Salt Worksheet Notes

Data Sources

The sources of data for the salt worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR), and Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS). Import and export data were collected by the U.S. Census Bureau and reported in the MR and the MYB. The years of publication and corresponding years of data coverage are listed in the References section below.

Production

Total mine production data were reported in the MYB starting in 1970 and detailed production data by product category for 1981 to the most recent year. The “Sold or used by producers” data category from the MCS and the CDS for 1955 to the most recent year and the MYB and the MR for 1907 to the most recent year was used as a substitute for production. The “Sold or used by producers” data category is the quantity of salt sold or used for captive purposes (i.e. brine for chloralkali manufacture). These data were reported by type and product form consisting of the following categories: brine, rock, solar, and vacuum and open pans. In addition, pressed blocks were separated out from rock, solar, and vacuum and open-pan categories because of the high unit value.

Imports

Import data were from the MR and the MYB.

Exports

Export data were from the MR and the MYB.

Apparent Consumption

Apparent consumption estimates were obtained from the MR and the MYB.

Unit Value (\$/t)

Unit value is the value in actual U.S. dollars of 1 metric ton (t) of salt apparent consumption. The weight-averaged value for salt was developed using the product sold or used values and quantities for the five product categories. These product categories are brine, rock, solar, vacuum, and open pan, and pressed block. All product values and quantities used in the estimation of the product price series were from the MR and the MYB for 1907 to the most recent year.

Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

World production data were reported in the MR for 1900–06. The MR stopped reporting world production for 1907–22. The 1923 MR reported world salt production for 1913–23 with continued reporting in the MR and in the MYB for 1924 to the most recent year.
