

# Russian-American Cooperative Observations in the Pacific Arctic

(a) Global-Mean Surface Temperature Anomaly (°C)

(b) 2005 Surface Temperature Anomaly (°C)

# A NOAA Climate Driver in the Arctic

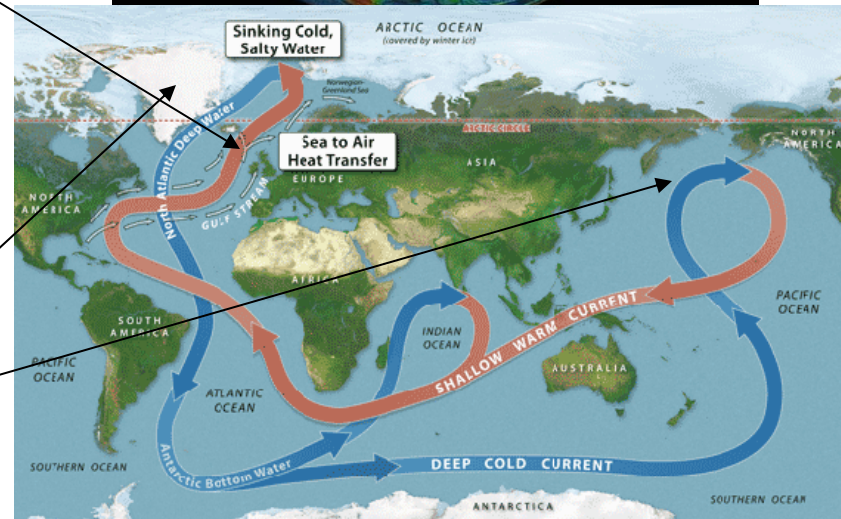

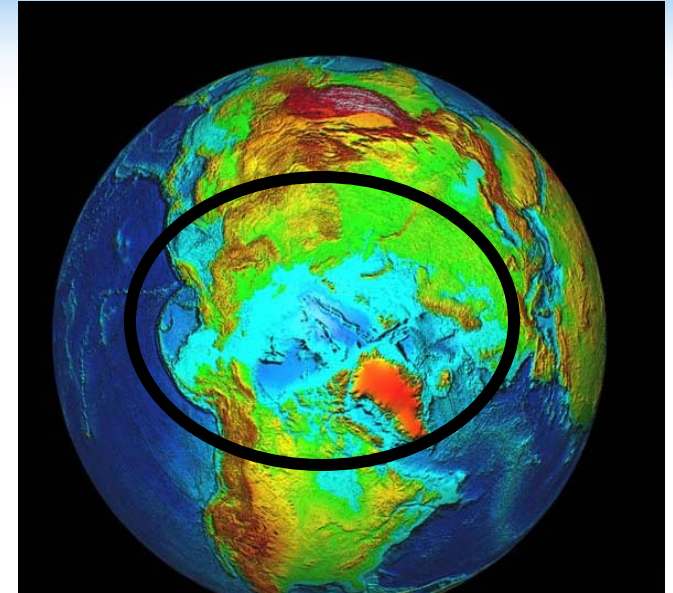

Temperature anomalies are higher in the Arctic than the rest of the world

<http://www.arctic.noaa.gov/detect/global-temps.shtml>

*Global - Global Temperature Trends: 2005 Summation*

# Possible Arctic Influences on Global Climate Change:

- Increase of methane in the atmosphere due to a thaw in the permafrost on land and under water
- Fresh water /salt water unbalances, Ocean circulation disruption
- Changing albedo of the planet due to melting of sea ice
- Extinction or migration of many species
- Rising sea level due to the melting of the Greenland Ice Cap.
- Increase in severe weather.

## **The Bering and Chukchi Seas, Alaska and Chukotka show amplified responses to climate change.**

The United States and the Russian Federation are working together to monitor the change in flux into and out of the Arctic through the Bering Strait-the Pacific Gateway to the Arctic.

# Russian-American Long-term Census of the Arctic: RUSALCA

U.S.-Russian Federation S&T Agreement  
MOU on World Oceans and Polar Regions, 2003

# RUSALCA

## RUSALCA Goals:

- Take observations where Arctic sea ice is reducing
- Monitor fresh water, nutrient fluxes
- Track the fate of Pacific water in the Arctic and monitor the influx of Atlantic water
- Monitor ecosystem indicators of climate change.
- Improve international Arctic science collaboration and explore the unknown Arctic

Russian American Long-term Census of the Arctic

# Sea Ice Thickness (10-year average)

1950's

2050's

Pacific Gateway

100% of 1955 volume

54% of 1955 volume

GOAL 1 (Sea Ice Thinning Observations)

