Standard Supply Discrepancy Report (SDR), Follow-up, Correction, Cancellation, & Reconsideration Request

842   Nonconformance Report

Functional Group=NC

Purpose: This Draft Standard for Trial Use contains the format and establishes the data contents of the Nonconformance Report Transaction Set (842) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to report products and processes that do not fulfill specifications or requirements.The Nonconformance Report Transaction Set provides the ability for the sender to report the nonconformance at the level of detail that is required. It also provides the ability to report the specific nonconformances of a component/part while identifying the assembly as the product that is in nonconformance. The Nonconformance Report Transaction Set may be used to report, initiate, or request actions related to the nonconformance being reported. Financial and accounting information is provided for reporting purposes only.The Nonconformance Report Transaction Set has the capability to report the cause of the nonconformance and to state the proposed action to be followed to prevent a repetition of the problem.

Federal Note:

1. Use a single occurrence of this transaction set to transmit single complaint transaction to a single or multiple organizations.

2. DoD logistics users should refer to the Defense Logistics Management System (DLMS) Supplement to the Federal Implementation Convention (IC) available at URL: http://www.dla.mil/j-6/dlmso. The DLMS Supplement provides specific business rules, conditions, and authorized codes necessary for appropriate use of this IC within the DLMS.

DLMS Note:

1. This DLMS Supplement (DS) provides the DOD standard format for SDR submission. In addition, it is specifically designed to transmit complaint transactions originated in the DoD WebSDR program to the appropriate action activity and distribution copy recipients.

2. The reply to the SDR will be carried in the DS 842A/R.

3. Users operating under the Defense Logistics Management system (DLMS) must reference the Unit of Issue and Purchase Unit Conversion Table which can be found on the DLA Logistics Management Standards Office Web site at http://www.dla.mil/j-6/dlmso.

4. This transaction may be used to provide item unique identification (UID) information. Refer to the UID web at URL: http://www.acq.osd.mil/dpap/sitemap.html for DoD policy and business rules.

5. This DLMS Supplement to the Federal 842A/W contains: Data associated with a DLMS enhancement authorized for implementation by modernized systems under DLMS migration. This data (including expanded field sizes) should be adopted during, or subsequent, to modernization when applicable to the Component's business process. Prior coordination is not required. Components should ensure that inclusion of this data in a DLMS transaction does not cause inappropriate rejection of the transaction.

6. This DLMS Supplement incorporates the Proposed DLMS Change and Approved DLMS Change (ADC) listed. PDC/ADCs are available from the DLA Logistics Management Standards Office Web site: http://www.dla.mil/j-6/dlmso/elibrary/Changes/processchanges.asp.

User Option (Usage): Must use

Purpose: To indicate the start of a transaction set and to assign a control number

Semantics:

1. The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).

2. The implementation convention reference (ST03) is used by the translation routines of the interchange partners to select the appropriate implementation convention to match the transaction set definition.

User Option (Usage): Must use

Purpose: To indicate the beginning of a Nonconformance Report Transaction Set

Semantics:

1. BNR02 is the nonconformance report identifier number.
2. BNR03 is the date that the nonconformance report was created.
3. BNR04 is the time that the nonconformance report was created.

Comments:

1. BNR05 indicates the status or intention of the nonconformance report.

Element Summary:

Ref	Id	Element Name	Req	Type	Min/Max	Usage	Rep
BNR01	353	**Transaction Set Purpose Code**	M	ID	2/2	Must use	1

Description: Code identifying purpose of transaction set

Federal Note: *Use any code.*

DLMS Note: *1. For DLMS use, the following codes are authorized.*

2. Cancellation, Request for Reconsideration, Follow-Up, 2nd Request for Reconsideration for FMS, and Correction (BNR01 Codes 01, 15, 45, 50, and CO, respectively) require point of contact information, action date, and narrative comments. Cancellation, Correction, Follow-up, and Requests For Reconsideration must perpetuate data from the original SDR with updates as applicable. SDR transactions identified by these transaction types require an original SDR to be recorded in DoD WebSDR and the recipient's SDR system for successful processing.

Code	Name
00	Original

DLMS Note:

1. Use to identify a new submission.

2. Transaction Set Purpose Code 00 is also used on WebSDR-forwarded SDRs where the original SDR was directed to the wrong action activity (associated with disposition/status reply code 504). It will appear as a new SDR to the new action activity, but will include identification of the forwarding activity and date forwarded (Qualifier 514).

01	Cancellation
15	Re-Submission

DLMS Note:

Use to request reconsideration on a SDR resolution/disposition (SDR must contain additional information/justification). Use only after having received a reply from the action activity.

DLMS Note:

Use to indicate SDR is information copy dissemination to non-action activities. (Use of this code is not comparable to SDR Action Code 1H which informs the action activity that the SDR is provided for

28   Query

DLMS Note:

1. Use to indicate a follow-up SDR for status on an open SDR. Use only after interim status has been received. Requires point of contact information and action date. Do not perpetuate data contents from previous submission. This type of follow-up may not be treated as an original SDR because original unchanged data content is not perpetuated.

2. Reserved - not currently available.

3. This is a DLMS enhancement for future implementation and requires coordination prior to use.

45   Follow-up

47   Transfer

DLMS Note:

1. Use to indicate SDR is forwarded by action activity to a secondary action activity.

2. Reserved - not currently available.

49   Original - No Response Necessary

DLMS Note:

1. Use to indicate SDR is forwarded for update to historical records only. DAAS is intended recipient. When used, the SDR will be recorded in the WebSDR/DAAS data base, but no outgoing transaction will be created. All data content must be provided as comparable to that of non-historical SDRs.

2. When Transaction Set Purpose Code 49 is used, the associated date of the SDR action and the Point of Contact (POC) must be specifically identified to the type of action being performed (e.g., cancellation date using Qualifier 177, or follow-up POC using Qualifier SM).

3. (not authorized for other purposes)

50   Register

DLMS Note:

FMS customers use to contest the U.S. Government decision subsequent to reconsideration request.

CO   Corrected

DLMS Note:

Document Number and Suffix may not be modified from the original submission.   If these were identified in error the SDR must be cancelled and resubmitted.

HL Hierarchical Level

Pos: 0100	**Max:** 1
Detail - Mandatory	
Loop: HL	**Elements:** 2

User Option (Usage): Used

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

Comments:

1. The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Element Summary:

Ref	Id	Element Name	Req	Type	Min/Max	Usage	Rep
HL01	628	**Hierarchical ID Number**	M	AN	1/12	Must use	1
		Description: A unique number assigned by the sender to identify a particular data segment in a hierarchical structure

HL03	735	**Hierarchical Level Code**	M	ID	1/2	Must use	1
		Description: Code defining the characteristic of a level in a hierarchical structure

I	Item

DLMS Note:

Use to identify UID data consistent with UID data requirements. The UID data is carried in the REF and N1 segments; the NCD segment is required by ANSI syntax; and no other segments are used in the UID loop. Use a separate UID loop for each item. Skip this level when not applicable. The UII value and some of the associated data elements are DLMS enhancements. These elements may not be received or understood by the recipient's automated processing system.
