

TOX21 ASSAY NOMINATION FORM INSTRUCTIONS

This Assay Nomination Form may be submitted to propose assays for inclusion in Tox21, the tripartite collaboration between the Office of Research and Development of the U.S. EPA, the National Toxicology Program of the National Institute of Environmental Health Sciences, and the NIH Chemical Genomics Center (NCGC) of the National Human Genomics Research Institute. The goal of this project is the research, development, validation and translation of new and innovative methods that characterize key steps in toxicity pathways. A central component of the collaboration is the use of quantitative high-throughput screening (qHTS) assays performed at the NCGC to evaluate pathways of toxicity. Ideally proposed assays complement assays that are part of EPA's ToxCast program, and this could include the direct transition of ToxCast assays to NCGC. This Nomination Form serves to provide input to the collaboration of potential assays supporting this goal.

Proposed assays should be compatible with the guidelines for qHTS assays as described on the NCGC website:

http://www.ncgc.nih.gov/guidance/HTS_Assay_Guidance_Criteria.html

The assay proposal should be limited to **one** page. The form should be submitted by email to the address below. Members of the collaboration will evaluate submissions on an ongoing basis. Please provide contact information as submitters may be contacted for additional information. Please note that the submitter will not necessarily receive feedback on submissions unless selected for screening.