# GOAL 2: Fresh water fluxes & pathways

Increased fresh water flow from the Arctic to the north Atlantic

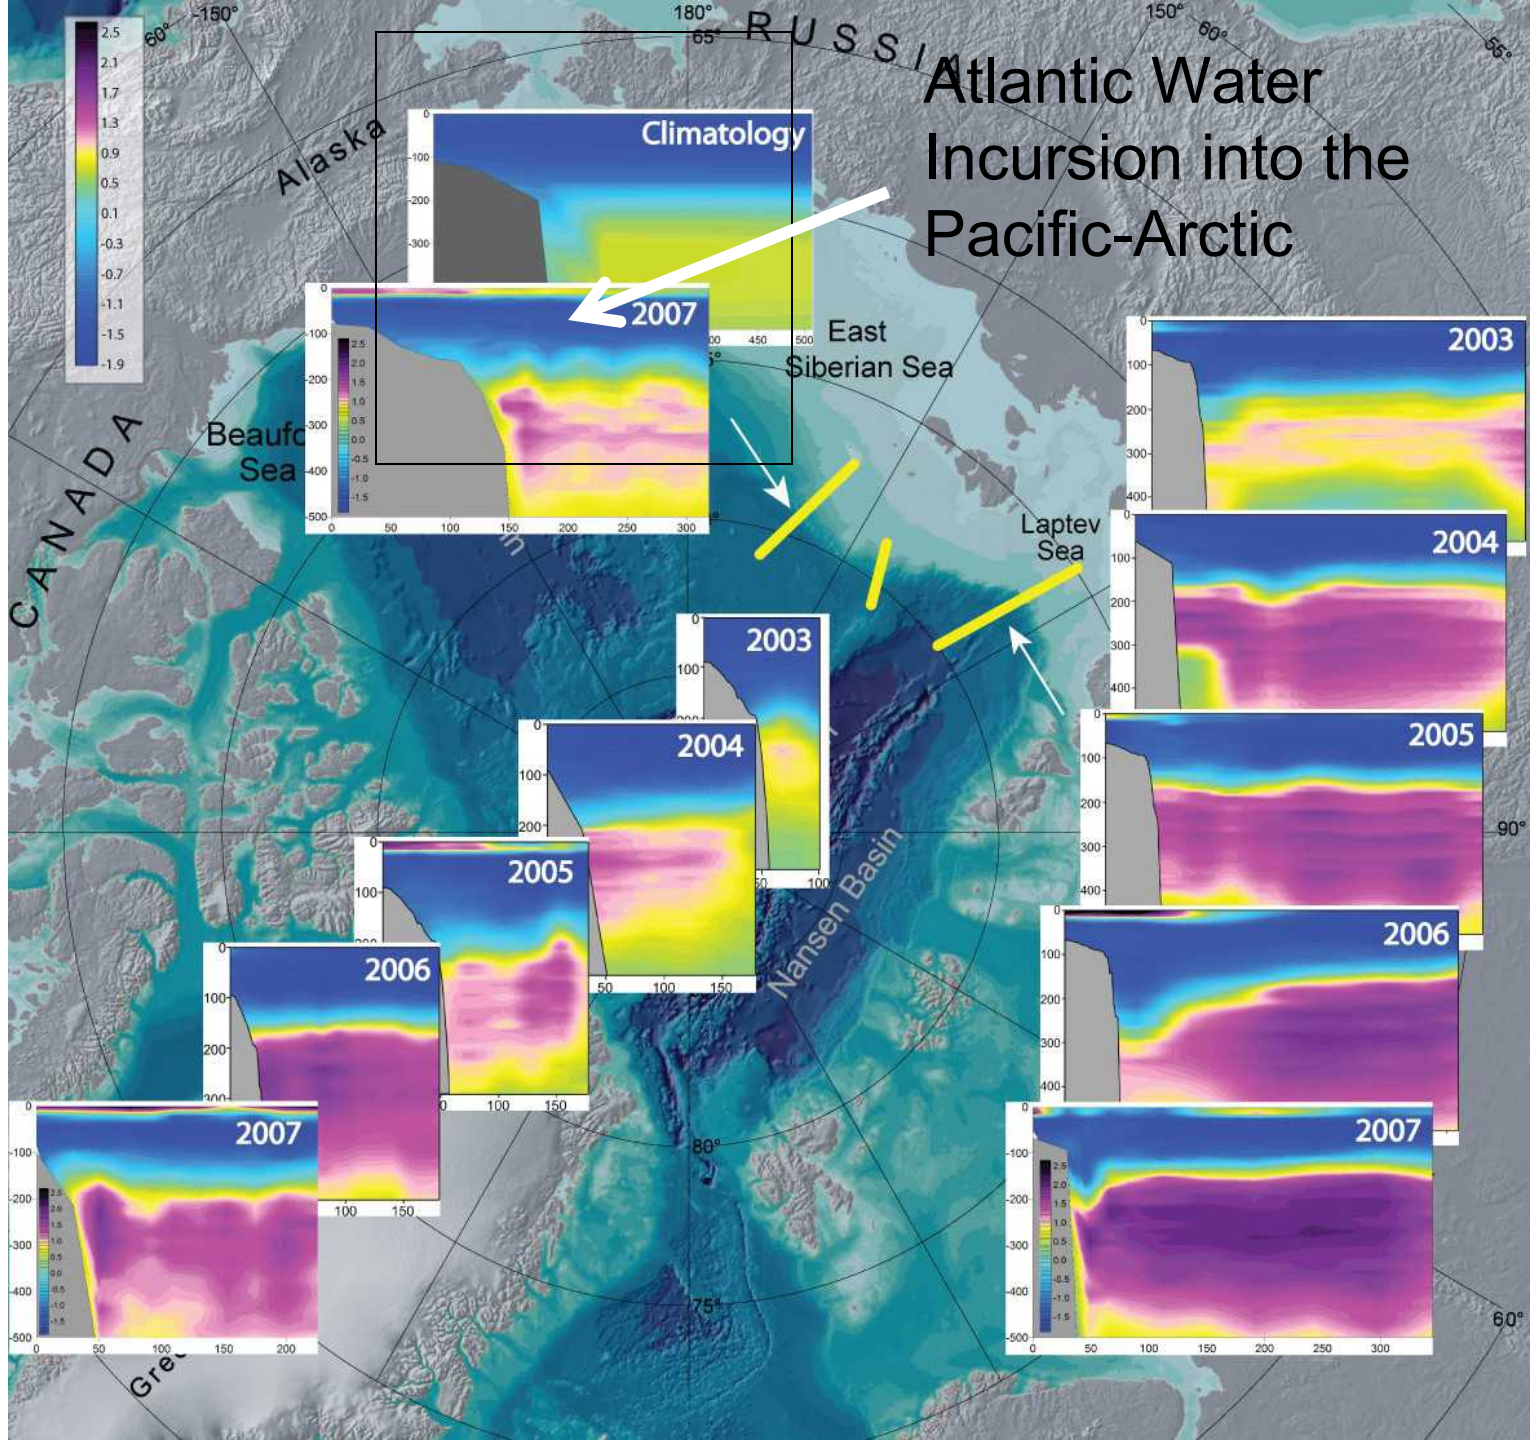

What are the pathways of fresh water flow across the Pacific Gateway ?

# Goal 3

# Atlantic Water Incursion into the Pacific-Arctic

**GOAL 4**  
Monitor Eco-  
system changes  
and take an  
Arctic Census of  
Marine Life

**ECOSYSTEM INDICATORS OF CLIMATE CHANGE**

**GOAL 5**  
Explore  
The  
unknown  
Arctic  
Ocean

NOAA Pacific Arctic Gateway exploration

Moscow, 2003

Russian American Long-term Census of the Arctic

# RUSALCA Russian Government Partners

- Russian Academy of Sciences
  - Shirshov Institute of Oceanology
  - Zoological Institute
  - Institute of Microbiology
  - Pacific Oceanological Institute
- Roshydromet
  - AARI
  - FEHRI

- Ministry of Defense
  - Russian Federation Navy
- Ministry of Natural Resources
  - VNIIOkeangeologica
- Ministry of Sciences
- Foreign Ministry

# RUSALCA U.S. PARTNERS

- NSF- Bering Strait Moorings
- NOAA funded (CPO, OER, NMFS)
  - CIFAR- University of Alaska
  - Smithsonian Institution
  - Pt. Stephens Research
  - University of Tennessee
  - University of Washington
  - Woods Hole Oceanographic Institution

# Structure of the Shipboard Operations

Chief of Expedition

- RUSALCA MISSION COORDINATORS

K. Crane USA-M. Zhdanov, Russia

- U.S. CHIEF SCIENTIST'S

\_\_\_Kevin Wood, NOAA, Terry Whitledge, UAF

# SCIENTIFIC PARTY

- SCIENTISTS WRITE PROPOSALS TO THEIR OWN FUNDING AGENCIES
- Russians- Russian Academy of Sciences
- US - CIFAR, JISAO, CICOR (NOAA's Cooperative Institutes at the University of Alaska, Washington and WHOI)
- Most teams have both Russian and American partners, e.g. Biodiversity of Fish, Census of Zooplankton, Nutrients

