# Introduction

## PURPOSE AND SCOPE

The 2007 Census of Agriculture Watershed publication provides data that supplement the 2007 Census of Agriculture, Volume 1. As a service to agricultural and environmental data users, the 2007 data for 38 individual land characteristics are published at the 6-digit Hydrologic Unit Code (HUC) level. For comparison, data from the 2002 Census of Agriculture are also published in this report at the 6-digit HUC level. According to the United States Geological Survey (USGS), the U.S. is divided into 20 Regions (2-digit Hydrologic Unit Code level). These Regions are subdivided into 221 subregions (4-digit Hydrologic Unit Code level) based on water flow patterns from the major rivers within the region. The subregions are further divided into basins (6-digit Hydrologic Unit Code level), of which there are 376. However, for the purposes of this report, we will refer to these “basins” as watersheds.

## HISTORY

This report is the first time that NASS has summarized and published Census of Agriculture data by watersheds. It will be published again after the 2012 Census of Agriculture, Volume 1 is released.

## AUTHORITY

The 2007 Census of Agriculture is required by law under the “Census of Agriculture Act of 1997,” Public Law 105-113 (Title 7, United States Code, Section 2204g). The law directs the Secretary of Agriculture to conduct a census of agriculture in 1998 and in every fifth year after, covering the prior year.

## FARM DEFINITION

The census definition of a farm is any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the census year. The definition has changed nine times since it was established in 1850. The current definition was first used for the 1974 Census of Agriculture and has been used in each subsequent agriculture census. This definition is consistent with the definition used for current USDA surveys.

## DATA COMPARABILITY

Most data are comparable between the 2007 and 2002 censuses. A few changes were made to the 2007 census that affect comparability for some data items. See the Appendix for this publication for a detailed discussion of these changes.

## REFERENCE PERIOD

Reference periods for the 2007 Census of Agriculture were similar to those used in the 2002 Census of Agriculture. Livestock and chicken inventories were measured as of December 31 of the census year.

## WATER RESOURCE MAPS

The maps used throughout this report were provided by USGS. The data for each Region are preceded by a page containing two maps, one of which shows the Region in relation to the U.S., and the other which shows the Region broken into each of its watersheds (6-digit HUC).

## TABLES AND APPENDIX

**Data Tables.** These tables list the same 76 published items for each Region and its watersheds,

and they are each labeled as Table 1. The data table for each Region is preceded by a Region map and a listing of the watersheds, by name and 6-digit Hydrologic Unit Code, within that Region. For comparison purposes, each new Region's data tables first display the U.S. level data totals followed by the Region totals, and then the individual watershed totals.

**Appendix.** Provides information about the statistical methodology used in assigning each farm operation to a specific watershed. It also includes definitions of specific terms and phrases used in this publication.

## **RESPONDENT CONFIDENTIALITY**

In keeping with the provisions of Title 7 of the United States Code, no data are published that would disclose information about the operations of an individual farm or ranch. All tabulated data are subject to an extensive disclosure review prior to publication. Any tabulated item that identifies data reported by a respondent or allows a respondent's data to be accurately estimated or derived, was suppressed and coded with a 'D'. However, the number of farms reporting an item is not considered confidential information and is provided even though other information is withheld.

## **DATA PRODUCTS**

The 2007 Census of Agriculture Watershed publication is available on the Internet at [www.usda.gov/nass](http://www.usda.gov/nass) and in printed reports. Printed reports can be ordered by calling 1-800-727-9540.

## **CUSTOM TABULATIONS**

Special studies such as the 2007 Census of Agriculture Watershed publication provide supplemental information to the 2007 Census of

Agriculture. Results are published in print and on the Internet.

Custom-designed tabulations may be developed when data are not published elsewhere. These tabulations are developed to individual user specifications on a cost-reimbursable basis and shared with the public.

All special studies and custom tabulations are subject to a thorough disclosure review prior to release to prevent the disclosure of any individual respondent data. Requests for custom tabulations can be submitted via the Internet from the NASS home page, by mail, or by e-mail to:

## **DEFINITIONS AND EXPLANATIONS**

Definitions and explanations of selected terms used in the tables are defined in the General Explanation.

## **ABBREVIATIONS AND SYMBOLS**

The following abbreviations and symbols are used throughout the tables:

- Represents zero.

(D) Withheld to avoid disclosing data for individual farms.

(Z) Less than half of the unit shown.

