

more than 50 percent of the world cork supply,<sup>5</sup> and Spain accounts for another 26 percent.<sup>6</sup> The outer bark of the cork oak is stripped every 9-10 years when it has become thick enough to provide cork for commercial use.<sup>7</sup> High quality cork is typically used for stoppers for wine bottles, but lower grades are used to manufacture a wide range of other products including ceiling tiles, heat and electrical insulators, auto parts (e.g., gaskets), and shoe soles.<sup>8</sup> Although cork oak may grow in certain states (e.g., Louisiana, Hawaii) as an exotic ornamental,<sup>9</sup> there is no commercial production of natural cork in the United States.

This bill effects a net reduction in the general rate of duty for U.S. imports classified in HTS 4503.90.60, a basket classification described as articles of natural cork other than corks and stoppers; discs, wafers, and washers; or wallcoverings. A search of the U.S. Customs CROSS database revealed that included in this subheading were products such as cork socks or booms, cork disks for industrial applications, cork leg padding for kayaks, cork pictures, and cork sheets. In 2003, U.S. imports classified in this subheading totaled approximately \$354 thousand. The five major suppliers were Portugal, China, Taiwan, Spain, and France.

**Technical comments:**<sup>10</sup>

The proponent of this bill, a manufacturer of fishing rods and fishing rod components, uses imported natural cork rings of various sizes to make fishing rod handles. The firm argued unsuccessfully before U.S. Customs that the cork rings it uses should be considered parts of fishing rods (HTS 9507.10.00), which are subject to a general duty of 6 percent (see Customs Ruling HQ 965499). U.S. Customs ruled that the cork rings in question should be classified in HTS 4503.90.20, which is subject to a general duty of 14 percent. This legislation reduces the general duty for HTS 4503.90.20 to 6 percent, the same rate as that for HTS 9507.10.00. The revenue impact of the 8 percentage point reduction is negligible.

However, this legislation focuses attention on a broader question in regard to HTS heading 4503, articles of natural cork. Reflecting the fact that natural cork is not produced in the United States, the general rate of duty for subheadings within HTS 4503, with one exception, is free. The exception is the basket category, HTS 4503.90.20, which as noted above is subject to a duty of 14 percent. Rather than reduce the duty on the entire basket category of cork products, it appears that the bill could be more narrowly drawn to cover the cork rings at issue.

<sup>10</sup> The Commission may express an opinion on the HTS classification of a product to facilitate consideration of the bill. However, by law, only the U.S. Customs Service is authorized to issue a binding ruling on this matter. The Commission believes that the U.S. Customs Service should be consulted prior to enactment of the bill.
