## Clay Worksheet Notes

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey-Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data are domestic clay material sold or used by producers. Prior to 1943 most of the clay used for the production of brick, sewer pipe and other heavy clay products was not included in the production statistics. Data are reported in the MR and the MYB.

## Imports

Data are clay material imported into the United States, as reported in the MR and the MYB.

## Exports

Data are clay material exported from the United States, as reported in the MR and the MYB. Export data are not reported prior to 1916.

## Apparent Consumption

Apparent consumption data are not reported. For 1900 to the most recent year, apparent consumption data are estimated by using the following equation:
APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When clay data for a particular category were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton ( t ) of clay apparent consumption. Data are estimated by using the following equation:
UNIT VALUE = (PRODUCTION SALES VALUE + IMPORT VALUE - EXPORT VALUE) / (APPARENT CONSUMPTION).

Data are reported in the MR and the MYB. When clay data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Ball Clay

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey-Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data are domestic ball clay material sold or used by producers. Data are reported in the MR and the MYB.

## Imports

Import data includes ball, common blue and gross almerode clays. Prior to 1954, data were reported as common clay. Wrought or manufactured clays were included for 1954 to the most recent year. Data are reported in the MR and the MYB.

## Exports

Export data are ball clay only and were not reported separately prior to 1970. Data are reported in the MR and the MYB.

## Apparent Consumption

Apparent consumption data are not reported. For 1900 to the most recent year, apparent consumption data are estimated by using the following equation:

## APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 t of apparent consumption. For 1900 to the most recent year, unit value data are estimated by using the following equation:

UNIT VALUE $=($ PRODUCTION SALES VALUE + IMPORT VALUE - EXPORT VALUE) $/$ (APPARENT CONSUMPTION).
Data are reported in the MR and the MYB. When data for a particular category were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Bentonite

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data are domestic bentonite clay material sold or used by producers. Bentonite sold or used data were reported under the miscellaneous clay category until separately reported in 1930. Data are reported in the MR and the MYB.

## Imports

Import data includes bentonite clays. Except for 1936-40 and 1952-55, prior to 1964, data were not separately classified but reported under the miscellaneous clay category in the MR publication. Datum was not available for 1966. Data are reported in the MR and the MYB.

## Exports

Bentonite clay export data were not separately classified prior to 1957, but reported under the miscellaneous clay category in the MR publication, except for 1939-40, 1942-48. Data were not available for 1963 and 1964. Data are reported in the MR and the MYB.

## Apparent Consumption

Apparent consumption data are not reported. For 1930-64, sold or used data are used to estimate apparent consumption. For 1965 to the most recent year, apparent consumption was estimated using the following equation:
APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 t of apparent consumption. For 1930-64, the sold or used unit value data are used as an estimate for unit value. For 1965 to the most recent year, unit value was estimated using the following equation:

## UNIT VALUE = (PRODUCTION SALES VALUE + IMPORT VALUE - EXPORT VALUE) / (APPARENT CONSUMPTION).

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Fire Clay

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey-Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data are fire and stoneware clay material sold or used by domestic producers. Data are reported in the MR and the MYB.

## Imports

Import data were not reported separately as fire clay prior to 1989. Data are reported in the MR and the MYB.

## Exports

Export data were not reported separately as fire clay prior to 1916. Data are reported in the MR and the MYB. After 2004, exports were estimated because $40 \%$ to $65 \%$ of export tonnage under the HTS code for fire clay was believed to be refractory-grade kaolin.

## Apparent Consumption

Apparent consumption data are not reported. For 1900 to the most recent year apparent consumption was estimated using the following equation:
APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 t of apparent consumption. For 1900 to the most recent year, the sold or used unit value data are used as an estimate for unit value. Data are reported in the MR and the MYB.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Fuller's Earth

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey-Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data include fuller's earth material sold or used by domestic producers. Data are reported in the MR and the MYB.

## Imports

Fuller's earth import data were reported as wrought and unwrought fuller's earths prior to 1934. For 1935-82 and 1984-2006, data were reported as fuller's earth. Data for 1983 and 2007 were not available. Gross almerode clay was included with fuller's earth data for 1953-63. Data are reported in the MR and the MYB.

## Exports

Export data were not reported separately prior to 1923. Data for 1935-55 were reported separately under "Miscellaneous clays" and are reported here. Data are not available for 1956-57 and 1963-64. Data are reported in the MR and the MYB.

## Apparent Consumption

Apparent consumption data are not reported. For 1900 to the most recent year apparent consumption was estimated using the following equation:

> APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 t of apparent consumption. For 1900 to the most recent year, unit value was estimated using the following equation:

## UNIT VALUE = (PRODUCTION SALES VALUE + IMPORT VALUE - EXPORT VALUE) / (APPARENT CONSUMPTION).

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Kaolin

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey-Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data include kaolin, china, and paper clay material sold or used by domestic producers, except for the period 1905-12 when paper clay was reported separately. Data are reported in the MR and the MYB.

## Imports

Data are kaolin, china and paper clay imports. Data are reported in the MR and the MYB.

## Exports

Kaolin china and paper clay export data were not reported prior to 1945, except for 1922 and 1942. Data are reported in the MR and the MYB.

## Apparent Consumption

Apparent consumption data are not reported. For 1900 to the most recent year, apparent consumption was estimated using the following equation:
APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 t of apparent consumption. For 1900 to the most recent year, apparent consumption was estimated using the following equation:
UNIT VALUE = (PRODUCER SALES VALUE + IMPORT VALUE - EXPORT VALUE) / (APPARENT CONSUMPTION).

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

## Miscellaneous Clay

## Data Sources

The sources of data for the clay worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey-Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below.

## Production

Data include bentonite, brick, slip and miscellaneous clay material sold or used by domestic producers. Prior to 1905, data were reported as miscellaneous clays. Miscellaneous clays and slip clay were reported separately for 1905-34. Brick clay was reported separately for 1907-17. Bentonite clay was reported separately beginning in 1930. After 1934, data were reported as common clay. Data are reported in the MR and the MYB.

## Imports

Data were separately classified as wrought and unwrought clays prior to 1938 and as other clays for 1938 to the most recent year. Data are not available for 1958-69. Data for 1930-39 include artificially activated clays. Data are reported in the MR and the MYB.

## Exports

Export data were not reported prior to 1916 and not available for 1958 and 1966. Data include fuller's earth that was not reported separately, for 1916-22, and 1963-64 and bentonite clay prior to 1957. Data do not include fuller's earth for 1935-55 and bentonite clay for 1939-40 and 1942-48. Data are reported in the MR and the MYB.

## Apparent Consumption

Apparent consumption data are not reported. For 1900 to the most recent year, apparent consumption was estimated using the following equation:
APPARENT CONSUMPTION = PRODUCTION (PRODUCER SALES) + IMPORTS - EXPORTS.

Data are reported in the MR and the MYB. When data for a particular category other than apparent consumption were unavailable, data were presumed to be zero in making the above calculation.

## Unit Value (\$/t)

Unit value is defined as the value of 1 t of apparent consumption. For 1900 to the most recent year, the sold or used unit value data are used as an estimate for unit value. Data are reported in the MR and the MYB.

## Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.