## Census of Agriculture Methodology and General Explanation

---

### HYDROLOGIC UNIT CODE ASSIGNMENT METHODOLOGY

The census of agriculture asked farm operators to report the principal state and county of agricultural activity for the farm or ranch based on total value of production. In addition, the 5-digit zip code (zip5) for the mailing address was known for each operation. Watershed assignments were made to all completed reports based upon the principal state, principal county, and zip5 for each operation. If the principal county was contained completely within a watershed, the operation was deterministically assigned to that watershed. When the principal county was in multiple watersheds, a check was made to see if the zip5 was valid for the principal county. Records were deterministically assigned when the zip code was valid and was entirely contained within a watershed. Operations that could not be deterministically assigned were sent through an algorithm to be probabilistically assigned.

Probabilistic assignments were made based on the proportion of agricultural land each watershed had within the principal county. For example, if a watershed represents 60 percent of the agricultural land in a county, a record would have had a 6 out of 10 chance of being assigned to that watershed.

Assignment of Hydrological Unit Codes (HUC) to all 2007 reports was a three-step process. Each record passed through the algorithm and a 2-digit HUC was assigned. Ten percent of the operations were probabilistically assigned at this step. The 2-digit HUC designations were locked in and all records passed back through the algorithm for a 4-digit HUC assignment. This step raised the percent probabilistically assigned to 37. Finally, after all records passed through for the 6-digit HUC assignment, 45 percent were probabilistically assigned. The remaining 55 percent of the completed reports were deterministically assigned.

In order to provide a comparative history for this first-time publication, NASS made 6-digit HUC assignments to all 2002 Census of Agriculture completed reports. There were 41 percent of the completed reports from 2002 which could be matched to a 2007 response, and these were given the same 6-digit HUC as the 2007 record. The remaining records went through the assignment algorithm to establish a 6-digit HUC. In total, the remaining records were also 55 percent deterministic.

Probabilistically assigned large farms and ranches were examined by NASS Field Office staff to verify that the 6-digit HUC assignments were correct. Field Offices have an on-going survey relationship with these operations and applied local knowledge to correct erroneous 6-digit HUC algorithmic assignments.

### TERMS AND DEFINITIONS

The following definitions and explanations provide a detailed description of specific terms and phrases used in this publication. Many of the definitions and explanations are the same as those used in earlier censuses. For more details relating to the Census of Agriculture program, go to the NASS website at [www.nass.usda.gov](http://www.nass.usda.gov).

**Acres.** Crops were reported in whole acres, except for the following crops that were reported in tenths of acres: tobacco, nursery and greenhouse crops in the open, vegetables including potatoes and sweet potatoes, fruit and nut crops including land in orchards, and berries; in Hawaii, taro and ginger root. Totals for crops reported in tenths of acres were rounded to whole acres at the aggregate level

during the tabulation process. Nursery and greenhouse crops grown under glass or other protection were reported in square feet but were converted to acres for this report.

If two or more crops were harvested from the same land during the year (double cropping), the acres were counted for each crop. Therefore, the total acres of all crops harvested generally exceeded the acres of cropland harvested. An exception to this procedure was hay crops.

When more than one cutting of hay was taken from the same acres, the acres were counted only once for the harvesting method but the quantity harvested includes all cuttings. For interplanted crops or “skip-row” crops, acres were reported according to the portion of the field occupied, whether by a crop or by idle land. If a crop was interplanted in an orchard or vineyard and harvested, then the entire orchard or vineyard acreage was reported under the appropriate fruit crop and the interplanted estimated crop acreage was reported under the appropriate crop.

If a crop was planted but not harvested, the acres were not reported as harvested. These acres were reported in the “land” section on the report form under the appropriate cropland items – cropland on which all crops failed or were abandoned, cropland in cultivated summer fallow, cropland idle or used for cover crops or soil-improvement but not harvested and not pastured or grazed, or cropland used only for pasture or grazing. This does not include fruit and nut orchards, vineyards, berries, acres in production for cut Christmas trees, and acres in production for short rotation woody crops that were not harvested. Acreage for these commodities were included in cropland harvested whether the crop was harvested or not. Abandoned orchards were reported as cropland idle, not as harvested cropland, and the individual abandoned orchard crop acres were not reported.

Crops that were only hogged or grazed were reported as “cropland used only for pasture or grazing.” Crop residue left in fields after the harvest and later hogged or grazed was reported as cropland harvested and not as cropland used only for pasture or grazing.

**Acres treated with chemicals.** For each type of chemical applied, the acres treated were reported only once even if the acres were treated more than once. If multi-purpose chemicals were applied, the acres treated for each purpose were reported. This also includes acres on which custom application of chemicals was made.

