Data are calculated, estimated, or reported. See notes for more information.

Molybdenum Worksheet Notes

Data Sources

The sources of data for the molybdenum worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR); Metal Prices in the United States through 1998 (MP98); and Internet Molybdenum Yearbook 1983 (Sutolov, 1983, p. 251–252). The years of publication and corresponding years of data coverage are listed in the References section below.

Production

Production data show the U.S. mine production of molybdenum concentrate in contained weight of molybdenum. For 1900–06 and 1908, data are from Sutolov (1983, p. 251–252). For 1926, mine output was withheld to avoid disclosing proprietary data. For 1909 to the most recent year, data are from the MR and MYB.

Shipments

Shipments are the amount of concentrate shipped by producers in contained weight of molybdenum. Data are from the MR and the MYB. Data are not available for 1900–18.

Imports

Imports are the molybdenum content of ores and concentrate and molybdenum products except for 1911. Datum for 1911 is a combination of unspecified amounts of molybdenum and ferromolybdenum in gross weight. Data were not available for 1900–10 and 1914–17. Data are from the MR and MYB.

Exports

Exports are the molybdenum content of ores and concentrates and molybdenum products. Data were not available for 1900–38. Data are from the MR and MYB.

Stocks

Stocks are the sum of concentrate stocks, product stocks, and consumer stocks in contained weight of molybdenum. For 1919–20, stocks are reported in the MR as producer stocks. Stocks data were not available for 1900–40. Consumer stocks data are not available for 1941–43, 1949–53, and 1955. Data are from the MR and MYB.

Apparent Consumption

Apparent consumption was calculated with the formula:

$$\text{APPARENT CONSUMPTION} = \text{PRODUCTION} + \text{IMPORTS} - \text{EXPORTS} \pm \text{STOCK CHANGES.}$$

If imports, exports, and/or stocks were not available, they were not included in the calculation of apparent consumption. For these years, where data were incomplete, apparent consumption is reported in two significant figures. For 1926, the shipment amount was substituted for production in the calculation.

Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of molybdenum apparent consumption. For 1912–70, the unit value is estimated with the molybdenum concentrate price series, from various sources, as published in MP98. For 1971 to 2007, the unit value is estimated by the molybdenum oxide price series from (Platts) Metals Week. For 2008 to the most recent year, the unit value is estimated by the molybdenum oxide price series from Ryan's Notes.

Unit Value (98\$/t)

The Consumer Price Index, with 1998 as the base year, is used to adjust unit value in current dollars to the unit value in constant 1998 dollars.

World Production

World production reports world mine production of ores and concentrates. For 1900–04, data are from Sutolov (1983, p. 251–252). For 1905 to the most recent year, data are from the MR and MYB.
