INTRODUCTION

A pilot study to evaluate the feasibility of obtaining recreational fishing data under contract with charterboat captains was conducted by personnel of the National Marine Fisheries Service (NMFS), Southeast Fisheries Center, Panama City Laboratory, during 1982. Captains who conducted chartered fishing trips off the southeastern United States coast were contracted to provide daily records of their catch and effort to us. The purpose of this report is to make available the detailed data provided by each of the survey participants.

METHODS

Nine charterboat captains from five regions (Figure 1) participated in the survey. Log sheets (Figure 2) and self-addressed, government-franked envelopes were provided to the captains, who completed the form using the following definitions:

1. Fishing Zone -- Three distinct fishing zones were defined: estuarine or bay waters (zone 1), offshore waters less than ten fathoms deep (zone 2), and offshore waters over ten fathoms deep (zone 3). When more than one zone was fished, all pertinent numbers were recorded.
2. Fishing Method -- "Troll" was defined as fishing activity undertaken with the boat moving under power. "Bottom" included all other fishing, including "conventional" bottom-fishing, drift-fishing, and flylining.
3. Hours Actually Fished -- Only actual fishing times, rounded to the nearest half-hour, were reported. Running times when hooks were not in the water were specifically excluded.
4. Species and Number Caught -- The catches of all species were reported. Any species not included in the printed list of twenty-four were identified in lines 25 through 30 and the number of fish that were caught was noted in the appropriate column.

Each week, log sheets were mailed to the Panama City Laboratory, where the data were transcribed into a computerized system that archived the data and provided analyses.

RESULTS AND INTERPRETATION

Appendix Tables 1 through 9 are the data listings by region and fishing method. The elements of the Appendix Tables are defined as:

1. Date -- the actual date fishing activity occurred.
2. Zone -- fishing in multiple zones is reported as:
zone 4 (i.e., fished in zones 1 and 2);
zone 5 (i.e., fished in zones 1 and 3);
zone 6 (i.e., fished in zones 2 and 3);
zone 7 (i.e., fished in zones 1, 2, and 3).
3. Hours fished -- the total number of hours fished by a single boat on all of its trips on one day using a particular method.

4. Catch per species -- each catch is reported in a "species-code(number-caught)" format; that is, of each pair of numbers, the species code (Table 1) is on the left and the number of fish that were caught is on the right in parentheses. For example, the first entry in Appendix Table 1 shows that fifty bluefish were caught.
5. Continuation lines -- when more than one line is required to display a day's catch data, the catches are continued on the next line but the date, zone, and hours-fished are not repeated (see Appendix Table 1, May 29). However, when a continuation must extend from the bottom of one column to the top of the next column, the trip information is repeated in the new column and a "+" is inserted after the hours-fished (see Appendix Table 2, October 13).
