Effective Health Care
Diagnosis of Coronary Artery Disease
Nomination Summary Document

Results of Topic Selection Process & Next Steps

- Diagnosis of coronary artery disease using computed tomography versus stress echocardiography is too broad to develop with limited program resources, given lack of a defined population or clinical context. No further activity will be undertaken on this topic.

Topic Description

Nominator: National non-governmental advisory group

Nomination Summary: The nominator has expressed interest in the comparative effectiveness of computed tomography versus stress echocardiography for the diagnosis of coronary artery disease.

Key Questions from Nominator: None

Considerations

- This topic could not be evaluated due to insufficient information given in the original nomination. Specifically, the populations and outcomes are undefined.
