SPECIAL PUBLIC NOTICE 05-04

Proposal to reissue General Permit 83-4Q Discharge of Dredged and/or Fill Material into Wetlands at Bethel, Alaska

Notice is hereby given that the U.S. Army Corps of Engineers, Alaska District (Corps), under authority of Section 404 of the Clean Water Act (Public Law 95-217, 33 U.S.C. 1344 et seq.), is soliciting comments on the re-issuance of General Permit (GP) 83-4P for discharge of dredged and/or fill material into waters of the United States, including wetlands in Bethel, Alaska. If you have comments for our consideration, please provide them by the expiration date noted above.

INTRODUCTION: GPs are considered appropriate for activities which are substantially similar in nature, have minimal adverse impacts both individually and cumulatively on water quality and the aquatic environment, are not contrary to the public interest, and provide a more effective way of administering the Clean Water Act without creating an undue burden on the public. As such, on April 12, 2000, the Corps re-issued GP 83-4P for a five-year period. This GP authorizes the discharge of fill material into waters of the U. S., including wetlands in Bethel, Alaska for the purpose of creating foundation pads for structures, utilities, associated roads, driveways, parking areas, and other domestic, governmental, and commercial development. The GP authorizes excavation activities, including mechanized land clearing and other activities that could result in a redeposition of fill material. The GP also authorizes those activities when the placement of pilings has the effect of a discharge of fill material.

Approximately 7,760 acres of waters of the U.S. were included within the area subject to this GP for potential authorization for development when it was re-authorized in 2,000. During 2000-2004, a total of two hundred fifty-one permits have been issued under GP 83-4P and approximately 64 acres of waters of the U.S. were filled from these authorized actions. Approximately 7,696 acres of waters of the U.S. remain within the area subject to this GP for potential development. The Bethel GP expires on April 12, 2005.

PROPOSED ACTIVITY: The Corps of Engineers proposes to reauthorize the existing Bethel General Permit, GP 83-4P, with permit condition revisions, and change the GP administrative number from GP 83-4P to GP 83-4Q.

- GP 83-4P conditions number 10 and 11 would be combined into one condition (GP condition No. 11) to avoid duplication and provide better clarification.
- GP 83-4P conditions number 5 and 14 would be deleted. Condition number 5 is more specifically addressed in other permit conditions. Condition number 14 would be deleted since this condition is addressed under the Limits of This Authorization Section.
- The following three conditions would be added to GP 83-4Q:

Number 13. If permafrost is present, sufficient fill (or other methods of insulation) shall be placed on the ground to provide thermal stability. Signs of thermokarsting or standing water indicate non-compliance with this condition.

Number 14. No fill or construction materials shall be stockpiled in waters of the U.S. including wetlands, outside of the project boundary which shall be staked, or otherwise delineated, prior to any mechanized land clearing or fill placement.

Number 15. The activities authorized under this GP shall not adversely affect Essential Fish Habitat (EFH). Section 305 (b) of the Magnuson-Stevens Fishery Conservation and Management Act and 50 CFR Part 60 provide the requirements for EFH consultation. The District Engineer shall make a determination whether or not the action will adversely affect EFH. The determination and an EFH assessment {per 50 CFR 600.920} shall be provided in any subsequent notice should the action adversely affect EFH.

WATER QUALITY CERTIFICATION: A water quality certification or waiver of the certification, as required under Section 401 of the Clean Water Act (Public Law 95-217), is required from the Alaska Department of Environmental Conservation before this GP can be re-issued.

COASTAL ZONE MANAGEMENT ACT CERTIFICATION: Section 307(c)(3) of the Coastal Zone, Management Act of 1972, as amended by 16 U.S.C. 1456(c)(3), requires certification that the described activity affecting land or water uses in the Coastal Zone complies with the Alaska Coastal Management Program. The GP will not be re-issued until the Office of Project Management and Permitting, Department of Natural Resources concurs that this proposal complies with the Alaska Coastal Management Program.

PUBLIC HEARING: Any person may request, in writing, within the comment period specified in this notice, that a public hearing be held to consider this application. Requests for public hearings shall state, with particularity, reasons for holding a public hearing.

CULTURAL RESOURCES: The Corps has conditioned the GP to protect cultural resources. Any comments the State Historic Preservation Officer has concerning presently unknown archeological or historic data that may be lost or destroyed by work under the requested permit will be considered in our assessment of the described work.

