January 2010 47

REGIONAL QUARTERLY REPORT

State Personal Income and More . . .

State personal income, 2009:III

Personal income grew in 41 states in the third quarter of 2009 (table A). Excluding personal current transfer receipts funded by the American Recovery and Reinvestment Act (ARRA) of 2009, which peaked in the second quarter, personal income grew in every state.

Personal income growth ranged from 0.9 percent in Alaska to –0.4 percent

in Louisiana and averaged 0.3 percent in the third quarter. In the second quarter, state personal income growth averaged 0.8 percent.

Inflation, as measured by the national price index for personal consumption expenditures, accelerated to 0.7 percent in the third quarter after rising 0.3 percent in the second quarter. This increase in the prices households paid for goods and services was greater than or equal to the increases in personal income in every state except Alaska.

Personal income is the sum of net earnings by place of residence, property income, and personal current transfer receipts. Net earnings is the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income less contributions for government social insurance plus an adjustment to put place of work data on a place-of-residence basis.

- County compensation by industry statistics, 2008, page 52
- Map, growth of compensation by county, 2008, page 56

For information about BEA regional statistics, go to www.bea.gov.

Net earnings

Net earnings grew in 45 states in the third quarter. In 19 of these states, net earnings grew for the first time in at least a year (table B). Net earnings grew in California and Florida, two of the states

with the largest construction earnings declines of the current recession. Net earnings also grew in Michigan, Illinois, Indiana, Ohio, and Wisconsin, all in the Great Lakes region, where the domestic motor vehicle manufacturing industry is concentrated. In New York, the nation's financial capital, net earnings also grew. However, net earnings continued to fall in Arizona and Nevada. As in California and Florida, the declines in construction earnings in Arizona and Nevada from their peaks are among the largest of all states.

The following BEA economists contributed to this report: Tina C. Highfill, David G. Lenze, and Mauricio Ortiz.

The increase in net earnings in the third quarter occurred despite job losses. Forty states lost jobs in the third quarter, according to the Current Employment Statistics published by the Bureau of Labor Statistics. However, payroll depends not only on the number of workers employed but also on the hours they work and their hourly wage rates. The Current Employment Statistics data indicated that average weekly hours of U.S. produc-

^{1.} Net earnings is earnings by place of work—the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income—less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

tion workers increased 0.1 percent, and their average hourly earnings increased 0.6 percent in the third quarter.

Average hourly earnings can continue to rise if those workers who remain employed receive raises and cost of living adjustments or if the wage rates of those who lose their jobs are lower than the wage rates of those who remain employed.

Note. An industry's contribution to percent change in personal income equals the dollar change in that industry's earnings divided by personal income in the preceding quarter times 100.

private services-producing industries were mostly offset by declines in goods-producing industries. Although mining, construction, and manufacturing continued to decline in the third quarter, they subtracted less from third-quarter earnings growth than from second-quarter growth. Federal civilian and military earnings grew in the third quarter, but state and local government earnings declined. Thus, the net contribution of the government sector was nearly zero.

Across the states, there were some notable differences in industrial performance. In New York, state and local government contributed more than any other industry to that state's earnings growth (second highest in the nation). In Hawaii, declines in state and local government subtracted more than any other industry; Hawaii had the lowest earnings growth in the nation in the third quarter. In the state of Washington, the biggest contributors to third-quarter earnings growth were durable-goods manufacturing and information, industries which declined nationally. The third-quarter data for the information industry in Washington include stock grants typically made this time of year. In Alaska, military earnings contributed more than any other industry to personal income growth, followed by health care and transportation.

The 2.2 percent decline in U.S. mining earnings was greater than in any other nonfarm industry. Although not particularly large in the national economy, mining (including oil and gas extraction) is prominent in Wyoming, West Virginia, and Alaska and reduced third-quarter earnings growth 0.2 to 0.4 percentage point in each state.

Alaska and Maryland were the only states in which net earnings have not declined in any quarter since the recession began in the fourth quarter of 2007. Almost all of Maryland's earnings growth over this period can be accounted for by growth in federal civilian and military earnings. Although state and local government earnings also grew over this period, they were offset by declines in the private sector. In contrast, Alaska's private sector grew over this period, accounting for nearly half of the state's earnings growth. As in Maryland, government earnings also grew in Alaska.

