For Immediate Release  
June 19, 2009

Bethany Farmer, a second year graduate student at the University of Tennessee, Knoxville, was selected as a fellow under the U.S. Department of Energy's Mickey Leland Energy Fellowship program. Farmer is completing the 10-week summer fellowship at the National Energy Technology Laboratory (NETL) at NETL's Morgantown, W.Va., research site. NETL also has major research facilities in Pittsburgh, Pa., and Albany, Ore. The fellowship program is sponsored by DOE's Office of Fossil Energy.

A native of Johnson City, Tenn., Farmer is pursuing a masters's degree in information science. She is working with her mentor, NETL's Jo Ann Yuill, on a project employing library and information research. The work has potential for providing valuable experience in the operation of an energy-specific library in a Department of Energy national laboratory.

The Mickey Leland Energy Fellowship program offers summer fellowships to students from underrepresented groups in science, technology, engineering and mathematics to enhance their knowledge and gain hands-on experience. To participate in the program, students must be enrolled as an undergraduate or graduate student pursuing a degree in mathematics, science, engineering or technology and must hold a minimum grade-point average of 3.0.

Mentored by scientists and researchers, the fellows are assigned specific projects related to their skills and qualifications, and they write, present and publish a technical paper at program's end. The fellowship provides fellows the opportunity to develop their professional, technical, leadership and communication skills, while promoting careers in energy, particularly in fossil fuel research and development.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – "the ENERGY lab" – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