TRIBAL CONSULTATION: The Alaska District fully supports tribal self-governance and government-to-government relations between the Federal government and Federally recognized Tribes. This notice invites participation by agencies, Tribes, and members of the public in the Federal decision-making process. In addition, Tribes with protected rights or resources that could be significantly affected by a proposed Federal action (e.g., a permit decision) have the right to consult with the Alaska District on a government-to-government basis. Views of each Tribe regarding protected rights and resources will be accorded due consideration in this process. This Public Notice serves as notification to the Tribes within the area potentially affected by the proposed work and invites their participation in the Federal decision-making process regarding the protected Tribal right or resource. Consultation may be initiated by the affected Tribe upon written request to the District Engineer during the public comment period.

ENDANGERED SPECIES: A preliminary determination has been made that re-issuance of the GP will not affect threatened or endangered species, or their critical habitat designated as endangered or threatened under the Endangered Species Act of 1973 (87 Stat. 844). This determination will be coordinated with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service. Any comments they may

have concerning endangered or threatened species or their critical habitat will be considered in our final assessment of the GP.

ESSENTIAL FISH HABITAT: The proposed work is being evaluated for possible effects to Essential Fish Habitat (EFH) pursuant to the Magnuson Stevens Fishery Conservation and Management Act of 1996 (MSFCMA), 16 U.S.C. et seq and associated federal regulations found at 50 CFR 600 Subpart K. The Alaska District includes areas of EFH as Fishery Management Plans. We have reviewed the January 20, 1999, North Pacific Fishery Management Council's Environmental Assessment to locate EFH area as identified by the National Marine Fisheries Service (NMFS). We have determined that the proposed GP re-issuance will not adversely affect EFH, including anadromous fish and federally managed fishery resources.

SPECIAL AREA DESIGNATIONS: This GP authorizes certain discharges within the designated "Bethel General Permit Area" as shown on the 1:500 Scale "General Permit Area" map. This map is available for viewing at the City of Bethel, Planning Department, Public Works Building, 1155 Ridgecrest Drive, Bethel, Alaska 99559; telephone (907) 543-5301.

FLOODPLAIN MANAGEMENT: Evaluation of the described activities shall include conformance with appropriate State and local floodplain standards, consideration of alternative sites and construction methods, and weighing of the short and long-term environmental impacts of the proposed work on floodplains and management thereof.

EVALUATION: The decision whether to issue a permit will be based on an evaluation of the probable impacts including cumulative impacts of the proposed activity and its intended use on the public interest. Evaluation of the probable impacts, which the proposed activity may have on the public interest, requires a careful weighing of all the factors that become relevant in each particular case. The benefits, which reasonably may be expected to accrue from the proposal, must be balanced against its reasonably foreseeable detriments. The decision whether to authorize a proposal, and if so, the conditions under which it will be allowed to occur, are therefore determined by the outcome of the general balancing process. That decision should reflect the national concern for both protection and utilization of important resources. All factors, which may be relevant to the proposal, must be considered including the cumulative effects thereof. Among those are conservation, economics, aesthetics, general environmental concerns, wetlands, cultural values, fish and wildlife values, flood hazards, floodplain values, land use, navigation, shore erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, considerations of property ownership, and, in general, the needs and welfare of the people. For activities involving 404 discharges, a permit will be denied if the discharge that would be authorized by such permit would not comply with the Environmental Protection Agency's 404(b)(1) guidelines. Subject to the preceding sentence and any other applicable guidelines or criteria (see Sections 320.2 and 320.3), a permit will be granted unless the District Engineer determines that it would be contrary to the public interest.

The Corps of Engineers is soliciting comments from the public; Federal, State, and local agencies and officials; Indian Tribes; and other interested parties in order to consider and evaluate the impacts of this proposed activity. Any comments received will be considered by the Corps of Engineers to determine whether to issue, modify, condition or deny a permit for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects, and the other public interest factors listed above. Comments are used in the preparation of an Environmental Assessment and/or an Environmental Impact Statement pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

Comments on the described work, with the reference number, should reach this office no later than the expiration date of this Public Notice to become part of the record and be considered in the decision. Please contact Ms. Marcia Heer at (907) 753-2716, toll free from within Alaska at (800) 478-2712, or by email at marcia.l.heer@poa02.usace.army.mil, if further information is desired concerning this notice.