Personal current transfer receipts

Personal current transfer receipts funded by the American Recovery and Reinvestment Act (ARRA) fell to \$65.2 billion in the third quarter from \$90.2 billion in the second quarter for the nation (table D). In addition, the composition of ARRA receipts changed substantially. Three-fourths of the receipts in the third quarter went to unemployed workers, either as unemployment compensation or as subsidized health insurance. In the second quarter, 60 percent of the receipts went to retirees and other beneficiaries of federal social insurance programs,

such as social security, in the form of \$250 lump sums.¹ This changing composition of the ARRA receipts was

1. ARRA reduced personal premiums for health insurance coverage under the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985. In particular, workers who were involuntarily terminated during the period from September 1, 2008, to December 31, 2009, were eligible to pay only 35 percent of the full COBRA premiums for health insurance coverage for themselves and their families for up to 9 months. The remaining 65 percent of the premium was reimbursed directly to the employer, plan administrator, or insurance company through a payroll tax credit. If the credit amount was greater than the taxes due, then the IRS credited or refunded the excess as if it were an overpayment of payroll taxes. In the state personal income accounts, the COBRA premium reduction is treated as a transfer receipt of persons from the federal government. This treatment recognizes that the federal government is providing health benefits to individuals eligible under this ARRA provision. This treatment is similar to how BEA handles other health care benefits, such as those provided by Medicare.

noticeable in the state estimates of personal income because the state distributions of unemployed workers and retirees are quite different.² For example, in Nevada, third-quarter unemployment compensation funded by

ARRA American Recovery and Reinvestment Act of 2009

^{2.} National estimates of ARRA receipts were allocated to states using the following indicator series. Supplemental Security Income (SSI): number of SSI recipients by state in 2008; Old Age, Survivors, and Disability Insurance (OASDI): number of OASDI recipients in 2008; Railroad Retirement Board (RRB): number of RRB retirees and survivors by state as of September 30, 2008; veterans' pensions: number of disability pension and disability compensation recipients age 55 or more by state in 2008; Supplemental Nutrition Assistance Program (SNAP): BEA estimates of SNAP benefits by state in 2008; unemployment insurance: state estimates published on recovery.com, COBRA health insurance subsidy: number of covered unemployed persons by state in 2008; and Pell Grants: number of recipients by state in 2008.

ARRA was 39 percent greater than the total of secondquarter \$250 receipts. In Maryland, third-quarter unemployment compensation was 80 percent less than the total of second-quarter \$250 receipts.

The decline in total ARRA receipts subtracted 0.2 percent from U.S. personal income growth in the third quarter after adding 0.7 percent in the second quarter. Across states, ARRA receipts subtracted as much as 0.6 percentage point in Mississippi and West Virginia in the third quarter. The only state where ARRA receipts added to third-quarter growth (0.1 percentage point) was Nevada. In the second quarter, ARRA receipts added between 0.4 percentage point (in Maryland and Wyoming) and 1.1 percentage points (in West Virginia) to personal income growth.

Even with the additional benefits funded by ARRA, state unemployment insurance benefits grew only 18 percent nationally in the third quarter of 2009, the smallest increase since the 8.6 percent increase in the second quarter of 2008. State unemployment insurance benefits increased in all states. In all states except South Carolina, the rate of increases was less than in the second quarter. State unemployment insurance benefits in the third quarter accounted for 2.0 percent or more of personal income in Idaho, Michigan, Nevada, Oregon, and Wis-

consin. Such benefits accounted for 1.4 percent of personal income nationally.

The Alaska Permanent Fund paid \$1,305 per eligible resident in 2009, down from \$3,269 in 2008. Over the last several years slightly less than 90 percent of the state's resident population, as measured by the Census Bureau, has been eligible for this transfer receipt.

Homeowner assistance related to Hurricane Katrina was unchanged in the third quarter amounting to \$400 million in both Louisiana and Mississippi (table E).

Table E. Homeowner Assistance Payments for Louisiana and Mississippi

[Millions of dollars, annual rate]

	2008	2009				
	2000	I	II	III		
LouisianaMississippi	2,250 400	1,200 400	400 400	400 400		

Note. Estimates for earlier quarters published in the July issue of the Survey are unchanged.

