Sand and Gravel (Industrial) Worksheet Notes

Data Sources

The sources of data for the industrial sand and gravel worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR), and Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS). The years of publication and corresponding years of data coverage are listed in the references section below.

Production

U.S. production data collection and reporting did not start for industrial sand until 1902. Before 1902, sand was included with stone and included only silica sand for glass making. Construction and industrial sand and gravel production were reported together in the salient statistical table in the MR and the MYB through 1958, and were split between "commercial" and "government" (State, county, municipalities, and Federal). Categories were split between construction and industrial according to the following guidelines: Construction sand included building, paving, railroad ballast, and other (excluding ground sand). The reporting of gravel production prior to 1959 did not indicate any industrial applications, therefore the assumption is made that all gravel production data were for construction applications. After 1958, some gravel was used for industrial applications, such as filtration, ferrosilicon, and non-metallic flux for sulfur production. Industrial sand includes glass, molding, grinding and polishing (also blast sand), fire or furnace, engine, and filter (ground sand is included in the "other" category and is separated out for inclusion with industrial). Construction and industrial sand and gravel statistics were reported separately in a combined chapter starting with the 1959 MYB and in separate chapters starting with the 1988 MYB.

Imports

U.S. import data for industrial sand and gravel were reported in tables starting with the 1922 MR and continues to be reported in the MYB and the MCS.

Exports

Export data for combined sand and gravel (construction) and sand and gravel (industrial) were reported in the foreign trade section text starting with the 1922 MR and continuing in the MYB through 1939. Construction and industrial sand and gravel export data were split 50:50 for 1922–39 based on the average for 1971 to the most recent year when more complete export data were available. Sand and gravel (industrial) export data were not available for 1940–62. Export data for 1963 to the most recent year are from the CDS, the MCS, and the MYB.

Apparent Consumption

Apparent consumption is defined as follows:

APPARENT CONSUMPTION = PRODUCTION + IMPORTS – EXPORTS.

Export data are not available for 1940–62 and are not included in the estimate of apparent consumption.

Unit Value (\$/t)

Unit values were estimated by summing the values for different types of sand and gravel (industrial) production plus import values minus export values and dividing by total quantity of production plus imports minus exports. Data for quantities and values from which unit values were estimated are from the MR and the MYB.

Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

World Production

World production data reporting of industrial sand and gravel started in 1969 in the MCS. Data prior to 1969 were not available for other countries and therefore were not reported. Data from 1969–95 were from the MCS. Data from 1996 to the most recent year were from the MYB.