**All other crops.** Data include all crops other than those listed separately in the tables.

**Cattle and calves.** Data for all cattle and calves on farms are included.

**Chickens.** This category includes the number of farms with any chickens of any type, whether broilers or layers.

**Cropland, harvested.** See Harvested cropland.

**Cropland, irrigated.** See Irrigated land.

**Cropland idle or used for cover crops or soil improvement, but not harvested and not pastured or grazed.** Cropland idle includes any other acreage which could have been used for crops without any additional improvement and which was not reported as cropland harvested, cropland on which all crops failed, cropland in summer fallow, or cropland used for pasture or grazing. This category includes:

1. Land used for cover crops or soil improvement but not harvested or grazed.
2. Land in Federal or State conservation programs that was not hayed or grazed.
3. Land in Federal or State conservation programs that was planted to trees for future harvest as timber, pulp, or Christmas trees.
4. Land occupied with growing crops for harvest in the year following the Census of Agriculture or later years but not harvested or summer fallowed in the Census year (except fruit or nuts in an orchard, grove, or vineyard being maintained for production). Examples are acreage planted in winter wheat, strawberries, etc., for harvest in the year following the Census, but no crop was harvested from these acres in the Census year.

5. Land in “skipped” rows between rows of crops or field strips.

**Cropland, total.** See Total cropland.

**Cropland used only for pasture or grazing.** This category includes land used only for pasture or grazing that could have been used for crops without additional improvement. Also included were acres of crops hogged or grazed but not harvested prior to grazing. However, cropland that was pastured before or after crops were harvested was included as harvested cropland rather than cropland for pasture or grazing.

**Farms.** The term “farms” represents the number of farms reporting the item. For example, if there are 3,710 farms in a 6-digit HUC and 842 of them had 28,594 cattle and calves, the data for those farms reporting cattle and calves would appear as:

Cattle and calves farms . . . . .	842
number . . . . .	28,594

**Fertilizer.** Includes farms with acres treated at least once with commercial fertilizer, lime, or soil conditioners. Fertilizer data for the 2002 Census of Agriculture Volume 1 farm count are based on farms with fertilizer expense, not acres treated.

**Floriculture crops.** See Nursery, greenhouse, floriculture, and sod.

**Fruits and tree nuts.** This category includes all land in bearing age and nonbearing age fruit trees, citrus or other groves, vineyards, and nut trees of all ages, including land on which all fruit or nut crops failed. Respondents were instructed not to report abandoned plantings and plantings of fewer than 20 total fruit, citrus, or nut trees or grapevines.

**Goats, all.** Data for farms with goats of all sizes and types, whether for meat, milk, or fiber are included.

**Harvested cropland.** This category includes land from which crops were harvested and hay was cut, land used to grow short-rotation woody crops and land in orchards, citrus groves, Christmas trees, vineyards, nurseries, and greenhouses. Land from which two or more crops were harvested was

counted only once. Land in tapped maple trees was included in woodland not pastured. The 2007 census definition for harvested cropland is the same as the 2002 definition.

**Harvested cropland irrigated.** This category includes harvested cropland which was irrigated by any artificial or controlled means. See Irrigated land.

**Hogs and pigs.** Data for all hogs and pigs on farms are included.

**Horses and ponies.** Data for farms with horses and ponies of all sizes are included.

**Hydrologic Unit Code (HUC).** Any subdivision of land in the U.S. based on boundaries determined by the United States Geological Survey (USGS). These subdivisions are based on water flow patterns from the major rivers and their tributaries.

**Irrigated land.** This category includes all land watered by any artificial or controlled means, such as sprinklers, flooding, furrows or ditches, sub-irrigation, and spreader dikes. Included are supplemental, partial, and preplant irrigation. Each acre was counted only once regardless of the number of times it was irrigated or harvested. Livestock lagoon waste water distributed by sprinkler or flood systems was also included.

**Land in farms.** The acreage designated as “land in farms” consists primarily of agricultural land used for crops, pasture, or grazing. It also includes woodland and wasteland not actually under cultivation or used for pasture or grazing, provided it was part of the farm operator’s total operation. Large acreages of woodland or wasteland held for nonagricultural purposes were deleted from individual reports during the edit process. Land in farms includes CRP, WRP, FWP, and CREP acres. For definitions of these types of land, please refer to Volume 1, Appendix B, page B-9, column 2.

Land in farms is an operating unit concept and includes land owned and operated as well as land rented from others. Land used rent free was reported as land rented from others. All grazing land, except

land used under government permits on a per-head basis, was included as “land in farms” provided it was part of a farm or ranch. Land under the exclusive use of a grazing association was reported by the grazing association and included as land in farms. All land in American Indian reservations used for growing crops, grazing livestock, or the potential of grazing livestock was included as land in farms. Land in reservations not reported by reservation, individual American Indians or non-Native Americans was reported in the name of the cooperative group that used the land. In many instances, an entire American Indian reservation was reported as one farm.