AUTHORITY: This permit will be issued or denied under the following authority:

(X) Discharge dredged or fill material into waters of the United States - Section 404 Clean Water Act (33 U.S.C. 1344). Therefore, our public interest review will consider the guidelines set forth under Section 404(b) of the Clean Water Act (40 CFR 230).

A draft copy of GP 83-4Q is attached to this public notice for review and comment.

District Engineer
U.S. Army, Corps of Engineers

Attachment(s)

DRAFT GENERAL PERMIT 83-4Q

**Discharge of Dredged and/or Fill Material into Wetlands
at Bethel, Alaska**

INTRODUCTION

Under the authority of Section 404 of the Clean Water Act (Public Law 95-217, 33 U.S.C. 1344 et. seq.), the Secretary of the Army authorizes the placement of dredged and fill material into waters of the U.S., including wetlands, within specific areas of Bethel, Alaska. A maximum of approximately 7,696 acres of waters of the U.S. are included within the area subject to this General Permit (GP) and would potentially be authorized for development. The GP boundary would be limited to an area within the city limits of Bethel, less excluded areas (Enclosure 1).

AUTHORIZED ACTIVITIES:

This GP authorizes the placement of fill material into waters of the U.S., including wetlands, for the purpose of creating foundation pads for structures, utilities, associated roads, driveways, parking areas, and other domestic, governmental, and commercial development. The GP authorizes excavation activities, including mechanized land clearing, ditching, and other excavation activities that can result in the re-deposition of material. The GP authorizes those activities when the placement of pilings and/or boardwalks would have the effect of a discharge of fill material.

General Permit 83-4Q is valid until April 1, 2010. The District Engineer may, at any time during this period, alter, modify, or revoke the permit if he deems such action to be in the public interest.

PROCEDURES

All authorizations are contingent upon receiving approval from the City of Bethel. As stated in condition number 1 below, a "Site Plan Review" must be approved by the City of Bethel Planning Department prior to beginning work under this permit. A "Site Plan Review" application form is attached for guidance (Enclosure 2a and 2b). An example of a project drawing is also attached (Enclosure 2c). If the City of Bethel reviews the project and does not approve the site plan or the proposed work does not meet the requirements of the terms and conditions of GP 83-4Q, the GP does not apply and the applicant would be required to apply for a Department of the Army individual permit or a different form of authorization from the Corps of Engineers.

Information required for evaluating the "Site Plan Review" includes:

1. Name, address, and phone number of responsible party.
2. Drawings on 8-1/2 by 11-inch paper, to include a plan and cross section view of the proposed fill, including location, dimensions, and depth. The drawings shall also show lot size and the placement of structures to be located on the wetland fills.
3. The purpose of the fill (eg., foundation for building, road, etc.).
4. The type of fill material.

GENERAL CONDITIONS

All activities identified and authorized by this GP must be consistent with the following conditions:

1. That each applicant/permittee inform the City of Bethel of the proposed project no less than 10 days before beginning work under this permit. The applicant/permittee will complete and receive approval of a "City of Bethel, Site Plan Review" from the City Planning Department before starting work. If the City of Bethel, Planning Department determines that a proposed project would not be authorized by this GP, then the applicant would need to apply for an individual Department of the Army (DA) permit from the Corps of Engineers.

2. That discharges are not authorized within certain excluded areas as shown on the 1:500 Scale "General Permit Area" map available for viewing at the City of Bethel, Planning Department, Public Works Building, 1155 Ridgecrest Drive, Bethel, Alaska 99559; telephone (907) 543-5301.

3. No discharged dredged or fill material shall consist of unsuitable fill material. This includes but is not limited to trash, metal debris, car bodies, overburden material, woodwaste, asphalt, and petroleum products. All material used for construction or discharged must also be free from toxic pollutants in toxic amounts as defined by Alaska State law and the Toxic Pollutants List in Section 307 of the Clean Water Act.

4. Natural drainage patterns shall be maintained using appropriate ditching, culverts, storm drain systems, and other measures, to the extent practicable, without introducing ponding or drying. Excessive ponding and/or dewatering of areas adjacent to fill areas shall indicate non-compliance with this condition.

5. Appropriate and effective erosion controls shall be implemented and maintained before, during, and after construction, until such time as all disturbed areas have been permanently stabilized.

