NA Not available. W Withheld to avoid disclosing proprietary data.

<sup>1</sup>Compiled by D.A. Buckingham (retired) and J.F. Carlin, Jr.

Data are calculated, estimated, or reported. See notes for more information.

## Antimony Worksheet Notes

### Data Sources

Sources of data for the antimony worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR), and Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS). Years of publication and corresponding years of data coverage are listed in the References section below. Zeros are used where data are actually “0.”

### Mine Production

Domestic mine production data includes antimony recovered from ores and concentrates. Data are “0” for 1908–14, 1919–21, 1927, 1929–31, and 2001–06 and 2008 to the most recent year. Data for 1985–92, 2000, and 2007 are withheld in order to avoid disclosing proprietary data. Data are not available for the year 1987. Data are reported in the MR and MYB.

### Smelter Production

Domestic smelter production includes antimony recovery from antimonial lead and lead smelters and refineries. Data for 2002 to the most recent year are withheld in order to avoid disclosing proprietary data. Data are reported in the MR and MYB.

### Primary Production

Total domestic antimony production data includes antimony recovered from ores and concentrates, and antimony recovery from antimonial lead at lead smelters and refineries. Data for 2002 to the most recent year are withheld in order to avoid disclosing proprietary data. Data are reported in the MR and the MYB.

### Secondary Production

Data include domestic antimony production from alloy scrap, and scrap and waste at secondary smelters, and refineries. For 1900–08, secondary production data were not available. Data are reported in the MR and the MYB.

### Shipments

Antimony ore concentrates and metal shipped in the United States from government stockpiles. Shipments data were not available prior to 1943, and for 1975–81, and 1988–92. Data are reported in the CDS and the MCS.

### Imports

Total antimony content data of several types of antimony imports for consumption including ores and concentrates, antimony metal and needle, and antimony sulfide and oxide chemicals. Data are reported in the MR and the MYB.

### Exports

Export data report the tonnage of antimony exported from the United States. Export data for 1900–14 are not available. Data are reported in the MR and the MYB.

### Stocks

Data are industry stocks. For 1900–15 and 1919–25, data are not available. Data are reported in the MR and the MYB.

### Apparent Consumption

Apparent consumption data include “Industrial Consumption” for prior to 1900–54. Data are from the MR and the MYB. Data for 1955–70 are published under the category “Consumption,” for the year 1971, “Actual Consumption,” and for 1972 to the most recent year, “Apparent Consumption.” These data are reported in the CDS and the MCS and are estimated using the following equation:

$$\text{DOMESTIC MINE PRODUCTION} + \text{SECONDARY PRODUCTION FROM OLD SCRAP} + \text{NET IMPORT RELIANCE.}$$

### Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of antimony apparent consumption. Data are estimated using the average market price in actual U.S. dollars per ton of antimony metal from 1900 to the most recent year. Data are reported in the MR and the MYB.

### Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

### World Production

Data for this category are world mine production in terms of antimony content. U.S. production is withheld and not available in the total, for 1985–92, and 2000 to the most recent year. Data are reported in the MR and the MYB.