**Land used for organic production.** This is a new item in the 2007 census. Respondents were instructed to report organic production as defined by the National Organic Standards while in 2002 only acreage of certified organically produced crops was collected. Organic acreage is divided into organic crops and organic pasture. The count of farms producing organic crops may differ from that found in other sources because this item is self reported by respondents. No attempt was made to verify reports with certifying organic organizations. The acres reported for organic crops must be less than or equal to the acres reported as cropland harvested for each operation.

In 2002, data were collected for the number of acres used to raise certified organically produced crops. This was replaced in 2007 with acreage and value of sales of organically produced commodities. For certified production, only a “Yes” or “No” response question was asked in the “Organic Agriculture” section. The 2007 data do not compare with 2002 Land used to raise certified organically produced crops.

**Livestock inventory.** Data for cattle and calves, hogs and pigs, horses and ponies, goats, and chickens are the reported inventories on farms on December 31, regardless of ownership. Data for sheep and lambs are the reported inventories of “owned” sheep and lambs, regardless of location on December 31.

**Mushrooms.** All mushroom crops were considered grown under glass or other protection. Those

reporting mushrooms grown in the open area were converted to an equivalent area of square feet under protection, then converted to acreage. All mushroom acreage is included under “Nursery, greenhouse, floriculture, and sod.”

**Nursery, greenhouse, floriculture and sod.** In the 2007 census, individual data were collected for area under glass or other protection, area in the open, and sales of aquatic plants; bulbs, corms, rhizomes, and tubers; cuttings, seedlings, liners, and plugs; floriculture crops; flower seeds; greenhouse fruits and berries; total greenhouse vegetables and fresh cut herbs; mushrooms; mushroom spawn; nursery stock; other nursery crops; sod harvested; tobacco transplants; vegetable seeds; and vegetable transplants.

**Organic agriculture.** See Land used for organic production.

**Pastureland and other land irrigated.** This category includes all types of land, other than Harvested cropland, which was irrigated by any artificial or controlled means. See “Irrigated land.”

**Permanent pasture and rangeland, other than cropland and woodland pastured.** This land use category encompasses grazable land that does not qualify as woodland pasture or cropland pasture. It may be irrigated or dry land. In some areas, it can be a high quality pasture that could not be cropped without improvements. In other areas, it is barely able to be grazed and is only marginally better than wasteland. In 2002 this category was referred to as Pastureland and rangeland, other than cropland pastured. This is a wording change only; all data are comparable.

**Sheep and lambs.** Data are for sheep and lambs of all ages owned regardless of location. In 2007 sheep and lambs were collected in their own section to clarify to respondents that only “owned” sheep and lambs were to be reported versus any sheep and lambs on the operation.

**Total cropland.** This category includes cropland harvested, cropland used only for pasture or grazing, cropland on which all crops failed or were

abandoned, cropland in cultivated summer fallow, and cropland idle or used for cover crops or soil improvement but not harvested and not pastured or grazed.

**Vegetables and melons harvested for sale.** The acres of vegetables and melons harvested are the summation of the acres of individual vegetables and melons harvested. When more than one vegetable or melon crop was harvested from the same acreage, acres were counted for each crop. In 2007, ginseng, potatoes, and sweet potatoes are included in vegetables harvested. In 2002, these acres were originally included in field crops in the Census of Agriculture, Volume 1. However, for this report, in order to maintain comparability, the 2002 data for vegetables harvested were adjusted to include ginseng, potato, and sweet potato acreage.

**Watershed.** According to the United States Geological Survey (USGS), the U.S. is divided into 20 Regions (2-digit Hydrologic Unit Code level). These Regions are subdivided into 221 subregions (4-digit Hydrologic Unit Code level) based on water flow patterns from the major rivers within the region.

The subregions are further divided into basins (6-digit Hydrologic Unit Code level), of which there are 376. However, for the purposes of this report, we will refer to these “basins” as watersheds.

**Woodland pastured.** This category includes all woodland used for pasture or grazing during the census year. Woodland or forest land pastured under a per-head grazing permit was not counted as land in farms and, therefore, was not included in woodland pastured.

**Woodland, total.** This category includes natural or planted woodlots or timber tracts, cutover and deforested land with young growth which has or will have value for wood products and woodland pastured. Land covered by sagebrush or mesquite was reported as Permanent pastureland and rangeland or other land. Land planted for Christmas tree production and short rotation woody crops was reported in Cropland harvested, and land in tapped maple trees was reported as Woodland not pastured.