See also "Table 2. Personal Income by State and Region" and "Table 3. Personal Income by Major Source and Earnings by Industry, 2008:IV–2009:III" on pages 59–74.

Compensation growth

Total compensation of U.S. workers grew 2.3 percent in 2008 (see map on page 56), compared with growth of 5.2 percent in 2007. The 2.3 percent growth was the smallest annual growth since 2002, when total compensation grew 2.2 percent. Five industry sectors contributed the most to the slowdown in growth: durable-goods manufacturing, finance and insurance, construction, retail trade, and real estate and rental and leasing. The contributions to the slowdown ranged from –4.8 percent in durable-goods manufacturing to –1.2 percent in real estate and rental and leasing. In these five industries, the slowdown in growth ranged from –2.0 percent in real estate and rental and leasing to –0.7 percent in retail trade.

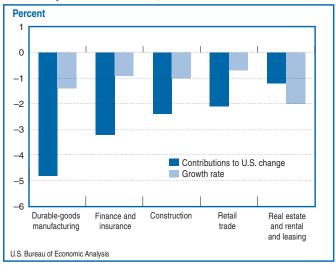

Industry shares

Durable-goods manufacturing, finance and insurance, construction, retail trade, and real estate and rental and leasing accounted for 28 percent of 2008 U.S. total compensation. Durable-goods manufacturing and finance and insurance are the largest of the five industry sectors, each accounting for 8 percent, while real estate and rental and leasing is the smallest, accounting for 1 percent. The industrial composition of local areas can vary greatly from one another and from the United State as a whole. This diversity in industrial mix helps explain differences in local area total compensation growth and the national average as well as accelerations and decelerations in local area total compensation growth.

Counties with the largest positive and negative contributions to compensation growth

The five counties that accounted for the largest positive and negative contributions to U.S. compensation growth in 2008 illustrate the importance of industrial composition in county compensation growth. The differences between 2007 and 2008 growth rates, contributions to U.S growth, and contribution rank relate in large measure to the industrial composition of these counties and the five sectors that negatively affected U.S. compensation growth.

Largest industries in Santa Clara, CA

After accounting for almost 2 percent of the increase in U.S. compensation in 2007, Santa Clara, CA, had one of the largest declines in 2008. Overall county growth fell from 8.6 percent in 2007 to -0.8 percent in 2008, with the manufacturing sector leading the decline. (Data for durable-goods manufacturing and nondurable-goods manufacturing are suppressed in Santa Clara, CA, therefore only the manufacturing sector as a whole can be presented.) Compensation in the manufacturing sector, which accounted for 27 percent of county compensation in 2008, contracted by more than 8 percent. The impact of this decline was moderated by increases in the professional, scientific, and technical services sector, which led growth in the county in 2007.

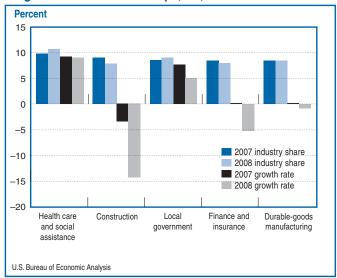

Largest Industries in Santa Clara, CA, 2008

Largest industries in Maricopa, AZ

In Maricopa, AZ, construction and finance and insurance, two of the same industries driving the slowdown in total U.S. compensation, are among the largest industries. Compensation in construction declined more than 14 percent in the county in 2008, while finance and insurance declined more than 5 percent. The largest sector in Maricopa, AZ, health care and social assistance, continued to grow at rate of 9 percent in 2008, curbing the overall county contraction to less than 1 percent.

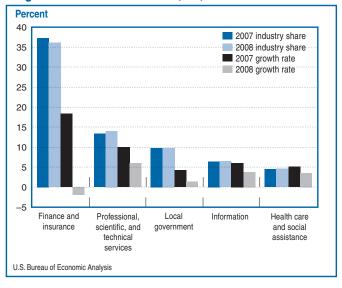

Largest Industries in Maricopa, AZ, 2008

Largest industries in New York, NY

In New York, NY, finance and insurance accounted for 36 percent of county compensation in 2008. Because the sector, the largest in the county, accounts for more than one-third of compensation, the industry has a significant affect on overall growth. Compensation grew 11.6 percent in the county for 2007, as growth in the finance and insurance industry gained 18.3 percent and accounted for more than 55 percent of the county's total growth. In 2008, when the finance and insurance sector declined 2.0 percent, total county compensation grew only 1.4 percent.

