

New Taxiway Designation Convention Standards @KCAE effective 5/2/2013

During the early part of 2013 the Airport will be undertaking several airfield construction projects, one of which is the Airfield Signage Project. This project was initially planned for the early part of 2012 with the intention of replacing all existing signage with new LED sign fixtures. However, when FAA Engineering Brief No. 89 ([Taxiway Nomenclature Convention](#)) was published on March 29th the Atlanta Airports District Office thought it would be a great opportunity for KCAE to adopt the taxiway designation convention standards contained in FAA Advisory Circular [150/5340-18F](#), Standards for Airport Sign Systems. Therefore, our Airfield Signage Project will be enhanced with the recommendations set forth in FAA Engineering Brief No. 89.

The sketch depicted below reflects both the current taxiway designators (single and double alphabetic characters in Black ink) and the new taxiway designators (alphabetic and alphanumeric characters in Red ink) that will become effective at 0401Z on 5/2/13. Please direct any inquiries regarding this project to either the Airports' Operations or Planning & Development Department. Also, project progress will be shown in an updated [airfield sketch](#), which will be posted on the Pilot Resources Page of our airport website.