*RUSALCA  
TIME LINE*

2003 Sign Memorandum of Understanding, Russian Academy and NOAA

2004 **Khromov expedition** Bering-Chukchi Seas

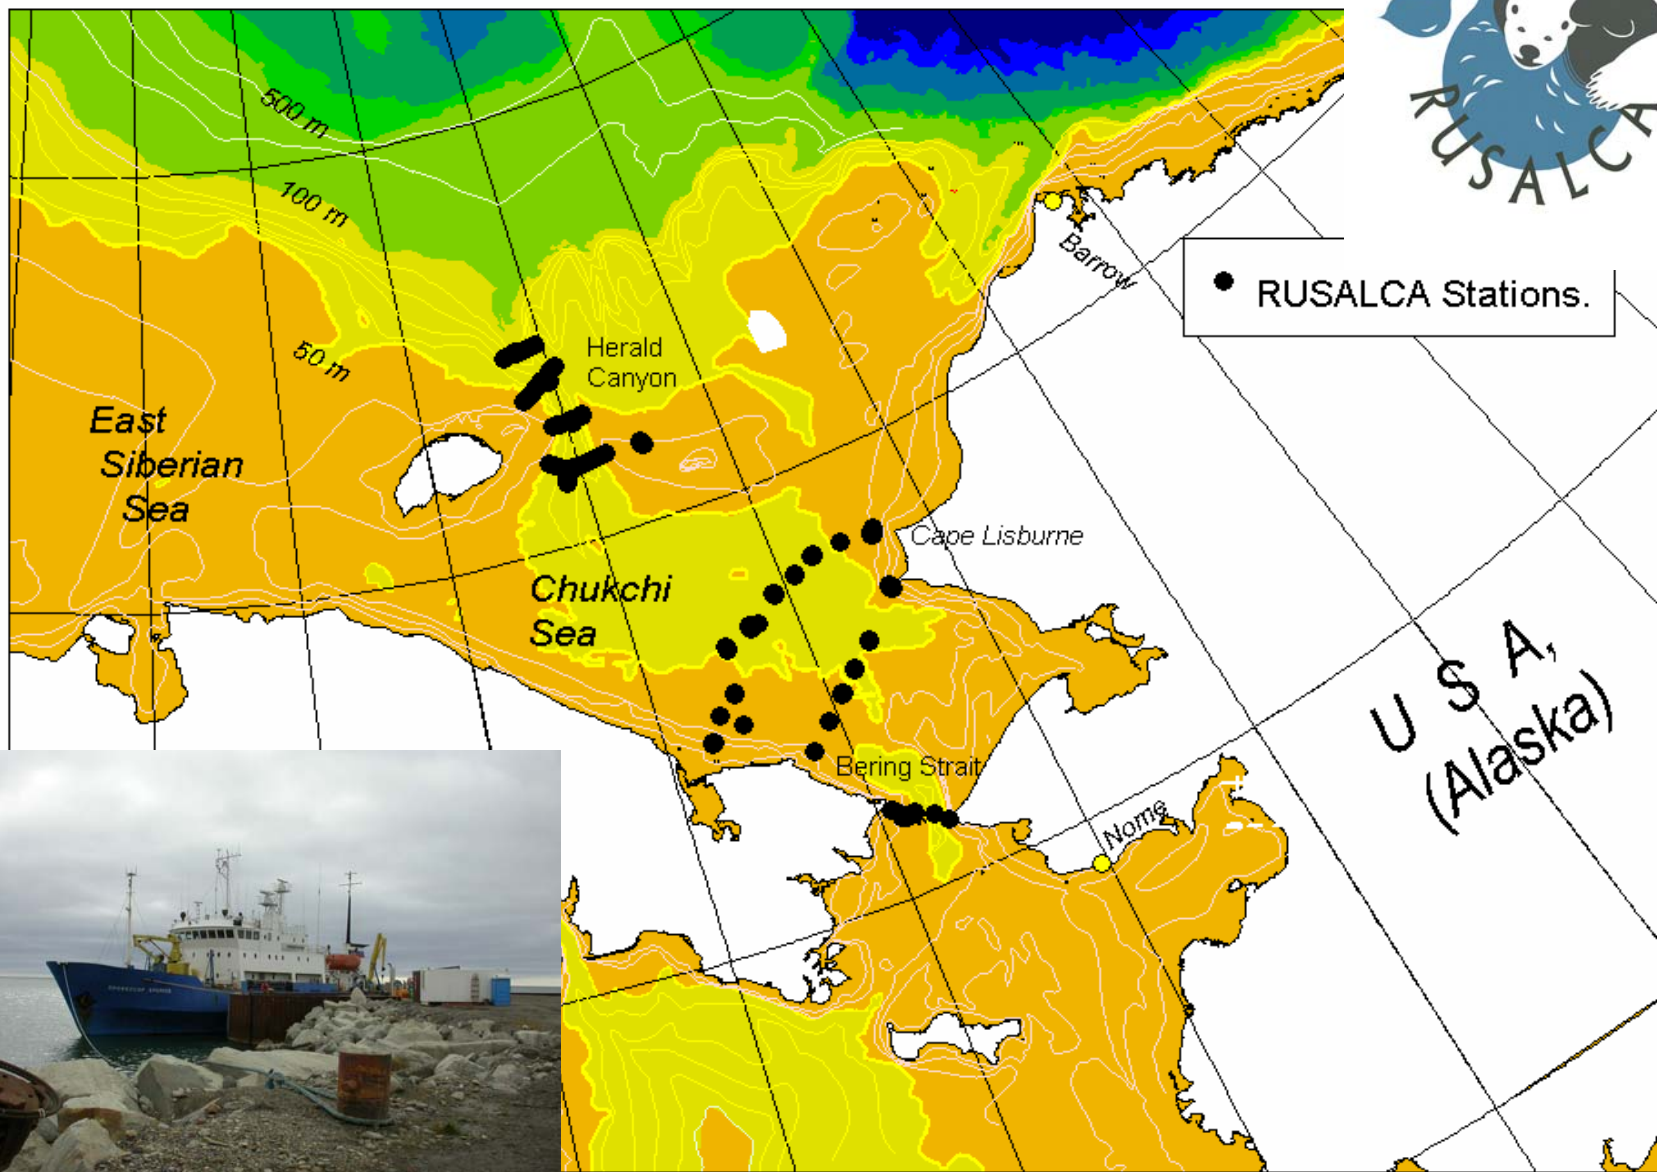

- Census of Marine Life and exploration of the Chukchi Sea
- Monitoring current fluxes through the Bering Strait and Herald Canyon
- Methane exploration

