

AFNet Integration

Leading car makers employ a sophisticated manufacturing process with design feedback, multiple quality checkpoints, and rigorous test drives before a new car ever hits the road. With the **AFNet Integration** service, AFNIC provides the same benefits to you, our mission partners.

We provide guidance and consultation through a project's lifecycle to make sure the system, product or application is optimized and ready to be integrated safely and reliably onto the AFNet.

AFNet Integration Service

Every day, hundreds of thousands of Air Force personnel across the U.S. and around the world depend on the availability, reliability and security of the Air Force Network (AFNet). From email to productivity tools to the most sophisticated software applications, the AFNet enables Airmen to access the resources they need to do their jobs with maximum efficiency and help ensure mission success.

Through our **AFNet Integration** service, AFNIC plays a crucial role in helping you make sure that any system, application or product being developed for the AFNet will perform reliably and securely on the network. We provide guidance and consultation through your development project's lifecycle to make sure the system, product or application will be networky--that is, optimized and ready to be integrated safely and reliably onto the AFNet.

The earlier we are able to engage with you and begin sharing our extensive expertise, the better result you'll achieve. AFNIC's team of technical professionals is ready to assist you with:

- **Initial Requirements Consultation** -- During the earliest stages of the development cycle, our experienced professionals will provide you with expert guidance on technical requirements and the criteria to follow to ensure successful connection to the AFNet.
- **Interim Technical Analysis** -- At key checkpoints in the development cycle, we'll assess progress, identify any potential problems, and provide appropriate feedback and recommendations as needed. Security, Interoperability, Supportability / Sustainability and Network Usability are the key AFNet technical characteristics our experts will help you address.
- **Certificate of Networkiness (CoN) Assessment** -- As development reaches the final stage, we'll perform a comprehensive operational assessment of your system, product or application against the full set of required standards and criteria. AFNIC will then forward the CON recommendation to the appropriate authority for approval to move to a Readiness Review and approval to connect to the AFNET.

The AFNIC Advantage

By engaging us early, you can be assured that you'll be positioned for successful integration of your mission-critical system, application or product onto the AFNet. Throughout our **AFNet Integration** service, you'll benefit from our:

- ▶ Innovative approach
- ▶ Holistic, enterprise perspective
- ▶ Extensive technical expertise
- ▶ Decades of experience solving the toughest technical challenges
- ▶ Commitment to an outstanding service experience every step of the way
