

# Taxiway Uniform Widening Project at Columbia Metropolitan Airport (KCAE)

During the early part of 2013 the Airport will be undertaking several airfield construction projects, one of which is the Taxiway Uniform "U" Widening Project. This project was initially planned for construction to take place in FY2015 but an 'operational need' to address several airfield-related safety concerns in a timely manner accelerated the development and implementation of this project.

The aerial view depicted below reflects the current taxiways under reconstruction. Taxiway designators in **Black ink** will be widened to 75' and will be able to accommodate Airplane Design Group IV / V aircraft. Taxiway designators in **Red ink** with an **Orange background** will be 40' wide and able to accommodate Airplane Design Group II aircraft. Taxiway FF will be relocated from its current position (identified by the double **X X**), widened to 60', and will be able to accommodate Airplane Design Group III aircraft. Project progress will be reflected in an updated Current NOTAM Closures Diagram which will be posted on the [Pilot Resources](#) Page of our airport website.

Please direct any inquiries regarding this project to either the Airports' Operations or Planning & Development Department. Also, please refer to FAA Team Notice Number NOTC4113 for progress on our Airfield Signage Replacement Project.