2005, 2008 retrieval of mooring data

2009 Large scale expedition

Actual RUSALCA Stations, 2004

# RUSSIAN-AMERICAN MOORING LOCATIONS

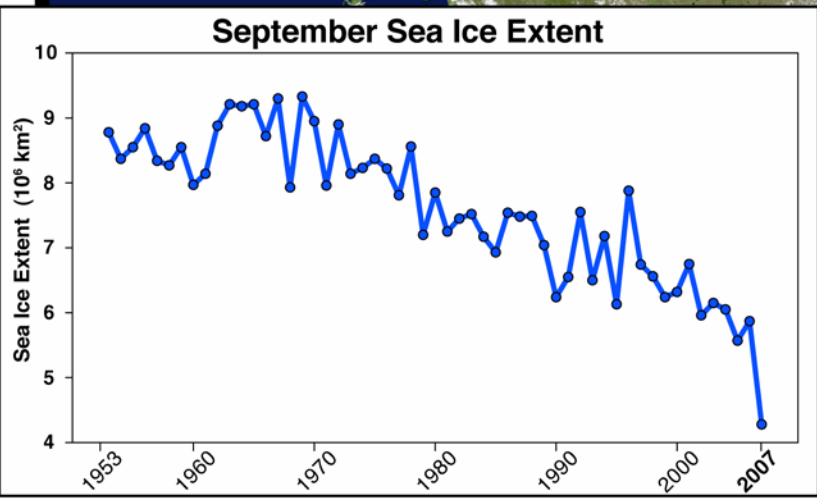

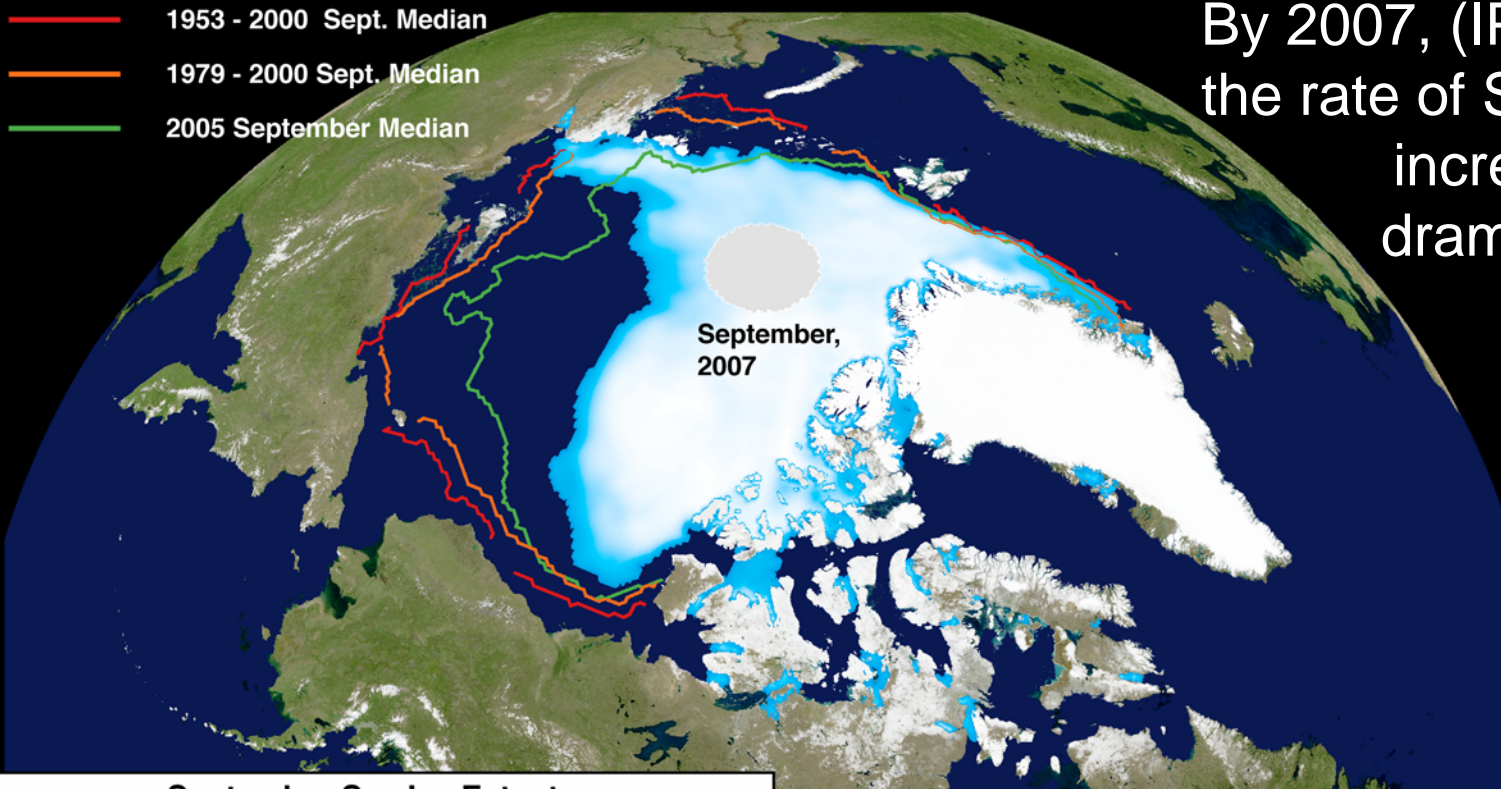

RUSALCA STATIONS, BERING STRAIT

PROPOSED MOORING LOCATIONS ●

## RUSALCA Mooring Locations 2007-2008

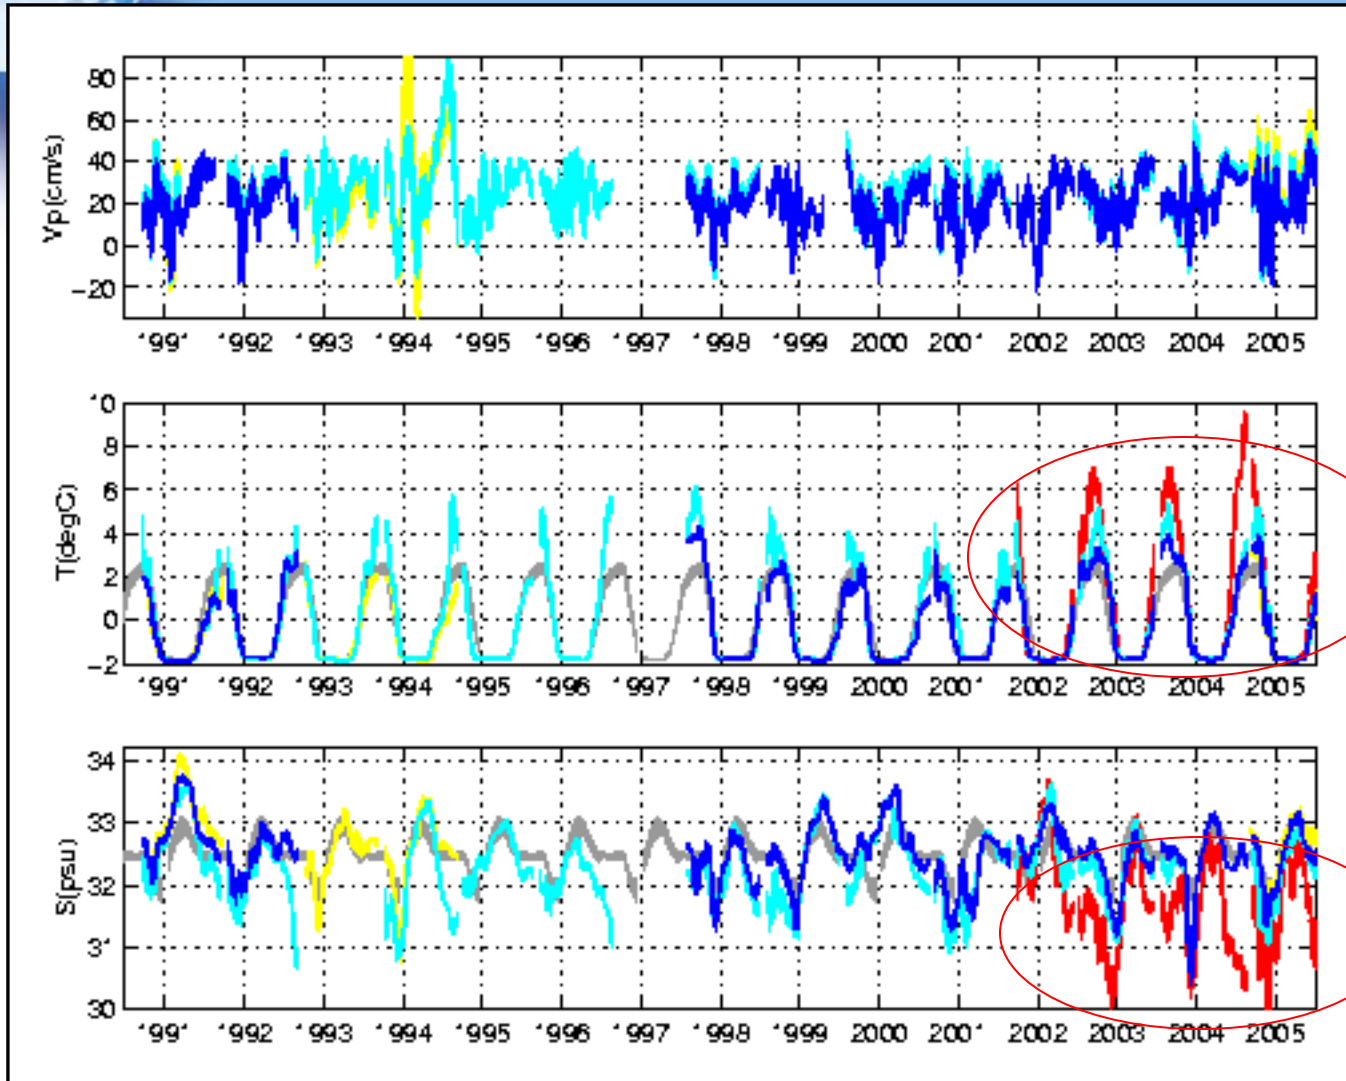

By 2007, (IPY)  
the rate of Sea ice loss  
increased  
dramatically

# Flow Through Bering Strait warmer and fresher

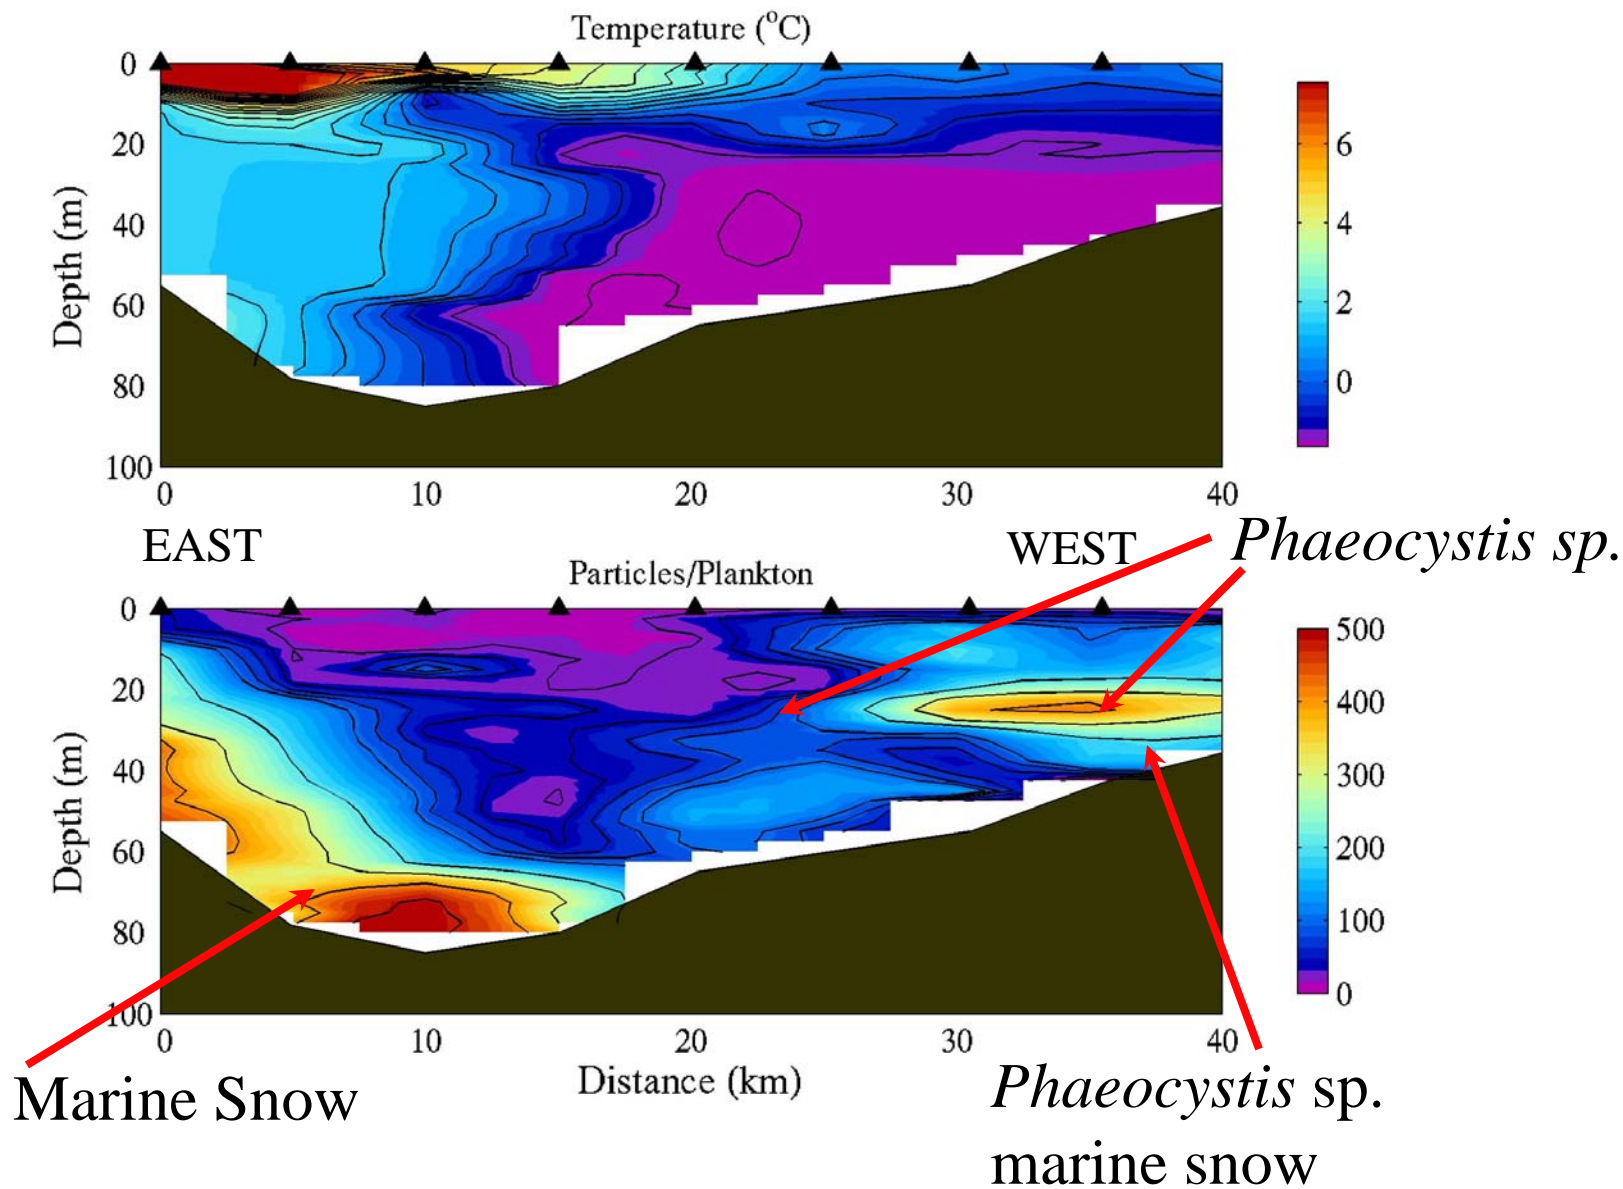

Temperature  
Is Rising