6. Slopes of fills shall be no greater than 2:1 (horizontal to vertical), and all side slopes shall be stabilized by revegetating with native grasses, mulch, sandbagging and/or other reasonable material after fill placement. This stabilization would minimize erosion, turbidity, siltation, and prevent inadvertent sloughing of fill into adjacent wetlands or waters.

7. The proposed activity shall not adversely affect a threatened or endangered species as identified in 50 CFR 17.11 and 17.12, August 23, 1973, "Endangered and Threatened Wildlife and Plants" and subsequent updates, or endanger the critical habitat of such species. The subsequent discovery of the presence of a threatened or endangered species which may be affected by a permitted action or related activities shall result in immediate suspense of the GP for the specific project until Section 7 consultation required by the Endangered Species Act of 1973, as amended, is complete.

8. The permittee must maintain the lands and facilities subject to this GP in good condition and in conformance with the terms and conditions of this GP. Permittee is not relieved of this requirement even if the activity is abandoned. The permittee may transfer the permit to a third party in compliance with condition number nine below. Should the permittee cease to maintain the authorized activity or should they desire to abandon the project without a transferee, then the permittee must obtain approval from this office, which may require restoration of the area.

9. If the permittee sells the property rights or transfers a lease associated with an activity authorized by this GP, they must obtain the signature of the new property owner or new lessee, along with appropriate documentation to

record the transaction, and submit them to this office to validate the transfer of the authorized activity.

10. No activity, which may affect historic properties listed or eligible for listing, in the National Register of Historic Places is authorized, until the Corps has completed Section 106 review, as per the National Historic Preservation Act. In addition, if any previously unknown historic or archeological remains are discovered while accomplishing the activity authorized by this GP, you must immediately notify this office and the State Historic Preservation Office of what you have found. The DE will initiate the Federal and State coordination required to determine if the remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places. If the activity occurs on Federal land, the land manager is responsible for coordination.

11. A water quality certification has been issued for this GP by the Alaska Department of Environmental Conservation as required under Section 401 of the Clean Water Act (Public Law 95-217). For your convenience, a copy of the certification is attached. The permittee must comply with the conditions specified in the certification as general conditions to this permit.

12. Permittee must allow the City of Bethel, the DE, or their designated representatives, to inspect the authorized activity at any time deemed necessary to ensure that the work is being or has been accomplished in accordance with the terms and conditions of this GP.

13. If permafrost is present, sufficient fill (or other methods of insulation) shall be placed on the ground to provide thermal stability. Signs of thermokarsting or standing water indicate non-compliance with this condition.

14. No fill or construction materials shall be stockpiled in waters of the U.S. including wetlands, outside of the project boundary which shall be staked, or otherwise delineated, prior to any mechanized land clearing or fill placement.

15. The activities authorized under this GP shall not adversely affect Essential Fish Habitat (EFH). Section 305 (b) of the Magnuson-Stevens Fishery Conservation and Management Act and 50 CFR Part 60 provide the requirements for EFH consultation. The District Engineer shall make a determination whether or not the action will adversely affect EFH. The determination and an EFH assessment (per 50 CFR 600.920) shall be provided in any subsequent notice should the action adversely affect EFH.

REPORTING AND MONITORING:

The City of Bethel shall submit a summary report of all approved "Site Plan Review" authorizations under this GP, on a quarterly basis, to the Alaska District, Corps of Engineers, Regulatory Branch, North Section. The summary report shall include the name and address of responsible party, project location, fill quantity, dimensions of fill, and purpose of the authorized fill. If questions as to the applicability of the GP arise, or if there is any uncertainty whether a project is authorized by the GP, then the City of Bethel shall contact the Alaska District, Corps of Engineers, Regulatory Branch, North Section for assistance prior to approving the specific "Site Plan Review". These quarterly reports are due by the last day of March, June, September, and December for the previous 3 calendar months, for the entire term of the permit. In addition, the City of Bethel shall provide a map annually showing the permitted activities for the previous year by January 10.

LIMITS OF THIS AUTHORIZATION:

(1) This permit does not obviate the need to obtain other Federal, state, or local authorizations required by law.

(2) This permit does not grant any property rights or exclusive privileges.

(3) This permit does not authorize any injury to the property or rights of others.

(4) This permit does not authorize interference with any existing or proposed Federal Project.

LIMITS OF FEDERAL LIABILITY:

In issuing this permit, the Federal Government does not assume any liability for the following:

(1) Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.

