For Immediate Release  
September 28, 2009

The National Energy Technology Laboratory (NETL) has selected Charles Miller as a business management specialist in its Project Financing and Technology Deployment Division. Before his current assignment, he worked for more than five years as a project manager in NETL's Existing Plants Division.

Previously, Miller served as a project manager for Allegheny Energy in Greensburg, Pa. Miller earned a B.S. in engineering from the University of Pittsburgh. He and his wife and children reside in Harrison City, Pa.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – "the ENERGY lab" – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