Salinity Is  
Falling

From Rebecca Woodgate - UW/APL

# Observations of Marine Particles and Plankton : Chukchi Sea

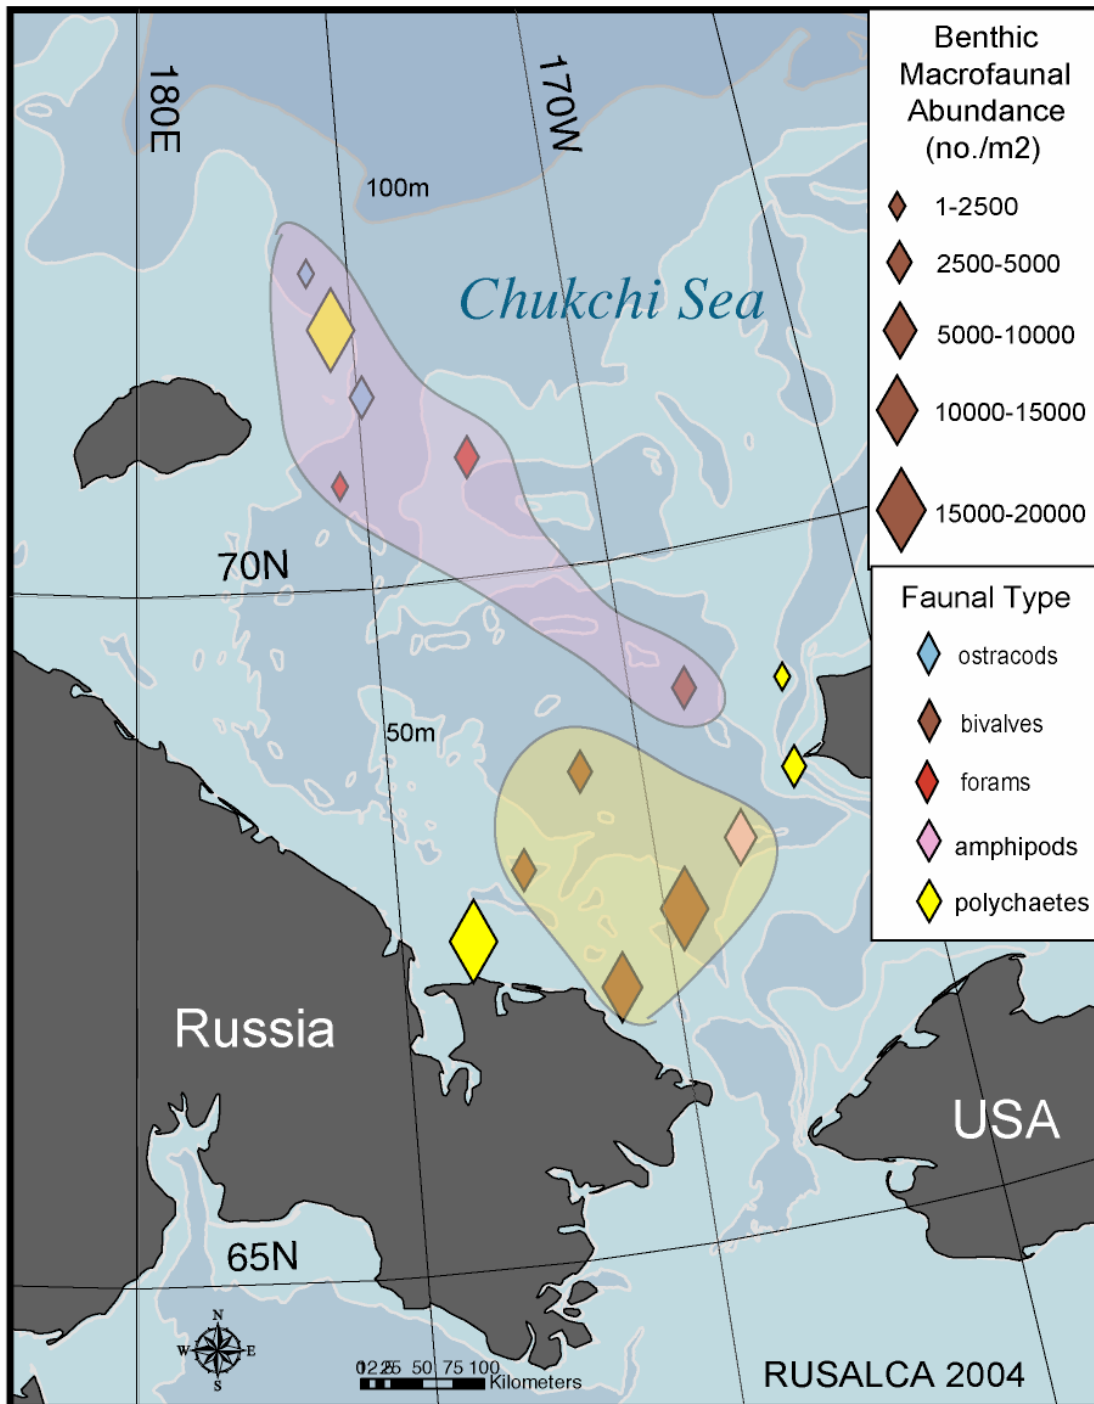

# Observations of Benthic Structure

two major cluster groups at 57% similarity level

**yellow:** “hot spot” in southern Chukchi Sea, high abundance level of bivalves and amphipods

**purple:** downstream Herald Valley group, dominated by polychaetes, bivalves, forams and ostracods

Individual sites: in fast current regions along coastlines, dominated by suspension-feeding polychaetes

