Workflow 10: Updating Earthwork Calculations

1. *Run the earthwork input file described in Workflow 1.*

2. *Clear the imported data in the "from_GEOPAK" worksheet by selecting "Click here to clear the contents of this worksheet".*

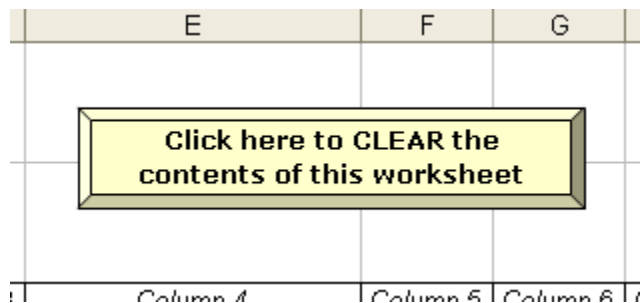

Fig. 12-25: Clearing old earthwork contents

3. *To import the revised ascii text file, select Data>Import External Data>Edit Text Import. The "Import Text File" window will open. Select the ascii file name to be imported, Click "Import" and the file will drop right in. Adjust column widths as necessary and edit stations using the method described in Workflow 2.*

4. *Revise any affected hand calculated data.*

If the total number of cross sections has changed, the following needs to be updated:

1. Update the row numbers in the first two columns of the "Grading Summary" worksheet that defines the calculation rows from the "XSData" worksheet (follow Workflow 8).

2. Update the data range in the "Source Data" window from the "MassHaul" worksheet (follow Workflow 9).
