Re: FY-89 MCON Project P-229 Electronics/Communication Maintenance  
Shop, MCB, Camp Lejeune, North Carolina

Gentlemen:

Subsequent to the return of your 35% submittal of the referenced project, additional comments were received from our Environmental Quality Branch. Enclosure (1) provides comments which address life safety and fire protection issues. Additional comments which need to be incorporated in your design follow:

- a. Remove the battery shop holding tanks and the associated acid resistant piping. Coordinate with the Activity for a central location for storage of spent battery acids (55 gal. drums).
- b. Provide an oil/water separator between the wash rack and the sanitary sewer.
- c. Install acid neutralizing tanks in all battery shops. Install at floor level directly beneath the sinks. Tank outlets to be drained to the sanitary sewer.

If you have any questions, contact Ms. Susan M. Gale of this Command at telephone (804) 444-9670.

S. M. GALE, P. E.