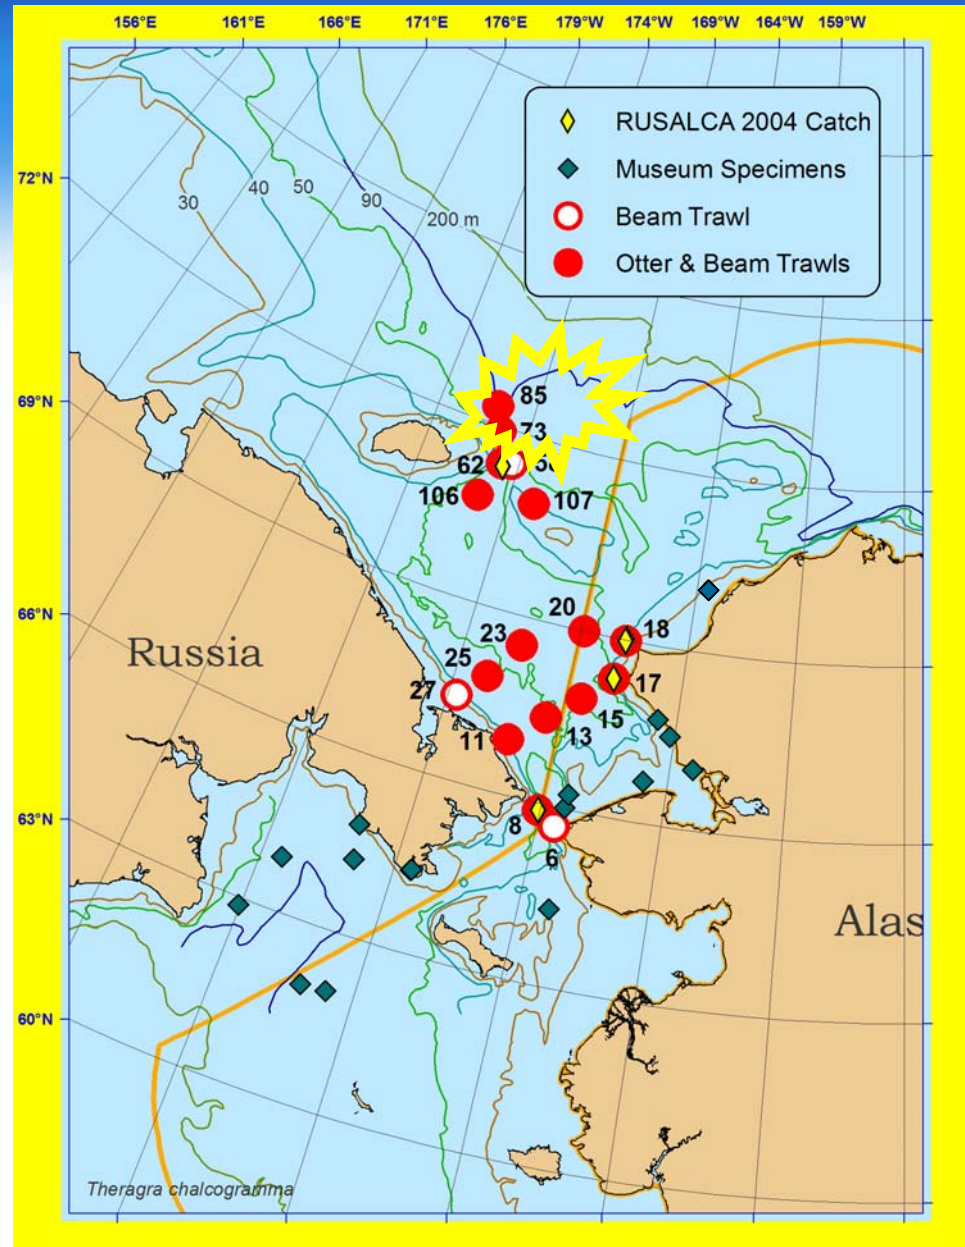

# Impacts on Ecosystems

**Fish Found Further North in the Arctic: Migrations from the Bering Sea?**

**Walleye Pollock**  
*Theragra chalcogramma*

From K. Mecklenburg

**RUSALCA**

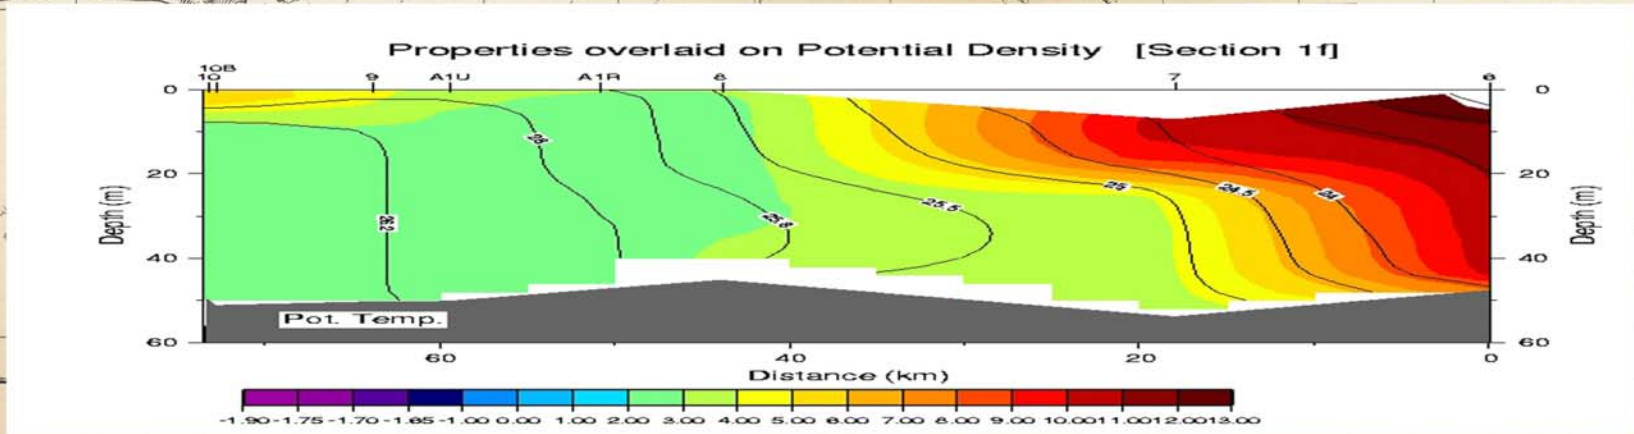

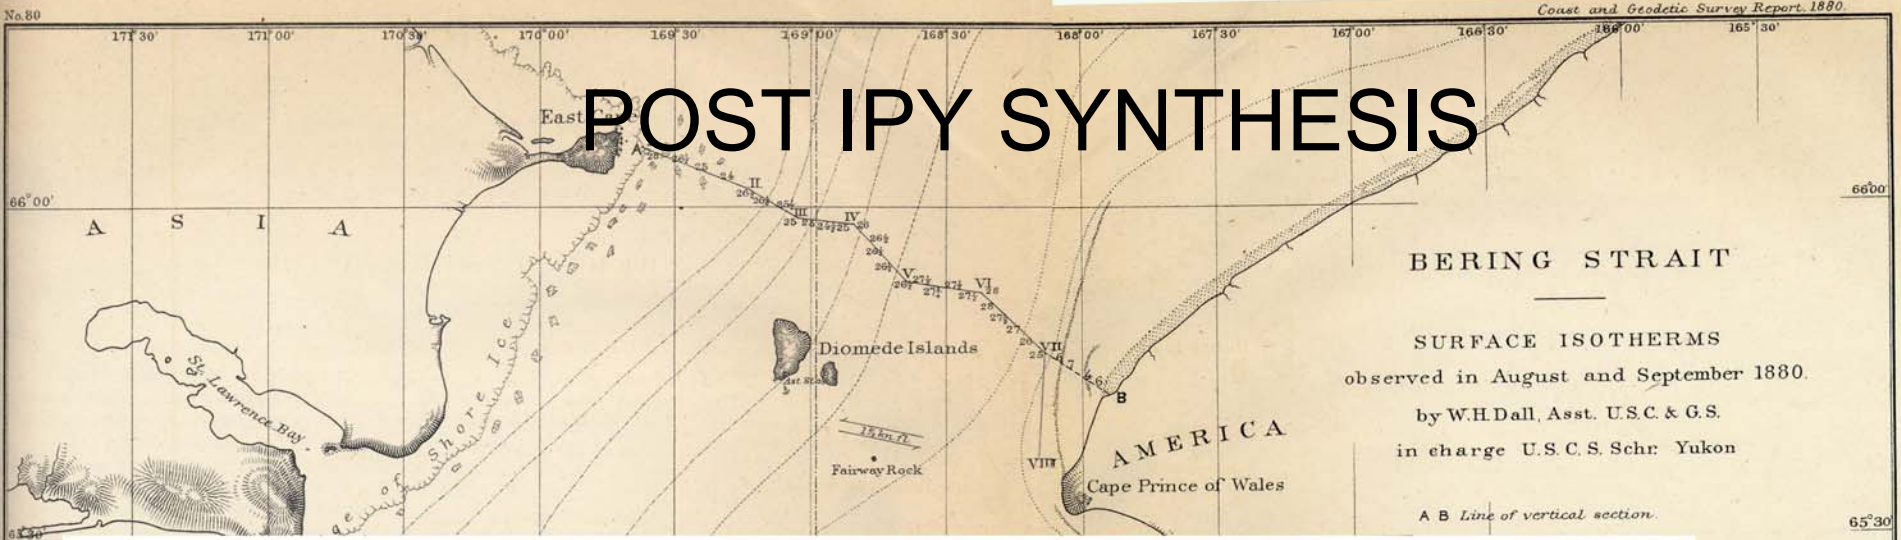

The first four years of RUSALCA shows the Importance of long-term observations of the ecosystem.

Figure 3. Representation of a simplified northern Bering/Chukchi Sea food web. The high density and abundance of benthic biota reflects the large proportion of phytoplankton that falls directly to the seabed, ungrazed by pelagic organisms. The direct assimilation of phytoplankton by the benthos results in shorter food chains and a more efficient transfer of carbon to large marine mammals and diving seabirds.

