SUBJ: Utilization of Geographic Information System (GIS),
Water Exposure/Air Exposure modeling and Historical Re-
Construction of the Water Distribution System at MCB, Camp
Lejeune, N.C. : 1968-1985.

Ref: (a) my letter to COMNAVFACENGCOM (EV) dtd 26 Feb 03

Reference (a) submitted to COMNAVFACENGCOM Environmental
Division some recommendations concerning the use of
newly developed techniques by the Agency for Toxic
Substances and Disease Registry (ATSDR) to assist in
epidemiologic investigations at Camp Lejeune.

There is a large at-risk population of military personnel
and their dependents that were exposed to a range of
contaminants in the water supply over a number of years
and these now validated techniques seem appropriate to
be utilized in further investigations at MCB, CLUC.

I would hope that EV has made contact with ATSDR to
obtain the mass of materials relevant to these procedures
and begun to assess where NAVFACENGCOM stands re: their
future utilization at that NPL site.

CC: HQMC JL/LFL
LAUT DN
MCB, CLUC

Respectfully Submitted,

MAJOR, USMC (Retired)
