

## Corrections to the Perinatal Guidelines

On January 22, 2013, changes were made to the [Perinatal Guidelines](#) to clarify the infant nevirapine (NVP) dosing recommendations.

In the [Postpartum Care—Infant Antiretroviral Prophylaxis](#) section, [Table 9. Recommended Neonatal Dosing for Prevention of Mother-to-Child Transmission of HIV](#) was updated to indicate that the NVP prophylaxis doses are presented as the **total** dose (not mg/kg).