(2) Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.

(3) Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

(4) Design or construction deficiencies associated with the permitted work.

(5) Damage claims associated with any future modification, suspension, or revocation of this permit.

REVALUATION OF PERMIT DECISION: The Corps may reevaluate its decision to issue a GP authorization to any person or agency at any time the circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to the following:

(1) The permittee or the City of Bethel fails to comply with the terms and conditions of this permit.

(2) The information provided by the permittee in support of an application under the GP proves to have been false, incomplete, or inaccurate.

(3) Significant new information surfaces which this office did not consider in reaching the original public interest decision.

(4) The City of Bethel (itself) is found to be party to violations of the Clean Water Act. If the DE determines that this has occurred, this GP may be modified by the Corps, such that the Alaska District Regulatory Branch would assume the verification role until such time as the issue is resolved to the District Engineer's satisfaction.

Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 enforcement procedures such as those contained in 33 CFR 326.4 and 326.5. The referenced enforcement procedures provide for the issuance of an administrative order requiring the permittee to comply with terms and conditions of the GP and for the initiation of legal action where appropriate. The permittee will be required to pay for any corrective measures ordered by this office, and if the permittee fails to comply with such directive, this office may in certain situations (as those specified in 33 CFR 209.170) accomplish the corrective measures by contract or otherwise and bill the permittee for the cost.

INSPECTION:

The DE, or his designated representative, may inspect sites of authorized work to determine that the work is being, or has been, performed in conformance with the terms and conditions of this GP. In the event that work is being or has been, performed in noncompliance with this GP, appropriate measures shall be taken to resolve the violation, including a requirement to obtain an individual permit.

PENALTIES FOR VIOLATION:

Failure to comply with the terms and conditions of this GP may result in suspension of the work, revocation of the permit, removal of dredged and/or fill material or other structures, restoration of waters and/or wetlands, and/or imposition of penalties as provided by law.

The discharge of dredged and/or fill material not in accordance with the terms and conditions of this GP is a violation of Section 301 of the Clean Water Act (33 U.S.C. 1319), and upon conviction thereof is punishable, in accordance with Section 309 of the Clean Water Act (33 U.S.C. 1319); by a fine of not less than \$2,500, nor more than \$25,000, per day of violation, or by imprisonment of not more than one year, or both. That individual is also subject to a civil penalty not to exceed \$25,000 per day of the violation.

EXTENSION, MODIFICATION, AND REVOCATION OF GENERAL PERMIT:

This GP may be revoked by issuance of Public Notice at any time the DE determines that the individual or cumulative effects of the activities authorized herein are having an unacceptable adverse effect upon the public interest. Following such revocation, all new applications will be processed under individual permit application review procedures and the DE would decide on a case-by-case basis if previously authorized activities should be revoked, suspended, or modified.

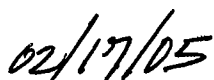

This GP and its associated State Water Quality Certification will be in effect for a period of five years. During that time, it may be modified by the DE if he determines that the singular or cumulative impacts of the activities authorized by this GP have an unacceptable adverse effect upon the public interest. During its fifth year, this GP and the work authorized under it shall be reviewed to determine if this GP should be modified, extended, or discontinued.

The time limit for authorizing work under this GP ends five years from the date of issuance. Any activity authorized by this GP before the expiration date must also be completed by that date, unless the activities are underway, will be completed within twelve months of the expiration date, and the permittee notifies the Corps of their intent to continue work on the project. Further time extension may be considered on a case-by-case basis under provisions of 33 CFR 325.6. If the applicant finds that they need more time to complete the authorized activity, they may submit their request for a time extension to this office for consideration at least one month before the expiration date.

FOR THE DISTRICT ENGINEER

Kevin Morgan, Chief

SITE PLAN APPLICATION

Title 18 of the Bethel Municipal Code requires the review of a Site Plan prior to the erection of any improvement on real property within the City limits. Application for a Site Plan Review shall be filed with the City of Bethel Planning Department. Upon approval of the application, a permit will be issued and is required to be displayed on the property to be improved. By submitting this application you are authorizing public access to the displayed Site Plan Permit area. Approval of plans does not presume to give approval to oversights by the City of Bethel Planning Office not grant authority to violate or cancel the provisions of any other federal, state or local laws regulating the use of development of this land.
