized Interfaces	Execution Context, Platform Bindings, Deployment Model

Our purpose with SAIF and ECCF is to enable “Working Interoperability”

Interoperability: Multiple Levels Based on ECCF Specifications

Additional Information

- NCI service specification and development is an open process; all artifacts are available at the NCI wiki*
- NCI welcomes all interested parties to participate in the service specification and development process
