Data are calculated, estimated, or reported. See notes for more information.

## Gemstones Worksheet Notes

### Data Sources

Sources of data for the gemstones worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR). The years of publication and corresponding years of data coverage are listed in the References section below. Note: 1 metric ton = 5 million carats.

### Production Value

Data are the value of U.S. gemstones production. Data for 1922–34 are not available. Data are from the MR and the MYB.

### Imports

Import data for 1919–21 are rough or uncut and cut but unset natural diamonds. Import data for 1929 to the most recent year represent the summed gross weights of rough or uncut and cut but unset natural diamonds, emeralds, sapphires, rubies; natural, cultured and imitation pearls; and various other natural, synthetic and imitation gemstones; imported into the United States for consumption. Data are not included for agate, corals, jade, and marcasites. Import data are not available for 1922–28. Data are from the MR and the MYB.

### Exports

Export data are not available prior to 1970. Data for 1970 to the most recent year represent the summed weights of all natural diamond materials that were exported or re-exported from the United States. Data are from the MYB.

### Apparent Consumption

Gemstones apparent consumption data are not reported and could not be accurately calculated because only value data are given for production. Import data were used to estimate U.S. gemstones apparent consumption.

### Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of gemstones apparent consumption in current dollars. Because there are no apparent consumption data, unit value was estimated using imports unit value data for 1919–21 and 1929 to the most recent year, and rounded to two significant figures. Unit value data for 1922–28 were estimated by interpolation of imports value data, and rounded to two significant figures. Fluctuations in the unit value series, such as for 1920–21, 1929–30, 1949–50, 1969–70, and 1990–91, may not indicate changes in value, but may reflect variations in type, quantity, and quality of the gemstones imported. Data are from the MR and the MYB.

### Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, was used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

### World Production

World production data prior to 1944 and for 1949–54 are reported in total gemstone-quality diamonds, plus industrial diamonds. World production data for 1944–48 and 1955 to the most recent year represent the total quantity of natural gemstones quality diamonds. Data are from the MR and the MYB.
