ICD-O-3 is effective for cases diagnosed on or after January 1, 2001.
Tables prepared March 2001

TABLE OF CONTENTS

Introduction	1
Morphology Table	7

INTRODUCTION

The *International Classification of Diseases for Oncology, Third Edition*¹ (ICD-O-3) was published by the World Health Organization (WHO) in 2000 and is to be used for coding neoplasms diagnosed on or after January 1, 2001 in the United States. This is a complete revision of the Second Edition of the *International Classification of Diseases for Oncology*² (ICD-O-2), which was used between 1992 and 2000.

The topography section of ICD-O-3 is based on the Neoplasm chapter of the current revision of the *International Classification of Diseases* (ICD), Tenth Revision³, just as the ICD-O-2 topography was. There is no change in this Topography section. The morphology section of ICD-O-3 has been updated to include contemporary terminology. For example, the non-Hodgkin lymphoma section is now based on the World Health Organization Classification of Hematopoietic Neoplasms⁴. In the process of revising the morphology section, a Field Trial version was published and tested in both the United States and Europe.

Epidemiologists, statisticians, and oncologists, as well as cancer registrars, are interested in studying trends in both incidence and mortality. To be able to compare data over time, it is essential that conversion tables be available so that all data are comparably coded. The following conversion (comparison or equivalency) tables convert ICD-O-3 morphology to ICD-O-2 morphology codes.

Since there is no change to the topography of ICD-O-2 and ICD-O-3, no conversion is necessary.

Acknowledgements

The editors wish to acknowledge the thorough review of this document by Annette Hurlbut, RHIT, CTR; the technical assistance of Jennifer Stevens and Sandy Kline, Information Management Services, Inc., Silver Spring, MD, in the production of the tables; and the programming expertise of Nicola Schussler, Information Management Services, Inc., Silver Spring, MD, in the development of the computer conversion programs.

CONVERSION OF MORPHOLOGY

These conversion tables include all codes printed in ICD-O-3 as it was published in 2000, as well as matrix terms identified from the SEER public use data file as coded in ICD-O-2. Terms added to ICD-O-2 in the lymphoma and leukemia sections in North America are identified by a pound sign (#) in the right-most (ICD-O-2 text) column for lymphoma terms used in North America from 1995 to 2000 diagnoses and a double pound (##) for leukemia terms used in North America from 1998 to 2000.

In the morphology conversion table, the two columns on the left show the morphology and behavior code from ICD-O-3 and its associated text (terms). The middle column is a flag to indicate whether the ICD-O-3 text should be hand-reviewed for optimal conversion to ICD-O-2. The two columns on the right show the morphology and behavior code and terms from ICD-O-2. The majority of morphology codes and terms are the same in both editions. However, sometimes terms were changed, synonyms added, subtracted or modified. The terms associated with each code in column one and column four are listed in columns two and five respectively as they appear in the appropriate edition.

The following codes for hand review are used:

0	No review required
1	Review required

Code 0 means that there is a one-to-one relationship between the ICD-O-3 code and the ICD-O-2 code and no review of the output is necessary. (See also note under Code 1.)

Code 1 means that there is not a clear one-to-one relationship between the ICD-O-3 code and the ICD-O-2 code, and that review of the narrative text associated with the code is advised.

Note: Certain non-specific histology codes or those with large numbers of cases that are not designated for review are exceptions to the hand-review process. For example, carcinoma, NOS is not reviewed because only a few of the cases would be found to be of a

more specific histology in ICD-O-3. The histology codes that are not designated for review are:

8010/3	Carcinoma, NOS
8050/3	Papillary carcinoma, NOS (except for specific sites)
8070/3	Squamous cell carcinoma, NOS
8140/3	Adenocarcinoma, NOS
8500/3	Duct carcinoma, NOS
8800/3	Sarcoma, NOS
9680/3	Malignant lymphoma, large B-cell, diffuse, NOS (except for specific sites)
9801/3	Acute leukemia, NOS
9861/3	Acute myeloid leukemia, NOS
9863/3	Chronic myeloid leukemia

Except for the hematopoietic diseases, only a few terms were consolidated from individual codes in ICD-O-2 to an aggregate or less specific code in ICD-O-3. See Appendix 3, Terms that Changed Morphology Codes in ICD-O-3. For these ICD-O-3 codes, there is a many-to-one relationship in the conversion from ICD-O-2. For example, the ICD-O-2 codes 9802/3 Subacute leukemia, NOS; 9803/3 Chronic leukemia, NOS; and 9804/3 Aleukemic leukemia, NOS, have been collapsed into 9800/3 Leukemia, NOS in ICD-O-3. Once the conversion of these codes is completed, it will not be possible to determine which of the previous terms was used without reviewing the associated text. A many-to-one conversion will not require review from ICD-O-3 to ICD-O-2, but would require review in an ICD-O-2 to ICD-O-3 conversion.

A number of terms that were previously classified as uncertain whether benign or malignant (/1) are classified as malignant (/3) in ICD-O-3. For a complete list, refer to Appendix 6 in ICD-O-3. If they were previously coded as malignant according to the ICD-O matrix rule, they would have been shown as /3 in the behavior column in ICD-O-2. However, during the conversion from ICD-O-3, both the /1 and the /3 terms would be assigned /1 in ICD-O-2.

The structure of ICD-O allows the coding of matrix terms - histology/behavior combinations not explicitly contained in the Morphology Numeric Section. (See the Introduction of ICD-O for a complete discussion of the matrix system.) The conversion tables contain some matrix terms from ICD-O-2 which have been reported in the SEER database. These matrix terms, which are not

printed in ICD-O-2 or ICD-O-3, are indicated by an asterisk (*) preceding the code. Matrix terms are converted by using the conversion specified for the histology code, but changing the behavior code on the ICD-O-2 term to that reported for the ICD-O-3 code. This procedure is the same one used for coding a matrix term in the first place. For example, the conversion of basal cell carcinoma in situ (*80902/2) in ICD-O-2 would be to the same category in ICD-O-2 but with a behavior code of /2. Since 8090/2 does not exist in ICD-O-3 except as a matrix term, this code is also preceded by an asterisk.

Because of the matrix system, there may be some conversions of /0 to /1 or /1 to /0 that should be reviewed if a registry collects benign and borderline neoplasms. It was not possible to list all of these in this table, but they are marked for review in the computer program available from SEER.

The following conversion information can be found at <http://www.seer.cancer.gov/Admin/ConvProgs>:

- Conversion table in electronic (PDF) format
- An Excel file containing only the codes and conversion flags
- A conversion program written in C++ for multi-platform compatibility which uses the conversion table
