For Immediate Release
June 30, 2009

The National Energy Technology Laboratory (NETL) has selected Jason Efav as a contract specialist. He will work on congressionally directed projects and financial assistance awards. Previously, he worked at the VA Medical Center in Clarksburg, W.Va. in acquisition and materials management.

A resident of Fairmont, W.Va., Efav grew up in Fairmont and earned a bachelor degree in business from Fairmont State University.

NETL is one of the U.S. Department of Energy's national laboratories. NETL – “the ENERGY lab” – focuses on America's economic prosperity, which requires secure, reliable energy supplies at sustainable prices. Three overarching issues characterize the energy situation in the United States. They are energy affordability, supply security, and environmental quality. The Department of Energy's only government-owned, government-operated national lab, NETL is a research and technology center where these energy challenges converge and energy solutions emerge. NETL implements a broad spectrum of energy and environmental research and development programs through its own research staff and through funded research at other labs, universities, and industry that will return benefits for generations to come.