Organisms are: 1: ice algae; 2: phytoplankton; 3: copepods; 4: walrus; 5: basket stars; 6: ascidians; 7: shrimps; 8: filter-feeding bivalves; 9: sea stars; 10: sand dollars; 11: crabs; 12: bottom feeding fishes; 13: diving seabirds; 14: deposit feeding bivalves; 15: polychaetes, 16: native subsistence hunters.

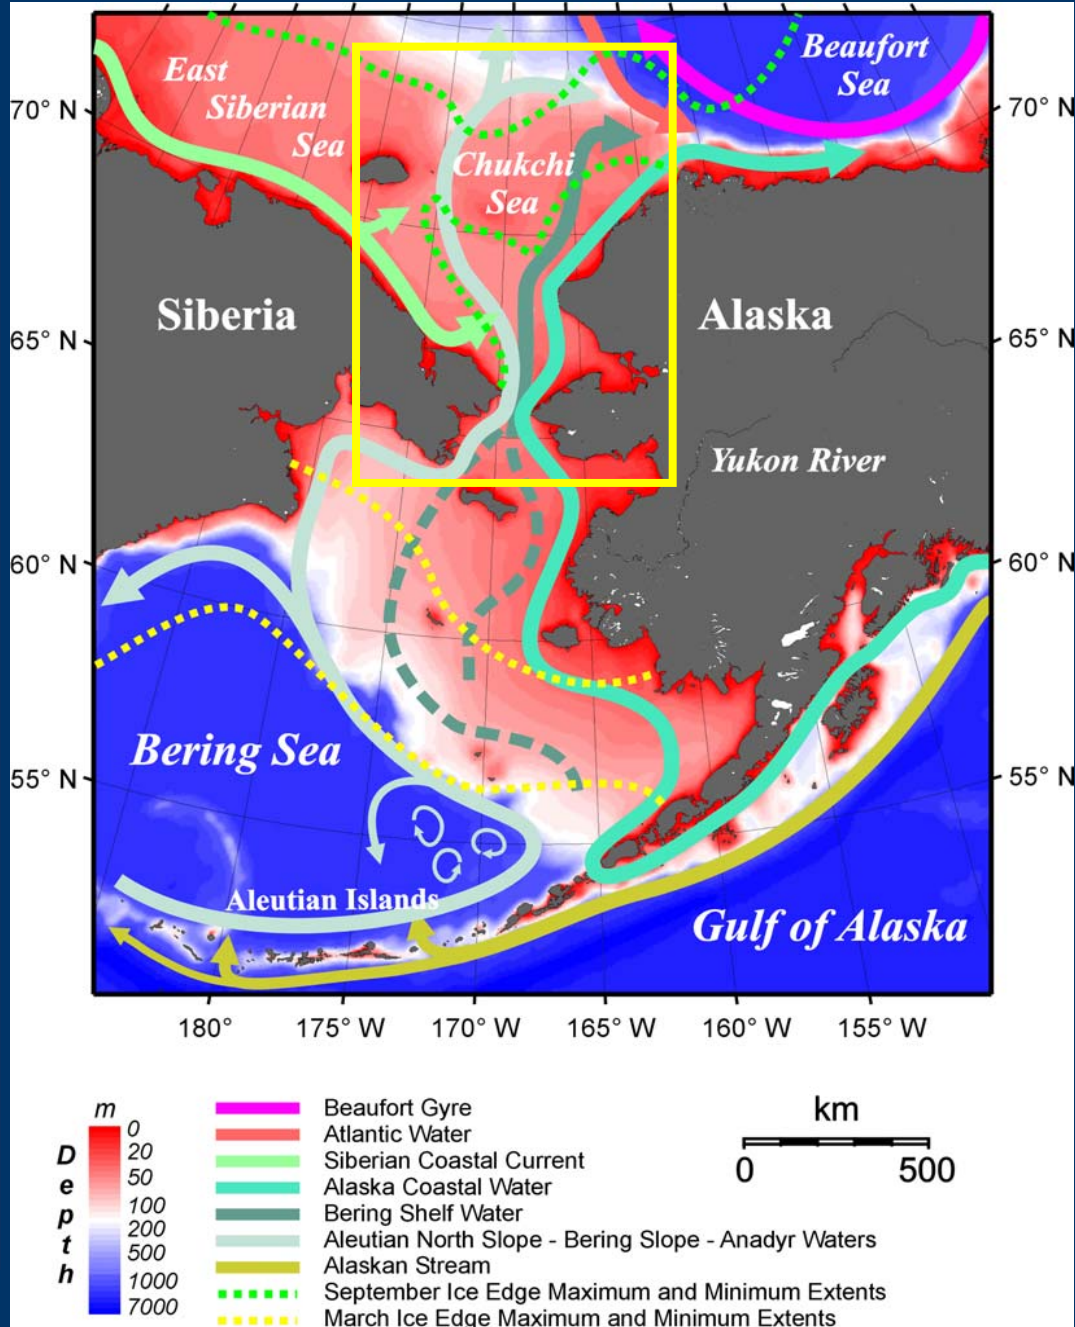

# Post IPY Studies

- Pacific Arctic Shelf Circulation & Ecology
  - Improve knowledge of circulation between Bering Sea and the Arctic Basin
  - Improve knowledge of water mass type and ecological processes
  - Improve knowledge of propagation of ecological signatures through Bering-Chukchi ecosystems within the context of climate change

[Courtesy: T. Weingartner & S. Danielson, UAF]

# Post International Polar Year: *Exploration*

RUSALCA: Exploration of Marine Life in the Pacific-Arctic: What lives in this part of the Arctic Ocean?