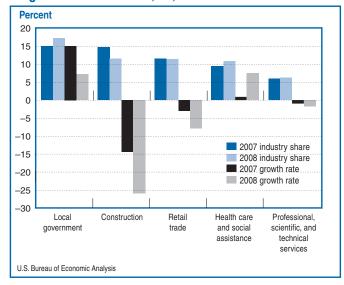

Largest Industries in New York, NY, 2008

Largest industries in Lee, FL

In 2008, Lee, FL, experienced a significant contraction in compensation, declining almost 6 percent. Construction and retail trade, which are two of the three largest industries in the county, both contracted in 2007 and 2008, contributing to the county's overall growth rates of –0.1 percent in 2007 and –5.9 percent in 2008. More than half of the decline in county compensation in 2008 stemmed from the 25.9 percent decrease in construction.

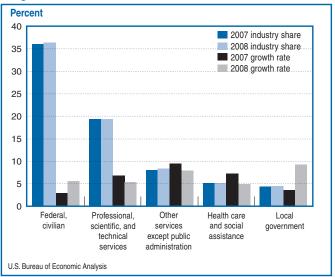

Largest Industries in Lee, FL, 2008

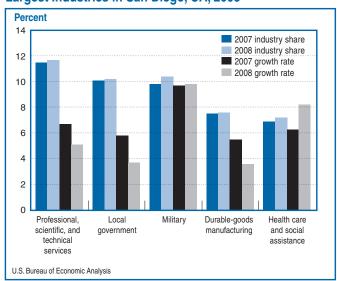

Largest industries in the District of Columbia and San Diego, CA

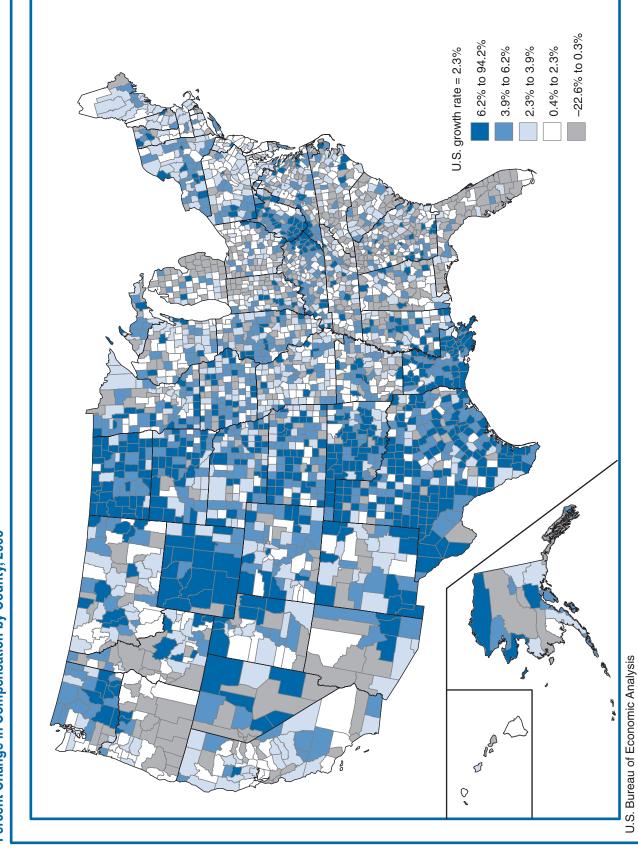

In 2008, the District of Columbia and San Diego, CA, both moved into the top five counties that contributed the most to U.S. compensation growth (table F). The industry composition in the two counties aided overall county growth. In the District of Columbia, federal government compensation accounted for 36 percent of the county total; it grew 5.6 percent in 2008 and was the largest contributor to the county growth rate of 4.8 percent. In San Diego, CA professional, scientific, and technical services, local government, and the military accounted for approximately 30 percent of county compensation; they grew 5.1 percent, 3.7 percent, and 9.8 percent, respectively in 2008, driving the county increase of 3.4 percent. Both the District of Columbia and San Diego, CA, surpassed the U.S. growth rate of 2.3 percent.

Largest Industries in the District of Columbia, 2008

Largest Industries in San Diego, CA, 2008