# Post IPY Goal:

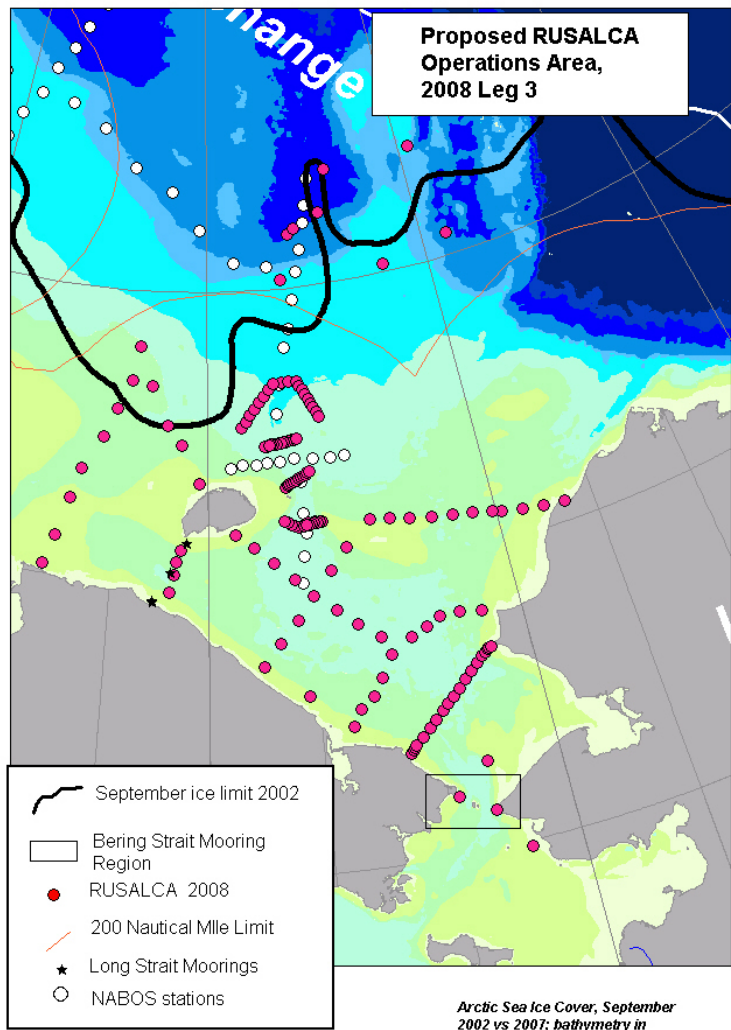

## Monitoring the State of Sub-sea Permafrost

- Continuous
- Discontinuous
- Sporadic
- Subsea

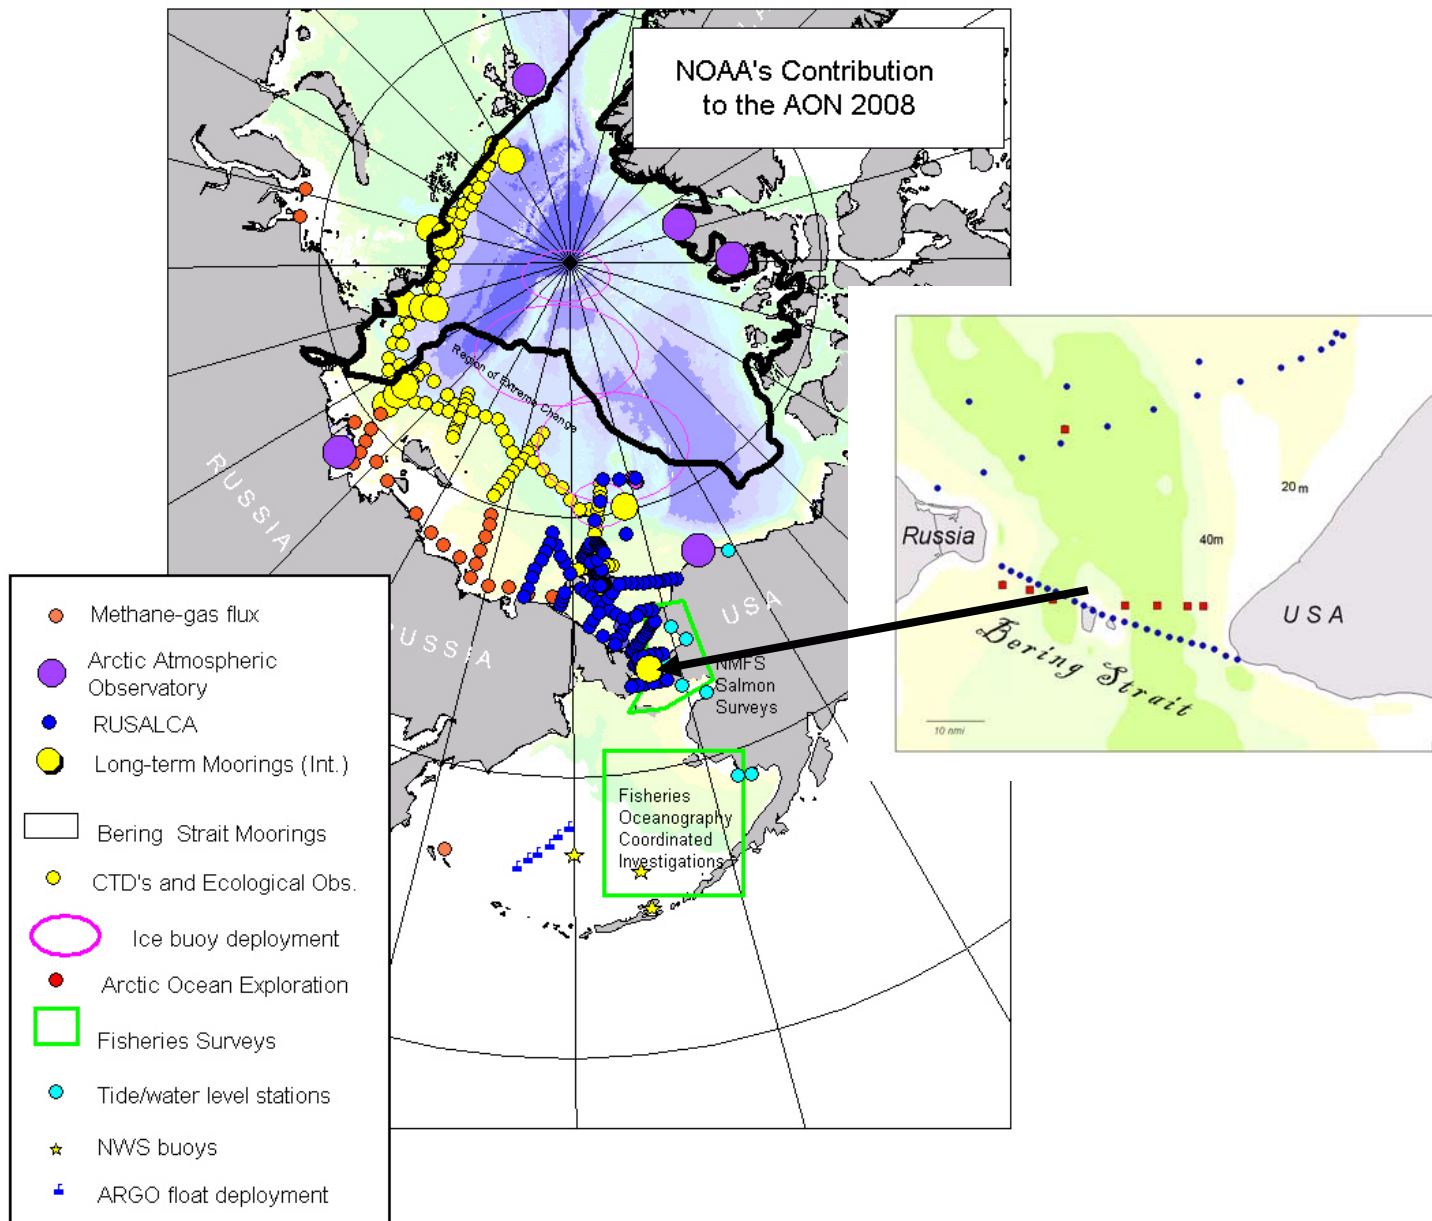

# PRIORITY 2009, RUSALCA: Climate Obs in the Pacific-Arctic

FY2009: RUSALCA will revisit the Chukchi Sea and regions within the region of extreme sea ice loss to:

- Document changes in the oceanography and ecosystems
- Provide observations to provide boundary conditions for improving the integration of ecosystem and physical models.
